FLORA OF WASHINGTON.

ADVERTISEMENT.

The United States National Herbarium, which was founded by the Smithsonian Institution, was transferred in the year 1868 to the Department of Agriculture, and continued to be maintained by that Department until July 1, 1896, when it was returned to the official custody of the Smithsonian Institution. The Department of Agriculture, however, continued to publish the series of botanical reports entitled "Contributions from the U. S. National Herbarium," begun in the year 1890, until, on July 1, 1902, the National Museum, in pursuance of an act of Congress, assumed responsibility for the publication. The first seven volumes of the series were issued by the Department of Agriculture.

FLORA OF THE STATE OF WASHINGTON

By CHARLES V. PIPER

WASHINGTON
GOVERNMENT PRINTING OFFICE
1906

BULLETIN OF THE UNITED STATES NATIONAL MUSEUM: Issued October 8, 1906.

PREFACE.

The following account of the flora of the State of Washington, by Prof. C. V. Piper, is based on his study of the plants of that State during a period of twenty years. This work was carried on in chance hours of leisure and in occasional summer vacations. During most of the college year 1899–1900, however, Professor Piper was at the Gray Herbarium looking up critical material and examining the specimens of older collectors, especially those upon which publications had been based. Considerable time was devoted also to other large herbaria, particularly those of the United States National Museum, of the Academy of Natural Sciences of Philadelphia, and of the New York Botanical Garden. The private herbaria of Prof. L. F. Henderson, of Mr. Thomas Howell, and of Mr. W. N. Suksdorf were likewise freely consulted.

Most of the types of the new species published by Professor Piper in the present work and in earlier papers are in the United States National Herbarium, and a large part of the whole material on which this flora is based is also represented there.

In the course of his work Professor Piper examined specimens of nearly all the collections made within the confines of the State of Washington, so far as these are to be found in American herbaria. Thus it was possible to ascertain the identity of nearly all the species which had been accredited to the State through erroneous determination. Unfortunately several of the specimens upon which the names in published lists were based are not now to be found in the herbaria in which they might be expected. This is true particularly of Cooper's plants and in less degree of those of the Wilkes Expedition, so that the identity of such plants can only be surmised. In publications on the collections of Menzies, Douglas, Scouler, and Tolmie there are many plant names that can be definitely rectified only by examining the original specimens. It is quite certain also that the current interpretation of a number of species based on these early collections is erroneous. Their correction will require an examination of the types, which are in European herbaria.

With few exceptions no species has been admitted into this flora unless its author has actually studied Washington specimens.

In the course of the preparation of this work Professor Piper became indebted to many botanists for assistance. He states that he

6 PREFACE.

is under especial obligations to Prof. B. L. Robinson, of the Gray Herbarium, for kindly counsel, as well as for much aid in the genus Lupinus; to Mr. Frederick V. Coville, of the National Herbarium, for his continuous helpful advice; to Dr. N. L. Britton, of the New York Botanical Garden, Mr. Stewardson Brown, of the Academy of Sciences of Philadelphia, and Dr. C. F. Millspaugh, of the Field Columbian Museum, for the privileges of consulting the herbaria of which they have charge; to Mr. M. L. Fernald, of the Gray Herbarium, for technical assistance in various genera; to Dr. J. M. Greenman, of the Field Columbian Museum, for aid in Senecio; to Mr. A. A. Eaton, for a key to the species of Isoetes; to Mr. P. L. Ricker and Mr. W. F. Wight, of the Department of Agriculture, for assistance in bibliography; to Dr. Theodor Holm and Prof. C. F. Wheeler for aid in the genus Carex.

Thanks are extended to the many persons who have favored Professor Piper with their collections of Washington plants, especially Mr. Kirk Whited, of Wenache, Washington; Prof. R. M. Horner, of Waitsburg, Washington; Prof. J. B. Flett, of Tacoma, Washington, and Mr. M. W. Gorman, of Portland, Oregon.

For the privilege of examining their private herbaria Professor Piper is indebted to Mr. Thomas Howell, of Milwaukee, Oregon; to Mr. W. N. Suksdorf, of Bingen, Washington, and to Prof. L. F. Henderson, of Moscow, Idaho.

Frederick V. Coville, Curator of the United States National Herbarium.

FLORA OF THE STATE OF WASHINGTON.

INTRODUCTION.

The principal aim of the author in this work is to present a summary of our present knowledge of the vascular plants of Washington and to call attention to the more important problems, both taxonomic and ecological, which have become disclosed.

Simple keys to the genera and species are inserted so as to give the work a wider usefulness.

The nomenclature aims to follow the recently proposed Philadelphia Code. In accordance with the rules of this code in the matter of generic Lames, it is not improbable that several of those here used will have to be changed when the necessary bibliographical researches have been made. As the important synonomy is here given with each species, there will be little difficulty in coordinating the name adopted with any other commonly used heretofore, or which may be proposed hereafter.

As regards the limitation of species the author has in the main adopted a rather conservative attitude. Some of the recently proposed species seem well founded even if the differences are slight. In other cases the species or subspecies seem to be based on too slight characters and are therefore unworthy of nomenclatorial recognition. As one's acceptance or rejection of a proposed species depends in part on personal judgment, and in part on the evidence available, attention is, in nearly all cases, called to those which the author rejects. In all such cases additional material, as well as careful field notes, is desirable for the better understanding of the forms in question.

In the matter of the tendency common at present to raise to generic rank what have heretofore been considered subgenera, the writer likewise takes a conservative attitude. It is at least doubtful if the very large number of new names thus occasioned does not more than counterbalance any advantage argued in favor of the practice. Certainly the carrying of the practice to such an extreme that genera are considered to be made up of species of similar habit, rather than to be based on structural characters, seems inadvisable. Neither does it impress one as a valid argument that, because in some extremely natural families the genera must perforce be based on very slight

differences, similar characters must be given equal consideration in all families.

The Pacific northwest is a region with great physiographic and correspondingly great climatic differences. In consonance with the physical factors there are many and striking peculiarities in the distribution of the plant species occupying this area, and the attempt is here made on the basis of the writer's familiarity with the region, and the recorded data of others, to determine some of the complex causes which have brought about the present plant distribution.

It is more than possible that some of the conclusions here reached or suggested may be based quite as much on our lack of knowledge as on definite information. While this may eventually prove to be the case, the suggestions here advanced may nevertheless serve as working hypotheses when a more complete botanical survey shall be undertaken.

Many of the data upon which the origin of the present flora of Washington depends must be sought to the southward, a region here considered only incidentally, but which must needs be more fully explored before certain conclusions here suggested can be either verified or overthrown.

THE BOTANICAL EXPLORERS OF WASHINGTON.

The following brief account of the botanical explorers of Washington refers to their labors mainly in so far as they concern the region covered by this work. Inasmuch as both Washington and Idaho were included in Oregon until 1853, many of the earlier collections in these States are ascribed simply to "Oregon," though Washington and north Idaho are sometimes referred to as "Upper Oregon," notably in Geyer's explorations. Before the name Oregon became attached to the northwest Pacific region the interior portions, especially south Idaho and eastern Oregon, were more or less vaguely included in "Upper California," a phrase not unusual on Douglas's plant labels, and quite frequently used in the Botany of Beechey's Voyage. Still earlier than this the name "New Georgia" was employed, mainly for the region bordering Puget Sound and the Gulf of Georgia. The most vague term of all, "Northwest Coast," has been made by different writers to include everything from the northern boundary of California to Prince William Sound, Alaska, and the approximate meaning of this phrase can be gleaned in each case where used only by indirect means.

The botanical explorations of Washington are conveniently grouped into two periods. The first of these includes all the explorers previous to 1860, namely, Menzies, Lewis, Douglas, Scouler, Tolmie, Gairdner, Wyeth, Nuttall, Pickering and Brackenridge, Geyer, Spalding, Jef-

frey, Cooper, and Lyall. Besides these may be mentioned Mogino, who botanized at Nootka Sound, Vancouver Island, in 1792, and Thaddeus Haenke, who was at the same place in 1791. Nootka Sound, an important harbor in early times, was also visited by Menzies and by Scouler, and consequently is the type locality of many northwestern species.

MENZIES.

Archibald Menzies (1754–1842) was the surgeon and naturalist with Vancouver during his explorations from 1790 to 1795, during which time a thorough exploration was made of Puget Sound and adjacent waters, and of the Columbia River as far up as the site of Fort Vancouver. Previous to this time Menzies had already visited the "Northwest Coast" in a trading vessel and had made some collections. Sets of his plants are at Kew and in the British Museum. A very few are in the Gray Herbarium. In descriptions, Menzies's plants are commonly ascribed to the "Northwest Coast," or to "New Georgia." A considerable number are definitely known to have been collected at Nootka Sound, and it would perhaps be possible to ascertain the exact source of most of them.

LEWIS.

In conjunction with William Clark, Meriwether Lewis (1774-1809) made the famous transcontinental exploration in 1804-1806. All of his botanical collections that concern Washington plants were made on the return trip in 1806, and it has been possible from the labels on the specimens and the detailed journals of the expedition to determine accurately where each specimen was gathered. Most of these which concern Washington plants were collected, or described, from Fort Clatsop, near Astoria, Oreg.; at the Cascades, or "Grand Rapids" of the Columbia; at "Fort Rock Camp," or The Dalles of the Columbia; at Camp Chopunnish, on the Clearwater, opposite the present town of Kamiah, Idaho, and at "Quamash Flats," now Weippe Prairie, Idaho. Lewis's plants were described by Pursh in 1814 in Flora Americae Septentrionalis. A nearly complete set of his specimens is in the Philadelphia Academy of Sciences. A few of these are Pursh's actual types, but most of them are duplicates. Λ curious fact pointed out by Coues is that whenever Lewis described a plant in detail in his journal he rarely collected a specimen. This is notably true of the trees in the vicinity of Fort Clatsop, which Lewis described with considerable care. Rafinesque afterwards gave botanical names to these trees, based wholly on Lewis's descriptions.

DOUGLAS.

David Douglas (1799–1834), a Scotch botanist sent out by the London Horticultural Society, made extensive collections in two journeys, the first from 1824 to 1827. In this journey Douglas explored the larger portion of what is now Washington and much of Oregon and Idaho. He returned to England in 1827, traveling overland from Fort Vancouver to Hudson Bay, where he fortunately found a whaling vessel. The second journey occupied the years 1830 to 1833. The summer of 1830 was spent in Washington and Oregon. From December, 1830, to October, 1832, he was in California and the Hawaiian Islands, whence he again reached the Columbia River October 23, 1832. The ensuing twelve months were spent in Washington and Oregon. October 18, 1833, Douglas sailed from the mouth of the Columbia to the Hawaiian Islands, where he met his death July 12, 1834.

During all of his trips Douglas kept a journal, and this is now in the possession of the London Horticultural Society. The principal parts of this journal were published after Douglas's death in the "Companion to the Botanical Magazine," by Sir W. J. Hooker, in 1836. This paper has recently been reprinted by the Oregon Historical Society. From it the following epitome of Douglas's northwestern explorations are drawn:

Reaching Fort Vancouver April 19, 1825, Douglas spent the first two months collecting in the immediate vicinity. From June 20 to August 5 he botanized along the Columbia between Vancouver and The Dalles. On August 19 he started up the Willamette, reaching a point 38 kilometers (24 miles) above the falls. The second week in September he ascended the high mountains on each side of the Columbia, a very arduous task. On the mountain on the south side, he discovered Abies amabilis and A. nobilis. The time from October 22 until November 15 was spent in a trip to the mouth of the Columbia, thence up the coast to Willapa and Gray harbors. From the latter place he ascended the Chehalis River and returned to Vancouver down the Cowiitz. Owing to extremely bad weather, all the collections of this trip were lost. The winter was spent at Fort Vancouver.

March 20, 1826, Douglas started for Fort Walla Walla, now the site of Wallula, which he reached on the 28th. April 1 he was at Priest Rapids, April 6 at the mouth of the Okanogan, and April 11 at the mouth of the Spokane, where he remained eight days. April 19 he started for Kettle Falls, where much of the time until June 4 was spent. Proceeding overland to Walla Walla, he remained there until June 19. During the three weeks succeeding he made two trips into the Blue Mountains. On July 17 he started up the Snake River,

reaching the mouth of the Clearwater July 24. Douglas collected about the present site of Lewiston and in the adjacent Craig Mountains until the 30th. July 31 he started overland for Kettle Falls, which he reached August 4, going by way of Old Fort Spokane. Here he remained until the 18th, when he proceeded to Fort Okanogan on horseback, thence down the Columbia, reaching Vancouver August 31. The remainder of this season was spent in a trip to the head of the Umpqua River, where he discovered the sugar pine, near the present site of Roseburg. On March 20, 1827, he started for England, going up the Columbia to Kettle Falls on foot. From here he made his way across the continent to Hudson Bay, whence he sailed in a whaling ship.

On Douglas's second journey he reached the Columbia June 3, 1831. Most of this season was spent in the Blue Mountains region, where he collected "one hundred new species" of plants. From October 10 until December 23 he was at the mouth of the Columbia. From then until October 23, 1832, he was in California and the Sandwich Islands. Reaching the Columbia again October 23, 1832, he spent the fall collecting mosses and seaweeds along the coast. In the spring of 1833 he again ascended the Columbia, reaching Fort Okanogan April 9. The early part of the summer was spent on Fraser River, but all his collections were lost by the upsetting of his canoe, and Douglas barely escaped with his life. July 15, 1833, he was again at Walla Walla, whence he made excursions for the third time into the Blue Mountains. October 18, 1833, he sailed from the mouth of the Columbia. The extent and amount of this man's collections during the three seasons he spent in the Northwest almost surpass belief.

His collections are described in Hooker's Flora Boreali-Americana. A few of his duplicates are in the Gray Herbarium, but the most complete set is at Kew.

SCOULER.

Dr. John Scouler (1804–1871) was the companion of Douglas on his first journey. His collections were confined to the single season of 1825. During April and May he collected with Douglas mainly at the mouth of the Columbia and at Fort Vancouver. From June until September Scouler spent on a trip to Nootka Sound and return, during which he is said to have visited nearly every harbor along that stretch of coast. Some of his specimens are labeled "Straits of de Fuca;" others "Nootka Sound." The best set is in the British Museum. Scouler's manuscript journal is in the possession of the Oregon Historical Society and, it is stated, will soon be published.

TOLMIE.

Dr. W. F. Tolmie (died in 1886) went to Fort Vancouver in 1832 as a medical officer to the Hudson Bay Company. He had been a pupil of Sir W. J. Hooker, to whom he sent many botanical specimens. Tolmie's duties caused him to travel quite widely in the Northwest, but little is known of the details of his journeys. He was the first botanist to visit Mount Rainier, on the slopes of which he collected in 1837. Tolmie's specimens are mostly labeled "Fort Vancouver," "Multnomah River," and "N. W. Coast," Many specimens collected in the "Snake country" of south Idaho and described in the Botany of Beechey's Voyage, are usually accredited to Tolmie, though he expressly states that they were gathered for him by a friend.

GAIRDNER.

Dr. Meredith Gairdner, a surgeon of the Hudson Bay Company, collected a few plants about Fort Vancouver, where he died prior to 1840. His specimens are at Kew. *Carum gairdneri*, the finest food plant of the northwestern Indians, commemorates his name.

WYETH.

Nathaniel Wyeth, the adventurous and enterprising American traveler and trader, crossed the continent on his first journey in 1832. On his return trip in 1833 he crossed the mountains in north Idaho, and made a small collection of plants on the Flathead River. These were described by his friend, Nuttall, in the Journal of the Philadelphia Academy of Sciences, new series, volume 7. Wyeth's journals were published in 1889 by the Oregon Historical Society.

NUTTALL.

Thomas Nuttall (1786–1859), an Englishman by birth, one of the most acute and able of American botanists, spent the years 1834 to 1836 botanizing in the West. He was a member of Wyeth's second expedition, crossing the continent by the "Oregon Trail." He reached Fort Walla Walla about September 3, 1834, and Fort Vancouver September 16. On the overland trip Nuttall collected a very large number of species, considering the circumstances. December 11 he sailed for the Sandwich Islands, returning to the Columbia the following spring. His headquarters during 1835 were on Sauvie Island, at the mouth of the Willamette River, then called Wappatoo Island. Nuttall made but few and short excursions from his base, apparently finding enough to occupy his energies there. He did, however, collect about the Willamette Falls, Fort Vancouver, and the mouth of the Columbia. His original collection is in the British

Museum, but good sets of his specimens are in the Gray and Torrey herbaria, and many others are in the Philadelphia Academy of Sciences.

PICKERING AND BRACKENRIDGE.

Dr. Charles Pickering and Mr. W. D. Brackenridge were the botanists of the exploring expedition under Commodore Wilkes. Their botanical explorations so far as Washington is concerned were briefly as follows: May 2, 1841, the expedition was at Port Discovery, remaining there until the 6th instant. On the trip up Puget Sound stops were made at Appletree Cove and Port Madison. The expedition reached Fort Nisqually May 11, which place became the headquarters for the explorations in the interior. Pickering and Brackenridge were attached to Lieutenant Johnson's party, which left Nisqually May 20 and crossed the Cascade Mountains by way of the Indian trail up White River. They reached the summit on the 26th instant, remaining there two days, descending on the east side down the Spipen or Naches River. Leaving this river near its mouth the party traveled northward to the Yakima and thence over the Wenache Mountains to the Wenache River. From here the route was up the Columbia to Fort Okanogan, which was reached June 8. June 10 the journey was resumed eastward up the Columbia, and Fort Colville was reached June 15. From Fort Colville the party traveled southward, reaching Lapwai, Idaho, on June 25. A two days' trip from here brought the party to Fort Walla Walla, where they remained until July 4. From here their route led up the Yakima and Naches rivers and thence over the mountains by the outgoing route.

Several other exploring parties were also sent out from Nisqually, but the only botanical specimens collected by the expedition seem to have been gathered by Pickering and Brackenridge.

The results are included in two of the large volumes devoted to the scientific results of the expedition. Unfortunately the original labels of the specimens seem in some way to have become intermixed, with the result that a good many plants confined to eastern Washington bear such labels as "Port Discovery" and "Nisqually," while other species confined to western Washington are labeled "Walla Walla," or "North Fork of the Columbia." On some sheets eastern and western Washington species are mixed, and mounted over a single label. With the details of the party's itinerary known, it is possible, however, to tell with some accuracy where the specimens must have been gathered.

GEYER.

Charles A. Geyer, a German botanist who had previously botanized extensively in Illinois, and who later was attached to Nicollet's expedition, traversed the continent with a party of missionaries, and in November, 1843, crossed a high spur of the "Green" (Bitterroot) Mountains from the Flathead to the Spokane or Cœur d'Alene River, and passed the winter at Chamokane Mission, situated on Chamokane Creek, about 10 miles from its junction with the Spokane. During the season of 1844 Geyer made excursions northward to Old Fort Colville on the Columbia, southeastward up the Spokane River and into the mountains about Lake Cœur d'Alene, and southward to the Palonse River and to Lapwai Mission, near the mouth of the Clearwater. From here he explored the Craig Mountains of Idaho. Journeying overland to Fort Walla Walla he descended the Columbia, and reached Fort Vancouver November 13, 1844, whence he sailed to England.

Geyer's account of the flora of the regions explored by him is remarkably good. A nearly complete set of his plants is in the Gray Herbarium.

SPALDING.

Rev. Henry Spalding was a missionary to the Nez Perce Indians and founder of Lapwai Mission near the mouth of the Clearwater River, Idaho. In this vicinity Spalding collected a good many plants which are in the Gray Herbarium. Most of them are labeled "Clearwater, Oregon," but inasmuch as a number of them have not since been found near Lapwai it is not improbable that they were collected elsewhere. Spalding traveled quite extensively in the course of his labors, and doubtless gathered some of his specimens at other places than Clearwater, as, indeed, some few of the labels indicate. His notes on the Indian food plants are most interesting and often quite detailed. According to the testimony of his son, the late II. H. Spalding, the specimens were largely gathered by his mother.

LYALL.

Dr. David Lyall was the surgeon and botanist attached to the International Boundary Survey. His work, so far as it relates to Washington, was during the years 1858 to 1860, inclusive. During 1858 he made collections on Vancouver Island and on the smaller islands and the mainland near the forty-ninth parallel. In 1859 the western slopes of the Cascades near the boundary were explored. In 1860 the surveyors went up the Columbia, dividing at The Dalles into two parties. One party, which Lyall accompanied, traveled in a northerly direction, past Fort Sincoe, across the Naches and other

tributaries of the Yakima, thence over the Wenache Mountains to the Columbia, which was reached just below the mouth of the Wenache. From here the party followed the Columbia and Okanogan to Lake Osoyoos. Following up the Similkameen and Ashnola the party formed a camp at 1,670 meters (5,480 feet) elevation on the boundary, where they remained some time.

The other party proceeded to Fort Walla Walla and thence northward, crossing the Snake at the mouth of the Palouse and passing Rock Lake on the route to Fort Colville. The collections of this party were made by John Buttle, but the specimens seem all to be credited to Lyall. During the year 1860 the survey was completed nearly to the Idaho line.

Lyall's account of his botanical observations is brief, but very interesting. A nearly complete set of his plants is in the Gray Herbarium.

JEFFREY.

John Jeffrey, a Scotch botanist, was sent out by some patrons to collect the seeds of plants of horticultural interest in the region traversed by Douglas, "to complete his researches, and to extend them into those parts of the country not fully explored by him." Jeffrey was at Fort Colville May 13, 1851, reaching that point from the northward. During this season he spent much of the time in northern Washington and adjacent British Columbia. Late in the season he was on Mount Baker. In May of the following year Jeffrey was at Fort Nisqually, and during June and July at Fort Vancouver. His remaining explorations were all southward.

Very little is known of Jeffrey's specimens, as none exist in American herbaria, and but little has been published concerning them.

COOPER.

Dr. J. G. Cooper collected in various portions of Washington from 1853 till 1855, in connection with the Stevens Survey of the forty-eighth parallel. An annotated list of his plants, including also some collected by Dr. George Gibbs and Dr. G. Suckley, is published in the Pacific Railroad Reports, volume 12, part 2.

COLLECTORS SINCE 1860.

Among botanical collectors since 1860 none has done more to explore the flora of the State than Mr. W. N. Suksdorf, of Bingen, who for twenty-five years past has been an assiduous student of plants. His most important collections have been made in Klickitat County, but he has gathered much material also in Spokane and Whatcom counties, and elsewhere. Sets of his plants are in all the principal

herbaria, while his private collection is among the best in the Northwest.

Mr. Thomas Howell, whose long and extensive labors have mainly been limited to Oregon, has nevertheless collected much in Washington, especially in the counties bordering on the Columbia. Mr. Howell's herbarium is now in the possession of the Oregon State University, but sets of his plants are widely distributed. A considerable collection of Klickitat County plants was also made by Mr. Joseph Howell.

Professor L. F. Henderson, who has also collected much in Oregon, gathered rich material in the Olympic Mountains in 1890, and in 1892 traveled over much of the State to make a collection for the Columbian World's Fair. This is now in the State University at Seattle. Professor Henderson's private herbarium, one of the most complete in its representation of North Pacific plants, was unfornately burned in the recent fire that destroyed the main building of the University of Idaho.

Mr. T. S. Brandegee, Mr. Frank Tweedy, and Prof. E. W. Hilgard were associated with the North Transcontinental Survey organized in connection with the Northern Pacific Railway under Villard's presidency. In connection with this work extensive collections were made, especially by Brandegee, in Walla Walla, Yakima, and Kittitas counties. The best set of these plants is in the Canby Herbarium, now in the New York College of Pharmacy.

Dr. Sereno Watson visited Washington in 1880 in connection with the Tenth Census Survey of the forests. He made small collections at Yakima Pass, Lake Chelan, Fort Colville, and Spokane. The specimens are in the Gray Herbarium.

Charles A. Ramm collected a small set of plants in 1883 in Spokane County, which were sent to Doctor Gray.

Mr. George R. Vasey made extensive collections for the Department of Agriculture in 1889, principally in Yakima, Kittitas, and King counties. Sets of his plants are in the principal herbaria. His specimens, unfortunately, lack data regarding their exact place of collection.

Mr. F. Binns collected plants from 1888 to 1890 about Port Ludlow, and sent them to the Gray Herbarium.

Rev. Ernest C. Smith botanized in the vicinity of Seattle in 1889 and 1890, in the latter year making collections on Mount Rainier.

Dr. E. L. Greene collected in 1889 about Clealum, Yakima, and on Mount Rainier.

Mr. J. M. Grant sent a few plants to the Gray Herbarium, collected in the Olympic Mountains in 1889.

Mrs. Susan Tucker made collections near Cheney in 1889, and again in 1903,

Prof. E. R. Lake and Mr. W. R. Hull collected in 1892 in the Blue Mountains, and later in Douglas and Chelan counties.

Messrs. Sandberg and Leiberg, collecting for the Department of Agriculture, botanized along the Great Northern Railway from Spokane to the summit of the Cascade Mountains in 1893. Their collections are very large and valuable. During the preceding year these same botanists, together with Dr. D. T. MacDougal and Mr. A. A. Heller, collected in Latah and Nez Perce counties, Idaho, incidentally gathering plants at a few adjacent points in Washington.

Prof. J. B. Flett has been active in studying the flora of the State since 1895. He has made extensive collections in the Olympic Mountains, on Mount Rainier, about Tacoma, in Island County, and in the Mount Adams region.

Mr. O. D. Allen during the year 1895, and subsequently, has prepared exquisite sets of specimens from the region about Mount Rainier. His plants are in all the leading herbaria.

Mr. A. D. E. Elmer botanized in 1896 in Whitman County; in 1897 in Okanogan and Kittitas counties; in 1898 about Mount Stuart, and in 1900 in Clallam County. His specimens are in many herbaria.

Prof. R. M. Horner made fine sets of the plants of the Blue Mountains in 1896 and 1897. Λ complete set of his plants is in the National Herbarium.

Mr. N. L. Gardner collected in 1897 and 1898, mainly about Coupeville.

Mr. M. W. Gorman secured a fine set of plants in the Washington Forest Reserve in 1897 for the National Herbarium. He has also collected in Klickitat County and elsewhere.

Mr. F. H. Lamb collected in 1897 in the little known region northward from Grays Harbor. Several herbaria have sets of his plants.

- Mr. A. A. Heller made sets of specimens in 1898 from the vicinity of Montesano. They have been distributed to the leading herbaria.

Mr. Kirk Whited has for several years past made large collections in Kittitas and Chelan counties, adding much to the knowledge of that interesting region.

Mr. John S. Cotton has made very extensive collections in central Washington since 1900, mostly in Yakima County. In 1902 he collected in company with Dr. David Griffiths.

Mr. Frank O. Kreager collected sets of plants in Stevens and Spokane counties in 1903, and the flora of the same region has been further explored by Prof. R. K. Beattie and Ronald Chapman in 1904.

Mr. H. C. Conrad made valuable collections in 1903 on the Quinault Indian Reservation of Chehalis County.

Dr. Ruhn, U. S. Army, gathered specimens about Muckleshoot Prairie, King County, and sent them to Doctor Gray. The labels bear no dates. Others have made smaller collections of plants in the State. Their names appear in association with the specimens they gathered.

The writer's personal observations and collections have been made in many parts of the State. Especially extensive collections were made about Scattle, 1885-1892; Mount Rainer, 1888 and 1895; Olympic Mountains, 1890 and 1895; Union City, 1890; Pullman and vicinity, 1893-1903; Blue Mountains, 1896. The earliest of these collections are in the herbarium of the State University at Seattle; the remainder are at Pullman, in the State College of Washington. The herbarium of the State College, which more than any other is the basis of this work, contains about 40,000 sheets of Washington plants, including very full sets of the Washington collections of Howell, Henderson, Suksdorf, Vasey, Sandberg and Leiberg, Gorman, Flett, Whited, Horner, Lake and Hull, Allen, Elmer, Gardner, Lamb, Heller, Cotton, Cotton and Griffiths, Kreager, Mrs. L. A. Bouck, Beattie and Chapman, and Conard. A nearly complete set of the writer's own collections, including the types of his new species, is deposited in the National Herbarium.

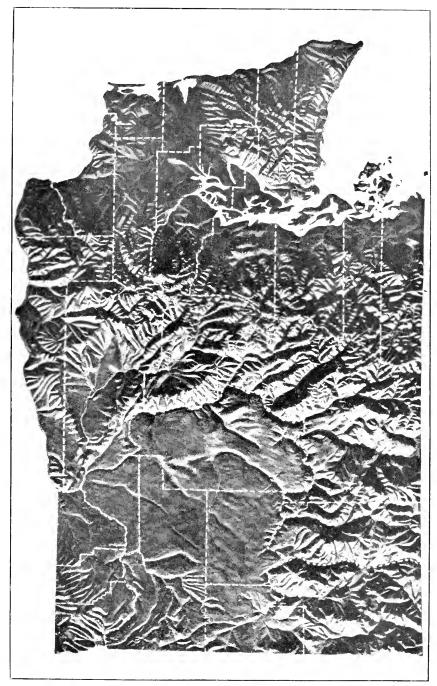

PHYSIOGRAPHY AND GEOLOGY.

The accompanying relief map (Pl. II) will render clear the principal physiographic features of the State of Washington. It may conveniently be considered to be made up of seven regions, namely, the Pacific Coastal Plain, the Olympic Mountains, the Puget Sound Basin, the Cascade Mountains, the Columbia Basin, the Okanogan Highlands, and the Blue Mountains.

THE PACIFIC COASTAL PLAIN.

This is a narrow strip of land in immediate proximity to the Pacific Ocean and the Straits of Juan de Fuca. It is watered by numerous short streams from the Olympic Mountains and from the low Coast Mountains in Chehalis and Pacific counties. The largest stream, the Chehalis River, rises in the Cascade Mountains, and its valley connects the coastal plain with the Puget Sound Basin.

The formation of most of the land is quite similar to that of the Puget Sound Basin, described below. The distinctive features are, first, the low strip of sandy land, seldom over a mile wide, formed by the inland drifting of the ocean sand; second, the steep rocky bluffs which face the ocean at the mouth of the Columbia River and in a few places near Cape Flattery, and third, the coastal plain proper. This region is characterized by having a very great rainfall, ranging from 200 to 300 centimeters (80 to 120 inches) annually.

TOPOGRAPHIC MAP OF WASHINGTON.

Contriblat. Herb. (a) Xi PLATE III.

CHARACTERISTIC VEGETATION OF THE BLUFFS ALONG PUGET SOUND.

The conspictions plants are goatsbeard. Artimens arminens in the center, with thimble berry (Rubus parvillorus) on the right wormwood (Aftemisia suksdoriii) beneath, and Petasites speciosa in the lower corner as the left.

THE OLYMPIC MOUNTAINS.

This is an almost circular group of mountains, which occupies much of Clallam, Jefferson, Mason, and Chehalis counties. The mountains are quite isolated. They consist of numerous peaks, varying in height from 1,800 to over 2,300 meters (6,000 to 7,500 feet), the highest being Mount Olympus, altitude 2,638 meters (8,131 feet). Owing to their isolated position the drainage from these mountains is in all directions, but the largest streams flow into the Pacific Ocean. Nearly all the streams head in small glaciers.

These mountains are very difficult of exploration, and their geology is but little known. The peaks consist, for the most part, at least, of a laminated igneous rock which dips at a very steep angle, so that the summits of the ridges and peaks are often exceedingly narrow, not rarely indeed being hollowed out beneath by the falling rock. The age of these rocks is unknown.

The streams have all worn very deep gorges along their courses almost to the center of the mountains. This is due, perhaps, more to the soft character of the rock than to the lapse of a great period of time. This fact, however, renders it exceedingly difficult, and often impossible, to pass from one dividing ridge to another.

Owing to the circumstance of these mountains standing first in the path of the moist Pacific winds the precipitation of rain and snow is very great. In exceptional seasons some of the glaciers may be of annual duration only. Such a glacier may disappear entirely by the end of the summer, the snowfall of the succeeding winter being sufficient to form it again.

The Olympies are really a portion of the coast system of mountains, isolated, owing to the fact that the portion of the system in southwest Washington consists only of hills which rise to little over 300 meters in height, through which the Chehalis River forms a broad gap. The portion of the system to the northward is widely severed by the Straits of Juan de Fuca.

THE PUGET SOUND BASIN.

This term is applied to the broad valley lying between the coast system of mountains and the Cascades. It has an average breadth of about 80 kilometers (50 miles). Much of the central portion of the basin near the head of Puget Sound is comparatively flat, and less than 30 meters above sea level. Along the greater portion of the Sound the shores rise abruptly, often in bluffs 30 meters high (Pl. III), thence sloping more or less gently into hills 90 to 200 meters high or more. The basin proper may conveniently be limited for our purpose by the 700-meter (2.300-foot) contour line.

In its late geological history the region was covered by great glacial deposits derived mainly from the adjacent mountains. These deposits consist of clay, gravel, or sand, often somewhat stratified. Pure deposits of each 30 meters thick or more are common. The total thickness of the glacial deposit has been estimated at from 150 to 300 meters.

The whole region is densely timbered with the exception of a series of small gravelly plains. These are largest and most abundant in the central part of the basin, but similar ones occur near Vanconver, and on Whidby and other islands. Likewise the tips of many of the points projecting into Puget Sound have the same gravelly soil, accompanied by a characteristic flora and fauna. These gravelly prairies are plainly formed by flowing water, and are generally considered to be deposited by post-glacial streams. Very similar prairies occur along the Willamette Valley. They form, indeed, an interrupted series from the middle part of that valley northward to Vanconver Island. Owing to the very gravelly soil of these prairies, they partake of a semiarid condition. Indeed, the flora contains many species identical with those of eastern Washington.

The drainage of the basin is mainly into Puget Sound, the principal rivers coming from the Cascades, but the Cowlitz River and various smaller streams in the extreme southern part of the basin, flow into the Columbia.

These streams for the main part originate in glaciers, and all of them have formed rather narrow valleys largely of glacial detritus.

THE CASCADE MOUNTAINS.

These mountains vary in breadth from 100 to 125 kilometers (80 to 100 miles), traversing the State in a course a little easterly of a true north direction. The altitude of the main uplift varies from 1,800 to 2,100 meters (6,000 to 7,000 feet). The important peaks which conspicuously exceed this altitude are Mount Baker, in Whatcom County, altitude 3,335 meters (10,825 feet); Glacier Peak, Snohomish County, said to be 3,214 meters (10,436 feet) high; Mount Stuart, Kittitas County, 2,903 meters high (9,479 feet); Mount Rainier, on the dividing line of Pierce and Thurston counties, the highest peak of the Cascade system, 4,475 meters high (14,530 feet); Mount Adams, Klickitat County, altitude 3,819 meters (12,401 feet), and Mount St. Helens, Skamania County, 2,947 meters high (9,570 feet). These tall peaks are all capped with perpetual snow, and rise far above the limits of ordinary plant life. With the exception of Glacier Peak and Mount Stuart they are all volcanic cones.

The Cascade Mountains form the most important topographical feature of the State as affecting the distribution of plant life. The prevailing southwest winds from the Pacific are by them deprived of most of their moisture, the result being that the region to the eastward is not only much drier, even to semidesert conditions in limited areas, but also much warmer in summer. The plants and animals adapted to such conditions are necessarily very different, as a rule, from those that thrive in the moist region to the westward.

It is very clear that the Cascades serve as a barrier, primarily because of the difference in humidity eastward and westward which they occasion, and not because of their altitude. Many of the passes over these mountains are but a little over 1,000 meters in altitude, not sufficiently high even in this period to prevent many plants from migrating through, especially in the wake of forest fires. As a matter of fact the rainfall influences the vegetation for a considerable distance down the eastern slopes of the mountains, the flora of the main range down to about 1,000 meters altitude being largely composed of species of the coast region.

In Washington proper no stream traverses the Cascade Mountains, but on the southern border is the great gap through which the Columbia River flows. This enormous gorge gives rise to peculiar local conditions, which find marked expression in the flora. Through this gap, too, the coastal flora, aided by the prevailing upstream humid winds, penetrates farther eastward than usual. Still, at the village of White Salmon there is an unmistakable dividing line between the humid and the semiarid floras.

Nearly all of the many streams that arise in the Cascades flow through deep gorges, once occupied by glaciers. Indeed, many of the streams, especially those heading about the higher peaks, still find their birth in glaciers.

The Cascade range north of the forty-seventh parallel is composed largely of granite and other metamorphic rocks. Mount Rainier and the entire range southward to its extremity in northern California is on the contrary almost entirely made up of volcanic rocks. Recent investigations in the geology of these mountains disclose in part a very complex history, but indicate that the principal uplift took place either in late Pliocene or early Pleistocene time, and subsequent to the great outpourings of lava that make up most of the region between the Cascades and the Rockies.

From a biological point of view the changes brought about by the Cascade uplift were profound. Undoubtedly it transformed the climate of the region to the eastward from one relatively moist to one distinctly arid, and at the same time increased greatly the humidity of the region to the westward. This climatic change, particularly in the interior, must have been accompanied by a correspondingly great change in the flora. The peculiar make-up of the Columbia Basin flora of the present time indicates with more or less clearness some of the resultant effects of the Cascade uplift.

THE OKANOGAN HIGHLANDS.

These mountains occupy the northeast portion of the State, including most of Stevens and Ferry counties. To the southward they pass gradually into the Columbia Plains. To the westward they are naturally limited by the Okanogan River.

The Okanogan Highlands consist mainly of gently rounded hills, rising into peaks 1,500 to 2,000 meters high. Geologically they are similar to the northern part of the Cascades, and are composed largely of granite. The vegetation is nearly identical with that of the eastern slope of the Cascades. These mountains and those of British Columbia connect the Cascade system with the Rocky Mountain system in Idaho. In consonance with the markedly similar conditions of soil and climate it is not surprising that a number of species of the coast region occur through these mountains and in north Idaho.

THE COLUMBIA PLAINS.

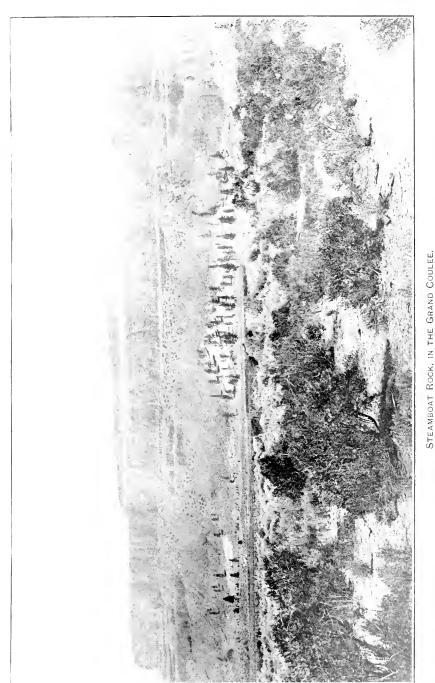

The greater portion of eastern Washington is covered by an immense mass of basalt, of an average thickness of at least 1,300 meters. This mass is the result of a series of lava overflows which involved not only eastern Washington but also great portions of eastern Oregon and Idaho, covering in all an area of over 500,000 square kilometers (200,000 square miles). Geologically this is known as the Columbia River basalt. It covered in Washington all of the region south of the Okanogan Highlands and extended westward from the Bitterroots nearly to the present crest of the Cascade Mountains and beyond this at least in Clarke and Cowlitz counties. The canyon walls of Snake River and other streams indicate a number of successive overflows, at least ten, between some of which sufficient time elapsed for soil to form and forests to grow. The remains of the latter appear either as charcoal embedded in the soil of old lake bottoms, or else as silicified trunks, these often remaining in their original vertical positions.

Originally the surface of the lava appears to have been approximately level, but subsequent to the last great overflow a large lake or else a series of lakes existed in Yakima, Douglas, Klickitat, and Franklin counties as well as in adjacent Oregon. This was Lake John Day. Whether this lake merely filled a basin formed beyond the heads of the last lava flows, or whether it was formed through the sinking of the surface concomitantly with the commencement of the uplifting of the Cascade and Blue mountains is not clear.

The deposits formed in the bottoms of Lake John Day consist of soft sandstone and conglomerates which have largely been removed by subsequent erosion. The light, ashy soils formed from these deposits are very different from the heavy clay loam formed by the disintegration of basalt.

Contr. Nat. Herb., Vol. XI. PLATE IV.

The large plants in the foreground are greasewood (Surcohatus vermienlatus), those in the middle distance are sagebrash (Artemisia tridentata), with yellow pine (Pinus ponderesa) on the talus slope.

In some of the John Day rocks remains of plants and animals are found which long since have become extinct. These belong to Miocene-Tertiary time and indicate the existence of a rich and varied flora, strikingly different from that which occupies the region to-day.

The surface of the Columbia River basalt averages about 700 meters in elevation. Subsequent to its formation occurred the uplifting of the Cascade and Blue mountains. Since that time the geological history of the region has been mainly one of erosion.

Owing to the soft character of the basalt the principal rivers have worn great canyons in it along their courses. Thus Snake River where it enters the State flows in a tremendous gorge 600 meters deep, this gradually lessening to the westward. Where this river cuts through the Blue Mountains between Washington and Idaho it exposes 1,300 meters of basalt rock, which is supposed to represent about the original thickness of the combined lava overflows.

The Columbia River for a great portion of its course has followed close to the line of contact between the basalt and the older granitic rocks. In places its canyon is almost as impressive as that of Snake River.

Besides the canyons now occupied by streams, there are many others, the abandoned courses of ancient rivers, called coulees. The most notable of these are Grand Coulee (Pl. IV) and Moses Coulee in Douglas County, 200 to 300 meters deep. These two coulees were originally enormous cracks in the basalt, and have since been greatly eroded. The bottom of the first named is occupied by a nearly continuous chain of lakes.

The glacial period has left but small traces of its work in eastern Washington outside of the mountains. During this time the canyons of the Snake River and the Columbia were filled to a depth of about 100 meters with gravel, most of which has since been removed. The upper Spokane Valley is, however, still composed of such glacial detritus. No evidence of glaciation exists, however, on the surface of the basalt plateau, excepting in the northern part of Douglas County, where glaciers crossed the Columbia, thus blocking it and causing the waters to find a temporary new channel through the Grand Coulee.

Apparently the gorge of the Columbia River through the Cascade Mountains was blocked at this same time, resulting in the formation of a great glacial lake, called Lake Lewis. This seems to have occupied practically the same area as its ancient predecessor, Lake John Day. Except for ill-defined beaches at an elevation of 420 meters and occasional erratic bowlders scattered over Yakima and Douglas counties and doubtless dropped by icebergs, there is little left to show the existence of this lake.

For the most part the Columbia River lava completely covered up all of the older rocks over which it flowed, these being seen only as they are revealed in the river canyons. Exceptions to this appear in peaks which were too high to be overwhelmed, as in the cases of Steptoe and Kamiak buttes in Whitman County, together with many others less conspicuous. Steptoe Butte is a granitic cone projecting about 500 meters above the surrounding basalt and, being completely isolated, is a notable landmark. To designate such isolated buttes, of which there are many, Russell has proposed the term *steptoe*, after the name of this striking example. A steptoe is "an island of granite in a sea of basalt." Kamiak butte near Pullman is composed largely of quartzite.

THE BLUE MOUNTAINS.

The Blue Mountains in extreme southeastern Washington and adjacent Oregon, represent a great uplift of basalt surrounding a central mass of granite peaks. The portion of these mountains in Washington is composed wholly of basalt, elevated to over 2,000 meters.

The granitic peaks in the central part of the mountains, the socalled Powder River Mountains in Oregon, rise to an altitude of about 3,000 meters, and form the greatest "steptoe" in the whole Columbia Basin.

CLIMATE.

The data here presented are compiled from the reports of the United States Weather Bureau. The observing stations are all located at places of relatively low altitude, and the accurate data therefore relate wholly to the portions of the State which lie in the Transition and Upper Sonoran areas.

PRECIPITATION.

The following table gives the normal annual rainfall of each of the Weather Bureau stations together with the length of the period over which full records are available:

$Rainfall\ records.$

Station.	Altitude in feet.	Length of record in years.	Average annual pre- cipitation in inches.
Aberdeeu	162	14	88.55

The rainfall map (Pl. V) is based mainly on the above records, but over mountainous regions where no records have been made the lines drawn are based on topography. Owing to the great variation in rainfall caused by mountains and to a less extent by deep canyons, which often make great differences within small areas, the rainfall map is drawn on broad lines. Enough is known of these local differences in rainfall caused by topography to make it certain that an accurate map of Washington to show these smaller differences would be a very complex affair.

The larger differences in the normal annual precipitation are clearly shown by the map. As a whole, western Washington has a heavy rainfall while that of eastern Washington is light. The coast region has the greatest precipitation, heaviest on the western slope of the Olympic Mountains. The region immediately to the northeast of these mountains has a correspondingly light rainfall. No satisfactory records are available for the precipitation in the higher parts of the Cascade Mountains. Presumably it is between 70 and 90 inches.

In eastern Washington perhaps the most striking feature is the suddenness with which the precipitation decreases east of the crest of the Cascades.

The area over which the rainfall is less than 10 inches is practically identical with the Upper Sonoran life area.

As compared with the rest of the United States the narrow strip immediately along the ocean has the maximum amount of rainfall,

approached only by that of the regions about Mobile, Ala., and Cape Hatteras, N. C. The rainfall of the Puget Sound Basin as a whole is but slightly in excess of that of the Atlantic coast States, but it shows wide variation within short distances. The greater part of castern Washington coincides as regards total rainfall with the upper Mississippi Valley.

A noticeable peculiarity of the Washington rains, particularly in the western part of the State, is their gentleness. They are rarely accompanied either by winds or by lightning. Perhaps 90 per cent of the rains consist of gentle drizzles, locally characterized as "Oregon mists."

A most striking feature of the rainfall is the very low amount of precipitation during the summer months. This has given rise to a distinction between a "dry" or summer season and a "wet" or winter season, though in reality the wet season includes much of the spring mall parts of the State, and also of the fall, particularly in western Washington.

A prolonged "dry" season naturally entails drought, which may be marked even in the humid western portion of the State. In eastern Washington such droughts have occasionally caused severe injury to crops.

The significance of this dry season is rendered more clear by comparison. If we except the Vancouver strip, all of the United States west of the Rocky Mountains has normally less than 3 inches of rainfall during July, August, and September, an amount lower for these months than any other part of the country. For eastern Washington, as a whole, the rainfall of these three months averages about 2 inches.

The normal annual rainfall for the Vancouver strip during the three summer months is less than 6 inches, thus coinciding with that of the area between the one hundredth meridian and the Rocky Mountains.

SUNSHINE AND CLOUDINESS.

The average number of clear days in western Washington for the years 1902–1904 was, respectively, 120, 127, and 117; of partly cloudy days, 92, 100, and 80; of cloudy days, 153, 148, and 159. As might be expected in conformity with the wide variation in rainfall, the extremes depart considerably. The smallest numbers of clear days were, respectively, 56, 42, and 48; the largest, 171, 174, and 174.

In eastern Washington for the same years the clear days totaled, respectively, 146, 153, and 178; the partly cloudy days, 92, 95, and 90; the cloudy days, 127, 117, and 98. The largest numbers of clear days were 207, 228, and 230. The smallest records for the same years were 67, 77, and 85.

If the records are considered separately for the stations located within the line of 10 inches of rainfall the average number of clear days for these same years is 166, 168, and 193.

These data show very clearly that eastern Washington has much more sunshine than western Washington, and also that in the region of less than 10 inches rainfall, which closely coincides with the Upper Sonoran area, the amount of sunshine is considerably greater than for the average of eastern Washington.

The following percentages are based on the normal sunshine map of the United States Weather Bureau: The least amount of sunshine is in the very humid region, which has over 90 inches of annual rainfall. Less than 40 per cent of the days here are clear, a low percentage equaled in the United States only on the upper peninsula of Michigan, in northern New York, and in northern New England.

In the region of less than 10 inches rainfall over one-half of the days of the year are clear, thus corresponding in general with the broad basins of the Missouri and Mississippi valleys and with the Southern States. The remainder of the State has from 40 to 50 per cent of the days clear, resembling in this respect the region of the Ohio Valley northward and eastward.

TEMPERATURE.

WESTERN WASHINGTON.

Temperature records of the United States Weather Bureau are available for over 30 stations in western Washington, all located in the Humid Transition area, for periods varying from one year to thirty years. The normal annual mean temperature based on these records is 49.3° F. The same average for each of the 30 stations shows the lowest to be Port Crescent, 46.6°, and the highest to be Vancouver, 52°. The normal monthly mean temperatures of the same stations vary as follows:

Temperature dat	a for	Humid	Transition	area.
-----------------	-------	-------	------------	-------

Month.	Degrees F.	Month.	Degrees F.
January February March April May June	37 to 43 38 to 46 45 to 51 50 to 58	October	56 to 66 53 to 60 47 to 53 38 to 46

The highest temperature ever recorded at any of these stations is 100° : the lowest is -2° .

As regards temperature then the climate of this region is remarkably equable, without marked extremes in either summer or winter. The region in immediate proximity to the ocean has the coolest summer, and the extreme winter temperatures have never reached zero.

EASTERN WASHINGTON.

The records of the United States Weather Bureau concern nearly forty different stations in eastern Washington for periods of from one to twenty-three years. Fifteen of these stations lie within the Upper Sonoran area, the remainder within the Arid Transition. The Upper Sonoran stations are Ellensburg, Ephrata, Kennewick, Lind, Mottinger's Ranch, Moxee, Odessa, South Ellensburg, Sunnyside, Trinidad, Walla Walla, Wenache, and Zindel. The normal annual mean temperature for the whole region is 48.7°; for the Arid Transition stations alone it is 45.9°; and for the Upper Sonoran stations it is 51.3°.

The normal monthly mean temperatures for the stations located in the Arid Transition are as follows:

Degrees F.	Month.	Degrees F.
21 to 34	July	62 to 72
25 to 38	August	62 to 74
30 to 43		
43 to 52	October	44 to 55
51 to 58	November	32 to 42
	December	25 to 36
	21 to 34 25 to 38 30 to 43 43 to 52 51 to 58	21 to 34 July 25 to 38 August 30 to 43 September 43 to 52 October 51 to 58 November

Temperature data for Arid Transition area.

The highest temperature recorded at these stations is 105° , the lowest is -32° .

The corresponding data for the stations located in the Upper Sonoran area are as follows:

Month.	Degrees F.	Month.	Degrees F.
January	25 to 37	July	65 to 77
February		August	
March		September	
April	48 to 55	October	36 to 43
May		November	
June		December	47 to 57

Temperature data for Upper Sonoran area.

The maximum temperature ever observed at any of the above stations is 113°; the minimum is -30°.

As regards temperature, eastern Washington while having a normal annual mean but slightly lower than that of western Washington, has much greater extremes, being decidedly colder in winter and warmer in summer. The Upper Sonoran area as compared with the Arid Transition is several degrees warmer.

A notable feature of the temperature of Washington, in conformity with much of the region west of the Rocky Mountains, is the great variation of temperature between day and night, especially in summer. It is emphatically a region of cool nights, where one can appreciate blankets at night throughout the year. These cool nights are least marked in the Upper Sonoran area, and it may, indeed, be found that this factor is an important one in limiting the range of Upper Sonoran plants.

These cool nights naturally indicate late frosts in spring and early ones in autumn. In western Washington such killing frosts are not unusual up to April 15, and rarely a month later. Except in the warmest portions of eastern Washington killing frosts occur not uncommonly up to June 1, and infrequently three weeks later.

The first autumnal frosts in western Washington occur as early as the middle of September or as late as the middle of November; rarely they may be delayed until December. The dates are much the same for eastern Washington.

WINDS.

The most prevalent winds are from the southeast, and are usually accompanied by rain. East of the Cascade Mountains they are known as *chinooks*. This term is usually applied only to the winds that blow in the winter months, but there seems no proper reason to distinguish such from similar winds during the remainder of the year. The winter chinooks are commonly warm winds, accompanied or immediately followed by heavy rains; rarely they are cold and dry.

The wet chinooks are in eastern Washington remarkable chiefly for the rapid rising of the temperature which they occasion.

These winds are often quite severe. This is particularly true of the occasional southwest winds which occur in summer, which in eastern Washington usually assume the form of dust storms. Such storms may cause much destruction.

The only other winds deserving of special mention are those which sometimes occur in eastern Washington during the summer months, blowing from the north or northeast. These winds are gentle but exceedingly dry, and are therefore capable of causing great damage to growing crops. For this reason they are much feared in the agricultural districts.

THE ZONAL DISTRIBUTION OF WASHINGTON PLANTS.

That there are physical causes which profoundly influence the distribution of plants no one who has crossed the State of Washington from east to west can for a moment question. The contrast between the treeless bunchgrass prairies and sage plains of eastern Washington and the luxuriant coniferous forests of western Washington is too striking to overlook. In this particular case the principal factor is one of humidity, the Puget Sound region possessing a notably moist climate, while that of the Columbia Basin is markedly arid.

A similar change of vegetation may be witnessed in the ascent of any of our higher mountain peaks. As elevation increases the familiar lowland plants disappear and different ones present themselves, which in turn give way at high altitudes to still others. The most marked of these changes is that where the timber ceases and the alpine meadows present their charming carpet of flowers. Here the changes are due manifestly not to differences in humidity, but to lessened temperature, a conclusion emphasized by the fact that many of these alpine plants are the identical species which occur in arctic regions.

Heat and moisture are undoubtedly the principal physical factors upon which the distribution of plants depend. A third factor may be important, even determinative, namely, the character of the soil, but this is much less potent than the two above named. In addition to these physical factors only one other need be considered, the biological factor of ancestry. In general, plants inhabit the regions where their ancestors thrived. This factor is usually continental in its scope; thus cacti and yuccas are confined to America; encalypti to Australia, and lilacs to Asia. But in a similar way this same factor operates over small areas, and it is the principal cause why the Pacific coast flora as a whole is different from that of the Atlantic. The existing plants are different because their immediate ancestors were, whatever factors may have determined that.

It is not to be understood from this that all the plants which formerly flourished in Washington have left descendants there. In Tertiary times such plants as palms, cinnamon trees, and sequoias grew in Washington. Some of these require tropical or subtropical conditions of heat; others, as the sequoias, probably have given way in competition with more aggressive species. Nevertheless the broad statement remains true that the present vegetation of the region owes its character in large part to similar ancestors. The conditions which make the Pacific coast the home of many peculiar genera and species are ancestral. The heat and moisture requirements of these plants are duplicated in other portions of the earth, where, however, totally different congeries of species occur. It is generally admitted that heat is the most potent factor in determining the distribution of plants, and that in general the old division into Arctic, Temperate, and Tropical zones approximates the real truth. Such zonation, depending on heat, is far more wide-reaching than one depending mainly on moisture. While the former gives rise primarily to what we in general know as Arctic or Tropical zones, the factor of moisture determines the opposed conditions we distinguish as arid and moist. Differences in the heat factor are universal, resulting in the whole earth being divided into more or less well-marked zones, corresponding in general with isothermal lines. Differences in the moisture factor are relatively local, so that deserts may occur in the midst of the most varied surroundings.

While the larger zones depending on heat are strikingly different, yet each passes gradually into the contiguous ones. Determination of such zones is therefore more or less arbitrary. The scheme of life zones, so far as North America is concerned, that has resulted from the studies of Merriam has been generally adopted. It is as follows:

	(Arctic or Arctic-Alpine zone.	
Boreal region	Arctic or Arctic-Alpine zone. Hudsonian zone. Canadian zone.	
	Canadian zone.	
		Alleghenian area.
	Transition zone	Arid Transition area.
		Pacific or Humid Transition area.
Austral region.	Unper Austral zone	Alleghenian area. Arid Transition area. Pacific or Humid Transition area. Carolinian area. Upper Sonoran area. Austroriparian area. Lower Sonoran area.
	C pper 11 and 11	Upper Sonoran area.
	Lower Austral zone	∫Austroriparian area.
	CIOW I III	Lower Sonoran area.
Marian Laurian		(Humid Tropical area.
ropica region.		Arid Tropical area.

In this scheme zones are based primarily on the distribution of plants and animals as determined by the heat factor. The subdivision of the zones or areas depend mainly on the differences due to the moisture factor. As may readily be imagined, all possible combinations of these two factors occur, so that regions of mixed character are found wherever zones or areas are contiguous. This overlapping of contiguous zones that are usually well marked is perhaps more pronounced in the Pacific northwest than elsewhere in North America. It has been ascribed to the very equable temperature of the region. In consequence of this peculiarity the determination of the life zones in Washington, so as to coordinate them with adjacent regions, presents unusual difficulties. Six life zones or life areas are represented, namely, the Arctic, the Hudsonian, the Canadian, the Humid Transition, the Arid Transition, and the Upper Sonoran.

The first-mentioned zone, the Arctic, is sharply marked, consisting of the alpine flora above timber line. These alpine meadows

correspond in conditions, and in a large part in species, with the arctic meadows north of the limit of timber.

The Upper Sonoran area in eastern Washington is practically coextensive with the distribution of the sagebrush. Agriculturally it is the region where the commercial growing of peaches and water-melons is practicable.

The Humid Transition, or Pacific area, includes the great forests of red fir in western Washington. Other characteristic trees are the giant cedar, red alder, and Oregon maple.

The Arid Transition area in eastern Washington includes two subdivisions, a lower one—the bunchgrass prairies, and an upper—the yellow pine forests.

The Canadian zone has for its most characteristic tree the western white pine. Here, too, the lodgepole pine, the western larch, and the western hemlock are most abundant and best developed.

The Hudsonian is the zone of the subalpine fir, the Alaska cedar, the black hemlock, and the white-bark pine. At their extreme limits of altitude all of these become prostrate mats of branches.

These zones are not separated by level altitudinal lines. This may readily be seen where the Hudsonian and Arctic zones meet. The trees of the former zone extend up the mountain sides much higher on the ridges than in the valleys between. The dividing line is thus a sinuate one. This has been considered by Merriam partly the result of more and less favorable exposure to the sun's rays, and partly to air currents, the warm currents tending to follow up the steep ridges while the cold currents flow down in the valleys. Consequently, certain species ascend highest on the warm ridges, while others descend farthest in the cool valleys.

Exactly similar conditions, but with the forest line reversed, are seen at the low altitude timber line of the yellow pine, where this borders on the bunchgrass prairies. The timber here descends to much lower altitudes along valleys and draws than on the ridges; or, what is the converse statement of the same thing, the bunchgrass flora ascends highest on the warm slope.

The most notable examples of the effect of slope exposure alone are perhaps seen on high ridges, or in canyons that extend in a general east and west direction. For example, Kamiak Butte, a bold peak in Whitman County, has nearly its entire south exposure covered by a bunchgrass flora, while the northern slope is densely timbered with yellow pine and other coniferous trees. In canyons of low altitude the sunny north wall is often timberless, while its shady south wall is timbered.

The same fact is generally true in the case of high mountain peaks. The corresponding zones extend relatively higher on the south or warmer side than on the north or colder side.

Making due allowance for the overlapping of the various zones, the following approximations of their altitudinal limits in Washington may be made:

Upper Sonoran, 65 to 600 meters (200 to 1,900 feet). Humid Transition, 0 to 1,200 meters (0 to 3,800 feet). Arid Transition, 500 to 1,300 meters (1,600 to 4,200 feet). Canadian, 400 to 1,500 meters (1,400 to 5,000 feet). Hudsonian, 1,500 to 2,100 meters (5,000 to 7,000 feet). Arctic, 1,800 to 3,200 meters (6,000 to 10,500 feet).

UPPER SONORAN LIFE AREA.

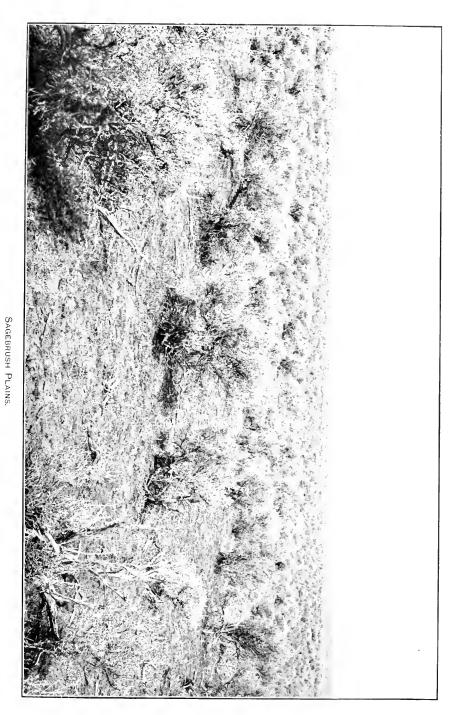

This comprises the western or arid portion of the Upper Austral life zone. It occupies much of the Columbia and Great basins, and the lower portions of the Great Plains eastward to about the one hundredth meridian. It also extends southward into Mexico at increasing elevations along both sides of the Rocky Mountain system. In Washington the area is confined to that portion east of the Cascade Mountains below a contour line approximating 360 meters (1,200 feet), but on southerly slopes it may extend up to 510 meters (1,700 feet), or even more.

From an agricultural standpoint this zone is that in which the commercial culture of such crops as tomatoes, peaches, apricots, and watermelons is possible.

In Washington the most conspicuous plant of this zone is the sagebrush (Artemisia tridentata) (Pl. VI). It marks quite sharply the limits of the Upper Sonoran zone, seldom extending into the zone above, as it commonly does farther southward. Other characteristic, if less abundant, shrubs are rabbit brush (Chrysothamuus nauscosus and C. riscidiflorus), hop sage (Grayia spinosa), antelope brush (Kunzia tridentata, locally known as black sage), and, in alkaline situations, greasewood (Sarcobatus vermiculatus). In a few localities the sagebrush is absent, but in such cases one or more of the other characteristic shrubs is sure to be present.

Excepting such species as are confined to the moist ground along perennial streams, the great majority of the Upper Sonoran plants are either shrubs or thick-rooted perennial herbs or short-lived annuals.

There are in Washington about 500 species of plants which occur in this life zone. Of this number 243 species occur in no other life zone—that is, are distinctive. Furthermore, of this last element 39 species are confined in their distribution to the Columbian Basin of Washington, Oregon, and Idaho, several of them being quite rare and local.

ORIGIN OF THE UPPER SONORAN FLORA.

Some considerations regarding the origin of the Upper Sonoran species of the Washington flora seem to justify definite conclusions. In the geographical history of the Columbia Plains, as above outlined, there was found, during the existence of Lake John Day in Miocene-Tertiary time, a rich flora of subtropical aspect. Subsequent to this time and probably not much prior to the glacial epoch, occurred the principal uplift of the Cascade Mountains. This undoubtedly caused profound changes in climatic conditions, particularly to the eastward of this range, accompanied by correspondingly great changes in the flora.

Succeeding the uplifting of the Cascade Mountains came the Glacial period. During this period immense changes took place in western Washington, but there is scarcely a trace of glacial work on the plain of the Columbia. Nevertheless, in accord with the lower temperatures there was probably a general southward migration of the plants, followed by their return on the retreat of the ice.

Of the changes which have taken place in the flora since the John Day period to the present time there is no record preserved. In this enormous lapse of time—perhaps millions of years—a forest composed of magnolias, elms, sycamores, etc., apparently much like that of the Lower Mssissippi in the present day, has utterly vanished and no near relatives remain, either in the same or adjacent territory.

Inasmuch as somewhat similar subtropical forests existed in Miocene time in western Washington, the causes which have led to their extinction are more profound than such climatic changes as could be occasioned by the Cascade uplift and are to be sought rather in the general causes which have lowered the temperatures of the earth's surface.

There remains, then, but one source from which light may be thrown on the present constitution of the flora—namely, its relation to contiguous floras.

Such considerations naturally focus first on the physical conditions which most likely prevailed at the close of the last great geological cataclysm, namely, the Glacial period. The most conspicuous result of this period of cold is perhaps the large number of Arctic species which occur on all the higher peaks of the Cascades or stranded on isolated mountains, as the Olympics or the Blues—a fact which appears more striking in mountains farther to the southward. However slight the effect of the Glacial period may have been in eastern Washington, it is quite certain that the temperature was such that no plants adapted to Upper Sonoran conditions could survive. They were either driven southward, as were the Arctic plants, or else perished. Following the retreat of the ice, the areas that then became

fitted to support an Upper Sonoran flora could have become inhabited either by the northward extension of already adapted plants, or by the gradual modification of species of a colder zone, or by both. The evidence indicates the first method to have been the most potent.

South of the Columbia Basin are two very distinct floral regions—namely, California and the Great Basin—divided by the Sierra Nevada. It is perfectly clear that Upper Sonoran plants of the Columbia Basin have been derived in part from each of these sources, assuming that plants which range from California or the Great Basin into the Columbia Basin originated in the former regions and not vice versa. This assumption is based on considerations heretofore discussed.

The prevailing winds of the Columbia Basin are from the southwest. So pronounced are these winds that they have had considerable to do with molding the hills in the entire region. Very naturally plants would migrate quite rapidly with these very constant and at times severe southwest winds. The natural route of the Californian plants would be through the low gap in northeastern Californian made by the Klamath River and lakes. Some few plants may have reached the Columbia Basin by way of the Willamette Valley and the Columbia River, but this, if true, is certainly exceptional, not only on account of the long distance and moist region through which these illy adapted plants would have to migrate, but from the actual fact that few Sonoran plants reach the Willamette Valley, the Rogue River Mountains in southwest Oregon forming a sharp and effective barrier to them, but not to Transition plants.

The following lists of Upper Sonoran plants indicate the relative importance of the Californian and Great Basin elements in Washington:

SPECIES OF CALIFORNIA ORIGIN.

Alnus rhombifolia.
Aphyllon comosum.
Blepharipappus glandulosus.
Cryptanthe subglochidiata.
Hemizonia citriodora.
Lepidium dietyotum.
Lupinus microcarpus.
Microseris linearifolia.

Ocnothera strigulosa,
Pectocarya setosa,
Piscaria setigera,
Psitocarphus brevissimus,
Ranunculus hebecarpus,
Rigiopappus leptocladus,
Thysanocarpus curripes,
Tonella collinsioides,

SPECIES OF GREAT BASIN ORIGIN.

Trees.

Celtis douglasii.

Salix ampgdaloides.

Shrubs.

Amelanchier utahensis,
Artemisia tridentata,
Artemisia tripartita,
Chrysothamnus nauscosus,
Ericameria nana,
Eriogonum microthecum,
Eurotia lanata,
Grayia spinosa,

Kunzia tridentata. Ramona incana. Rhus glabra occidentatis. Rhus toxicodendron. Ribes aureum. Ribes cereum. Sarcobatus vermiculatus. Tetradymia canescens.

Herbs.

Adenostegia capitata. Artemisia dracunculoides. Asclepias mexicana, Atriplex canescens. Bergia texana. Carex donglasii. Castilleja pallescens. Chacnactis donglasii. Chorizanthe scatsoni. Chrusopsis villosa. Cleonic Intea. Coldenia nuttallii. Colcosanthus linifolius. Comandra pallida. Corispermum hyssopifolium. Cryptanthe plerocarya. Dondia depressa. Erigeron concinnus. Erigeron divergens, Euphorbia glyptosperma. Gaerineria acanthicarpa. Gaura parvitlora. Gilia leptomeria. Gilia parviflora, Gilia pungens hookeri. Hymenopappus tenuifolius. Iva axillaris. Iva xanthifolia. Lactuca pulchella. Lappula occidentalis. Lupinus pusillus. Mamillaria sp. Mollugo verticillata. Monolepis pusilla. Nicoliana attenuala.

Orcocarya leucophaca. Orobanche Indoviciana. Orogenia linearifolia. Oxytheca dendroidea. Pentstemon acuminatus, Pentstemon deustus, Pentstemon gairducri. Pentstemon glaber. Phaca inflexa. Phaeclia linearis, Phlox longifolia. Phragmites phragmites. Piptocalyx circumscissa, Psoralea lanccolata scabra, Ptiloria paniculala. Ptiloria tenuifolia. Rumex renosus. Schoenocrambe linifolia. Situation hystrix. Solanum Triflorum. Sphacraleca munroana. Sporobolus airoides, Sporobolus asperifolius. Sporobolus cryptandrus. Streptanthus longirostris. Stipa bloomeri. Stipa comata. Stipa occidentalis. Stipa thurberiana. Thelypodium integrifolium, Thelypodium laciniatum. Thelypodium nuttallii. Trifolium megacephalum. Zygadenus paniculatus.

From the foregoing lists it is evident that the greater portion of the Upper Sonoran flora in Washington is of Great Basin origin. The comparatively small proportion of Californian species is probably due partly to the barriers through which few plants of this zone have succeeded in passing. This is indicated by the fact that a much larger proportional number of Arid Transition plants have found their way from California into the Columbia Basin, as hereafter shown.

There is a third element, however, in the make-up of the Upper Sonoran flora of Washington, namely, those species which seem to have originated in the Columbia Basin, or at least are not known elsewhere.

SPECIES PECULIAR TO THE COLUMBIA BASIN.

Abronia mellifera. Antennaria flageltaris. Arabis whitedii. Avenaria franklinii. Claytonia archicola. Conanthus parriflorus. Eragrostis Intescens. Erigeron currifolius. Erigeron filifolins. Erigeron linearis. Erigeron poliospermus. Eriogonum nireum. Eriogonum proliferum. Erusimum occidentale. Gilia leptomeria. Hetianthus ensiekii. Lappula arida. Lappula ciliata. Leptotacnia purpurca. Leptotacnia satmonittora. Lesquerella dougtasii.

Lomatium geyeri. Orcocarya celosioides. Oreocarna spiculifera, Pentstemon glandulosus. Pentstemon pruinosus. Phaca collina. Phaca diphusa. Phaca lyallii. Phaca misella. Phaca reventa. Phaca sclerocarpa. Phaca simuata. Phaca speirocarpa. Phaeclia lenta. Pteruxia terebinthina. Talinum spinescens. Thelypodium streptanthoides. Tonella floribunda. Townsendia florifer. Trifolium megacephalum. Viola trincrrata.

HUMID TRANSITION AREA.

The Pacific coast region west of the Cascade Mountains in British Columbia, Washington, Oregon, and northwestern California, is notable for its moist climate and equable temperature no less than for the very luxuriant forests which these conditions foster. This region has sometimes been referred to as the Northwest Coast Strip, an unfortunate name, as the term "Northwest" has been used in too many senses to give it accuracy. Adopting a suggestion of Mr. D. A. Brodie, the term Vancouver Strip is here given to the region, for which it is desirable to have a definite name in conformity with the remarkably uniform flora and fanna which it possesses. The name above suggested commemorates the name of the navigator who first thoroughly explored the region and whose name has there been attached to the largest island and to two important towns.

Much the greater portion of the Vancouver Strip belongs to the Pacific or Humid Transition area. The most characteristic tree is

the red fir (Pseudotsuga mucronata) which in the Puget Sound region often makes up over 90 per cent of the forest over large areas (Pl. VII), and up to an altitude of 1,000 meters seldom forms a smaller element of the total forest than 60 per cent. Nearly all of western Washington below the altitude mentioned possesses this characteristic red fir type of vegetation, except a narrow strip along the Pacific Ocean. Here the Sitka spruce (Picca sitchensis) becomes the dominant tree, making up from 25 to 75 per cent of the forest, while the red fir falls to 10 per cent or less. This narrow strip has been considered as belonging to the next higher zone, the Canadian, but for reasons hereafter expressed we would include it in the Humid Transition.

The principal features of the vegetation of western Washington may be discussed under the three heads of the principal types of soils, namely, the Uplands, the Bottom Lands, and the Gravelly Prairies. Plant associations of lesser importance, but of marked character, are those of the seashores and of sphagnum bogs.

UPLANDS.

The vegetation of the uplands throughout the Pacific area in Washington is a plant association in which the red fir predominates. The size of this tree and the luxuriance of the associated plants varies with the character of the soil, but otherwise the formation is remarkably uniform. In forests in dry or sterile soils the commonest undershrubs are salal (Gaultheria shallon) and Oregon grape (Berberis nervosa), while the bracken fern (Pteridium) is the most conspicuous herb. Shrubs or trees of Scouler willow (Salix scouleriana) are also constantly associated.

In better soils the same shrubs remain, but the salal especially becomes much more luxuriant, often forming almost impenetrable thickets. When, however, the red fir is at its best, forming dense forests into which the sun scarcely penetrates (Pl. VIII) the salal and Oregon grape are usually much less conspicuous. Under such circumstances the ground is covered with a thick layer of mosses and scattered crowns of Chamisso's shield fern (Polystichum munitum). Among the few shrubs which thrive in such dense shade is the red huckleberry (Vaccinium parcifolium). Following the destruction of a red fir forest by logging and subsequent burning, as has been too commonly the case, there is a marked sequence in the plants that appear, usually as follows: The first are nearly always the fireweed (Epilobium spicatum) and the bracken (Pteridium). These are closely followed by the dewberry (Rubus macropetalus) which the following year fruits heavily and then gradually disappears. The thimbleberry (Rubus parviflorus) is often abundant also, as is redflowered currant (*Ribes sanguineum*). By this time the Scouler willow is conspicuous, and in wet places the red alder (*Alnus oregana*). These two trees dominate the vegetation until the young red firs which spring up in a very dense growth have become large enough to supersede them. The red fir is so completely the dominant tree in the region that as a rule it quickly reforests itself whenever destroyed.

BOTTOM LANDS.

The bottom lands of western Washington are mainly river valleys. Less commonly they occur about lake borders or form marshes. commonest type of forest covering is a red alder and giant cedar association, which, however, is seldom pure. Rarely either one of these trees may occupy the ground exclusively. Usually, however, there are associated various other trees, as white fir (Abics grandis), largeleaved maple (Acer macrophyllum), Oregon ash (Fraxinus oregana), and cottonwood (Populus trichocarpa.) The cottonwood often forms groves of pure growth in the river valleys, and the maple does so occasionally. Moisture of the soil is apparently the one factor that favors the red alder-cedar association, which is quite as common on springy hillsides and upland swamps as in river valleys. Where the amount of soil moisture is not too great the red fir occurs sparingly, but the individuals are often of gigantic size. In bottom lands that are excessively wet, the alder is absent and often the cedar also. lands commonly are covered by dense thickets composed of various species of willows, western cornel (Cornus occidentalis), crabapple (Purus diversifolia), and vine maple (Acer circinatum). These same species form the usual fringe along the banks of small streams flowing through the forest, especially the cornel and the vine maple. such situations occur also various shrubs, as the devil's club (Echinopanax horridum) which, contrary to the oft-told tale, seldom forms dense thickets, the salmon berry (Rubus spectabilis), the fetid currant (Ribes bracteosum), and the red-berried elder (Sambucus callicarpa).

GRAVELLY PRAIRIES.

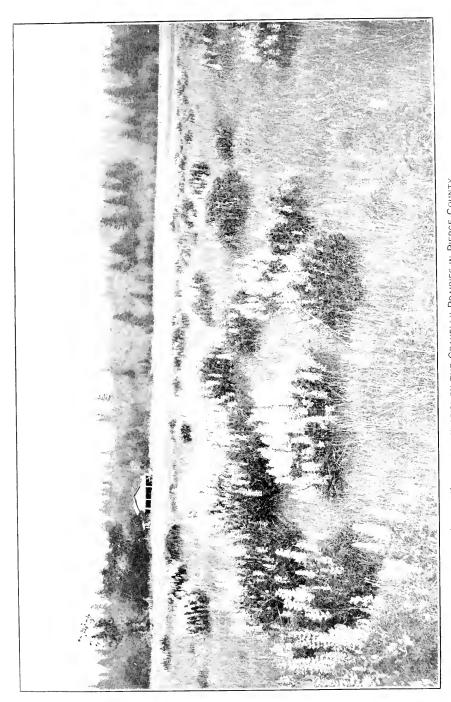

The soil of these prairies, which are comparatively limited in extent, consists mainly of fine water-worn gravel, the pebbles making up perhaps 50 per cent, or more, of the soil. The prairies commonly present the appearance of a sterile pasture (Pl. 1X) with scattered oaks (Quercus garryana) here and there, and occasional beautifully symmetrical young trees of red fir. At the edges of the prairie, where the gravelly soil ceases, a dense forest of red fir usually occupies the ground, the gravelly prairie soil serving as an almost perfect barrier to this tree. In a few localities, where the gravelly soil merges gradually into the ordinary loams or clays of the region, the

PASTURE-LIKE GRAVELLY PRAIRIES IN PIERCE COUNTY.

The trees are young examples of the Pacific post oak (Quercus garryana).

black pine (*Pinus contorta*) disputes the ground with the red fir. Until the middle of July these prairies are carpeted with flowers (Pl. X). After this time they present a distinctly arid appearance.

The flora consists of a considerable number of species which, so far as Washington and Oregon are concerned, do not occur elsewhere, though most of them range into California. Among them are the following:

Arenavia tenella,
Dodecatheon latifolium,
Erythronium giganteum,
Gilia tenella,
Godelia amoena,
Godelia quadrivulnera,
Grindelia integrifolia,
Hemizonella durandi,
Hookera coronata,
Hookera pulchella,
Hosackia gracilis,
Iris tenax,
Lomatium ulriculatum,

Lupinus albicaulis,

Lupinus lepidus,
Microseris laciniata,
Orthocarpus attenuatus,
Platystigma oreganum,
Ranunentus orthorhynchus,
Senecio fastigiata,
Sericocarpus rigidus,
Solidago tolmicana,
Synthyris rolundifolia,
Trifolium leidentatum,
Valerianella congesta,
Viola howellii,

A much larger number of species, however, recur in the Arid Transition area east of the Cascade Mountains. Nearly all of these species are limited to the Pacific coast, ranging from California northward to British Columbia on both sides of the Cascade Mountains. Here, as in the case of the Upper Sonoran species of California origin, there is good reason to believe that most of the species reached the Columbia Basin through the Klamath Gap. Characteristic examples are the following:

Agoseris heterophylla. Alchemilla occidentalis. Alsine nitens. Antennaria howellii. Athusanus pusillus. Balsamorhiza balsamorhiza. Balsamorhiza deltoidea. Boisduralia stricta, Carum gairdneri, Caucalis microcarpa. Ceanothus sanguineus. Collinsia grandiflora. Crocidium mullicande. Eriocephalum lanatum. Erigeron speciosus. Gilia capitata. Gilia gracilis. Gilhopsis specularioides, Heterocodon rariflorum. Henchera cylindrica. Hieracium scouleri.

Hookera hyacinthina. Hosackia decumbens. Lomatium nudicaule, Lomatium triternalum. Micrampelis oregana. Navarretia intertexta. Peclocarya penicillata. Pinus ponderosa. Polemonium micranthum. Prunus demissa, Psilocarphus clatior. Quercus garryana. Sedum douglasii. Sidaleca campestris. Silene menziesii. Sisyrinchium grandiflorum. Tellima parviflora. Thysanocarpus curripes. Touclla collinsioides. Zygadenus venenosus.

A third series of species, few in number, presents a puzzling problem. It consists of Arid Transition plants common enough east of the Cascade Mountains, which are known to occur west of these mountains only on Whidby Island, or, in a few cases, on neighboring islands. They deserve particular mention.

Siercesia ciliata is abundant east of the Cascades, ranging as a common plant to Minnesota and Nebraska, and as a rarity even to New England. West of the Cascades it is known only from the prairies of Whidby Island.

Aphyllon comosum, a parasite on various asteraceous plants, is not rare in eastern Washington, and ranges east of the Cascades to California. It has also been found on Whidby and San Juan islands on Grindelia.

Polemonium micranthum and Lupinus microcarpus, both on Whidby Island, together with Platyspermum scapigerum, Aster conspicuus, and Scatellaria angustifolia, known from Vancouver Island, are cases practically parallel to that of Aphyllon comosum.

Iris missouriensis is abundant east of the Cascades, ranging to Dakota and Nebraska. Its station near Coupeville is the only one known in the Vancouver strip.

Juniperus scopulorum, which crosses the Cascades to reappear in Island and San Juan counties, is a somewhat similar case.

There needs to be mentioned also the only cactus that occurs in the Vancouver strip, Opuntia polyacantha borcalis, confined to the island in the northern part of Puget Sound.

Only one physical factor presents itself which may explain these strange cases, namely, the fact that these islands lie in the lee of the Olympic Mountains, and therefore have a lesser rainfall, as may be seen by comparison with the rainfall map. The conditions, therefore, more nearly approximate those of the Arid Transition area than any other portion of Washington west of the Cascade Mountains. But, admitting this to be true, it is difficult to see how these species could have crossed the barrier of the Cascade Mountains. The only other alternative would seem to be that these species once occupied much of the Vancouver strip, and have persisted northward only in this somewhat drier region of Whidby and adjacent islands.

The case of a few Vancouver Island plants, like *Lilaca subulata*, *Festuca reflexa*, and *Microseris bigelorii*, not otherwise known north of Oregon, and especially the cases of *Baeria gracilis* and *Allocarya chorisiana*, which leap from California to Vancouver, seem, however, to lend weight to the latter hypothesis.

SEASHORES.

Immediate proximity to the sea furnishes conditions that support a strip of vegetation consisting of few but very characteristic species. On the Washington coast there are two marked formations—the sand dunes and the salt marshes.

Typical sand dunes are confined to the ocean coast, not occurring on Puget Sound. The important sand-loving plants are:

Abronia latifolia. Abronia umbellata. Carex macrocephala Glehnia littoralis. Lathyrus littoralis, Lupinus littoralis, Poa macrantha, Tanacctum huroneusc,

Less abundant, but not less characteristic, are:

Agoseris maritima. Carex pansa. Gaertneria chamissonis. Juncus lescurii. Pentacaena ramosissima, Poa confinis, Potygonum paronychia, Sanienta howettii,

In the lee of the dunes or on shores where the sand does not drift there is often a strip of black pine (*Pinus contorta*), forming dense thickets, the trees seldom over 30 feet high. Where not timbered various species adapted to campestrine conditions abound, but few of them are confined to the seashore. Such are:

> Argentina anscrina, Carduns edulis, Cerastium arvense, Festuca rubra,

Fragaria chilocusis, Trifolium wormskioldii, Viola adunca,

Intermediate in character between these meadowy beaches and sand dunes are sand spits and high, sandy beaches. These maintain, in consequence, a rather mixed flora.

Salt or brackish marshes are most commonly found on low shores, especially near the mouths of streams, where they are at least occasionally covered by high tides. They often occur also behind high sea beaches. Most of the plants are those which love a saline soil. The most characteristic are saltgrass (*Distichlis spicata*) and glasswort (*Salicornia ambigua*), the latter often infested with a dodder (*Cuscuta squamigera*).

 Λ portion of the plants found in these seashore marshes are confined to the immediate proximity of the sea. Such are:

Ammodenia peploides. Atriplex littoralis. Carex cryptocarpa. Coclopleurum maritimum. Conioselinum fischeri. Janmea carnosa, Lathyrus maritimus, Orthocarpus castilleioides, Sidaleca hendersoni, Tissa marina,

Others occur also in alkaline marshes in the interior, such as *Juneus* balticus, Glaux maritima, and Triglochin maritimum.

 Λ few other species exhibit a marked predilection for proximity to the sea without being apparently either sand-loving or salt-loving plants. Such are:

Artemisia suksdorfii, Calamagrostis aleutica, Hydastylus borealis, Hydastylus brachypus, Poa pachypholis, Polypodium sconleri, Salix hookeriana, Selaginella struthioloides,

In addition to these the marine aquatic genera Zostera and Phyllospadix deserve mention as our only genera of flowering plants found in the ocean. The related *Ruppia maritima* occurs in brackish waters.

SPHAGNUM BOGS.

Sphagnum bogs are quite common throughout western Washington. The usual shrubs are Labrador tea (*Ledum latifolium*), laurel (*Kalmia ylauca*), and eranberry (*Oxycoccus oxycoccus intermedius*). Usually a willow (*Salix myrtilloides*), sweet gale (*Myrica yale*), and a dwarf birch (*Betula ylandulosa*) are present also. On the drier hummocks small hemlocks (*Tsuga heterophylla*) often occur, and in similar situations one is often surprised to find the black pine (*Pinus contorta*), typically a plant of barren, gravelly or sandy soil.

The more interesting and characteristic herbs are sundew (*Droscra rotundifolia*), cotton-grass (*Eriophorum russcolum*), *Scheuchzeria palustris*, and *Juncus oregana*.

In the bogs near the ocean coast *Ledum columbianum* and *Myrica californica* replace their two close relatives.

THE COASTAL STRIP.

One other important forest association of Washington, namely, the tideland or Sitka spruce forests, in immediate proximity to the Pacific Ocean, is perhaps best classed as Humid Transition zone rather than otherwise. The facts in the distribution of this species are peculiar. It is the dominant tree, forming over 50 per cent of the forest strip, along the coast from middle Oregon northward to Kadiak Island, beyond which all timber ceases, and the flora becomes almost that of the Artic Zone. Therefore we have this one species of tree dominating a continuous stretch of sea level, from the Arctic Zone to the Humid Transition, through both the Hudsonian and the Canadian zones. In the north the Sitka spruce forests end sharply with the arctic meadows. In the south they merge imperceptibly with the red-fir forests. This enormous stretch of a single species at sea level is probably due to the remarkably equable temperature and great humidity of the immediate seacoast,

That this strip of Sitka spruce should be considered Humid Transition rather than Canadian or Hudsonian is open to question. Accompanying the spruce throughout all or nearly all of its range, are some other plants, such as Ribes laxiflorum, Moneses uniflora, Menziesia ferruginea, Cornus canadensis, and Viola glabella, which in the Cascade Mountains occur mainly or only in the Canadian or Hudsonian zones.

On the other hand, it is very evident that the great majority of the plants in the Sitka spruce forests of Washington are truly Transition plants. Indeed, some of the most characteristic of the undershrubs of the red-fir forests are even more luxuriantly developed in the spruce forests, such as the salal (Gaultheria shallon), red huckleberry (Vaccinium parvifolium), and the evergreen huckleberry (V. oratum). Some others, as the salmon berry (Rubus spectabilis) and the devil's club (Echinopanax horrida), accompany the spruce throughout nearly all of its range, and likewise occur in the Cascade Mountains far above it in altitude.

Other facts of plant distribution also bear out the conclusion that the mixed floral character of the ocean coast is due to the remarkably equable temperature. One of these is the fact that a number of Alaskan plants follow down the coast with the spruce, but do not follow down the mountain ranges. Such are the marsh plants Viola langsdorfii, Nephrophyllidium crista-galli, and Caltha asarifolia; the dune plants, Carex macrocephala, and Glehnia littoralis; and Calamagrostis alcutica, Coelopleurum gmelini, which on the Washington coast splits into two supposedly different species, Carex cryptocarpa, Conioselinum fischeri, and Ammodenia peploides.

On the other hand, the northward extension of various Californian coastal plants overlaps the southward extension of these Alaskan species. Among these are Abronia latifolia and A. umbellata, Angelica hendersoni, Gaertneria chamissonis, Myrica californica, and Pentacaena ramosissima.

Perhaps, too, the peculiar conditions of this coastal strip may aid in explaining the local abundance of *Pinus contortu*, which otherwise reappears principally in the lodge-pole forests of the Canadian zone.

The zonal position of the Sitka spruce itself is a difficult matter to decide. Undoubtedly it reaches its greatest development as to size on the Washington and Oregon coasts, but on the Alaska coast it reaches its greatest development as regards number of individuals and domination of the forest.

ARID TRANSITION AREA.

In Washington this is confined entirely to the eastern portion, except, perhaps, a few limited localities west of the Cascades, here-tofore discussed. In our limits this area has two marked subdivis-

sions. The lower subdivision is grass-covered and lies immediately above the zone of the sagebrush. The conspicuously abundant plants are bunchgrass (Agropyron spicatum) and a June grass (Poa sandbergii). Indeed, these areas are often called bunchgrass prairies. They constitute the most extensive and valuable lands of the Columbia Basin, and consist entirely of basaltic soil, except in a few gravelly valleys of glacial origin. The upper subdivision is covered by a forest of yellow pine. This grows mostly on soils of granitic origin above the level of the Columbia lava.

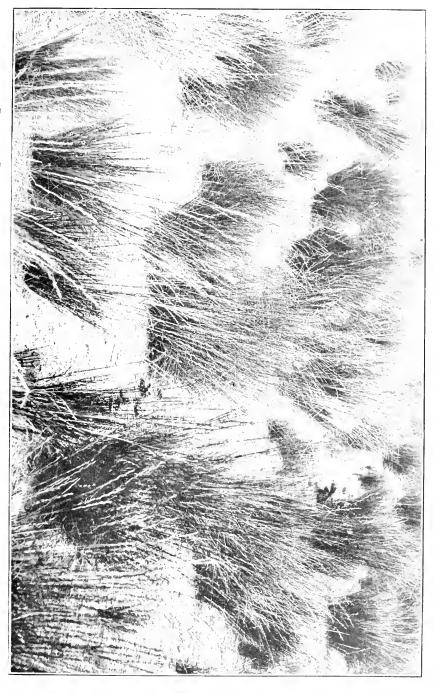

THE BUNCHGRASS PRAIRIES.

These constitute a belt of varying width lying between the zone of sagebrush below and that of yellow pine above. Altitudinally they lie between 500 and 800 meters. The bunchgrass prairies are best developed in extreme eastern Washington, there constituting the rolling hills known as the Palouse and Walla Walla regions. In the so-called "Big Bend Country" of Lincoln and Douglas counties the prairies are very similar, but less rolling. In Yakima and Klickitat counties the bunchgrass lands are confined to the high plateaus, known as the Rattlesnake Mountains and Horse Heaven (Pl. XI). On the eastern slopes of the Cascade Mountains they are limited in extent.

The basaltic soil of these prairies where the rainfall is comparatively large is a black clay loam, perfectly free from grit. The subsoil is similar, but yellowish in color. These soils have originated wholly from the decomposition of basalt in place, and vary from a few inches to 50 feet or more in depth. Owing to the prevailing southwest winds the hills have, as a rule, much steeper north and northeast slopes, on which the accumulated soil is unusually fine and deep. These moister "north hillsides" support a vegetation much like the narrow vales or draws between the hills.

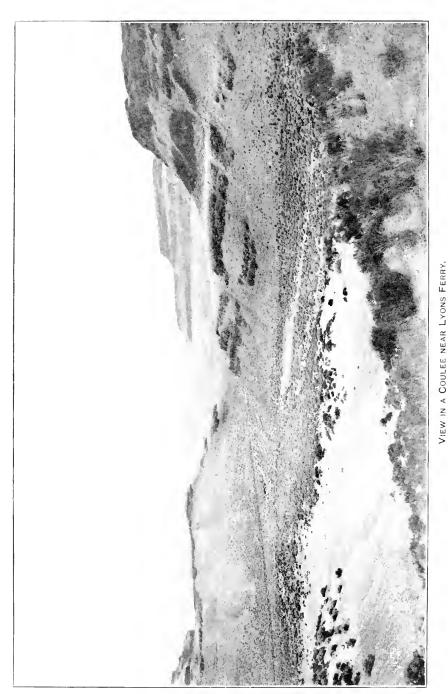

In regions of decreasingly less rainfall there is a correspondingly smaller degree of disintegration of the basaltic rock, which indeed often crops out upon the surface. Such rocky lands are locally called "scab" or "scablands." The lie for the most part between the typical bunchgrass prairies and the sagebrush plains, but possess in the main the flora of the former.

The bunchgrass prairies (Pl. XII) are treeless, and excepting along streams and by springs, or on north hillsides, shrubs are rarely seen. Of the herbaceous vegetation, apart from the grasses, the most conspicuous plants are the lupines (Lupinus ornatus, L. sericeus, and L. wyethii), often very abundant: the sunflowers (Balsamorhiza sagittata and Helianthella douglasii), Gaillardia aristata, Geranium incisum, and Leptotaenia multifida. In moister places Iris missouriensis

and the "black sunflower" (Wyethia amplexicaulis) often occupy large areas in nearly pure growths.

Along the streams and by springs willows of several species, together with a thorn (Cratacgus brevispina) form thick copses. Occasionally aspens (Populus tremuloides) and cottonwood (P. trichocarpa) form groves. The commoner undershrubs are snowberry (Symphoricarpos racemosus), roses (Rosa untkana and R. pisocarpa), and gooseberries (Ribes incrme and R. irriguum). Intermingled with these are other shrubs of less importance. Occasionally, however, the birch (Betula microphylla) is the most abundant shrub. The accompanying herbaceous vegetation is richer and more varied than on the hills, but the individuals are relatively less abundant. Among the more conspicuous are:

Castilleja miniata. Clematis hirsutissima. Heraeleum lanatum. Lupinus leucophyllus. Sidaleca oregana. Solidago serotina, Urtica lyatlii, Urtica holosericea, Valeriana ceratophylla, Veratrum californicum,

The north hillsides flora consists mainly of plants found in the "draws," though there are several species which, while not entirely confined to the north hillsides, flourish there especially well. Such are the adder's tongue (*Erythronium grandiflorum*), blueberry (*Vaccinium cespitosum*), *Trillium petiolatum*, and *Capnorea villosula*.

The scablands, which as before stated lie mainly between the zone of sagebrush and that of bunchgrass, possess in large part the flora of the latter. A few species, however, are quite characteristic of these basaltic outcroppings. One of these is a service-berry (Amelanchier cusickii) which often occurs in the cracks of basalt crags. The rock-rose or bitterroot (Lewisia rediviva) occurs abundantly in the crevices of "scab," making a brave show with its beautiful rose-colored flowers. Where a thin soil is formed, the scabland sagebrush (Artemisia rigida) often occurs in considerable areas. Other plants usually found only in scablands are:

Arabis cusickii, Eriogonum thymoides, Lomatium canbyi, Lomatium farinosum, Lomatium grayi, Lomatium macrocarpum, Talinum spineseens, Viola trinervata,

The conspicuous basaltic outcroppings along canyons and coulees are locally known as "rimrock." The rimrock flora is in general the same as that of scablands of similar elevation. (Pl. XIII.)

29418—06 м——4

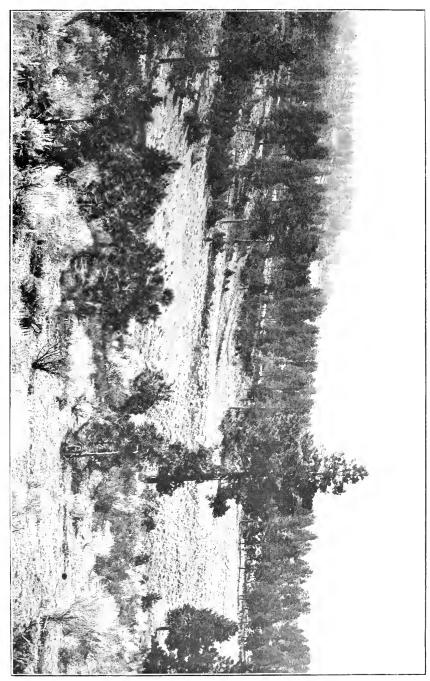

THE YELLOW PINE FORESTS.

The vellow pine belt in eastern Washington lies between the altitudes of 550 and 1,000 meters (1,800 and 3,300 feet). In places the characteristic tree, the vellow or bull pine (Pinus ponderosa). deseends nearly to sea level, as along the Columbia River, and specimens of the trees are occasionally found at 1.800 meters (6,000 feet) altitude. This tree exhibits a marked predilection for soils of granitic origin, and whenever such soil is found, even if completely isolated, the vellow pine is quite sure to occur. The zonal distribution of the tree is not primarily due, however, to a soil factor. The raised dome of the northern portion of the Blue Mountains, wholly basaltic, is timbered with this tree. Likewise narrow tongues of the Columbia basalt of the usual elevation, 600 to 750 meters (2,000 to 2,500 feet), extending into Idaho between the flanks of granitic mountains, are covered with yellow pine forests. Nevertheless, it is apparent that this tree encroaches on the clayey basaltic soils with difficulty. Whether this is owing to the inability of the seedlings to struggle with the herbaceous vegetation or to a lack of adaptation to the soil itself, or to some other factor, remains to be determined. From the fact that the vellow pine establishes itself on basaltic clay soils under favorable conditions of moisture and temperature, as in the Blue Mountains, or of the shading and abundant sceding that the surrounding forests provide in western Idaho, it is evident that the soil factor is not the only one that has prevented the spread of the pine forest.

Yellow pine forests (Pls. XIV, XV), where pure, are open in character, and marked by the relatively small amount of forest litter. There is a rather scattered growth of various shrubs, consisting of ninebark (Opulaster panciflorus, buckbrush (Ceanothus sanquincus), and rose (Rosa gymnocarpa). At a somewhat higher altitude where the yellow pine is at its best, the commonest undershrub is the huckleberry (Vaccinium macrophyllum). Where such forests are more open the most abundant plant is often the pinegrass (Calamagrostis suksdorfii).

Yellow pine forests are, however, seldom pure, except at low altitudes in rather dry soil. In the moister situations afforded by higher altitude, shaded slopes, or valleys, the yellow pine is usually mixed with red fir (*Pseudotsuga mucronata*) in varying proportions. Indeed, as the moisture becomes greater the proportion of the red fir increases until it becomes the predominating tree. The increasing proportion of red fir is usually accompanied by a proportional increase in the density of the forest and the amount of litter. Shrubs, too, become more abundant both in species and individuals, and under favorable circumstances, as in old burns, some of them, espe-

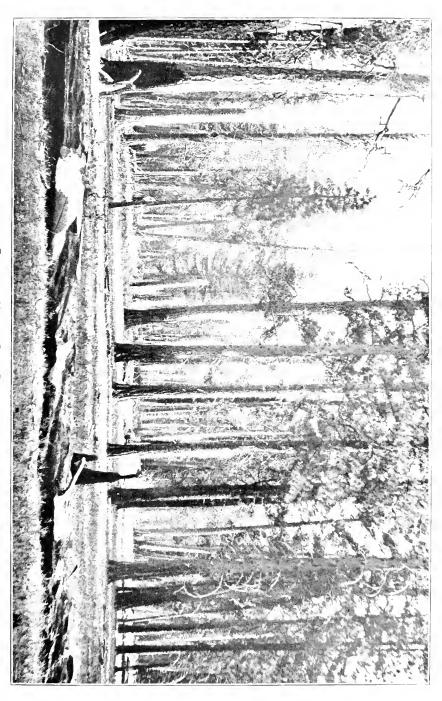

Contr. Nat. Herb. Vol. M. PLATE XIV.

FOREST OF YELLOW PINE (PINUS PONDEROSA).

On the eastern slope of the Blue Mountains, south of the Oregon line.

cially sticky laurel (*Ceanothus velutinus*) and thimbleberry (*Rubus parvitlorus*), form dense thickets.

Such Arid Transition forests, in which the red fir becomes the most abundant tree, resemble very closely the Humid Transition forests of western Washington. Indeed, they are intermediate in character between the two, merging at lower altitudes into the ordinary yellow pine forests, and at higher altitudes into the Canadian or white pine zone. Inasmuch as the Canadian and higher zones in the Bitterroot Mountains have a flora very similar to that of the Cascade Mountains, it is not surprising that the higher and moister portion of the Arid Transition shows a like similarity.

CRIGIN OF THE ARID TRANSITION FLORA.

The Arid Transition flora, like the Upper Sonoran, is clearly made up for the most part of three sets of species. These may be denominated the Californian element, consisting of plants which have migrated from California; the Rocky Mountain element, species whose distribution is easterly and southerly from the region here considered; and the Columbian element, those species which are confined to the Columbia Basin and have in all probability originated there.

THE CALIFORNIA ELEMENT.

This consists of species which range from California through the low passes in the Klamath region into the Columbia Basia. A large number of the species range also into the Willamette Valley on the west side of the Cascade Mountains, most of these also reaching the gravelly prairies of western Washington. These species have been discussed in connection with the Humid Transition area. The following list is composed of species confined to the Arid Transition area east of the Cascade Mountains:

Agoseris grandiflora, $Agoseris\ retrorsa.$ Alopeeurus californicus. Amsinekia intermedia. Arabis subvillosa, Arenaria pusilla. Calandrinia menziesii. Calochortus macrocarpus, Ceanothus prostratus. Clarkia rhomboidea, Cuscuta californica. Deschampsia calycina. Elatine californica. l riogonum sphaerocephalum, Eryngium articulatum. Festuca confusa.

Festuca pacifica, Frascra nitida. Gilia harknessii. Lagophylla ramosissima. Lepidium nitidum. Linum digynum. Lomatium piperi. Melica fugax. Merathrepta californica. Microseris nutaus, Mimulus pulsiferac. Orthocarpus hispidus. Orthocarpus tennifolius. Pectocarya penicillala. Peelocarya musilla. Planiobothrys tenellus.

Polygonum greenei.
Polygonum parryi.
Ptilocalais nutans.
Ptilonella scabra.
Scribneria bolanderi.
Scutellaria angustifolia.
Sidaleca oregana.
Trichostema oblongum.

Trifolium ciliolatum.
Trifolium cyathiferum.
Urtica holosericea.
Valerianella macrocera.
Veratrum californicum.
Wycthia angustifolia.
Zygadenus venenosus.

THE ROCKY MOUNTAIN ELEMENT.

This consists of species which range from the foothills of the Rocky Mountains and related chains northward or northwestward into the Columbia Basin. Their number is much less than those of California origin. Among them are the following:

Adenostegia capitata, Agoseris glanca, Antennaria dimorpha. Arabis holboclii, Artemisia dracunculoides, Cereocarnus ledifotius. Cornus stolonifera. Disporum maius. Erigeron corymbosus, Eriogonum elatum, Eriogonum heraeleoides. Frasera speciosa, Fritillaria pudica. Gaillardia aristata. Galium asperrimum. Gilia aggregata, Gratiola virginiana, Hookera donglasii.

Lithospermum pilosum. Lomatium ambiguum, Lomatium gravi. Luninus leucophullus. Lycopus lucidus. Monolepis nuttulliana. Opulaster panciflorus. Orthocarpus luteus, Ranunculus glaberrimus. Senecio serra. Silene menziesii. Solidado missouriensis. Steironema ciliatum. Sunthuris rubra. Tellima tenella. Thermopsis montana, Valeriana ceratophylla. Wyethia amplexicaulis.

THE COLUMBIA BASIN ELEMENT.

Considering the recent geological origin of the Columbia Basin, the number of species peculiar to it both in the Upper Sonoran and Arid Transition areas is remarkably large. The number would be greatly increased by including Oregon forms that do not cross the Columbia River. The Arid Transition species are as follows:

Allium douglasii.
Amelanchier basalticola.
Antennaria generi.
Antennaria stenophylla.
Arabis cusickii.
Artemisia rigida.
Boisduvalia glabella.
Castilleja camporum.
Castilleja lutescens.
Clarkia putchella.

Claytonia dichotoma, Eriogonum thymoides, Frasera albicaulis, Helianthella douglasii, Lomatium canbyi, Lomatium cous, Lomatium farinosum, Lomatium gormani, Lomatium watsoni, Orthocarpus burbatus, Parrya menziesii,
Pentstemon attenuatus,
Pentstemon pinetorum,
Pentstemon richardsonii,
Pentstemon triphyllus,
Phaca arrecta,
Phaca conjuncta,
Phaca spaldingii,
Physaria geyeri.

Platyspermum scapigerum.
Polygonum polygaloides.
Ranunculus triternatus,
Silene spaldingii.
Sphaeraleea longisepala,
Trifolium douglasii.
Trittium petiolatum.
Viola trinervala.

COMPARISON OF THE HUMID AND ARID TRANSITION FLORAS.

As before stated, the Cascade Mountains form a sharp and efficient barrier between the areas of the Transition zone. The Humid Transition does not cease abruptly with the crest of the Cascade Mountains, but many species descend for some distance on the eastern slope, at lower altitudes becoming mixed indiscriminately with Arid Transition plants.

In the moisture portions of the western slopes of the Bitterroots and in the Blue Mountains the climatic conditions approach those of western Washington. It is therefore not surprising that in the moister portions of the yellow pine subarea in western Idaho a great many of the Humid Transition plants of western Washington reappear. Indeed at least one-half of the species are thus common, and it is therefore largely an arbitrary matter to class the one as Humid Transition, the other as Arid.

The complex nature of the problem is realized, however, when we consider the remaining species. They may be thus grouped: First, those that occur in the Vancouver strip, but not in North Idaho; second, those that occur in Idaho, but not in the Vancouver strip, and third, those that are abundant in Idaho, but very rare in the latter area. The following tables bring out clearly the relative importance of these elements:

PLANTS EQUALLY COMMON IN THE HUMID TRANSITION AREA OF THE VANCOUVER STRIP AND THE MOISTER PORTION OF THE YELLOW PINE SUBAREA IN NORTH IDAMO.

Trees.

Abics grandis.
Acer douglasii.
Pinus contorta.
Pinus monticola.
Populus trichocarpa.
Pseudotsuga mucronata.

Rhamnus purshiana. Salix scoulcriana. Taxus brevifolia. Thuya plicata. Tsuga mertensiana.

Shrubs.

Alnus sinuata.
Amelanchier florida.
Ceanothus sanguineus.
Ceanothus velutinus.
Chimaphila umbellata.
Linnaca americana.
Lonicera involucrata.
Menziesia ferruginea.
Opulaster opulifolius.

Pachystima myrsinites.
Ribes lacustre.
Rosa gymnocarpa.
Rubus lencodermis.
Rubus parviflorus.
Salix cordata.
Schizonotus discolor.
Vaccinium macrophyllum.

Herbs.

Actaca arguta. Adenocaulon bicolor. Alsine crispa. Alsine longipes. Antennaria howellii. Aquilegia formosa. Asarum candatum. Asplenium cyclosorum. Cardinis edulis, Carex amplifolia. Carex stipata. Cephalanthera austinae. Cinna pendula. Circuca pacifica. Cutherea bulbosa. Dryopteris dilutata. Festuca occidentalis. Festuca subulata. Galium trifidum. Geum macrophullum. Gilia capitata, Hieracium albiflorum. Lactuca spicata. Lusichiton kamtschateensis. Melica subulata. Micromeria chamissonis. Mimulus moschatus. Ophrys cordata. Panicularia pauciflora. Peramium menziesii. Pteridium aquilinum pubescens. Parola anhulla. Pyrola bracteata. Pyrola incarnata. Pyrola picta. Quamasia quamash. Ranunculus bongardi, Scirpus microcarpus. Solidago clongata. Trantvetteria arandis. Trillium ovatum. Vagnera amplexicaulis. Vaquera sessilifolia. Viola adunca. Washingtonia diraricata. Xerophyllum tenar.

PLANTS THAT OCCUR IN THE VANCOUVER STRIP. BUT NOT IN NORTH IDAHO.

Trees.

Acer circinatum. Acer macrophyllum. Alnus oregana. Arbutus menziesii. Pyrus diversifolia. Salix lasiandra.

Ribes divarieatum.

Shrubs.

Arctostaphylos tomentosa.
Gauttheria shallon.
Rhododendron californicum.
Rhus diversiloba.
* Ribes bracteosum.

Ribes sanguineum. Sambucus callicarpa. Vaccinium oratum. Vaccinium parcifolium.

Herbs.

Achlys triphylla.
Allotropa rirgata.
Bikukulla formosa.
Equisctum telmatcia.
Hemitomes congestum.
Juneus covillei.
Juneus oxymeris.
Lathyrus polyphyllus.
Leptaxis menziesii.

Lupinus vivulavis,
Petasites speciosa,
Poa howellii,
Polypodium occidentale,
Struthiopteris spicant,
Synthyris votundifolia,
Vancouveria hexandra,
Vicia gigantea,
Viola howellii,

PLANTS THAT OCCUR IN THE MOISTER PARTS OF THE YELLOW PINE SUBAREA IN WESTERN IDAHO, BUT NOT IN THE HUMID TRANSITION OF WESTERN WASHINGTON.

Trees.

Alnus tenuifolia.

Lavix occidentalis.

Shrubs.

Andromeda polifolia.
Berberis repens,
Chiogenes hispidula,
Cornus stolonifera,
Lonicera conjugialis,
Rhamnus alnifolia.

Ribes irrigaum, Ribes viscosissimum, Rubus strigosus, Sambucus melanocarpa, Spiraca corymbosa, Spiraca menzicsii,

Herbs.

Aconitum columbianum,
Acorus calamus,
Antennaria racemosa,
Aralia nudicaulis,
Arnica cordifolia,
Aster lacris geyeri,
Calochortus elegans,
Carex geyeri,
Carex nebraskensis,
Clematis columbiana,
Clematis hirsulissima,
Coptis occidentalis,
Frascra thursifora,

Gentiana oregana.
Hydrophyllum capitatum,
Ligusticum verticillatum,
Mitella stauropetala,
Pentstemon pinetorum,
Petasites dentata,
Ranunculus platyphyllus,
Rudbeckia occidentalis,
Sunicula marilandica,
Sphaeraleca rivularis,
Synthyris rubra,
Therofon majus,
Trillium petiolatum,

HUMID TRANSITION PLANTS COMMON IN WESTERN WASHINGTON, BUT VERY RARE IN NORTHERN IDAHO.

Trees.

Cornus nuttallii. Occurs only in the valley of the middle fork of the Clearwater.

Shrubs.

Berberis nervosa. Near Farmington.
Cornus occidentalis. Near Spokane, Wash.
Corylus californica. Near Kettle Falls, Wash.
Echinopanax horridum.
Gaultheria ovatifolia. Priest Lake.
Rubus macropetalus.
Rubus spectabilis. Priest Lake, very rare.

Herbs.

Antennaria howellii. Cedar Mountain. Spangle, Wash. Claytonia parrifolia. Priest Lake; Packsaddle Peak. Collinsia grandiflora. Troy. Collomia heterophylla. Wiessner Peak. Corallorhiza striata. Cedar Mountain. Erigeron speciosus. Fritillaria lanccolata. Farmington Landing. Palouse City, Wash. Heuchera cylindrica. Near Lewiston. Hosackia bicolor. Howellia aquatilis. Lake Tesemini. Lilium parriflorum. Lake Pend Oreille. Maianthemum bifolium kamtschatieum. Priest Lake. Micrampelis oregana. Umatilla River, Oreg. Kettle Falls, Wash. Mitella caulescens. Farmington Landing. Polygonum bistortoides. Near Moscow. Polystichum munitum. Cedar Mountain. Also in Blue Mountains. Psoralca physodes. One station near Troy. Saxifraga orcgana. Priest Lake. Stenanthium occidentale. Priest Lake. Tricutalis latifolia. Wiessner Peak. Blue Mountains, Wash, Vaccinium oralifolium. Priest Lake.

In this connection the fact may also be pointed out that in several cases the species of the coast region are replaced in Idaho by very close allies. This fact is illustrated by the following pairs:

Coast region of Washington:
Alnus oreyana.
Philadelphus gordonianus.
Potentilla gracilis.
Ranunculus orthorhynchus.
Ribes divaricutum.
Salix lusiandra.
Sambucus callicarpa.
Spiraca douglasii.
Viola sempervirens.

Northern Idaho:
Alnus tenuifolia,
Philadelphus lewisii,
Potentilla blaschkeana,
Ranunculus platyphyllus,
Ribes irriguum,
Salix lancifolia,
Sambucus melanocarpa,
Spiraca menziesii,
Viola orbiculata,

Perhaps the most significant of the above lists is that of the species which are now so rare in Idaho, but abundant in western Washington. These species must be either relatively newcomers, just obtaining a foothold, or else old inhabitants, now on the verge of extinction, so far as this immediate region is concerned. The latter hypothesis

seems to be by far the more likely one. First, because these rare species show none of the aggressiveness to be expected in recent introductions that have found a congenial environment: second, because this hypothesis fits in with the explanation that these species were forced southward in the glacial period, and under the changed conditions following have lingered in regions to which they are not well adapted.

One other fact indicates also that many species have had to adjust themselves to a changed environment, and as this has been done without morphological change, the readjustment must have been recent. In endeavoring to fix the zonal limits of plants which occur on both sides of the Cascade Mountains, the curious fact becomes evident that many species have a lower zonal range in the interior region than that which they occupy in the coastal area. Among the examples may be cited the following:

Populus trichocarpa, a Humid Transition or even Canadian species in western Washington, is more abundant east of the Cascades as an Upper Sonoran than as an Arid Transition plant. Other species of which the same statement holds true are:

Delphinium menziesii. Geranium caroliniunum. Henchera cylindrica. Lomatium nudicaule. Rhamnus purshiana. Schizonotus discolor. Specularia perfoliata.

It may be argued that the Humid Transition character of these plants is not altogether demonstrated in their zonal range in western Washington where no lower zone occurs. But nearly all of the above species in their range southward confine themselves strictly to the Transition Area.

Some species, typically Canadian on the west slopes of the Cascades, are just as typically Arid Transition in the Bitterroots. *Vaccinum macrophyllum* is perhaps the most conspicuous example of this, but it is also illustrated in less degree by *Pterospora andromedea* and *Cornus canadensis*.

Pedicularis racemosa and P. bracteosa in the Cascades and Olympics are Hudsonian species, extending more or less into the Arctic above or the Canadian below. On the west slope of the Bitterroots they occur in undoubted Arid Transition, ranging also into the Canadian. This same statement also applies to:

Abics lasiocarpa.
Alnus sinuata.
Gaultheria ovatifolia.
Hemieva vannuulifolia.
Hydrophyllum albifrons.
Pentstemon confertus.

Pentstemon procerus.
Polygonum bistortoides,
Saussurea americana.
Stenanthium occidentale.
Thalictrum occidentale.
Trantvetteria grandis.

These instances are not to be confused with those illustrated by plants of wide altitudinal range, like Castilleja miniata, which occurs in all the zones from Upper Sonoran to Arctic, as do also Castilleja angustifolia, Aquilegia formosa, Heracleum lanatum, Hypericum scouleri, Achillea millefolium, and others.

The condition that has determined this strange nonconformity in the altitudinal or zonal relations of the species above mentioned is perhaps to be sought in the lower winter temperatures of the interior. This factor alone may tend to confine a species to the lowest zonal position in which it can maintain its existence.

THE CANADIAN ZONE.

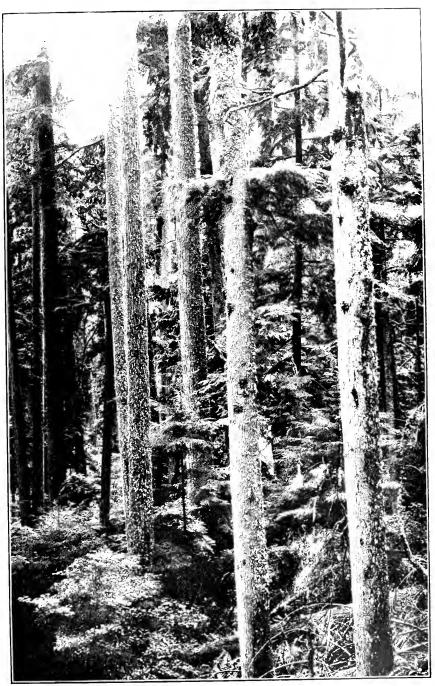

This is the most illy defined of all the life zones in Washington, merging into the Transition below and the Hudsonian above. Its most characteristic tree is perhaps the western white pine (Pinus monticola), but in Washington this tree is not abundant. In the Olympic and Cascade mountains the amabilis fir (Abies amabilis) is also a characteristic tree, as is its near relative, the noble fir (A. nobilis), found in the Cascades from Mount Stuart southward. Apart from these truly characteristic trees, the white fir (Abies grandis) and the western hemlock (Tsuga heterophylla) (Pl. XVI) both find their best development in the Canadian zone, but both also are not rare at sea level. The dominant tree of the Humid Transition zone, the red fir, also thrives in the company of its Canadian relatives.

On the eastern slopes of the Cascades, and more especially in the mountains of eastern Washington, two other trees appear in the Canadian zone, the Engelmann spruce (*Picea engelmanni*) and the western larch (*Larie occidentalis*), while the amabilis and noble firs disappear.

A characteristic plant association of this zone is that of the lodgepole pine, a form of *Pinus contorta*, which often forms dense forests. The trees are remarkably uniform in size, seldom exceeding 1 foot in diameter and 60 feet in height. Such forests are often very extensive, the one species making up 90 per cent of the timber. While most abundant in the Canadian zone, groups of the lodgepole pine occasionally occur isolated in yellow pine forests.

There are but few plants in Washington confined to the Canadian zone. The somber depths of these moist forests, however, induces a luxurious carpet of mosses and a vegetation which is largely ericaceous. Among the more plentiful shrubs are the blue huckleberry (Vaccinium ovalifolium), Menziesia ferruginea, Pachystima myrsinites, the trailing Rubus nivalis, and the dwarf cornel (Cornus canadensis).

Contr. Nat. Herb 76 XI

FOREST OF HEMLOCK (TSUGA HETEROPHYLLA).

Near Elbe, Pierce County. A nearly pure growth of voting and old hemlocks. Reproduced by courtesy of the Forest Service.

The abundant herbs are:

Clintonia uniflora, Disporum oreganum, Leptaxis menziesii, Milella canlescens, Oxalis oregana. Oxalis trilliifolia, Phegopteris dryopteris, Trautvetteria grandis, Vagnera sessilifolia.

Most of these occur also in the Transition.

The zone can, in fact, be recognized in Washington not so much by any purely characteristic species as by the great abundance of species relatively rare in the contiguous zones.

CHARACTERISTIC SPECIES OF THE CANADIAN ZONE.

Trees.

Abies amabilis. Abies grandis Abies nobilis. Acer douglasii. Pinus monticola. Taxus brevifolia.

Shrubs.

*Cornus canadensis.

*Lonicera conjugialis.

Lonicera utabensis.

Menziesia ferruginea.

Pachystima myrsiniles.

Pyrus silchensis.

*Ribes ciliosum.

Ribes laxiflorum,
*Ribes viscosissimum,
*Rubus nivalis,
*Sambucus melanocarpa,
Symphoricarpos acutus,
*Vaccinium scoparium,

Herbs.

Allotropa virgata. *Anemone deltoidea. *Anemone piperi. Antennaria racemosa. Arnica cordifolia. *Cacaliopsis nardosmia glabrata. *Camoides sconleri. *Cardamine lyallii. Cephalanthera austinae Chelone nemorosa, *Circaca alpina. Claytonia asarifolia. *Clintonia uniflora. Contis occidentalis. Corallorhiza corallorhiza. Corallorhiza mertensiana. Disporum oreganum. *Galium bifolium, *Heuchera micrantha. *Kelloggia galioides. Lentaris menziesii. *Lycopodium annotinum.

Lucopodium claratum.

Lysias orbiculata. Mitella caulescens, *Monotropa hypopitys. Ophrus caurina. Oxalis oregana, *O.ralis Trilliifolia. Pentstemon diffusus. Phegopteris dryopteris, Pyrola chlorantha. Pyrola secunda, Rudbeckia occidentalis. *Sangnisorba latifolia. Saxifraga mertensiana. Sedum oreganum. Senecio Triangularis. *Streptodus roseus. Synthyris reniformis, Therofon occidentale. *Tiarella unifoliata. Trantretteria grandis. Vagnera sessilifolia. Viola glabella. Viola orbiculata.

^a The species marked with an asterisk are restricted to the Canadian zone.

THE HUDSONIAN ZONE.

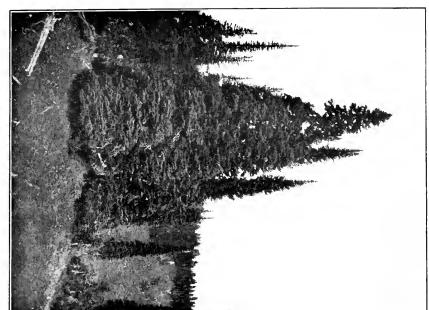

This is the highest of the *timbered* plant zones, its average altitude in Washington being from 1.500 to 2.300 meters (5,000 to 7.500 feet). The most widespread and characteristic tree in all the northwestern mountains is the subalpine fir (Abies lasiocarpa) (Pl. XVII). the Olympic and Cascade mountains this is always accompanied by the black hemlock (Tsuga mertensiana), a tree which recurs locally in the Bitterroots of Idaho, but which is unknown in the Blue Mountains save on a single peak. It is not known whether this tree occurs in the Okanogan Highlands. In the Olympic and Cascade mountains the Alaska cedar (Chamaecyparis nootkatensis) is likewise a characteristic tree, but it does not occur eastward from the latter range. The white-bark pine (Pinus albicaulis) also belongs to this zone, and reaches a higher altitude than any other Washington tree. It is absent from the Olympics, but occurs nearly throughout the Cascade Mountains, and appears again on the higher peaks of the Blues and Bitterroots.

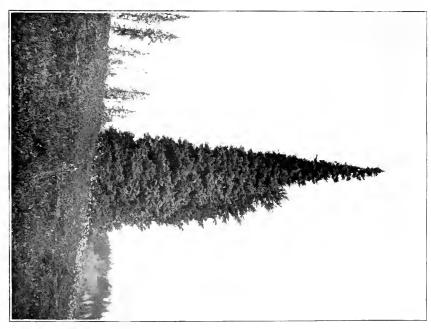

Comparatively few shrubs and herbs are definitely limited to this zone. Among the more conspicuous are an azalea (*Rhododendron albiflorum*), a currant (*Ribes howellii*), and the western mountain ash (*Pyrus occidentalis*). In places the bear grass (*Xerophyllum tenax*) occupies acres of ground, but this plant occasionally occurs as low as the Transition zone.

In the following table is given a list of the characteristic Hudsonian species, showing their known appearance on the principal peaks of the Cascade Mountains, namely, Mounts Stuart, Rainier, Adams, St. Helens, Hood, Mazama, and Shasta. Only small collections have been made on Mount Baker, and for this reason the species known to occur in the Cascade Mountains between the 48th and 49th parallels are lumped for comparison. The table also shows which species occur in the Arctic regions, in the Olympic Mountains, in the Blue Mountains, in the Rocky Mountains as a whole, and in the Sierra Nevada.

THE ARCTIC ZONE.

This is sharply marked by the high altitude timber line. As before explained, this line extends to a much higher altitude, 700 meters or more on Mount Rainier, on the ridges than in the draws between. This, in general, is true of all the northwestern mountains. highest mountain peaks flowering plants extend up to 3,200 meters (10,500 feet) altitude. The lower portion of this zone, except where there are rock outcroppings, is covered with a dense carpet of grasses and flowers. Among the more abundant of the former are Festuca viridula, Poa arctica, and Agrostis rossae. Among the more conspicuous flowers in the damper places are a buttercup (Ranunculus suksdorfii), a marsh marigold (Caltha leptosepala), and a shooting star (Dodecatheon jeffreyi). On the drier slopes Pulsatilla occidentalis raises its curious tasseled heads of akenes; a lupine (Lupinus subalpinus) forms great masses of blue; a painted cup (Castilleja oreopola) makes mats of dull crimson, and a cinquefoil (Potentilla flabellifolia) furnishes an abundance of yellow. Even more conspicuous are the two "heathers," Phyllodoce empetriformis and Cassiope mertensiana, the former with clusters of rose-purple flowers, the latter with the clusters pure white.

Along the rills a beautiful blue gentian (Gentiana calycosa), the crimson mimulus (Mimulus lewisii), and the yellow arnicas make parti-colored borders.

Two small plants, a saxifrage (Saxifraga tolmici) and Lutkea pectinata are conspicuous only because they form dense mats.

Along the limit of the meadows in what have been called "pumice fields" a very different series of plants appear. Among the more characteristic are a lupine (Lupinus lyallii), the curious Spraguea umbellata, an Eriogonum (E. coryphaeum), Orcastrum alpigenum, Erigeron aureus, and Polemonium elegans.

The above description applies particularly to the Arctic Zone in the Cascade Mountains. The flora of the same zone in the Olympics is very similar, the principal differences being in the flora of the highest peaks. In the Blue Mountains of Washington the Arctic Zone is very limited in extent. The arctic flora of these last mountains is, however, about as closely related to that of the Rocky Mountains as to that of the Cascades.

The following list shows the same comparative data as regards distribution as were shown for Hudsonian species:

REGIONS OF PECULIAR BOTANIC INTEREST.

In a State where conditions are so diverse as in Washington, and where practically every locality that has been carefully explored contains species of apparently very limited range, it is difficult to say which places have transcendent botanical interest. Where, however, the local massing of species of narrow range can be associated with more or less definite environmental conditions, the phenomenon is worth especial consideration. The following areas thus deserves special attention.

THE OLYMPIC MOUNTAINS.

The most striking peculiarities as regards these mountains, botanically considered, are the excessive rainfall on their southern and western slopes, and their isolated position. The heavy moisture precipitation results in modifying greatly the effect of altitude, so that the lines of zonal demarcation are much obscured. Many Humid

Transition species ascend even to the Hudsonian zone, producing thus a strange mixture of lowland and subalpine plants.

From the isolated position of these mountains together with their considerable elevation, some peculiarities would naturally be presupposed. The flora is, however, exceedingly similar to that of the Cascade Mountains. One misses, to be sure, a few conspicuous Cascade inhabitants, such as Saxifraga tolmici, Lupinus lyallii, Gentiana calycosa, and Encephalus ledophyllus, but the great majority of the plants are the same as those of the Cascades. The species which are not of the Cascade Mountains present, however, some interesting problems. Up to the present time there are only about ten species known to be peculiar to the Olympics, and these are all species of high altitude and most of them abundant as to individuals. They are as follows:

Aster paneicapitalus. Campanula piperi. Epilobium mirabile. Erysimum arenicola. Polemonium amoenum. Senecio flettii. Spiraca hendersoni. Synthyris pinnatifida tomenlosa. Viola flettii.

Campanula piperi is nearly related to an Alaskan species. The others have their nearest relatives in Cascade and Sierra forms. Some few species have a strangely isolated station in the Olympics. Phaca hookeriana, a species of the mountains of northern California and adjacent Nevada, also occurs in the Blue Mountains and then, apparently vaulting the Cascades, reappears in the Olympics.

Synthyris pinnatifida tomentosa likewise has no close relative except in the Wasatch and Rocky Mountains.

Thermopsis montana, collected in Chehalis County, is not otherwise known west of the eastern border of Washington.

Therofon majns intermedium is a subspecies whose parent species occurs in southeastern Oregon and California, and strangely enough reappears in abundance in the Bitterroots, though unknown in the Blue Mountains.

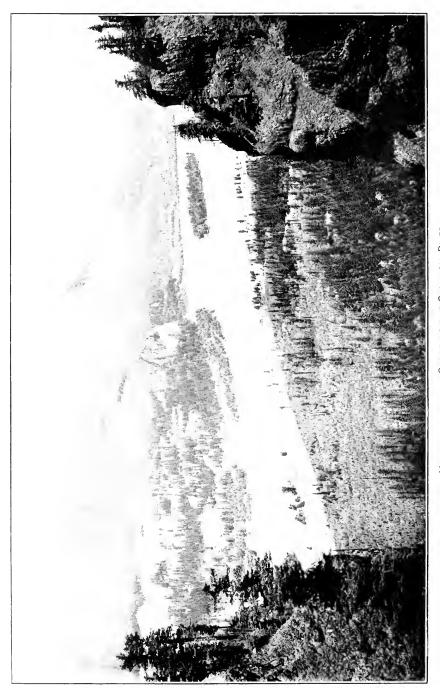

Hedysarum borede, a very abundant species in the Olympics, is not known from the Cascades at all, though occurring in the northern Rockies and castward to New England. In the northern Cascades and in the Bitterroots appears the closely related species H. sulphurescens.

Henchera racemosa is an abundant species in the higher Olympics. Otherwise it is a very rare plant, on Mount Adams and on Mount Rainier.

Further explorations of these mountains are likely to disclose other peculiar species. These should be sought especially on the highest peaks.

÷		

Contr. Nat. Herb., Vol. XI. PLATE XVIII.

VEGETATION OF THE GORGE OF THE COLUMBIA RIVER. View from St. Peter's Donie, Oregon, looking up the river.

THE COLUMBIA GORGE.

The wonderful gorge of the Columbia River (Pl. XVIII), extending a distance of about 50 kilometers (38 miles), presents peculiarities scarcely paralleled elsewhere in the Pacific northwest. The cliffs, rising hundreds of meters vertically, present almost every rupestrine condition. Some of them are in almost perpetual shadow, others subjected to bright sunshine. Some become dry almost with the cessation of the spring rains, others are bathed constantly in the spray of waterfalls. There are thus furnished suitable conditions, both to species from the arid interior and to others that normally flourish only in cool mountain valleys. The resultant association of Canadian or even Hudsonian species with those of the Transition zones is strikingly peculiar.

That such an unusual environment should be the habitat of a considerable number of species not found elsewhere might have been predicted. No less than 16 species are practically confined to this region. They are:

Agrostis howellii.
Calamagrostis howellii.
Delphinium trolliifolium.
Dodecatheon dentatum.
Erigeron howellii.
Erigeron oreganus.
Hemiera riolaeca.
Hieracium longiberbe.

Lomatium sp. nov.
Mimulus alsinoides.
Pentstemon barrettae.
Poa multnomae.
Sullirantia oregana.
Tellima odorata.
Valerianella uphanoptera.
Vibuenum ellipticum.

Some few others are worthy of special mention. *Bolandra oregana*, otherwise confined to the Columbia gorge, reappears on the bluffs of Snake River in Wallowa County, Oreg.

Synthyris reniformis, abundant on the Oregon side of the gorge almost at the river's edge, has its real home in the Canadian and Hudsonian zones of the Blue and Bitterroot mountains. Like several other species, it does not occur on the Washington side of the Columbia gorge.

A number of the Canadian and Hudsonian species that descend into the Columbia gorge are more or less modified from their original forms and may be regarded as subspecies, when compared with the alpine forms. Such are:

Romanzoffia silchensis, Saxifraga bronchialis, Saxifraya caespitosa, Saxifraga occidentalis. Valeriana sitchensis,

But a larger number preserve their identity beyond question. Such are:

Carex macrochacta, Chelone nemorosa, Cornus canadensis, Douglasia laevigata, Pentstemon diffusus, Pentstemon rupicola, Polypodium hesperium, Tofieldia intermedia,

KLICKITAT COUNTY.

A considerable number of species reach their northernmost extension in Klickitat County or in adjacent Skamania County and are not otherwise known to occur in Washington. In some cases a long distance to the southward intervenes before the species again occurs. This local northern distribution is perhaps due to the association of Humid and Arid Transition conditions and a warm southern slope exposure, the resultant combination being highly peculiar.

The species to which the above remarks apply are:

Arnica cradiata. Azolla caroliniana. Bromus orcuttianus. Ceanothus prostratus, Ceanothus thyrsiflorus. Collinsia vattani. Collinsia sparsiflora. Cynoglossum grande. Cupripedium fasciculatum. Epilobium ursinum. Eriogonum nudum. Eryngium petiolalum. Festuca confusa. Garrya fremontii. Gilia bolanderi. Gilia divaricata.

Hemicarpha occidentalis,

Juneus uncialis. Levidium nitidum. Melica fugax, Mimulus donalasii, Nemophila sepulta. Orogenia linearifolia, Panicum hirticaulon. Piscaria setigera. Playiobothrys nothofulrus. Polygonum austinac, Polygonum greenei. Scribneria bolanderi. Tonella collinsioides. Trifolium ciliolatum. Viburnum ellipticum. Viola sheltoni.

Some of these species will perhaps be found in Washington ontside of Klickitat County, but the flora is well enough explored to make it quite certain that this will be the case with but few of them.

MOUNT STUART AND THE WENACHE MOUNTAINS.

Mount Stuart, a tall granitic peak in Kittitas County, and the surrounding Wenache Mountains, have long been of peculiar interest botanically, owing to the considerable list of species which are there localized. This peculiar localization of species, several of them without close relatives, seems to be in a measure associated with the granitic character of the region. Recent investigations have shown that most of the species occur also to the northward, but that they are confined almost entirely to granitic soils of the crest of the Cascades.

Among the species thus restricted are the following:

Arabis whitedii.
Cavaliopsis nardosmia glabrata,
Calamagrostis tweedyi.
Calochortus lyallii.
Castilleja elmeri.
Cynomavathrum bvandegei.
Delphinium virideseens.

Delphinium xantholeucum,
Douglasia dentata,
Erigeron leibergii,
Leptolaenia watsoni,
Lewisia tweedyi,
Pedicularis ornithorhyncha,
Poa canbyi,

Raimera stricta, Rudbeckia atpicola, Saxifraga apetala, Senecio elmeri, Solidago caurina, Sphacraleca longisepala, Spiraca cincrascens, Valcriana columbiana,

This extremely restricted range of so considerable a number of species in a mountain chain which would seem to offer no barrier to their extension southward is perhaps due primarily to the fact that the greater portion of the Cascade system from Mount Rainier southward is volcanic. Indeed, the cruption of the igneous rocks not only may have brought about the isolation of the plants above mentioned, but, through their preference for granitic soils, may have kept them from spreading southward. This idea further obtains support in the fact that there are some striking similarities between the flora of the Mount Stuart region and that of the Klamath region in southwestern Oregon, which is also largely granitic in character.

This is exemplified by a number of species which do not occur in the intermediate region. Among them are—

Arabis suffrutescens, Bikukulla uniflora, Campanula scabrella, Chacnactis nevadensis, Hoorebekia greenei, Kelloggia galioides, Ledum glandulosum,

To these should perhaps be added Cacaliopsis nardosmia glabrata and C. nardosmia, Luina hypoleuca, and L. hypoleuca californica.

Facts to be adduced hereafter in connection with the make-up of the flora of the Blue Mountains emphasize still more the above conclusions.

While a great portion of the plants of the Cascade and the Blue mountains are identical, there are nevertheless many species whose occurrence in the former mountains is so local that their recurrence in the latter furnishes some strikingly peculiar facts. As before stated, the central and southern portions of the Cascade system are composed of recent volcanic rocks, while the northern portion and the Siskiyon and other mountains of the Klamath region contiguous to the southern end of the Cascades are made up of older rocks, largely granite. This difference in geological structure seems to be directly associated with the distribution of certain plants here discussed. The facts of the distribution are, first, that there are species in common between the northern Cascades and the Klamath region which are absent in the intermediate portion of the Cascades; second, that certain species occur only in the Blues and the Klamath region or the northern Sierras; third, that others occur only in the northern Cascades and the Blues; and finally some species occur in all three regions, but not elsewhere.

SPECIES COMMON TO THE NORTHERN CASCADES AND THE BLUE MOUNTAINS.4

* Angelica cantyi. Angelica lyallii. *Castilleja orcopola. Claytonia megarrhiza. (Also on Mount Jefferson.) * Dodecatheon tetrandrum. Frascra speciosa, *Hoorebekia hirta. Hoorebekia lyallii.

Lewisia pygmaca.

* Nemophila breviflora. Parnassia fimbriata, * Pedicularis contorta. Polygonum alpinum. * Ranunculus suksdorfii. Rhododendron albiflorum. Rumex paucifolius. Sambuens melanocarpa. * Silene oregana.

SPECIES COMMON TO THE BLUE MOUNTAINS AND THE NORTHERN SIERRAS AND KLAMATH REGION.

Archaria aculeata. *Asclepias cryptocerus. *Aster bloomeri. Calochortus curycarpus. Cardnus ochrocentrus Caulanthus hastatus, Cereocarpus ledifolius, Colcosanthus microphyllus. Draba Iemmoni. *Erigeron austinae. *Erigeron bloomeri, Galium bifolium. *Gentiana simplex. Gilia micromeria. Gilia tenerrima.

Tresia baileui. Ocnothera scapoidea. *Pellaca breweri. *Phaca bolanderi. Physaria newberryi. Poa bolanderi. *Potentilla breweri. *Salix lemmoni, *Sednm debile. *Smclowskia fremontii. Sphacrosciadium capitellatum. Thalictrum fendleri. *Trifelium beckwithii. *Trifolium plummerae.

SPECIES COMMON TO THE MOUNT STUART REGION, THE BLUE MOUNTAINS, AND THE KLAMATH REGION."

Agoseris retrorsa. *Arabis lemmoni. *Arabis suffratescens. Bikukulla uniflora. *Bromus suksdorfii. Claytonia megarrhiza. Cordinanthus capitatus, Ericameria nana. Enpatorium occidentale. *Hoorebekia greenci.

*Hoorebekia greenci motlis.

Iresia yordoni, Ledum glandulosum. Lewisia triphylla. *Melica fugax. Melica stricta. Spiraca densiflora. Spraguea umbellata. Stipa lemmoni. *Veronica ensickii. *Viola beekwithii. Viola purpurca.

No especial attempt has been made to determine what species are absent from the Blue Mountains which might be expected to occur there. It is especially striking, however, that all the forest trees of

^e Species marked with an asterisk are confined to the above regions.

b Species marked with an asterisk are confined to these three regions.

c Species marked with an asterisk are confined to these two regions.

the adjoining Bitterroots reach the Blues excepting the higher alpine *Larix lyallii* and the giant cedar (*Thuja plicata*). The absence of the last tree is the more marked as it is common throughout the Bitterroots, even on most of the outlying peaks.

Some few other plants common in the Bitterroots are likewise absent from the Blues. Among them are Frascra fastigiata, Mitella stauropetala, Pentstemon pinetorum, Coptis occidentalis, and Asarum candatum.

The explanation of this peculiar interrelation in the floras of these distant mountains is probably to be sought in two facts. First, these mountain regions are alike in being composed wholly or largely of granite rocks; second, the intervening portion of the Cascades is wholly made up of volcanic rocks.

THE BLUE MOUNTAINS.

The greater part of this range lies within the State of Oregon. Its central portion, known as the Powder River Mountains, consists of granitic peaks which rise to an altitude of 2,400 to 2,700 meters (7,000 to 9,000 feet). Surrounding this granite center are lower mountains composed wholly of basalt. Such is the case with the portion which extends into Washington.

Occupying as they do a nearly central position in the Columbia Basin, quite widely separated from the Cascade Mountains to the westward and the scattered mountains southward, while almost contiguous to the outlying ranges of the Bitterroots to the east, peculiarities in the constitution of the flora of these mountains would be expected. That such is the case was recognized by their earliest explorer, Douglas, who made no less than three trips into this rather unique region.

The general facies of the flora is that of all the other mountains surrounding the Columbia basin. The great majority of the plants are identical with those of the eastern slope of the Cascade Mountains and scarcely a smaller proportion with those of the adjacent mountains in Idaho.

. An analysis of the remaining portion of the Blue Mountains flora shows that it consists of several elements of diverse origin which combine to make it peculiar. These elements are, first, those species that are known to occur only in the Blue Mountains; second, those species which are common to the Rocky Mountains but which do not reach the Cascades, and third, those species which are also of more or less local distribution in the Cascade Mountains.

The plants known to be limited in distribution to the Blue Mountains are neither numerous nor strikingly different from their nearest relatives. In themselves they indicate scarcely more than that their

origin is comparatively recent. It is worthy of note that a large proportion of them are habitants of the higher granitic portions of the mountains. The list is as follows:

SPECIES CONFINED TO THE BLUE MOUNTAINS.

Allium collinum. Allium macrum. Allium madidum. Aragallus cusickii. Calamagrostis cusickii. Castille ja cusickii. Castilleia rubida. Castilleja rustica. Draba cusickii. Elumus nitidus. Erigeron chrysopsidis. Erigeron membranaccus, Eriogonum strictum, Frascra cusickii. Lappula hispida. Lathurus cusickii. Lathyrus rigidus, · Lomatium cusickii,

Lomatium oreganum. Lupinus cusickii. Lupinus sabinci, Lupinus sulphureus. Madia ramosa. Pentstemon cusickii. Pentstemon renustus. Phaca cusickii. Physaria oregana. Potentilla brerifolia. Primula cusickiana, Pteryxia focuiculacea. Pteryxia thapsoides. Quamasia cusickii, Ranunculus populago. Senecio condensatus. Situation latifolium. Townsendia alpigena.

The Rocky Mountain element consists of a considerable number of species, including some genera which otherwise do not occur in Washington or Oregon. Most of these are confined to the higher granitic peaks, very few occurring within Washington limits. The presence of this Rocky Mountain element is undoubtedly a direct result of immediate contiguity, though the species may have been isolated on these remote peaks for a long period. It is noteworthy that a number of the list reach the Sierra Nevada but not the Cascades. The species are as follows:

SPECIES THAT OCCUR ALSO IN THE ROCKIES BUT NOT IN THE CASCADES.

Androsace septentrionalis,
Anemone parriflora,
Arabis microphylla,
Aster elegans,
Aster integrifolius,
Aster scopulorum,
Carex hystricina,
Conioselinum scopulorum,
Corallorhiza corallorhiza,
Draba alpina,
Draba glacialis,
Erigeron armeriaefolius,
Erigeron coulteri,
Eriogonum piperi,

Eritrichium clongatum.
Galium bifolium.
Hedysarum mackenzii.
Lepidium montanum.
Leucocrinum umbellatum.
Ligusticum tenuifolium.
Peraphyllum ramosissimum.
Phaca aboriginum.
Phaca kentrophyta.
Polemonium confertum.
Pinus flexilis.
Salix fernaldii.
Senecio renifolius.
Thlaspi glauca.

PLANTS KNOWN TO OCCUR ONLY IN WASHINGTON.

There are 158 recognized species and 27 subspecies of vascular plants which have thus far been found only within the confines of Washington. They are as follows:

> Agastache occidentalis. Agropyron flexuosum.

Agropyron saxicola.

Agropyron spicatum puberulentum.

Allium crenulatum.

Alsine washingtoniana.

Ambrosia artemisiaefolia diversifolia.

Amelanchier cuncata.

Angelica canbyi.

Antennaria confinis.

Antennaria hendersoni.

Antennaria latisquama.

Antennavia lencophaca.

Antennavia tomentella.

Apocymum ciliolatum.

Arabis atrorubens.

Arabis subrillosa seconda.

Arabis whitedii.

Arnica belonicaefolia.

Artemisia atomifera.

Aster elmeri.

Aster wattii.

Atriplex zosteracfolia.

Cacaliopsis nardosmia glubrata.

Calamagrostis inexpansa bar-

Calamagrostis langsdorjii lac-

Calamagrostis Incedyi.

Campanula piperi.

Capnorea fulerata.

Capnorca villosula.

Carex nebraskensis ultri-

formis.

Mertensia laevigata. Mertensia platuphulla.

Mitella micrantha.

Monardella discolor,

Monardella nerrosa.

Navarretia klickitatensis.

Orcocarna celosioides.

Orcocarna lenconhaca.

Orcocarna spiculifera.

Orthocarpus barbatus.

Ovyzepsis hendersoni.

Pedicularis ornithorhyncha.

Pent temon gairdneri hians.

Pentstemon pruinosus.

Pentstemon rupicola.

Peutstemon variabilis.

Phaca arrecta leibergii.

Phaca glarcosa.

Phaca lyallii.

Phaca selerocarna.

Phaca scrotina.

Phaca sinuata,

Phaca speirocarpa.

Phaca suksdorfii.

Phaca tireediii.

Phaeclia lenta.

Physaria geyeri.

Phlox lanccolata,

Phlox viridis.

Phlox whitedii.

Pou cottoni.

Poa curtifolia.

Poa leekenbyi.

Pow pachypholis.

Poa suksdorfii.

Polemonium amocuum.

Polemonium elegans.

Polemonium pectinatum. Potentilla permollis.

Quamasia suksdorfii.

Rainiera stricta.

Ranninculus triternatus.

Ribes watsonianum.

Rubus hesperius, Rudbeckia alpicola.

Saxifraga apetata.

Sedum dirergens.

Senecio condensatus.

Senecio elmeri.

Senccio Acttii.

Senecio foctidus.

Senecio fraternus.

Senecio vascui.

Silene suksdorfii. Sitanion basalticola.

Situnion latifolium.

Situnion planifolium.

Situation rubescens.

Solidago caurina.

Sphaeraleca longisepala.

Snhaerostiama hilgardi, Spiraca cincrascens.

Spiraca hendersonii.

Stina comata intonsa, Stina elmeri.

Stipa thurberiana.

Symphoricarpos aentus.

Synthyvis pinnatifida tomen-

Smithuris schizantha.

Talinum spinescens.

Teucrium occidentale risci-

dum

Thelypodium streptanthoides.

Therofon majus intermedium.

Trillium crassifolium.

Utricularia intermedia.

Vaccinium deliciosum,

Vagnera racemosa brachys-

fula.

Valeriana columbiana.

Valerianella anhanoptera.

Valerianella mamillata

Veratum caudatum.

Veronica allenii.

Viola flettii.

Viola trinervata.

Xanthium oligacanthum.

Two of the genera included above, Rainiera and Hesperogenia, are monotypic.

PLANTS WHICH PROBABLY WILL BE FOUND TO OCCUR IN WASKINGTON.

The following list consists of species which are known either to occur both in Gregon and British Columbia, or else to grow within 13 kilometers (10 miles) of the Washington boundary. Most of them will probably be found to occur in Washington localities:

Agrostis howellii Scribner. Rooster Rock, Oreg.

Allium cusickii S. Wats. Bluffs epposite Lewiston, Idaho.

Andromeda polifolia 1. Priest Lake, Idahe.

Arnica aurantiaca Greene. Blue Mountains, Oreg., and Chilliwack, B. C.

Aster cordalenus Hend. Lake Cœur d'Alene, Idaho.

Aster lyalli A. Gray. Priest Lake.

Astragalus howellii A. Gray. Near The Dalles, Oreg.

Brachyactis frondosa (Nutt.) Gray. The Dalles, Oreg.

Carex interior Bailey. Chilliwack Valley, B. C.

Chiogenes hispidula (L.) Torr. & Gray. Priest Lake.

Cyperus houghtoni Torr. Upper Ferry, near Lewiston, Idaho.

Delphinium troltiifolium A. Gray. South bank of Columbia below Cascades.

Erigeron howellii A. Gray. Near the Cascades of the Columbia, Oreg.

Eviophorum angustifolium Roth. Chilliwack Valley, B. C.

Eupatorium purpureum L. Saturna Island, B. C.

Festuca reflexa Buckl. Portland, Oreg., and Vancouver Island.

Howellia aquatitis A. Gray.—Sauvies Island, Oreg., and Kootenai County, Idaho. Lepidium idahoense Heller.—Lewiston, Idaho.

Lilaca subulata H. B. K. Oregon and Vancouver Island.

Lomatium donnellii Coult. & Rose. Near Lewiston, Idaho.

Microseris bigelovii A. Gray. Oregon and Vancouver Island.

Mimulus cliricola Greenman. Thatuna Hills, Idaho,

Mimulus scouleri Hook. Tongue Point, Oreg.

Mitella stauropetala Piper. Thatuna Hills, Latah County, Idaho.

Myosurus sessilis S. Wats. Near Arlington, Oreg.

Onoclea struthiopteris (L.) Hoffm. Saturna Island, B. C.

Poa invaginata Scribner & Williams. Mitchells Point, Oreg.

Salix prolixa Anders. Mouth of Fraser River, B. C.

Sanicula marilandica L. North Idaho.

Savastana macrophylla (Thurb.) Beal. Sauvies Island, Oreg.

Scirpus macounii Holm. Chilliwack Valley, B. C.

Sullivantia oregana Wats. Multnomah Falls, Oreg.

ANNOTATED CATALOGUE OF THE SPECIES OF VASCULAR PLANTS OF WASHINGTON.

POLYPODIACEAE. FERN FAMILY.

Indusium wanting, the sori maked.		
Sori elongated, following the veins, often branched or netted Ceropteris (p.	76).	
Sori round.		
Leaves pinnatifid; sori large, on the tips of the veins Polypodium (p.	76).	
Leaves ternate or twice to thrice pinnatifid: sori small, on	·	
the backs of the veins	. 11)-	
Indusium present. Sori marginal covered by the more or less modified margin		
of the leaf (false indusium).		
Sporangia on a marginal vein which connects the ends		
of the lateral veinlets	8).	
Sporangia at or near the ends of unconnected veins.	/-	
False indusium continuous Pellaea (p. 78)		
False indusium not continuous.		
Sporangia on the under side of the false in-		
dusium	S).	
Sporangia on the leaf surface beneath the false		
indusium	. 79).	
Sori not marginal nor covered by a false indusium.		
Fruit-bearing veins parallel to the midrib; sori linear.	(70)	
Sori nearest to the margin; leaves of two sorts Strutinopteris		
Sori nearest to the midrib; leaves all slike Woodwardia (p. Fruit veins not parallel to the midrib; sori not linear.). (9).	
Sori oblong, on oblique veins.		
Leaves pinnate, small, firm Asplenium (p. 3	80)	
Leaves bipinnate, large, flaccid		
Sori round.	٠,٠	
Induslum conspicuous, peltate or reniform.		
Leaves firm, coriaceous: indusium peltate Polystichum (1	o. 80±.	
Leaves membranaceous; indusium reniform. Dryopteris (p.	81).	
Indusium inconspicuous, not peltate or reniform.		
Indusium under the sorus, stellately divided. Woodsia (p. 82	١.	
Indusium hooded, fixed by a broad base Filix (p. 82).		
CEROPTERIS.		
1. Ceropteris triangularis (Kaulf.) Underw. Bull. Torr. Club 29: 630. 1902.		
GOLD-BACK	FERN.	
Gymnogramme triangularis Kaulf, Enum. Fil. 73, 1824.		
Gymnopteris triangularis Underw, Our Native Ferns ed. 6, 84, 1900. Type locality: "Habitat in California." Collected by Chamisso.		
RANGE: British Columbia to California and Arizona.		
Specimens examined: San Juan Island, Gardner 392. Also reported from Eato	nville	
Flett, and from near Port Angeles.		
Zonal distribution: Humid Transition.		
POLYPODIUM.		
Leaves leathery; veins more or less netted 1. P. scoule	ri.	
Leaves membranous; veins free.		
Pinnae attenuate, acute or acuminate	entale.	
Pinnae short, obtuse		

1. Polypodium scouleri Hook. & Grev. Icon. Fil. 1: pl. 56, 1829.

LEATHER-LEAF POLYPODY.

Polypodium pachyphyllum D. C. Eaton, Am. Journ. Sci. II. 22: 138, 1856.

Type locality: Not ascertained.

Range: British Columbia to California along the coast.

Specimens examined: Granville, Conard 320; Fort Canby, Bruner, October 29, 1881.

Zonal distribution: Humid Transition.

2. Polypodium occidentale (Hook.) Maxon, Fern Bull. 12: 102, 1901.

LICORICE POLYPODY.

Polypodium vulgare occidentale Hook, Fl. Bor, Am. 2: 258, 1840.

Polypodium fulcatum Kellogg, Proc. Cal. Acad. 1:20, 1851.

Type locality: "On rocks and decayed wood, common near the confluence of the Columbia with the sea," Collected by Douglas.

Range: Alaska to California in the coast region.

Specimens examined: Seattle, Piper 300; Port Ludlow, Binns, August 20, 1888; Clallam County, Elmer 2811; Grays Harbor, Wilkes Expedition 11; Castle Rock, Piper, October 31, 1901.

Zonal distribution: Humid Transition.

3. Polypodium hesperium Maxon, Proc. Biol. Soc. Wash, 13: 200, 1900.

Type Locality: "In Coyote Cañon, Lake Chelan, Washington." Collected by Gorman, Range: British Columbia to Montana and Arizona.

Specimens examined: Olympic Mountains, Piper, August, 1895; Mount Rainier, Piper, August, 1895; Stehekin, Whited 1392; Horseshoe Basin, Elmer 703; without locality, Vascy 41; Cape Horn, Piper 5013, 5015; Mount Baldy, Conard 288; Kettle Falls, Beattie & Chapman 2225.

ZONAL DISTRIBUTION: Canadian to Arctic.

This species is the basis for the record of Pohypodium vulgare L. in Suksdorf's List.

POLYPODIUM CALIFORNICUM Kaulf, (Polypodium intermedium Hook, & Arn.) is reported from the Columbia River, collected by Scouler, in Hooker's Flora 2: 258. It is quite certain that there is a mistake here either as to locality or as to identity.

PHEGOPTERIS. BEECH FERN.

Plant densely tufted; leaves oblong-lanceolate, tripinnatifid. 1. P. alpestris. Plants spreading by rootstocks; leaves triangular.

Leaves bipinnatifid; rachis winged. 2. P. phegopteris.

Leaves ternate, the stalked divisions pinnate or bipinnate; rachis

1. Phegopteris alpestris (Hoppe) Mett. Fil. Hort. Bot. Lips. 83, 1856.

Polypodium alpestre Hoppe, Taschenb. 216, 1805.

Type locality: European.

RANGE: British Columbia to Montana and California. Europe.

Specimens examined: Cascade Mountains, latitude 19°, Lyall in 1859; Clallam County, Elmer 2806; Olympic Mountains, Piper, August, 1895; Mount Adams, Henderson, August 10, 1892; Mount Rainier, Piper 2111; Skagit Pass, Lake & Hull 658; Wenache region, 2.120 meters altitude, Brandeger 1222; Bridge Creek, Elmer 636.

Zonal distribution: Arctic.

2. Phegopteris phegopteris (L.) Underw. Bull. Torr. Club 20: 462, 1893.

Phegopteris polypodioides Fée, Gen. Fil. 243, 1850-52.

Polypodium phegopteris L. Sp. Pl. 2: 1089, 1753.

Polypodvim phegopteris minus Hook, Fl. Bor, Am. 2: 258, 1840.

Type locality: "Habitat in Europae fagetis et in Virginia."

Range: Alaska to Labrador, south to Washington, Iowa, and Virginia. Europe. Asia. Specimens examined: Skamania County, Subsider 2035.

ZONAL DISTRIBUTION: Humid Transition.

3. Phegopteris dryopteris (L.) Fée, Gen. Fil. 243. 1850-52.

Polypodium dryopteris L. Sp. 11. 2: 1093, 1753.

Polypodium dryop'eris rigidius Hook, Fl. Bor, Am. 2: 259, 1840.

Type locality: European.

RANGE: Alaska to Newfoundland, south to Oregon, Colorado, and Virginia.

Specimens examined: Cl. llam County, Elmer 2813; Whidby Island, Gardner 372; Port Ludlow, Binns, June 18, 1882; Silverton, Bonek in 1899; Snoqualmie, Parker, August, 1892; Skagit Pass, Lake & Hull 659; Stevens Pass, Sandberg & Leiberg 778, Whited 1436; Horseshoe Basin, Elmer 732; without locality, Vascy in 1889; Davis Ranch, Kreager 212, 185; Ione, Kreager 404; Mount Carlton, Kreager 275.

ZONAL DISTRIBUTION: Mostly Canadian.

ADIANTUM.

Adiantum pedatum aleuticum Rupr. Beitr. Pflanzenk. Russ. Reich. 3: 49, 1845.
 Maiden-Hair fern

Adiantum pedatum rangiferinum Burgess, Proc. Roy. Soc. Canada 44: 11, 1887.

Type locality: Unalaska,

Range: Alaska to Quebec, south to California.

Specimens examined: Claffam County, Elmer 2809; Mount Stuart, Sandberg & Leiberg 820; Fish Lake, Dunn, August 8, 1900; Horseshoe Basin, Lake & Hull 661; Elmer 723; west Klickitat County, Suksdorf 2030; without locality, Vasey in 1889; Scattle, Piper.

ZONAL DISTRIBUTION: Humid Transition to Canadian.

PTERIDIUM.

1. Pteridium aquilinum pubescens Underw. Our Native Ferns ed. 6, 91, 1900.

Bracken.

Pteris aquilina lanuginosa Bong, Mem. Acad. St. Petersb. VI. 2: 176, 1832, not Pteris lanuginosa Bony 1810.

Type locality; Sitka.

Range: Alaska to California and Arizona.

Specimens examined: Fish Lake, Dann, August, 1900; Wenache Mountains, Whited 1416; Tumwater Canyon, Sandberg & Leiberg 520; Wawawai, Beattie, July 12, 1902; Cleahum Lake, Cotton 1852.

ZONAL DISTRIBUTION: Humid Transition, abundant; Arid Transition, occasional.

PELLAEA.

1. Pellaea occidentalis (E. Nelson) Rydberg, Mem. N. Y. Bot. Gard. 1: 466, 1900.

Pellaca atropurpurea occidentalis E. Nelson, Fern Bull. 7: 30, 1899.

Pellaca pumila Rydberg, Mem. N. Y. Bot. Gard. 1: I. 1900.

Type locality: "In a cañon in the Laramie Hills," Wyoming.

Range: South Dakota to Wyoming and Washington.

Specimens examined: West Klickitat County, Suksdorf 2083.

ZONAL DISTRIBUTION: Doubtful.

2. Pellaea densa (Brack.) Hook. Sp. Fil. 2: 150, 1858.

Onychium densum Brack, in Wilkes Exped. 16: 120, t. 13, 1854,

Type locality: "Oregon, on the banks of Rogue's River."

Range: British Columbia to Wyoming and California.

Specimens examined: Clallam County, Elmer 2810; Mount Stuart, Elmer 1105; Sandberg & Leiberg 821; Stehekin River, Whited 1385; Blue Mountains, Horner 526; without locality, Vascy in 1889.

Zonal distribution: Probably Hudsonian.

CHEILANTHES.

Leaf-blades glabrous above, bipinnate; ultimate segments mostly entire. . 1. C. gracillima, Leaf-blades pubescent above, tripinnate or tripinnatilid; ultimate seg-

Cheilanthes gracillima D. C. Eaton, Bot. Mex. Bound. 234, 1859. Lace Fern.
 Type Locality: "Cascade Mountains of Oregon at 7,000 feet altitude, l.d. 44°."
 Collected by Newberry.

RANGE: British Columbia to Idaho and California.

Specimens examined: Clallam County, Elmer 2814; Olympic Mountains, Piper 1051; Mount Adams, Suksdorf 521; Mount Stuart, Brandeque 1211; Stehekin River, Whited 1384; Lake Chelan, Whited 1396; Bridge Creek, Elmer 660; without locality, Vasey 37, 38.

Zonal distribution: Arid Transition to Iludsonian.

2. Cheilanthes feei Moore, Index Fil. 38, 1857

Myriopteris gracilis Fée, Gen. Fil. 150, 1850-52.

Cheilanthes lanuginosa Nutt.; Hook. Sp. Fil. 2: 99, 1858.

Cheilanthes gracilis Mett. Abh. Senck. Nat. Gesell. 3: 80, 1859-61, not Kaulf.

Type locality: "Habitat ad rupes circa Hillsboro, in America septentr."

RANGE: British Columbia to Illinois, south to Arizona and Texas.

Specimens examined: Almota, Piper 1768, 1881.

Zonal distribution: Upper Sonoran.

CRYPTOGRAMMA.

Cryptogramma acrostichoides R. Br. in Richards. Bot. App. 367, 1823.

Type Locality: "In shady rocky woods, between lat, 56° and 60° north, (First found by Mr. Menzies at Noo(ka Sound.)"

RANGE: Alaska to the Great Lakes, Colorado, and California.

Specimens examined: Challam County, Elmer 2807; Mount Rainier, Piper, August, 1895; Flett, July, 1895; Mount Stuart, Sandberg & Leiberg, August 1, 1893; Skagit Pass, Lake & Hull 660; Stampede Tunnel, Henderson, July 27, 1892; Stevens Pass, Sandberg & Leiberg 781; mountains north of Ellensburg, Brandegee 1209; Lake Chelan, Whited 1390; Horseshoe Basin, Elmer 734; Davis Lake, Kreager, August, 1902; without locality, Vascy in 1889; Stehekin, Griffiths & Cotton 235; Cape Horn, Piper 5006, 4978.

Zonal distribution: Hudsonian and Canadian.

STRUTHIOPTERIS.

1. Struthiopteris spicant (L.) Weiss, Pl. Crypt. 287, 1770.

Deer fern.

Osmunda spicant L. Sp. Pl. 2: 1066, 1753.

Lomaria spicant Desy, Mag. Gesell, Naturf. Fr. Berlin 5: 325, 1811.

Blechnum doodioides Hook, Fl. Bor, Am. 2: 263, 1840.

Type locality: "Habitat in Europa."

Range: Alaska to California. Europe. Asia.

Specimens examined: Clallam County, Elmer 2803; Port Ludlow, Binns, August 20, 1889; Seattle, Piper, September, 1898; Stevens Pass, Sandberg & Leiberg 774; without locality, Vasey in 1889.

Zonal distribution: Humid Transition.

WOODWARDIA.

1. Woodwardia spinulosa Mart. & Gal. Mem. Acad. Brux. 155: 64, 1842.

Woodwardia chamissoi Brack, in Wilkes Exped. 16: 138, 1851.

Type locality: Near Mount Orizaba, Mexico.

RANGE: British Columbia to California, Arizona, and Mexico.

Specimens examined: Steilacoom, Flett in 1902.

ZONAL DISTRIBUTION: Humid Transition.

ASPLENIUM.

1. Asplenium trichomanes L. Sp. Pl. 2: 1080, 1753.

SPLEENWORT.

Type locality: European.

RANGE: Alaska to Nova Scotia, south to Arizona, Texas, and Alabama.

Specimens examined: Snoqualmie Falls, Parker, August, 1892; Snoqualmie, Hindshaw; East Seattle, Hindshaw; west Klickitat County, Suksdorf 1228; Cape Horn, Piper 4971; Quinault, Conard 220; Kirkland, Wittenmyer.

Zonal distribution: Humid Transition.

2. Asplenium viride Huds. Fl. Angl. 385, 1762.

Type locality: "Habitat in rupibus humidis in comitatibus Eboracensi et Westmorlandica," England.

RANGE: Alaska to Oregon, Colorado, and Vermont. Europe. Asia.

Specimens examined: Wenache Region, Brandegee 1216; near Mount Baker, Flett.

ZONAL DISTRIBUTION: Hudsonian or Arctic.

ATHYRIUM.

1. Athyrium cyclosorum Rupr. Beitr. Pflanzenk. Russ. Reich. 3: 41, 1845.

Type locality: "Petropawlowsk! et Unalaschka! Kadiak!"

Range: Alaska to Nebraska and California. Kamehatka.

Specimens examined: Olympia, Henderson, August 23, 1892; Stehekin, Whited 1387; Stevens Pass, Sandberg & Leiberg 771; Shagit Pass, Lake & Hull, August 24, 1892; without locality, Vascy in 1889; Clarks Springs, Kreager 34.

ZONAL DISTRIBUTION: Humid Transition to Canadian.

This species has commonly been referred to A. filix-forming (L.) Roth, from which it appears amply distinct.

POLYSTICHUM.

Leaves simply pinnate.

Leaf-stalk long; segments linear-lanceolate.

Leaves 60 to 90 cm. long, the segments not over-

lapping 2. P. munitum.

Leaves about 39 cm. long, the segments overlapping. 2a. P. munitum imbricans, Leaves bipinnate or bipinnatifid.

Sori few; leaves bipinnate at base..... 3. P. lemmoni.

Sori numerous; leaves bipinnatifid at base................... 4. P. scopulinum.

1. Polystichum lonchitis (L.) Roth, Tent. Fl. Germ. 3: 71. 1800. Holly fern.

Polypodium lonchitis L. Sp. Pl. 2: 1088, 1753.

Aspidium lonchitis Sw. Schrad. Journ. Bot. 1800²: 30, 1801.

Type locality: "Habitat in alpinis Helvetiae, Baldi, Arvoniae, Mouspelii, Virginiae."
RANGE: Subarctic regions southward to California, Colorado, and Wisconsin. Europe.

Specimens examined. Olympic Mountains, Piper, August, 1895; Mount Rainier, Piper, August, 1895; Goat Mountains, Allen, August 5, 1895; Skamania County, Suksdorf 2056; mountains near Ellensburg, Brandegee 1220; Fish Lake, Dunn, August 8, 1900; Bridge Creek, Elmer 659.

ZONAL DISTRIBUTION: Arctic and Hudsonian.

2. Polystichum munitum (Kaulf.) Presl, Tent. Pterid. 83, 1836.

Aspidium munitum Kaulf, Enum. Fil. 236, 1824.

Type locality: "Habitat in California." Collected by Chamisso.

RANGE: Alaska to Idaho and California.

Specimens examined: Clallam County, Elmer 2808; Montesano, Heller 4035; Scattle, Piper, December, 1893; head of Twisp River, Whited 38; Blue Mountains, Piper, July, 1896. Zonal distribution: Humid Transition.

2a. Polystichum munitum imbricans (D. C. Eaton) Maxon, Fern Bull. 8: 30, 1900.
Aspidium munitum imbricans D. C. Eaton, Ferns N. Am. 1: 188, 1879.

Type locality: "In Plumas County" and "at Red Mountain, Mendocino County," California.

Range: Washington to California.

Specimens examined: Challam County, Elmer 2815; Peshastin, Sandberg & Leiberg, July, 1893; Lake Chelan, Whited 1382; Horseshoe Basin, Lake & Hull 662; Tumwater Canyon, Sandberg & Leiberg 517; without locality, Vascy in 1889; Lake Chelan, Gorman 641.

Zonal distribution: Canadian or Hudsonian.

3. Polystichum Iemmoni Underw. Our Native Ferns. ed. 6, 416, 1900.

Type locality: "Near Mt. Shasta, California."

RANGE: Alaska to California.

Specimens examined: Mount Stuart, Elmer 1114; Sandberg & Leiberg 812; Brandegee 1219.

Zonal distribution: Arctic.

4. Polystichum scopulinum (D. C. Eaton) Maxon, Fern Bull. 8: 29, 1900.

Aspidium aculeatum scopulinum D. C. Eaton, Ferns N. A. 2: 125, 1880.

Type locality: "In the Upper Teton Cañon in Eastern Idaho."

RANGE: Washington and Idaho to California.

Specimens examined: Mount Stuart, Elmer 1113; Mount Adams, Henderson in 1883; Horseshoe Basin, Elmer 707; west Klickitat County, Suksdorf 2084; Eatonville, Flett.

ZONAL DISTRIBUTION: Canadian to Hudsonian.

Flett's Eatonville specimens were referred to $P.\ californicum\ (D.\ C.\ Eaton)$ Underw., but that species is not known to occur in Washington.

DRYOPTERIS.

Veins freely forking.

Indusia with marginal glands.

Indusia without marginal glands.

2. D. spinulosa dilatata.

Indusia without marginal glands.

3. D. filix-mas.

1. Dryopteris oreopteris (Sw.) Maxon, Proc. U. S. Nat. Mus. 23: 638, 1901.

Veins simple or once forked; leaves glandular, 1. D. orcopteris.

Aspidium oreopteris Sw. Schrad. Journ. Bot. 1800²: 35, 1800.

Polypodium montanum Vogler, Dissert. Polyp. Mont. 1781, not Lam. 1778.

Type locality: European.

Range. Alaska to Washington. Europe. Asia.

Specimens examined: Bridge Creek, Elmer 671.

ZONAL DISTRIBUTION: Hudsonian.

Dryopteris spinulosa dilatata (Hoffm.) Underw. Our Native Ferns ed. 4: 116.
 1893. Wood ferns.

Polypodium dilatatum Hoffm, Deutsch, Fl. 2: 7, 1795.

Aspidium spinulosum dilatatum Hook, Brit. Fl. 444, 1830.

Type locality: Germany.

RANGE: Alaska to Labrador, south to California, Montana, and Virginia. Europe. Asia.

Specimens examined: Claffam County, Elmer 2804; Montesano, Heller 3919; Samish 29418—06 м——6

Lake, Suksdorf 1029; Lake Cushman, Henderson 1206; Tacoma, Flett 140, 141; Skokomish Valley, Kincaid, May 17, 1892; Bridge Creek, Elmer 670; without locality Vasey 1889.

ZONAL DISTRIBUTION: Humid Transition.

3. Dryopteris filix-mas (L.) Schott, Gen. Fil. 1834.

Male Fern.

Polypodium filix-mas L. Sp. Pl. 2: 1090, 1753.

Aspidium filix-mas Sw. Schrad. Journ. Bot. 1800²: 38, 1801.

Type locality: "Habitat in Europae sylvis."

Range: Alaska to Labrador, south to California, Michigan, and Nova Scotia. Europe. Asia.

Specimens examined: Falcon Valley, Suksdorf 1230.

ZONAL DISTRIBUTION: Humid Transition.

FILIX.

 Filix fragilis (L.) Underw, Our Native Ferns ed. 6, 119, 1900.
 Bladder fern, Polypodium fragile L. Sp. Pl. 2: 1091, 1753.

Cystopteris fragilis Bernh. Schrad. Neu. Journ. Bot. 12: 27, 1806.

Type locality: European.

Range: Alaska to Labrador, south to California, Kansas, and Georgia.

Specimens examined: Challam County, Elmer 2812; Mount Rainier, Piper, August 12, 1889, 2106; upper Naches River, Henderson, June 15, 1892; Mount Stuart, Elmer 1219; Stampede Pass, Henderson, July 26, 1892; Egbert Springs, Sandberg & Leiberg 351; Wenache Mountains, Whited 1075; Waitsburg, Horner 260; without locality, Vasey 49; Almota, Piper, May 2, 1897.

Zonal distribution: Transition to Arctic.

WOODSIA.

1. Woodsia scopulina D. C. Eaton, Can. Nat. II. 2: 90, 1865.

Type Locality: "Rocky Mountains near 40° north latitude, Parry, Hall and Harbour; Columbia River, Brackenridge; Frazer River, near 49° north latitude, Mrs. John Miles." Range: Alaska to Ontario, Colorado, and Californ'a.

Specimens examined: Ellensburg foothills, Elmer 418; White Salmon, Suksdorf in 1879; Wenache River, Brandegee 1224; Rainbow Falls, Whited 1407; Stehekin, Whited 1391; Cascade Mountains, latitude 49°, Lyall; Spokane, Dewart; without locality, Vascy in 1889; Cape Horn, Piper 4975.

Zonal distribution: Transition, mostly and.

2. Woodsia oregana D. C. Eaton, Can. Nat. H. 2: 90, 1865.

Woodsia obtusa lyallii Hook, Syn. Fil. 48, 1868.

Type locality: "Dalles of the Columbia River, Major Raines; Rocky Mountains near 40° north latitude. Hall and Harbour."

RANGE: British Columbia to the Great Lakes, south to California, Arizona, and Nebraska. Specimens examined: Mount Adams, Suksdorf, September, 1877. Rattlesnake Mountains, Cotton 422; Coulee City, Piper 3850; between Coulee City and Waterville, Spillman, May 27, 1896; Sprague, Henderson, May 30, 1892; Pullman, Piper 1731; without locality, Vasey in 1889; Davis Ranch, Kreager 218; near Spokane, Kreager 171; Coulee City, Piper 3850; Republic, Beattle & Chapman 2258.

Zonal distribution: Arid Transition.

OPHIOGLOSSACEAE.

OPHIOGLOSSUM.

1. Ophioglossum vulgatum L. Sp. Pl. 2: 1062, 1753. Adder's Tongue.

Type locality: "Habitat in Europae pratis sylvaticis."

RANGE: Washington to Arizona, Texas, and Maine. Europe. Asia.

Specimens examined: Skamania County, Suksdorf, June 26, 1895; Falcon Valley, Suksdorf 1218.

ZONAL DISTRIBUTION: Humid Transition.

BOTRYCHIUM. GRAPE FERN.

Bud in a cavity at one side of the base of the stem; leaves thin, ternate,

then pinnately much divided. 1. B. cirginianum. Bud inclosed in the base of the stalk.

Sterile portion of leaf arising near the base of the rather large plant. 2. B silaifolium. Sterile portion of leaf arising near the middle of the usually small

plant.

Green part of leaf oblong, its segments fan-shaped.

Green part of leaf triangular or ovate, the segments not fanshaped.

1. Botrychium virginianum (L.) Sw. Schrad. Journ. Bot. 18002: 111. 1801.

Osmunda virginiana L. Sp. Pl. 2: 1064, 1753.

Type locality: "Habitat in America."

RANGE: British Columbia to Labrador, south to Washington, Arizona, Texas, and Florida.

Specimens examined: Seattle, Piper 906.

Zonal distribution: Transition.

2. Botrychium silaifolium Presl, Rel. Haenk. 1: 76, 1825.

Botrychium occidentale Underw. Bull. Torr. Club 25: 538, 1898.

Type locality: "Hab. in Nootka-Sound."

RANGE: British Columbia and Washington.

Specimens examined: Lake Cushman, Henderson 1852; Seattle, Tarleton, July, 1894; Piper, October, 1892; Lake Wenache, Sandberg & Leiberg 639; Usk, Kreager 360; Lake Chelan, Elmer, September, 1897.

Zonal distribution: Humid Transition.

This species appears in Suksdort's List as Botrychium ternatum Swartz.

3. Botrychium Iunaria (L.) Sw. Schrad. Journ. Bot. 1800²: 110, 1801.

Osmunda lunaria L. Sp. Pl. 2: 1064, 1753.

Type locality: European.

RANGE: Washington to Colorado and Labrador and northward. Europe. Asia.

Specimens examined: Mount Rainier, Smith, October, 1888; Mount Adams, Suksdorf, July 11, 1886.

Zonal distribution: Arctic.

The Mount Adams specimen is the basis for the inclusion of Botrychium simplex Hitchcock in Suksdorf's List.

4. Botrychium onondagense Underw. Eull. Torr. Club 30: 47, 1903.

Type locality: Near Split Rock, Syracuse, New York, Range: Washington, Montana, Michigan, and New York,

Specimens examined: Olympic Mountains at foot of Mount Steele, Piper 928.

Zonal distribution: Doubtful.

5. Botrychium lanceolatum (S. G. Gmel.) Angs. Bot. Notiser 1854; 68, 1854.

Osmunda lanccolata S. G. Gmel, Nov. Comm. Acad. Sci. Petrop. 12: 516, 1768.

Type locality: European.

Range: Washington to Colorado, Pennsylvania, and northward. Europe. Asia.

Specimens examined: Foot of Mount Rainier, Allen, August 2, 1899.

ZONAL DISTRIBUTION: Probably Canadian.

6. Botrychium neglectum Wood, Classbook Bot. 635, 1847.

Type locality: "Growing in woods, Meriden, N. H."

Range. Alaska to Nova Scotia, south to Washington, South Dakota, and Maryland.

Specimens examined: Mount Adams, Suksdorf 1220.

MARSILEACEAE.

MARSILEA.

Marsilea vestita Hook, & Grev. Ic. Fil. pl. 159, 1832.

Type locality "Ad flumaen Columbiam, ora occidentali Americae Septentrionalis."

Range: British Columbia to Kansas and Arizona.

Specimens examined: Falcon Valley, Suksdorf 227; opposite mouth of Wenache River, Watson 470; west Klickitat County, Suksdorf 119; Columbia River Valley, Brandegee 1225; Wenache, Whited 1426; Pasco, Hindshaw 35; Lake Chelan, Lake & Hull 657; Pullman, Piper 1736; Henderson 2431; Almota, Piper, September 9, 1896; Sentinel Bluffs, Cotton 1347.

Zonal distribution: Upper Sonoran and Arid Transition.

SALVINIACEAE.

AZOLLA.

1. Azolla caroliniana Willd. Sp. Pl. 5: 541, 1810.

Type locality: "Hab. in aquis Carolinae."

Range: British Columbia to Ontario, south to Florida and Mexico. Specimens examined: West Klickitat County, 8nksdorf 1216.

Zonal distribution: Upper Sonoran.

EQUISETACEAE.

EQUISETUM. Horsetail.

Stems evergreen, perennial; spike tipped with a rigid point.

Plant tall and stout; stems many-grooved, 0.5 to 2 meters high.

Plants tufted, slender; stems 5 to 10-grooved.

Sheaths 5 to 10-toothed; stems hollow. 3. E. rariegatum.
Sheaths 3-toothed; stems solid. 4. E. scirpoides.

Stems annual; spikes not mucronate.

Fertile stems pale-brown, short-lived; sterile with many branches.

Stems slender, 6 to 10-furrowed. 5. E. arcense.
Stems stout, 20 to 40-furrowed. 6. E. telmateia.

Fertile stems green like the sterile, naked or branched.

Stems obscurely ridged; sheaths appressed. 7. E. fluciatile.
Stems acutely ridged; sheaths loose. 8. E. palustre.

1. Equisetum hyemale L. Sp. Pl. 2: 1062, 1753.

Scouring Rush.

Type locality: "Habitat in Europae sylvis, asperis, uliginosis."

RANGE: British Columbia to New England, south to California and Georgia. Europe. Asia.

Specimens examined: West Klickitat County, Suksdorf 1243, 2161, 2162; Wenache, Whitel, May 17, 1896; Waitsburg, Horner, February 1, 1897; Pullman, Elmer 294, July 2, 1896; Port Discovery, Wilkes Expedition.

Zonal distribution: Transition to Canadian.

Mr. A. A. Eaton considers that this variable species consists of several definable subspecies. Ours are thus classified:

The first subspecies has commonly been referred to $E.\ robustum\ \Lambda.\ Br.$

2. Equisetum laevigatum A. Br. Am. Jour. Sci. 46: 87, 1844.

Type locality: "On the banks of the river, below St. Louis," Missouri.

Range: British Columbia to New York, south to California, Texas, and Georgia.

Specimens examined: West Klickitat County, Suksdorf 2135; North Yakima, Henderson 2263 and May 26, 1892; White Salmon, Suksdorf 317; without locality, Vascy, 1889; Old Fort Colville, Watson 472; Pullman, Piper 1733 and June 20, 1893; Kiona, Cotton 735, Zonal distribution: Arid Transition.

3. Equisetum variegatum Schleich, Cat. Pl. Helvet, 27, 1807.

Type locality: Switzerland.

RANGE: Arctic America, south to Nevada and Pennsylvania.

Specimens examined: West Klickitat County, Suksdorf 2099.

4. Equisetum scirpoides Michx. Fl. 2: 281, 1803.

Type locality: "Hab, in vetustis sylvis Canadae."

Range: Alaska to Labrador, south to Washington, Illinois, and Pennsylvania.

Specimens examined: Box Canyon, Kreager 389; Ione, Kreager 405.

5. Equisetum arvense L. Sp. Pl. 2: 1061, 1753.

Equisetum saxicola Suksdorf, Deutsch. Bot. Monatss. 19: 93, 1901.

Type locality: "Habitat in Europae agris, pratis."

Range: Alaska to Greenland, south to California and New England. Europe. Asia. Specimens examined: Everett, *Piper*, July, 1892; Skamania County, *Suksdorf* 2163; Falcon Valley, *Suksdorf* 1238; Pullman, *Piper*, May 15, 1893; *Elmer* 210, May, 1897.

ZONAL DISTRIBUTION: Transition mainly.

6. Equisetum telmateia Ehrh. Hannov. Mag. 138, 1783.

Type locality: European.

RANGE: British Columbia to California. Europe.

Specimens examined: Seattle, Piper, July 10, 1895; March, 1892; upper Valley Nisqually, Allen 175; Wenache, Whited 19, May 17, 1895; near Bingen, Suksdorf 1237; White Salmon, Suksdorf 315.

Zonal distribution: Humid Transition.

7. Equisetum fluviatile L. Sp. Pl. 1: 1062, 1753.

Equisetum limosum L. loc. cit.

Type locality: "Habitat in Europa ad ripas lacuum, fluviorum."

Range: Alaska to Labrador, south to Washington and Virginia. Europe. Asia.

Specimens examined: New London, Lamb 1203 and June 12, 1897; Lake Cushman, Piper, August, 1895; Henderson 1190; Skamania County, Suksdorf 2164 and August 17, 1892; Seattle, Piper, July 10, 1895.

Zonal distribution: Humid Transition to Hudsonian.

One of Suksdorf's specimens was distributed and included in his list as E. littorale Kühle.

8. Equisetum palustre L. Sp. Pl. 2: 1061, 1753.

Type locality: "Habitat in Europae aquosis."

RANGE: Alaska to Nova Scotia, south to Washington and New York. Europe.

Specimens examined: West Klickitat County, Suksdorf 46.

LYCOPODIACEAE.

LYCOPODIUM. CLUBMOSS.

Sporangia in the axils of ordinary leaves.

Sporangial leaves forming a terminal spike................... 1. L. inundatum.

Sporangial leaves subterminal, the terminal leaves sterile.

Stems rigid; leaves all alike, ascending..................... 2. L. selago.

Stems not rigid: leaves spreading, of two sorts, long and short. 3. L. lucidulum. Sporangia in the axils of modified leaves crowded in spikes.

Stems leafy up to the spikes or nearly so.

Leaves 6 to 8-ranked, spreading. 4. L. annotiunm.

Stems of the fruiting branches nearly naked.

1. Lycopodium inundatum L. Sp. Pl. 2: 1102, 1753.

Type locality: European.

Range: Washington to Newfoundland, south in the Alleghanies to Georgia. Europe.

Specimens examined: Chambers Lake near Olympia, Henderson 2048; Spanaway Lake, Flett.

2. Lycopodium selago L. Sp. Pl. 2: 1102, 1753.

Type locality: European.

Range: Alaska to Labrador, south to Washington, Michigan, and Carolina. Europe. Asia.

Specimens examined: Olympic Mountains, Piper 2232; Baldy Peak, Lamb 1390; Mount Baker, Flett 162; Snoqualmie Falls, Parker, August, 1892; Snoqualmie Pass, Piper, August, 1892; Stevens Pass, Sandberg & Leiberg, August, 1893; Bridge Creek, Elmer 686, Zonal distribution: Arctic.

3. Lycopodium lucidulum Michx. Fl. 2: 284, 1803.

Type locality: "Hab. a Canada ad Carolinam Montosam."

Range: British Columbia to New Brunswick, south to Washington, Iowa, and North Carolina.

Specimens examined: Skykomish River, Wittenmyer: Stevens Pass, Sandberg & Leiberg 777; Mount Baldy, Conard 276.

ZONAL DISTRIBUTION: Canadian.

4. Lycopodium annotinum L. Sp. Pl. 2: 1103, 1753.

Type locality: European.

Range: Labrador to Alaska, south to Washington, Colorado, and New York. Europe. Asia.

Specimens examined: Mount Rainier, Piper 2110; Big Meadows, Kreager 412.

Zonal distribution: Canadian.

5. Lycopodium sitchense Rupr. Beitr. Pflanzenk. Russ. Reich. 3: 30, 1845.

Type locality: Sitka.

RANGE: British Columbia to Labrador, south to Oregon and New York.

Specimens examined: Challam County, Elmer 2527; Olympic Mountains, Lamb 1398; Piper, August, 1895; Mount Rainier, Piper 2098; Stevens Pass, Sandberg & Leiberg 779; Horseshoe Basin, Elmer, September, 1897.

ZONAL DISTRIBUTION: Arctic.

This species has commonly, but erroneously, been referred to L. alpinum L.

6. Lycopodium clavatum L. Sp. Pl. 2: 1101. 1753.

Type locality: European.

Range: Alaska to Labrador, south to Washington, Michigan, and North Carolina. Europe. Asia.

Specimens examined: Challam County, Elmer 2454; Port Ludlow, Binns, August 15, 1890; Silverton, Bouck 214; Mashel River, Piper 2105; Skamania County, Suksdorf 1030; Horseshoe Basin, Elmer 728; without locality, Yasey 1889.

Zonal distribution: Humid Transition.

7. Lycopodium complanatum L. Sp. Pl. 2: 1104, 1753.

Type locality: "Habitat in Europae and Americae septentrionalis sylvis acerosis."

RANGE: Alaska to Labrador, south to Washington, the Great Lakes, and Virginia.

Specimens examined: Lake Keechelus, Piper, 1887; Stampede Pass, Henderson 2535; Big Meadows, Kreager, August, 1902; Box Canyon, Kreager 399.

ZONAL DISTRIBUTION: Canadian!

SELAGINELLACEAE.

SELAGINELLA.

Leaves of two sorts, the lateral ones much larger. 1. S. douglasii. Leaves all alike.

Stem flaccid, often very long; leaves not bristle-tipped 2. S. strutkioloides. Stems rigid; leaves bristle-tipped.

Leaves much crowded; stems 5 to 10 cm. long............ 3. S. densa.

Leaves less crowded; stems 10 to 30 cm. long................. 4. S. rupestris.

1. Selaginella douglasii (Hook.) Spring, Monog. 2: 92, 1841.

Lycopodium douglasii Hook. & Grev. in Hook. Fl. Bor. Am. 2:268, 1840.

Lycopodium ovalifolium Hook. & Grev. Ic, Fil. t. 177, 1831, not Desv. 1823.

Type locality: "Hab, in oris occidentalibus Americae septentrionalis." Collected by Douglas.

Range: Washington to California.

Specimens examined: Cape Horn, Joseph Howell 35; Piper 4965.

Zonal distribution: Humid Transition.

2. Selaginella struthioloides (Presl) Underw. Bull. Torr. Club 25: 132, 1898.

Lycopodium struthioloides Presl, Rel. Haenk. 1: 82, 1830.

Selaginella oregana D. C. Eaton in Wats. Bot. Cal. 2: 350, 1880.

Type locality: "Hab, in Nootka-Sund."

Range: Near the seacoast, British Columbia to Oregon.

Specimens examined: Southbend, Piper in 1900; Laban, Piper 3820; Quinault, Conard 174.

ZONAL DISTRIBUTION: Humid Transition.

3. Selaginella densa Rydberg, Mem. N. Y. Bot. Gard. 1:7. 1900.

Type locality: "Little Rocky Mountains," Montana.

Range: Washington to Montana and Nebraska.

Specimens examined: Wawawai, Piper, May 26, 1894.

Zonal distribution: Arid Transition.

4. Selaginella rupestris (L.) Spring; Mart. Fl. Bras. 12: 118, 1840.

Lycopodium rupestre L. Sp. Pl. 2: 1101, 1753.

Type locality: "Habitat in Virginia, Canada, Siberia."

Range: British Columbia to New England, south to California and Georgia.

Specimens examined: Lillewaup, Piper, September, 1890; Klickitat County, Suksdorf 66; Cascade Mountains, latitude 49°, Lyall 1376; Cape Horn, Piper 4964.

Zonal distribution: Humid Transition.

In a recent paper by Hieronymus a large number of new species allied to *Schoginella* rupestris are proposed. Three of these are from Washington and Oregon, namely:

Selaginella haydeni Hieronymus, Hedwigia 39: 296, 1904.

Selaginella wallacei Hieronymus, op. cit. 305.

Selaginella sartorii oregonensis Hieronymus, op. cit. 305.

The type of the last is one of the Lyall specimens above cited.

ISOETACEAE.

ISOETES. QUILLWORT.

Plants of shallow water or muddy places; leaves with stomata.

Stems 3-lobed; leaves setaceous.

Velum incomplete; megaspores spinulose...... 1. 1. minima.

Plants aquatic, often in deep water; stems bilobed.

Stomata absent.

Megaspores marked with irregular ridges...... 4. I. paupercula.

Megaspores with low distinct warts...... 5. 1. piperi.

mata present.

Leaves recurved.

Megaspores spinulose; microspores smooth..... 6a. *I. echinospora braunii*. Megaspores tuberculate; microspores spinulose... 6b. *I.echinospora flettii*.

1. Isoetes minima A. A. Eaton, Fern Bull. 6: 30, 1898.

Type locality: Near Waverly, Washington. Collected by Suksdorf.

Specimens examined: Waverly, Suksdorf.

2. Isoetes nuttallii A. Br.; Engelm. Am. Nat. 8: 215, 1874.

Isoctes suksdorfii Baker, Handbook Fern Allies 132, 1887.

Type locality: "On the Columbia," Collected by Nuttall. Specimens examined: West Klickitat County, Suksdorf 917.

3. Isoetes howellii Engelm. Trans. St. Louis Acad. 4: 385, 1882.

Isoetes nuda Engelm, l. c.

Isoctes underwoodii Henderson, Bot. Gaz. 23: 124, 1897.

Type locality: "On the borders of ponds at The Dalles of the Columbia, Oregon." Collected by Howell.

Range: Washington, Oregon, and Idaho.

Specimens examined: Cusick, Stevens County, Piper 4209; Lake Kalispel, Kreager 335.

4. Isoetes paupercula (Engelm.) A. A. Eaton, Proc. U. S. Nat. Mus. 23: 649, 1901.

Isoetes lacustris paupercula Engelm, Trans. St. Louis Acad. 4: 377, 1882,

Isoetes occidentalis Henderson, Bull. Torr. Club 27: 358, 1900.

Type locality: Grand Lake, Middle Park, Colorado.

RANGE: Washington to California and Colorado.

Specimens examined: Lake Chelan, Gorman.

CIECITEAS EXAMINED. DAM CICAM, Gorman.

5. Isoetes piperi A. A. Eaton, Fern Bull. 13: 51, 1905.

Type locality: "Green Lake, near Seattle, Washington."

Specimens examined: Green Lake, Piper 2317.

6a. Isoetes echinospora braunii (Durieu) Engelm, in A. Gray, Man. ed. 5, 676, 1867.
Isoetes braunii Durieu, Bull. Soc. Bot. France 11: 101, 1864.

Type locality; Not ascertained.

Specimens examined: Lake Chelan, Elmer, August, 1897; Ponds, Mount Rainier, Piper 131; Bitter Lake, Piper in 1890.

6b. Isoetes echinospora flettii A. A. Eaton, Fern Bull. 13: 51, 1905.

Type locality: "Spanaway Lake," Pierce County, Washington.

Specimens examined: Spanaway Lake, Piper 2125; Flett 949.

7. Isoetes bolanderi Engelm, Am. Nat. 8: 214, 1871.

Type locality: Tuolumne, California.

Range: Washington and Idaho to California.

Specimens examined: Mount Adams, Suksdorf 2375; Falcon Valley, Suksdorf 2370, Yakima region, Brandegee.

TAXACEAE. YEW FAMILY.

TAXUS.

Taxus brevifolia Nutt. Svlva 3: 86, pl. 108, 1849.

Western Yew.

Type Locality: "In the dense maritime forests of the Oregon,"—Collected by Nuttall,
Range: British Columbia, south to Tulare County, Cal., eastward to Montana and the
Blue Mountains.

Specimens examined: Nason City, Sandberg & Leiberg, July, 1893; Arbutus Point, Henderson, July, 1892; upper Valley Nisqually, Allen 204; Port Ludlow, Binns, September 5, 1890; Columbia River, latitude 46° to 49°, Lyall in 1860; Kittitas County, Sandberg & Leiberg 699; Blue Mountains, Piper, August, 1896; without locality, Vascy 57; Olympic Mountains, Elmer 2486.

ZONAL DISTRIBUTION: Transition and Canadian.

The western yew is by no means an abundant tree, occurring only scattered through rich, moist woods. It is, perhaps, most plentiful on the Olympic peninsula. The largest individuals reach a height of perhaps 12 meters and a diameter of 75 cm. In Hooker's Flora this species was referred to the European Taxus baccata L., to which it is closely allied.

PINACEAE. PINE FAMILY.

Seales of the fruit few, opposite: leaf-buds naked.

Fruit a dry cone.

Scales of the fruit numerous, alternate; leaf-buds scaly.

Leaves in clusters.

Clusters ensheathed at base, containing 2, 3, or 5 leaves... Pixts (p. 91).

Clusters not ensheathed at base, containing many leaves. Larix (p. 92).

Leaves solitary.

Cones pendent; scales persistent.

Branchlets roughened by the persistent leaf-bases.

Leaves sessile, pungent-pointed Picea (p. 95).

JUNIPERUS.

Leaves very resinous, dark green

Leaves not resinous, often glaucous

3. J. scopulorum.

Juniperus communis sibirica (Burgsd.) Rydberg, Contr. Nat. Herb. 3: 533, 1896.
 Juniperus sibirica Burgsd, Anleit, Holz. no. 272, 1787.

Juniperus communis al pina Wahl, Fl. Lapp. 276, 1812.

Juniperus communis montana Ait. Hort. Kew 3: 414, 1788.

Type locality: Siberia.

RANGE: Arctic regions, south in the mountains to California, Colorado, and Maine.

Specimens examined: Olympic Mountains, Elmer 2487; Stevens Pass, Sandberg & Leiberg 768; Mount Rainier, Piper 2099; Loomis, Elmer 600; Mount Adams, Henderson, August, 1892.

Zonal distribution: Arctic or rarely lower.

Common in the mountains at from 900 to 2,100 meters elevation. Hooker refers Tolmie's Mount Rainier specimens to J. common L., but they belong to the above subspecies.

2. Juniperus occidentalis Hook. Fl. Bor. Am. 2: 166, 1839. Western juniper.

Type locality: "Common on the higher parts of the Columbia, at the base of the Rocky Mountains, where it attains a height of 60-80 feet, and a diameter of 2-3 feet." Collected by Douglas.

Range: Washington to Nevada and California.

Specimens examined: Near Eltopia, Cotton 1022 in 1903.

ZONAL DISTRIBUTION: Arid Transition.

This is the only known station for the western juniper north of Oregon. The exact place is locally known as Ryegrass Coulee or Juniper Canyon, some 30 miles southwest of Kahlotus and near Fishhook Ferry on Snake River. The junipers occur in scattering groves on the floor of the coulee, the largest groves being about 100 acres in extent. None of the trees are over 7 meters high.

3. Juniperus scopulorum Sargent, Gard. & For. 10: 420, 1897.

Rocky Mountain Juniper.

Type locality: Wyoming, Montana, and Colorado.

Range: Vancouver Island castward to Montana and south in the Rocky Mountains to Arizona; also in the Black Hills.

Specimens examined: Oreas Island, Henderson, July, 1892; Sucia Island, Randolph, October, 1892; Weinache, Whited 1001; Sandberg & Leiberg, July, 1893; near Lake Chelan, Lake & Hull 631; Spokane, Henderson, July, 1892; Piper, September, 1896; Peshastin, Sandberg & Leiberg 471; without locality, Vascy 58, Olympic Mountains, Elmer 2488; lone, Kreager 407; Fidalgo Island, Flett 2116; Sentinel Bluffs, Cotton 1359; Everett, Piper.

ZONAL DISTRIBUTION: Mostly Arid Transition, but also Upper Sonoran. It also reappears in the Humid Transition in northwest Washington.

There is some doubt as to whether the form found in western Washington is identical with that of the interior. Better and more copious material is needed to determine the point definitely.

CHAMAECYPARIS.

1. Chamaecyparis nootkatensis (Lamb.) Spach, Hist. Veg. 11: 333, 1842.

Alaska cedar. Yellow cedar.

Cupressus nootkatensis Lambert, Gen. Pinus 2: 18, 1824.

Chamaecyparis nutkaensis Spach, Hist. Veg. 11: 333, 1842.

Type locality: Nootka Sound.

RANGE: Alaska south to Mount Jefferson, Oregon, mainly in the Cascade and Coast Mountains; perhaps in north Idaho.

Specimens examined: Olympic Mountains, Piper in 1890; Henderson 2047; Elmer 2481; Horseshoe Basin, Elmer 854; Skagit Pass, Lake & Hull 632; Cascade Mountains, latitude 49°, Lyall in 1859; Stevens Pass, Sandberg & Leiberg 796; Mount Rainier, Piper 2103; Allen 207; Goat Mountains, Allen 207a.

ZONAL DISTRIBUTION: Hudsonian.

THUJA.

1. Thuja plicata Donn, Hort. Cantab. ed. 6, 219, 1811. Giant Cedar.

Thuja qigantea Nutt. Journ. Phila. Acad. 7: 52, 1834. Type locality: Nootka Sound. Collected by Menzies.

RANGE: Southern Alaska to northern California, eastward to Montana, and south to the Salmon River, Idaho.

Specimens examined: Seattle, Piper 599; Olympia, Henderson, April, 1892; Port Ludlow, Binns, September 9, 1890; Nisqually Valley, Allen 304; Falcon Valley, Suksdorf 495; Skagit Pass, Lake & Hull 637; Peshastin, Sandberg & Leiberg 483; Colville, Lyall in 1860; without locality, Vascy 63; Olympic Mountains, Elmer 2484; Stehekin, Whited 1407.

Zonal distribution: Humid Transition mainly.

For illustration of a giant cedar forest see frontispiece.

PINUS.

Leaves 5 in each fascicle; scales of the cones unarmed.

Cones oblong-cylindric, 10 to 30 cm. long 1. P. monticola. Cones ovate or globose, 4 to 8 cm. long 2. P. albicaulis.

Leaves less than 5 in each fascicle; scales of the cones armed.

Fascicles containing 3 leaves; cones large 3. P. ponderosa.
Fascicles containing 2 leaves; cones small 4. P. contorta.

1. Pinus monticola Dougl. in Lambert, Desc. Gen. Pinus ed. 2, 3: 27, t. 87, 1837.

Western white pine.

Type locality: Not ascertained.

Range: Southern British Columbia, south to central California, eastward to western Montana.

Specimens examined: Olympic Mountains, Piper, August, 1895; Elmer 2485; Port Ludlow, Binns: Cascade Mountains, latitude 49°, Lyall in 1860; Horseshoe Basin, Okanogan County, Elmer 862; Skagit Pass, Lake & Hull, August 24, 1892; Nisqually Valley, Allen 315; without locality, Vascy 51.

Zonal distribution: Mainly Canadian.

In Hooker's Flora our species was mistaken for its eastern relative P. strobus.

 Pinus albicaulis Engelm, Trans. Acad. St. Louis 2: 209, 1868. WHITE-BARK PINE. Pinus cembroides Zucc. err. det. Newberry, Pac. R. R. Rep. 6: 41, 1857. Type locality: Cascade Mountains, Oregon, about latitude 44°. Collected by Newberry.

RANGE: British Columbia, south in the Cascades and Sierras to San Bernardino County, California, eastward to western Montana and to the Blue Mountains.

Specimens examined: Mount Rainier, Piper 2095; Smith 1089; Mount Adams, Henderson, August 9, 1892.

Zonal distribution: Hudsonian.

In Lyall's report this pine is erroneously referred to as P. flexilis James.

3. Pinus ponderosa Dougl.; Lawson, Man. Agr. 354, 1836. Yellow Pine. Bull Pine. Type locality: Washington, on the Spokane River. Collected by Douglas. Range: British Columbia to South Dakota, southward to Texas and New Mexico.

Specimens examined: Wenache Mountains, Whited 1351, 1356; Steamboat Rock, Grand Coulee, McKay 19.

ZONAL DISTRIBUTION: Arid Transition, but occasional in the Upper Sonoran.

This is the common forest tree of eastern Washington. West of the Cascade Mountains it occurs locally on the gravelly prairies, as near Hillhurst. For illustrations of yellow-pine forests see Plates XIV and XV, facing pages 49 and 50.

4. Pinus contorta Dougl.; Loudon, Arb. Frut. 4: 2292, f. 2210, 2211, 1838.

SHORE PINE. LODGEPOLE PINE.

Pinus murrayana Balf. in Murray, Rep. Bot. Exp. Oregon t. 3. f. 2. 1853.

Pinus contorta hendersoni Lemmon, Erythea 2: 176, 1894.

Pinus tenuis Lemmon, Erythea 6: 77, 1898.

Type Locality: "In North-West America, in swampy ground near the sea coast; and abundantly near Cape Disappointment and Cape Lookout." Collected by Douglas.

RANGE: Alaska to California and Idaho.

Specimens examined: Westport, Heller 3946; Mount Rainier, Allen 308; Mount Adams, Suksdorf, September 28, 1896; Wenache Mountains, Elmer 474; Whited 1356; McAllisters Lake, Henderson, June 22, 1895; Falcon Valley, Suksdorf, September 29, 1896, and 1259; Pend Oreille River, Lyall in 1861; without locality, Vascy in 1889; Blue Mountains, Piper, July 31, 4896.

Zonal distribution: Transitional to Canadian.

This pine is very variable and by some botanists considered to consist of two species. The typical P, contorta of Douglas is the scrubby tree so common along the ocean coast near the shore. Away from the coast it occurs either in sterile gravelly soil or in sphagnum bogs. It is usually a small tree, but occasional examples are met 90 cm. in diameter and 30 meters or more high. East of the Cascade Mountains it forms the "lodgepole pine," Pinus marrayana of some botanists. This ordinarily forms dense forests, often of considerable area, in nearly pure growth, the trees being very uniform in size, 20 or 25 cm. in diameter and 18 to 22 meters high. But occasional specimens are found 90 cm. in diameter and 45 meters high.

If there are any characters by which *contorta* and *murrayana* may be distinguished botanically, they remain to be pointed out. None of the slight differences heretofore relied upon are at all constant.

Some of the earlier botanical writers referred to our tree erroneously as *Pinus inops* Sol. or *Pinus banksiana* Lamb.

LARIX.

Larix Iyallii Parl. Enum. Sem. Hort. Reg. Mus. Flor. 259, 1863.
 WOOLLY LARCH.
 Type locality: "Cascade Mountains et Galton Ranges Rocky Mountains, latitudinis 49° ad 2100 et 2300 m." Collected by Lyall.

RANGE: Mountains of British Columbia, south to Mount Hood, Oregon, and to the Lolo Pass, Idaho. Specimens examined: Mount Stuart, Brandegee, July, 1883; Cascade Mountains, latitude 49°, Lyall in 1860; North-Fork Bridge Creek, Elmer, September, 1897; Wenache Mountains, Whitel 1352.

Zonal distribution: Hudsonian.

One of our rarest conifers, most plentiful on the Wenache Mountains and northward.

2. Larix occidentalis Nutt. Sylva 3: 143. t. 120. 1849. Western larch.

Type locality: "In the coves of the Rocky Mountains on the western slope toward the Oregon." Collected by Nuttall.

RANGE: Cascade Mountains of British Columbia and Washington eastward to Montana and south to the Blue Mountains.

Specimens examined: Upper Naches River, Henderson, June 10, 1892; Mount Adams, Suksdorf 212; Columbia River, latitude 46° to 49°, Lyall in 1860; Blue Mountains, Piper, August 2, 1896; Kamiak Butte, Elmer 812.

ZONAL DISTRIBUTION: Mainly Canadian.

ABIES.

Cones with conspicuous reflexed bracts. 1. 1. nobilis. Cones with the bracts concealed.

Leaves not notched at apex, mostly acute, not horizontally spreading; cones purple.

Alpine tree; cones puberulent, 5 to 7 cm. long. 2. A. lasiocarpa, Subalpine tree; cones not puberulent, 7 to 10 cm. long. 3. A. amabilis,

1. Abies nobilis Lindl. Penn. Cycl. 1: 30, 1833.

Noble fir

Type locality: Collected by Douglas on high mountains, Oregon, near the Cascades of the Columbia.

Range: Cascade Mountains of Washington and Oregon; Olympic Mountains.

Specimens examined: Mount Rainier, Allen 314: Piper in 1889; Mount Baker, Johnson; Soleduck River, Olympic Mountains, Sargent.

ZONAL DISTRIBUTION: Canadian or Hudsonian.

2. Abies lasiocarpa (Hook.) Nutt. Sylva 3: 138, 1849

ALPINE FIR.

Pinus lasiocarpa Hook. Fl. Bor. Am. 2: 163, 1842.

Abies subalpina Engelm. Am. Nat. 10: 555, 1876.

Type locality: "Interior of N. W. America." Collected by Douglas.

RANGE: Alaska southward in the mountains to Oregon and Colorado.

Specimens examined: Olympic Mountains, *Piper* in 1890; Cascade Mountains, latitude 49°, *Lyalt* in 1860; Goat Mountains, *Allen* 312; Blue Mountains, *Piper*, July 31, 1896; Mount Rainier, *Piper* 2101.

ZONAL DISTRIBUTION: Arctic.

The Olympic Mountains form of this species often has exserted bracts to the cones. The form on the Blue Mountains has much larger cones than that occurring on Mount Rainier. For illustrations of this species see Plate XVII, facing page 60.

3. Abies amabilis (Dougl.) Forbes, Pinetum Wob. 125, t. 44, 1839. Amabilis Fir. Picca amabilis Dougl.; Loudon, Arb. Frut. 4: 2342, 1838.

Type locality: Collected by Douglas on high mountains, Oregon, near the Cascades of the Columbia.

Range: British Columbia, south in the Cascade Mountains of Washington and Oregon; also in the Olympic Mountains.

Specimens examined: Olympic Mountains, Piper in 1895; Mount Rainier, Allen 313; Piper in 1888.

Zonal distribution: Canadian.

Mr. Suksdorf informs me that the Abies magnifica Murr.! of his list is probably only
A. amabilis.

4. Abies grandis Lindl. Penn. Cycl. 1: 30, 1833.

WHITE FIR.

Type locality: Not ascertained.

RANGE: British Columbia south to northern California, eastward to Montana and the Blue Mountains, Oregon.

Specimens examined: East Sound, Henderson, July 3, 1892; Port Ludlow, Binns, September 3, 1890; Tacoma, Flett, April 20, 1897; upper Nisqually Valley, Allen 311; Skagit Pass, Lake & Hull, August, 1892; Cascade Mountains, Lyall, July, 1860; Blue Mountains, Piper, July, 1897.

ZONAL DISTRIBUTION: Transition and Canadian.

The tree recorded from near Mount Rainier by Plummer as Abies concolor (Gord.) Parry is probably an erroneous identification of a form of A. grandis.

PSEUDOTSUGA.

1. Pseudotsuga mucronata (Raf.) Sudw. Contr. Nat. Herb. 3: 266, 1895.

RED FIR. DOUGLAS SPRUCE.

Abies mucronata Raf. Atl. Journ. 120, 1832.

Abies douglasii Lindl, Penn. Cvcl. 1: 32, 1833.

Pseudotsuga douglasii Carr. Trait. Conif. nouv. éd. 256, 1867.

Pseudotsuga taxifolia Britton, Trans. N. Y. Acad. Sci. 8: 74, 1889.

Type locality: Mouth of the Columbia River, Oregon.

Range: Alaska and British America, latitude 55°, south to southern California, Arizona, and western Texas.

Specimens examined: Olympic Mountains, Elmer 2480; Nisqually Valley, Allen 209; head of Grand Coulee, McKay 23; Kamiak Butte, Elmer 811.

Zonal distribution: Mainly Humid Transition.

The commonest tree of the State, making up the bulk of the forest west of the Cascade Mountains and common in eastern Washington in the upper part of the yellow pine zone. For illustration of a red fir forest see Plate VII, facing page 36.

TSUGA.

Lowland tree; cones 1 to 2 cm. long 1, T. heterophylla.

Alpine tree; cones 5 to 7 cm. long 2, T. mertensiana.

 Tsuga heterophylla (Raf.) Sarg. Silva N. A. 12: 73, 1898. WESTERN HEMLOCK. Abics heterophylla Raf. Atl. Journ. 119, 1832.

Type locality: Mouth of the Columbia River, Oregon.

Range: Alaska to northern California and western Montana.

Specimens examined: Olympic Mountains, Elmer 2482; Cascade Mountains, latitude 49°, Lyall; Horseshoe Basin, Elmer 710; Scattle, Piper, September, 1896; Chambers Lake, Henderson, August 23, 1892; Port Ludlow, Binns, September, 1890; Nisqually Valley, Allen 305; Yakima Pass, Watson 384; Lake Keechelus, Henderson, July 26, 1892.

ZONAL DISTRIBUTION: Humid Transition and Canadian.

In Cooper's report and other early botanical works this hemlock was referred to the eastern *T. canadensis*. For illustration of a hemlock forest see Plate XVI, facing page 58.

2. Tsuga mertensiana (Bong.) Carr. Trait. Conif. nouv. éd. 250. 1867.

Black hemlock.

Pinus mertensiana Bong, Mem. Acad. St. Petersb. VI. 2: 45, 1832.

Abies pattoniana Jeffrey, Rep. Bot. Exp. Oregon. 1853.

Tsuga pattoniana Engelm. in Wats. Bot. Cal. 2: 121, 1880.

Tsuga hookeriana Carr. Trait. Conif. nouv. éd. 252, 1867.

Type locality: Sitka,

Range: Alaska to California and Montana.

Specimens examined: Olympic Mountains, Henderson, August 9, 1892; Elmer 2483; Mount Rainier, Piper, August, 1895; Allen 306; Mount Adams, Henderson, August 9, 1892; Skagit Pass, Lake & Hull, August 24, 1892; Bridge Creek, Elmer 871, September, 1897.

ZONAL DISTRIBUTION: Hudsonian.

PICEA.

1. Picea sitchensis (Bong.) Traut. & Meyer, Fl. Ochot. 87, 1856.

SITKA SPRUCE.

Pinus sitchensis Bong, Mem. Acad. St. Petersb. VI. 2: 164, 1832. Abies menziesii Lindl. Penn. Cvcl. 1: 32, 1833.

Type locality: Sitka.

RANGE: Along the coast from Alaska to northern California.

Specimens examined: Olympic Mountains, Elmer 2489; Hoquiam, Lamb 1075; Seattle, Piper in 1885.

ZONAL DISTRIBUTION: Humid Transition.

A very abundant tree along the ocean coast, but only locally plentiful on Puget Sound.

2. Picea engelmanni Parry in Engelm. Trans. St. Louis Acad. 2: 212, 1863.

Engelmann spruce.

Picca columbiana Lemmon, Gard. & For. 10: 183. 1897.

Type locality: "Higher parts of the Rocky Mountains, from New Mexico to the headwaters of the Columbia and Missouri rivers."

RANGE: British Columbia, southward to Arizona in the Rocky Mountains, and in the Cascade Mountains of Washington.

Specimens examined: Wenache, Elmer 473; Blue Mountains, Piper, July 31, 1896; east side Cascade Mountains, Lyall; without locality, Vascy 64.

Zonal distribution: Mainly Canadian.

The Klickitat County specimens considered by Suksdorf to represent Pieca pangens Engelm, and so listed seem rather to be P, engelmanni.

TYPHACEAE.

TYPHA.

1. Typha latifolia. L. Sp. Pl. 2: 971, 1753.

Cattail.

Type locality: "Habitat in paludibus Europae."

Range: Throughout the northern hemisphere except the Arctic regions.

Specimens examined: Samish Lake, Suksdorf 1007; Rock Lake, Lake & Hull 627; Pullman, Piper, July 15, 1901; Cow Creek, Griffiths & Cotton 532; Stehekin, Griffiths & Cotton 226; Prosser, Cotton 740.

ZONAL DISTRIBUTION: Upper Sonoran and Transition.

The cattail is exceedingly common about lakes and marshes in western Washington and scarcely less so in eastern Washington. Botanical specimens of it are, however, seldom gathered.

SPARGANIACEAE.

SPARGANIUM. BUR REED.

Inflorescence branching.

Fruits stalked 1. S. carycarpum.

Fruits sessile 2. S. androcladum.

Inflorescence simple.

Stems floating.

 Nutlets fusiform, dark, 4 mm. long
 4. S. angustifolium.

 Nutlets oblong, obovate, 2 to 3 mm. long
 5. S. minimum.

Sparganium eurycarpum Engelm. in A. Gray, Man. ed. 2, 430, 1856.

Type locality: "Borders of ponds, etc., common northward and especially westward." Range: British Columbia to Newfoundland, south to California, Utah, and Virginia. Specimens examined: Kalispel Lake, *Kreager* 488, a doubtful specimen.

Zonal distribution: Transition.

2. Sparganium androcladum (Engelm.) Morong, Bull. Torr. Club 15: 78. 1888.

Sparganium simplex androcladum Engelm, in A. Gray, Man. ed. 5, 481, 1867.

Type locality: "From New England southward and especially westward."

THE LOCALITY. From New England solutional and especially westward

RANGE: British Columbia to Nova Scotia, south to Texas and Florida.

Specimens examined: Near Montesano, Heller 3865; Seattle, Piper 713; Tacoma, Flett 151; Puyallup, Piper, September 2, 1899; Rock Lake, Lake & Hull 630; Touchet River, Horner 20. Zonal distribution: Transition.

This species was referred to in Cooper's Report as S. ramosum Smith.

3. Sparganium simplex Huds. Fl. Angl. ed. 2, 401, 1778.

Type locality: "Circa Norwich," England.

Range: British Columbia to Labrador, south to California and Pennsylvania.

Specimens examined: Cascade Mountains, 49°, Lyall in 1859; Seattle, Smith 712; Peshastin, Sandberg & Leiberg 600; Lake Keechelus, Henderson, July, 1892; without locality, Vascy in 1889.

Zonal distribution: Transition.

4. Sparganium angustifolium Michx. Fl. 2: 189, 1803.

Sparganium simplex angustifolium Engelm. in A. Gray, Man. ed. 5, 481, 1867.

Type locality: "Hab. in amnibus Canadae."

Range: British Columbia to California, east to Ontario and New York.

Specimens examined: Without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Transition.

5. Sparganium minimum Fries, Sum. Veg. 2: 560, 1846.

Type locality: Scandinavian.

RANGE: British Columbia to New Brunswick, south to Oregon, Utah, and Pennsylvania. Europe.

Specimens examined: Mount Rainier, Smith in 1889; Mount Adams, Henderson, August, 1882; Falcon Valley, Suksdorf 518; Spokane Falls, Watson 399; without locality, Vascy in 1889.

Zonal distribution: Transition to Hudsonian.

POTAMOGETONACEAE.

POTAMOGETON. PONDWEED.

Floating leaves broad; stipules free.

Submerged leaves grass-like.

Stipules long; floating leaves subcordate at base...... 1. P. natans.

Stipules short; floating leaves attenuate at base....... 2. P. nuttallii.

Suhmerged leaves lanceolate.

Floating leaves 10 to 20-nerved.

Petioles of floating leaves long.

Floating leaves none.

Leaves all oblong or lanceolate.

Base of leaves not clasping; apex not acuminate.

Leaves all narrowly linear.

Stipules adnate to the sheathing base of the leaf.

Stipules free.

Leaves tape-like; spike cylindric; fruit large...... 10. P. zosteracjolius.

Leaves not tape-like; spike not cylindric; fruit small.

1. Potamogeton natans L. Sp. Pl. 1: 126, 1753.

Type locality: European.

Range: North America. Europe. Asia.

Specimens examined: Cascade Mountains, 49°, Lyall in 1859; Oyhut, Lamb 1259; Tacoma, Flett 135; Falcon Valley, Suksdorf, July 17, 1886; Pend Oreille River, Lyall in 1861.

2. Potamogeton nuttallii Cham. & Schlecht. Linnaea 2: 226, t. 6, f. 25, 1827.

Potamogeton claytonii Tuck, Am. Journ. Sci. 14: 38, 1843.

Type locality: None given.

Range: Washington and Oregon to Nova Scotia and South Carolina.

Specimens examined: Montesano, Heller 4072; Hwaco, Henderson in 1886; Lake Washington, Piper, September, 1892; Mount Constitution, Henderson 2477; Spokane County, Henderson 2476; Waitsburg, Horner R16.

3. Potamogeton amplifolius Tuck, Am. Journ. Sci. 11, 6: 225, 1848.

Type locality: Cambridge, Massachusetts.

RANGE: British Columbia to Ontario, south to Washington and Nebraska.

Specimens examined: Coupeville, Gardner 421; Pullman, Henderson 2474; Kalispel Lake, Kreager 441; Whatcom County, Suksdorf, August 1, 1890.

4. Potamogeton alpinus Balbis, Mem. Acad. Turin 7: 323, 1803.

Potamogeton rufescens Schrad.; Cham. Ad. Fl. Ber. 5, 1815.

Type locality: European.

RANGE: British Columbia to Labrador, south to California and New Jersey.

Specimens examined: Mount Adams, Snksdorf, September, 1879; Trout Creek, Snksdorf 2172.

5. Potamogeton heterophyllus Schreb. Spicileg. Fl. Lips. 21, 1771.

Type locality: "In stagno ad Lindenthal," Germany.

Range: Throughout most of North America. Europe.

Specimens examined: Lake Chelan, Lake & Hull 611, Okanogan River, Watson 396; Tumwater Canyon, Sandberg & Leiberg 524; Falcon Valley, Suksdorf, August, 1885.

6. Potamogeton lonchites Tuck, Am. Journ. Sci. 11, 6: 226, 1848.

Type locality: "Common in New England and extending southward to Virginia."

Range: Washington to New Brunswick, south to California and Florida.

Specimens examined: Clallam County, Elmer 2798, Silver Lake, Henderson 2475; Okanogan River, Watson 398, Pend Oreille River, Lyall in 1864, Whitman County, Henderson 2473; Umon Flat, Peper, August 4, 1899, without locality, Vasey in 1889.

29418-06 м----7

7. Potamogeton perfoliatus richardsonii Bennett, Journ. Bot. 27: 25. 1889.

Potamogeton perfoliatus lanceolatus Robbins in Gray, Man. ed. 5, 488, 1867, not P. lanceolatus Smith, 1824–28.

Type locality: "Along the Great Lakes."

Range: British Columbia to New England, south to California and Nebraska.

Specimens examined: Lake Washington, Piper, August, 1892; Whatcom River, Gardner 419; Lake Chelan, Dr. T. E. Wilcox in 1883; Fort Colville, Rocky Mountains, Lyall in 1861; Lake Chelan, Gorman 677; Prosser, Griffiths & Cotton 809.

The specimen upon which the "P. crispus L. !" of Suksdorf's list is based proves to be a sterile specimen of the above from Lake Washington.

8. Potamogeton praelongus Wulf. Roem. Arch. 111. 3:331. 1803.

Type locality: "Laboci Junio Julique in fluvio cognomine, et in fluvio Jschiza."

Range: British Columbia to Nova Scotia, south to California and Pennsylvania. Europe. Asia.

Specimens examined: Tacoma, Flett 2160.

9. Potamogeton lucens L. Sp. Pl. 1: 126, 1753.

Type locality: "Hab. in Europae lacubus, stagnis, fluviis argillosis."

RANGE: British Columbia to Nova Scotia, south to California and New Jersey. Europe. Asia.

Specimens examined: Lake Chelan, Gorman 703.

10. Potamogeton zosteraefolius Schum, Enum. Pl. Saell. 50, 1801.

Type locality: Saellandia.

Range: Oregon and British Columbia to New Jersey and New Brunswick. Europe.

Specimens examined: Whatcom County, Suksdorf, August 1, 1890.

11. Potamogeton californicus (Morong).

Potamogeton pauciflorus valifornicus Morong, Bot. Gaz. 10: 254. 1885.

Type locality: San Diego County, California.

Range: Washington to California.

Specimens examined: Pullman, Piper 1802.

12. Potamogeton pusillus L. Sp. Pl. 1: 127, 1753.

Type locality: Europe.

RANGE: British Columbia to New Brunswick, south to California, Texas, and Virginia. Europe.

Specimens examined: Seattle, Piper 761; Okanogan River, Watson 395.

13. Potamogeton pectinatus L. Sp. Pl. 1: 127. 1753.

Potamogeton columbianus Suksdorf, Deutsch. Bot. Monatss. 19: 92. 1901.

Type locality: European.

Range: British Columbia to New Brunswick, south to California and Florida. Europe. Specimens examined: Cascade Mountains, 49°, Lyall in 1859; west Klickitat County, Suksdorf 2062: White Salmon, Suksdorf 221; Okanogan River, Watson 394.

14. Potamogeton robbinsii Oakes, Hovey's Mag. 7: 180, 1841.

Type locality: "In Pondicherry Pond, Jefferson, N. H."

RANGE: Washington to New Brunswick, south to Oregon and Pennsylvania.

Specimens examined: Lake Cushiman, Piper 2231; Henderson 1861; Lake Chelan Gorman in 1898.

POTAMOGETON PULCHER Tuck, is listed by Suksdorf. The basis is a sterile plant from Glenwood, which may belong to P. amplifolius Tuck.

POTAMOGETON MARINUS L. is included in Suksdorf's list based on a sterile plant from Bingen, which seems to be P. pectinatus L.

NAIADACEAE.

Carpels several to each flower.

Carpels solitary; flowers monoecious or dioecious.

Leaves alternate, entire, long-linear.

RUPPIA.

Sheaths 6 to 8 mm, long; fruit 2 mm, long. 1. R. maritima. Sheaths 12 to 30 mm, long; fruit 3 to 4 mm, long 2. R. occidentalis.

1. Ruppia maritima L. Sp. Pl. 1: 127, 1753.

Type locality: European.

Range: In brackish water, nearly cosmopolitan.

Specimens examined: Claffam County, Elmer 2797; Whidby Island, Gardner 348; Anacortes, Henderson, July, 1892; Ocosta, Henderson, June, 1892; Seattle, Piper 2863.

2. Ruppia occidentalis S. Wats. Proc. Am. Acad. 25: 138, 1890.

Type locality: "In saline ponds near Kamloops, British Columbia." Collected by Macoun.

RANGE: British Columbia to Washington and Nebraska.

Specimens examined: Lake Chelan, Lake & Hull.

ZANNICHELLIA.

1. Zannichellia palustris L. Sp. Pl. 2: 969, 1753.

Type locality: "Habitat in Europae, Virginiae fossis, fluviis."

Range: Throughout most of North America. Europe. Asia.

Specimens examined: West Klickitat County, Suksdorf 2174: Junction Crab and Wilson Creeks, Sandberg & Leiberg 264: Marshall Junction, Piper, July 2, 1896.

NAIAS.

1. Naias flexilis (Willd.) Rostk. & Schmidt, Fl. Sed. 384, 1824.

Caulinia flexilis Willd, Abh. Akad. Berlin 95, 1803.

Type locality: European.

Range: Throughout most of North America. Europe.

Specimens examined: Green Lake, Piper; Lake Chelan, Elmer, September, 1897.

ZOSTERA.

Zostera marina L. Sp. Pl. 2: 968, 1753.

Eelgrass.

Zostera oregana Wats, Proc. Am. Acad. 26: 131, 1891.

Type locality: "Habitat in mari Balthico, Oceano."

Range: Seacoasts, Alaska to California and Greenland to Florida. Europe. Asia.

Specimens examined: Grays Harber, Henderson 2471; Orchard Point, Piper 2314.

Eelgrass is very abundant at about low-tide mark all along the seashore, especially in quiet water. Fruiting specimens are very rarely found. Better material for study is much to be desired.

PHYLLOSPADIX.

Phyllospadix scouleri Hook, Fl. Bor. Am. 2: 171, 1839.

Type locality: "Dundas Island in the Columbia River," Dr. Scouler.

Range: Seacoast, British Columbia to California.

Specimens examined: Whidby Island, Gardner 323.

The other species, P. torreyi Wats., may be expected to occur on the Washington coast, as it is known from California and from Vancouver Island.

SCHEUCHZERIACEAE.

Leaves basal; flowers in a long spike-like raceme. Triglochex.

Stems leafy; flowers few in a loose raceme. Scheuchzerla.

TRIGLOCHIN.

1. Triglochin palustris L. Sp. Pl. 1: 338, 1753.

Type locality: European.

Range: Alaska to New Brunswick, south to Washington and New York.

Specimens examined: Colville, Kreager 520.

Zonal distribution: Arid Transition.

2. Triglochin maritima L. Sp. Pl. 1: 339, 1753.

Type locality: Europe.

Range: Alaska to Labrador, south to California and New Jersey.

Specimens examined: Challam County, Elmer 2571; Whidby Island, Gardner 355; Admiralty Head, Piper; Orchard Point, Piper, July, 1895; Seattle, Piper 680; Lopez Island, Lyall in 1858-59; Falcon Valley, Suksdorf 617; Lake Chelan, Elmer, September, 1897; Lake & Hull 628; Loomis, Elmer 261; Sprague, Sandberg & Leiberg 210; Medical Lake, Henderson, July 2, 1892; Priest Rapids, Cotton 1378.

Zonal distribution: Transition.

SCHEUCHZERIA.

1. Scheuchzeria palustris L. Sp. Pl. 1: 338, 1753.

Type locality: "Habitat in Lapponiae, Helvetiae, Borussiae, Sueciae paludosis."

RANGE: British Columbia to Labrador, south to California and Pennsylvania.

Specimens examined: Scattle, Piper 693; Skamania County, Suksdorf 1327; White Salmon, Suksdorf in 1878; Colville to Rocky Mountains, Lyall in 1861; Tacoma, Flett 2226.

ZONAL DISTRIBUTION: Humid Transition.

ALISMACEAE.

ALISMA.

1. Alisma plantago-aquatica L. Sp. Pl. 1: 342, 1753.

WATER PLANTAIN.

Type locality: European.

Range: Nearly throughout North America, Europe, Asia.

Specimens examined. Cascade Mountains, latitude 49°, Lyall in 1859; Seattle, Piper, August, 1892; Tacoma, Flett 153; west Klickitat County, Suksdorf 1317; Ellensburg, Whited 498, Wenache, Whited 1428; North Yakima, Watt, August, 1895; Columbia River,

46° to 49°, Lyall in 1860; Kalispel Valley, Kreager 363; Usk, Kreager 366; Cotton 432; Nason Creek, Sandberg & Leiberg 694; without locality, Vasey 66; Waitsburg, Horner 21; Pullman, Hull 629; Piper, July, 1897.

ZONAL DISTRIBUTION: Transition.

SAGITTARIA. ARROWHEAD.

Beak of the akene horizontal or oblique, more than one-fourth its length.. 1. S. latifolia. Beak of the akene less than one-fourth its length.

Bracts 8 to 20 mm. long; bog plant. 2. N. arifolia.
Bracts 4 to 6 mm. long; water plant. 3. N. cuneata.

1. Sagittaria latifolia Willd. Sp. Pl. 4: 409, 1805.

Wapato.

Sagittaria sagittifolia macrophylla Hook. Fl. Bor. Am. 2: 167, 1839.

Sagittaria sagittifolia vulgaris Hook, loc. eit.

Sagittaria esculenta Howell, Fl. N. W. Am. 679, 1903.

Type Locality: "Habitat a Canada ad Carolinam."

Range: Throughout most of North America.

Specimens examined: Cascade Mountains, 49°, Lyall in 1858; Scattle, Piper, August, 1892; Chambers Lake, Henderson, August, 1892; Falcon Valley, Suksdorf 673.

ZONAL DISTRIBUTION: Transition.

This is the wapato or wappatoo, formerly an important food plant of the Indians. The introduction of the European carp into the Columbia River has nearly caused the extermination of this plant, where it used to be abundant.

2. Sagittaria arifolia Nutt.; J. G. Smith, Ann. Rep. Mo. Bot. Gard. 6: 32, 1894.

Type locality: Oregon. Collected by Nuttall.

Range: British Columbia to Quebec, south to California and Kansas.

Specimens examined: West Klickitat County, Suksdorf 1318; Lake Chelan, Lake & Hull, August, 1892; Colville, Lyall in 1860; Union Flat, Piper 3049, 3049; Lake & Hull 626; Pullman, Hardwick, July, 1895; Prosser, Griffiths & Cotton 806.

Zonal distribution: Arid Transition.

2a. Sagittaria arifolia stricta J. G. Smith, Ann. Rep. Mo. Bot. Gard. 6: 34, 1891.

Type locality: Falcon Valley, Klickitat County, Washington. Collected by Suksdorf. Range: Washington.

Specimens examined: Falcon Valley, Suksdorf 674.

3. Sagittaria cuneata Sheld. Bull. Torr. Club 20: 283. 1893.

Type Tocality: "East Battle Lake, Otter Tail County," Minnesota.

Range: Washington to Minnesota, north to British Columbia and Saskatchewan.

Specimens examined: Phileo Lake, Spokane County, Suksdorf 2262.

VALLISNERIACEAE.

ANACHARIS.

1. Anacharis canadensis (Michx.) Planch, Ann. Sci. Nat. III, 11: 75, 1849.

Elodea canadensis Michx. Fl. 1: 20. 1803.

WATERWEED.

Philotria canadensis Britton, Science II. 2: 5. 1895.

Type locality: "Hab, in rivulis Canadae."

Range: Throughout most of North America.

Specimens examined: Green Lake, Piper, September, 1898; Lake Chelan, Gorman in 1897.

#

POACEAE. Grass Family.

KEY TO THE TRIBES.

Spikelets, 1 or 2-flowered. Rachilla articulated below the glumes, the spikelet 1 when 2-flowered the lower staminate.	or 2-flowered,	
Glumes 2; spikelets flattened	ORYZEAE.	
Rachilla articulated above the glumes.		
Glumes apparently 4: palea 1-nerved		
Spikelets 2 to many-flowered. Inflorescence a panicle or raceme.		
Lemma shorter than the glumes, usually with a bent awn arising		
from the back		
Lemma longer than the glumes, awnless or with a		
awn		
Inflorescence a spike. Spikelets crowded in 2 rows, forming one-sided spikes		
Spikelets in 2 opposite rows.		
KEY TO THE GENERA.		
ORYZEAE.		
Flowers perfect; glumes and lemmas keeled	Homalocenchius (p. 104).	
PANICEAE.		
Spikelets in one-sided racemes or spikes.		
First glume very small		
First glume well developed	Paspalum (p. 104).	
Spikelets not in one-sided racemes or spikes. Inflorescence dense: pedicels bearing bristles	Cuartochioa (n. 106).	
Inflorescence loose: pedicels not bristly	Рахистм (р. 105).	
PHALARIDEAE.		
Spikelet with 3 florets, the uppermost perfect, the others stami-		
nate	Savastana (p. 106).	
Spikelet with 1 perfect floret, the lateral ones reduced to ster-		
ile lemmas. Sterile lemmas bifid, awned	ANTHON ANTHUM (p. 106)	
Sterile lemmas awnless, very small		
AGROSTIDEAE.		
Lemma with a long terminal awn, and closely embracing the grain.		
Fruiting lemma thin and membranaceous	MUHLENBERGIA (p. 110).	
Awns 3-branched.	Aristida (p. 107).	
Awns simple.		
Twisted, persistent on the lemma		
Straight, deciduous from the lemma	ORYZOPSIS (p. 109),	

Lemma awaless or short-awned, and loosely enveloping the grain. Inflorescence a dense spike. Spikelets early deciduous; lemma with a dorsal awn Spikelets persistent; lemma awnless or with a terminal	Alopecurus (p. 110).
awn. Spikes ovoid: glumes long-awned Spikes cylindric: glumes not long-awned Inflorescence a loose paniele.	
Fruit a utricle	Sponobolus (р. 112).
Fruit a grain. Palet 1-nerved; stamen \Palet 2-nerved; stamens 3.	Cinna (p. 113).
Glumes none; plant, minute	Coleanthus (p. 114).
Callus with a tuft of long hairs at base Callus naked.	
AVENEAE.	
Perfect flower only one, the other staminate. Lower flower perfect; upper staminate and awned. Lower flower staminate, long-awned; second flower perfect.	
awnless	
Rachilla prolonged beyond the upper flower. Awn of the lemma arising between the two terminal	7 [v v=2).
teeth	Мекатикерта (р. 122) .
Florets large, more than 15 mm, long. Florets small, less than 15 mm, long.	Avena (p. 123).
Lemma erose-truncate	Deschampsia (p. 123). Trisetum (p. 124).
FESTUCEAE.	
Lemma 3-nerved, rarely 1-nerved. Rachilla with long hairs	Рика с мітеs (р. 125).
Glumes obtuse very unlike the upper inclosing the flowers	Estonia (p. 125).
Panicle close; spikelets 2 to 4-flowered	Koeleria (p. 126). Eragrostis (p. 126).
Spikelets with the upper florets sterile and folded about each other	Менса (р. 127).
tive. Keels of the palea winged	Pleuropogon (p. 128).
Keels of the palea not winged. Stigmas arising below the apex of the ovary Stigmas arising at the apex of the ovary.	Browts (p. 141).
Lemmas compressed and keeled.	

Lemmas awn-pointed	Dactylis (p. 128).
Lemmas pointless.	
Glumes 1 to 3-nerved	Poa (p. 128).
Glumes 5-nerved or more	Distichlis (р. 135).
Lemmas convex or rounded on the back.	
Lemmas acute or awned	Festuca (p. 135).
Lemmas obtuse and scarious at apex.	
Prominently 5 to 7-nerved	Panicularia (p. 139).
Obscurely 5-nerved	

CHLORIDEAE.

Pedicel jointed above the persisting glumes; spikes digitate Capriola (p. 146).	
Pedicel jointed below the glumes.	
Spikelets much flattened; glumes unequal, keeled Spartina (p. 145).	
Spikelets subterete; glumes equal, convex Beckmannia (p. 145)).

HORDEAE,

Spikelets mostly solitary at each joint of the rachis.	
Spikelet 1-flowered	Scribneria (p. 146).
Spikelet several-flowered.	
Placed edgewise on the rachis	LOLIUM (р. 146).
Placed flatwise on the rachis	Agropyron (p. 146).
Spikelets two or more at each joint of the rachis.	•
Spikelets 1-flowered	Нокреим (р. 149).
Spikelets 2 to many-flowered.	
Rachis continuous	Elymus (р. 150).
Rachis readily separating into joints	Sitanion (p. 153).

HOMALOCENCHRUS.

1. Homalocenchrus oryzoides (L.) Poll. Hist. Pl. Palat. 1: 52, 1776.

Leersia oryzoides Sw. Prod. Veg. Ind. Occ. 21, 1788.

Phalaris oryzoides L. Sp. Pl. 1: 55, 1753.

Type locality: "Habitat in Virginiae paludibus nemorosis."

Range: Newfoundland to Washington, south to Florida, Texas, and California.

Specimens examined: Seattle, Piper in 1889; North Yakima, Leckenby, August, 1897.

Zonal distribution: Transition and Upper Sonoran.

PASPALUM.

1. Paspalum distichum L. Amoen. Acad. 5: 391, 1759.

Type locality: Jamaica.

Specimens examined: Along Columbia River, Leckenby, October, 1900; Klickitat County, Suksdorf.

Introduced along the banks of the lower Columbia River.

SYNTHERISMA.

 Syntherisma sanguinale (L.) Nash, Bull. Torr, Club 22: 420, 1895. Crabgrass. Panicum sanguinale L. Sp. Pl. 1: 57, 1753.

Digitaria sanguinalis Scop. Fl. Carn. ed. 2. 1: 52. 1772.

Syntherisma praecox Walt. Fl. Car. 76, 1788.

Type locality: "Habitat in America, Europa australi."

Specimens examined: Pullman, Piper 1920.

Sparingly introduced as a weed in grass seed.

PANICUM.

Spikelets in one-sided racemes, awned; summit of the palet free 1. P. crus-galli. Spikelets in open panicles, awnless; summit of the palet inclosed in glume.

Annual, spikelets pointed.

Culms 15 to 25 cm, high, slender; spikelets 2.5 mm, long . . . 2. P. barbipulvinatum. Culms 40 cm, or more high, stout; spikelets 3.5 mm, long . 3. P. hirticaulum.

Perennial, spikelets obtuse.

Culms stout; spikelets 3 mm, long 4. P. scribnerianum.
Culms slender; spikelets 1.5 mm, long 5. P. occidentale.

1. Panicum crus-galli L. Sp. Pl. 1: 56, 1753.

Barnyard grass.

Type locality: "Habitat in Europae et Virginiae cultis."

RANGE: A native of Europe widely established as a weed.

Specimens examined: Scattle, Piper; Alma, Elmer 530; North Yakima, Watt, August, 1895; Parker, A. D. Dunn, August 8, 1901; west Klickitat County, Suksdorf 2329; Almota, Piper, September, 1896; Wawawai, Lake 87; Davis Lake, Kreager 441; Marcus, Kreager 460.

2. Panicum barbipulvinatum Nash, Mem. N. Y. Bot. Gard. 1:21, 1900.

Panieum capillare brevifolium Vasey, U. S. Dept. Agr. Div. Agrost. Buil. 5: 21, 1897, not P. brevifolium L. 1753.

Type locality: "Manhattan, on a shaded sand bar in the Gallatin River," Montana, Range: Washington to Montana.

Specimens examined: White River, Vasey 66: Chelan, Elmer 484, 848: Kittitas County, Sandberg & Leiberg 431: North Yakima, Henderson 2219; Watt, August, 1895; Fort Colville, Lyall in 1860: Watson 445: Whitman County, Lake & Hull 63: Dry Creek, Whitman County, Vasey 65: Yelm Prairie, Piper in 1888.

Zonal distribution: Upper Sonoran and Transition.

3. Panicum hirticaulum Presl, Rel. Haenk. 1: 308, 1830.

Type locality: "Hab. ad Acapulco, Mexico."

Range: Washington to Mexico.

Specimens examined: Near Bingen, Suksdorf 2320.

ZONAL DISTRIBUTION: Upper Sonoran.

4. Panicum scribnerianum Nash, Bull. Torr. Club 22: 421, 1895.

Panicum scoparium minor Scribn, Bull, Univ. Tenn. 7; 48, 1894, not Panicum pubescens minus Poir.; Lam. Enevel. 4: 272, 1846.

Type locality: "Middle Tennessee."

RANGE: Maine to Washington, south to Alabama and Arizona.

Specimens examined: Alki Point, Peper 804; Seattle, Smith 804; Tacoma, Flett 11; American Lake, Smith, May, 1890. between Olympia and Gate City, Heller 4058; Cascade Mountains, 49°, Lyall in 1859. Ophir, Elmer 509; Old Fort Colville, Watson 443; Wawawai, Elmer 763; Brodie, June, 1898.

ZONAL DISTRIBUTION: Upper Sonoran and Transition.

All references of Panicum scoparium Lam, to Washington refer to P, scribnerianum. With little doubt also the Columbia River specimens referred by Hooker to P, ricidum Ell, are the same.

5. Panicum occidentale Scribn, Ann. Rep. Mo. Bot. Gard. 10: 48, 1899.

Panicum pubescens Lam. err. det. Presl, Rel. Haenk. 1:306, 1830

Type locality: "Hab. in Nootka-Sund," Vancouver Island.

RANGE. British Columbia, Washington, and Idaho.

Specimens examined: Cascade Mountains, 49°, Lyall in 1859; Woodlawn, Henderson, June 22, 1892; Yelm, Smeth, July 20, 1890, Enumelaw, Uasey 72; Montesano, Heller 3978;

Union City, Piper 939; Coulee City, Lake & Hull 118; Chelan, Elmer 489; Wenache, Whited 1249; Tumwater Canyon, Whited, August, 1901; Little Baldy, Spokane County, Kréager 160; Mason County, Piper 939; Kiona, Cotton 736; Toppenish, Cotton 792.

ZONAL DISTRIBUTION: Transition.

Specimens of this species have been referred to P. nitidum Lam. and to P. dichotomum, L. species not known to occur within our limits.

Panicum virgatum L. is stated by Hooker to have been collected on the Columbia by Douglas. There is no recent evidence of such occurrence of the species.

CHAETOCHLOA.

Chaetochloa viridis (L.) Seribu, U. S. Dept, Agr. Div. Agrost. Bull. 4: 39, 1897.
 Green fontall.

Panicum viride L. Sp. Pl. ed. 2, 83, 1762.

Setaria viridis Beauv. Agrost, 51, 178, 1812.

Type locality: "Habitat in Europa australi."

Specimens examined: North Yakima, Watt; Parker, A. D. Dann; Pullman, Piper; Waitsburg, Horner: Seattle, Piper.

PHALARIS.

 Inflorescence a narrow paniele
 1, P. arundinacea.

 Inflorescence an ovoid spike.
 2, P. canariensis.

1. Phalaris arundinacea L. Sp. Pl. 1: 55, 1753.

REED CANARY GRASS.

Type locality: European.

RANGE: British Columbia to Nova Scotia, southward to New Jersey, Kansas, and California.

Specimens examined: Cascades, Lyall in 1859, Wenache region, Brandegee 1153, Whited 1425; Ellensburg, Prper, June, 1897; Whited 563; Columbia River, Klickitat County, Suksdorf 1186; Spokane River, Piper 2386; Big Meadow, Kreager 425; Lake Chelan, Vascy 52, 552; Colville Reservation, Griffiths & Cotton 367; Brewster, Griffiths & Cotton 263.

ZONAL DISTRIBUTION: Arid Transition.

2. Phalaris canariensis L. Sp. Pl. 1:51, 1753.

Canary grass.

Type locality: "Hab, in Europa australi, Canariis." Specimens examned: Pullman, *Hardwick*, July, 1895.

ANTHOXANTHUM.

1. Anthoxanthum odoratum L. Sp. Pl. 1: 28, 1753.

SWEET VERNAL GRASS.

Type Locality: "Habitat in Europae pratis."

Specimens examined: Tacoma, Piper, September 5, 1895.

SAVASTANA.

 Savastana odorata (L.) Scribn, Mem. Torr. Club 5; 34, 1894.
 Vanilla grass. Holeus odoratus L. Sp. Pl. 2; 1048, 1753.

Hierochloe borealis Roem, & Schult, Syst. 2: 513, 1817.

Type locality: European.

RANGE: Newfoundland to Alaska, south to Washington, Colorado, and Wisconsin.

Specimens examined: Effensburg, Whited 292; North Yakima, Leckenby, April 22, 1897; Fort Colville, Lyall in 1861; Wenache River, Vascy 229.

ZONAL DISTRIBUTION: Transition.

ARISTIDA.

1. Aristida purpurea robusta (Merrill).

Aristida longiseta robusta Merrill, U. S. Dept. Agr. Div. Agrost, Circ. 34: 5, 1901.

Type locality: "Indian Creek, Montana."

RANGE: South Dakota to British Columbia, south to Nebraska and Wyoming.

Specimens examined: Alma, Elmer 536; Rock Island, Sandberg & Leiberg 439; Spokane, Piper 2597; Wawawai, Brodie, July, 1898; Kelly's Bar, Snake River, Brodie, July, 1898; Cow Creek, Griffiths & Cotton 288; Lyons Ferry, Griffiths & Cotton 547.

Zonal distribution: Upper Sonoran and Arid Transition.

Nuttall's type of A. purpurea in the Philadelphia Academy of Sciences was, in my opinion, misunderstood by Mr. Merrill. The type certainly belongs to the group of forms Merrill includes under A. longiscla Steud., and has nothing to do with the species with which Merrill associates the name purpurea.

STIPA.

Awns 10 to 20 times longer than the lemmas.	
Plants glabrous.	S. S. comata.
Plants pubescent	Sa. S. comata intonsa.
Awns 4 to 7 times longer than the lemma.	
Awns plumose.	
Ligule 1 mm. long or less.	
Sheaths glabrous	1. S. occidentalis.
Sheaths pubescent	2. S. elmeri.
Ligule 2 to 4 mm. long	3. S. thurberiana.
Awns only slightly pubescent or scabrous.	
Callus very short, obtuse; spikelets stout	4. S. lemmoni.
Callus acute or acuminate.	
Sheaths pubescent	5. S. williamsii.
Sheaths smooth or only scabrous.	
Awns 1 to 3 cm. long	6. S. minor.

1. Stipa occidentalis Thurb. Bot. King Explor. 380, 1871.

Stipa stricta Vasey, Bull. Torr. Club 10: 42, 1883.

Stipa stricta sparsiflora Vasey, Contr. Nat. Herb. 3: 51, 1892.

Stipa oregonensis Scribner, U. S. Dept. Agr. Div. Agrost. Bull. 17: 130, 1899.

Type locality: "Yosemite Trail, California."

RANGE: Washington to Nevada and California.

Specimens examined: Ellensburg, Piper 2583; Twenty-tive Mile Creek, Okanogan County, Gorman 617; Clealum, Henderson 2254; Mount Adams, Henderson 2256; Ophir, Elmer 515; without locality, Suksdorf in 1882; Mount Baldy, Cotton 1755; Wenache Mountains, Cotton 1675; Stehekin, Griffiths & Cotton 21.

Zonal distribution: Arid Transition.

Stipa elmeri Piper & Brodie, U. S. Dept, Agr. Div. Agrost. Bull. 11: 46, 1898.
 Stipa virulula pubescens Vasey, Contr. Nat. Herb. 3: 50, 1892, not Stipa pubescens R. Br. 1810.

Type locality: Empire City, Nevada, according to the label on the type specimens.

Range: Washington to Nevada.

SPECIMENS EXAMINED: West Klickitat County, Suksdorf, June 17, 1883; Nile, Henderson 2253; Cascade Mountains, Vascy in 1889; Chelan, Elmer 487; Ophir, Elmer, August, 1897; Spokane, Piper 2276, 2601; Steamboat Rock, Griffiths & Cotton 441.

Zonal distribution: Arid Transition.

3. Stipa thurberiana Piper, U. S. Dept. Agr. Div. Agrost. Circ. 27:10, 1900.

Stipa occidentalis Thurb, Bot. Wilkes Exped. 483, 1874, not Thurb, Bot. King Explor, 380, 1871.

Type locality: "North Branch of the Columbia." Collected by the Wilkes Expedition.

Range: Washington to Nevada and California.

Specimens examined: Wenache, Whited 1230; Sunnyside, Cotton 487; North Yakima, Leckenby, May, 1898; Henderson 2255; Ellensburg, Piper 2611; North Branch Columbia River, Wilkes Expedition; Douglas County, Sandberg & Leiberg 269; Wilson Creek, Sandberg & Leiberg, June, 1893; between Coulee City and Waterville, Spillman, May, 1896; Spokane, Piper 2613; Coulee City, Piper 3919; Ephrata, Griffiths & Cotton 477; Yakima, Griffiths & Cotton 50.

Zonal distribution: Upper Sonoran and Arid Transition.

4. Stipa lemmoni (Vasev) Scribn. U. S. Dept. Agr. Div. Agrost. Circ. 30: 3, 1901.

Stipa pringlei lemmoni Vasey, Contr. Nat. Herb. 3:55, 1892.

Stipa lemmoni jonesii Scribn, U. S. Dept. Agr. Div. Agrost. Circ. 30: 4, 1901.

Type locality: Mohawk Valley, Plumas County, California, according to the label of the type specimen.

Range: Washington to California.

Specimens examined: West Klickitat County, Suksdorf 146, 56; Simcoe Mountains, Howell 8; Wenache Mountains, Cotton 1263; Perkins Creek, Cotton 1613.

ZONAL DISTRIBUTION: Arid Transition.

5. Stipa williamsii Scribn, U. S. Dept, Agr. Div. Agrost, Bull. 11:45, 1898.

Type locality: Dry soil on the west side of Big Horn Mountain, near Monument Spring, Wyo.

Range: Washington to Oregon and Wyoming.

Specimens examined: Colville Reservation, Griffiths & Cotton 390; Loomis, Griffiths & Cotton 328, 335.

Zonal distribution: Arid Transition.

6. Stipa minor (Vasey) Scribn, U. S. Dept, Agr. Div. Agrost, Bull. 11: 46, 1898.

Stipa viridula minor Vasey, Contr. U. S. Nat. Herb. 3: 50, 1892.

Type locality: Kelso Mountain, near Torrey Peak, Colorado, according to the label of the type specimen.

Range: Washington to Colorado and Wyoming.

Specimens examined: Olympic Mountains, Elmer 1900; Mount Adams, Suksdorf 147; Nisqually, Wilkes Expedition: Steptoc, Vascy, June, 1900; Palouse City, F. D. Cloud, June, 1895; Pullman, Piper 1762; Brewster, Griffiths & Cotton 258, 259; Colville Reservation, Griffiths & Cotton 391; Wenache Mountains, Cotton 1304.

Zonal distribution: Transition, mostly Arid.

7. Stipa nelsoni Scribn, U. S. Dept, Agr. Div. Agrost. Bull. 11: 46, 1898.

Type locality: "Woods Landing, Albany County, Wyoming"

Range: Washington and Oregon to Wyoming.

Specimens examined: Rattlesnake Mountains, Cotton 687; Cow Creek, Griffiths & Cotton 517; Steamboat Rock, Griffiths & Cotton 433.

Zonal distribution: Arid Transition.

8. Stipa comata Trin. & Rupr. Gram. Agrost. 3: 75, 1842.

Stipa juncea L. err. det. Nutt. Gen. 1: 58, 1818.

Stipa capillata L. err. det. Hook. Fl. Bor. Am. 2: 237, 1839.

Type locality: "Carlton House Fort ad fl. Saskatchawan."

RANGE: British Columbia to Alberta southward to California and New Mexico.

Specimens examined: Douglas County, Spillman, May, 1896; Sandberg & Leiberg, 240; Wenache, Whited 1130, 1229; North Yakima, Mrs. Steinweg: Connell, Leckenby, June, 1897; Spokane, Piper 2600; Pasco, Piper in 1897; Snipes Mountain, Cotton 379; Kittitas County, Vascy 121; Eltopia, Cotton 1017; Ephrata, Griffiths & Cotton 495; Brewster, Griffiths & Cotton 254.

Zonal distribution: Upper Sonoran.

8a. Stipa comata intonsa subsp. nov.

Differs from S. comata in having the leaves densely puberulent.

Specimens examined: Near Rockland, Klickitat County, Suksdorf 1026, type.

ORYZOPSIS.

Low alpine species with narrow strict panicles.

Tall lowland plants with loose panicles.

Glumes equal; cuspidate; awn 3 to 5 mm. long. $\frac{4}{2}$ O, hymenoides. Glumes equal; awn 10 to 15 mm. long. $\frac{4}{3}$ O, bloomeri.

1. Oryzopsis exigua Thurb. Bot. Wilkes Exped. 481, 1874.

Type locality: "Cascade Mountains, Oregon."

Range: Washington, Idaho, Oregon.

Specimens examined: State of Washington, Suksdorf, in 1883; Cascade Mountains, Kittitas County, Vascy 34.

Zonal distribution: Hudsonian or Arctic.

This grass grows in granitic sand near timber line.

2. Oryzopsis hendersoni Vasey, Contr. Nat. Herb. 1: 267, 1893.

Type locality: "In Washington." Collected by Henderson (no. 2249).

Range: Known only from the type collection.

Specimens examined: Summit of Mount Cleman, Henderson 2249.

3. Oryzopsis bloomeri (Boland.) Ricker.

Stipa bloomeri Boland, Proc. Cal. Acad. 4: 168, 1872.

Type locality: "Bloody Cañon, near Mono Lake," California.

RANGE: Washington to Montana and California.

Specimens examined: Douglas County, Sandberg & Leiberg 231.

Zonal distribution: Arid Transition.

4. Oryzopsis hymenoides (Roem. & Schult.) Ricker.

Stipa hymenoides Roem. & Schult. Syst. 2: 339, 1817.

Eriocoma enspidata Nutt. Gen. 1: 40, 1818.

Stepa membranacea Pursh, Fl. 2: 728, 1814, not L. 1753.

Oryzopsis membranacca Vasev, U. S. Dept. Agr. Div. Bot. Bull. 12: pl. 10, 1891.

Eriocoma membranacea Beal, Grasses N. Am. 2: 232, 1806.

Oryzopsis cuspidata Benth; Vasey, U. S. Dept. Agr. Spec. Rep. 63: 23, 1883.

Type locality: "On the banks of the Missouri."

RANGE: British Columbia to California, east to Alberta and New Mexico.

Specimens examined: Douglas County, Spillman, May, 1896; Sandberg & Leiberg, 281; Ellensburg, Piper, May, 1897; North Yakima, Henderson, May, 1892; Mrs. Steinweg in 1894; Pasco, Piper 2964; Hindshaw 33; Sunnyside, Cotton 416; Rattlesnake Mountains, Cotton 421; Walla Walla, Lyall, June, 1860; Sprague, Sandberg & Leiberg, June, 1893; Kittitas County, Vascy 85; Wallula, Cotton 1030, 1048.

Zonal distribution: Upper Sonoran.

MUHLENBERGIA.

Lemmas acuminate	1.	M.	racemosa.
Lemmas long-awned.			
Hairs of the callus equaling the lemma	2.	M.	comata.
Hairs of the callus much shorter than the lemma	3.	M.	sylvatica

1. Muhlenbergia racemosa (Michx.) B. S. P. Prel. Cat. N. Y. 67, 1888.

Agrostis racemosa Michx. Fl. 1: 53, 1803.

Muhlenbergia glomerata Trin. Gram, Unifl. 191, 1824.

Polypogon glomeratus Willd. Enum. Hort. Berol. 87, 1809.

Type locality: "Hab. in ripis sabulosis inundatis fluminis Mississippi."

Range: Newfoundland to British Columbia, south to New Jersey, Missouri, and New Mexico.

Specimens examined: Sumas Prairie, Lyall in 1858-9; Loomis, Elmer, August, 1897; Wenache Valley, Samlberg & Leiberg 594; Parker, A. D. Dunn; Cascade Mountains, Vascy 140

Zonal distribution: Transition.

2. Muhlenbergia comata (Thurb.) Benth.; Vasey, Desc. Cat. Grasses U. S. 39, 1885.

Vascya comata Thurb, Proc. Acad. Phila. 1863: 79, 1863.

Type locality: "A native of the plains of Nebraska."

Range: Colorado to Washington and California.

Specimens examined: Loomis, Elmer 558.

Zonal distribution: Arid Transition.

3. Muhlenbergia sylvatica setiglumis S. Wats. Bot. King Explor. 378, 1871.

Type locality: "Near Warm Springs in Humboldt Pass, Nevada; 6,000 feet altitude." Range: Washington to Nevada.

Specimens examined: Spokane, Piper, September 1, 1899; Phileo Lake, Spokane County, Suksdorf 948.

Zonal distribution: Arid Transition.

ALOPECURUS.

Awas scarcely exceeding the glumes: spikelets 2 to 2.5 mm, \log_{++} 1. A. quaiculatus fulvus. Awas much exceeding the glumes.

Spikelets 3 mm. long; anthers orange. 2. A. californicas.
Spikelets 4 mm. long; anthers white. 3. A. saccatus.

1. Alopecurus geniculatus fulvus (Smith) Sonder, Fl. Hamb. 32, 1851.

Alopecurus fulvus J. E. Smith, Engl. Bot. 21: pl. 1467, 1805.

Alopecurus aristulatus Michx. Fl. 1: 43, 1803.

Alopecurus geniculatus aristulatus Torr. Fl. U. S. 1: 97, 1824.

Alopecurus geniculatus robustus Vasey, Bull. Torr. Club 15: 13. 1888.

Type locality: England.

Range: British Columbia to Newfoundland, southward to Florida, Tennessee, and California. Europe.

Specimens examined: Coupeville, Garduer 333; Scattle, Piper 793; Smith, June, 1890; Tacoma, Flett 14, 183; Leckenby, May 29, 1897; Clallam County, Elmer 1663; Alma, Elmer 548; Ellensburg, Vascy 118; North Yakima, Henderson, May 26, 1892; Watt, August, 1895; Klickitat County, Suksdorf 1066; Boundary, T. F. O'Hara; Usk, Kreager 356; Spokane, Dewart, June 5, 1901; Asotin Creek, Hunter 93; Waitsburg, Horner 214.

Zonal distribution: Transition.

Alopecurus californicus Vasey, Bull. Torr. Club 15: 13, 1888.

Alopecurus pallescens Piper, Fl. Palouse Reg. 18, 1901.

Type locality: Santa Cruz, California, according to label on the type specimen.

RANGE: Washington and Idaho to California.

Specimens examined: Spokane, Wilkes Expedition: Pullman, Piper 1743; Whitman County, Lake & Hull, July 7, 1892; Sandberg & Leiberg 108; West Klickitat County, Suksdorf 2117.

ZONAL DISTRIBUTION: Arid Transition.

3. Alopecurus saccatus Vasev, Bot. Gaz. 6: 290, 1881.

Type locality: "Eastern Oregon." Collected by Howell.

Range: Eastern Washington and eastern Oregon.

Specimens examined: Lyle, Leckenby, May 21, 1899; near Spangle, Piper, 3553.

ZONAL DISTRIBUTION: Arid Transition.

PHLEUM.

1. Phleum pratense L. Sp. Pl. 1: 59, 1753.

Тімотну.

Type locality: "Habitat in Europae versuris et pratis."

Specimens examined. Seattle, Piper 789; Colville, Lyall in 1860; Pullman, Hardwick July, 1895.

2. Phleum alpinum L. Sp. Pl. 1: 59, 1753.

MOUNTAIN TIMOTHY.

Type locality: "Habitat in Alpibus."

Range: Alaska to Labrador, southward to New Hampshire, Arizona, and California, Europe. Patagonia.

Specimens examined: Olympic Mountains, Elmer, 1901; Mount Rainier, Piper 1953; Allen, July 20, 1892; Mount Stuart, Sandberg & Leiberg 814 and August, 1893; Wenache Mountains, Elmer 441; Cascade Mountains above Lake Chelan, Lake & Hull 115; Cascade Mountains to Fort Colville, Lyall in 1860; Cascade Mountains, Vascy 393.

ZONAL DISTRIBUTION: Arctic and Hudsonian.

POLYPOGON.

Glumes notched at apex, their awns 2 to 3 times as long; panicle dense, cylindric 1. P. monspeliensis.

Glumes attenuate into awns of equal length; panicle lobed or interrupted 2. P. littoralis.

1. Polypogon monspeliensis (L.) Desf. Fl. Atl. 1:67, 1800.

Alopecurus monspeliensis L. Sp. Pl. 1:61, 1753.

Type locality: "Habitat monspelii."

Range: British Columbia to Mexico. Europe. Naturalized in the Atlantic States.

Specimens examined: Olympics, Elmer 1934; South Bend, Spillman, August 17, 1899; Seattle, Piper 792; Tacoma, Flett 7; Parker, Dunn; North Yakima, Watt, August, 1895; Alma, Elmer 532; Douglas County, Sandberg & Leiberg 280; Waitsburg, Horner 523; Illia, W. R. Hull 90; Almota, Piper, June, 1894; Spokane, Sandberg, Heller, & MacDougal 920; Steptoe, Vascy 56; Ellensburg, Vascy 494.

Zonal distribution: Upper Sonoran and Transition.

2. Polypogon littoralis (With.) Smith, Comp. Fl. Brit. ed. 2, 13, 1816.

Agrostis littoralis With, Bot. Arr. Brit. Veg. ed. 3, 2: 129, 1796.

Type locality: "Wells, on the Norfolk coast," England.

RANGE: Vancouver Island to California and on the Atlantic and Gulf coasts.

Specimens examined: Olympic Mountains, Elmer 1955; Tacoma, Flett 8.

ZONAL DISTRIBUTION: Humid Transition.

SPOROBOLUS.

Panicle contracted, spike-like.

Perennials

Sheaths inflated, usually inclosing base of panicle... 2. S. vaginaeflorus neglectus. Sheaths not inflated.

Glumes one-third to one-half the length of the

Glume from two-thirds to almost the whole length

Panicle open, branches mostly spreading.

Annuals, culms slender, pedicels longer than spikelets.... 5. S. confusus.

Perennials.

Panicle branches close-flowered nearly to base; pedi-

cels equaling to shorter than spikelets......... 6. 8. cryptandrus.

Panicle branches few-flowered, naked below.

Pedicels smooth, seldom more than twice the

Pedicels scabrous, 3 to many times the length

of the spikelet...... 8. 8. asperifolius.

1. Sporobolus filiformis (Thurb.) Rydberg, Contr. Nat. Herb. 3: 189, 1895.

Vilfa de pau perata filiformis Thurb. Bot. King Explor. 376, 1871.

Vilfa gracillima Thurb, in Wats. Bot. Cal. 2: 268, 1880.

Sporobolus gracillimus Vasey, Descr. Cat. Grasses U. S. 44, 1885.

Type locality: Yosemite Valley, California.

RANGE: Washington to California and Colorado.

Specimens examined: Glenwood, Flett 1396; Mount Adams, Henderson, August 3, 1892;

Howell 84; Falcon Valley, Suksdorf 13. ZONAL DISTRIBUTION: Hudsonian.

 Sporobolus vaginaeflorus neglectus Scribn, U. S. Dept. Agr. Div. Agrost. Bull. 17, rev. ed. 170, 1901.

Sporobolus neglectus Nash, Bull. Torr. Club 22: 464, 1895.

Type locality: None given.

Range: Washington to Massachusetts, Tennessee, and Kansas.

Specimens examined: Myers Falls, Kreager 590.

ZONAL DISTRIBUTION: Transition.

3. Sporobolus richardsoni (Trin.) Merrill, Rhodora 4: 46. 1902.

Vilfa richardsoni Trin. Mem. Acad. St. Petersb. VI. 62: 103, 1840.

Type locality: "Amer. boreal." Richardson.

Range: British Columbia to Labrador, south to California and New Mexico.

Specimens examined: Ellensburg, Piper 2581; Parker, Dunn, August 8, 1901: Medical Lake, Henderson 2251; Grand Coulee, Griffiths & Cotton 359; Prosser, Cotton 636; Colville Reservation near Mount Bonaparte, Griffiths & Cotton 359; Grand Coulee, Griffiths & Cotton 434.

Zonal distribution: Transition and Upper Sonoran.

4. Sporobolus depauperatus (Torr.) Scribn. Bull. Torr. Club 9: 103. 1882.

Vilfa depariperata Torr.; Hook. Fl. Bor. Am. 2: 257, 1840.

Vilfa squarrosa Trin. Mem. Acad. St. Petersb. VI. 62: 100, 1840

Type locality: "N. W. America. Barren sandy parts of the Columbia from Menzies' island upwards." Collected by Douglas.

Range: Oregon and Washington to Montana.

Specimens examined: "N. W. coast," Douglas: Pullman, Piper 1926; Henderson 2250; Almota, Piper, September, 1896.

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

5. Sporobolus confusus (Fourn.) Vasey, Bull. Torr. Club 15: 293, 1888.

Vilfa confusa Fourn. Mex. Pl. Enum. Gram. 101, 1886.

Type locality: "In devexis arenosis montis ignivomi Jorullo," Mexico.

Range: Washington to Arizona, Texas, and Mexico.

Specimens examined: Parker, Yakima County, Elmer 1076.

Zonal distribution: Upper Sonoran.

6. Sporobolus cryptandrus (Torr.) Grav. Man. 576, 1848.

Agrostis cryptandrus Torr. Ann. Lyc. N. Y. 1: 151, 1824.

Vilfa tenacissima fuscicolor Hook, Fl. Bor. Am. 2: 239, 1840.

Type locality: "On the Canadian river."

Range: Washington to Maine southward to Texas.

Specimens examined: Cascade Mountains, central Washington, Vascy 132; Klickitat County, Suksdorf 1019; Wawawai, Elmer 760; near Ellensburg, Vascy 465; Kiona, Cotton 726; Sentinel Bluffs, Cotton 1353.

ZONAL DISTRIBUTION: Upper Sonoran in Washington.

7. Sporobolus airoides Torr. Pac. R. Rep. 73: 21, 1856.

Agrostis airoides Torr. Ann. Lyc. N. Y. 1:151, 1824.

Type locality: "On the branches of the Arkansas, near the Rocky Mountains."

Range: Washington to Nebraska, south to California and Arizona.

Specimens examined: Near Oroville, Okanogan River, Griffiths & Cotton 350. This is the northernmost station known.

Zonal distribution: Upper Sonoran.

8. Sporobolus asperifolius (Nees & Meyen) Thurb, in Wats, Bot, Cal. 2: 269, 1880.

Vilfa asperifolia Nees & Meyen, Mem. Acad. St. Petersb. V1. 62: 95, 1840.

Type locality: "Chile; Rio Mayno; Copiapo."

Range: British Columbia to Assiniboia southward to California and Missouri.

Specimens examined: Alma, Elmer 549; Coulee City, Lake & Hull, August, 1892; Wilson Creek, Lake & Hull 99; Alkali Lake, Sandberg & Leiberg, July, 1893; Ellensburg, Piper 2580; North Yakima, Henderson 2218; Union Gap, Yakima River, Cotton 492; North Yakima, Watt in 1895; Cascade Mountains, Vascy 525; Toppenish, Cotton 804; Priest Rapids, Cotton 1403.

ZONAL DISTRIBUTION: Upper Sonoran.

Sporobolus cuspidatus Wood, Bot. & Flor. 385, 1874. (Vilfa cuspidata Torr.; Hook, Fl. Bor. Am. 2: 238, 1839.) This is included in Suksdorf's List, but no Washington specimens have been seen by us.

CINNA.

1. Cinna latifolia (Trev.) Griseb. in Ledeb. Fl. Ross. 4: 435, 1853.

Agrostis latifolia Trev.; Goepp. Beschr. Bot. Gaert. in Breslau 82, 1830.

Cunna pendula Trin. Mem. Acad. St. Petersb. VI. 62, 280, 1841.

Cinna pendula glomerula Scribn, Proc. Acad. Phila. 1884: 290, 1885.

Cunna latifolia glomerata Beal, Grasses N. Am. 2: 319, 1896.

RANGE: Alaska to Oregon, Colorado, New England, and Carolina.

Specimens examined: Cascade Mountains, 49°, Lyall in 1859; Seattle, Piper 821; Montesano, Heller 4017; Longmire Springs, Mount Ranier, Piper 1982; Lake Cushman, Piper 1991; Railroad Creek, Okanogan County, Elmer 719; Coulee City, Lake & Hull 114; Nason City, Sandberg & Leiberg, July, 1893; Okanogan County, Sandberg & Leiberg 581; Blue Mountains, Piper, July, 1896; Salmon River, Blue Mountains, Horner 494.

ZONAL DISTRIBUTION: Transition and Canadian.

COLEANTHUS.

1. Coleanthus subtilis (Tratt.) Seidel; Roem. & Schult. Syst. 2: 276, 1817.

Schmidtia subtilis Tratt. Fl. Austr. 1: 12, 1816.

Type locality: "In der gegend von Wosseck," Bohemia.

RANGE: Along the lower Columbia River. Also in Europe.

Awn strongly geniculate; callus hairs much shorter than the lemma.

Specimens examined: Klickitat County, Suksdorf 280.

Zonal distribution: Humid Transition.

CALAMAGROSTIS.

1. C. howellii.
4. C. tweedyi.
2. C. purpurascens
3. C. vaseyi.
5. C. aleutica.
6. C. rubescens.
7. C. suksdorfii.
9. C. langsdorffii.
12. C. macouniana.
10. C. canadensis.
11. C. blanda.

Leaf blades rigid.

Callus hairs sparse.

Panicle dense, spike-like.

Glumes subcoriaceous, ovate, acute; paniele

Callus hairs copious; sheaths bearded at summit.............. 13. C. scribneri.

Glumes membranous, acuminate, paniele 5

1. Calamagrostis howelli Vasev, Bot. Gaz. 6: 271, 1881.

Type locality: "Oregon." Collected by Howell.

Range: Washington and Oregon.

Specimens examined: Larm River, Suksdorf 13; Cape Horn, Piper.

Zonal distribution: Humid Transition.

Abundant on the perpendicular cliffs of the Columbia Gap, but not known elsewhere.

Calamagrostis purpurascens R. Br. in Richards. Bot. App. Frankl. Journ. 731, 1823.
 Calamagrostis sylvatica DC. err. det. A. Gray, Proc. Am. Acad. 6: 80, 1866.

Calamagrostis sylvatica americana Vasey, Contr. Nat. Herb. 3: 83, 1892.

Type locality: British America between Point Lake and the Arctic Sea.

RANGE: Alaska to Greenland, southward to the Black Hills, Colorado, and California

. Specimens examined: Mount Stuart, Sandberg & Leiberg 825; Mount Chapaca, Elmer 555; Wenache region, Tweedy 650.

Zonal distribution: Hudsonian.!

3. Calamagrostis vaseyi Beal, Grasses N. Am. 2: 344, 1896.

Catamogrostis purpurascens R. Br. err. det. Vasey, Contr. Nat. Herb. 3: 83, 1892.

Type locality: "Cascade Mountains of Washington." Collected by G. R. Vasey.

Range: Washington and Oregon.

Specimens examined: Olympic Mountains, Piper 1984, 1983; Mount Ranier, Piper 1956, 1957, 1955; Goat Mountains, Allen 177; Skamania County, Nuksdorf 1025; Flett 1384, 1390.

Zonal distribution: Arctic.

The "Degenria sylvatica Kth." of Suksdorf's list is Calamagnostis vascyi Beal.

4. Calamagrostis tweedyi Scribn. Contr. Nat. Herb. 3: 83, 1892.

Deyeuxia tweedyi Scribn. Bull. Torr. Club 10: 64, 1883.

Type locality: "Cascade Mountains, Washington." Collected by Tweedy.

Range: Cascade Mountains, Washington.

Specimens examined: Cascade Mountains, Tweedy: Vasey in 1889.

Calamagrostis aleutica Trin. in Bong, Mem. Acad. St. Petersb. VI. 2: 171, 1832.
 Calamagrostis albicans Buckl. Proc. Acad. Phila. 1862: 92, 1863.

Calamagrostis pallida Nutt.; A. Gray, Proc. Acad. Phila. 1862; 334, 1863.

Degenzia breviaristata Vasey, Bull. Torr. Club 15: 48, 1888.

Type locality: "Unalaschka."

Range: Alaska to California.

Specimens examined: Westport, Henderson, June, 1892; Granville, Conard 335.

Zonal distribution: Humid Transition.

6. Calamagrostis rubescens Buckl. Proc. Acad. Phila. 1862; 92, 1863.

Deyeuxia varia Kunth, err. det. Scribn. Bull. Torr. Club 9: 45, 1882.

Type locality: "Oregon." Collected by Nuttall.

RANGE: British Columbia and Alberta to California.

Specimens examined: Blue Mountains, Horner 493; Loke & Hull 74; Lake Omack, Griffiths & Colton 389; Cascade Mountains, Vascy in 1889.

ZONAL DISTRIBUTION: Arid Transition.

7. Calamagrostis suksdorfii Scribn, Contr. Nat. Herb. 3: 82, 1892.

Deyeuxia suksdorfii Scribn, Bull. Torr, Club 15: 9, 1888.

Type locality: According to type specimen, Falcon Valley, Washington. Collected by Suksdorf.

Range: British Columbia to California and Wyoming.

Specimens examined: Wenache Valley, Sandberg & Leiberg 535; Ellensburg, Elmer 421; Atanum River, Henderson 2151; east of Mount Adams, Henderson 2153; Twenty-five Mile Creek, Okanogan County, Gorman 615; North Palouse River, Uasey, July 3, 1901; Dry Creek, Vasey, July 5, 1901; Pullman, Piper 1919; Falcon Valley, Suksdorf 26, 607; Spokane County, Suksdorf 92.

Zonal distribution: Arid Transition.

 Calamagrostis suksdorfii luxurians Kearney, U. S. Dept. Agr. Div. Agrost. Bull. 11: 24, 1898.

Type locality: "Farmington Landing, Lake Cour d'Alene, Idaho." Collected by Sandberg, Heller, and MacDougal.

Range: British Columbia, Washington, and Idaho.

Specimens examined: Tieton River, Cotton 503; Wenache, Whited 1418; Cascade Mountains, Vascy; Peshastin, Sandberg & Leiberg, July, 1893; Spokane, Piper 1918; Eluc Mountains, Piper 2557; locality unknown, Brandegee 1171.

ZONAL DISTRIBUTION: Arid Transition.

9. Calamagrostis langsdorffii Trin. Gram. Unifl. 225. t. 4. f. 10. 1824.

Calamagrostis oregonensis Buckl. Proc. Acad. Phila. 1862: 92, 1863.

Calamagrostis columbiensis Nutt.; A. Gray, Proc. Acad. Fhila. 1862: 334, 1863.

Type locality: "Tobolsk," Siberia.

Range: Alaska to Greenland, south to California, New Mexico, Michigan, and North Carolina. Europe. Asia.

Specimens examined: Olympic Mountains, Piper 1986: Elmer 1671, 1672: Mount Rainier, Smith 981: Tatoosh Mountains, Alben 176: Goose Lake, Flett 1378: Cascade Mountains, Henderson 2157: Vascy in 1889: Samberg & Leiberg 795: North Fork of Bridge Creek, Elmer 680: Mount Adams, Howell in 1882; Suksdorf 87, 204.

ZONAL DISTRIBUTION: Mainly Hudsonian and Arctic.

 Calamagrostis langsdorffii lactea (Beal) Kearney, U. S. Dept. Agr. Div. Agrost. Bull. 11; 28, 1898.

Calamagostis lactea Beal, Grasses N. Am. 2: 346, 1896.

Degenzia lacten Suksdorf in Beal, Grasses N. Am. 2: 346, 1896, as synonym.

Type locality: "Washington: banks of the North Fork of Noeksack River, near Mount Baker," Collected by Suksdorf.

Range: Washington.

Specimens examined: Near Mount Baker, Suksdorf 1022, 1023; Falcon Valley, Suksdorf 206.

10. Calamagrostis canadensis (Michx.) Beauv. Agrost. 15, 157, 1812.

Arundo canadensis Michx. Fl. 1: 73, 1803.

Type locality: "Hab. in Canada."

RANGE: British Columbia to Nova Scotia, southward to New Jersey, Ohio, Utab, and Oregon.

Specimens examined: Wenache region, Brandeque 1169; Klickitat County, Suksdorf 2127; Thorn Creek, Whitman County, Vasey, July 9, 1901; Pullman, Brodic August, 1898; Piper 3037; Henderson 2162; Big Meadows, Kreager 411; Spokane County, Suksdorf 86, 90a.

Zonal distribution: Transition.

10a. Calamagrostis, canadensis acuminata Vasey, U. S. Dept. Agr. Div. Agrost. Bull. 5: 26, 1897.

Type locality: Georgetown, Colorado.

RANGE: Aliska to Labrador, south in the mountains to California, New Mexico, and North Carolina.

Specimens examined: Cascade Mountains, Vascy in 1889; Brandeyee 1168; Lyall in 1860; Elletsberg, Piper, July 9, 1897; west Klickitat County, Suksdorf 2127; along Salmon River, Horner 495; Stehekin, Griffiths & Cotton 196, 230. Cascade Mountains, Vascy in 1880; Klickitat County, Suksdorf 203, 205; near Mount Baker, Suksdorf 2166; Mount Adams, Howell 82; Suksdorf 200.

ZONAL DISTRIBUTION: Arid Transition to Hudsonian.

11. Calamagrostis blanda Beal, Grasses N. Am. 2: 349, 1896.

Calamagros'is pullida Vasey & Scribn, Contr. Nat. Herb. 3: 79, 1892, not. C. Muell. 1860.
Type_Locality: "Washington." Collected by Suksdorf.

Range: Washington to Montana.

Specimens examined: Klickitat County, Suksdorf 52.

12. Calamagrostis macouniana Vasey, Contr. Nat. Herb. 3: 81, 1892.

Degenzia macouniana Vasey, Bot. Gaz. 10: 297, 1885.

Type locality: "Souris Plain, Assiniboia" according to the label on the type specimen. RANGE: Washington to Assiniboia and Missouri.

Specimens examined: North Palouse River, Vasey, March 3, 1897; Pullman, Henderson 2162, Piper 3037, Brodie, July, 1898; Spokane County, Suksdorf 1097.

Zonal distribution: Arid Transition.

13. Calamagrostis scribneri Beal, Grasses N. Am. 2: 343, 1896.

Degenzia dubia Scriba, Bot. Gaz. 11: 174, 1886.

Calamagrostis dubia Scribn, Contr. Nat. Herb. 3: 80, 1892, not Bunge: Lehm. Rel. 348, 1847.

Type locality: "Slough Creek, alt. 6,760 ft., Montana,"

RANGE: British Columbia to Washington and Wyoming.

Specimens examined: Chiquash Mountains, Suksdorf 1023; Mount Adams, Suksdorf 145; Wenache Mountains, Cotton 1756.

ZONAL DISTRIBUTION: Hudsonian?

Calamagrostis neglecta (Ehrh.) Gaertn. Meyer & Scherb. Fl. Wetterau 1: 94
1799

Arundo neglecta Ehrh. Beite. 6: 84, 137, 1791.

Calamagrostis stricta Koel, Deser, Gram, 105, 1802.

Calamagrostis coarctata Torr.; Hook. Fl. Bor. Am. 2: 240, 1839,

Type locality: Upsala, Sweden.

Range: Alaska to Labrador, south to Oregon, Colorado, and Maine. Europe. Asia. Specimens examined: Spokane County, Suksdorf (9).

15a. Calamagrostis inexpansa cuprea Kearney, U. S. Dept. Agr. Div. Agrost. Bull. 11: 37, 1898.

Type locality: "In shallow water, Falcon Valley, Washington," Collected by Suksdorf.

Range: Known only from the type locality.

Specimens examined: Falcon Valley, Subsdorf 910.

15b. Calamagrostis inexpansa barbulata Kearney, U. S. Dept. Agr. Div. Agrost. Bull. 11: 37, 1898.

Type locality: "Mason County, Wash." Collected by Piper, three miles south of Union City.

Range: Known only from the type specimen.

Specimens examined: Mason County, Piper 947.—Abundant in small wet meadows in woods of Pinus contorta.

16. Calamagrostis crassiglumis Thurb, in Wats. Bot. Cal. 2: 281, 1880.

Deyeuxia erassiglimis Vascy, Descr. Cat. Grasses U. S. 50, 1885.

Type Locality: "Swamps, Mendocino County," California. Collected by Bolander.

RANGE: Vancouver Island to California.

Specimens examined: Whatcom Lake, Suksdorf 1024.

ZONAL DISTRIBUTION: Humid Transition.

 Calamagrostis hyperborea Lange, Fl. Dan. 50: t. 2942, 1880; Consp. Fl. Groenl. 160, 1880.

Calamagrostis stricta robusta, Vasey in Rothr.; Wheeler Rep. 6: 285, 1878, not C. robusta C. Muell.

Type locality: Igalico, near Julianshaab, southern Greenland.

Range: Alaska to Greenland, south to California, Arizona, and Vermont.

Specimens examined: Cascade Mountains, Cooper.

17a. Calamagrostis hyperborea elongata Kearney, U. S. Dept. Agr. Div. Agrost. Bull. 11: 40, 1898.

Type locality: "Plummer Ford, on the Dismal River, Plummer County, Nebr."

Range: British Columbia to Ontario, southward to California, Colorado, and Pennsylvania.

Specimens examined: Douglas County, Sandberg & Leiberg 325; Spangle, Saksdorf 1099, 1100; Marshall Junetion, Piper 2254; locality unknown, Brandegee 1170; Endicott, Elmer 1028; Ephrata, Cotton 470; Falcon Valley, Saksdorf 187, 188; Spokane County, Suksdorf 106.

Zonal distribution: Arid Transition.

17b. Calamagrostis hyperborea americana Vasey; Kearney, U. S. Dept. Agr. Div. Agrost. Bull. 11: 41. 1898.

Deveuxia neglecta americana Vasey, Macoun. Cat. Can. Pl. 4: 206. 1888, nom. nud.

Calamagrostis stricta Gray, Proc. Am. Acad. 6: 79. 1866 in part, not Koel.

Type locality: "Donald, Columbia Valley," British Columbia. Collected by Macoun.

RANGE: British Columbia to Hudson Bay, southward to Oregon, Colorado, and Vermont.

Specimens examined: Brewster, Griffiths & Cotton 267; Conconully, Griffiths & Cotton 271; Stehekin, Griffiths & Cotton 240; Ephrata, Griffiths & Cotton 470.

ZONAL DISTRIBUTION: Arid Transition.

Calamagrostis stricta Nutt. is listed in Cooper's Report, page 70. The specimen seems to be lost, but it was certainly of some other species.

AGROSTIS.		
Rachilla prolonged behind the palet.		
Spikelets 3 mm. long, usually purple	1. A. acquivalvis.	
Spikelets 2 mm. long, usually pale	2. A. thurberiana.	
Rachilla not prolonged behind the palet.		
Palet evident, 2-nerved.		
Plant spreading by creeping short-leafed stolons	A. depressa.	
Plant without stolons.		
Tufted; a dwarf high-alpine species		
Provided with rootstocks; culms erect, rather tall	5. A. alba.	
Palet wanting or minute and nerveless.		
Plant with rootstocks	6. A. pallens.	
Plant tufted, without rootstocks.		
Panicle narrow, rather close.		
Lemma with exserted awn.		
Glumes awn-pointed	7. A. microphylla.	
Glumes merely acute	8. A. ampla.	
Lemma awnless or the awn included.		
Panicle 5 to 30 cm. long; tall lowland plant	91. exarata.	
Panicle 3 to 6 cm. long; low alpine plant	101, rossae.	
Panicle open, loose.		
Inflorescence very diffuse; herbage scabrous	11. A. hyemalis.	
Inflorescence not diffuse.		
Plants 10 to 30 cm. high; panicle usually pale	12. A. idahoensis.	
Plants 30 to 60 cm. high.		
Panicle pyramidal, dark purple		
Panicle elongated, oblong	14. A. schiediana.	

Agrostis aequivalvis Trin. Mem. Acad. St. Petersb. IV. 6²: 362, 1841.

Agrostis canina acquivalvis Trin. in Bong. Mem. Acad. St. Petersb. VI. 2: 171, 1832.

Type locality: Sitka.

Range: Alaska to Oregon.

Specimens examined: Nason Creek, Sandberg & Leiberg 676; Mount Adams, Suksdorf 194.

Zonal distribution: Hudsonian!

 Agrostis thurberiana A. S. Hitchcock, U. S. Dept. Agr. Bur. Pl. Ind. Bull. 68: 23, 1905.

Type locality: "In wet places on mountains, Skamania County, Wash." Collected by Suksdorf.

Range: British Columbia to California and Utah.

Specimens examined: Mount Adams, Suksdorf 24, 194; Nason Creek, Sandberg & Leiberg 676; Mount Rainier, Flett 1955.

3. Agrostis depressa Vasev, Bull. Torr. Club 13: 54. 1886.

Agrostis exarata stolonifera Vasey, loc. cit.

Type locality: Clear Creek Canyon, Colorado.

Range: Washington to California, Colorado.

Specimens examined: West Klickitat County, Suksdorf 40, 140; Hwaco, Piper.

ZONAL DISTRIBUTION: Humid Transition.

4. Agrostis humilis Vasey, Bull. Torr. Club 10: 21, 1883.

Type locality: Mount Adams, Washington. Collected by Suksdorf.

RANGE: British Columbia to Oregon and Colorado.

Specimens examined: Olympic Mountains, Flett 836; Elmer 1951; Mount Rainier, Piper 1976, 1975, 1973, 1974; Allen 65a, 179; Skamania County, Suksdorf 1021, 1079; Mount Adams, Suksdorf 25; Howell 85; Stevens Pass, Sandberg & Leiberg, August, 1893; Cascade Mountains Vasey 362; Bridge Creek, Elmer 677.

Zonal distribution: Arctic.

5. Agrostis alba L. Sp. Pl. 1: 63. 1753.

REDTOP.

Type locality: "Habitat in Europae nemoribus."

Range: British Columbia to Labrador and southward.

Specimens examined: Clallam County, Elmer 1954; Southbend, Spillman, August 7, 1899; Montesano, Heller 4034, 3957; Skamania County, Flett 1387; Tacoma, Piper, July 15, 1897; Wenache, Whited 4; Ellensburg, Elmer 407; Piper 2578; Tieton River, Cotton 493; Parker, A. D. Dunn, August 8, 1901; Douglas County, Spillman, May 27, 1896; Sandberg & Leiberg 403; North Palouse River, Vasey, July 3, 1901; Pullman, Piper, July, 1894; Wawawai, Piper 3531; Ellensburg, Vasey 489.

ZONAL DISTRIBUTION: Transition.

6. Agrostis pallens Trin. Mem. Acad. St. Petersb. IV. 62: 328, 1841.

Agrostis exarata littoralis Vasey, Bull. Torr. Club. 13: 54, 1886.

Type locality: "Amer.-borealis?"

Range: Washington to California along the coast.

Specimens examined: Copalis, Conard 416; Westport, Henderson 2116.

ZONAL DISTRIBUTION: Humid Transition.

6a. Agrostis pallens foliosa (Vasey) A. S. Hitchcock, U. S. Dept. Agr. Bur. Pl. Ind. Bull. 68: 34, 1905.

Agrostis foliosa Vasey, Bull. Torr. Club 13: 55, 1886.

Agrostis diegoensis Vasey, loc. cit.

Type locality: Oregon. Collected by Howell.

Range: British Columbia to Idaho and California.

Specimens examined: Union City, Piper 950, 949; Lakeview, Henderson 2125; East Seattle, Henderson 2113; Skamania County, Flett 1382, 1386; Cascade Mountains, Yakima County, Henderson, August 3, 1892; Cape Horn, Suksdorf 2332, 2331; Steptoe, Vasey, June 1900; Pullman, Piper 3106, 1927, 3043; Wawawai, Piper 3531.

Zonal distribution: Transition.

All the Washington specimens that have been named A. hallii Vasey belong to A. pallens foliosa.

7. Agrostis microphylla Steud. Syn. Pl. Gram. 164, 1855.

Type locality: "Douglas legit in Am. Sptr." Collected by Douglas in North America. Range: Washington to California.

Specimens examined: Seattle, Piper S28; Lake Crescent, Laurence 306; Stuart Island, Laurence 124; Johns Island, Laurence 190; Falcon Valley, Suksdorf 47; Douglas County, Sandberg & Leiberg 327; Montesano, Heller 4010.

Zonal distribution: Humid Transition.

8. Agrostis ampla A. S. Hitchcock, U. S. Dept. Agr. Bur. Pl. Ind. Bull. 68: 38, 1905.

Type locality: "On wet rocks near Rooster Rock, Multinomah County, Oregon."

RANGE: British Columbia to Arizona.

Specimens examined: Olympic Mountains, Elmer 1953; Scattle, Henderson 2113; Whatcom Lake, Suksdorf 132; Bingen, Suksdorf 2829; Falcon Valley Suksdorf 132; Skamania County, Flett 1389.

Zonal distribution: Humid Transition.

This species was previously referred to the Mexican A. cirescens II. B. K.

9. Agrostis exarata Trin. Gram. Unifl. 207. 1824.

Agrostis grandis Trin. Mem. Acad. St. Petersb. IV. 62: 316, 1841.

Agrostis asperifolia Trin. op. cit. 317.

Agrostis scouleri Trin, op. cit. 329.

Agrostis albicans Buckl. Proc. Acad. Phila. 1862: 91, 1862.

Type locality: "Ex Unalaschka." Collected by Eschscholtz.

Range: Alaska to Mexico.

Specimens examined: Olympic Mountains, Elmer 1952; Clallam County, Elmer 1949; Montesano, Heller 4018; Point Orchard, Piper 2311; Seattle, Henderson 2114; Upper Nisqually Valley, Allen 45; Wenache Region, Brandegie 1163; North Yakima, Watt, August, 1895; Yakima River, Cotton 425; Cascade Mountains, 49°, Lyall in 1859; Southbend, Spillman, August 17, 1899; Chelan, Elmer 485; Douglas County, Sandberg & Leiberg 370; Wilson Creek, Lake & Hull 97; Spokane, Piper 2852, 2623; Steptoe, Vasey, June, 1900; Waitsburg, Horner 499; Elue Mountains, Salmon River, Horner 496; Pullman, Piper 1759, 1623; Cascade Mountains, Vasey 149.

Zonal distribution: Upper Sonoran to Arctic.

10. Agrostis rossae Vasey, Contr. Nat. Herb. 3: 76, 1892.

Agrostis varians Trin. Mem. Acad. Petersb. VI. 62: 314, 1841, net Thuill. 1790.

Agrostis variabilis Rydberg, Mem. N. Y. Bot. Gard. 1: 32, 1900.

Type locality: Yellowstone Park, Wyoming.

RANGE: British Columbia to Colorado and California.

Specimens examined: Olympic Mountains, Elmer 1948, Piper 1994; Nason Creek, Sandberg & Leiberg 656; Mount Rainier, Allen 179; Piper 1978, 1979, 1972, 1980, 1970; Skamania County, Subsdorf 1020; Mount Adams, Henderson 2127; Atanum River, Henderson 2119; Horseshoe Basin, Elmer 730; Walla Walla, Piper 179a.

Zonal distribution: Hudsonian and Arctic.

11. Agrostis hyemalis (Walt.) B. S. P. Prel, Cat. N. Y. 68, 1888.

Cornucopiae hyemalis Walt. Fl. Car. 73, 1788.

Agrostis scabra Willd. Sp. Pl. 1: 370, 1799.

Agrostis nutkaensis Kunth, Enum. Pl. 1: 222, 1833.

Trichodium album Presl, Rel. Haenk. 1: 244, 1830.

Agrostis laxiflora (Michx.) Richards, Bot. App. Frankl. Journ. 731, 1823.

Type locality: Carolina.

Range: Throughout most of North America.

Specimens examined: Clallam County, Elmer 1950; Southbend, Spillman, August 17, 1899; Orcas Island, Henderson 2112; Snoqualmie Falls, Piper 827; Nisqually Valley, Allen 43; Tacoma, Flett 17; Cascade Mountains, Henderson, August, 1892; Tieton River, Cotton 435; North Yakima, Watt in 1895; Glenwood, Flett 1395; Parker, Dunn, August 8, 1901; Ophir, Elmer 510; Loomis, Elmer 557; Thorn Creek, Vasey, July 10, 1901; Steptoe, Vasey, July, 1900; Spokane, Henderson 2111; Pullman, Piper 1927; Blue Mountains, Horner 505; Cascade Mountains, Vasey 382, 68.

Zonal distribution: Transition.

11a. Agrostis hyemalis geminata (Trin.) A. S. Ilitchcock, U. S. Dept. Agr. Bur. Pl. Ind. Bull. 68: 44, 1905.

Agrostis geminata Trin. Gram. Unifl. 207, 1824.

Type locality: Unalaska.

Range: Alaska to Washington and Colorado.

Specimens examined: Cascade Mountains, Henderson, July, 1892; Skagit Pass, Lake & Hull 119; Mount Rainier, Allen in 1894.

Zonal distribution: Arctic.

12. Agrostis idahoensis Nash, Bull. Torr. Club. 24: 42, 1897.

Agrostis tennis Vasey, Bull. Torr. Club. 10: 21, 1883, not Sibth. 1794.

Agrostis tenniculmis Nash, Mem. N. Y. Bot. Gard. 1: 32, 1900.

Type locality: "Forest, Nes Perces County, Idaho." Collected by Heller.

RANGE: Washington and Montana to California and Colorado.

Specimens examined: Without locality, Brandegee 1165; Wenache Mountains, Cotton 1669, without locality, Suksdorf in 1883.

ZONAL DISTRIBUTION: Canadian?

13. Agrostis oregonensis Vasey, Bull, Torr, Club. 13: 55, 1886 (April).

Agrostis attenuata Vasey, Bot. Gaz. 11: 337, 1886 (December).

Type locality: "Oregon." Collected by Howell.

Range: Washington and Oregon.

Specimens examined: Skamania County, Suksdorf 907; Copalis, Conard 47; Lake Sutherland, Lawrence 318; Kittitas County, Henderson 2123.

ZONAL DISTRIBUTION: Humid Transition.

14. Agrostis schiediana Trin. Mem. Acad. St. Petersb. VI, 64: 327, 1841.

Agrostis hallii californica Vasey, Contr. Nat. Herb. 3: 74, 1892.

Type locality: "Mexico."

Range: British Columbia to Mexico.

Specimens examined: Falcon Valley, Suksdorf 50, 189, 196; Lewis River, Henderson 2134.

On Suksdorf's List appear the names Agrostis canina L., A. densiflora Vasey var. (arenaria), A. verticillata Vill. (A stolonifera L.), and A. perennans Tuck.² These names all seem to rest upon erroneous determinations, the last being A. hyemalis. A. verticillata Vill. has been collected at Walla Walla by Leckenby, but only from cultivated plots.

HOLCUS.

1. Holcus lanatus L. Sp. Pl. 2: 1048, 1753.

Velvet grass.

Type locality: "Habitat in Europae pascuis arenosis."

Specimens examined: Seattle, Smith 785; near Montesano, Heller 3952; Clarks Springs, Spokane County, Krauger 86.

Quite commonly escaped from cultivation. In western Washington known as "mesquite grass,"

ARRHENATHERUM.

Arrhenatherum elatius (L.) Beauv.; Mert. & Koch, Deutsch. Fl. 1: 546, 1823.
 Tall Meadow Oatgrass.

Avena elatior L. Sp. Pl. 1: 79, 1753.

Holeus avenaceus Scop. Fl. Carn. ed. 2, 276, 1772.

Arrhenatherum arenaceum Boiss, Voy. Bot. Espagne 2: 657, 1839-45.

Type locality: "Habitat in Europae maritimis & apricis."

Specimens examined: Seattle, Piper 830.

AIRA. HAIR GRASS.

1. Aira caryophyllea L. Sp. Pl. 1:66, 1753.

Type locality: "Habitat in Angliae, Germaniae, Galliae, glareosis."

Specimens examined: Coupeville, Gardner 346; Clallam County, Elmer 1933; Seattle, Piper 823; Lake Park, Piper, July 27, 1895; Montesano, Heller 3889; Pierce and Thurston counties, Henderson 2142.

2. Aira praecox L. Sp. Pl. 1: 65, 1753.

Type locality: Europe.

Specimens examined: Olympic Mountains, Elmer 1932; Point Orchard, Piper 2310, 832; Whidby Island, Gardner 345; Stuart Island, Lawrence 59.

MERATHREPTA.

[Merathrepta Raf. in Seringe, Bull. Bot. 1: 221, 1830.]

The type of Danthonia DC. is Festuca decumbers L. (Triodia decumbers R. Br.), and the name can not therefore be used in the current sense. Merathrepta has for its type M. spicata (L.) Raf. (Avena spicata L.).

Spikelets ascending, in a close panicle.

Callus very short, not hairy. 1. M. pinetorum.
Callus elongate, densely hairy. 2. M. intermedia.
Spikelets spreading in a loose panicle or solitary.

Lemma abruptly narrowed; spikelets usually 2 to 4. 4. M. americana. Lemma not abruptly narrowed; spikelets usually solitary. . . . 5. M. unispicata.

1. Merathrepta pinetorum.

Danthonia spicata pinetorum Piper, Erythea 7: 103, 1899.

Danthonia thermale Scribner, U. S. Dept. Agr. Div. Agrost. Circ. 30: 5, 1901.

Type locality: "In gravelly soil, Mason County, Wash., 3 miles south of Union City." Collected by Piper.

Range: British Columbia, Washington, and Idaho.

Specimens examined: Mason County, near Union City, Piper 943; between mouth of Spokane River and Colville, Wilkes Expedition.

Zonal distribution: Transition.

2. Merathrepta intermedia (Vasey).

Danthonia intermedia Vasey, Bull. Torr. Club 10: 52. 1883.

Type Locality: "California, Rocky Mountains, Plains of Br. America to Mount Albert, Lower Canada."

RANGE: Canada to Washington, Colorado, and California.

Specimens examined: Loomis, Elmer 553; Stevens Pass, Sandberg & Leiberg, August, 1893; Mount Rainier, Piper 1950; Cascade Mountains, Vascy 442.

Zonal distribution: Arctic.

2a. Merathrepta intermedia cusickii (Williams).

Danthonia intermedia cusickii Williams, U. S. Dept. Agr. Div. Agrost. Circ. 30: 7, 1901.

Type locality: "Oregon."

Range: Washington to Montana and Oregon.

Specimens examined: Olympic Mountains, Piper 1987.

Zonal distribution: Arctic.

3. Merathrepta californica (Boland.).

Danthonia californica Boland, Proc. Cal. Acad. 2: 182, 1858-62.

Type locality: "On the borders of cultivated fields near the bay at Oakland: hills near Mission Dolores, San Francisco."

RANGE: California to Washington and Montana.

Specimens examined: Pullman, Elmer 1011; Piper 1744; Horner 879; Steptoe, Vascy, June, 1900; without locality, Sandberg & Leiberg 488.

The following specimens are doubtfully referred here: Coupeville, Gardner 342; Seattle, Smith 829; Kitsap County, Piper 821.

Zonal distribution: Transition.

4. Merathrepta americana (Scribn.).

Danthonia americana Scribn. U. S. Dept. Agr. Div. Agrost. Circ. 30: 5, 1901. Danthonia grandiflora Philippi, Anal. Univ. Chil. 568, 1873, not Hochst. 1851.

Type locality: Chile.

RANGE: British Columbia to California. Chile.

Specimens examined: Montesano, Heller 3908; Falcon Valley, Suksdorf 150.

Zonal distribution: Transition.

5. Merathrepta unispicata (Thurb.).

Danthonia unispicata Thurb. in S. Wats. Bot. Cal. 2: 294, 1880,

Type locality: "From San Diego to San Francisco," California.

RANGE: Washington to California.

Specimens examined: Spokane, Piper 2599; without locality, Geyer 189; Pullman,

Elmer 1327: Brodie, June, 1898.

ZONAL DISTRIBUTION: Arid Transition.

AVENA.

 Avena fatua glabrata Petermann, Flora des Bienitz 13, 1841. Smooth wild oat. Avena fatua glabrescens Coss. Fl. Alg. 113, 1864-67.

Type locality: Not determined.

RANGE: Introduced on the Pacific coast, especially in Washington, Oregon, and Idaho-Specimens examined: Tacoma, *Piper*, July 5, 1897; Pullman, *Piper*, July 2, 1894.

DESCHAMPSIA.

Lower glume 1-nerved.

Lower glume 3-nerved.

Annual; glumes 5 to 7 mm. long. 3. D. calycina. Perennial; glumes 3 to 4 mm. long. 4. D. elongata.

1. Deschampsia cespitosa (L.) Beauv. Agrost. 91, 160, 1812.

Aira cespitosa L. Sp. Pl. 1; 64, 1753.

Type locality: Europe.

RANGE: Alaska to Labrador south to California, Arizona, Illinois, and New Jersey. Europe, Asia.

Specimens examined: Olympic Mountains, Elmer 1665; Sumas Prairie, Lyall in 1858–9; Seattle, Smith 858; Gray's Harbor, Henderson, June, 1892; Fort Vancouver, Garry in 1826; Railroad Creek, Elmer 718; Wenache River, Whited: Spokane, Piper, September, 1896; Pullman, Piper 1749; Steptoe, Vascy 12; Pend Oreille River, Lyall in 1861; Waitsburg, Horner 509; Lake Kalispel, Kreager 328; Lake Chelan, Vascy 24; without locality, Vascy 367.

Zonal distribution: Transition.

2. Deschampsia atropurpurea (Wahl.) Scheele, Flora 27: 56, 1844.

Aira atropurpurea Wahl. Fl. Lapp. 37, 1812.

Aira latifolia Hook, Fl. Bor. Am. 2: 243, 1840.

Deschampsia atropurpurea latifolia Scribn. in Macoun, Cat. Can. Pl. 2: 209, 1888.

Type locality: Finmark.

Range: Mountains of New England and New York to Alaska south to Oregon and Colorado. Europe.

Specimens examined: Olympic Mountains, Elmer 1670; Mount Rainier, Piper 1949; Mount Rainier, Smith 690; Mount Adams, Henderson 2147; Stevens Pass, Sandberg & Leiberg, August, 1893; Wenache Region, Brandegee, 1176; North Fork of Bridge Creek, Elmer 735; Mount Stuart, Elmer 1151; Skamania County, Flett 1371; Cascade Mountains, Vasey 423.

Zonal distribution: Hudsonian.

3. Deschampsia calycina Presl, Rel. Haenk. 1: 251, 1830.

Aira danthonioides Trin. Mem. Acad. St. Petersb. Vl. 1: 57, 1830.

Type locality: "Hab, ad Monte-Rey Californiae."

Range: Washington and Idaho to California and Arizona. Peru.

Specimens examined: Douglas County, Spillman, May, 1896; Sandberg & Leiberg 292; Wilson Creek, Sandberg & Leiberg 395; Clealum, Henderson, June, 1892; Spipen [Naches] River, Wilkes Expedition: Klickitat River, Flett 1369; Pullman, Piper 1922, 1758; Elmer 888; Steptoe, Vascy 25; Rattlesnake Mountains, Cotton 413; Walla Walla, Brandegee 1175; Blue Mountains, Horner 491; Kittitas County, Vascy 92; Palouse City, F. D. Cloud, June 22, 1895.

ZONAL DISTRIBUTION: Arid Transition.

4. Deschampsia elongata (Hook.) Munro in Benth. Pl. Hartw. 342, 1857.

Aira elongata Hook, Fl. Bor, Am. 2; 243, 1840.

Type locality: "Sandy islands of the River Columbia." Collected by Douglas.

Range: British Columbia to Montana and California.

Specimens examined: Olympic Mountains, Elmer 1664; San Juan Island, Lyall in 1858; Mason County, Kincaid, June, 1893; Montesano, Heller 4044, 3953a; Nisqually Valley, Allen 38; Seattle, Piper 843; Okanogan County, Sandberg & Leiberg 582; North Yakima, G. H. Watt: Wenache, Whited 1302; Stehekin, Whited 1399; Roslyn, Whited 477; Skamania County Flett 1372; Pullman, Piper 1741; Walla Walla, Brandegee 1174; Blue Mountains, Lake & Hull 70; Mount Carlton, Kreager 199; Tieton River, Cotton 50; Ellensburg, Vasey 389.

Zonal distribution: Transition.

TRISETUM.

Lemmas awuless: panicle narrow	1. T. muticum.
Lemmas awned.	
Panicle dense and spike-like	2. T. spicatum,
Panicle loose and open.	
Sheaths pubescent, lemma 7 mm. long	3. T. canescens.
Sheaths glabrous; lemma 5 mm. long	4. T. eernuum.

Trisetum muticum Scribn, U. S. Dept. Agr. Div. Agrost. 11: 50, 1898.

Trisetum subspicatum muticum Boland.; S. Wats. Bot. Cal. 2: 296, 1880.

Trisctum brandegei Scribner, Bull. Torr. Club 10: 64. 1883.

Type locality: "On the upper Tuolumne," California. Collected by Bolander.

Range: California to Washington, east to Colorado.

Specimens examined. Spangle, Suksdorf 949.

ZONAL DISTRIBUTION: Arid Transition.

2. Trisetum spicatum (L.) Richter, Pl. Eur. 1: 59, 1890.

Aria spicata L. Sp. Pl. 1; 64, 1753.

Aria subspicata L. Syst. Veg. ed. 10: 873, 1759.

Trisetum subspicatum Beauv. Agrost. 88 and 180, 1812.

Type locality: "Habitat in Lapponiae alpibus."

RANGE: Alaska to Labrador, south to California, New Mexico, and North Carolina.

Specimens examined: Olympic Mountains, Elmer 1947; Cascade Mountains, 49°, Lyall in 1860; Mount Rainier, Piper 2620, 1951; Mount Adams, Howell 423; Flett 1414; Yakima County, Henderson 2261, 2262; Loomis, Elmer 556; Klickitat River, Flett 1368; Blue Mountains, Piper, July, 1896; without locality, Sandberg & Leiberg 687.

ZONAL DISTRIBUTION: Arctic.

2a. Trisetum spicatum molle (Michx.).

Avena mollis Michx, Fl. Bor, Am. 1: 72, 1803.

Trisetum subspicatum molle Gray, Man. ed. 2, 572, 1856.

Type locality; "Hab. in Canada."

RANGE: Alaska to New England and Oregon.

Specimens examined: Loomis, Elmer 633; Cascade Mountains, Vascy 386.

Zonal distribution: Arctic.

3. Trisetum canescens Buckl. Proc. Acad. Phila. 1862: 100, 1862.

Type locality: "Oregon, Columbia Plains." Collected by Nuttall.

RANGE: British Columbia to Idaho and California.

Specimens examined: Clallam County, Elmer 1944, 1945; Seattle, Piper, June, 1891; Smith 1097; Olympia, Henderson, June, 1892; Montesano, Heller 3931; upper Nisqually Valley, Allen 48; Mount Stuart, Elmer 1143; Kamiak Butte, Piper, July 20, 1899; Palouse, F. D. Cloud, June, 1895; Blue Mountains, Horner 502, 518; Cascade Mountains, Vasey 483; Stehekin, Griffiths & Cotton 238.

ZONAL DISTRIBUTION: Transition.

5. Trisetum cernuum Trin, Mem. Acad. St. Petersb. 1: 61, 1830 (January).

Avena nutkaensis Presl, Rel. Haenk. 1: 254, 1830.

Trisetum sandbergii Beal, Grasses N. Am. 2: 378, 1896.

Trisetum nutkaense Scribner & Merrill, Univ. Cal. Bot. Publ. 1: 63, 1902.

Type locality: "Ex Ins. Sitka."

Range: Alaska to California and Idaho.

Specimens examined: Olympic Mountains, Elmer 1946: Mount Rainier, Smith 979: Longmire Springs, Smith, August, 1890: upper Nisqually Valley, Allen 42; Seattle, Peper, Smith 846; Wenache Region, Brandegee 1177: Pullman, Piper, July 13, 1899; Klickitat River, Flett 1368, 1412; Blue Mountains, Lake & Hall 64; Mount Stuart, Sandberg & Leiberg 823.

ZONAL DISTRIBUTION: Humid Transition.

PHRAGMITES.

1. Phragmites phragmites (L.) Karst. Deutsch. Fl. 379, 1880-83.

Reed.

Arundo phragmites L. Sp. Pl. 1:84, 1753.

Phragmites communis Trin. Fund. Agrost. 134, 1820.

Type locality: "Habitat in Europae lacubus, fluviis."

RANGE: British Columbia to Quebec south to Georgia and California, Europe, Asia.

Specimens examined: Ophir, Elmer 519; Columbia River, Scouler; Crab Creek, Douglas County, Lake & Hull 113; between Yakima and Ellensburg, Piper.

Zonal distribution: Arid Transition.

EATONIA.

1. Eatonia obtusata (Michx.) Gray, Man. ed. 2, 558, 1856.

Aira obtusata Michx, Fl. 1: 62, 1803.

Type locality: "Hab. in aridis, a Carolina ad Floridam."

Range: Washington to Ontario and Massachusetts, southward to Arizona and Florida.

Specimens examined: Wilson Creek, Lake & Hull, August, 1892; Wawawai, Elmer 1024; Brodie, June, 1898; Parker, A. D. Dunn; Priest Rapids, Cotton 1389; Prosser, Cotton 733.

Zonal distribution: Upper Sonoran.

2. Eatonia pennsylvanica (DC.) Gray, Man. ed. 2, 558, 1856.

Koeleria pennsylvanica DC. Cat. Hort. Monsp. 117, 1813.

Type locality: "Penn."

Range: New Brunswick to British Columbia, south to Georgia and Texas.

Specimens examined: Blue Mountains, Lake & Hull 61; Steptoe, Vasey 63; Usk, Kreager 358; Toppenish, Cotton 802.

Zonal distribution: Arid Transition.

KOELERIA.

1. Koeleria cristata (L.) Pers. Syn. 1: 97, 1805.

Aira cristata L. Sp. Pl. 1: 63, 1753.

Type locality: "Habitat in Angliae, Galliae, Helvetiae siccioribus."

RANGE: British Columbia to Athabasca, southward to Arizona, Kansas, and Pennsylvania. Specimens examined: Olympic Mountains, Elmer 1668: Alki Point, Piper, June, 1891; Fidalgo Island, Lyall in 1858; Nisqually, Wilkes Expedition; Ophir, Elmer 513: Fort Okanogan, Wilkes Expedition; Wenache, Whited 1131: Douglas County, Spillman, May, 1896; Toppenish, Henderson 2210: Tieton River, Cotton 452; Rattlesnake Mountains, Cotton 411; Klickitat River, Flett 1411; west Klickitat County, Suksdorf 1110 (a very pubescent form); Spokane, Piper 2723; Spokane, Kreager 1 (very pubescent): Clarks Springs, Kreager 70; Pullman, Piper 1757; Elmer 885; Steptoe, Vascy, June, 1900; Walla Walla, Leckenby, May, 1898; Blue Mountains, Horner 492; Kittitas County, Vascy 143; Palouse City, F. D. Cloud, June 22, 1895.

Zonal distribution: Transition.

This species is very variable and a critical revision of the genus may show it to consist of several subspecies. The European forms have been much subdivided in a recent paper by Domin. To several of his segregates he refers American specimens.

ERAGROSTIS.

Stems creeping: spikelets 10 to 35-flowered 1. E. hypnoides. Stems creet; spikelets 7 to 10-flowered 2. E. lutescens.

1. Eragrostis hypnoides (Lam.) B. S. P. Prel, Cat. X. Y. 69, 1888.

Poa hypnoides Lam. Tabl. Eneye. 1: 185, 1791.

Eragrostis reptans Nees, Agrost. Bras. 514, 1829.

Type locality; "Ex America merid."

Range: New England to Washington, south to Florida, Texas, and California.

Specimens examined: Kalama, Piper, October, 1901; Almota, Piper 1799; Vancouver, Sheldon 11266; Toppenish, Cotton 794.

Zonal distribution: Humid Transition and Upper Sonoran.

2. Eragrostis lutescens Scribner, U. S. Dept. Agr. Div. Agrost. Circ. 9: 7. 1899.

Type locality: "Sandy banks of Snake River, Almota, Washington."

RANGE: Washington and Idaho.

Specimens examined: Near Kennewick, Elmer in 1897; Almota, Piper 2624.

Zonal distribution: Upper Sonoran.

MELICA.

Lemmas notched at apex, usually awned.

Awns long.

 Nerves of the lemma hirsure.
 1. M. smithii.

 Nerves of the lemma glabrous.
 2. M. aristata.

Awns short or none. 3. M. barfordii.

Lemma not notched at apex, awnless.

Apex of lemma long-acuminate. 4. M. subulata.

Apex of lemma obtuse.

Not bulbiferous; spikelets 12 to 16 mm, long................. 5. M. s'ricta.

Bulbiferous: spikelets much shorter.

Spikelets shining, slender-peduncled, often nodding;

plants not tufted. 6. M. spectabilis.

Spikelets dull, erect or ascending; plants tufted.

Panicle strict; glumes membranous. 7. M. hella.
Panicle usually spreading; glumes coriaceous 8. M. fagax.

1. Melica smithii (Porter) Vasey, Bull. Torr. Club 15: 294, 1888.

Avena smithii Porter: Grav. Man. ed. 3, 640, 1867.

Melica retrefracta Suksdorf, Deutsch, Bot, Monatss. 19: 92, 4901.

Type locality: "Isle Royale, Keewenaw Point, Lake Superior,"

RANGE: Lake Superior to Washington and Oregon.

Specimens examined: Sumas Prairie, Lyall in 1858; without Locality, Nandberg & Leiberg 504; Skamania County, Suksdorf 2334; Blue Mountains, Lake & Hall 117.

Zonal distribution: Canadian!

2. Melica aristata Thurb.; Boland. Proc. Cal. Acad. 4: 103, 1870.

Type locality: "Loose soil in open woods near Clark's, 4,600 feet altitude, 1866." California.

Range: California to Washington.

Specimens examined: Klickitat County, Suksdorf 73; Webas, Griffiths & Cotton 93a.

Zonal distribution: Transition.

3. Melica harfordii Boland, Proc. Cal. Acad. 4: 102, 1870.

Type locality: "Wooded hillsides, Santa Cruz road, near Lexington [California], June, 1865."

Range: California to Washington.

Specimens examined: Clallain County, Elmer 1936, 1938; Cascade Mountains, Vascy 6; wee. Klickitat County, Suksdorf 3, 288, 17; Lower Cascades, Skamania County, Suksdorf 1188.

ZONAL DISTRIBUTION: Humid Transition.

3a. Melica harfordii tenuior nom. nov.

Melica harfordii minor Vasey, Bull. Torr. Club. 15: 48, 1888, not M. minor Hack, 1881.

Type locality: Siskiyou Mountains, Oregon. Collected by Howell.

Range: Washington and Oregon.

Specimens examined: Without locality, Vasey in 1889.

Melica spectabilis Scribner, Proc. Acad. Phila. 1885: 45, 1885.

Melica scabrata Scribner; Piper & Beattie, Fl. Palouse Reg. 25, 1901.

Range: Eastern Washington and Oregon to Montana.

Specimens examined: Spokane County, Suksdorf 1113; Pullman, Piper 1745; Elmer 833; Mount Rainier Forest Reserve, Flett in 1899.

Zonal distribution: Arid Transition.

5. Melica subulata (Griseb.) Scribner, Proc. Acad. Phila. 1885; 47, 1885.

Browns subulatus Griseb, in Ledeb, Fl. Ross, 4: 358, 1853.

Melica acuminata Boland, Proc. Cal. Acad. 4: 104, 1870.

Festuca cepacea Philippi, Linnaea 33: 297. 1864-65.

Melica cepacca Scribner, U.S. Dept. Agr. Div. Agrost. Circ. 30: 8, 1901.

Type Locality: Unalaska.

Range: Northern California to Wyoming and Alaska.

Specimens examined: Clallam County, Elmer 1937; Seattle, Piper 839, 864; Coupeville Gardner 339; Easton, Henderson 2216; upper Nisqually Valley, Allen 47; Blue Mountains, Piper 2560; Lake & Hull 83; Horner 512; Stehekin, Griffiths & Cotton 220.

ZONAL DISTRIBUTION: Transition to Arctic.

6. Melica bella Piper, U. S. Dept. Agr. Div. Agrost. Circ. 27: 10, 1900.

Melica bulbosa Geyer; Hook, Journ. Bot. & Kew Misc. 8: 19, 1856, nom. nud., not Melica bulbosa Geyer; Thurb, in S. Wats. Bot. Cal. 2: 304, 1880.

Type locality: "Rocky ravine, Upper Platte." Collected by Gever.

Range: Washington to Wyoming and Oregon.

Specimens examined: Wenache Mountains, Brandegee 1182; Whited, May 31, 1899; Mount Stuart, Sandberg & Leiberg 580; Upper Atanum River, Henderson 2214; Peslastin, Sandberg & Leiberg, July, 1893; Wenache, G. R. Vasey, July, 1889; Ellensburg, Piper 2616; Chelan, Griffiths & Cotton 167; Siehekin, Griffiths & Cotton 239.

Zonal distribution: Arid Transition.

7. Melica bella intonsa, subsp. nov.

Leaves and culms covered with a dense short reflexed pubescence.

Range: Washington to Nevada

Specimens examined. Wenas, Griffiths & Cotton 103, June, 1902 (type).

7a. Melica fugax madophylla, subsp. nov.

Leaves and stems glabrous or nearly so.

Range: Washington to California.

Specimens examined: Falcon Valley, Suksdorf 61 (type), 78, 16, 5; without locality Wilkes Expedition; Cascade Mountains, Vascy 9, 93.

Melica brownies Gray is included in Suksdorf's List, but there is no evidence that the species occurs in Washington.

PLEUROPOGON.

 Pleuropogon refractum (A. Gray) Vasey, U. S. Dept. Agr. Div. Bot. Bull. 13²: pl. 69, 1893.

Lophochlaena refracta A. Gray, Proc. Am. Acad. 8: 409, 1872.

Type locality: Oregon. Collected by Hall.

Range: Oregon and Washington west of the Cascades.

Specimens examined: Olympic Mountains, Elmer 1931; Piper; Seattle, Piper 886; Nisqually Valley, Allen 40; Stevens Pass, Sandberg & Leiberg 734; White River, Vasey 360, Zonal, distribution: Humid Transition to Canadian.

DACTYLIS.

1. Dactylis glomerata L. Sp. Pl. 1: 71, 1753.

Orchard grass.

Type locality: "Habitat in Europae cultis ruderatis."

Specimens examined: Waitsburg, Horner 224.

POA. Bluegrass.

Annual; lemma without cobwebby hairs at base. 1. P. annua. Perennial.

Plants with creeping rootstocks.

Stem evlindric.

Lemma webbed, that is, with a tuft of long bairs at the base.

Dioecious, seashore plant; spikelets 10 to 15 mm.	0.70
long	3. P. macrantha.
Perfect; spikelets 4 to 5 mm. long Lemma not webbed.	4. P. pratensis.
Low seashore plant with narrow involute leaves and	
	5 D annihuis
small panicle.	5. P. confinis.
Taller grasses, not maritime, with flat or folded	
leaves.	
Florets loose; ligule very short, ciliate; lat-	a D
eral nerves of lemma prominent	$6.\ P.\ nervosa.$
Florets close; ligule rather long, not ciliate;	
lateral nerves of lemma not prominent	7. P. olneyae.
Plants tufted, without rootstocks.	
Lateral nerves of lemmas prominent; web present	8. P. trivialis.
Lateral nerves of lemmas not prominent.	
Web present at base of lemma.	
Leaves flat or folded, not soft and flaceid.	
Panicle short, pyramidal; spikelets 6 to 7 mm.	
long; low alpine plant	9. P. arctica.
Panicle ample, spreading; spikelets 3 to 4 mm.	
long	10. P. triflora.
Leaves flat, rather short, soft and flaccid.	J
Panicle lax, spreading; spikelets 5 to 6 mm.	
long; florets not early deciduous	11. P. leptocoma.
Panicle narrow, the rays usually erect; florets	
early deciduous.	•
Lemma glabrous, or nearly so	19 P holanderi
Lemma pubescent.	
Web absent, no tuft of hairs at base of lemma.	10. 1
Nerves of the lemma pilose below.	1 (D)
Alpine plant: leaf blades flat, green, broad	14. F. atpina.
Maritime plant; leaf blades narrow or folded,	1 - 7) 7 7 7 7
glaucescent	15. P. pactiypholis.
Nerves of lemma not pilose.	
Stems coarse, 60 to 100 cm. high.	
Leaves flat, rarely involute, green or rarely	
glaucescent; panicles ample.	
Ligules long.	
Panicle compact, lemmas sca-	
brous	16. P. canbyi.
Panicle looser; lemmas pubes-	
cent	17. P. leckenbyi.
Ligules short; panicle loose	18. P. ampla.
Leaves narrow, involute, pale; panicles	
narrow, erect.	
Ligules short	$19.\ P.\ brackyglossa.$
Ligules long	20. P. nevadensis.
Stems not coarse nor tall, usually under 60 cm.	
in height.	
Leaves very narrow, filiform and involute.	
Panicles loose.	
Florets distant; ligule short	28. P. idahoensis.
Florets close; ligule long	
	1

```
Panicles close.
       Lemmas scabrous; leaves very
         scabrous....... 30. P. cottoni.
       Lemmas smooth; leaves smooth. 31. P. cusickii.
Leaves not filiform.
   Stems low, 5 to 20 cm. high; grasses
     of the highest mountains.
       Leaves soft; panicle purple, very
         short; plants 5 to 10 cm, high, 32. P, lettermani.
       Leaves rather rigid; panicle pale,
         narrow, elongated; plant 10 to
         Stems taller, usually 20 to 40 cm.
     high; mostly grasses of rupestrine
     habitat.
       Panicle close, erect; leaves flat.
           Lemmas pubescent at base;
             leaves rather narrow, some-
             Lemmas glabrous; leaf
             blades broader.
               Leaf blades soft ...... 22. P. paddensis.
               Leaf blades firm, very
                 Panicles loose: leaves narrow.
         flat or involute.
           Ligules of the sterile shoots
             obsolete; of the culm leaves
              short and truncate..... 24. P. multnomae.
           Ligules well developed on all
             the leaves.
               Low plants 5 to 10 cm.
                 high; panicle small,
                 with divarience rays
                 and few spikelets.... 25, P. vaseyochloa.
               Taller; 10 to 30 cm.
                 high:
                         panicle less
                 spreading, with many
                 spikelets.
                   Panicle loose;
                     glumes thin,
                     blades involute. 26. P. gracillima.
                   Paniele close:
                     glumes firm,
                     blades flat ..... 27. P. saxatilis.
```

1. Poa annua L. Sp. Pl. 1:68, 1753.

Type locality: "Habitat in Europa ad vias."

Specimens examined: Near Ellensburg, Piper 2617; Vascy 181; North Yakima, Watt, August, 1895; Southbend, Spillman, August 17, 1899; Steptoe, Vascy 1; Pullman, Piper 2769

Abundantly introduced, but in some localities apparently native.

2. Poa compressa L. Sp. Pl. 1; 69, 1753.

Canada eluegrass.

Type locality: "Habitat in Europae et Americae septentrionalis siccis, muris, tectis."

Specimens examined: Fairhaven, Piper 2605; Ellensburg, Piper 2618; Steptoe, Vascy 50; Colfax, Vascy 60.

3. Poa macrantha Vasey, Bull. Torr. Club 15: 11. 1888.

Type locality: "At the mouth of the Columbia River." Collected by Howell.

Range: Seacoast of Oregon and Washington.

Specimens examined: Coupeville, Gardner 335; Clallam County, Elmer 1923; Westport, Henderson 2243; Heller 3944.

Zonal distribution: Humid Transition.

4. Poa pratensis L. Sp. Pl. 1: 67, 1753.

Kentucky bluegrass.

Type locality: "Habitat in Europae pratis fertilissimis."

Specimens examined: Clallam County, Elmer 1922, 1920; near Montesano, Heller 3866; White River, Vasey 125; Cascade Mountains, Vasey 124; Sunnyside, Cotton 375; Spokane, Sandberg & Leiberg, May, 1893; Steptoe, Vasey 21; Colfax, Vasey, June 20, 1900; Pullman, Piper, June, 1893.

5. Poa confinis Vasey, U. S. Dept. Agr. Div. Bot. Bull. 13²: pl. 75, 1893.

Poa abbreviata R. Br. err. det. Thurb. in Wats. Bot. Cal. 2: 312, 1880.

Type locality: Tillamook Bay, Oregon, according to label on type specimen. Collected by Howell.

Range: Alaska to Oregon.

Specimens examined: Westport, Henderson 2245; Port Angeles, Piper 2308; Clallam County, Elmer 1921; Port Discovery, Wilkes Expedition; Port Orchard, Piper; Johns Island, Lawrence 200; Ilwaco, Piper.

ZONAL DISTRIBUTION: Humid Transition.

6. Poa nervosa (Hook.) Vasey, U. S. Dept. Agr. Div. Bot. Bull. 13²: pl. 81, 1893.

Festuca nervosa Hook, Fl. Bor, Am. 2: 251, 1840.

Type locality: "Nutka Sound." Collected by Scouler.

Range: British Columbia to Oregon.

Specimens examined: Cape Horn, Piper 4901.

ZONAL DISTRIBUTION: Humid Transition.

7. Poa olneyae Piper, Erythea 7: 101. 1899.

Type locality: Spokane, Washington.

RANGE: British Columbia to Oregon and Idaho.

Specimens examined: Klickitat River, Flett 1358; Falcon Valley, Suksdorf 10; Mount Adams, Suksdorf 160; Cleveland, Suksdorf 109: Simcoe Mountains, Howell 9; Mount Stuart, Elmer 1159; Atanum River, Henderson 2226; Upper Naches River, Henderson 2235; Spokane, Sandberg & Leiberg, May, 1893; Piper 2295, 2820; Wenache Mountains, Elmer 467, 468, 444; Whited 672; Cotton 1262, 1627, 1658.

ZONAL DISTRIBUTION: Arid Transition.

This species is near P. wheeleri Vasey and our plant has been referred to that species.

8. Poa trivialis L. Sp. Pl. 1: 67, 1753.

ROUGH MEADOW GRASS.

Type locality: "Habitat in Europae pascuis."

Specimens examined: Tacoma, Piper, July 5, 1897; Puyallup, Piper 3927, 3928.

9. Poa arctica R. Br. Suppl. to App. Parry's Voy. 288, 1824.

Type locality: Melville Island.

RANGE: Alaska to Labrador, south to Washington and Colorado.

Specimens examined: Mount Rainier, Allen 46; Piper 1966.

Both these collections were distributed as Poa laxa Haenke.

Zonal distribution: Arctic.

10. Poa triflora Gilib. Exerc. Phyt. 2: 531, 1792.

Poa scrotina Ehrh. Beitr. 6: 83. 1791, nom. nud.

Type locality: Europe.

Range: British Columbia to Nova Scotia, southward to Oregon, Nebraska, and New Jersey.

Specimens examined: Fairhaven, Piper 2810, 2604; Montesano, Heller 4016; Cascade Mountains, 49°, Lyall in 1859; Seattle, Piper 1452; Ophir, Elmer 517; Spokane, Piper, August 7, 1898; Clarks Springs, Kreager 52; Usk, Kreager 362; Steptoe, Vasey 61.

Zonal distribution: Transition.

11. Poa leptocoma Trin. Mem. Acad. St. Petersb. VI. 1: 374, 1830.

Type locality: Sitka.

Range: Alaska to Washington. Siberia.

Specimens examined: Olympic Mountains, Flett 835; Mount Stuart, Sandberg & Lieberg 806; Klickitat River, Cotton 1451; Mount Adams, Suksdorf 108; Atanum River, Henderson 2230; Wenache Mountains, Elmer 470; Cotton 1308; Clallam County, Elmer 1919.

Zonal distribution: Hudsonian.

All the Washington specimens that have been referred to Poa reflexa belong to P. lep-toeoma.

12. Poa bolanderi Vascy, Bot. Gaz. 7: 32. 1882.

Type locality: California.

RANGE: Washington to California.

Specimens examined: Blue Mountains, Piper 2558; Horner 489, 490.

12a. Poa bolanderi chandleri (Davy).

Poa howellii chandleri Davy, Univ. Cal. Bot. Publ. 1: 60. 1902.

Type locality: "Shackleford Cañon, near Marble Mt., Siskiyou County," California.

Range: Washington to California.

Specimens examined: Blue Mountains, Piper 2558; Horner 651, 652; without locality, Vasey in 1889.

13. Poa howellii Vasey & Scribn. U. S. Dept. Agr. Div. Bot. Bull. 13²: pl. 78. 1893.

Type locality: Portland, Oregon. Collected by Howell.

Range: British Columbia to California.

Specimens examined: Clallam County, Elmer 1924; Seattle, Piper 963, 962; Smith 962; without locality, Suksdorf.

Zonal distribution: Humid Transition.

14. Poa alpina L. Sp. Pl. 1: 67. 1753.

Type locality: "Habitat in alpibus Lapponicis, Helveticis."

Range: Alaska to Labrador, south to Washington, Colorado, and Quebec. Asia. Europe Specimens examined: North Fork Bridge Creek, Elmer 675.

Zonal distribution: Arctic.

15. Poa pachypholis Piper, Proc. Biol. Soc. Wash. 18: 146. 1905.

Type locality: "Ilwaco, Washington, on cliffs wet by the ocean spray, June 22, 1904." Not otherwise known.

16. Poa canbyi (Scribn.)

Glyceria canbyi Scribn. Bull. Torr. Club 11: 77. 1883.

Atropis canbyi Beal, Grasses N. Am. 2: 580, 1896.

Type locality: Cascade Mountains, Washington. Collected by Tweedy and by Brandegee.

Specimens examined: Mount Stuart, Sandberg & Leiberg 819; Cascade Mountains Tweedy; Wenache Mountains, Cotton 1708.

17. Poa leckenbyi Scribn, U. S. Dept, Agr. Div. Agrost. Circ. 9: 2, 1899.

Type locality: Scott, Klickitat County, Washington. Collected by Leckenby.

Range: Washington.

Specimens examined: Sunnyside, Cotton 381; Douglas County, Spillman, May, 1896; Scott, Leckenby, near Eltopia, Cotton 1019.

Zonal distribution: Upper Sonoran.

18. Poa ampla Merrill, Rhodora 4: 145, 1902.

Poa laeviculmis Williams, Bot. Gaz. 36: 55. 1903.

Type locality: Steptoe, Washington. Collected by G. R. Vasey.

RANGE: British Columbia to Idaho and Oregon.

Specimens examined: Sprague, Henderson 2224; Sandberg & Leiberg, June, 1893; Wawawai, Leckenby 3000; Piper 2567; Spokane, Piper, May, 1897; near North Yakima, Henderson, May, 1892; Falcon Valley, Suksdorf 1127; Douglas County, Spillman, May, 1896; Pullman, Piper 1755; Elmer 173.

Zonal distribution: Arid Transition.

19. Poa brachyglossa Piper, Proc. Biol. Soc. Wash. 18: 145, 1905.

Type locality: Douglas County, Washington. Collected by Sandberg & Leiberg.

Range: Washington to Nevada and California.

Specimens examined: Wenas, Griffiths & Cotton 80; Prosser, Griffiths & Cotton 1; Steamboat Rock, Griffiths & Cotton 432: Ephrata, Griffiths & Cotton 484: Brewster, Griffiths & Cotton 260, 264; Condons Ferry, Griffiths & Cotton 421; Grand Coulee, Griffiths & Cotton 449; Coulee City, Piper 3916, 3917, 3918; Cold Creek, Cotton 402; Colville Reservation, Griffiths & Cotton 101, 374, 396; Cow Creek, Griffiths & Cotton 512, 536, 518, 548; Wawawai, Piper 3955, 4127.

Zonal distribution: Arid Transition and Upper Sonoran.

20. Poa nevadensis Vasev, Bull. Torr. Club 11: 66, 1883.

Type locality: Arizona, according to the type specimen.

Range: Washington to Arizona.

Specimens examined: Bingen, Suksdorf 2831.

ZONAL DISTRIBUTION: Upper Sonoran.

21. Poa sandbergii Vasey, Contr. Nat. Herb. 1: 276, 1893.

Aira brevifolia Pursh, Fl. 1: 76, 1814, not Poa brevifolia Gaud. 1808.

Poa incurva Scribn. & Williams, U. S. Dept. Agr. Div. Agrost. Circ. 9: 6, 1899.

Type locality: Lewiston, Idaho.

RANGE: British Columbia to Oregon and Idaho.

Specimens examined: Wenache Mountains, Griffiths & Cotton 115; Wenas, Griffiths & Cotton 66, 99; Chelan, Griffiths & Cotton 170, 173; Stehekin, Griffiths & Cotton 208; Conconully, Griffiths & Cotton 305; Olympic Mountains, Elmer 1929; Washtucna, Cotton 979; Waitsburg, Horner 501; Steptoe, Vascy 8, 13, 7, 11, 14, 67; Rock Creek, Cotton 953; Saint Johns, Cotton 963; Olympic Mountains, Piper 1989.

ZONAL DISTRIBUTION: Mainly Arid Transition.

All of the Washington specimens that have been called *Poa tenuifolia* Xutt. or *Poa buckleyana* Xash are referable to *P. sandbergii*.

Poa paddensis Williams, U. S. Dept. Agr. Div. Agrost. Bull. 17 rev. ed.: 261, 1901. Poa purpurascens Vasey, Bot. Gaz. 6: 297, 1881, not Spreng, 1819.

Type locality: "On Mt. Hood, Oregon." Collected by Howe.1.

RANGE: British Columbia to Oregon.

Specimens examined: Olympic Mountains, Piper 1915; Flett 831; Elmer 1925, 1927, 1930; Bridge Creek, Elmer 675; Mount Rainier, Allen 184; Piper 1967; Atanum River, Henderson 2244; Mount Adams, Howell 83; Suksdorf 158, 159.

Zonal distribution: Arctic.

23. Poa curtifolia Scribn. U. S. Dept. Agr. Div. Agrost. Circ. 16: 3, 1899.

Type locality: Mount Stuart, Washington. Collected by Elmer.

Specimens examined: Mount Stuart, Elmer 1148; Yakima Region, Tweedy in 1882.

ZONAL DISTRIBUTION: Arctic.

24. Poa multnomae Piper, Bull. Torr. Club 32: 435. 1905.

Sporobolus bolanderi Vasev, Bot. Gaz. 11: 337, 1896, not Poa bolanderi Vasev, 1882.

Type locality: Multiomah Falls, Oregon.

Range: Washington and Oregon.

Specimens examined: Cape Horn, Piper 4902; Klickitat County, Suksdorf 77.

ZONAL DISTRIBUTION: Humid Transition.

25. Poa vaseyochloa Scribn. U. S. Dept. Agr. Div. Agrost. Circ. 9: 1. 1899.

Poa pulchella Vasey, Bot. Gaz. 7: 32, 1882, not Salisb. 1796.

Type locality: "On the Columbia river, from near the river bank to the summit of the bills," Klickitat County, Washington. Collected by Suksdorf.

Range: Washington and Oregon.

Specimens examined: White Salmon River, Suksdorf 2; Columbia River, Klickitat County, Suksdorf 1; Mountains, Klickitat County, Suksdorf, April 28, 1881.

26. Poa gracillima Vasey, Contr. Nat. Herb. 1: 272, 1893.

Type locality: Mount Adams, Washington. Collected by Suksdorf.

Range: Washington and Oregon.

Specimens examined: Mount Adams, Suksdorf 33; Howell 86, 87; Henderson 2229; Mount Stuart, Elmer 1153.

27. Poa saxatilis Scribn. & Williams, U. S. Dept. Agr. Div. Agrost. Circ. 9: 1, 1899.

Type locality: "Mt. Ra'nier, Washington, altitude 2100 meters."

RANGE: Washington to Californ'a, in the mountains.

Specimens examined: Olympic Mountains, *Piper* 1993, 983; *Elmer* 1928; *Flett* 834, 97; Mount Rainier, *Piper* 1961, 1962, 1963, 1964; Mount Stuart, *Elmer* 1154, 1155; Blue Mountains, *Piper* 2555.

Zonal distribution: Arctic.

28. Poa idahoeusis Beal, Grasses N. Am. 2: 539, 1896.

Poa filifolia Vasey, Contr. Nat. Herb. 1: 271, 1893, not Schur, 1866.

Poa scabrifslia Heller, Bull. Torr. Club 24: 310. 1897.

Poa spillmani Piper, Erythea 7: 102, 1899.

Type locality: Hatwai Creek, Nez Perces County, Idaho.

RANGE: Washington and Idaho.

Specimens examined: Wenas, Griffiths & Cotton 94; Douglas County Spillman, May 27, 1896.

ZONAL DISTRIBUTION: Arid Transition.

 Poa capillarifolia Scribn, & Williams, U. S. Dept. Agr. Div. Agrost. Circ. 9: 1, 1899.

Type locality: Californ'a.

Range: Washington to California.

Specimens examined: Cleman Mountain, Henderson 2238; Ellensburg, Piper 2614, 2615; opposite Clarkston, Hunter 42.

ZONAL DISTRIBUTION: Arid Transition.

30. Poa cottoni Piper, Proc. Biol. Soc. Wash. 18: 146-1905.

Type locality: Rattlesnake Mountains, Yakima County, Washington.

Range: Eastern Washington and eastern Oregon.

Specimens examined: Rattlesnake Mountains, Cotton 557; Griffiths & Cotton 4, 20; Kahlotus, Cotton 1010.

Zonal distribution: Arid Transition.

31. Poa cusickii Vasev, Contr. Nat. Herb. 1: 271. 1893.

Type locality: Oregon. Collected by Cusick.

Range: Washington and Oregon.

Specimens examined: Cleman Mountain, Henderson 2246; Wenas, Griffiths & Cotton 94; Chelan Butte, Griffiths & Cotton 164, 172; Naches River, Henderson 2233.

ZONAL DISTRIBUTION: Arid Transition.

32. Poa lettermani Vasey, Contr. Nat. Herb. 1: 273, 1893.

Type Locality: Gray Peak, Colorado.

Range: Washington to Colorado.

Specimens examined: Mount Rainier, Piper 1968, 1969; Flett 267.

Zonal distribution: Aretic.

33. Poa suksdorfii (Beal) Vasev; Beal, Grasses N. Am. 2: 574, 1896.

Atropis suksdorfii Beal, loc. cit.

Type locality: Mount Adams, Washington. Collected by Suksdorf.

RANGE: Washington to Colorado!

Specimens examined: Mount Rainier, Allen 183, Piper 1965; Mount Adams, Flett 1399, Henderson 2227, Suksdorf 1116; Mount Stuart, Elmer 1147.

ZONAL DISTRIBUTION: Arctic.

Poa stenantha Trin, is reported in Hooker's Flora as collected on Mount Rainier by Tolmie. No recent collections made in Washington seem referable to this Alaskan species, though its occurrence would not be surprising.

Poa caesia Smith and Poa Nemoralis L. both appear in Suksdorf's list, but we have seen no specimens that can be so referred.

DISTICHLIS.

1. Distichlis spicata (L.) Greene, Bull. Cal. Acad. 2: 415, 1887.

Saltgrass.

Uniola spicata L. Sp. Fl. 1: 71, 1753.

Distichlis maritima Raf. Journ. Phys. 89: 104-1819.

Distichlis spicata laxa Vasey; Beal, Grasses N. Am. 2; 519, 1896.

Distichlis spicata stricta Scribn, Mem. Torr. Club 5: 51, 1894.

Poa borealis Hook, Fl. Bor. Am. 2: 245, 1840.

Brizopyrum boreale Presl, Rel. Haenk. 1: 280, 1830.

Type locality: "Habitat in Americae borealis maritimis."

Range: In saline soils throughout the United States.

Specimens examined: Ophir, Elmer 508; Olympics, Elmer 1667; Seattle, Piper 809; Tacoma, Flett 133; Coulee City, Lake & Hull 106; Piper 3911; Alkali Lake, Sandberg & Leiberg, July, 1863; Wilson Creek, Sandberg & Leiberg, July, 1893; Douglas County, Spillman, May, 1896; State of Washington, Sandberg & Leiberg 463; Parker, A. D. Dunn; Kittitas County, Vascy 58; Lake Omack, Griffiths & Cotton 372.

Zonal distribution: Upper Sonoran to Transition.

FESTUCA. FESCUE.

Annuals; stamen usually one.

Spikelets loosely 1 to 5, rarely 6-flowered.

Branches of the short panicle divergent.

Spikelets more or less pulæscent.

Lemma glabrous; glumes hirsute 3. F. confusa. Lemma hirsute, glumes glabrous 4. F. criotepis.

Branches of the clongated panicle erect or appressed.

First glume $\frac{1}{3}$ to $\frac{1}{2}$ as long as the second; lemma ciliate... 5. F. megalura.

First glume $\frac{2}{3}$ to $\frac{3}{4}$ as long as the second; lemma not ciliate... 6. F. bromoides.

Perennials; stamens three.

Plants with narrow involute leaves, usually tufted.

Blades at length deciduous from the persisting sheaths 11. F. hallii. Blades not deciduous from the sheaths. Plant producing short rootstocks or stolons..... Plant not producing rootstocks or stolons. Awns longer than the lemma; ovary hispidulous at 8. F. occidentalis. Awns not longer than the lemma; ovary glabrous. Leaves closely involute, firm; awns usually well developed..... 9. F. orina. Leaves closely involute; awns very short, or 10. F. riridula. Plants with flat broad leaves, not densely tufted. Lemma membranous, keeled below.

1. Festuca octoflora Walt. Fl. Car. 81 1788.

Festuca tenella Willd, Sp. Pl. 1:419-1797.

Type locality: Carolina.

Range: Throughout most of temperate North America.

Specimens examined: Douglas County, Spillman, May 27, 1896; Wilson Creek, Sandberg & Leiberg, July, 1893; Wenache, Whited, July, 1896; Columbia River, 46° to 49°, Lyall in 1860; North Yakima, Henderson 2193; Prosser, Leckenby, May 2, 1898; Sunnyside, Cotton 355; Rattlesnake Mountains, Cotton 410. Pasco, Piper, May 26, 1899; Spokane, Leckenby, June 2, 1898; Marshall Junction, Piper 2279; Steptoe, Vascy, May, 1900; without locality, Vascy in 1889; Spokane, Kreager 3; Coulee City, Piper 3914.

Zonal distribution: Upper Sonoran and Transition.

2. Festuca pacifica Piper, Contr. Nat. Herb. 10: 12, 1906.

Type locality: Pullman, Washington.

Range: British Columbia to California and Arizona.

Specimens examined: Klickitat County, Suksdorf 1139; Olympia, Henderson 2176; Wenache, Whited 1228; North Yakima, Henderson 2174; Rattlesnake Mountains, Cotton 472; Pasco, Leckenby, May, 1898; Rock Lake, Sandberg & Leiberg, May, 1893; between Coulee City and Waterville, Spillman, May, 1896; Steptoe, Vascy in 1889; Pullman, Lake & Hull 108; Piper 1754; Almota, Piper 1925; Coulee City, Piper 3913.

Zonal distribution: Upper Sonoran and Arid Transition.

This species has commonly been mistaken for the rare Californian F, microstachys Nutt

3. Festuca confusa Piper, Contr. Nat. Herb. 10: 13, 1906.

Type locality: West Klickitat County, Washington.

Range: Washington to California.

Specimens examined: West Klickitat County, Suksdorf 1140.

ZONAL DISTRIBUTION: Arid Transition.

4. Festuca eriolepis Desv. in Gav. Fl. Chil. 6: 428, 1853.

Festuca arida Elmer, Bot. Gaz. 36: 52, 1903.

Type locality: Chile.

RANGE: Washington to Nevada and California, Chile.

Specimens examined: North Yakima, Henderson 2196; Coulee City, Piper 3915.

Zonal distribution: Upper Sonoran and Arid Transition.

5. Festuca megalura Nutt, Journ. Acad. Phila, n. ser. 1: 188, 1847.

Festuca myuros hirsuta Asch. & Graebn. Syn. Mitteleur. Fl. 2: 558, 1901.

Vulpia myuros hirsuta Hack, Cat. Gram. Port. 24, 1888.

Type locality: "Santa Barbara, Upper California." Collected by Nuttall.

RANGE: Washington to California. Argentina. Chile. Portugal.

Specimens examined: Challam County Elmer, 1914; East Sound, Henderson 2175; Seattle, Piper; Spokane, Leckenby, June, 1898; Pullman, Piper 3062; Steptoe, Vasey 18, 20; Waitsburg, Horner R 231.

ZONAL DISTRIBUTION: Transition.

6. Festuca bromoides L. Sp. Pl. 1: 75, 1753.

Type locality: "Habitat in Auglia, Gallia."

Range: British Columbia to California. Introduced from Europe.

Specimens examined: Seattle, Piper 1137; Tacoma, Flett; Stuart Island, Laurence 62, 136; Port Crescent, Laurence 257.

Festuca rubra L. Sp. Pl. 1: 74, 1753.

Red fescue.

Festuca vallicola Rydberg, Mem. N. Y. Bot. Gard. 1: 57, 1900.

Type locality: European.

RANGE: Subarctic regions, southward mainly along the seacoasts to California and Virginia, and in the mountains to Colorado. Europe. Asia.

Specimens examined: Near Tacoma, Flett 40, Piper 2621; Spokane, Wilkes Expedition; Piper 2594; Steptoe, Vasey 39; Pullman, Piper 1930, 3023; Horner 909; Clallam County, Elmer 1912, 1913; Fairhaven, Piper 2607; Port Angeles, Piper 2309; Westport, Henderson 2173; Kitsap County, Piper 848; Seattle, Piper, July, 1891; Smith, May 29, 1889.

ZONAL DISTRIBUTION: Transition.

7a. Festuca rubra megastachys Gaud. Fl. Helv. 1: 287, 1828.

Festuca oregona Vasey, Bot. Gaz. 2: 126, 1877.

Type locality: Switzerland.

RANGE: Alaska to Oregon and New Jersey. Europe.

Specimens examined: Klickitat County, Suksdorf 1140; Klickitat River, Suksdorf 1147.

Festuca rubra multiflora (Hoffm.) Asch. & Graebn. Syn. Mitteleur. Fl. 2: 499, 1900. Festuca multiflora Hoffm. Deutschl. Fl. ed. 2, 11: 50, 1800.

Type locality: Germany.

Range: Washington to Wyoming and California. Maine. Europe.

Specimens examined: Spangle, Suksdorf 119.

7c. Festuca rubra kitaibeliana (Schultes) Piper, Contr. Nat. Herb. 10: 23, 1906.

Festuca kitaibeliana Schultes, Mant. 2: 398, 1824.

Festuca barbata Schrank, Prim. Fl. Salisb. 46, 1792, not L. 1759.

Browns secundus Presl, Rel. Hacnk. 1:280, 1830.

Festuca rubra secunda Scribn, Ann. Rep. Mo. Bot. Gard. 10: 39, 1899.

Festuca rubra pubescens Vasey: Beal, Grasses N. Am. 2: 607-1896.

Type locality: "In Hungaria."

RANGE: Alaska to Oregon, Wyoming, and New England. Europe. Asia.

Specimens examined: Coupeville, Gardner 332; west Klickitat County, Suksdorf 167.

ZONAL DISTRIBUTION: Transition.

This subspecies is easily recognizable by its pubescent lemmas.

8. Festuca occidentalis Hook, Fl. Bor, Am. 2: 249, 1840.

Festuca ovina polyphylla Vasey; Beal, Grasses N. Am. 2: 597, 1896.

Type locality: "Plains and elevated grounds of the Columbia near the sea." Collected by Douglas.

RANGE: Idaho and British Columbia to California.

Specimens examined: Challain County, Elmer 1915, 1917; Nisqually Valley, Allen 50; Seattle, Smith, May 20, 1889, Piper 834; Lake Chelan, Vasey 65; Skamania County, Flett 1385; Spokane, Piper, July 2, 1896; Kamiak Butte, Piper 3085; Blue Mountains, Piper

2556, Horner 500; Lake & Hull 80; without locality, Sandberg & Leiberg 482; Fort Vancouver (ex Hooker); Stehekin, Griffiths & Cotton 188.

ZONAL DISTRIBUTION: Transition.

Our plant has been referred to Festuca ovina heterophylla of Europe, which, however, is quite different.

9a. Festuca ovina ingrata Hack.; Beal, Grasses N. Am. 2: 598, 1896.

BLUE BUNCHGRASS.

Festuca ovina oregona Hack.; Beal, op. cit. 599.

Festuca raseyana Hack.; Beal, op. cit. 601.

Festuca ovina columbiana Beal, op. cit. 599.

Type locality: Oregon. Collected by Howell.

RANGE: British Columbia and Alberta to California and Arizona.

Specimens examined: Falcon Valley, Suksdorf 1142; Cascade Mountains, Henderson 2192; Blue Mountains, Lake & Hull 85, 76; Piper 2410; Ellensburg, Whited 640; Ophir, Elmer 514; Pullman, Piper 1752; Elmer 826; Rock Creek, Piper 2610; Kamiak Butte, Piper 3085; Steptoe, Vasey, in 1889; Clarks Springs, Kreager 68; Spokane, Kreager 41.

ZONAL DISTRIBUTION: Arid Transition.

9b. Festuca ovina supina (Schur) Hack. Mon. Fest. 88, 1882.

Festuca supina Schur, Enum. Pl. Transs. 784, 1866.

Type locality: Transylvania.

RANGE: Arctic regions, southward in the mountains to California, Arizona, and New Hampshire. Europe.

Specimens examined: Olympic Mountains, Piper 1985; Elmer 1911, Flett 91, 117; Mount Baker, Flett 868; Mount Rainier, Allen 181; Piper 1960, 1958; Smith 958; Mount Adams, Flett 1400; Klickitat River, Flett 1362.

Zonal distribution: Arctic.

This subspecies has commonly been confused with the flaccid-leaved F, ovina brachy-phylla (Schultes) Piper (F, brevifolia | R, Br.)

Festuca viridula Vasey, U. S. Dept. Agr. Div. Bot. Bull. 13: t. 93, 1893.

Festuca gracillima Hook, err. det. Thurb, in Wats, Bot, Cal. 2: 318, 1880.

Type locality: "California."

Range: Idaho and Washington to California.

Specimens examined: Skagit Pass, Lake & Hull 116, 121; Peshastin, Sandberg & Leiberg 693; Mount Rainier, Piper 1959; Mount Adams, Flett 1397; Henderson 2200; Suksdorf 449, Atanum River, Henderson 2191; Mount Rainier, Allen 180; Mount Carlton, Kreagar 276, 241; Cascade Mountains, Vasey 407.

Zonal distribution: Hudsonian.

11. Festuca hallii (Vasey) Piper, Contr. Nat. Herb. 10: 31, 1906.

Melica hallii Vasev, Bot. Gaz. 6: 296, 1881.

Festuca scabrella major Vasey, Contr. Nat. Herb. 1: 278, 1893.

Type locality: Rocky Mountains between latitudes 39° and 41°.

RANGE: Washington to Saskatchewan and Colorado.

Specimens examined: Douglas County, Spillman, May 27, 1896; Wenache Mountains, Elmer 460; without locality, Vascy 38; Steptoe, Vascy 5; Wenache Region, Vascy 441; Spokane, Suksdorf in 1884; Chelan Butte, Griffiths & Cotton 165; Colville Reservation, Griffiths & Cotton 353.

ZONAL DISTRIBUTION: Arid Transition.

12. Festuca elatior L. Sp. Pl. 1: 75, 1753.

Meadow Fescue.

Type locality: "Habitat in Europae pratis fertilissimis."

Specimens examined: Scattle, Smith 1986; Naches River, Henderson 2234; Pullman, Piper 2020; Colfax, Vascy 46.

13. Festuca subuliflora Scribn, in Macoun, Cat. Can. Pl. 2: 396, 1890.

Festuca ambiqua Vasey, Contr. Nat. Herb. 1: 277, 1893, not Le Gall. 1852.

Festuca denticulata Beal, Grasses N. Am. 2: 589, 1896.

Type locality: Goldstream, Vancouver Island.

Range: Washington to California in the coast region.

Specimens examined; San Juan County, Henderson 2197; Scattle, Piper in 1889; Olympia, Henderson 2179; Port Crescent, Lawrence 278.

Zonal distribution: Humid Transition.

14. Festuca subulata Trin. in Bong. Mem. Acad. St. Petersb. V1. 2: 173, 1832.

Festuca jonesii Vasev, Contr. Nat. Herb. 1: 278, 1893.

Type locality: Sitka.

Range: Alaska to Utah and California.

Specimens examined: Olympic Mountains, Elmer 1916, 1918; Coupeville, Gardner 338; Seattle, Piper 837, 957, 938; Smith, June, 1890; Nisqually Valley, Allen 39; Piper 1981; Harmony, G. Hofer, July 26, 1901; without locality, Sandberg & Leiberg 504; Blue Mountains, Piper, July 16, 1896; Lake & Hull 81; Horner 506; Clarks Springs, Kreager 38; Chelan County, Vascy 5.

Zonal distribution: Humid Transition to Hudsonian.

PANICULARIA.

Spikelets linear, 10 to 20 mm. long. Flowering glumes scabrid only on the nerves; spikelets 10 to 17 mm. Flowering glumes scabrid all over the back; spikelets 16 to 20 mm. Spikelets ovate or oblong, 2 to 8 mm. long. Flowering glume with 7 prominent nerves. Spikelets 3 to 4 mm. long 4. P. nervata. 1. Panicularia borealis Nash, Bull. Torr. Club 24: 348, 1897.

Glyceria borealis Piper, Fl. Palouse Reg. 27, 1901.

Type locality: Van Buren, Maine,

Range: New York to California and northward.

Specimens examined: Valley of Nisqually, Allen 441; Seattle, Piper 855; Ellensburg, Whited, June 29, 1897; North Palouse River, Vasey, July 1, 1900; Pullman, Piper 1748; without locality, Sandberg & Leiberg 701; Vasey 57, 517.

Zonal distribution: Transition.

2. Panicularia fluitans (L.) Kuntze, Rev. Gen. Pl. 2: 782. 1891.

Festuca fluitans L. Sp. Pl. 1: 75, 1753.

Glyceria fluitans R. Br. Prod. Fl. Nov. Holl. 1: 179, 1810.

Panicularia davyi Merrill, Rhodora 4: 145, 1902.

Glyceria leptostachya Buckl. Proc. Acad. Phila. 1862: 95, 1862.

Type locality: European.

Range: British Columbia to Newfoundland, southward to New Jersey, Kentucky, and California.

Specimens examined: Near Montesano, Heller 3982; Quinault River, Lamb 1400; Vancouver, Piper 4905.

Zonal distribution: Humid Transition.

The Heller and the Lamb specimens agree with the types Panicularia davyi and Glyceria leptostachya, characterized by having the lemmas puberulent-scabrous and the glumes small and thin. These characters seem to be too variable, however, to accept as specific.

3. Panicularia pauciflora (Presl) Kuntze, Rev. Gen. Pl. 2: 783. 1891.

Glyceria pauciflora Presl, Rel. Haenk. 1:257, 1830.

Panicularia flaccida Elmer, Bot. Gaz. 36: 55. 1903.

Panicularia multifelia Elmer, Bot. Gaz. 36: 54.

Type locality: "In sinu Nootka."

RANGE: British Columbia to California, eastward to Montana and Colorado.

Specimens examined: Olympic Mountains, Elmer 1939, 1942, 1941; Cascade Mountains, Lyall, in August, 1860; Scattle, Piper 810; Valley of Nisqually, Allen 49; Ellensburg, Whited 686; Vasey 363; North Yakima, Watt, August, 1895; West Klickitat County, Suksdorf 1137; North Palouse River, Vasey in 1901; near Colfax, Vasey 58; without locality, Sandberg & Leiberg 604, 507; Cow Creek, Griffiths & Cotton 506; Clallam County, Elmer 1940; Rock Lake, Lake & Hull 162.

Zonal distribution: Transition.

The original description of *Glyceria pauciflora* does not apply well to our plant, but the name is here used as commonly applied. An examination of the type will doubtless show it to be different, perhaps not of this genus.

4. Panicularia nervata (Willd.) Kuntze, Rev. Gen. Pl. 1: 783, 1891.

Poa nervata Willd. Sp. Pl. 1: 389, 1797.

Glyceria nervata Trin. Mem. Acad. St. Petersb. VI. 1: 365, 1830.

Type locality: "Habitat in America boreali."

RANGE: British Columbia to Labrador, southward to California, Mexico, and Florida.

Specimens examined: Ellensburg, Whited 481 and July, 1897; North Yakima, Leckenby, June 1, 1898; Wilson Creek, Lake & Hull 95; Spokane County, Suksdorf 105; Spokane, Wilkes Expedition; between Colfax and Almota, Brodie; Union Flat, Piper, July 9, 1901; Shotgun Canyon, Palouse River, Vascy, July 1, 1900; eastern Washington, Lake & Hull 373; Davis' ranch, Kreager 224; Kittitas County, Vascy 126.

Zonal distribution: Transition.

Specimens collected by Tweedy and Brandegee and referred by Professor Scribner to Glyceria pallida a are probably a pale form of P, nervato. As we have not been able to find the specimens this is purely surmise.

4a. Panicularia nervata elata (Nash).

Panicularia data Nash, Mem. N. Y. Bot. Gard. 1: 54, 1900.

Glyceria latifolia Cotton, Bull. Torr. Club 29: 573. 1902.

Type locality: "Sweet Grass Cañon, Crazy Mountains," Montana.

RANGE: British Columbia, Washington, Idaho.

Specimens examined: Cascade Mountains, 46°, Lyall; Scattle, Smith 942; Stampede Pass, Henderson, October 4, 1892; west Klickitat County, Snksdorf 1136; Railroad Creek, Elmer 721; Mount Carlton, Kreager 274.

Zonal distribution: Transition, especially Humid.

5. Panicularia americana (Torr.) MacMillan, Met. Minn. 81, 1892.

Poa aquatica americana Torr. Fl. U. S. 1: 108, 1824.

Glyceria grandis Wats. in Gray, Man. ed. 6, 667, 1890.

Type locality: Deerfield, Massachusetts.

RANGE: New Brunswick to British Columbia, south to Tennessee and Nevada.

Specimens examined: Sumas Prairie, Lyall in 1858; Montesano, Heller 4071; Vancouver, Howell 362; Loomis, Elmer 628; Alma, Elmer 534; Ellensburg, Piper 2577; Waitsburg, Horner 229; Lake Chelan, Vasey 523; Cow Creek, Griffiths & Cotton 507.

Zonal distribution: Transition.

PUCCINELLIA.

Panicle narrow, its base usually inclosed in the upper sheath, erect or the Panicle well exserted, the branches becoming divaricate or reflexed. 2. P. distans. 1. Puccinellia angustata (R. Br.) Nash, Bull. Torr. Club 22: 512, 1895. Poa angustata R. Br. App. Parry's Voyage 287, 1824. Glyceria pumila Vasey, Bull. Torr. Club 15: 48, 1888. Poa nutkaensis Presl. Rel. Haenk. 1: 272, 1830. Type locality: Melville Island. Range: Seacoasts, arctic regions south to Oregon and Maine. Specimens examined: Whatcom County, Suksdorf 1027. 2. Puccinellia distans (L.) Parl. Fl. Ital. 1: 367, 1848. Poa distans L. Mant. 1: 32, 1767. Type locality: "Habitat in Austria." Range: Seacoasts; subarctic regions south to Oregon and New Jersey. Europe. Specimens examined: Yakima City, Piper 2590; Wenas, Griffiths & Cotton 102, 73; Seattle, Piper 1451; Challam County, Elmer 1910. None of the above specimens are typical P. distans, but in the present confusion of the genus they are tentatively so referred. BROMUS. Brome grass. Spikelets strongly flattened. Awns less than 7 mm, long. Leaves linear, somewhat involute, pilose..................... 1. B. subrelutinus Leaves linear-lanceolate, flat, not pilose..... 2. B. marginatus. Awns more than 7 mm, long. Panicle very broad, the longest rays 15 to 25 cm. long, drooping 3. B. sitchensis. Panicle large but the rays not drooping. 4. B. carinatus. Spikelets subterete, not strongly flattened. Native perennials mostly with loose and drooping panicles; lemma usually more or less long-hairy. Rays of the panicle not drooping. Panicle branches spreading, stiff; lemma scabrous or short-pubescent over the back..... 5. B. orcuttianus. Panicle short and erect; lemma pubescent on the sides... 6. B. suksdorfii. Rays of the panicle drooping. Plants without rootstocks. Lemma evenly pubescent. Introduced annuals or biennials. Awns much longer than the body of the narrow lemma. Lemma not pubescent. Awns 35 to 45 mm. long. 11. B. maximus. Awns less than 30 mm. long.

Panicle a dense head-like cluster 12. B. rubens.
Panicle loose 13. B. sterilis.

Awns shorter than or scarcely exceeding the broad lemma.

Awn twisted and divarieate. 17. B. japonicus.

Awn straight.

Margins of the lemma inrolled in fruit..... 18. B. seculinus.

Margins of the lemma not inrolled in fruit. 19. B. racemosus.

Bromus subvelutinus Shear, U. S. Dept. Agr. Div. Agrost. Bull. 23: 52, 1900.

Type locality; Reno, Nevada.

Range: Washington to Nevada and California.

Specimens examined: North Yakima, Hunter 596.

Zonal distribution: Upper Sonoran.

2. Bromus marginatus Nees; Steud. Syn. Pl. Glum. 1: 322. 1854.

Type locality: "Douglas legit ad fluy, Columbia, St. Louis." This is some undetermined point on the Columbia River.

RANGE: British Columbia to Arizona and Colorado.

Specimens examined: Fairhaven, Piper 2607: Whidby Island, Gardner 329; Wenache Lake, Vascy 103; Wenache, Whited 4: Wenache Mountains, Whited 1359; Skamania County, Flett 1391; Klickitat River, Flett 1391; Ellensburg, Whited 440: Union Gap, Yakima River, Cotton 448; Tieton River, Cotton 484; Blue Mountains, Piper, 2565, July 15, 1896; Salmon River, Horner 511; Cold Creek, Cotton 401; Steptoe, Vascy in 1901; Walla Walla, Shear 1593; Klickitat County, Suksdorf 174; Yakima, Leekenby in 1898.

Zonal distribution: Transition mostly.

This species has commonly but erroneously been called B. breviaristatus Hook.

2a. Bromus marginatus seminudus Shear, U. S. Dept. Agr. Div. Agrost. Bull. 23: 55, 1900.

Type locality: "On open mountain side 5 miles above Wallowa Lake, Oregon." Collected by Shear.

RANGE: Washington to Montana, south to California and Utah.

Specimens examined: Olympic Mountains, Piper 1990; Elmer 1956; Montesano, Heller 3979.

ZONAL DISTRIBUTION: Transition and Canadian.

2b. Bromus marginatus Iatior Shear, U. S. Dept, Agr. Div. Agrost. Bull. 23: 55, 1900.

Type locality: "Walla Walla, Washington." Collected by Shear.

RANGE: Washington to Wyoming, south to New Mexico and Arizona.

Specimens examined: Olympic Mountains, Elmer 1958; Ellensburg, Piper, July 9, 1897; Yakima, Leckenby, June 20, 1898; Steptoe, Vasey 23; Pullman, Piper 1738; Walla Walla, Shear 1615.

ZONAL DISTRIBUTION: Arid Transition.

3. Bromus sitchensis Trin. in Bong. Mem. Acad. St. Petersb. VI. 2: 173, 1832.

Type locality: Sitka.

Range: Washington to Alaska along the coast.

Specimens examined: Olympic Mountains, J. M. Grant, in 1889; Seattle, Piper 3014, 3013; Puyallup, Piper, September 2, 1899; Cascade Mountains, Lyall, in 1859.

Zonal distribution: Humid Transition.

4. Bromus carinatus Hook. & Arn. Bot. Beech. Vov. 403, 1841.

Bromus hookerianus minor Scribner: Beal, Grasses N. Am. 2: 614, 1896.

Type locality: California.

RANGE: California to Washington and Idaho.

Specimens examined: Fairhaven, Piper 260; Seattle, Piper, May 30, 1890, 818 in part; Tacoma, Leckenby, in 1898; Blue Mountains, Lake & Hull 65; Walla Walla, Shear 1579; Almota, Piper 3561; Wawawai, Piper 3552; Horner 915; Walla Walla, Shear 1579; Tacoma, Leckenby in 1898.

Zonal distribution: Upper Sonoran and Transition.

4a. Bromus carinatus hookerianus (Thurb.) Shear, U. S. Dept. Agr. Bull. Agrost. 23: 60, 1900.

Bromus hookerianus Thurb, in Torr. Bot. Wilkes Exped. 493, 1874, not Wiegel, 1772.

Ceratochloa grandiflora Hook, Fl. Bor, Am. 2: 253, 1840.

Bromus virens Buckl. Proc. Acad. Phila. 1862; 98, 1862, not Necs, 1829.

Type locality: "Plains of the Columbia", according to the original description. "Upland dry soils on the Multoonah [i. e., the Willamette], 1826", according to ticket on type specimen, collected by Douglas.

RANGE: California to Washington and Idaho.

Specimens examined: Scattle, Piper 818; Lyle, F. W. Magan; Klickitat County, Suksdorf 16.

ZONAL DISTRIBUTION: Humid Transition.

5. Bromus orcuttianus Vasey, Bot. Gaz. 10: 223, 1885.

Type locality: "Near San Diego", California.

RANGE: South California to Washington.

Specimens examined: Klickitat River, Suksdorf 172; Mount Adams, Suksdorf 120.

6. Bromus suksdorfii Vasey, Bot. Gaz. 10: 223, 1885.

Type locality: Mount Adams, Washington. Collected by Suksdorf.

Range: Oregon and Washington.

Specimens examined: Mount Adams, Suksdorf 620, 71.

Zonal distribution: Hudsonian.

7. Bromus laevipes Shear, U. S. Dept. Agr. Div. Agrost. Bull. 23: 45, 1900.

Type locality: "On the Columbia River, west Klickitat County, Washington.

Range: California to Washington.

Specimens examined: West Klickitat County, Suksdorf 178.

8. Bromus pacificus Shear, U. S. Dept. Agr. Div. Agrost. Bull. 23: 38, 1900.

Browns magnificus Elmer, Bot. Gaz. 36: 53, 1903.

Type locality: "In moist thickets near the seashore south of Seaside, Oregon."

RANGE: Oregon to Alaska along the coast.

Specimens examined: Snoqualmic Falls, Piper 3803; Clallam County, Elmer 1957; Granville, Congrel 343.

Zonal distribution: Humid Transition.

9. Bromus eximius (Shear).

Browns vulgaris eximins Shear, U. S. Dept. Agr. Div. Agrost. Bull. 23: 44, 1900.

Bromus ediatus glaberrimus Suksdorf, Deutsch. Bot. Monatss. 19: 93, 1901.

Type locality: "Moist, open mountain side 4 miles above Wallowa Lake, Oregon." Collected by Sheat.

Range: Oregon and Washington.

Specimens examined: Upper Atanum River, Henderson, August 2, 1892; Skamania County, Suksdorf 2335.

9a. Bromus eximius robustus (Shear).

Bromus vulgaris robustus Shear, U. S. Dept, Agr. Div. Agrost. Bull. 23: 41, 1900.

Type locality: "In moist thickets near the seashore, Seaside, Oregon." Collected by Scribner and Shear.

Range: Oregon to British Columbia and Idaho.

Specimens examined: Seattle, Prper 946; Montesano, Heller 3999, Mount Adams, Suksdorf 176.

9b. Bromus eximius umbraticus nom. nov.

Bromus vulgaris Shear, U. S. Dept. Agr. Div. Agrost. Bull. 23: 43, 1900, not Bromus purgans vulgaris Hook. Fl. Bor. Am. 2: 252, 1840, nor B. secalinus vulgaris Koch, Syn. 819, 1837.

Type Locality: Collected in the upper Nisqually Valley, Washington, by Allen (no. 41). Range: California to British Columbia, east to Montana and Wyoming.

Specimens examined: Olympic Mountains, Elmer 1961, 1960; Seattle, Piper 945, 946; Tacoma, Flett 74; Nisqually Valley, Allen 41; Blue Mountains, Piper 2563; Lake & Hull 79; Horner 513, 514; Clarks Springs, Kreager 57; Tacoma, Leckenby: Klickitat River, Suksdorf 177; west Klickitat County, Suksdorf 175.

Zonal distribution: Transition.

This species was formerly confused with $B.\ \epsilon iliatus\ {\rm L.},$ which is not known from within our limits.

Bromus richardsonii pallidus (Hook.) Shear, U. S. Dept. Agr. Div. Agrost. Bull. 23: 34, 1900

Bromus purgans pallidus Hook, Fl. Bor, Am. 2: 252, 1840.

Type locality: "Saskatchewan to the Rocky Mountains."

RANGE: Nebraska to Nevada and northward to the Arctic.

Specimens examined: Olympic Mountains, Elmer; Snoqualmie Falls, Piper 3803; White River, Vascy 378; Loomis, Elmer 559.

Zonal distribution: Canadian or Hudsonian.

11. Bromus maximus Desf. Fl. Atl. 1: 95, 1800.

Type locality: "Hab. in arvis," Europe.

Specimens examined: Spokane, Leckenby, June 2, 1898.

11a. Bromus maximus gussoni Parl. Fl. Ital. 1: 407, 1848.

Bromus gussoni Parl. Rar. Pl. Sic. 2: 8, 1840.

Type locality: Sicily.

Specimens examined: Tacoma, Piper, July, 1897; Leckenby in 1898.

12. Bromus rubens L. Cent. Pl. 1: 5, 1755.

Type locality: European.

Specimens examined: Bingen, Suksdorf 5077.

13. Bromus sterilis L. Sp. Pl. 1: 77, 1753.

Type locality: European.

Specimens examined: Pullman, Piper 2554; Stuart Island, Lawrence 169; Walla Walla, Shear 1616.

14. Bromus tectorum L. Sp. Pl. 1: 77, 1753.

Type locality: European.

Specimens examined: Spokane, Piper, July, 1896; Pasco, Elmer 1047; Pullman, Piper, July 4, 1899; without locality, Sandberg & Leiberg 191; Wallula, Cotton 1066.

15. Bromus brizaeformis Fisch. & Mey. Ind. Sem. Hort. Petrop. 3: 30, 1837.

Type locality, "In montibus Tafusch."

Specimens examined: Union Gap, Yakima River, Cotton 430; Waitsburg, Horner 563; Steptoe, Vasey 53; Almota, Piper 1739; Wawawai, Piper 1739, Pullman, Piper 1739; Elmer 876.

16. Bromus hordeaceus L. Sp. Pl. 1: 77. 1753.

Bromus mollis L. Sp. Pl. ed. 2, 1; 112, 1762.

Type locality. European.

Specimens examined. Scattle, Piper 796; Steptoe, Vasey 22; Almota, Piper 3562; Pullman, Elmer 878 in part; Piper, May, 1894, June 21, 1901; Prosser, Cotton 1110; Walla Walla, Shear 1585; Tacoma, Leckenby in 1898.

16a. Bromus hordeaceus glabrescens (Coss.) Shear, U. S. Dept. Agr. Div. Agrost. Bull. 23: 20, 1900.

Bromus mollis glabrescens Coss. Fl. Deser, Par. 654, 1845,

Type locality: Paris, France.

Specimens examined: Cold Creek, Cotton 495; Kittitas County, Vascy 74; Pullman Elmer 878 in part.

17. Bromus japonicus Thunb. Fl. Jap. 52, t. 11. 1784.

Bromus patulus Mert. & Koch in Röhl, Deutschl, Fl. 1: 685, 1823.

Type locality: Japan.

Specimens examined: Prosser, Cotton 1111.

18. Bromus secalinus L. Sp. Pl. 1: 76, 1753.

CHEAT.

Type locality: "Habitat in Europae agris secalinis arenosis."

Specimens examined: Seattle, Piper 1987; Fort Colville, Lyull, August, 1860; Steptoe, Vascy 45, 48; Waitsburg, Horner 521.

Bromus racemosus commutatus (Schrad.) Hook, f. Stud. Fl. Brit. Isl. 451, 1870.
 Bromus commutatus Schrad. Fl. Germ. 353, 1806.

Type locality: Germany.

Specimens examined: Challam County, Elmer 1959; Montesano, Heller 3983; Scattle Piper 944; Pullman, Elmer 886; Piper 3926.

SPARTINA.

1. Spartina pectinata Link, Jahrb. 13: 92, 1820.

Type locality: "Aus Nordamerika."

Range: Nova Scotia to Washington, south to New Jersey, Indian Territory, and Oregon. Specimens examined: Pend Oreille River, Lyoll in 1861, Almota, Piper 2372; Kalispel Lake, Kreager 339

Zonal distribution: Upper Sonoran to Transition.

This species has commonly been known as Spartina cynosuroides (1.) Michx., but the type of Dactylis cynosuroides is the species known as Spartina polystachya Michx.

2. Spartina gracilis Trin. Mem. Acad. St. Petersb. VI. 62: 110, 1840.

Type locality: "Amer. Bor."

Range: British Columbia to California, castward to North Dakota and Kansas.

Specimens examined: Loomis, Elmer 891, Coulee City, Henderson 2248, Piper 3910; Wilson Creek, Sandberg & Leiberg 248; Silver Lake, Henderson 2248; without locality, Brandegee 1152; Okanogan, Griffiths & Cotton 266; Grand Coulee, Griffiths & Cotton 450; Condons Ferry, Griffiths & Cotton 418.

ZONAL DISTRIBUTION: Upper Sonoran.

BECKMANNIA.

1. Beckmannia erucaeformis (L.) Host. Gram. Austr. 3: 5. 1805.

Phalaris erncaeformis L. Sp. Pl. 1: 55, 1753.

Type locality: "Habitat in Siberia, Russia, Europa australi."

RANGE: Ontario to British Columbia, south to Iowa, Colorado, and California.

Specimens examined: Loomis, Elmer 587; Toppenish, Henderson, May, 1892; Pullman, Piper 1750; Union Flat, Whitman County, Lake & Hull 109; Steptoe, Vascy 62, Ellensburg, Vascy 495; Cow Creek, Griffiths & Cotton 519.

Zonal distribution: Arid Transition.

29418—06 м——10

CAPRIOLA.

1. Capriola dactylon (L.) Kuntze, Rev. Gen. Pl. 2: 764, 1891. Bermuda grass.

Panicum daetylon L. Sp. Pl. 1: 58. 1753.

Cynodon dactylon Pers. Syn. 1: 85, 1805.

Type locality: "Hab. in Europa australi."

TYPE LOCALITY: "Hab, in Europa austran."

Specimens examined: North Yakima, Leckenby, August, 1897.

SCRIBNERIA.

1. Scribneria bolanderi (Thurb.) Hackel, Bot. Gaz. 11: 105. 1886.

Lepturus bolanderi Thurb. Proc. Am. Acad. 7: 401, 1868.

Type Locality: "Dry gravelly soil, Russian River Valley, California." Collected by Bolander.

Range: Washington to California.

Specimens examined: Near Major Creek, Suksdorf 913.

ZONAL DISTRIBUTION: Arid Transition.

LOLIUM.

1. Lolium temulentum L. Sp. Pl. 1: 83, 1753.

Type locality: "Habitat in Europae agris inter Hordeum, Linum."

Specimens examined: Seattle, Smith 794.

2. Lolium perenne L. Sp. Pl. 1: 83, 1753. Perennial ryegrass.

Type locality: "Habitat in Europa ad agrorum versuras solo fertili."

Specimens examined: Seattle, Smith 786; Montesano, Heller 3981.

AGROPYRON. WHEAT GRASS.

Plants densely tufted, seldom producing stolons.

Glumes awnless.

Spikelets flattened, somewhat remote......................... 1. A. spicatum.

Spikelets subterete, close.

Lemmas long-awned. 2. A. richardsonii.

Lemmas awnless, or very short-awned.

Spikes slender, 5 to 20 cm. long; lower glume 5-nerved 3. A. tenerum.

Spikes short, 2 to 7 cm. long; lower glume 3-nerved . 4. A. biflorum.

Glumes awned.

 Λ wns long; glumes subulate.

Spike dense; herbage pubescent 6. A. saxicola.

Spike loose; herbage glabrous. 7. A. flexuosum.

Plants not tufted, producing abundant stolons.

Lemma hairy.

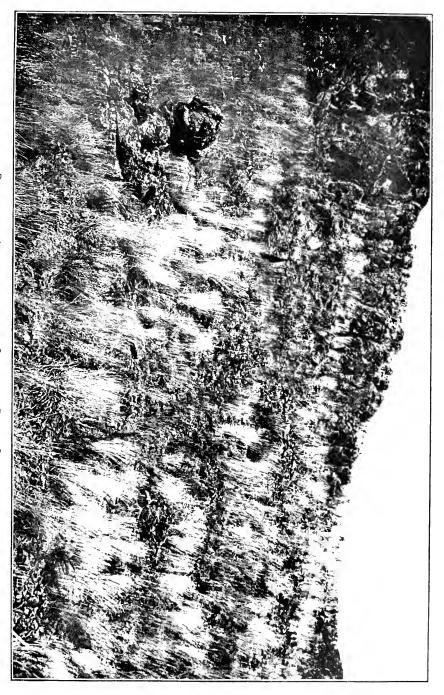

Spike loose, elongate; lemmas puberulent 9. A. lanccolatum.

Lemma not hairy, usually glabrous.

Agropyron spicatum (Pursh) Scribn, & Smith, U. S. Dept. Agr. Div. Agrost. Bull.
 4: 33, 1897.
 Wheat bunchgrass. Plate XIX.

Festuca spicata Pursh, Fl. 1: 83, 1814.

Agropyron divergens Nees in Steud. Syn. Plant. Glum. 1: 347. 1854.

Type Locality: Type collected by Lewis June 10, 1806, then at "Camp Chopunnish," opposite Kamiah, Idaho.

Range: Washington and Montana to Colorado.

Specimens examined: Wenache, Whited, 1147; Ellensburg, Whited 650; Yakima, Henderson 2140; Skamania County, Flett 1383; Tieton River, Cotton 451; Steptoe, Vasey 36; Pullman, Piper 1760; Blue Mountains, Sandberg & Leiberg 583; Lake & Hull 77; Horner 519, 515; Piper 2562; Almota, Piper 1753; Wawawai, Elmer 750; Piper 1911, 3001, 3954, 3960, 3525.

Zonal distribution: Arid Transition and Upper Sonoran.

For illustration of a bunchgrass prairie see Plate XI, facing page 48.

Agropyron spicatum inerme (Scribn. & Smith) Heller, Cat. N. A. Pl. ed. 2, 3, 1900.
 Agropyron divergens inerme Scribn. & Smith, U. S. Dept. Agr. Div. Agrost. Bull. 4: 27, 1897.
 Agropyron vascui Scribn. & Smith, loc. eit.

Type locality: "British Columbia to Utah and Idaho."

Range: British Columbia to Utah and Oregon.

Specimens examined: Wenache Mountains, Whited 1231, 1265; Wenache, Whited 1376; Stehekin, Whited 1395; between Coulee City and Waterville, Spillman, May, 1896; Waitsburg, Horner 235, 234; Lake Chelan, Vascy 169; Spokane, Piper 2612; Pullman, Piper 1913; Wawawai, Piper 1916, 3004½, 3962; Elmer 753; Almota, Piper 1915; Big Meadow, Kreager 419; Whitman County, Henderson 2132.

The last-named specimen is the type of Agropyron vascyi Scribn. & Smith.

ZONAL DISTRIBUTION: Arid Transition.

1b. Agropyron spicatum puberulentum nom. nov.

Agropyron spicatum pubescens Elmer, Bot. Gaz. 36: 52, 1903, not Triticum repens pubescens Döll. Fl. Bad. 129, 1857.

Type locality: Mount Stuart, Kittitas County, Washington. Collected by Elmer.

Range: Eastern Washington.

Specimens examined: Mount Stuart, Elmer 1157, 1158.

 Agropyron richardsoni (Trin.) Schrad.; Shear, U. S. Dept. Agr. Div. Agrost. Bull. 4: 29, 1897.

Triticum richardsoni Trin. Linnaea 12: 467, 1838.

Type locality: "America borealis arctica!"

RANGE: British Columbia to New England, south to the Black Hills and California.

Specimens examined: Loomis, Griffiths & Cotton 340; Cow Creek, Griffiths & Cotton 511; Yakima Ridge, Cotton 1411; Kittitas Valley, Cotton 1329.

ZONAL DISTRIBUTION: Arid Transition.

This species is exceedingly close to A. caninum Roem. & Schult., to which indeed some of the specimens may be referable.

3. Agropyron tenerum Vasey, Bot. Gaz. 10: 258, 1885.

Agropyron pseudorepens Scribn. & Smith, U. S. Dept. Agr. Div. Agrost. Bull. 4: 34, 1897.

Type locality: Fort Garland, Colorado, according to the label of the type specimen.

Range: Alaska to Labrador, south to New England, Colorado, and California.

Specimens examined: Bridge Creek, Elmer 679; Yakima, Leckenby, June, 1898; Piper 2844; Johns Island, Cotton 208; Seattle, Piper, June 20, 1889; Rattlesnake Mountains, Cotton 667; Toppenish, Cotton 793; Prosser, Cotton 744; Squaw Creek, Cotton 878; Cow Creek, Griffiths & Cotton 509, 533; Conconully Creek, Griffiths & Cotton 293; Olympia to Gate City, Heller 4059; Ellensburg, Piper 2587; Yakima, Watt, July, 1895; Spokane, Piper 2595; Henderson, July, 1892; Palouse, Henderson 2139; Pullman, Piper 1910.

Zonal distribution: Upper Sonoran and Transition.

4. Agropyron biflorum (Brign.) Roem. & Schult, Syst. 2: 760, 1817.

Agropyron biflorum Brign. Pl. Rar. Foroj. 18, 1810.

Type locality: Not ascertained.

RANGE: Alaska to Greenland, south to Washington and Colorado.

Specimens examined: Bridge Creek, Elmer 676.

ZONAL DISTRIBUTION: Arctic and Hudsonian.

 Agropyron gmelini (Griseb.) Scribn. & Smith, U. S. Dept. Agr. Div. Agrost. Bull. 4: 30, 1897.

Tritieum caninum gmelini Griseb. in Ledeb. Fl. Ross. 3: 16. pl. 248. 1831.

Type locality: "Hab in rupestribus ad fl. Tscharysch, Buchtorma, Katunja."

Range: Washington to Montana and Nebraska. Siberia.

Specimens examined: Rock Creek, Suksdorf 1167.

This specimen is probably a mere form of A. spicatum with short basal leaves and short-awned empty glumes. It has much less scabrous lemmas than A. qmelini of Siberia, which plant, in typical form at least, does not seem to occur in America.

6. Agropyron saxicola (Scribn. & Smith).

Elymus saricola Scribn. & Smith, U. S. Dept. Agr. Div. Agrost. Bull. 11: 56, 1898.

Type Locality: "Among bowlders and rocky crevices on the summit of Mount Chapaca, altitude 1,900 meters," Okanogan County, Washington. Collected by Elmer.

Range: Known only from the type locality.

7. Agropyron flexuosum Piper, Proc. Biol. Soc. Wash. 18: 149, 1905.

Sitanion flexuosum Piper, Erythen 7: 99, 1899.

Type locality: Wawawai, Washington.

Range: Eastern Washington.

Specimens examined: Wawawai, Leekenby 88; Piper 3004, 3965, 3967; Wenache Mountains, Cotton 1671, 1758.

8. Agropyron subvillosum (Hook).

Triticum repens subvillosum Hook. Fl. Bor. Am. 2: 254, 1840.

Agropyron dasystachyum subvillosum Scribn. & Smith, U. S. Dept. Agr. Div. Agrost. Bull. 4: 33, 1897.

Type locality: "Fort Norman on the Mackenzie River."

Range: Saskatchewan to Washington, Nevada, and Colorado.

Specimens examined: Ellensburg, Piper 2585; Whited 680; Klickitat County, Leckenby, May, 1898; Connell, Leckenby 2622; Toppenish, Henderson 2137; Pasco, Henderson 2171; Parker, A. D. Dunn, August 8, 1901; Rock Island, Sandberg & Leiberg, July, 1893; Lake Chelan, Vascy 530; Walla Walla, Wilkes Expedition 1035; Prosser, Cotton 634; Kiona, Cotton 719; North Yakima, Watt 2271.

Zonal distribution: Upper Sonoran.

Agropyron lanceolatum Scribn, & Smith, U. S. Dept, Agr. Div. Agrost, Bull. 4: 34, 1897.

Agropyron elmeri Scribn. U. S. Dept. Agr. Div. Agrost. Bull. 11: 54, 1898.

Type locality: Blackfoot, Idaho. Collected by Palmer.

Range: Washington, Idaho, Oregon.

Specimens examined: Wenache, Whited in 1895; Lake Chelan, Vasey 81; Chelan, Vasey 287; below Chelan, Griffiths & Cotton 154; Ophir, Elmer 523; Palouse, Cloud, June 22, 1895; Wawawai, Brodie 894; Piper 3006, 3069, 3964; Elmer 759.

Zonal distribution: Upper Sonoran.

10. Agropyron occidentale Scribn. U. S. Dept. Agr. Div. Agrost. Circ. 27: 9, 1900.

Agropyron glaueum oecidentale Scribn. Trans. Kans. Acad. Sci. 9: 119. 1885.

Agropyron spicatum Scribn. & Smith, U. S. Dept. Agr. Div. Agrost. Bull. 4: 33, 1897, not Festuca spicata Pursh. 1814.

Type locality: Kansas.

Range: Washington to Wisconsin, Texas, and Arizona.

Specimens examined: Wenache, Whited in 1895; North Yakima, Watt, July, 1895; Ophir, Elmer 512; Coopeville, Gardner 320, 334.

ZONAL DISTRIBUTION: Transition and Upper Sonoran.

The Agropyron glaucum of Suksdorf's List is based on specimens of A. occidentale.

11. Agropyron repens (L.) Beauv. Agrost. 102, 146, 1812.

Quack grass.

Triticum repens L. Sp. Pt. 1: 86, 1753.

Type locality: "Habitat in Europae culcis."

Specimens examined: Vancouver, Piper, July 20, 1897; Walla Walla, Leckenby, July 18, 1899; North Palouse River, Vasey, July 3, 1901.

HORDEUM. WILD BARLEY.

Glumes all alike, subulate.

Lateral florets long-awned.

Awns 4 to 6 cm. long. 2. II. jubatum.

Awns 2 to 3 cm. long.

Sheaths and blades glabrous. 3. II. caespitosum.
Sheaths and blades pilose 4. II. comosum.

Lateral florets not awned.

Lateral florets neutral. 5. II. nodosum.

Lateral florets perfect. 6. II. boreale.

Glumes not all subulate, the inner ones obliquely lanceolate. 7. II. genienlatum.

1. Hordeum murinum L. Sp. Pl. 1: 85, 1753.

WALL BARLEY.

Type locality: "Habitat in Europae locis ruderatis."

Specimens examined: Seattle, Piper; Tacoma, Piper 2602; Ellensburg, Piper 2582; Waitsburg, Horner 246; Almota, Piper 3560; Wallula, Cotton 1045.

2. Hordeum jubatum L. Sp. Pl. 1: 85, 1753.

SQUIRREL TAIL.

Type locality: "Habitat in Canada."

RANGE: Alaska to Ontario, south to California and Kansas.

Specimens examined: Seattle, Piper in 1889; North Yakima, Henderson 2208; Parker, A. D. Dunn, August 11, 1901; Pullman, Piper 1746; Spokane, Piper, June, 1897; Steptoe, Vascy 49.

Zonal distribution: Arid Transition and Upper Sonoran.

3. Hordeum caespitosum Scribn. Proc. Davenp. Acad. Sci. 7: 245, 1899.

Type locality: Edgemont, South Dakota.

RANGE: Washington to Assiniboia, Kansas, and Utah.

Specimens examined: Tacoma, Leckenby, June 3, 1898; Alma, Elmer 535; near Columbus, Suksdorf 218; without locality, Sandberg & Leiberg 245; Ephrata, Griffiths & Cotton 463; Priest Rapids, Cotton 1384, 1404; Kiona, Cotton 718; Grand Coulee, Griffiths & Cotton 445.

Zonal distribution: Arid Transition.

4. Hordeum comosum Presl, Rel. Haenk. 1: 327, 1830.

Type locality: Chile.

Range: Washington. Chile.

Specimens examined. Alma, Elmer 535; Colville Reservation, Griffiths & Cotton 363.

Zonal distribution: Arid Transition.

5. Hordeum nodosum L. Sp. Pl. ed. 2, 1: 126, 1762.

Type locality: "Habitat in Italia, Anglia."

Range: North temperate America, Asia, and Europe.

Specimens examined: Olympic Mountains, Flett 830; Fairhaven, Piper 2603; Seattle, Smith 803; Tacoma, Flett 45, Leekenby: Columbia River, 46° to 49°, Lyall in 1860; Steptoe, Vascy 16; without locality, Sandberg & Leiberg 245; Box Canyon, Pend Oreille River, Kreager 433.

ZONAL DISTRIBUTION: Transition.

5a. Hordeum nodosum depressum Scribn. & Smith, U. S. Dept. Agr. Div. Agrost. Bull. 4: 24, 1897.

Type locality: Near Lexington, Morrow County, Oregon. Collected by Leiberg.

Range: Washington to California.

Specimens examined: Klickitat County, Suksdorf in 1886; Washtucha, Cotton 990.

Hordeum boreale Scribn, & Smith, U. S. Dept. Agr. Div. Agrost. Bull. 4: 24, 1897.

Type locality: "Aleutian Islands and Alaska to Oregon and California."

Range: Alaska to California.

Specimens examined: Pullman, Piper 1747; Steptoe, Vasey, July 2, 1901; Kittitas County, Vasey 49; west Klickitat County, Suksdorf 1168.

Zonal distribution: Transition.

7. Hordeum geniculatum All. Fl. Ped. 2: 259, 1785.

Hordeum maritimum With, Bot, Arr. Brit. Veg. ed. 3, 2: 172, 1796.

Type locality: Piedmont, Italy.

Specimens examined: Seattle, Smith 814; Dry Creek, Whitman County, Vascy 52; Waitsburg, Horner 247; Walla Walla, Leckenby, May 19, 1898, Griffith & Cotton 556.

ELYMUS. RYEGRASS.

Annual; glumes rigid, spreading	1. E. caput-medusae
Perennials.	4
Tufted grasses without rootstocks.	
Culms stout, 1 to 2 meters high.	
Spikelets 1 to 1.5 cm. long, usually glabrous or scabrous.	9. E. condensatus.
Spikelets 2 to 3 cm. long, pubescent	
Culms slender, seldom 1 meter high.	
Lemma pubescent; spike nodding	2. E. canadensis.
Lemma not pubescent; spike erect.	
Glumes subulate.	
Awns of lemma 30 to 40 mm. long	3. E. leckenbyi.
Awns of lemma 3 to 5 mm. long	
Glumes lanceolate.	
Awns of lemma well developed.	
Spikes dense; lemma not ciliate	5. E. glaucus.
Spikes usually interrupted; lemma ciliate.	
Awns of lemma short or obsolete.	
Glumes rigid, longer than the spikelet	7. E. virginicus.
Glames not rigid, shorter than the spike-	-
let	
Not tufted but spreading by long rootstocks.	
Lemmas long-villous	11. E. flavescens.
Lemmas not long-villous.	•
Spike dense; lemma scabrous-puberulent; giumes	
sparsely lursute	
Spike not dense; glumes not hirsute.	
Lemma glabrous, usually glaucous	13. E. triticoides.

1. Elymus caput-medusae L Sp. Pl. 1: 84, 1753.

Type locality: "Habitat in Lusitaniae, Hispaniae maritimis."

Specimens examined: Steptoe, Vasey 3076.

2. Elymus canadensis L. Sp. Pl. 1: 83, 1753.

Sitanion brodiei Piper, Erythea 7: 100, 1899.

Type locality: "Habitat in Canada."

Range: Canada to Washington, south to Georgia and Texas.

Specimens examined: Alma, Elmer 518; Naches Valley, Piper 2584; Columbia River, 46° to 49°, Lyall in 1860; Box Canyon, Kreager 381; Pend Oreille River, Lyall in 1861; Wawawai, Brodie, July, 1898; Waitsburg, Piper 2561; Horner, July, 1896; Kiona, Cotton 728; Mabton, Cotton 745; Parker, Dunn; Bishops Bar, Brodie, July, 1898.

Zonal distribution: Upper Sonoran and Arid Transition.

3. Elymus leckenbyi Piper.

Sitanion leckenbyi Piper, Erythea 7: 100, 1899.

Type locality: "Sandy bars of Snake River at Wawawai, Wash." Collected by Piper and Leckenby.

Range: Eastern Washington.

Specimens examined: Wawawai, Piper 3003, 3963, 3959, 3969, 3972; Leckenby 86.

ZONAL DISTRIBUTION: Upper Sonoran.

4. Elymus aristatus Merrill, Rhodora 4: 147, 1902.

Type locality: "Silver Creek, Harney Co., Oregon."

Range: Washington and Oregon.

Specimens examined: Falcon Valley, Suksdorf 5194, July 16, 1905.

5. Elymus glaucus Buckl. Proc. Acad. Phila. 1862; 99, 1862.

Elymus americanus Vasey & Scribn.; Macoun, Cat. Can. Plants 2: 245. 1888.

Type locality: "Columbia River." Collected by Nuttall.

Range: Alaska to the Great Lakes, Missouri, and California.

Specimens examined: Olympic Mountains, Flett 839, 833; Fairhaven, Piper 2608; Mason County, Piper, July, 1890; Tacoma, Leckenby, August, 1898; Falcon Valley, Suksdorf 2151; Ellensburg, Whited 687; Yakima, Leckenby, June 20, 1898; Wenache, Whited 1301; Whitman County, Piper, July, 1894; Wind River, Flett 1393; Wawawai, Piper, June, 1896, 2566, 2999, 3058; Blue Mountains, Lake & Hull 78, 82.

ZONAL DISTRIBUTION: Mainly Transition.

6. Elymus borealis Scribn. U. S. Dept. Agr. Div. Agrost. Circ. 27: 9, 1900.

Elymus ciliatus Scribn. U. S. Dept. Agr. Div. Agrost. Bull. 11: 57, 1898, not Muhl. Gram. 179, 1817.

Type locality: "Common in wet places, Sitka, Alaska."

Range: Alaska to Washington.

Specimens examined: Olympic Mountains, Piper 1992; Flett 833; Elmer 1907.

ZONAL DISTRIBUTION: Hudsonian.

7. Elymus virginicus submuticus Hook. Fl. Bor. Am. 2: 255. 1840.

Elymus curvatus Piper, Bull. Torr. Club 30: 233. 1903.

Type locality: "Cumberland House Fort, on the Saskatchewan."

Range: Washington to Ontario and south to Kansas.

Specimens examined: Box Canyon, Kreager 375.

8. Elymus virescens Piper, Erythea 7: 101. 1899.

Type locality: "In damp coniferous woods, 3,000 ft. altitude, Olympic Mts., near the head of the Duckaboose River." Collected by Piper. Not otherwise known.

9. Elymus condensatus Presl, Rel. Haenk. 1: 265. 1830.

Type locality: "Ad Monte-Rey Californiae."

RANGE: British Columbia to Alberta, southward to California and Nebraska.

Specimens examined: Ophir, Elmer 529; Ellensburg, Piper 2588; Vascy 71; North Yakima, Watt 2270; Yakima, Piper 2592; Pasco, Henderson 2167; Klickitat County, Suksdorf 1172; Clarks Springs, Kreager 59; Pullman, Piper 1751; Steptoe, Uasey 64; Wawawai, *Piper* 2593.

Zonal distribution: Upper Sonoran and Arid Transition.

9a. Elymus condensatus pubens Piper, Erythea 1: 101. 1899.

Type Locality: "In strong alkali soil near Yakima City, Wash." Collected by Piper. Known only from the original locality.

10. Elymus arenarius L. Sp. Pl. 1: 83, 1753.

Type locality: "Habitat ad Europae litora marina in arena mobili."

RANGE: On sea and lake shores, Greenland to Labrador, Alaska to Washington and the Great Lakes. Europe, Asia.

Specimens examined: Fairhaven, Piper 2606; Whatcom, Suksdorf 1028; Clallam County, Elmer 1906; Seattle, Piper 813; Westport, Henderson 2169.

Zonal distribution: Humid Transition.

11. Elymus flavescens Scribn. & Smith, U. S. Dept. Agr. Div. Agrost. Bull. 8: 8, 1897.

Type locality: Columbus, Klickitat County, Washington. Collected by Suksdorf.

Range: Washington, Oregon, and Idaho.

Specimens examined: Klickitat County, Leckenby, May, 1898; Columbus Suksdorf 916; Eureka, Nelson, July 4, 1899.

Zonal distribution: Upper Sonoran.

12. Elymus vancouverensis Vasey, Bull. Torr. Club 15: 48. 1888.

Type locality: Vancouver Island. Collected by Macoun.

Range: Seacoast of Washington and British Columbia.

Specimens examined: Coupeville, Gardner, September I, 1899; Seattle, Piper 812, 2858; Howell 207.

Zonal distribution: Humid Transition.

Elymus triticoides Buckl. Proc. Acad. Phila. 1862: 99, 1862.

Type locality: "Rocky Mountains."

RANGE: Washington to Colorado, Arizona, and California.

Specimens examined: Kittitas County, Sandberg & Leiberg 437; Ellensburg, Piper 2586; Whited 519; North Yakima, Henderson 2172; Klickitat County, Suksdorf 2124; Wawawai, Piper 1911, 3066; Elmer 1021; Walla Walla, Leckenby 90; North Yakima, Griffiths & Cotton 334; Colville Reservation, Griffiths & Cotton 364; Seattle, Howell 206? Zonal distribution: Upper Sonoran.

14. Elymus arenicola Scribn. & Smith, U. S. Dept. Agr. Div. Agrost. Circ. 9: 7, 1899. Type locality: "Suferts, Oregon." Collected by A. B. Leckenby.

Range: Washington and Oregon.

Specimens examined: Rockland, Klickitat County, Suksdorf 1176; Walla Walla, Leckenby, May, 1898; without locality, Sandberg & Leiberg 466, 468; Brandegee 1202.

Zonal distribution: Upper Sonoran.

This species has been referred erroneously to E. dasystacleys littorales Griseb.

SITANION.

Glumes cleft or parted into 3 to many lobes; awns of lemmas 8 to 10 cm, long	1.	S. jubatum.
Glumes entire or only 2-cleft or 2-parted.		
Nerves of the glumes two.		
Glumes entire; lemma glaucous, 1 cm. long	2.	S. brevifolium.
Glumes or some of them bifid or 2-parted.		
Sheaths and upper surface of leaves glabrous.		
Leaves strongly involute	6.	S. basalticola.
Leaves flat or tardily involute.		
Blades 5 to 7 mm. broad	5.	S. latifolium.
Blades 2 to 5 mm. broad.		
Low plants; awns of lemmas 3 to 4 cm. long.	3.	S. rigidum.
Taller; awns of lemmas 4 to 5 cm. long	4.	S. qlabrum.
Sheaths and upper surface of leaves pubescent.		
Awns 2 to 3 times as long as lemma	7.	S. ciliatum.
Awns 4 to 5 times as long as lemma.		
Innovations many; culm leaves 7 to 12 cm, long.	s.	S. hystrix.
Innovations few; culm leaves 2 to 6 cm, long.	9.	S. velutinum.
Nerves of the glumes 3 to 5.		
Leaves glaucous, 5 to 8 mm. broad	10.	S. planifolium.
Leaves green, 2 to 5 mm. broad.		

1. Sitanion jubatum J. G. Smith, U. S. Dept. Agr. Div. Agrost. Bull. 18: 10, 1899. Sitanion villosum J. G. Smith, U. S. Dept. Agr. Div. Agrost. Bull. 18: 11, 1899. Sitanion strictum Elmer, Bot. Gaz. 36: 59, 1903.

Type locality: "Waitsburg, Wash." Collected by Horner.

Range: Washington to California.

Specimens examined: Waitsburg, Horner 249, 573; Wawawai, Piper 2998; Pullman, Piper 3021; Walla Walla, Shear 1602; Griffiths & Cotton 554; Waitsburg, Horner 574; Spokane, Piper 2598; Pullman, Piper, July 28, 1899; Wawawai, Piper 3528, 3958, 3970, 3529; Clarks Springs, Kreager 99; Almota, Elmer 266.

Zonal distribution: Upper Sonoran and Arid Transition.

2. Sitanion brevifolium J. G. Smith, U. S. Dept. Agr. Div. Agrost. Bull. 18: 17, 1899. Type locality. Tucson, Arizona.

Range: Washington to Colorado and Arizona.

Specimens examined: Falcon Valley, Suksdorf 5193, July 16, 1905.

3. Sitanion rigidum J. G. Smith, U. S. Dept. Agr. Div. Agrost. Bull. 18: 13, 1899.

Type locality: "Cascade Mountains, Washington." Collected by Allen.

Range: Washington to California and Wyoming.

Specimens examined: Olympic Mountains, Flett 119, 832; Goat Mountains, Allen 178; Mount Stuart, Elmer 1145; Mount Chapaca, Elmer, August, 1897; Blue Mountains, Horner 579; without locality, Vascy 454.

Zonal distribution. Aretic.

4. Sitanion glabrum J. G. Smith, U. S. Dept. Agr. Div. Agrost. Bull. 18: 14, 1899.

Type locality: "Near Crystal Spring, Caso Mountains, California."

Range: Washington to California.

Specimens examined. Olympic Mountains, Elmer 1904; Mount Rainier, Piper 1952; Mount Adams, Henderson, August, 1892, head of Twenty-live-mile Creek, Gorman 824. Zonal distribution: Arctic.

5. Sitanion latifolium Piper, Erythea 7: 99, 1899.

Type locality: "Blue Mts., Walla Walla County, Wash." Collected by Piper.

Range: Known only from the type specimen.

Specimens examined: Blue Mountains, Walla Walla County, Piper, July, 1896.

6. Sitanion basalticola Piper, Bull. Torr. Club 30: 234, 1903.

Type locality: "In basaltic soil, Coulee City, Washington." Collected by Piper.

Range: Douglas County, Washington.

Specimens examined: Coulee City, Piper 3924.

ZONAL DISTRIBUTION: Arid Transition.

7. Sitanion ciliatum Elmer, Bot. Gaz. 36: 58, 1903.

Type locality: "On dry rocky hills west of Wenatchee," Washington. Collected by Whited.

Range: Washington.

Specimens examined: Wenache Mountains, Whited 1360; Waterville, S. E. Jordan; Coulee City, Piper 3923; Lincoln County, Sandberg & Leiberg 221; Bickleton, Suksdorf 127.

Zonal distribution: Arid Transition.

8. Sitanion hystrix (Nutt.) J. G. Smith, U.S. Dept. Agr. Div. Agrost. Bull. 18: 15, 1899. Aegilops hystrix Nutt. Gen. 1: 86, 1818.

Situnion albescens Elmer, Bot. Gaz. 36: 57, 1903.

Type locality: "Arid plains of the Missouri."

Range: Washington to Wyoming and Colorado.

Specimens examined: Ellensburg, Piper 2579; Whited 670; Snipes Mountain, Cotton 380; Pasco, Piper 2962; Coulee City, Piper 3921, 3922; Spokane, Piper, June 25, 1897; Wenas, Griffiths & Cotton 76; Walla Walla, Leckenby, July, 1898.

Zonal distribution: Upper Sonoran and Arid Transition.

9. Sitanion velutinum Piper, Bull. Torr. Club 30: 233, 1903.

Type locality: "Steptoe, Whitman County, Washington." Collected by Vascy.

Range: Eastern Washington.

Specimens examined: Near Steptoe, Vascy.

10. Sitanion planifolium J. G. Smith, U. S. Dept. Agr. Div. Agrost. Bull. 13: 13. 15

Type locality: "High mountains, Skamania County, Wash." Collected by Suks. 6... Range: Mountains of Washington.

Specimens examined: Olympic Mountains, Elmer 1903; Skamania County, Suksdor, 224.

Zonal distribution: Arctic!

11. Sitanion rubescens Piper, Bull. Torr. Club 30: 234, 1903.

Type locality: "Dry rocky places, 2,300 m. altitude, Mount Rainier, Washington." Collected by Piper.

Specimens examined: Mount Rainier, Piper 1954.

Zonal distribution: Arctic.

Munroa squarrosa Torr, and Bouteloua oligostachya Torr, are included in Suksdorf's list. There is no direct evidence that either of these occurs in the State.

CYPERACEAE. SEDGE FAMILY.

Flowers monoecious; akene inclosed in a sac-like structure

Flowers perfect; spikelets all alike.

Spikelets flattened, the scales 2-ranked.

Perianth-bristles none; inflorescence terminal...... Cyperus (p. 155). Perianth-bristles 6 to 9; inflorescence axillary...... Dulichum (p. 156).

CYPERUS.

Scales acuminate, not awned 2. C. co. is co. s. Rach's winged.

Perennial with corm-like tubers. 4. C. S. pos. s.
Perennial by rootstocks bearing nut-like tubers. 5. C. as locals.

Cyperus inflexus Muhl. Gram. 16, 1817.

Cyperiis aristates Rottly, etc. det. Boeckl, Linnaca 35: 500, 1868

Type locality: Pennsylvania.

RANGE: British Columbia to Vermont, south to Mexi o and Florida.

ZONAL DISTRIBUTION. Upper Sonoran and Arid Transition.

2. Cyperus acuminatus Torr. & Hook. Ann. Lyc. N. Y. 3: 435, 1836.

Type locality: "Near St. Louis, Missouri,"

RANGE: Washington to Ellinois, south to California and Texas.

Specimens examined: Almota, Piper, August 26, 1894.

ZONAL DISTRIBUTION: Upper Sonoran.

3. Cyperus erythrorhizos Muhi. Gram. 20, 1817.

Cyperus occidental's Torr. Ann. Lyc. N. Y. 3: 259, 1836.

Cyperus e ipreus Presl. Rel. Haenk. 1: 172, 1828.

Type locality: Pennsylvania.

RANGE: Washington to Massachusetts, south to Florida and California.

Specimens examined: West Klickitat County, 8 Ped of 221, 222, 587, Parket, 79 -

August S. 1901; Almota, P [90], 1937; Vancouver, Stellen, 11274.

Zonal distribution: Upper Sonoran.

4. Cyperus strigosus L. sp. Pl. 1: 47, 1753.

Type locality: "Habitat in paludibus Jamaicae, Virginiae."

RANGE: Washington to Maine, south to Texas and Florida.

Specimens examined: West Klickitat County, 2 Ashor 1261, 84, September 17, 1886. This was listed by Suksdorf as "C. Decompletes Link?"

5. Cyperus esculentus L. Sp. Pl. 1: 45, 1735.

NUT GRASS.

Caperus aharatodes Muhl, Gram. 23, 1817.

Type Locality: "Habitat Monspelii, inque Italia, Oriente."

RANGE: Washington to New Brunswick, south to Californ'a and Florida.

Specimens examined: West Klickitat County, Suksdorf 223; Almota, Piper 2651.

Zonal distribution: Upper Sonoran.

DULICHIUM.

1. Dulichium arundinaceum (L.) Britton, Bull. Torr. Club 21: 29, 1894.

Cyperus arundinaceus L. Sp. Pl. 1:44, 1753.

Schoenus spathaceus L. Sp. Pl. ed. 2, 1:63, 1762.

Cyperus spathaceus L. Syst. ed. 12, 2: 735, 1767.

Dulichium spathaceum Pers. Syn. 1:65, 1805.

Type locality: "Habitat in Virginia."

RANGE: British Columbia to Nova Scotia, south to Oregon, Texas, and Florida. Specimens examined: Scattle, Piper 692; Lakeview, Flett, September 20, 1899.

ZONAL DISTRIBUTION: Humid Transition.

SCIRPUS.

Spikelets solitary, terminal.	
Involueral bract present, not longer than the spikelet.	
Perianth bristles none	1. S. riparius.
Perianth bristles 6, smooth	2. S. cespitosus.
Involucial bract 2 to 3 times as long as the spikelet	3. S. subterminalis.
Involucral bract wanting	4. S. pauciflorus.
Spikelets several to many, rarely solitary.	
Stems terete.	
Inflorescence apparently lateral, sessile	5. S. nevadensis.
Inflorescence umbellate.	
Akenes 2 mm. long, the scales little longer	6. S. validus.
Akenes 2.5 to 3 mm. long, the scales one-fourth longer.	7. S. occidentalis.
Stems three-angled.	
Involucral leaf solitary	8. S. americanus.
Involucral leaves several.	
Spikelets 1 to 2 cm. long.	
Akenes oblong-obovate, pale	9. S. brittonianus.
Akenes orbicular-obovate, dark	
Spikelets 3 to 5 mm. long.	
Akenes 3-angled; bristles 6	11. S. atrovirens.
Akenes plano-convex; bristles 4	

Scirpus riparius (R. Br.) Spreng, Syst. 1: 208, 1825.

Isolepis riparia R. Br. Prod. Fl. Nov. Hol. 222, 1810.

Type locality: Port Jackson, Australia.

Range: Washington to California. South America. Australia. Africa. Specimens examined: Whidby Island, Gardner 318; Seattle, Piper 2860.

Zonal distribution: Humid Transition.

Scirpus cespitosus L. Sp. Pl. 1: 48, 1753.

Type locality: Europe.

RANGE: Alaska to Greenland, south to Washington, Colorado, and New York.

Specimens examined: Olympic Mountains, Piper 2248; Skamania County, Suksdorf 2241; Cascade Mountains, 49°, Lyall in 1860; Stevens Pass, Sandberg & Leiberg 775; Bridge Creek, Elmer 644; Granville, Conard 376.

ZONAL DISTRIBUTION: Arctic.

3. Scirpus subterminalis Torr. Fl. U. S. 1: 47, 1824.

Type locality: Near Deerfield, Massachusetts.

RANGE: Washington to New Brunswick, south to Pennsylvania.

Specimens examined: Mount Adams, Howell, August, 1882; Falcon Valley, Suksdorf 88

4. Scirpus pauciflorus Lightf. Fl. Scot. 2: 1078, 1777.

Eleocharis pauciflora Link, Hort. Berol. 1:284, 1827.

Type locality: Highlands of Scotland, "as upon Malgbyrdy in Breadalbane."

RANGE: British Columbia to Labrador, south to Washington, Colorado, and New York.

Specimens examined: Mount Adams, Suksdorf 90; Alkali Lake, Sandberg & Leiberg 416.

5. Scirpus nevadensis S. Wats. Bot. King Explor. 360, 1871.

Type locality: "Shore of Soda Lake in Carson Desert, Nevada."

RANGE: Washington to Nevada.

Specimens examined: Crab and Wilson creeks, Lake & Hull 364; Sandberg & Leiberg 266; Condons Ferry, Griffiths & Cotton 416.

Zonal distribution: Upper Sonoran.

6. Scirpus validus Vahl, Enum. Pl. 2: 268, 1806.

Type Locality: "Habitat in Carabeis."

RANGE: Washington to Nova Scotia, southward to California, Texas, and the West Indies.

Specimens examined: Waitsburg, Horner, 512; Wenache, Whited 584.

ZONAL DISTRIBUTION: Arid Transition.

7. Scirpus occidentalis (S. Wats.) Chase, Rhodora 6:68, 1904.

TULE.

Scirpus lacustris occidentalis S. Wats. Bot. Cal. 2:218, 1876.

Type locality: San Diego County, California.

Range: British Columbia to California, castward to New England.

Specimens examined: Seattle, Smith 1012; Falcon Valley, Suksdorf 85; North Yakima, Henderson, May, 1892; Cascade Mountains, Tweedy 2; Cascade Mountains to Colville, Lyall in 1860; Alma, Elmer 539; Douglas County, Lake & Hull 394; Davis Lake, Kreager 435; Toppenish, Cotton 773; Priest Rapids, Cotton 1400.

ZONAL DISTRIBUTION: Transition and Upper Sonoran.

8. Scirpus americanus Pers. Syn. 1: 68, 1805 (March).

Scirpus pungens Valil, Enum. 2: 255, 1805 (October).

Type locality: "Hab. in Carolina inferiore."

Range: Throughout North America. Chile.

Specimens examined: Whidby Island, Gardner 305; Tacoma, Flett, September, 1896; Westport, Henderson in 1892; Alma, Elmer 533; Crab and Wilson creeks, Sandberg & Leiberg 332, 324; Wilson Creek, Sandberg & Leiberg, July, 1893; Medical Lake, Sandberg & Leiberg 55; Waitsburg, Horner 207; Tacoma, Flett 2235; Stuart Island, Lawrence 35.

ZONAL DISTRIBUTION: Transition.

9. Scirpus brittonianus nom. nov.

Scirpus campestris Britton, Ill. Fl. 1: 267, 1896, not Roth, 1800.

Scirpus robustus campestris Fernald, Rhodora 2: 241, 1900.

Type locality: "Manitoba and Minnesota to Nebraska, Kansas, and Mexico, west to Nevada."

Range: Washington to Manitoba, south to Mexico.

Specimens examined: Wilson Creek, Sandberg & Leiberg 333; Satus, Elmer 1067; Black Rock Spring, Suksdorf 465.

Zonal distribution: Upper Sonoran.

10. Scirpus robustus Pursh, Fl. 1: 56, 1814.

Type locality: "In salt marshes and on the banks of rivers, common" in the Atlantic States.

Range: Nova Scotia to Texas along the coast. Washington.

Specimens examined: Seattle, Piper 1008; Challam County, Elmer 2725; Admiralty Head, O. Piper, May 27, 1898.

ZONAL DISTRIBUTION: Humid Transition.

11. Scirpus atrovirens Willd. Enum. Hort. Berol. 79, 1809.

Type locality: "Habitat in America boreali."

Range: Washington to Labrador south to Georgia.

Specimens examined: Waitsburg, Piper, July, 1896; Horner 19.

Zonal distribution: Arid Transition.

12. Scirpus microcarpus Presl, Rel. Haenk. 1: 195, 1828.

Scirpus lenticularis Torr. Ann. Lyc. N. Y. 3: 328, 1836.

Scirpus sylvaticus digynus Boeckl, Linnaea 36: 727, 1870.

Type locality: Nootka Sound, Vancouver Island.

RANGE: Alaska to Nova Scotia, south to California and New York.

Specimens examined: Whidby Island, Gardner 307; Seattle, Piper, June, 1891; Tacoma, Flett 206; Falcon Valley, Suksdorf 1267; Ellensburg, Whited, July, 1898; Egbert Springs, Sandberg & Leiberg 387; Railroad Creek, Elmer, September, 1897; Pend Oreille River, Lyall in 1860; Spokane, Piper; Pullman, Piper, July 15, 1901; Clallam County, Elmer 2723; Mount Carlton, Kreager 298; Wenache Mountains, Whited 1366; Stehekin, Griffiths & Cotton 227; Squaw Creek, Cotton 879.

Zonal distribution: Transition.

13. Scirpus nanus Spreng. Pug. 1: 4, 1815.

Eleocharis pygmaea Torr. Ann. Lyc. N. Y. 3: 313, 1836.

What is probably this species occurs on flat shores at the mouths of streams near Seattle and elsewhere, but it is apparently always sterile. The presence of the characteristic nodules on the roots seems to justify this determination.

ERIOPHORUM. COTTON GRASS.

Spike solitary; bristles coppery	1.	E. chamissonis.
Spikes several; bristles white.		
the last it becar because flat 2 to 8 mm mile	•)	E malnotantinon

Akene obovoid, obtuse; leaves flat, 3 to 8 mm, wide 2. E. polystachyon.

Akene oblong, acute; leaves 3-sided, 2 to 4 mm, wide 3. E. gracile.

1. Eriophorum chamissonis C. A. Meyer in Ledeb. Fl. Alt. 1:70, 1829.

Eriophorum russcolum Fries, Novit. Mont. 3: 170. 1842.

Type locality: Unalaska.

Range: British Columbia to Washington, Newfoundland to Quebec. Europe.

Specimens examined: Whidby Island, Gardner 311; Seattle, Piper 684; Tacoma, Flett 207; Olympia, Henderson, May, 1892; Ilwaco, Henderson, August, 1886; Weiser Lake, Suksdorf, July 21, 1890; Tacoma, Flett 2227; Ilwaco, Piper 4953.

ZONAL DISTRIBUTION: Humid Transition.

The "E. vaginatum L." of Suksdorf's list is based on an erroneous determination of the above species.

2. Eriophorum polystachion L. Sp. Pl. 1: 52, 1753.

Type locality: European.

RANGE: Alaska to Labrador south to Oregon and Georgia. Europe. Asia.

Specimens examined: Mount Rainier, Piper 1016, 2174; Mount Adams, Suksdorf 89; Cascades 490, Lyall in 1860; Tweedy 41; Stevens Pass, Sandberg & Leiberg 789.

Zonal distribution: Arctic.

3. Eriophorum gracile Roth, Cat. Bot. 2: 259, 1800.

Type locality: Europe.

Range: Washington to Newfoundland, south to California and Pennsylvania. Europe. Asia.

Specimens examined: Seattle, Piper 776; Mount Adams, Henderson, July, 1892; Mount Stuart, Elmer 1138; Seattle, Smith 1016; Coulee City, Piper 3857; Priest Rapids, Cotton 1380.

Zonal distribution: Upper Sonoran to Hudsonian.

HEMICARPHA.

Scales erect or spreading only at the tips, little exceeding the akenes... 1. II. micrantha. Scales spreading, 2 to 3 times as long as the akenes.

Akenes black; scales broad, abruptly acuminate 2. H. aristulata.

Akenes brown; scales narrow, gradually attenuate 3. H. occidentalis.

1. Hemicarpha micrantha (Vahl) Britton, Bull. Torr. Club 15: 104. 1888.

Hemicarpha subsquarrosa Nees; Mart. Fl. Brasil 21: 61, 1842.

Scirpus micrantha Vahl, Enum. 2: 254. 1805.

Type locality: "Habitat in America meridionali!"

Range: Washington to New England and south into South America.

Specimens examined: Falcon Valley, Suksdorf 811, 88.

2. Hemicarpha aristulata (Coville) A. Nelson, Bull. Torr. Club 29: 400. 1902.

Hemicarpha micrantha aristulata Coville, Bull. Torr. Club 21: 36, 1894.

Hemicarpha intermedia Piper, Fl. Palouse Reg. 36, 1901.

Type locality: Texas.

Range: Washington to Texas.

Specimens examined: Almota, Piper 2375.

3. Hemicarpha occidentalis A. Gray, Proc. Am. Acad. 7: 391, 1868.

Type locality: Yosemite Valley, California.

Range: Washington to California.

Specimens examined: Falcon Valley, Suksdorf 87.

ELEOCHARIS. SPIKE RUSH.

Styles 2-cleft; akenes biconvex.

Tubercles constricted basally.

Annual, roots fibrous; akenes black 1. E. capitata.

Tubercles not constricted basally; annuals.

Heads oblong; bristles not longer than the akenes 4. E. monticola.

Styles 3-cleft; akenes 3-angled.

Tubercles subulate; akenes smooth 6. E. rostellata.

1. Eleocharis capitata (L.) R. Br. Prodr. Fl. Nov. Holl. 1:225, 1810.

Scirpus capitatus L. Sp. Pl. 1:48, 1753.

Type locality: "Habitat in Virginia."

RANGE: Washington to Maryland and Florida.

Specimens examined: Lake Chelan, Lake & Hull, August, 1892.

2. Eleocharis palustris (L.) Roem. & Schult. Syst. 2: 151, 1817.

Scirpus palustris L. Sp. Pl. 1: 47, 1753.

Type locality: European.

Range: Subarctic and Temperate North America. Europe. Asia.

Specimens examined: West Seattle, Piper, May, 1891; Smith 1006; Seattle, Smith,

July, 1889; west Klickitat County, Suksdorf 90; Kittitas County, Sandberg & Leiberg 705; Ellensburg, Whited, July, 1897; Wenache, Whited 82; Westport, Henderson, June, 1892; Lamb 1103; Crab and Wilson creeks, Sandberg & Leiberg 323; Pend Oreille River, Lyall in 1861; Pullman, Elmer 295; Clallam County, Elmer 2724; Lake Kalispel, Kreager, 333, 444; Newport, Kreager, 453, Mount Carlton, Kreager, 289; Grand Coulee, Griffiths & Cotton, 452; Cow Creek, Griffiths & Cotton, 502, 523; Cow Creek to Ephrata, Griffiths & Cotton, 466; Prosser, Cotton 660; Toppenish, Cotton 788.

Zonal distribution: Transition and Upper Sonoran.

A variable species which has been much subdivided by European authors. Our form was referred to $E.\ multicaulis$ Smith in Hooker's Flora.

3. Eleocharis obtusa Schultes, Mant. 2: 89, 1824.

Scirpus obtusus Willd. Enum. Hort. Berol 76, 1809.

Type locality: "Habitat in America boreali."

RANGE: British Columbia to New Brunswick, south to Kansas and the Gulf of Mexico.

Specimens examined: Near Montesano, Heller 4073; Henderson, June. 1892; Seattle, Piper 661; Vancouver Lake, Suksdorf 2328; Manor, Piper 3076; Almota, Piper, July, 1897; Eastern Washington, Lake & Hull 361; Green River Hot Springs, Piper 6280; Waitsburg, Horner 14.

Zonal distribution: Humid Transition.

3a. Eleocharis obtusa gigantea Fernald, Proc. Am. Acad. 34: 493, 1899.

Type locality: Cascade Mountains, latitude 49°. Collected by Lyafl.

Range: British Columbia to Oregon.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859.

4. Eleocharis monticola Fernald, Proc. Am. Acad. 34: 496, 1899.

Type locality: Plumas County, California.

Range: Washington to California.

Specimens examined: Parker, A. D. Dunn, August 8, 1901; Bingen, Suksdorf 2583.

4a. Eleocharis monticola leviseta Fernald, Proc. Am. Acad. 34: 496, 1899.

Type locality: Cœur d'Alene River, Kootenai County, Idaho.

Range: Washington and Idaho.

Specimens examined: Lake Kalispel, Kreager 332a, 332b.

5. Eleocharis acicularis (L.) Roem. & Schult. Syst. 2: 154, 1817.

Scirpus acicularis L. Sp. Pl. 1: 48, 1753.

Type locality: Europe.

Range: Temperate North America. Europe. Asia.

Specimens examined: Seattle, Smeth 662; west Klickitat County, Suksdorf 225; Wilson Creek, Lake & Hull 388, Pend Oreille River, Lyall in 1861, Pullman, Peper 1938, August, 1893; Lake Kalispel, Kreager 331.

ZONAL DISTRIBUTION: Transition.

5a. Eleocharis acicularis bella Piper, Fl. Palouse Reg. 35, 1901.

Type locality: Pullman, Washington.

Range: Washington.

Specimens examined: West Klickitat County, Suksdorf 226; Cascade Mountains, Tweedy 42; Spokane, Piper 2642; Pullman, Piper 3055; without locality, Vasey in 1889.

6. Eleocharis rostellata Torr. Fl. N. Y. 2: 347, 1843.

Scirpus rostellatus Torr. Ann. Lyc. N. Y. 3: 318, 1836.

Type locality: Penn Yan, New York.

RANGE: British Columbia to New England, south to California and Florida.

Specimens examined: Skamania County, Suksdorf 2237; Falcon Valley, Suksdorf 2820, 2537.

RHYNCHOSPORA.

1. Rhynchospora alba (L.) Vahl, Enum. 2: 236, 1806.

Schoenus albus L. Sp. Pl. 1: 44, 1753.

Type locality: Europe.

Range: Alaska to Labrador, south to Oregon and Florida.

Specimens examined: Whatcom County, Suksdorf 1014; Seattle, Piper 1121; Granville, Conard 374.

Zonal distribution: Humid Transition.

CAREX. Sedge.

1. Carex ablata Bailey, Bot. Gaz. 13: 82. 1888.

Carex frigida of American authors.

Type locality: None cited.

RANGE: British Columbia to Utah and California.

Specimens examined: Olympic Mountains, Piper 2244; Flett 823; Clallam County, Elmer 2703; Mount Rainier, Allen 270; Piper 2546; Mount Stuart, Elmer 1136, 1127; Mount Adams, Suksdorf 25, 26; Henderson, August 8, 1892; Stevens Pass, Sandberg & Leiberg 707; Cascade Mountains, Tweedy.

Zonal distribution: Arctic.

2. Carex accedens Holm, Am. Journ. Sci. IV. 16; 457, 1903.

Carex spreta Bailey, Mem. Torr. Club 1: 6. 1889, not C. spreta Steud.

Carex stylosa virens Bailey, Proc. Am. Acad. 22: 79. 1886, not Carex virens Lam. 1789.

Type locality: Sauvies Island, Oregon. Collected by Howell.

Range: Oregon and Washington.

Specimens examined: Mount Rainier, Piper 2550; Mount Adams, Howell, August, 1882; without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Transition to Aretic.

3. Carex acutina tenuior Bailey, Mem. Torr. Club 1: 53, 1889.

Type locality: Oregon. Collected by Howell.

Range: Washington and Oregon.

Specimens examined: Mount Adams, Henderson 1489 (fide Bailey).

4. Carex amplifolia Boott in Hook. Fl. Bor. Am. 2: 228. t. 226. 1839.

Type locality: "Marshy places, Columbia River." Collected by Douglas.

RANGE: British Columbia to Idaho and California.

Specimens examined: Olympic Mountains, Grant in 1889; Seattle, Piper 995; upper Nisqually Valley, Allen 174; Mount Adams, Suksdorf 50; Cascade Mountains, latitude 49°, Lyall in 1859; Cascade Mountains, Henderson, July, 1892; Ellensburg, Elmer 422; Tampico, Henderson, July, 1892; Falcon Valley, Suksdorf 42; without locality, Vasey in 1889; Clarks Springs, Kreager 26; Klickitat River, Cotton 1443.

Zonal distribution: Transition.

5. Carex aperta Boott in Hook. Fl. Bor. Am. 2: 218. t. 219. 1839.

Carex turgidula Bailey, Bot. Gaz. 25: 271. 1898.

Type locality: "Columbia River." Collected by Douglas and Scouler.

Range: Oregon, Washington, and Idaho.

Specimens examined: Columbia River, Scouler; west Klickitat County, Suksdorf 22, 64, 65, 66; Pend Oreille River, Lyall in 1861; McAllister Lake, Henderson 1788; Palouse, Henderson 2088; Meyers Falls, Kreager 588; Kalispel Valley, Spillman, July 1, 1901.

Zonal distribution: Transition.

This species has been considered the same as C, proliva Fries of Europe, C, acuta proliva Hornem.

6. Carex aquatilis Wahl. Kongl. Vet. Akad. Handl. II. 24: 165. 1803.

Type locality: "Hab. intra ripas fluviorum per Lapponiam."

RANGE: Washington to New England, south to Colorado.

Specimens examined: Ione, Kreager 426.

7. Carex arcta Boott, Ill. 155. t. 497. 1867.

Carex canescens oregana Bailey, Mem. Torr. Club 1: 75, 1889.

Type locality: "In America boreali, Canada, Lake Superior, Rainy Lake, Lake of the Woods."

Range: British Columbia to Quebec, south to Oregon and Vermont.

Specimens examined: Seattle, Piper 997; Henderson 2074; Mount Rainier, Allen 271; Mount Adams, Suksdorf 2063, 11; Tacoma, Flett 13; Chambers Lake, Henderson, August 23, 1892; Palouse, Henderson 2060; Falcon Valley, Suksdorf 902; Usk, Kreager, August 11, 1902; without locality, Vascy in 1889; Clealum, Cotton 845; Toppenish, Henderson, May 28, 1892.

Zonal distribution: Transition.

8. Carex aristata R. Br. in Richards, Bot. App. Frankl. Journ. 751, 1823.

Type locality: British America.

RANGE: British Columbia to Saskatchewan, south to Oregon, Utah, and New York.

Specimens examined: Concorolly, Griffiths & Cotton 310; Spangle, Suksdorf 2600; Phileo Lake, Suksdorf 2599.

Zonal distribution: Arid Transition.

9. Carex athrostachya Olney, Proc. Am. Acad. 7: 393, 1868.

Type locality: Yosemite Valley, California.

RANGE: Washington to California and Colorado.

Specimens examined: Cascade Mountains, Tweedy 9; Ellensburg, Piper, July, 1897; Whited 557; North Yakima, Henderson 2066; Easton, Henderson in 1892; Lake Chelan, Lake & Hull 416; Spokane, Henderson in 1892; Marshall Junction, Piper 2278; Palouse City, Henderson, July, 1892; Union Flat, Henderson in 1892; Pullman, Elmer 873; Piper, August, 1893; Kittitas Valley, Cotton 1215.

Zonal distribution: Arid Transition.

Carex atrata L. Sp. Pl. 2: 976, 1753.

Type locality: "In Alpibus Europae."

Range: Arctic regions south to Oregon and Colorado. Europe.

Specimens examined: Mount Rainier, Allen, August 14, 1895; Mount Adams, Flett 1402.

Zonal distribution: Arctic.

10a. Carex atrata nigra (All.) Gaudin, Agrost. Helvet. 115, 1811.

Carex nigra All. Fl. Pedem. 2: 267, 1775.

Type locality: "In summis alpibus Pedemontii et Sabaudiae."

Range: Washington to Colorado. Europe.

Specimens examined: Mount Stuart, Elmer 1124, 1125.

11. Carex aurea Nutt. Gen. 2: 205, 1818.

Type locality: Shores of Lake Michigan.

RANGE: Subarctic regions southward to California, Colorado, and the Great Lalles.

Specimens examined: Claffam County, Elmer 2712; Port Ludlow, Ernns in 1890; Coupeville, Gardner 303; Klickitat River, Flett 1363; Falcon Valley, Suksdo f 35; Lattle-snake Mountains, Cotton 709; Conconully, Griffiths & Cotton 277; Lake Omack, Griffiths & Cotton 400; Mount Stuart, Elmer 1141; Wilbur, Henderson, July, 1892; Union Flat, Hull, July, 1892; Pullman, Piper, May, 1892; Meyers Falls, Kreager 591; Klickitat River, Cotton 1452.

Zonal distribution: Transition.

11a. Carex aurea celsa Bailey, Mem. Torr. Club 1: 75. 1889.

Type locality: "San Bernardino Mts., California."

Range: Washington to California.

Specimens examined: Vancouver, Piper 6440.

ZONAL DISTRIBUTION: Transition.

12. Carex bebbii (Bailey) Olney; Fernald, Proc. Am. Acad. 37: 478, 1902.

Carex tribuloides bebbii Bailey, Mem. Torr. Club 1: 55, 1889.

Type locality: None given.

Range: British Columbia and Washington to Newfoundland and New York.

Specimens examined: Clarks Springs, Kreager 84; Silver Lake, Henderson 2072; Loon Lake, Beattie & Chapman 2186.

ZONAL DISTRIBUTION: Arid Transition.

13. Carex bolanderi Olney, Proc. Am. Acad. 7: 393, 1868.

Carex deweyana bolanderi W. Boott in S. Wats. Bot. Cal. 2: 236, 1876.

Type locality: "California, Yosemite Valley and Mariposa Big-tree grove."

RANGE: British Columbia to Idaho and California.

Specimens examined: Clallam County, Elmer 2716, 2715; Scattle, Piper 1001; Mount Stuart, Elmer 1142; along Salmon River, Horner 485; Stehekin, Griffiths & Cotton 198, 246; Blue Mountains, Piper, July, 1896; Lake & Hull 372; without locality, Brandegee 1138.

Zonal distribution: Transition.

The specimen referred to C. bromoides Schk. in Cooper's report is undoubtedly C. bolanderi.

14. Carex brunnescens (Pers.) Poir, Suppl. 3: 286, 1813.

Carex curta brunnescens Pers. Syn. 2: 539, 1807.

Carex eanescens al picola Wahl, Fl. Lapp. 232, 1812.

Carex canescens vulgaris Bailey, Bot. Gaz. 13: 86, 1888.

Type locality: "Hab. in Monte Touly."

RANGE: Newfoundland to British Columbia, south to Washington, Michigan, and in the mountains to North Carolina. Europe.

Specimens examined: Goose Lake, Skamania County, Flett 1379; Mount Rainier, Piper 2549; Mount Adams, Suksdorf 4277.

Zonal distribution: Arctic.

15. Carex canescens L. Sp. Pl. 2: 974, 1753.

Type locality: Europe.

Range: Alaska to Labrador, south to Washington, Utah, and Vermont.

Specimens examined: Seattle, Piper 1106; Nisqually Valley, Allen 163; Mount Adams, Henderson 2068.

15a. Carex canescens subloliacea Laestad. Nov. Act. Soc. Sci. Ups. 11: 282, 1839.

Type locality: Lapland.

Range: Subarctic America, south to Washington, Michigan, and New York.

Specimens examined: Seattle, Piper 1106.

16. Carex chalciolepis Holm, Am. Journ. Sci. IV. 16: 28, 1903.

Type locality: Pagosa Peak, Colorado.

Range: Washington to Colorado.

Specimens examined: Mount Adams, Suksdorf 4364, 2896; Henderson 2100.

Zonal distribution: Arctic.

17. Carex circinata C. A. Meyer, Mem. Sav. Etr. Petersb. 1: 209. t. 6. 1831.

Type locality: Unalaska.

Range: Alaska to Washington.

Specimens examined: Olympic Mountains, Elmer 2721.

Zonal distribution: Arctic.

18. Carex comosa Boott, Trans. Linn. Soc. 20: 117. 1846.

Carex pseudo-cyperus americanus Hochst.; Bailey, Mem. Torr. Club 1: 54. 1889.

Type locality: "In Georgia et Carolina."

RANGE: Washington to Nova Scotia, south to California and Georgia.

Specimens examined: Whatcom County, Suksdorf 1018; Seattle, Piper 992; Waitsburg, Horner, July, 1898; near Touchet River, Horner 586.

Zonal distribution: Transition.

19. Carex cryptocarpa C. A. Meyer, Mem. Sav. Etr. Petersb. 1: 226. t. 14, 1831.

Carex scouleri Torr. Ann. Lyc. N. Y. 3: 399, 1836.

Type locality: "Habitat in Unalaschka et Kamtschatca."

Range: Alaska to Oregon.

Specimens examined: Seattle, Piper 990; Smith 1005; Tacoma, Flett 134; Ilwaco, Henderson, September, 1892; without locality, Cooper in 1854; Ilwaco, Piper 6446; Clallam County, Elmer 2719.

ZONAL DISTRIBUTION: Humid transition.

The Tolmie specimen from Hood Canal referred by Boott a to C. salina Wahl, is with little doubt the above species.

Carex deflexa Hornem, Plantel, ed. 3, 1: 938, 1821.

Type locality: Not ascertained.

Range: Alaska to Greenland, south to Oregon, Michigan, and New England.

Specimens examined: Mount Rainier, Piper 2552; Wenache region, Brandegee 1145.

Carex deweyana Schwein, Ann. Lyc. N. Y. 1: 65, 1824.

Type locality: "New Eng."

Range: British Columbia to Nova Scotia, south to New Mexico, Michigan, and Pennsylvania.

Specimens examined: West Klickitat County, Suksdorf 31: Peshastin, Sandberg & Leiberg 508.

Zonal distribution: Transition.

22. Carex dives Holm, Am. Journ. Sci. IV. 18: 19, 1904.

Type locality: Chilliwack Valley, British Columbia.

Range: British Columbia to Oregon.

Specimens examined: Nisqually, Wilkes Expedition 308; Trout Lake, Suksdorf 43, 44; Cascade Mountains, Suksdorf 41.

Zonal distribution: Humid Transition.

These specimens have been supposed to represent C. barbarae Dewey, and may prove to belong there. Suksdorf's No. 41 was labelled C. aquatilis Wahl., and is perhaps the basis for the inclusion of that name in his list of Washington plants.

23. Carex douglasii Boott in Hook. Fl. Bor. Am. 2: 213. t. 214. 1839.

Type locality: "X. W. coast." Collected by Douglas.

Range: British Columbia and Saskatchewan to California and New Mexico.

Specimens examined: Wenache, Griffiths & Cotton 135; Rattlesnake Mountains, Cotton 572; North Yakima, Griffiths & Cotton 65; Brewster, Griffiths & Cotton 257; Cow Creek, Griffiths & Cotton 505; Ellensburg, Piper 2744; Rock Lake, Sandberg & Leiberg, May, 1893; Rock Creek, Sandberg & Leiberg 79; Ritzville, Sandberg & Leiberg 188; Spokane County, Suksdorf 80; Pullman, Piper, June, 1899.

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

24a. Carex festiva horneri nom. nov.

Carex festiva stricta Bailey, Mem. Torr. Club 1: 51, 1889, not C. stricta Lam. 1789.

Type locality: California.

Range: Washington to California.

Specimens examined: Olympic Mountains, Elmer 2702; Mount Rainier, Piper 2532; Simcoe Mountains, Suksdorf 60; west Klickitat County, Suksdorf 14; Stevens Pass, Sandberg & Leiberg 773; Conconully, Griffiths & Cotton 298; Blue Mountains, Horner, June 17, 1896, 479; Piper 2272.

Zonal distribution: Hudsonian and Arctic.

24b. Carex festiva pachystachya (Cham.) Bailey, Mem. Torr. Club 1: 51, 1889.

Carex pachystachya Cham.; Steud. Pl. Glum. 2: 197. 1855.

Type locality: "In Unalaschka."

RANGE: Alaska to Montana and Oregon.

Specimens examined: Olympic Mountains, Elmer 2709; Montesano, Heller 3954; Seattle, Piper, June 9, 1884; Henderson 2107; Mount Adams, Henderson, August 6, 1892; Nisqually Valley, Allen, 164; Stevens Pass, Sandberg & Leiberg 756; Skamania County, Flett 1373; Rattlesnake Mountains, Cotton 700; Lake Omach, Griffiths & Cotton 402; Wenache, Whited, June 28, 1896, 1081; Wenas, Henderson, June 18, 1892; Bridge Creek, Elmer 815; Stehekin, Griffiths & Cotton 245; Salmon River, Horner 483; Waitsburg, Horner 199; Pullman, Piper 1934; Blue Mountains, Lake & Hull 371.

ZONAL DISTRIBUTION: Transition.

25. Carex festucacea brevior (Dew.) Fernald, Proc. Am. Acad. 32: 477, 1902.

Carex straminea brevior Dew. Am. Journ. Sci. 11: 158, 1826.

Type locality: "Grows with the other [i. e. C. straminea] also in Missouri."

Range: British Columbia and Washington to New England and Arkansas.

Specimens examined: West Klickitat County, Suksdorf 13, 74, 613; Spokane, Henderson, July 10, 1892; Toppenish, Henderson 2070; without locality, Vascy in 1889.

ZONAL DISTRIBUTION: Arid Transition.

26. Carex feta Bailey, Bull. Torr. Club 20: 417, 1893.

Carex straminea mixta Bailey, Proc. Am. Acad. 22: 151, 1886, not C. mixta Miégey, 1865, Type Locality: California.

Range: Washington to California.

Specimens examined: Vancouver, Piper 6477; Falcon Valley, Suksdorf 3103; Husum, Suksdorf 3102.

ZONAL DISTRIBUTION: Humid Transition.

The Columbia River specimens referred to *C. lagopodioides* Schk, in Hooker's Flora *a* probably belong to *C. feta*. Suksdorf's record of *C. adusta* Boott is, to judge from a specimen so labeled, likewise *C. feta*.

27. Carex filifolia Nutt. Gen. 2: 204, 1818.

Type locality: "Dry plains and gravelly hills of the Missouri."

RANGE: British Columbia and Saskatchewan to California and Colorado.

Specimens examined: Rattlesnake Mountains, Cotton 329; Chelan, Griffiths & Cotton 249; Fort Colville, Lyall in 1861; Rock Lake, Sandberg & Leiberg, May, 1893; Rock Creek, Piper 2790; Sandberg & Leiberg 81; Pullman, Piper 1764; Elmer 837.

Zonal distribution: Arid Transition.

28. Carex filiformis L. Sp. Pl. 2: 916, 1753.

Type locality: European.

Range: British Columbia to Labrador, south to Washington and New Jersey.

Specimens examined: Seattle, Piper 1108; Stehekin, Griffiths & Cotton 207; Ellensburg, Piper 2748.

Zonal distribution: Transition.

29. Carex flava recterostrata Bailey, Bot. Gaz. 13:84. 1888.

Type locality: Vancouver Island. Collected by Macoun.

Range: British Columbia to Oregon and Idaho.

Specimens examined: Clallam County, Elmer 2704; Mount Constitution, Henderson 2090; Lake Padden, Suksdorf 1017; Loomis, Elmer 560; Bridge Creek, Elmer 560; Quinault, Conard 248; Padden Lake, Suksdorf 1017.

ZONAL DISTRIBUTION: Transition and Canadian.

30. Carex furva (Bailey).

Carex pratensis furva Bailey; Macoun Cat. Can. Pl. 2:377. 1890.

Carex pratericola furva Heller, Cat. N. A. Pl. ed. 2. 3. 1900.

Type locality: "In damp meadows at Cedar Hill, Goldstream, and throughout northern Vancouver Island."

Range: British Columbia and Washington.

Specimens examined: Coupeville, Gardner 296.

Zonal distribution: Humid Transition.

31. Carex fusca All. Fl. Ped. 2:269. 1785.

Carex buxbaumii Wahl, Kongl. Vet. Akad. Handl. H. 24:163, 1803.

Type locality: "Frequens in alpibus, quae monte Vesulo et Cenisio intercipiuntur."

RANGE: Alaska to Laborador, south to California and Georgia.

Specimens examined: Cascade Mountains, Tweedy 4; Lake Keechelus, Henderson 2079.

32. Carex gayana Desv. in Gay, Fl. Chil. 6:205. 1853.

Type locality: Chile.

Range: Washington to Colorado and California and southward.

Specimens examined: Falcon Valley, Suksdorf 2; also May 19 and July, 1884.

ZONAL DISTRIBUTION: Arid Transition.

33. Carex geyeri Boott, Trans. Linn. Soc. 20: 118, 1846.

Type locality: "In declivitatibus aridis Montium Saxosorum, Americae Septentrionalis." Collected by Geyer (No. 332).

RANGE: British Columbia to Colorado and California.

Specimens examined: Goat Mountains, Allen 169; near Ellensburg, Piper, May, 1897; Upper Atanum River, Henderson 2076; Mount Stuart, Sandberg & Leiberg 828; Kamiak Butte, Piper, July 20, 1899; without locality, Geyer 332.

Zonal distribution: Arid Transition.

34. Carex gymnoclada Holm, Am. Journ. Sci. IV. 14: 424. 1902.

Type locality: "Eastern Oregon, bogs of Hurricane Creek, 6,000 ft. alt." Collected by Cusick.

Range: Washington and Oregon.

Specimens examined: Mount Adams, Henderson 2097; Big Klickitat River, Henderson, August 4, 1892; Clallam County, Elmer 2708.

Zonal distribution: Aretic.

35. Carex hendersoni Bailey, Proc. Am. Acad. 22: 115. 1886.

Type locality: Portland, Oregon. Collected by Henderson.

Range: British Columbia to California.

Specimens examined: Scattle, Piper 999; Chenowith, Suksdorf 2982; Lower Cascades, Suksdorf 1904.

Zonal distribution: Humid Transition.

36. Carex hoodii Boott in Hook. Fl. Bor. Am. 2: 211. t. 211. 1839.

Type locality: "Columbia River." Collected by Douglas and by Scouler.

RANGE: Oregon to Montana and British Columbia.

Specimens examined: West Klickitat County, Suksdorf 71; Easton, Henderson 2103; Spokane, Henderson 2109; Bingen, Suksdorf 4434; without locality, Vasey in 1889; Clark Springs, Beattie & Chapman 2044; Coupeville, Gardner 309, 310.

Zonal distribution: Arid Transition.

36a. Carex hoodii neurocarpa nom. nov.

Carex hoodii nervosa Bailey, Mem. Torr. Club 1: 14. 1889, not C. nervosa Desf. 1800.

Type locality: "California."

Range: California to Washington.

Specimens examined: None; reported by Bailey from Seattle, Howell.

37. Carex hookerana Dewey, Am. Journ. Sci. 29: 248. 1836.

Carex muricata gracilis Boott, Ill. 193. 1858.

Type locality: "Found at Carlton House by Dr. Richardson."

Range: Washington to Saskatchewan, Utah, and California.

Specimens examined: Bingen, Suksdorf 2821.

38. Carex hystricina Willd.; Schkuhr, Riedgr. 2: 69. 1801.

Type locality: "Habitat in humidis Pensylvaniae."

RANGE: British Columbia to Nova Scotia, south to Oregon, Nebraska, and Georgia.

Specimens examined: Head of Priest Rapids at "The Junipers," Cotton 1379, July 16, 1993

39. Carex illota Bailey, Mem. Torr. Club 1: 15, 1889.

Carex bonplandii minor Gray, Proc. Acad. Phila. 1863: 77. 1863.

Type locality: Colorado.

Range: Washington to Colorado and Utah.

Specimens examined: Olympic Mountains, Flett 824; Elmer 2703; Piper 996; Mount Adams, Suksdorf 3, 4; Bridge Creek, Elmer 2706; Mount Adams, Suksdorf 4251, 4252; Hell Roaring River, Cotton 1503.

Zonal distribution: Arctic.

40. Carex interrupta Boeckl. Linnaea 40: 432. 1876.

Carex angustata verticillata Boott in Hook. Fl. Bor. Am. 2: 218. 1839.

Carex vertieillata Boott, Ill. 67. t. 183. 1858, not C. verticillata Zoll. & Moritzski. 1846.

Type locality: Columbia River.

RANGE: Washington, Oregon, and Idaho.

Specimens examined: West Klickitat County, Suksdorf 9: Mount Adams, Henderson, August 5, 1892; Quinault, Conard 165; Tumwater, Henderson, August 2, 1892; without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Humid Transition.

41. Carex irrasa Bailey, Bot. Gaz. 25: 271. 1898.

Carex douglasii laxiflora Bailey, Mem Torr. Club 2: 20. 1889, not C. laxiflora Lam.

Type locality: "Near Utica, Montana."

RANGE: Washington to Montana.

Specimens examined: Between Coulee City and Waterville, Spillman, May, 1896.

Zonal distribution: Arid Transition.

42. Carex jonesii Bailey, Mem. Torr. Club 1: 16. 1889.

Type locality: "Soda Springs, Nevada Co., Cal., 7,000 feet." Collected by M. E. Jones.

Range: California to Washington.

Specimens examined: Cascade Mountains, Tweedy~27; Stevens Pass, Sandberg~&~Leiberg~773.

43. Carex kelloggii W. Boott in S. Wats. Bot. Cal. 2: 240. 1880.

Carex aeuta pallida Boott, Ill. 166. 1867, not C. pallida Meyer.

Carex vulgaris lipocarpha Holm, Am. Journ. Sci. IV. 17: 308. 1904.

Carex rigida strictiformis Bailey, err. det. Piper, Fl. Palouse Reg. 38.

Type locality: California, "In the Sierra Nevada at Alta."

RANGE: Alaska to Idaho and California.

Specimens examined: Olympic Mountains, Piper 2245, 985; Seattle, Piper 989; Clallam County, Elmer 2707; Mount Rainier, Piper 2548; Allen 267; Lake Keechelus, Henderson 2080; Nisqually Valley, Allen 167; Wenache River, Whited, August 25, 1901; North Yakima, Henderson 2083; Clealum Lake, Cotton 863; Klickitat River, Flett 1415; Cascade Mountains, Tweedy 3; Davis Lake, Kreager 439; Spokane, Piper 2851; Pullman, Elmer 881; Mount Adams, Suksdorf 19; Klickitat County, Suksdorf 18.

Zonal distribution: Transition mainly.

This is the commonest representative of *C. vulgaris* Fries on the Pacific coast, and it has been mistaken for *C. vulgaris juncella* Fries. Our plant has commonly been called *C. decidua* Boott, a species from Terra del Fuego and the Falkland Islands, but that has conspicuously stipitate perigynia. Specimens from the mouth of the Columbia, Oregon, collected by Hinds and by Henderson have stipitate perigynia and represent either true *C. decidua* or a very closely allied species.

44. Carex laeviculmis Meinsch. Bot. Centralb. 55. 1893.

Carex deveyana sparsiflora Bailey, Bot. Gaz. 13: 87. 1888, not Carex sparsiflora Fries. Type locality: "Kamtschatka, Insel Sitcha."

Range: Alaska to Oregon and Idaho.

Specimens examined: Whatcom County, Gardner 414; upper Nisqually Valley, Piper 2534; Allen 162; Mount Adams, Henderson, August 6, 1892; Stevens Pass, Sandberg & Leiberg 708; Piper 2318; Stampede Tunnel, Henderson 2067; Bridge Creek, Elmer 685; Mount Carlton, Kreager 248; Touchet River, Horner 486.

Zonal distribution: Canadian.

45. Carex lanuginosa Michx. Fl. 2: 175, 1803.

Carex filiformis latifolia Boeckl. Linnaea 41: 309. 1877.

Type locality: "Ad lacus Mistassins," Canada.

Range: British Columbia to Nova Scotia, south to California, New Mexico, and Pennsylvania.

Specimens examined: North Yakima, Henderson, May, 1892; west Klickitat County, Suksdorf 51; Satus, Elmer 1068; Crab and Wilson creeks, Sandberg & Leiberg 322, Coulee City, Henderson, July, 1892; Conconully, Griffiths & Cotton 274; Brewster, Griffiths & Cotton, 261; Cow Creek, Griffiths & Cotton 498; Grand Coulee, Griffiths & Cotton 444, 468; Wenas, Griffiths & Cotton 83; Pullman, Piper 3510; Vancouver, Piper 6441.

Zonal distribution: Transition.

46. Carex lenticularis Michx. Fl. 2: 172. 1803.

Type locality: "Per tractus montium, a sinu Hudsonis ad Canadam, praesertim ad lacum Cycnorum dictum."

Range: Washington to Labrador and Maine.

Specimens examined: Sumas Prairie, Lyall in 1858; Larm River, Suksdorf 40.

ZONAL DISTRIBUTION: Transition.

47. Carex leporina L. Sp. Pl. 2: 973. 1753.

Type locality: "Habitat in Europae pratis udis."

Range: Washington and British Columbia; Nova Scotia, New England, and New York, Europe. Asia.

Specimens examined: Seattle, Piper 1003; East Sound, Henderson 2074.

48. Carex Ieptalea Wahl, Kongl. Vct. Akad, Handl. II, 24: 139, 1803.

Carex polytrichoides Willd. in Wahl, loc. cit. as synonym.

Type locality: "Habitat in Pennsylvania."

Range: Washington to Saskatchewan, south to Florida.

Specimens examined: Clallam County, Elmer 2714; Samish Lake, Suksdorf 1016; Seattle,

Piper in 1888; Stampede Pass, Henderson 2057; Vancouver, Piper 6442.

ZONAL DISTRIBUTION: Humid Transition.

49. Carex liddoni Boott in Hook. Fl. Bor. Am. 2: 214. t. 215. 1839.

Type locality: "Columbia River." Collected by Scouler.

RANGE: Washington to Montana and Colorado.

Specimens examined: Columbia River, Scouler; Chelan Butte, Griffiths & Cotton 169; Loomis, Elmer 577; Spokane County, Suksdorf 61; Spangle, Piper 3544.

ZONAL DISTRIBUTION: Arid Transition.

50. Carex limosa L. Sp. Pl. 2: 977, 1753.

Type locality: Europe.

Range: Washington to Labrador, south to New Jersey.

Specimens examined: Seattle, *Piper* 1109; upper Nisqually Valley, *Allen* 295; Pend Oreille River, *Lyall* in 1861.

ZONAL DISTRIBUTION: Canadian?

51. Carex luzulaefolia W. Boott in Wats. Bot. Cal. 2: 250, 1876.

Type locality: "In the Sierra Nevada, at high altitudes, from above Yosemite Valley to Ebbett's Pass and northward," California.

Range: Washington to California.

Specimens examined: Mount Adams, Suksdorf 26.

This specimen is perhaps only a broad-leaved form of C. ablata Bailey.

52. Carex macrocephala Willd.; Spreng. Syst. 3: 808, 1826.

Type locality: "Sibir.!" Collected by Pallas.

Range: Seashores, Cook Inlet, Alaska, to Oregon.

Specimens examined: Challam County, Elmer 2710; Shoalwater Bay, Cooper; Whidby Island, Gardner 314; Port Angeles, Piper 2306; Grays Harbor, Wilkes Expedition.

ZONAL DISTRIBUTION: Humid Transition.

53. Carex macrochaeta C. A. Meyer, Mem. Sav. Etr. Petersb. 1: 221. t. 13. 1831.

Type locality: "Habitat in Unalaschka."

Range: Alaska to Oregon.

This species is reported from Fort Vancouver by Hooker Fl. 2:219. We have seen no Washington specimens, but the plant is known to occur near Multnomalı Falls on the south bank of the Columbia River, and in Chilliwacke Valley just north of the forty-ninth parallel.

54. Carex magnifica Dewey, ined.

Carex sitchensis Hook. Fl. Bor. Am. 2: 220. t. 221, 1839, not Prescott.

Range: British Columbia to California west of the Cascade Mountains.

Specimens examined: Montesano, Heller 3860; Ashford, Allen, August 15, 1898; Scattle, Piper 1107, 990; Cascades of Columbia, Suksdorf 20; Mouth of Columbia, Scouler; Lake Wenache, Sandberg & Leiberg 636; Claffam County, Elmer 2716; Vancouver, Piper 6443; Ilwaco, Piper 6447.

Zonal distribution: Humid Transition.

55. Carex marcida Boott in Hook, Fl. Bor, Am. 2: 212, 1839.

Type locality: "Columbia River." Collected by Scouler.

Range: British Columbia to California and Colorado.

Specimens examined: North Yakima, Steinweg: Henderson 2065; Toppenish, Henderson 2059; Morgans Ferry, Suksdorf 62: Snipes Mountain, Cotton 316; Silver Lake, Henderson 2059;

derson 2029; Coulee City, Henderson 2062; Lake Chelan, Lake & Hull 363; Crab Creek, Suksdorf 58; Junction Crab and Wilson Creek, Sandberg 321; Wenas, Griffiths & Cotton 81; Grand Coulee, Griffiths & Cotton 447; Loomis, Griffiths & Cotton 347; Lake Omack, Griffiths & Cotton 408; Cow Creek, Griffiths & Cotton 537; Conconully, Griffiths & Cotton 278; Condons Ferry, Griffiths & Cotton 419; Toppenish, Cotton 1163, 1164, 1169; St. Johns, Piper 2744; Ellensburg, Whited 310.

Zonal distribution: Upper Sonoran and Arid Transition.

56. Carex mertensii Prescott in Bong. Mem. Acad. St. Petersb. VI. 2: 168, 1832.

Type locality: Sitka.

Range: Alaska to Oregon.

Specimens examined: Clallam County, Elmer 2711; Olympic Mountains, Piper 2246; Mason County, Henderson, June, 1892; upper Nisqually Valley, Allen 166; Snoqualmie, Smith 988; Cascade Mountains, 49°, Lyall in 1859; Skagit Pass, Lake & Hull 401; Stevens Pass, Sandberg & Leiberg, August, 1893; Whited, August 27, 1901; Mount Adams, Suksdorf 33; Mount Stuart, Elmer 1174; Peshastin, Sandberg & Leiberg 513; Stehekin, Griffiths & Cotton 200; Nason Creek, Sandberg & Leiberg 674; without locality, Vascy in 1899; Horseshoe Basin, Elmer 739.

Zonal distribution: Hudsonian.

57. Carex mirata Dew. Wood's Botany 428. 1865.

Carex exsiceata Bailey, Mem. Torr. Club 1:6, 1889.

Carex exsiccata globosa Bailey, l. c.

Carex vesicaria major Boott in Hook. Fl. Bor. Am. 2: 221. 1839, not C. teretiuscula major Koch, Syn. 751. 1837.;

Type locality: "In Greece, eleven miles west of Rochester and six south of Lake Ontario," New York.

Range: Washington to California; Ontario; New York.

Specimens examined: Seattle, Piper 993; upper Nisqually Valley, Allen 161; Clallam County, Elmer 2720.

Zonal distribution: Humid Transition.

58. Carex monile pacifica Bailey, Proc. Cal. Acad. II. 3: 105, 1890.

Carex vesicaria L. err. det. W. Boott in Wats. Bot. Cal. 2: 252, 1876.

Type locality: Donner Lake, California.

Range: Washington and Idaho to California.

Specimens examined: Klickitat River, Flett 1413; Union Flat, Piper 3044; Henderson 2095; Pullman, Piper 2659, 3509; Hull 382; Blue Mountains, Lake & Hull, July 1, 1892; Toppenish, Henderson, May 28, 1892.

ZONAL DISTRIBUTION: Transition, mainly.

59. Carex multimoda Bailey, Bot. Gaz. 21: 5. 1896.

Carex festiva graeilis Olney, Proc. Am. Acad. 8: 407, 1873, nom. mid.

Type locality: Oregon. Collected by Hall.

Range: Washington to California

Specimens examined: Olympic Mountains, Piper 2249; Seattle, Piper 1110, 1111; Mount Rainier, Allen 193a; Piper 2536, 2544. East Sound, Henderson, July 3, 1892; Ellensburg, Elmer 403; Horseshoe Basin, Elmer 742, 741, 738; Lake & Hull 414; Lake Chelan, Lake & Hull 403, 371, 404, Clallam County, Elmer 2700, 2701; Vancouver, Piper 6476; Blue Mountains, Piper 2273; Horner 481; Hell Roaring River, Cotton 1513.

Zonal distribution: Transition to Arctic.

60. Carex nardina Fries, Nov. Mant. 2: 55, 1842.

Type locality: "In Junkersdalen Lapponiae Lilensis."

Range: Alaska to Greenland south to Washington and Montana. Europe. Asia. Specimens examined: Mount Rainier, Allen 173, Piper 2542; Mount Stuart, Elmer

1128; Mount Adams, Flett 1403; Henderson, August 10, 1892; Wenache Mountains, Whited 844.

Zonal distribution: Arctic.

61. Carex nebrascensis Dew. Am. Journ. Sci. H. 18: 102, 1854.

Carex nebraseensis praevia Bailey; Mem. Torr. Club 1: 49, 1889.

Carex jamesii Torr. Ann. Lyc. N. Y. 398, 1836, not Schwein, 1824.

Type locality: None given, but presumably collected in Nebraska by Hayden.

Range: Washington to Nebraska and New Mexico.

Specimens examined: Falcon Valley, Suksdorf 21; Wilbur, Henderson, July 12, 1892; Union Flat, Piper 3040; Henderson 2101; Pullman, Lake & Hull 397; Cow Creek, Griffiths & Cotton, 521.

Zonal distribution: Arid Transition.

61a. Carex nebrascensis ultriformis Bailey, Bot. Gaz. 21: S. 1896.

Type locality: Ritzville, Washington. Collected by Sandberg & Leiberg.

Range: Washington.

Specimens examined: Falcon Valley, Howell 104; Ritzville Sandberg & Leiberg 194; Union Flat, Piper 3041.

ZONAL DISTRIBUTION: Arid Transition.

62. Carex nervina Bailey, Bot. Gaz. 10: 203. pl. 3, 1885.

Type locality: Summit Camp, California.

Range: Washington to California.

Specimens examined: Little Klickitat River, Henderson, August 4, 1892.

63. Carex nigricans C. A. Meyer, Mem. Sav. Etr. Petersb. 1: 211. 1831.

Type locality: "Habitat in Unalaschka."

Range: Alaska to California and Utah. Kamtschatca.

Specimens examined: Mount Rainier, Piper 2539, 2551; Smith; Allen 268; Mount Stuart, Elmer 1130; Mount Adams, Henderson, August, 1892; Howell 101, 102; Suksdorf, August 8, 1882; Cascade Mountains, Tweedy 6; Skagit Pass, Lake & Hull 411; Horseshoe Basin, Elmer 737; Stevens Pass, Sandberg & Leiberg 767.

Zonal distribution: Arctic.

64. Carex nudata W. Boott in Wats. Bot. Cal. 2: 241. 1876.

Type locality: "In the Coast Ranges, from San Francisco Bay to Ukiah."

Range: California to Washington.

Specimens examined: Without locality, August, 1882, probably collected by Brandegee.

64a. Carex nudata versuta nom. nov.

Carex aperta angustifolia Boott in Hook. Fl. Bor. Am. 2: 218. 1839, nom. nud.

Carex nudata angustifolia Bailey, Mem. Torr. Club 1: 16, 1889.

Type locality: "Fort Good Hope, Mackenzies River." Collected by Richardson.

Range: Oregon. Washington, and northward.

Specimens examined: Cascade Mountains, latitude 49°, Lyall.

65. Carex occidentalis Bailey, Mem. Torr. Club 1: 14. 1889.

Carex muricata americana Bailey, Proc. Am. Acad. 22: 140. 1886.

Type locality: "Santa Rita Mountains, Arizona." Collected by Pringle.

Range: Washington and Montana to Arizona.

Specimens examined: Klickitat County, Suksdorf 1297.

·

66. Carex oregonensis Olney: Bailey, Proc. Am. Acad. 22: 73. 1886.

Carex halliana Bailey, Bot. Gaz. 9: 117. 1884, not C. hallii Olney. 1871.

Carex oregonensis Olney, Proc. Am. Acad. 8: 407. 1872, nom. nud.

Type locality: Oregon. Collected by Hall.

Range: Oregon and Washington.

Specimens examined: Mount Adams, Suksdorf 68, 52; Howell 97; Skamania County, Flett 1380; Yakima County, Henderson, August 12, 1882.

67. Carex pachystoma Holm, Am. Journ. Sci. IV. 20: 302. 1905.

Type Locality: Crater Lake National Park and Klamath County, Oregon; Mount Adams and west Klickitat County, Washington.

Range: Washington and Oregon.

Specimens examined: Mount Adams, Suksdorf 4248, 2959.

68. Carex paddoensis Suksdorf, Allg. Bot. Zeitschrift 12: 43. 1906.

Type locality: Mount Paddo (Adams).

 ${\tt Specimens \ Examined: \ Mount \ Rainier, \ Allen\ 172; \ Piper\ 2541; \ Mount \ Adams, Howell\ 92.}$

Zonal distribution: Arctic.

This species is related to C. breweri and C. engelmanni, to both of which species it has erroneously been referred.

69. Carex pansa Bailey Bot. Gaz. 13: 82. 1888.

Type locality: "Very abundant in drifting sand as well as borders of sea estuaries, Clatsop, Oregon, and Ilwaco, Washington Territory." Collected by Henderson.

Range: Sea coast of Washington and Oregon.

Specimens examined: Westport, Henderson in 1892; Hwaco, Piper 6437.

Zonal distribution: Humid Transition.

70. Carex pauciflora Lightf. Fl. Scot. 2: 543. t. 6. 1777.

Type locality: "In the isle of Arran," Scotland.

RANGE: Alaska to Labrador, south to Washington and Pennsylvania.

Specimens examined: Mount Constitution, Henderson 2056; Weiser Lake, Suksdorf 1015.

Zonal distribution: Canadian.

71. Carex phaeocephala nom. nov.

Carex leporina americana Olney, Proc. Am. Acad. 8: 407, 1872, nom. nud.; 22: 152, 1886, not C. muricata americana Bailey, Proc. Am. Acad. 22: 140, 1886.

Type locality: Oregon. Collected by Hall.

Range: British Columbia to Oregon and Colorado.

Specimens examined: Olympic Mountains, Piper 2553; Mount Rainier, Piper 2535; Allen, August 14, 1895; Mount Adams, Suksdorf 8, 9, 10, 592; Mount Stuart, Elmer 1133; Cascade Mountains, Tweedy 10.

ZONAL DISTRIBUTION: Aretic.

This species has been considered to be the same as C, preslii Steud., based on the C, leporina L. of Presl in Reliquiae Haenkeanae. The type of C, preslii came from the shores of Nootka Sound, and there is scarcely a possibility that the high alpine \overline{C} , leporina americana can be the same. It is much more likely that C, preslii is a form of C, festiva. C, petasata Dewey, the type of which is in the Gray Herbarium, is a very different species from C, phaeocephala.

72. Carex polymorpha Muhl. Gram. Descr. 239. 1817.

Type locality: "Habitat in Pennsylvania."

RANGE: Washington; Massachusetts to North Carolina.

Specimens examined: Skamania County, Suksdorf 2895.

73. Carex prionophylla Holm, Am. Journ. Sci. IV. 15: 423. 1902.

Type locality: "Divide between St. Joe and Clearwater rivers," Idaho.

Range: Washington and Idaho.

Specimens examined: Mount Carlton, Kreager 264.

Carex pulchella Holm, Am. Journ. Sci. IV. 16: 457, 1903.

Carex hallii Bailey, Proc. Am. Acad. 22: 82. 1886, not C. hallii Olney. 1871.

Type locality: Oregon. Collected by Hall.

RANGE: Washington to California.

Specimens examined: Klickitat Meadows, Flett 1357, 1365; without locality, Vascy in 1889; Falcon Valley, Suksdorf 816, 1284.

75. Carex pyrenaica Wahl. Kongl. Vet. Akad. Handl. 24: 139. 1803.

Type locality: "Hab. in Pyrenaeis."

Range: Alaska to Colorado and California. Asia. Europe.

Specimens examined: Olympic Mountains, Flett 825; Elmer 2722; Mount Rainier, Piper 2540; Allen 171; Mount Adams, Suksdorf 28.

Zonal distribution: Arctic.

76. Carex raynoldsii Dew. Am. Journ. Sci. H. 32: 39, 1861.

Carex lyallii Boott, Ill. 150. pl. 483. 1858.

Type locality: "Pierre's Hole, Snake River Valley, alt. 6,000 ft." Collected by Hayden.

RANGE: Wyoming to Montana, westward to California and British Columbia.

Specimens examined: Mount Chapaca, Elmer 580, Mount Adams, Henderson, August, 1892; Wenache Region, Brandegee 1143; Cascade Mountains, latitude 49°, Lyall (type of C. lyallii); Wenache Mountains, Cotton 1240.

Zonal distribution: Canadian and Hudsonian.

77. Carex retrorsa Schwein, Ann. Lyc. N. Y. 1: 71, 1824.

Type locality: Massachusetts.

Range: British Columbia to Saskatchewan, southward to Washington and Pennsylvania. Specimens examined: Peshastin, Sandberg & Leiberg 592; Loomis, Elmer 616; Waitsburg, Horner 29; Clarks Springs, Kreager 566; Priest Rapids, Cotton 1379.

Zonal distribution: Arid Transition and Upper Sonoran.

78. Carex richardsoni R. Br. in Richards. Bot. App. Frankl. Journ. 751, 1823.

Type locality: British America "In the wooded country from latitude 54° to 64° north."

Range: Saskatchewan to New York, South Dakota, and Washington.

Specimens examined: Near Waitsburg, Horner 208.

79. Carex rigida hesperia nom. nov.

Carex vulgaris bracteosa Bailey, Proc. Am. Acad. 22: 81, 1886, not C. bracteosa Schwein. 1824.

Type locality: "Ebbett's Pass, California, alt. 8,000 feet." Collected by Brewer.

Range: Washington to California.

Specimens examined: Cascade Mountains, Tweedy 19, 24; mountains north of Ellensburg, Brandegee 1142; Mount Rainier, Allen 269; Piper 2533 in part; Mount Adams, Suksdorf 16, 17, 36.

Zonal distribution: Aretic.

80. Carex rossii Boott in Hook. Fl. Bor. Am. 2: 222. 1839.

Carex deflexa rossii Bailey, Bot. Gaz. 10: 207. 1885.

Carex deflexa media Bailey, Mem. Torr. Club 1: 43. 1889.

Type locality: "N. W. Coast, Douglas; Rocky Mountains, Drummond."

RANGE: British Columbia to Colorado and Oregon.

Specimens examined: Clallam County, Elmer 2718; Coupeville, Gardner 343; Mount Rainier, Allen 168; Mount Adams, Henderson 2094; Suksdorf 24; Klickitat River, Suksdorf 48; Hangman Creek, Sandberg & Leiberg 30; Kamiak Butte, Piper 3094; Blue Mountains, Horner 480; Mount Rainier, Piper 2543, 2552, 2537; west Klickitat County, Suksdorf 77; Olympia, Henderson 2093; Wenache Region, Brandegee 1145.

ZONAL DISTRIBUTION: Arctic to Transition.

It is exceedingly probable that all the Oregon and Washington specimens that have been referred to C. varia Muhl. and C. novae-angliae Schwein, are in reality forms of C. rossii.

80. Carex rostrata Stokes; With. Bot. Arr. Brit. Veg. ed. 2, 1059, 1787.

Carex ampullacea Goodenough, Trans. Linn. Soc. 2: 207, 1794.

Type locality: "Bogs of Isla, and on Bentelkerny in Breadalbane," Great Britain.

RANGE: British Columbia to Newfoundland south to New York, Utah, and California.

Specimens examined: Mount Adams, Suksdorf 1278.

81. Carex scirpoidea Michx. Fl. 2: 171, 1803.

Carex pseudoscirpoidea Rydberg, Mem. N. Y. Bot. Gard. 1: 78, 1900.

Type locality: "Ad sinum Hudsonis."

RANGE: Alaska to Greenland, south to New England and Washington.

Specimens examined: Olympic Mountains, Piper 2243; Mount Stuart, Elmer 1126, Skagit Pass, Lake & Hull 408; Horseshoe Basin, Elmer 684.

Zonal distribution: Arctic.

The western form is somewhat larger and broader-leaved as a rule, a difference we consider too slight to warrant separating it as a distinct species as has been done by Rydberg.

82. Carex scoparia Schkuhr; Willd. Sp. Pl. 4: 230, 1805.

Type locality: "Habitat in America boreali."

Range: British Columbia to Nova Scotia south to Colorado and Florida.

Specimens examined: Vancouver, Henderson, June 12, 1892.

Zonal distribution: Arid Transition.

83. Carex scopulorum Holm, Am. Journ. Sci. IV. 14: 422. 1902.

Type locality: "In the region of Clear Creek Cañon" Colorado.

RANGE: Washington to Montana and Colorado.

Specimens examined: Olympic Mountains, Piper 2247; Flett 826; Mount Rainier, Allen 170; Piper 2533 in part; Little Klickitat River, Henderson, August 4, 1892; Horseshoe Basin, Elmer 729; Lake & Hull 407; Mount Adams, Suksdorf 4246, 4247.

Zonal distribution: Arctic and Hudsonian.

84. Carex siccata Dewey, Am. Journ. Sci. 10: 278, 1826.

Type locality: Westfield, Massachusetts.

RANGE: Alaska to Ontario, south to Oregon and New York.

Specimens examined: Mount Baldy, Wenache Mountains, Cotton 1757.

85. Carex sitchensis Prescott in Bong. Mem. Acad. St. Petersb. VI. 2: 169, 1832.

Carex howellii Bailey, Mem. Torr. Club, 1: 45, 1889.

Type locality: Sitka.

Range: Alaska to Oregon along the coast.

Specimens examined: Shoalwater Bay, Henderson 1783; Mount Constitution, Henderson 2086.

ZONAL DISTRIBUTION: Humid Transition and Canadian.

86. Carex specifica Bailey, Mem. Torr. Club 1: 21. 1889.

Type locality: "California, Silver Valley, head of Toulumne River, and Ebbett's Pass."

Range: Washington to California.

Specimens examined: Mount Adams, Suksdorf 3099.

87. Carex spectabilis Dew. Am. Journ. Sci. 29: 248. pl. 10. f. 76. 1836.

Carex invisa Bailey, Proc. Am. Acad. 22: 82. 1887.

Type locality: "Found in the Arctic Regions."

Range: British Columbia to California.

Specimens examined: Mount Rainier, Allen 194a, 195a; Piper 2545, 2538; Smith, August, 1890; Mount Adams, Suksdorf 39, 76; Skagit Pass, Lake & Hull 402, 407; Fort Vancouver; Olympic Mountains, Flett 826.

Zonal distribution: Arctic.

Our species has erroneously been referred to C. podocarpa R. Br., a quite different plant.

88. Carex stellulata Good, Trans. Linn. Soc. 2: 144, 1794.

TYPE LOCALITY: England.

Range: Alaska to Labrador south to California and Maryland. Europe. Asia.

Specimens examined: Stevens Pass, Sandberg & Leiberg 761; Lake Keechelus, Henderson in 1892; Mount Constitution, Henderson, July, 1892.

Zonal distribution: Canadian.

88a. Carex stellulata excelsior (Bailey).

Carex sterilis excelsior Bailey, Bull, Torr, Club 20: 424, 1893.

Carex echinata excelsior Fernald, Proc. Am. Acad. 37: 484, 1902.

Type locality: None given.

RANGE: British Columbia and Oregon to Newfoundland and North Carolina.

Specimens examined: Seattle, Piper 1111; Vancouver, Piper 6444.

ZONAL DISTRIBUTION: Humid Transition.

88b. Carex stellulata ormantha (Fernald).

Carex echinata ormantha Fernald, Proc. Am. Acad. 37: 483, 1902.

Type locality: Strawberry Creek, Eldorado County, California.

Range: Washington to California. Connecticut.

Specimens examined: Mount Adams, Henderson, August, 1892.

89. Carex stipata Muhl.; Willd. Sp. Pl. 4: 233, 1805.

Type locality: Pennsylvania.

RANGE: British Columbia to Newfoundland, south to California and Florida.

Specimens examined: Olympic Mountains, Grant in 1889; Clallam County, Elmer 2705; Seattle, Piper 998; North Yakima, Griffiths & Cotton 62; Ellensburg, Whited 511; Peshastin, Sandberg & Leiberg 589; west Klickitat County, Suksdorf 29; Cascade Mountains, Tweedy 17; Blue Mountains, Lake & Hull 377; Pullman, Piper, July, 1893; Vancouver, Piper 6438.

ZONAL DISTRIBUTION: Transition.

90. Carex straminiformis Bailey, Mem. Torr. Club 1: 24, 1889.

Carex straminea congesta Boott; Olney, Proc. Am. Acad. 7: 393, 1868, not Carex congesta Meyer. 1858.

Type locality: Mount Shasta, California. Collected by Brewer.

Range: California, Oregon, and Washington.

Specimens examined: Mount Adams, Howell, August, 1882; Henderson, August 7, 1882; Suksdorf.

Zonal distribution: Aretie?

91. Carex tenella Schkuhr, Riedgr. 23. f. 104. IS01.

Type locality: Unknown.

Range: New Jersey to California and northward.

Specimens examined: Klickitat River, Suksdorf 73.

92. Carex teretiuscula ampla Bailey, Mem. Torr. Club 1: 53, 1889.

Type locality: "Quaking bogs, head of Burnt River, E. Oregon." Collected by Cusick.

Range: Washington, Oregon, Idaho, and British Columbia.

Specimens examined: Seattle, Piper 1002; Tacoma, Flett 210; Nisqually Valley, Allen 165; Coupeville, Gardner 308; McAllisters Lake, Henderson, June 22, 1892; Marshall Junction, Piper 2282; Pend Oreille River, Lyall in 1861; Vancouver, Piper 6445.

Zonal distribution: Humid Transition.

93. Carex umbellata brachyrhina nom. nov.

Carex umbellata brevirostris Boott, Ill. 2: 99. t. 294, 1860, not C. brevirostris Cederstr. 1857.

Type locality: "Carlton House." Collected by Richardson.

Range: British Columbia to Saskatchewan and Maine south to California and New Mexico.

Specimens examined: Mount Rainier, Allen 168; Coupeville, Gardner 343; Hangman Creek, Sandberg & Leiberg 30; Olympia, Henderson 2093.

94. Carex usta Bailey, Mem. Torr. Club, 1: 20, 1889.

Carex douglasii brunnea Olney, Bot. King Explor. 363, 1871, not C. brunnea Thunberg. Type locality: California.

Range: Washington to Nevada and California.

Specimens examined: Colville Reservation, Griffiths & Cotton 408; Kittitas Valley, Cotton 1216.

Zonal distribution: Arid Transition.

95. Carex utriculata Boott in Hook. Fl. Bor. Am. 2: 221. 1839.

Type locality: British America. Collected by Richardson.

Range: Alaska to Labrador south to California and Delaware.

Specimens examined: Lake Wenache, Sandbirg & Leiberg 640; Scattle, Piper 994; Tacoma, Flett 208; Clealum Lake, Cotton 846; Stehekin, Griffiths & Cotton 210; Mission, Griffiths & Cotton 490; Loomis, Griffiths & Cotton 332; Cow Creek, Griffiths & Cotton 497; Railroad Creek, Elmer 758; Marshall Junction, Piper 2277; Waitsburg, Horner 202; Mount Adams, Henderson 2095; Mount Adams, Suksdorf 1278.

Zonal distribution: Transition, mainly.

96. Carex vernacula Bailey, Bull. Torr. Club 20: 417. 1893.

Carex foctida "All." of American authors.

Type locality: "Colorado and Wyoming."

RANGE: Washington to California and Colorado.

Specimens examined: Mount Adams, Suksdorf 812; Henderson.

Zonal distribution: Arctic.

97. Carex vespertina (Bailey) Howell, Fl. N. W. Am. 1: 705. 1903.

Carex pennsylvanica vespertina Bailey, Mem. Torr. Club 1: 74, 1889.

Type Locality: "Dry hills near the Cascades of the Columbia," Oregon. Collected by Howell and by Henderson.

Range: Oregon to British Columbia.

Specimens examined: Waitsburg, Horner 208; Olympia, Henderson 2077; Chiquash Mountains, Suksdorf 2990; Mount Adams, Suksdorf 292, 437, 23, 67; Henderson 2078; Klickitat River, Flett 1406.

Zonal distribution: Arid Transition.

Specimens of this have been referred to C, globosa Boott, a species which seems not to occur in Washington.

98. Carex vicaria Bailey, Mem. Torr. Club 1: 49, 1889.

Type locality: "Oregon and California."

Range: Washington to California.

Specimens examined: Vancouver, Piper 6439.

Zonal distribution: Humid Transition.

99. Carex vulpinoidea Michx. Fl. 2: 169, 1803.

Type locality: "In Canada et Nova Anglia."

Range: Washington to New Brunswick, south to Florida and Texas.

Specimens examined: West Klickitat County, Suksdorf 1298; Ophir, Elmer 516; Cusick, Piper, September, 1903; Usk, Kreager, August 16, 1902.

Zonal distribution: Arid Transition.

Besides the above listed species in this difficult genus a number of others have been reported from the region, but there is too much uncertainty regarding them to warrant

their inclusion. Carex incisa Boott ' is based on Geyer's specimen collected in "rich mould; thickets of the fertile plairs above Colville." The brief description is as follows: "Differt a C. scabrata Schkuhr perigyniis Laevibus, etc., squamis foemineis viscidis, etc., F. B." It has not been identified. Carex rosca Schk., reported in Hooker's Flora b as collected by Scouler on the Columbia River, has not since been found in this region. Other species reported from the Columbia River in Hooker's Flora are C. stricta Lam., C. angustata Boott, C. lagopodioù es Schk. (C. tribuloides V. M.) and C. straminea Schk. As none of these have recently been collected, it is quite certain that the specimens will be found to represent other species.

ARACEAE. ARUM FAMILY.

LYSICHITON.

Lysichiton camtschatcense (L.) Schott, Prodr. Aroid. 121, 1860. Skunk cabbage.
 Symplocarpus kamtschaticus Bong. Mem. Acad. St. Petersb. VI. 2: 168, 1832.

Dracontium camtschateense L. Sp. Pl. 2: 968, 1753.

Type locality: "Habitat in Sibiria."

RANGE: Alaska to California and Idaho. Siberia.

Specimens examined: Cl. Ilain County, Elmer 2786; Sea(d), Figer, July, 1895; Silverton, Bouck 174; upper Nisqually Valley, Allen 240; Wenache Lake, Sandberg & Leiberg 642; Yakima Pass, Watson 400; Nason City, Sandberg & Leiberg, July, 1893; Marshall Junction, Piper, July, 1896; Davis Ranch, Kraager 295.

ZONAL DISTRIBUTION: Transition.

LEMNACEAE. DUCKWEED FAMILY.

Thalloid shoot	with 1 root	Lemna.
Thalloid shoot	with several roots	Spirodela.

LEMNA.

Thalloid shoot nearly circular, 1.5 to 5 mm, long	1.	L. minor.
Thalloid shoot oblong, stalk-like at base	2.	L. trisulca.

1. Lemna minor L. Sp. Pl. 2: 970, 1753.

Type locality: Europe.

Range: Nearly cosmopolitan.

Specimens examined: Whidby Island, Gardner 429; Ellensburg, Piper, May, 1897; North Yakima, Henderson 2531; Waitsburg, Horner, July, 1896; Meyers Falls, Kreager 515.

Lemna trisulca L. Sp. Pl. 2: 970, 1753.

Type locality: Europe.

Range: Throughout North America. Asia. Europe.

Specimens examined: Coupeville, Gardner 430; near Scattle, Tarleton.

SPIRODELA.

Spirodela polyrhiza (L.) Schleid, Linnaca 13: 392, 1839.

Lemna polyrhiza (L.) Sp. Pl. 2: 970, 1753,

Type locality: Europe.

Range: Nearly cosmopolitan.

Specimens examined: Whidby Island, Gardner 428; Seattle, Piper, August, 1897.

a Boott; Hook, Journ. Bot. 7: 377, 4869.

b Hook, Fl. Bor, Am. 2: 212, 4839.

PONTEDERIACEAE. PONDWEED FAMILY.

HETERANTHERA.

1. Heteranthera dubia (Jacq.) MacM. Met. Minn. 138, 1892. Commelina dubia Jacq. Obs. Bot. 3: 9. pl. 59, 1768. Schollera graminifolia Willd. Neue. Schr. Ges. Naturf. Fr. 3: 438 Heteranthera graminea Vahl, Enum. 2: 45, 1806. Leptanthus gramineus Michx. Fl. 1: 25, 1803. Type locality: The type specimen is Clayton's number 814, pr. Range: Washington to Ontario, south to Mexico and Florida. Specimens examned: Hangman of Latah Creek near Marshall	obably from Virginia.
JUNCACEAE. RUSH FAMILY.	
Leaf sheaths open; capsule 1 or 3-celled, many-seeded; placentae petal or axial	Juncus (p. 178).
$Leaf sheaths closed; capsule 4-celled, 3-seeded; placenta \ basal$	Juncoides (p. 184).
JUNCUS. Rusu.	
Lowest leaf of the inflorescence appearing like a continuation of the stem, the inflorescence therefore seemingly lateral. Flowers in compound panicles, usually numerous. Stamens 3; leaf of the inflorescence much shorter than the stem.	
Perianth green; panicle loose	1. J. effusus. 1a. J. effusus hesperius.
Perianth green; leaf of the inflorescence as long as the stem	2. J. filiformis.
Flowers 3 to 4.5 mm, long	3. J. balticus. 4. J. lescurii.
Inner sheaths bristle-tipped; capsule retuse Inner sheaths leaf-bearing; capsule acute Lowest leaf of the inflorescence not appearing like a continuation of the stem. Leaves not provided with cross-partitions, either flat and grass-like or terete and channeled.	5. J. subtriflorus. 6. J. parryi.
Flowers brac(colate, loosely scattered or somewhat congested but not in heads. Annuals; stems branched, leafy. Stamens 6; flowers loosely scattered.	- / / .
Capsule oblong	$8.\ J.\ sphaerocarpus.$
Inflorescence 1-flowered; bract 1 Inflorescence—few-flowered; bracts—2—or—more, style short	9. J. uncialis. 10. J. brachystylus.
Perennials; stems simple. Peranth segments 2.5 to 4 mm, long; capsule	10. V. Williams

Perianth segments 3.5 to 5.5 mm, long; capsule	
1-celled.	(9) I tombo
Panicle loose; flowers pale green Panicle close; flowers fuscous	
Flowers not bracteolate, in true heads.	15. J. occinemacis.
Auricles of the leaf-sheaths wanting: perianth parts	
minutely roughened. Perianth shorter than the capsule; heads sev-	
•	1 (/ /:///:
eral to many, 3 to 5-flowered	14. J. coruici.
Perianth longer than the capsule.	
Seeds not tailed.	15 I C.L. a
Flowers in 1, rarely 2 or 3, large heads.	
Flowers in 3 to 20 small heads	
Seeds tailed	11. J. regetti.
Auricles of the leaf-sheaths present; perianth parts	100 1 1 2 2 1 12
smooth	18. J. longistylis.
Leaves provided with distinct cross-partitions.	
Blades of the leaves equitant.	
Heads pale, numerous; stamens 6; plant tall	28, J. oxymeris.
Heads brown or black.	
Stamens 6; heads solitary; stems not 2-edged.	29. J. mertensianus.
Stamens 3 (rarely 6); stems 2-edged.	
Flowers in 2 to several dense nearly black	
heads	
Flowers in many brown heads	
Blades of the leaves cylindric or only slightly compressed.	
Stamens 3	19. J. acuminatus.
Stamens 6.	
Capsules subulate; heads many-flowered.	
Leaf blades erect; inner perianth parts	
longer than the outer	22. J. nodosus.
Leaf blades spreading: outer perianth parts	
longer than the inner	23. J. torreyi.
Capsules not subulate.	
Heads pale, few-flowered; capsules oblong-	
lanceolate.	
Perianth segments less than 5 mm.	
long	20. J. richardsonianus.
Perianth segments over 5 mm, long	$21.\ J.\ oreganus.$
Heads brown; capsules oblong, abruptly	
acute.	
Perianth pale brown; seeds reticu-	
lated, the longitudinal striac 20 to	
26	24. J. columbianus.
Perianth dark brown; seeds about 15-	
striate.	
Stout 60 to 100 cm. high; heads	
several or many; capsule	
shorter than the perianth	25. J. suksdorfii.
Slender 20 to 40 cm. high; heads	-
few; capsule as long as the	
	Dr. I bulling

1. Juneus effusus L. Sp. Fl. 1: 326, 1753.

t Juneus effusus gracilis Hook, Fl. Bor, Am. 2: 190, 1838.

Type locality: European.

RANGE: Subarctic and temperate North America. Europe. Asia.

Specimens examined: Mason County, Kincaid, June, 1892; King County, Suksdorf 1010; Seartle, Piper 1029; Everett, Piper.

Zonal distribution. Humid Transition.

1a. Juncus effusus hesperius nom nov.

Juneus effusus brunneus Fagelin, Trans. St. Louis Acad. 2: 491, 4868, not J. tenageja brunneus Neilveich 4859.

Type locality: Certo Leon, Mexico.

Range: Washington to California near the seacoast.

Specimens examined: Challam County, Elmer 2728; Montesano, Heller 3970; Olympic Moun ains, Grant; Chambers Lake, Henderson, August 23, 1892; Lillewaup, Henderson 1800; without locality, Cooper in 1852; Klickitat County, Suksdorf 2157; Everett, Piper, Zonal distribution: Humid Transition.

2. Juneus filiformis L. Sp. Pl. 1: 326, 1753.

Type locality: European.

Range: British Columbia to Labrador, south to Colorado and Pennsylvania. Europe. Asia.

Specimens examined: Cascade Mountains, 49°, Lyall: Skamania County, Suksdorf 216; Nason City, Sandberg & Leiberg 602; Rogers Lake, Elmer 717.

This species has been mistaken for J, patens Meyer, and we believe that all Washington references to the latter really belong to J, fil/formis.

3. Juneus balticus Willd. Ges. Naturf. Fr. Berlin. Mag. 3: 298, 1809.

Type locality: "Bei Warnemünde," Germany.

RANGE: Alaska to Labradov, south to California, Nebraska, and New York. Europe. Asia.

Specimens examined: Claffam County, Elmer 2730; Whidby Island, Gardner 299; Fidalgo Island, Lyall in 1858; Lake Osoyoos, Lyall in 1860; Falcon Valley, Suksdorf 2146, 214, 215; Egbert Springs, Sandberg & Leiberg 401; Seattle, Smith 1021; Longmire Springs, Piper, August, 1895; Wenache, Whited 1422; Ellensburg, Whited in 1897; North Yakima, Henderson 2554; Wilbur, Henderson, July, 1892; Rock Lake, Lake & Hull 385, 393; Pullman, Henderson 2553; Piper, August 2, 1899; without locality, Vascy in 1889; Clealum Lake, Cotton 850; Conconully, Griffiths & Cotton 320.

Zonal distribution: Upper Sonoran and Transition.

4. Juneus lescurii Boland. Proc. Cal. Acad. 2: 179, 1858-62.

Type locality: Salt marshes of San Francisco Bay, California.

Range: Vancouver Island to Chile, on the seashore.

Specimens examined: Westport, Henderson 2552; Heller 3945; Thurston County, Henderson 2550; Cascade Mountains, Tweedy 34, 35; Oyhut, Conard 412.

ZONAL DISTRIBUTION: Humid Transition.

5. Juneus subtriflorus (Meyer) Coville, Contr. Nat. Herb. 4: 208, 1893

Juneus compressus subtriflorus Meyer, Linnaea 3: 368, 1828.

Juncus drummondii Meyer; Ledeb. Fl. Ross. 4: 235, 1853.

Type locality: "Hab. in insulis Koräginsk."

RANGE: Alaska to California and Colorado.

Specimens examined: Olympic Mountains, Flett 828; Mount Rainier, Alten 68; Cascade Mountains, Tweedy 31; same, latitude 49°, Lyall in 1859; Mount Stuart, Elmer 1139; Mount Ada;ns, Henderson, August, 1892; Skamania County, Suksdorf 1011; Nason Creek, Sandberg & Leiberg 675; Bridge Creek, Elmer 652; Blue Mountains, Piper 2274.

ZONAL DISTRIBUTION: Arctic.

6. Juneus parryi Engelm. Trans. St. Louis Acad. 2: 446, 1866.

Type locality: Colorado. Collected by Parry.

RANGE: British Columbia to Colorado and California.

Specimens examined: Claffam County, Elmer 2733; Olympic Mountains, Flett 111, Henderson 1025; Mount Rainier, Piper 2169; Mount Adams, Henderson, August, 1892; Cascade Mountains to Fort Colville, Lyall in 1860; Skamania County, Suksdorf 1041; Chiquash Mountains, Suksdorf 1041; Skagit Pass, Lake & Hull 410; Nason Creek, Sandberg & Leiberg 665; Horseshoe Basin, Elmer 736; Mount Carlton, Kreager 231.

Zonal distribution: Arctic.

7. Juneus bufonius L. Sp. Pl. 1: 328, 1753.

Type locality: European.

Range: Nearly cosmopolitan.

Specimens examined: Challam County, Elmer 2734; Southbend, Spillman, August 2, 1889; Silver Lake, Henderson, July, 1892; North Yakima, Watt, August, 1895; Harrington, Sandberg & Leiberg 218; Spokane, Henderson, July, 1892; Pullman, Piper.

ZONAL DISTRIBUTION: Upper Sonoran and Transition.

8. Juneus sphaerocarpus Nees, Flora 1: 521, 1818.

Type locality: European.

RANGE: British Columbia to Colorado and California. Europe.

Specimens examined: Cheney, Mrs. Tucker 137; Bingen, Piper 6446; Pullman, Elmer 1044.

9. Juneus uncialis Greene, Pittonia 2: 105, 1890.

Juneus triformis uniflorus Engelm, Trans. St. Louis Acad. 2: 493, 1868, not J. trifidus uniflorus Tausch, 1834.

Type locality: "Low moist places in fields near Suisun, California."

Range: Washington to California.

Specimens examined: Falcon Valley, Suksdorf, June 25, 1881.

10. Juneus brachystylus (Engelm.).

Juncus triformis brachystylus Engelm, Trans. St. Louis Acad. 2: 492, 1868.

Type locality: "Ukiah, Mendocino county," California.

Range: Washington to California.

Specimens examined: West Klickitat County, Suksdorf, June 19, 1882.

11. Juneus confusus Coville, Proc. Biol. Soc. Wash. 10: 127, 1896.

Type locality: "In an irrigated meadow, North Park, Colorado"

RANGE: Washington to Colorado and Montana.

Specimens examined: Falcon Valley, Suksdorf 2191; Spangle, Suksdorf 1042.

Juncus tenuis Willd. Sp. Pl. 21: 214, 1799.

Type locality: "Habitat in America boreali."

Range: Nearly throughout North America.

Specimens examined: Montesano, Heller 4074; Seattle, Piper 1134; Egbert Springs, Sandberg & Leiberg 389, 388; Wenache, Whited: For Colville, Lyall in 1860; Rock Lake, Lake & Hull 387; Loomis, Elmer 576; Palouse City, Henderson, July, 1892; Blue Mountains, Lake & Hull 375; Pullman, Piper 1939; Stehekin, Griffiths & Cotton 187; Prosser, Cotton 647, 659.

Zonal distribution: Transition.

13. Juneus occidentalis (Coville) Wiegand, Bull. Torr. Club 27: 521. 1900.

Juncus tenuis occidentalis Coville, Proc. Biol. Soc. Wash. 10: 129, 1896.

Juneus tenuis congestus Engelm, Trans. St. Louis Acad. 2: 450, 1866, not J. congestus Thuill, 1799.

Type locality: "In California (San Francisco, Bolander; Monterey, Brever) and in Colorado, Hall."

Range: British Columbia to California.

Specimens examined: Coupeville, Gardner 295, 300; Lake Chelan, Lake & Hull in 1892; Elmer, August, 1897; Pullman, Piper 3051; Elmer, July 20, 1896; Cow Creek, Griffiths & Cotton 504.

Zonal distribution: Transition.

14. Juncus covillei nom. nov.

Juncus fulcatus paniculatus Engelm, Trans. St. Louis Acad. 495, 1868, not J. paniculatus Hoppe, 1823.

Juneus latifolius paniculatus Buch, Engl. Bot. Jahrb. 18: 426, 1890.

Type locality: "Sphagnous swamp near Mendocino, California."

RANGE: British Columbia to California, in the coast region.

Specimens examined: Clallam County, Elmer 2732; Whatcom County, Gardner 410; Scattle, Piper 1033, 2762; Mount Adams, Suksdorf 219; Vancouver, Piper 4928; Lake Crescent, Lawrence 303.

Zonal distribution: Humid Transition.

15. Juneus falcatus E. Meyer, Syn. Luz. 34, 1823.

Juneus menziesii R. Br.; Hook, Fl. Bor, Am. 2: 192, 1838.

Type locality: "Mont-Real," that is, Monterey, California. Collected by Haenke.

Range: Washington to California.

Specimens examined: Westport, Henderson, June 26, 1892.

Zonal distribution: Humid Transition

16. Juneus orthophyllus Coville, Contr. Nat. Herb. 4: 207. 1893.

Juneus latifolius Buch, Engl. Bot. Jahrb. 18: 425, 1890.

Juneus longistylis latifolius Engelm, Trans. St. Louis Acad. 2: 496, 1868, not Juneus latifolius Wulf. 1789.

Type locality: "Californian Sierras on alpine meadows or along rivulets in the Yosemite Valley, alt. 4000 feet."

Range: British Columbia to California.

Specimens examined: Cascade Mountains, 49°, Lyall in 1859; Clealum, Henderson, June, 1892; Rock Lake, Lake & Hull 386; Pullman, Piper 1765, 3024, 3052.

Zonal distribution: Arid Transition.

17. Juncus regelii Buch. Engler's Bot. Jahrb. 18: 414. 1890.

Type locality: "Im westlichen Nordamerika von Washington anscheinend bis Utah." Collected by Suksdorf and by Jones.

Range: Washington and Idaho to Utah.

Specimens examined: Mount Adams, Henderson 1527; Suksdorf: Flett 1360; Mount Stuart, Sandberg & Leiberg 822, 579; Klickitat River, Flett 1367; Yakima County, Watt, August, 1895; Clealum, Henderson, June 11, 1892; Bridge Creek, Elmer 746; Loomis, Elmer 575; Blue Mountains, Horner 484; Whitman County, Lake & Hull 374; without locality, Vascy in 1889; Cape Horn, Piper 5026, 5027; Snipes Creek, Cotton 669½ in part.

Zonal distribution: Canadian!

18. Juneus Iongistylis Torr. Bot. Mex. Bound. 223, 1859.

Type locality: "Near the Copper Mines, New Mexico."

Range: Washington to Saskatchewan, south to California and New Mexico.

Specimens examined: Egbert Springs, Sandberg & Leiberg 360; Whitman County, Lake & Hull 374; along Wilson Creek, Lake & Hull 391; Medical Lake, Henderson, July, 1892; Marshall Junction, Piper 2280.

Zonal distribution: Arid Transition.

19. Juneus acuminatus Michx. Fl. 1: 192. 1803.

Type locality: "In Carolina inferiore."

RANGE: British Columbia to Maine, south to Oregon and Georgia.

Specimens examined: Montesano, Heller 3969; Seattle, Hovell 612; Piper 1135; Thurston County, Henderson 2556; Ilwaco, Henderson 2161; North Yakima, Henderson 2555; Atanum Soda Springs, Watt August, 1895; Samish Lake, Suksdorf 1013.

ZONAL DISTRIBUTION: Transition.

20. Juneus richardsonianus Schult, in Roem, & Schult, Syst. 7: 201, 1829.

Juncus alpinus insignis Fries; Engelm. Trans. St. Louis Acad. 2: 459, 1866.

Type locality: "In sylvis Americae arcticae." Collected by Richardson.

RANGE: British Columbia to Nova Scotia, south to Washington, Nebraska and Pennsylvania.

Specimens examined: Whatcom County, Gardner 417; Suksdorf 1012; Chelan, Elmer 883.

Juncus oreganus S. Wats. Proc. Am. Acad. 23: 267–1888.

Juneus paucicapitatus Buch, Engler's Bot, Jahrb. 12: 367, 1890

Type locality: "In bogs at Awaco," Washington. Collected by Henderson.

Range: Alaska to Washington near the seacoast.

Specimens examined: Ilwaco, *Henderson*, September, 1892 and 15. Cascade Mountains, latitude 49°, *Lyall*; Ilwaco, *Piper*, June, 1904.

ZONAL DISTRIBUTION: Humid Transition.

22. Juneus nodosus L. Sp. Pl. ed. 2, 466, 1762.

Type locality: "Habitat in America septentrionali."

RANGE: British Columbia to Nova Scotia, south to Nevada, Nebraska, and Virginia.

Specimens examined: Newport, Piper 4211; Colville, Kreager 519

ZONAL DISTRIBUTION: Arid Transition.

23. Juneus torreyi Coville, Bull. Torr. Club 22: 303, 1895.

Juneus nodosus megacephalus Torrey, Fl. N. Y. 2: 326, 1843.

Juncus megacephalus Wood, Bot. ed. 2, 724, 1861, not Curtis 1835.

Type locality: "On the shores of Lake Ontario."

Range: British Columbia to New York, south to California and Texas.

Specimens examined: Coupeville, Gardner 312, Cascade Mountains, Tweedy in 1882; Parker, Dunn, August 11, 1901; Yakima, Leckenby, August, 1897; Loomis, Elmer 613; Colville, Kreager 519; Toppenish, Cotton 789; Prosser, Cotton 648.

Zonal distribution: Arid Transition and Upper Sonoran.

24. Juneus columbianus Coville, Proc. Biol. Soc. Wash. 14: 87-1901.

Type locality: "In wet meadows near Pullman, Washington." Collected by Elmer Range: Washington to Montana and Oregon.

Specimens examined: Wilson Creek, Sandberg & Leiberg 389; western Klickitat County, Suksdorf 462; Marshall Junction, Piper 2281; Spangle, Suksdorf 463; Pullman, Piper 3054, 3537; Elmer 235; Lake Chelan, Lake & Hull 389 in part, Snipes Creek, Cotton 669½ in part, 668.

Zonal distribution: Arid Transition.

25. Juneus suksdorfii Rydberg, Bull. Torr. Club 26: 541. 1899.

Type locality: Falcon Valley, Klickitat County, Washington. Collected by Suksdorf. Range: Eastern Washington, eastern Oregon, and adjacent Idaho.

Specimens examined: Falcon Valley, Suksdorf 217, 680; Spangle, Suksdorf 464; Pullman, Piper 1947, 3026, 3042, 3053; Henderson 2547, 2548.

ZONAL DISTRIBUTION: Arid Transition.

26. Juneus badius Suksdorf, Deutsch. Bot. Monatss. 19: 92. 1901.

Type locality: "Im Falkenthal im westl. Teil von Klickitat County," Washington.

Specimens examined: Falcon Valley, Suksdorf 2141; Kalispel Lake, Kreeger 336.

Very close to J -nevadensis Wats, but to be distinguished by its relatively longer capsule.

The Falcon Valley specimen was the basis for the inclusion of *Juneus chlorocephalus* Engelm, in Suksdorf's list.

27. Juneus ensifolius Wiks. Kongl. Vet. Akad. Handl. 2: 274. 1823.

Juneus xiphioides triandrus Engelm. Trans. St. Louis Acad. 2: 482, 1868.

Juncus xiphioides macranthus Engelm loc. cit.

Type locality: Not ascertained.

Range: Alaska southward in the mountains to California.

Specimens examined. Montesano, Heller 3968, Scattle, Piper 1038; Skamania County, Flett 1388, Bridge Creek, Eln er 645; Lake Chelan, Lake & Hull 360; Nason City, Sandberg & Leiberg 608, Blue Mountains, Piper 2275, Pullman, Piper 1938, Stehekin, Griffiths & Cotton 193, Clealum Lake, Cotton 848, Cascade Mountains, latitude 49°, Lyall; Grays Harbor, Wilkes Expedition 237.

ZONAL DISTRIBUTION: Transition to Canadian.

27a. Juneus ensifolius major Hook. Fl. Bor. Am. 2: 191, 1840.

Juneus xiphioides montanus Engelm, Trans. St. Louis Acad. 2: 481, 1868.

Juneus saximontanus A. Nelson, Bull. Torr. Club. 29: 401. 1902

Type locality: "Sources of the Columbia River, in the Rocky Mountains."

RANGE. British Columbia to Oregon and Idaho.

Specimens examined: Olympia, Henderson, October 2, 1892, Wenache, Whited 82, 207; Ellensburg, Whited 710; Blue Mountains, Lake & Hull 376; Silver Lake, Henderson, July 13, 1892, North Yakima, Wall, August, 1895.

28. Juneus oxymeris Engelm. Trans. St. Louis Acad. 2: 483, 1868.

Type locality: "Sacramento Valley, Cal." Collected by Hartweg.

Range: Washington to California.

Specimens examined. Scattle, Piper, July 4, 1897; Smith 1032

ZONAL DISTRIBUTION: Humid Transition.

29. Juneus mertensianus Bong, Mem. Acad. St. Petersb. VI. 2: 167. 1832.

Type locality: Sitka.

RANGE: Alaska to California and Colorado.

Specimens examined: Clallam County, Elmer 2735, Olympic Mountains, Flett 827; Mount Rainier, Piper 1037; Allen 272, 273; Smith, August, 1890, Mount Stuart, Elmer 1131; Cascade Mountains, 49°, Lyall in 1869; Skamania County, Suksdorf 2042; Flett 1376; Klickitat River, Flett 1117, Wenache Region, Brandegee 676. Stevens Pass, Whited, August 27, 1901; Tieton River, Cotton 438, Skagit Pass, Lake & Hall 405; Bridge Creek, Elmer 650; Blue Mountains, Piper 2276. Kalispel Lake, Kreager 336.

Zonal distribution: Arctic.

29a. Juneus mertensianus filifolius Suksdorf, Deutsch. Bot Monatss. 19: 92. 1901.

Type Locality: "Skamania County," Washington.

JUNCOIDES. Wood RUSH.

Flowers in clusters of 2 to 3 or solitary in an open panicle.

Leaves 10 to 12 mm. broad: perianth brown, 3 to 3.5 mm. long.... 1. J. globratum. Leaves 6 to 8 or 10 mm. broad. perianth 1.5 to 2.5 long.

Panicle rays drooping; leaves with a few pilose hairs at base.

Flowers and capsules pale green; leaves thin, shining; seeds

Flowers and capsules dark brown; leaves thick, dull; seeds

Paniele rays divariente; leaves without pilose hairs 4. *J. divarientum*. Flowers congested into 1 to several spike-like or head-like clusters.

Inflorescence nodding, nearly always of a single spike-like cluster. 5. J. spicatum.

Inflorescence of 2 to 12 globose or oblong clusters 6. J. campestre.

1. Juncoides glabratum (Hoppe) Sheldon, Minn. Bot. Stud. Bull. 9: 63, 1894.

Juneus glabratus Hoppe; Rostk. Mon. June. 27, 1801.

Luzula glabrata Desv. Journ. Botanique 1: 145, 1808.

Luzula spadicea glabrata E. Meyer, Syn. Luz. 8, 1823.

Type locality: "Habitat in alpibus Salisburgensibus."

RANGE: British Columbia to Montana and Oregon. Europe.

Specimens examined: Mount Rainier, Piper 2170; Mount Adams, Henderson 2546; mountains north of Ellensburg, Brandegee 1114; Cascade Mountains, Treedy ——; Cascade Mountains above Lake Chelan, T. E. Wilcox in 1883; Cascade Mountains, Colville, Lyall in 1860; Nason City, Sandberg & Leiberg 668; Okanogan County, Whited 49; Mount Carlton, Kreager 232.

Zonal distribution: Hudsonian.

2. Juncoides parviflorum (Ehrh.) Coville, Contr. Nat. Herb. 4: 209, 1893.

Juneus parviflorus Ehrh. Beitr. 6: 139, 1791.

Luzula parviflora Desv. Journ. Botanique 1: 144, 1808.

Luzula spadicea laxiflora E. Meyer, Syn. Luz. 8, 1823.

Type locality: "Helvetia, Germania, Suecia."

RANGE: Alaska to Labrador, south to California, Minnesota, and New York.

Specimens examined: Montesano, Heller 3900; Cascade Mountains, latitude 49°, Lyall; Mount Rainier, Piper 2171; Lake Cushman, Henderson 1016; Cascade Mountains, Tweedy; Chiquash Mountains, Suksdarf 1008; Seattle, Piper 1015; Skokomish Valley, Kineaid; Skagit Pass, Lake & Hull 409; Wind River, Flett 1392; Bridge Creek, Elmer 641; Okanogan County, Lake & Hull 400, 409; Southbend, Spillman, August 7, 1899.

ZONAL DISTRIBUTION: Humid Transition to Hudsonian.

A variable species not much different from the European spadiceum. Our common form has lax panicles and pale perianth segments and capsule, and is nearly the same as Luzula parciflora sparsiflora Lange. The form with dark capsules, Luzula parciflora melanocarpa (Desv.) Gray, does not seem to occur in our limits.

Juncoides piperi Coville, sp. nov.

Densely tufted, from short horizontal usually matted rootstocks; stems erect, 10 to 35 cm. high; leaves mostly basal, firm in texture, pule green and dull, erect or nearly so, linear-lanceolate, attenuate, 2 to 4 mm. broad, 15 to 17-nerved, about one-fourth as long as the stem, smooth and glabrous except for a few long bairs on the sheaths and margins, inclined to become revolute; cauline leaves two or rarely three; paniele 5 to 8 cm. long, dark brown, nodding; lowest bract foliaceous, usually 8 to 15 mm. long; bractlets brown, paler and hyaline toward the apex, lacerate; flowers solitary on the branches or sometimes in clusters of two or three; perianth segments dark brown, nearly equal, ovate, acuminate, about 1.5 mm. long; stamens half to two-thirds the length of the perianth, the anthers nearly equaling the filaments; style about 2 to 3 mm., stigmas 2 to 3 mm. in length; capsule dark brown, exceeding the perianth, its valves broadly ovate, broadly acute, indistinctly or not at all apiculate; seeds of a light brown to buff or amber color, about 1.2 mm. in length, lanceolate-oblong in outline, narrowed to each end, distinctly keeled on the inner side, the cellular reticulations faint.

Type specimen United States National Herbarium no. 352425, collected in September, 1897, by A. D. E. Elmer (no. 678) in the Cascade Mountains of Okanogan County, Washington, on the north fork of Bridge Creek, growing "on dry sand-gravelly moraines just below the glaciers at 6,000 feet altitude."

This species differs from Juncoides parviflorum in its more densely tufted habit, smaller size, and more lacerate bractlets, thicker, never shining leaves, the lack of a distinct apiculation on the capsule valves, and the light-colored pointed seeds. In parviflorum the seeds are dark brown, narrowly oblong in outline, and blunt at the ends. Our species bears a superficial resemblance to the European spadiceum, but is readily distinguishable by i.s.

broader leaves and by its seed and capsule characters, which in *spadieeum* are the same as described above for *parviflorum*.

Juncoides piperi occurs on high peaks in the Cascade Mountains from northern Washington to southern Oregon, in the Olympic Mountains, and in the Cœur d'Alene Mountains of northern Idaho (Leiberg 1355), and appears to be associated with soils so porous as to be sabject to great dryness in late summer. It is named for Professor C. V. Piper, who first pointed out its characters.

Specimens examined: Olympic Mountains, Flett 122: Horseshoe Basin, Lake & Hull 412: Bridge Creek, Elmer 678: Mount Rainier, Tolmie: Piper 21723; Allen 44; Chiquash Mountains, Suksdorf 1009: Klickitat River, Flett 1364 in part.

Zonal distribution: Arctic.

4. Juncoides divaricatum (S. Wats.) Coville, Contr. Nat. Herb. 4: 209, 1893.

Luzula divaricata S. Wats. Proc. Am. Acad. 14: 302, 1879.

? Luzula arenata major Hook. Fl. Bor. Am. 2: 189, 1840.

Type locality: "California in the Sierra Nevada, mostly alpine, from above Mono Lake to Sierra County."

Range: Washington to California.

Specimens examined: Mount St. Helens, Coville 799.

The type of Luzula arcuata major Hook, was collected on Mount Rainier by Tolmie.

5. Juncoides spicatum (L.) Kuntze, Rev. Gen. Pl. 2: 725. 1891.

Juneus spicatus L. Sp. Pl. 1: 330, 1753.

Luzula spicata DC, Fl. Fr. 3: 161, 1805.

Type locality: "Habitat in Lapponiae Alpibus."

Range: Alaska to Labrador, south to California, Colorado, and New York. Europe. Asia. Specimens examined: Mount Rainier, Piper 2173; Allen; Smith 1014; Mount Stuart, Elmer 1123; Brandeger 339; Mount Adams, Flett 1404; Wenache Mountains, Cotton 1291.

Zonal distribution: Arctic.

6. Juncoides campestre (L.) Kuntze, Rev. Gen. Pl. 2: 722, 1891.

Juneus campestris L. Sp. Pl. 1: 329, 1753.

Luzula campestris DC, Fl. Fr. 3: 161, 1805.

Luzula comosa E. Meyer, Syn. Luz. 21, 1823.

Type locality: Europe.

Range: Temperate North America. Europe. Asia.

Specimens examined: San Juan Island, Lyall in 1858; Coupeville, Gardner 301; Tacoma, Flett 202; Skamania County, Flett 1374; Klickitat River, Flett 1364 in part; Skokomish Valley, Kincaid, May 6, 1892; Mount Stuart, Elmer 1122; Falcon Valley, Suksdorf 2118; west Klickitat County, Suksdorf 2100; Flett 1364; Skagit Pass, Lake & Hull 415; Pend Oreille River, Lyall in 1861; Cascade Mountains, Tweedy 28; Hangman Creek, Sandberg & Leiberg 19; Kamiak Butte, Elmer 805; Blue Mountains, Lake & Hull 380; Piper, July, 1896; Nisqually Valley, Allen 160.

Zonal distribution: Transition.

LILIACEAE. LILY FAMILY.

Bracts of the inflorescence scarious.

Flowers not in racemes.

Odor not onion-like; flowers in umbels or corymbs..... Hookera (p. 189)

Bracts of the inflorescence foliaceous or none.

Perianth segments unlike, the outer much narrower...... Calocuortus (p. 193) Perianth segments similar.

Bulbs scaly; anthers versatile. Nectary a linear groove; perianth not campanulate. Lat Nectary a shallow pit; perianth campanulate Fr Bulbs corm-like; anthers not versatile. Leaves only two, rather broad Er Leaves several, narrow, grass-like LL	итивакіх (р. 191). ехтикомічм (р. 192).
ALLIUM. Onion.	
Bulbs oblong, cespitose, more or less rhizomatons.	
Leaves linear	1. A. sibiricum.
Leaves flat or channelled.	
Rhizome stout; flowers erect	
Rhizome scarcely developed; flowers nodding	3. A. cermuum.
Bulbs globose, loosely cespitose or solitary, not rhizomatous.	
Bulb coats fibrous	1. A. geyeri.
Bulb coats not fibrous, usually reticulate.	
Flowers red.	
Leaves flat, rather broad; reticulations wanting.	
Plants tall, 20 to 40 cm. high; umbel globose,	~
dense; scape terete	5. A. donglasii.
Plants low, 5 to 10 cm, high; scape flattened.	0 1 1 1
Leaves 2 to 3 mm, broad; scapes smooth	
Leaves 1 to 1.5 mm, wide; scapes crenulate Leaves narrow; reticulations evident.	4. A. Cremuanum.
Reticulations polygonal, distinct; petals 10 to 11	
mm. long, serrulate	S. A. acuminatum.
Reticulations obscure, transversely-oblong or want-	o. 21. acaminanim.
ing: petals entire, 6 mm, long	9. A. nevii.
Flowers white.	
Scape tall; umbel dense, globose; reticulations narrow,	
transverse, sinuous.	10. A. attennifolium.
Scape low; umbel flat.	κ'
Reticulations none	H. J. maerum.
Reticulations narrow; very cernuous	12. A. collinum.
1 Allino sikiniano I Mant 500 1707	

1. Allium sibiricum L. Mant. 562, 1767.

Type locality: Siberia.

Range: Alaska to New Brunswick, south to Oregon and Minnesota.

Specimens examined: Wenache, Whited 26; Lake Wenache, Sandberg & Leiberg 630; White Bluff Ferry, Lake & Hull, August 9, 1892; Fort Colville, Lyall in 1861; Walla Walla, Tolmie.

Zonal distribution: Arid Transition.

2. Allium validum S. Wats, Bot, King, Explor, 350, 1871.

Type locality: Mono Pass, California. Collected by Bolander.

Range: Washington to California and Nevada. Specimens examined: Mount Rainier, Flett 275.

ZONAL DISTRIBUTION: Hudsonian.

3. Allium cernuum Roth, Roem. Archiv. I 2: 40, 1798.

Allium recurratum Rydberg, Mem. N. Y. Bot, Gard. 1, 94, 1900.

Type locality: None given.

Range: British Columbia to Oregon and Texas, and in the Allegheny Mountains.

Specimens examined: Clallam County, Elmer 2506; Olympic Mountains, Flett 822; East Sound, Henderson, July 3, 1892; Bellingham Bay, Suksdorf 1005; Fairhaven, Peper 2803: Fidalgo City, Flett 2109; Goat Mountains, Allen 81; Snoqualmie Falls, Piper 671; White Bluff Ferry, Lake & Hull, August 11, 1892; Fort Colville, Lyall in 1860; Wenache, Whited 1420; Chelan, Elmer 504; Meyers Falls, Kreager 594.

ZONAL DISTRIBUTION: Transition.

Allium geyeri S. Wats. Proc. Am. Acad. 14: 227, 1879.

Type locality: The type specimen was collected by Geyer "on stony banks of the Kooskooskia River [Idaho]." The omoir of the Xez Perce Indians.

RANGE: Washington, Idaho, Oregon, and British Columbia.

Specimens examined: Ellensberg, Whited 508; Piper, May 21, 1897; Prosser, Henderson 26; Mabton, Cotton 367; between Coulee City and Waterville, Spillman, May 27, 1896; Spokane, Piper 2272, 2722; Coulee City, Piper 3853; Sprague, Sandberg & Leiberg 146; Pullman, Elmer 834; Union Flat, Piper 1850; without locality, Vasey: Cape Horn, Piper 5073.

Zonal distribution: Arid Transition.

This species was referred to A. reticulatum Don in Hooker's Flora.

5. Allium douglasii Hook. Fl. Bor. Am. 2: 184. t. 196. 1838.

Allium hendersoni Robinson & Seaton, Bot. Gaz. 18: 237, 1893.

Type locality: "Northwest coast on the low hills, Douglas," according to Hooker, but Douglas' label reads "Subalpine hill near Kettle Falls in the Blue Mountains, 1826." Kettle Falls is in Stevens County, Wash.

RANGE: Eastern Washington and adjacent Idaho.

Specimens examined: Spangle, Piper, June, 1899; Union Flat, Lake & Hull 621; Piper 1870; Blue Mountains, Horner 165; Piper, July, 1896.

ZONAL DISTRIBUTION: Arid Transition.

6. Allium tolmiei Baker, Bot. Mag. under pl. 6.227, 1876.

Allium douglasii β Hook, Fl. Bor, Am. 2: 185, 1839.

Type locality: "In the Snake Country, Tolmie."

Range: Washington to Utah.

Specimens examined: Opposite Umatilla, Howell, April 26, 1882; Wallula, Suksdorf 2006.

The last-cited specimen is the basis of the inclusion of Allium cusickii in Suksdorf's List.

7. Allium crenulatum Wiegand, Bull. Torr, Club 26: 135, 1899.

Type locality: "Loose gravel near the summit of the Olympic Mountains in the vicinity of the headwaters of the Quilcene River."

Range: Olympic Mountains, Washington.

Specimens examined: Clympic Mountains, Flett 821; Mount Steele, Piper 2218; B.I.dy Peak, Lamb 1330.

ZONAL DISTRIBUTION: Arctic.

8. Allium acuminatum Hook. Fl. Bor. Am. 2: 184. 1838.

Type locality: "Nootka Sound, plentiful." Collected by Menzies.

RANGE: British Columbia to California and Utah

Specimens examined: Clallam County, Elmer 2499; Olympic Mountains, Flett 86; Fidalgo Island, Flett 2106; Admiralty Head, Piper, May 27, 1898; Coupeville, Gardner 286; Naches, Lyall in 1860; Mount Stuart, Elmer, August, 1898; near Mount Adams, Flett 1117; Peshastin, Sandberg & Leiberg 498; Klickitat River, Flett 1115; Tieton River, Cotton 442; North Yakima, Henderson, May 29, 1892; Ellensburg, Elmer 397; Skagit Pass, Lake & Hull, August 21, 1892. Crab and Wilson creeks, Sandberg & Leiberg 273; Pullman, Piper 1685; without locality, Vascy 92.

Zonal distribution: Transition.

Allium acuminatum cuspidatum Fernald, Zöe 4: 380, 1894.
 Type locality: Wawawai, Washington. Collected by W. R. Hufl.

lo.

Range: Eastern Washington.

Specimens examined: Wawawai, Hull 619; Clarks Springs, Kreager 12.

9. Allium nevii S. Wats. Proc. Am. Acad. 14: 231, 1879.

Type locality: Hood River, Oregon. Collected by Nevius.

Range: Washington and Oregon.

Specimens examined: Klickitat, Howell, June, 1879; Klickitat River, Flett, 1116; Falcon Valley, Suksdorf 42; Yakima County, Henderson 2480, 2481; Wenache Mountains, Elmer 458; Sprague, Sandberg & Leiberg 205; Henderson 2479; Wilson Creek, Sandberg & Leiberg, June, 1893; without locality, Fasey 91; Wenache Mountains, Cotton 1284.

Zonal distribution: Arid Transition.

10. Allium attenuifolium Kellogg, Proc. Cal. Acad. 2: 110, 1858-62.

Type locality: Mt. Shasta, California.

Range: Washington to California.

Specimens examined: Klickitat County, Sulesdorf 60.

11. Allium macrum S. Wats. Proc. Am. Acad. 14: 233, 1879.

Type locality: "Union County, Oregon, on rocky hills." Collected by Cusick.

Range: Blue Mountains of Washington and Oregon.

Specimens examined: Blue Mountains, Piper 2325.

Zonal distribution: Hudsonian.

Allium collinum Dougl.; S. Wats, Proc. Am. Acad. 14: 228, 1879.

Allium fibrillum Jones, Contr. Western Bot. 10: 24, 1902.

Type locality: "Abundant on the Blue Mountains." Collected by Douglas.

Specimens examined: Blue Mountains, Horner 190, 193, 470.

ALLIUM SCILLOIDES Dougl.a, collected by Douglas, at "Priest's Rapids, Columbia River,' has not been recognizable from Watson's very brief description.

HOOKERA.

Anther-bearing stamens 3.

Anther-bearing stamens 6.

Stamens in two rows; flowers blue or purplish.

Filament of inner stamens broad.

Corolla lobes much shorter than the tube ________5. II. bicolor.

Hookera coronaria Salisb. Par. Lond. pl. 98, 1806.

Brodiaea grandeflora Smith, Trans. Linn. Soc. 10: 2, 1811.

Type locality: "In California."

Range: British Columbia to California west of the Cascades and Sierras.

Specimens examined. Fidalgo Island, Flett 2104. Whidby Island, Gardner 281; near Satsop, Heller 4031; Lake Park, Peper 2093; Tacoma, Flett 906; Gate City, Henderson, June, 1892; Fort Vancouver, Tolmic; Stuart Island, Lawrence 27.

Zonal distribution: Humid Transition.

2. Hookera pulchella Salisb. Par. Lond. under pl. 98, 1806.

Brodiaea congesta Smith, Trans. Linn. Soc. 10; 3. pl. 1. 1811.

Dichelostemma congestum Kunth, Enum. Pl. 4: 470, 1843.

Type locality: "In California."

Range: Washington to California west of the Cascades and Sierras.

Specimens examined: Whidby Island, Gardner 283; Fourth Plain, Piper, July 14, 1899; Alki Point, Piper in 1888; Cape Horn, Piper 4982.

Zonal distribution: Humid Transition.

3. Hookera hyacinthina (Lindl.) Kuntze, Rev. Gen. Pl. 2: 712. 1891.

Hesperochordon hyacinthinum Lindl. Bot. Reg. 15: under t. 1293, 1829.

Hesperochordum lacteum Lindl. Bot. Reg. 19: t. 1639, 1833.

Hesperochordon lewisii Hook. Fl. Bor. Am. 2: 185, t. 198, 1839.

Brodiaca lactea Wats. Proc. Am. Acad. 14: 238, 1879.

Type locality: "Native of the plains of the Missouri and of the north-west of America, in which last country it was found by Mr. Douglas."

RANGE: British Columbia to California and Idaho.

Specimens examined: Humptulips, Lamb 4282; Muckleshoot, Dr. Ruhn; Whidby Island, Gardner 282; Fidalgo City, Flett 2107; Admiralty Head, Piper, May, 1898; Tieton River, Cotton 450; Mount Stuart, Elmer 1208; Peshastin, Sandberg & Leiberg, July, 1893; Pullman, Piper 1679, July, 1893; Lake 617; without locality, Vasey in 1889.

Zonal distribution: Transition.

4. Hookera douglasii (S. Wats.).

Brodiaca grandiflora Smith, err. det. Pursh, Fl. 1: 223, 1814.

Triteleia grandiflora Lindl. Bot. Reg. 15 under t. 1293, 1829.

Brodiaca donglasii S. Wats. Proc. Am. Acad. 14: 237, 1879.

Type locality: "Northwest America." Collected by Douglas.

Range: British Columbia to Utah and Wyoming, probably only to the eastward of the Cascade Mountains.

Specimens examined: Tampico, Flett 1121; Klickitat River, Flett 1409; Spokane, Sandberg & Leiberg 71; Spokane County, Suksdorf 455; Hangman Creek, Sandberg & Leiberg 71; Pullman, Piper, July, 1893; Wawawai, Piper 1671; without locality, Vascy 87, Zonal distribution: Arid Transition.

5. Hookera bicolor (Suksdorf.)

Brodiaea bicolor Suksdorf, West. Am. Sci. 14: 2, 1902.

Type locality: "In Falkenthal (Falcon Valley), Klickitat County, Washington." Collected by Suksdorf.

Range: Eastern Washington.

Specimens examined: Wenache, Whited 1049; North Yakima, Henderson 2406; without locality, Vascy in 1889.

6. Hookera howellii (S. Wats.).

Brodiaca howellii S. Wats. Proc. Am. Acad. 14: 301, 1879.

Type locality: "Klickitat County," Washington. Collected by Joseph Howell.

Range: Washington.

Specimens examined: Whidby Island, Gardner 285, Tacoma, Flett, June, 1896, Klickitat County, Howell, June, 1879; Falcon Valley, Suksdorf 506, 62. Ellensburg, Piper, May, 1896.

Zonal distribution: Transition.

QUAMASIA. CAMAS.

Camassia esculenta leichtlinii Baker, Bot. Mag. t. 6287, 1877.

Camassia leichtlinii Wats. Proc. Am. Acad. 20: 376, 1885.

Chlorogalum leichtlinii Baker, Gard. Chron. n. ser. 1: 689, 1874.

Type locality: British Columbia. Collected by Jeffrey.

Range: British Columbia to Washington west of the Cascade Mountains.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Admiralty Head, Piper, April, 1898.

ZONAL DISTRIBUTION: Humid Transition.

3. Quamasia suksdorfii (Greenm.) Piper.

Camassia suksdorfii Greenm. Bot. Gaz. 34: 307, 1902.

Type locality: Falcon Valley.

Specimens examined: Falcon Valley, Suksdorf 251, 509; near Bingen, Suksdorf 2663.

LILIUM. LILY.

1. Lilium parviflorum (Hook.) Holzinger, Contr. Nat. Herb. 3: 253, 1895.

Lilium eanadense parvi⁴orum Hook, Fl. Bor, Am. 2: 181, 1838.

Lilium columbianum Hanson; Baker, Journ. Linn. Soc. 14: 243, 1875.

Lilium bakerii Purdy, Erythea 5: 104, 1897.

Type locality: "N. W. Coast, Columbia and Walamet Rivers." Collected by Douglas and by Tolmie.

Range: British Columbia to North California, not east of the Cascade Mountains.

Specimens examined: Cascade Mountains, Lyall in 1860; Harford & Dunn, May 27, 1869; Clallam County, Elmer 2502; Olympic Mountains, Sargent, August 15, 1896; Montesano, Heller 3972; Silverton, Bouck 187; Chehalis County, Lamb 1179; Pringle, June 27, 1877; Chehalis River, Lamb 1237; Twisp River, Whited 176; Mount Rainier, Piper, August, 1895; Scattle, Piper, July, 1895; Tacoma, Flett 124; Peshastin, Sandberg & Leiberg 533; Skagit Pass, Lake & Hull, August, 1892; Stevens Pass, Sandberg & Leiberg 740; Wenache Mountains, Whited 1178; Falcon Valley, Suksdorf 511; Roslyn, Whited 462; Stehekin, Griffiths & Cotton 226.

Zonal distribution: Humid Transition.

Cooper referred this lily to the eastern L. canadense L.

FRITILLARIA.

wers brownish purple, styles distinct to the initiale

Capsules obtusely angled; flowers obscurely mottled 3. F. cantischateensis.

1. Fritillaria pudica (Pursh) Spreng. Syst. 2: 64, 1825.

Lilium? pudicum Pursh, Fl. 1: 228. t. 8. 1814.

Type locality: "On the headwaters of the Missouri," according to Pursh, but this is probably an error, as the Lewis specimen in the Philadelphia Academy is from the Kooskooskee [Clearwater] River, Idaho.

Range: British Columbia to California and Utah.

Specimens examined: Klickitat River, Flett 1114; White Salmon, Suksdorf 313; Wenache, Whited 2, 1009; Clealum, Henderson in 1892; Fort Colville, Lyell in 1861; Spokane, Sandberg & Leiberg 74; Pullman, Piper, July, 1893, 1673; Moore, May, 1893. Zonal distribution: Arid Transition.

2. Fritillaria lanceolata Pursh, Fl. 1:230, 1814.

Type locality: "On the headwaters of the Missouri and Columbia." Collected by Lewis. The Columbia specimen in the Philadelphia Academy is from Brant Island at the foot of the Cascades. The Missouri River locality is probably erroneous, as it is out of the known range of the plant.

RANGE: British Columbia to California eastward to western Idaho.

Specimens examined: Clallam County, Elmer 2507; Orchard Point, Piper, July, 1895; Orcas Island, Henderson, July, 1892; Admiralty Head, Piper, April, 1898; Tacoma, Flett 71; Roslyn, Whited 359; Peshastin, Sandberg & Leiberg 534; White Salmon, Suksdorf 312; Major Creek, Suksdorf, June 4, 1886; Semiamoo Bay, Lyall in 1858; Goat Mountains, Allen 235; Twisp River, Whited, July 16, 1896; without locality, Vascy 88, 90.

Zonal distribution: Transition.

Fritillaria camtschatcensis (L.) Ker-Gawl. Bot. Mag. 30: under t. 1216, 1809.
 Lilium camtschatcense L. Sp. Pl. 1: 303, 1753.

Type locality: "Habitat in Canada, Camschatca."

Range: Alaska to Washington. Kamchatka.

Specimens examined: Whidby Island, Gardner 281; Silverton, Bouck 1, 188.

Zonal distribution: Canadian!

ERYTHRONIUM. Adder's tongue.

1.	reaves mottled; flowers cream-color	1.	E. giganteum.
j	eaves not mottled.		
	Flowers white; filaments filiform	2.	$E.\ montanum.$
	Flowers yellow.		
	Anthers purple	. 3.	E. grandiflorum.
	Anthers white	. 4.	$E.\ parviflorum.$

Erythronium giganteum Lindl. Bot. Reg. 21: under t. 1786, 1835.

Erythronium grandi florum albiflorum Hook Fl. Bor. Am. 2: 182, 1839.

Type locality: "North West America."

RANGE: British Columbia to Oregon west of the Cascade Mountains.

Specimens examined: Whidby Island, Gardner 289; Admiralty Head, Piper, April, 1898; Chimacum, Einns, June 30, 1889; Seattle, Piper, April, 1889; Smith, April, 1889; Clarke County, Suksdorf 2327; without locality, Henderson, May, 1892.

Zonal distribution: Humid Transition.

Our plant is clearly the *E. giganteum* figured in Curtis's Botanical Magazine (pl. 5714) which Hooker suspects is the *E. giganteum* Lindl.

We incline to the belief that the *E. revolutum* Smith, a collected by Menzies on "King George's Sound" is the plant here called *E. giganteum*. But Mr. Carl Purdy retains that name for a closely allied species ranging from the Columbia River to Mendocino County, California, which may also range up the Washington coast to the vicinity of "King George's Sound," i. e., the Gulf of Georgia.

2. Erythronium montanum S. Wats. Proc. Am. Acad. 26: 130, 1891.

Type locality: "Mt. Hood, Mt. Adams, etc."

RANGE: Cascade Mountains of Washington and Oregon; Olympic Mountains.

Specimens examined: Challam County, Elmer 2496; Olympic Mountains, Piper, 2220; Henderson 2038; Mount Rainier, Piper 2118; Paradise Valley, Flett 256; Goat Mountains, Allen 83; Skamania County, Suksdorf, August 11, 1886; Mount Adams, Suksdorf 156.

Zonal distribution: Hudsonian.

3. Erythronium grandiflorum Pursh, Fl. 1:231, 1814.

Erythronium grandiflorum minus Hook, Fl. Bor, Am. 2; 182, 1839.

Type locality: "On the Kooskooskee," Idaho. Collected by Lewis. The exact spot is opposite the present town of Kamiah.

Range: British Columbia to Oregon and Idaho.

Specimens examined: Fort Colville, Lyall in 1861; Pullman, Piper 1676, June, 1893.

Zonal distribution: Arid Transition.

4. Erythronium parviflorum (S. Wats.) Goodding, Bot. Gaz. 33: 67, 1902.

Erythronium grandiflorum parviflorum S. Wats. Proc. Am. Acad. 26: 129, 1891.

Type Locality: "In the mountains from Colorado and northern Utah to British America, in the Blue Mountains of Oregon and in the Cascades of Washington and British Columbia." Range: British Columbia to Montana and Colorado.

Specimens examined: Challam County, Elmer 2491; Olympic Mountains, Henderson 2039!; Silverton, Bouck 489; Mount Rainier, Piper, 2100; Flett 260; Goat Mountains, Allen 82; Klickitat River, Flett 1118; near Mount Adams, Henderson, August, 1892; near Ellensburg, Whited, April, 1897; Simcoe Mountains, Howell in 1879; Wenache Mountains, Whited 1053; Blue Mountains, Piper, July, 1896.

Zonal distribution: Hudsonian.

LLOYDIA.

1. Lloydia serotina (L.) Sweet, Hort. Brit. ed. 2, 527, 4830.

Anthericum serotinum L. Sp. Pl. ed. 2, 1: 444, 1762.

Lloydia alpina Salisb. Trans. Hort. Soc. Lond. 1: 328, 1812.

Type Locality: "Habitat in alpibus Angliae, Helvetiae, Taureri rastadiensis, Waflaesiae.''

Range: Arctic regions, southward in the mountains to Washington, Nevada, and Colorado. Europe.

Specimens examined: Olympic Mountains, Flett 850; Mount Baker, Flett 861; Mount Baldy, Conard 285.

Zonal distribution: Arctic.

CALOCHORTUS.

Flowers pink or purple, erect.

Petals obtuse or truncate, ocellate at base.

Flowers 2 to 2.5 cm. long; petals denticulate 2. C. longebarbatus.

Flowers white or yellowish, nodding.

Petals pale yellow, sparsely hairy inside; gland naked 4. C. apiculatus.

Petals white, very hairy inside, broadly ovate; gland more or

less covered by a scale.

Petals obtuse; pods nodding.

Stems 5 to 15 cm, high; scale deeply lacerate....... 5. C. degans.

Stems 20 to 40 cm, high; scales subentire.

29418—06 м——13

Calochortus macrocarpus Dougl. Trans. Hort. Soc. 7: 276. t. 8. 1830.

Type locality: "Dry barren grounds around the Great Falls of the Columbia, and on the summit of the low hills between them and the Grand Rapids." Collected by Douglas, June, 1825.

RANGE: British Columbia to Idaho and California.

Specimens examined: White Salmon, Suksdorf in 1879; Simeoe Hills, Lyall in June, 1860; Egbert Springs, Sandberg & Leiberg 409; without local'ty, Vascy 83; Kreager 391; Ellensburg, Elmer 393; near Ellensburg, Whited 539; Piper, July, 1897; Wenache, Whited 1269; Cowiche Creek, Cotton 462; Spokane County, Mrs. Tucker: Spokane, Piper, July, 1891; Steamboat Rock, McKay 21; Alkal' Lake, Sandberg & Leiberg, July, 1892; Pullman, Lake & Hull, July, 1892; Piper 1681; Waitsburg, Horner 463; Ill.a, Lake & Hull, June 1892.

Zonal distribution: Upper Sonoran and Arid Transition.

Calochortus longebarbatus S. Wats. Proc. Am. Acad. 17: 381, 1882.

Type Locality: Falcon Valley, Klekitat County, Washington. Collected by Suksdorf Range: Klekitat County and adjacent Oregon.

Specimens examined: White Salmon, Suksdorf in 1879; Falcon Valley, Suksdorf 64; Klekitat Valley, Howell 560; Klickitat River, Flett 1123.

This species differs constantly from C, ndidus in producing a bulblet on the stem at the surface of the ground.

3. Calochortus nitidus Dougl. Trans. Hort. Soc. 7: 277. t. 9. 1830.

Calochortus paronaceus Fernald, Bot. Gaz. 19: 335. IS94.

Type Locality: "On the chain of the Blue Mountains and mountainous districts of the Columbia, from the confluence of the Spokane River upwards." Collected by Douglas.

Range: Eastern Washington and adjacent Idaho.

Specimens examined: Pullman, Peper 4680, Henderson 2484, Union Flat, Lake & Hull 618.

ZONAL DISTRIBUTION: Arid Transition.

4. Calochortus apiculatus Baker, Journ. Linn. Soc. 14: 305, 1875.

Type locality: "Columbia brittan'ca ad montes Pend Ore'lle et Kootenay." Collected by Lyall. This must be very close to where Washington, Idaho, and British Columbia meet.

RANGE. Washington, Idaho, and Bratish Columbia.

Specimens examined. Spokane, Miss Kate Reed: Pend Ore-lle and Kootenay rivers, Ligall in 1861

ZONAL DISTRIBUTION: Canadian.

5. Calochortus elegans Pursh, Fl. 1: 240, 4814.

Catochortus elegans menor Hook, Fl. Bor, Am. 2: I83, 1839.

Calochortus elegans major Hook, loc, cit,

Type locality, "On the headwaters of the Kooskooky," Idaho. Collected by Lewis. The exact place is opposite Kam'ah, Idaho.

RANGE: Washington, Idaho.

Specimens examined: Pullman, Hull 811; Henderson 2483; Wenache, Whited 40, 1139. Zonal, distribution: Arid Trans'tion to Canadian.

Small specimens of this species have been referred a to consly to C. elegans names Wood.

Calochortus purdyi Eastwood, Proc. Cal. Acad. 111, 1: 137, 1898.

Type locality: Grants Pass, Oregon, Collected by Howell.

Range: Western Washington and western Oregon.

Specimens examined: Seattle, Piper, June 4, 1883; Meany, June, 1885.

Zonal distribution: Humid Transition.

7. Calochortus lyallii Baker, Journ. Linn. Soc. 14: 305, 1875.

Calochortus ciliatus Robinson & Seaton, Bot. Gaz. 18: 238, 1893.

Type locality: "Columbia brittanica ad apicem mont's alt. 5,800 pedes inter fluy. Columbia et Yakima." Collected by Lyall.

Range: Eastern Washington, in the Cascade Mountains.

Specimens examined: Naches River, Henderson 2485; Mount Stuart, Sandberg & Leiberg 575; Wenache Mountains, Whited 1139, 40; Cotton 1266, 1313, 1657; Wenache region, Brandegee 1107; without locality, Vascy 82.

Zonal distribution: Hudsonian.

A specimen of E, ciliatus from the Wenache Mountains, the type locality for each supposed species, was sent to Mr. J. G. Baker, who reports that it "is not exactly the same" as the type of C, lyallii, "as it differs in the relative length of anther to filament." A fairly large series of specimens convinces me that two species can not be maintained as distinct on such a basis.

8. Calochortus subalpinus sp. nov.

Bulbs ovate, 2 to 3 cm. long, the outer coats dark; stems flexuous, erect, 15 to 29 cm. high, usually exceeded by the solitary leaf, 1 to 3-flowered; leaf linear-lanceolate, acuminate, 3 to 8 mm. wide, paler beneath; bracts lanceolate, long-acuminate, 2 to 3 cm. long; sepals lance-ovate, acuminate, somewhat scarlors on the margins, 1.5 to 2.5 cm. long, 6 to 9-nerved, the base strongly arched forming a shallow pit inside, this marked by a purple spot; petals cream-colored, purplish at base, obovate or rhomble-orbicular, 2 to 3 cm. long, slightly crose at margin, sparsely villous over the upper face above the striate minutely puberulent gland excepting a narrow portion near the apex; scale narrow, entire, extending in a gentle curve nearly across the petal and covered with long, retrorse hairs; filaments broadly wing-margined, equalling the long-beaked anthers; capsules nodding, narrowly elliptic, rather acutish at each end, 2 to 3 cm. long, beaked by a style 1 to 2 mm. long.

A subalpine species closely allied to C, purdyi Eastwood, which differs in having thinner sepals lacking the pit at the base, more villous petals without the naked apical area, less villous scales which are very strongly arched, a much thinner perfectly smooth gland, and merely acuminate, not beaked, anthers.

Specimens examined: Washington: Mount 8t. Helens, Coville 765, July 18, 1898; Mount Adams, Henderson 52; Klickitat River, Flett 1121; Skamania County, Suksdorf, August 11, 1886; White Salmon, Suksdorf in 1879; Falcon Valley, Suksdorf, July 1, August 1881.

Oregon: Mount Hood, A. Wood in 1866; Gorman, September 23, 1896; Dr. C. H. Merriam, altitude 6,000 to 7,000 feet in 1896; Howell in 2881 (type, in U. S. National Herbarium); Three Sisters, Gorman 121, July 21, 1903, altitude 6,000 feet.

This species was included in *C. elegans namus* Wood by its author, but the type of that came from near Yreka, California, and is quite different from this subalpine or alpine northern species. In Howell's Flora of Northwest America this species is well described, but under the name *C. lyallii* Baker, which belongs to a very different species. The species has also been confused with *C. apiculatus* Baker.

MELANTHACEAE. BUNCH-FLOWER FAMILY.

Anthers 1-celled: leaves neither rigid nor equitant.

Leaves broad; petioles sheathing; flowers in a large panicle. . Veratram (p. 196), aves narrow, grass-like.

Flowers erect, each segment bearing a gland at base . . . ZYGADENUS (p. 197).

Flowers nodding: perianth segments glandless..... Stenanthium (p. 197.). Anthers 2-celled; leaves rigid or equitant.

Leaves not equitant, harsh and rigid; pedicels naked XEROPHYLLUM (p. 197).

VERATRUM. FALSE HELLEBORE.

Flowers green; panicle drooping. 1. $V.\ viride.$ Flowers white; panicle erect.

Terminal branch of the panicle much clongated 2. V. caudatum.

Terminal branch of the panicle rather short 3. V. californicum.

1. Veratrum viride Ait. Hort. Kew 3: 422, 1789.

Green hellebore.

Veratrum lobelianum eschscholzianum Roem, & Schult, Syst. 7: 1555, 1830.

Veratrum eschscholtzii Gray, Ann. Lyc. N. Y. 4: 119, 1837.

Type locality: North America.

RANGE: Alaska to New Brunswick southward to Washington, Minnesota, and Georgia. Specimens examined: Claffam County, Elmer 2501; Cascade Mountains, latitude 49°, Lyall in 1860; Mount Rainier, Piper, August, 1895; Skamania County, Suksdorf 213; Mount Adams, Suksdorf 85; near Skagit Pass, Lake & Hull 609; Bridge Creek, Elmer 665; Blue Mountains, Piper, July, 1896.

Zonal distribution: Hudsonian.

2. Veratrum caudatum Heller, Bull. Torr. Club 26: 588, 1899.

Type locality: "In wet meadows at Montesano, Chehalis County, Washington." Collected by Heller.

Range: Western Washington.

Specimens examined: Montesano, Heller 4013; Scattle, Piper 1101; Chehalis River, Lamb 1236.

ZONAL DISTRIBUTION: Humid Transition.

This may be merely a form of V. californicum Durand, but the plant is somewhat different in habit.

3. Veratrum californicum Durand, Journ. Acad. Phila. 3: 103, 1851.

WHITE HELLEBORE. PLATE XX.

Veratrum speciosum Rydberg, Bull. Torr. Club 27: 531, 1900.

Type locality: California. Collected by Pratt.

RANGE: Washington to California, Colorado, and Montana.

Specimens examined: Mount Adams, Suksdorf 65; Falcon Valley, Suksdorf 174; North Fork Atanum, Henderson, August 2, 1892; Peshastin, Sandberg & Leiberg 518; Wenache, Whited; Palouse, Henderson, July 15, 1892; Pullman, Piper; without locality, Vascy 99; Mount Carlton, Kreager 263.

ZONAL DISTRIBUTION: Arid Transition.

Veratrum californicum Durand is described as having petioled leaves, but the type pecimen clearly shows that the so-called petiole is only a part of the sheathing base.

TOFIELDIA.

1. Tofieldia intermedia Rydberg, Bull. Torr. Club 27: 528, 1900.

Type Locality: "Sheh-Shooh Lake, Alaska."

RANGE: Alaska to Oregon and Montana.

Specimens, examined: Clallam County, Elmer 2501; Olympic Mountains, Piper 2242; Cascade Mountains, latitude 49°, Lyall in 1859; Mount Rainier, Piper 2133; Flett 291; Tatoosh Mountains, Allen 274; Olympia, Kincaid, July 2, 1896; Mount Stuart, Elmer 1227; Mount Adams, Suksdorf, August 31, 1886; Falcon Valley, Suksdorf 516; Lake Wenache, Sandberg & Leiberg 629; Horseshoe Basin, Lake & Hull 610; Bridge Creek, Elmer.

Contr. Nat. Herb Vol XI PLATE XX.

WHITE HELLEBORE (VERATRUM CALIFORNICUM).

A common plant in the moist flats and vales of the Arid Transition area. Photograph by A. B. Leckenby.

Zonal distribution: Arctic and Hudsonian.

This species has been confused with both T. glutinosa (Michx.) Pers. and T. occidentalis S. Wats.

STENANTHIUM.

Stenanthium occidentale A. Grav, Proc. Am. Acad. 8: 405, 1873.

Stenanthella occidentalis Rydberg, Bull. Torr. Club 27: 531, 1900.

Type locality: "In the Rocky Mountains." Collected by Bourgeau.

RANGE: British Columbia and Alberta to Oregon and Montana.

Specimens examined: Olympic Mountains, Flott 137; Piper 2226; Cascade Mountains, latitude 49°, Lyall in 1859-60; Clallam County, Elmer 2503; Silverton, Bouck 188a; Goat Mountains, Allen 233; Cascade Mountains, Henderson, July, 4892; Cape Horn, Howell in 1877; Piper 4966.

ZONAL DISTRIBUTION: Arctic to Canadian.

XEROPHYLLUM.

Xerophyllum tenax (Pursh) Nutr. Gen. 1: 235, 4818.

Helonias tenax Pursh, Fl. 1: 243, 1814.

Type locality: "On the high lands near the Rocky Mountains." Collected by Lewis. June 25, 1806, on which date he was on Collins [Lolo] Creek, Idaho.

Range: British Columbia to Montana and California.

Specimens examined: Challam County, Elmer 2505; Skokomish Valley, Kincaid, June, 1892; Mount Rainier, Piper, August, 1895; Mount Carlton, Kreager 273.

Zonal distribution: Hudsonian and Canadian.

This plant was formerly much used by the Indians in basketry work. If ranges in altitude from near the sea level in Mason County to 6,000 feet on Mount Rainier. On the Lolo Trail, where Lewis collected the type, it is exceedingly abundant, often covering hundreds of acres. It is also known as bear grass and squaw grass.

ZYGADENUS.

Petals 6 to 8 mm, long; gland obovate.

1. Zygadenus elegans Pursh, Fl. 1: 241, 1814.

Type locality: "On the waters of the Cokablaishkit River, near the Rocky Mountains" [i. e., Big Blackfoot River, Montana]. Collected by Lewis.

Range: Alaska to New Brunswick, south to Washington, Colorado, Minnesota, and Vermont.

Specimens examined: Olympic Mountains, Flett 109; Wenache Mountains, Whited 718; Wenache Region, Brandegee 1112; Loomis, Elmer 597.

2. Zygadenus paniculatus S. Wats. Bot. King Explor. 5: 343, 1871.

Type Locality: "Oregon and Washington. Frequent on the foot-hills of the Virginia. Trinity, and West Humboldt Mountains, Nevada, and in the Walisatch."

Range: Washington to Nevada and Montana.

Specimens examined: Admiralty Head, Piper, May, 1898; Ellensburg, Whited 354, Piper 2671: Ellensburg to Wenas, Whited 276; Wenache Valley, Whited 85, 1054; Falcon Valley, Suksdorf 704; Rattlesnake Mountains, Cotton 577, 366; between Coulee Ci. : . . Waterville, Spillman, May, 1896; without locality, Vascy; Waitsburg, Horner B UB.

Zonal distribution: Upper Sonoran.

3. Zygadenus venenosus S. Wats, Proc. Am. Acad. 14: 279, 1879. Death camas.

Type locality: Salinas Valley, "among hills," Monterey County, California, according to the label on the type specimen. Collected by Brewer.

RANGE: British Columbia to California.

Specimens examined: Clallam County, Elmer 2493; Humptulips, Lamb 1185; Whidby Island, Gardner 294; Lopez Island, Lyall in 1858; Tacoma, Flett 893; Admiralty Head, Piper, May, 1898; Fort Vancouver, Tolmie; Snoqualmie, Smith 1060; Steilacoom, Piper 211; Muckleshoot Prairie, Ruhn: Spokane Valley, Lyall in 1861; Falcon Valley, Suksdorf 515; Klickitat River, Flett 1120; Pullman, Piper 1672, Elmer 831; without locality, Vascy in 1889.

ZONAL DISTRIBUTION: Transition.

This species as here accepted is quite variable, but none of the forms seems susceptible of segregation. The western Washington forms are more nearly typical, having the glands of the perianth very distinctly limited. The poisonous qualities of the bulb of this plant are certainly much exaggerated, if indeed there is any real basis in fact for its reputed virulence.

The Washington specimens referred by Hooker a to Leimanthium nuttallii and by Cooper b to Anticlea nuttallii and A. douglasii are with little doubt Zygadenus venenosus.

CONVALLARIACEAE. LILY OF THE VALLEY FAMILY.

Leaves reduced to scales; branches thread-like, green Leaves foliaceous; branches not thread-like. Plant producing but one flower. Leaves three in a whork. Leaves all leavel per whork I	
Leaves three in a whork	m
Leaves three in a whorl	m / 10:
Louvey all level and released	ТВИЛЛЕМ (р. 198),
Leaves all basal, not whorled.	Clintonia (d. 199).
Plant producing several to many flowers.	1 /
Inflorescence a raceme or panicle.	
Perianth segments six.	Vagnera (p. 199).
Perianth segments four	Uхионим (р. 200).
Inflorescence an umbel or flowers solitary.	•
Flowers terminal on the branches, solitary or umbelled.	Ді вровім (р. 201).
Flowers axillary, usually solitary.	
Perianth narrowly campanulate

sepals	2. T. crassifolium.3. T. chloropetalum.

RANGE: British Columbia to California and Idaho,

a Flora Bor, Am. 2: 177.

b Pac. R. Rep. 122; 69.

Specimens examined: Claffam County, Elmer 2498; Port Ludlow, Binns, March 30, 1889; Silverton, Bonck 478; upper Nisqually Valley, Allen 58; Piper, August, 1895; Tacoma, Flott 75; Easton, Whited 295; Fort Vancouver, Tolmie; Stevens Pass, Sandberg & Leiberg 770; without locality, Vascy 85; Pend Oreille River, Lyall in 1861; Mount Carlton, Kreager 188.

ZONAL DISTRIBUTION: Transition and Canadian.

2. Trillium crassifolium Piper, Erythea 7: 104, 1899.

Type locality: "Footbills near Wenatchee," Wash. Collected by Whited.

Range: Known only from the type locality.

Specimens examined: Wenache Mountains, Whited, April, 1899; May, 1900.

3. Trillium chloropetalum (Torr.) Howell, Fl. N. W. Am. 661, 1902.

Trillium sessile chloropetalum Torr. Pac. R. Rep. 4: 151, 1856.

Trillium sessile californicum Wats, Proc. Am. Acad. 14: 273, 1879.

Type locality: "Redwoods," California.

Range: Washington to California in the coast region.

Specimens examined: Roy, Flett 2223. Zonal distribution: Humid Transition.

4. Trillium petiolatum Pursh, Fl. 1:244, 1814.

Type locality: "On the waters of the Kooskooskee." Collected by Lewis, June 15, 1806. On that day Lewis was on the Lolo River, Idaho.

Range: Idaho and adjacent Washington and Oregon.

Specimens examined: Spokane, Sandberg & Leiberg, May, 1893; Spokane County, Suksdorf 457; Spokane hills, Lyall in 1861; Pullman, Piper 1674; Elmer 125.

ZONAL DISTRIBUTION: Arid Transition.

CLINTONIA.

1. Clintonia uniflora (Schult.) Kunth, Enum. Pl. 5: 159, 1850.

Smilacina borealis uniflora Schult, in Roem, & Schult, Syst. 71: 307. 1829.

Smilacina uniflora Menzies; Hook. Fl. Bor. Am. 2: 175, t. 190, 1839.

Type locality: "In ora occidentali Americae borealis." Collected by Menzies,

RANGE: British Columbia to California and Idaho.

Specimens examined: Clallam County, Elmer 2494; Olympic Mountains, Grant in 1889; Cascade Mountains, latitude 49°, Lyall in 1859; Valley of Nisqually, Allen 74; Silverton, Bouck 180; Mount Rainier, Flett 262; Mount Stuart, Sandberg & Leiberg 560; Stampede Pass, Henderson, July and October, 1892; Skagit Pass, Lake & Hull 612; Peshastin, Sandberg & Leiberg, July, 1893; between Spokane and Pend Oreille River, Lyall in 1861; Mount Carlton, Kreager 184, 229; without locality, Vasey 98.

ZONAL DISTRIBUTION: Canadian.

VAGNERA.

Flowers numerous, small, in panicles.

Flowers larger, fcw, in racemes.

Leaves folded, ascending. 1. V. stellata.

1. Vagnera stellata (L.) Morong, Mem. Torr. Club 5: 114, 1894.

Convallaria stellata L. Sp. Pl. 1: 316, 1753.

Smilacina stellata Desf. Ann. Mus. Par. 9: 52, 1807.

Type Locality: Canada.

RANGE: Washington to Labrador, south to California, New Mexico, Iowa, and Pennsylvania.

Specimens examined: Ellensburg, Whited 351; North Yakima, Leckenby, May, 1898; Blue Mountains, Horner 194.

2. Vagnera sessilifolia (Baker) Greene, Man. Bay Region 316, 1894.

Toraria sessilifolia Baker, Journ. Linn. Soc. 14: 566, 1875.

Smilacina sessilifolia Nutt; Wats. Proc. Am. Acad. 14: 245, 1879.

Smilacina stellata sessilifolia Henderson, Bull. Torr. Club 27: 358, 1900.

Type locality: "America borealis occidentalis a Columbia brittanica ad Californiam et Mexicum Novum."

Range: British Columbia to California and New Mexico.

Specimens examined: Clallam County, Elmer 2495; Cascade Mountains, latitude 49°, Lyall in 1858; near Lake Cushman, Piper, August, 1895; Silverton, Bonck 185; Valley of Xisqually, Allen 37; Tacoma, Flett 90; west Klickitat County, Suksdorf 173; Falcon Valley, Suksdorf 172; Skokonish River, Kinevid, May, 1892; Wenache Mountains, Whited 1052; Sunnyside, Cotton 374; Klickitat River, Flett 1122; Colville, Lyall in 1860; Rock Creek, Sandberg & Leiberg 126; Spokane Valley, Lyall in 1861; Spokane, Henderson, June, 1892; Almota Creek, Piper, May, 1897; Pullman, Elmer 117; Piper, July, 1900; Hull 616; Waitsburg, Horner 195; without locality, Vasey; Clarks Springs, Kreager 45; Mount Carlton, Kreager 221, 252.

Zonal distribution: Transition.

3. Vagnera amplexicaulis (Nutt.) Greene, Man. Bay Region 316, 1894.

Smilaeina amplexicaulis Nutt. Journ. Acad. Phila. 7: 58, 1834.

Smilacina racemosa amplexicaulis Wats. Bot. King Explor. 345, 1871.

Vaguera brachypetala Rydberg, Bull. Torr. Club 28: 268, 1901.

Type locality: "In the valleys of the Rocky Mountains about the sources of the Columbia River." Collected by Wyeth.

Range: British Columbia to California and New Mexico.

Specimens examined: Clallam County, Elmer 2500; Baldy Peak, Lamb 1345; Coupeville, Gardner 290; Tacoma, Flett 203; Silverton, Bonck 186; Mount Adams, Suksdorf 1006; Wenache, Whited 1051; Lake Wenache, Sandberg & Leiberg 648; Lake Chelan, Lake & Hull, August 15, 1892; Pend Oreille River, Lyall in 1861; Blue Mountains, Piper, July 15, 4896; Mount Carlton, Kreager 271.

Zonal distribution: Transition.

A variable species distinguishable with difficulty from V. racemosa (L.) Morong.

3a. Vagnera amplexicaulis brachystyla (Henderson).

Smilacina racemosa brachystyla Henderson, Bull. Torr. Club 27: 357, 1900.

Type locality: "In the Yakima country," Washington.

Range: Eastern Washington and eastern Oregon.

Specimens examined: Kamiak Butte, Elmer 810: Moore, June, 1893: Piper, July 20, 1899.

UNIFOLIUM.

1. Unifolium bifolium kamtschaticum (Gmel.)

Convallaria bifolia kamtschatica Gmcl.; Cham. & Schlecht, Linnaca 6: 587, 1831.

Maianthemum bifolium dilatatum Wood, Proc. Acad. Phila. 1868: 174, 1868.

Type locality: Kamtschatka.

RANGE: Alaska to California and Idaho. Siberia.

Specimens examined: Clallam County, Elmer 2494; Silverton, Bonck; Seattle, Piper 200; Tacoma, Flett 197; Nisqually Valley, Allen 73; Lower Cascades, Suksdorf, May 29, 1886; Fort Vancouver, collector not indicated; without locality, Vascy in 1889.

Zonal distribution: Humid Transition.

This plant was referred to Smilacina bifolia L. in Hooker's Flora and to Smilacina bifolia trifolia in Cooper's List.

DISPORUM.

Perianth narrowed at base.

1. Disporum smithii (Hook.).

Uvularia smithii Hook, Fl. Bor, Am. 2: 174, t. 189, 1838.

Prosartes menziesii D. Don, Trans. Linn. Soc. 1: 48–1839 (December) or 1840.

Disporum menziesii Britt. Bull. Torr. Club, 15: 188, 1888.

Type locality: "Nutka Sound." Collected by Menzies.

RANGE: British Columbia to north California, near the coast.

Specimens examined: Hoquiam, Lamb 1039a; upper Nisqually Valley, Allen, June 25, 1893; Skokomish River, Kincaid, May 13, 1892; without locality, Vascy 97.

Zonal distribution: Humid Transition.

2. Disporum oreganum (S. Wats.) Benth. & Hook.; Howell, Fl. X. W. Am. 1: 659, 1902. Prosartes oreganum S. Wats. Proc. Am. Acad. 14: 271, 1879.

Type locality: Oregon.

Range: British Columbia to Oregon and Idaho.

Specimens examined: Challam County, Elmer 2497; Lake Cushman, Piper, August, 1895; Nisqually Valley, Allen 148; Cascade Mountains, latitude 49°, Lyall in 1861; Tacoma, Flett, May, 4896; Falcon Valley, Suksdorf 513; along Salmon River, Horner 472; Stampede Pass, Henderson, June, 1892; Wenache Mountains, Brandeger 1110; Fort Vancouver, Tolmie: Lake Wenache, Sandberg & Leiberg 644; Blue Mountains, Piper, July, 1896; foothills of Blue Mountains, Horner 189; without locality, Vasey: Frontier, Kreager 468.

Zonal distribution: Transition.

3. Disporum majus (Hook.) Britton, Bull. Torr. Club 15: 188, 1888.

Prosartes lanuginosa major Hook, Fl. Bor. Am. 2: 174, 1839.

Prosartes trachycarpa S. Wats. Bot. King. Explor. 314, 1871.

Type locality: "Between Norway House and Cumberland House Fort." Collected by Richardson.

RANGE: British Columbia and Saskatchewan to Arizona.

Specimens examined: Silverton, Bouck 181; along Twisp River, Whited, July, 1896; Falcon Valley, Suksdorf 901; Conconully, Whited 1321; Wenache, Whited 69; Clealum, Whited 4224; Spokane, Piper 2285, 2268; along Salmon River, Horner 473; Blue Mountains, Piper, July, 1896; Mount Carlion, Kreager 310; Clarks Springs, Kreager 130.

Zonal distribution: Arid Transition.

Prosartes lanuginosa major Hook, has been associated with P. oreganum Wats., but mistakenly, since the latter species does not range east of Idaho. A Richardson specimen in the Gray Herbarium perhaps of the type collection is unquestionably P. trachycar pum Wats. We have, therefore, no hesitancy in giving the synonymy as above.

STREPTOPUS.

Leaves glaucous beneath, half-clasping; flowers greenish 1. S. amplexifolius. Leaves green on both sides, sessile; flowers, rose-colored. 2. N. roseus.

Streptopus amplexifolius (L.) DC. Fl. Fr. 3: 171, 1805.

Uvularia amplexifolia L. Sp. Pl. 1: 304, 1753.

Type locality: "Habitat in Bohemiae, Silesiae, Saxoniae, Delphinatus montibus."

Range: Alaska to Labrador and southward to Arizona and Pennsylvania. Europe.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1559; Coupeville, Gardner, May 25, 1897; Silverton, Bonck 182; Seattle, Peper in 1885; Tacoma, Flett, 204; Stevens Pass, Sandberg & Leiberg 737; near Skagit Pass, Lake & Hull 615; Lake Wenache, Sandberg & Leiberg 646; Blue Mountains, Piper, July, 1896; without locality, Vasey 104; Mount Carlton, Kreager 254, 191.

Zonal distribution: Transition.

2. Streptopus roseus Michx. Fl. 1: 201, 1803.

Streptopus curvipes Vail, Bull. Torr. Club. 28: 267, 1901.

Type locality: "Hab, in excelsis montibus Carolinae septentrionalis et in Canada." Range: Alaska to Oregon, Labrador, and Georgia.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Lake Cushman, Piper in 1890; Goat Mountains, Allen, August 12, 1895; Silverton, Bonek 183; Skamania County, Suksdorf, August 10, 1886; Mount Adams, Suksdorf 44; Stampede Pass, Henderson, April 10, 1892; Stevens Pass, Whited 1460; Simcoe Mountains, Howell in 1879; Nason City, Sandberg & Leiberg 652.

ZONAL DISTRIBUTION: Humid Transition.

The western form of this species is commonly smaller than that of the eastern States, and shows a tendency to produce longer rhizomes, but we believe these differences are not specific, especially as rhizomatous forms occur also in the Allegheny Mountains.

KRUHSEA.

 Kruhsea streptopoides (Ledeb.) Kearney in Herron, Explor, in Alaska, Adj. Gen. Off. 31: 74, 1901.

Smilacina streptopoides Ledeb, Fl. Ross, 4: 128, 1853.

Kruhsea tilingiana Regel, Nouv. Mem. Soc. Nat. Mosc. 11: 122, 1859.

Streptopus brevipes Baker, Journ. Linn. Soc. 14: 592, 1875.

Type locality: "Hab, in Siberia orientali pr. Ajan! inque insula Sitka."

RANGE: Alaska to Washington. Siberia.

Specimens examined: Cacsade Mountains, latitude 49°, Lyall in 1859.

Zonal distribution: Canadian.

ASPARAGUS.

1. Asparagus officinalis L. Sp. Pl. 1: 313, 1753.

Asparagus.

The cultivated asparagus quickly escapes from cultivation and becomes more or less established. This is especially true in somewhat alkaline lands in the Yakima Valley.

IRIDACEAE. IRIS FAMILY.

Flowers moderate; styles filiform.

Filaments united only at base; flowers never blue.

Flowers red: styles cleft near the top...... OLSYNUM (p. 204).

IRIS.

 Stems leafy; bracts green, not scarious.
 2. I. trax.

 Stems leafless; bracts largely scarious.
 1. I. missouriensis.

1. Iris missouriensis Nutt. Journ. Acad. Phila. 7: 58, 1834.

PLATE XX1.

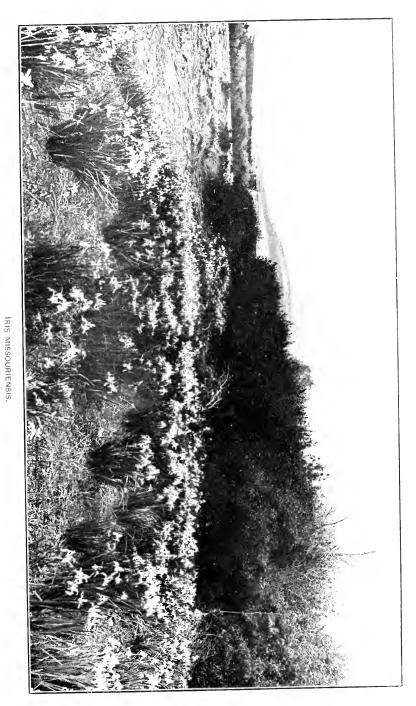

Iris tolmicana Herbert, Bot. Beech. Vov. 396, 1839.

Iris caurina Herbert; Hook, Fl. Bor, Am. 2: 206, 1839 (November).

Type locality: "Towards the sources of the Missouri." Collected by Wyeth.

RANGE: British Columbia to Dakota, Arizona, and California.

Specimens examined: Whidby Island, Gardner 278, 426; Ellensburg, Whited, May, 1897; Yakima, Leckenby, May, 1898; North Yakima, Henderson, May, 1892; Prosser

Henderson, May, 1892; Rock Creek, Sandberg & Leiberg 100; Pullman, Piper, June, 1893; Elmer 824; Piper 1683; Wenas, Griffiths & Cotton 67.

ZONAL DISTRIBUTION: Arid Transition.

Some Washington specimens have been referred to Iris longipetala Herbert, but all such seem to us forms of I. missouriensis. The occurrence of this species on Whidby Island is surprising. No other station for the plant is known west of the Cascade Mountains.

Iris tenax Dougl.; Lindl. Bot. Reg. 15: 7, 1218, 1829.

Type locality: "A common plant in north California and along the coast of New Georgia, in dry soils or open parts of woods, flowering in April and May." Collected by Douglas.

Range: Washington to California in the coast region.

Specimens examined: Montesano, Heller 3876; Henderson; Fort Vancouver, Tolmie; Manor, Piper, July 14, 1899; Vancouver, Piper 4943.

Zonal distribution: Humid Transition.

SISYRINCHIUM. BLUE-EYED GRASS.

Bracts of the spathe linear, equally narrow, the inner exceeding the Bracts of the spathe dissimilar, the inner broader than the outer and always shorter than the flowers.

Perianth-segments 4 to 7 mm. long, white or pale; leaves and

Perianth-segments 12 to 18 mm. long, blue.

Stems always simple.

Leaves 1 to 3.5 mm, broad, firm; stems 1 to 3 mm, wide . 4. 8. idahoense.

Leaves 0.5 to 1.5 mm. broad, soft; stems 1 to 1.5 mm wide...... 5. S. segetum.

1. Sisyrinchium sarmentosum Suksdorf, Erythea 3: 121, 1895.

Type locality: Skamania County, Washington. Collected by Suksdorf.

Range: Known only from the type locality.

Specimens examined: Skamania County, Subsdorf 2233.

2. Sisyrinchium septentrionale Bicknell, Bull. Torr. Club 26: 452, 1899.

Type locality: Moose Mountain Creek, Assiniboia.

Range: Assiniboia to Washington and Idaho.

Specimens examined: "Spokane to Colville," Wilkes Expedition in 1838-1812.

3. Sisyrinchium birameum sp. nov.

Loosely tufted, 40 to 50 cm. high, the herbage discolored in drying: stems smooth, erect, winged, the principal ones branched above, 1 to 2 mm. broad; leaves firm, erect, rather few, about half the height of the stem, 2 to 3 mm, broad, acute; cauline leaf when present 8 to 10 mm, long, the two peduncles usually exceeding it; bracts of the spathe subequal, lanceolate, purplish, the inner 2 to 2.5 cm. long, always shorter than the pedicels, the outer often of the same length, sometimes a half longer, both hyaline-margined and attenuate-acute; flowers 2 to 5 on slender, creet pedicels; perianth dark blue with a yellow eve, its segments 12 to 15 mm. long; stamineal column 5 to 6 mm. long; ovaries glandularpuberulent; capsules globose, 4 to 5 mm, broad; seeds black, foveolate, 1 mm, long, the angles irregularly winged.

Collected in swamps near Vancouver, June 5, 1905, no. 4926, the type in the National Herbarium. The species is closely allied to S. idahoense Bicknell, but its frequently branched stems searcely permit its association therewith. Typical S. idahornsa occurred, however, in drier ground near by and it is possible that our plant is merely a luxuriant branched form of that species.

4. Sisyrinchium idahoense Bicknell, Bull. Torr. Club 26: 445. 1899.

Type locality: Kootenai County, Idaho. Collected by Leiberg.

Range: British Columbia to Idaho and California.

Specimens examined: Montesano, Heller 3883; Prosser, Henderson 2543; Ellensburg, Whited 453; Pullman, Piper 1684; Hull 608; Elmer 213, 825; Wenas, Griffiths & Cotton 78; Satus, Cotton 1119; Vancouver, Piper 4938.

ZONAL DISTRIBUTION: Arid Transition.

This species was formerly considered the same as the eastern S. mucronatum Michx., under which name several references to our flora occur.

5. Sisyrinchium segetum Bicknell, Bull. Torr. Club 26: 449. 1899.

Type locality: Seattle, Washington.

Range: Washington and Oregon west of the Cascade Mountains.

Specimens examined: Humptulips, Lamb 1176; Admiralty Head, Piper, May 27, 1898; Seattle, Piper, May, 1892; Meany 196; Coupeville, Gardner 283; Tacoma, Flett 187; Olympia, Henderson 2542.

Zonal distribution: Humid Transition.

Very near S. idahoeuse, but perhaps distinct by its narrower and thinner leaves and stems.

HYDASTYLUS.

 Pedicels 40 to 15 mm, long; leaves 2 to 5 mm, broad
 1. H. brachypus.

 Pedicels 15 to 20 mm, long; leaves 1 to 3 mm, broad
 2. H. borealis.

These two supposed species are very similar and probably not distinct. Heretofore they have been referred to Sisyrinchium californicum Ait., a species that does not occur so far north. More material of these two forms is necessary to determine their status.

1. Hydastylus brachypus Bicknell, Bull. Torr. Club 27: 379, 1900.

Type locality: "Oregon." Collected by E. Hall.

Range: Coasts of Oregon and Washington.

Specimens examined: Oyhut, Lamb 1251; Westport, Henderson, June, 1892; Granville, Conard 110.

Zonal distribution: Humid Transition.

2. Hydastylus borealis Bicknell, Bull. Torr. Club 27: 378, 1900.

Type locality: Whatcom County, Washington. Collected by Suksdorf.

Range: Coast of Washington and Vancouver Island.

Specimens examined: Whatcom County, Gardner 411; Suksdorf 1001.

Zonal distribution: Humid Transition.

OLSYNIUM.

1. Olsynium grandiflorum (Dougl.) Raf. New Fl. Am. 1: 72, 1836.

Sisyrinchium grandiflorum Dougl. Bot. Reg. 16: t. 1364, 1830.

Type Locality: "Near the Great [Celilo] Falls of the river Columbia." Collected by Douglas in 1826.

Range: British Columbia to California and Nevada.

Specimens examined: Whidby Island, Gardner 279; between Ellensburg and Wenache, Whited 58; North Yakima, Mrs. Steinvey in 1894; Klickitat River, Flett 1112; Hangman Creek, Sandberg & Leiberg 34; Pullman, Moore, May, 1893; Fluier 74; Piper, April, 1894, June, 1893; Wenache Mountains, Griffiths & Cotton 133; Spokane, Piper.

ORCHIDACEAE. ORCHID FAMILY.

Perfect an hers 2; lip large, sac-like	Суркіреріцы (р. 205).
Perfect ancher 1.	•
I lanes saprophytic, without green herbage.	
Flowers spurred, reddish or white	Corallorinza (p. 206).
Flowers spurless, white	Cephalanthera (p. 206).
Plants with ordinary green herbage.	•
Flower and leaf solitary; plant bulbous	Cytherea (p. 207).
Flowers several to many in racemes.	•
Leaves only two.	
Both leaves cauline; lip 2-lobed	Opingys (p. 207).
Both leaves basal; lip entire	Leptorems (p. 208).
Leaves more than two.	
Cauline leaves reduced to bracts.	
Basal leaves several, white-reticulated	Регамисм (р. 208).
Basal leaves two, green and shining	Lysias (p. 208).
Cauline leaves not reduced to bracts.	
Anther on the face of the column.	
Stem leaves abruptly reduced; lat-	
eral sepals adnate to the base of	
the lip	Piperia (p. 208).
Stem leaves gradually reduced; lat-	•
eral sepals free	Limnorchis (р. 209).
Flowers spirally arranged in a dense	•
spike	Івирісм (р. 211).
Anthers on the summit of the column.	-
Flowers in a loose leafy raceme	Ерграстів (р. 211).

CYPRIPEDIUM. Lady's slipper.

Lip about 1 cm. long; flowers greenish brown.

Lip 1.5 to 5 cm. long; flowers not greenish brown.

Flowers yellow; lip 1.5 to 3 cm. long.

2. C. parciflorum,
Flowers brown, with a white lip 3 to 5 cm. long.

3. C. montanum.

1. Cypripedium fasciculatum Kellogg; S. Wats, Proc. Am. Acad. 17: 380, 4882.

Type locality: "On the White Salmon River above the falls," Washington. Collected by Suksdorf.

Range: Washington to California.

Specimens examined: Klickitat County, Suksdorf 900, 310, May, June, 1886; Wenache Region, Brandeyee 1095.

2. Cypripedium parviflorum Salisb. Trans. Linn. Soc. 1: 77, 1791.

Type locality: "Sponte nascentem in Virginia."

Range: British Columbia to Newfoundland south to Washington, Missouri, and Georgia. Specimens examined: Spokane County, Sandberg & Leiberg 125; Suksdorf 946; Spokane, Piper, May, 1897; Henderson 2478.

Our western form corresponds to C. flavescens DC, in Redoute, Lil. 1: pl. 20, 1802, questionably distinguishable by somewhat narrower leaves and with the hp a little compressed laterally.

3. Cypripedium montanum Dougl.; Lindl. Gen. & Sp. Orch. 528, 1840.

Type locality: "Hab, in America boreali-occidentali." Collected by Douglas.

Range: Washington and Idaho to California.

Specimens examined: Mount Stuart, Sandburg & Leiberg 572; Wenache Mountains, Whited 152; Clealum, Henderson, June, 1892; Kalispel Valley, Kreager in 1902; Mount

Carlton, Kreager 285; Spokane, Henderson, June, 1892; Blue Mountains, Lake & Hall 623; Pullman, Carl Cozier, June, 1901; without locality, Vascy in 1889.

Zonal distribution: Transition.

CORALLORHIZA. CORAL ROOT.

Spur none; petals and sepals purple, veiny................... 1. *U. striata*. Spur present.

Petals and sepals pale, 1-nerved; spur very short............ 2. C. corallorhiza.

Petals and sepals 3-nerved; spur prominent.

Spur wholly attached to the ovary. 3. C. multiflora.
Spur free for its apical half. 4. C. mertensiana.

Corallorhiza striata Lindl. Gen. & Sp. Orch. 534, 1840.

Type locality: "Hab. in America boreali-occidentali." Collected by Douglas.

RANGE: British Columbia to New York, south to California.

Specimens examined: Whidby Island, Gardner 276; Admiralty Head, Piper, April, 1898; Tacoma, Flett 53; Roy, Allen, May 19, 1889; near Fort Vancouver, Douglas: Klickitat County, Suksdorf 59; Blue Mountains, Lake & Hull 785.

Zonal distribution: Humid Transition.

2. Corallorhiza corallorhiza (L.) Karst. Deutsch. Fl. 448, 1880-83.

Ophrys corallorhiza L. Sp. Pl. 2: 945, 1753.

Corallochiza innata R. Br. in Ait. Hort. Kew. ed. 2, 5: 200, 1813.

Type locality: Europe.

RANGE: Alaska to Labrador, south to Washington, Nebraska, and Georgia.

Specimens examined: Skamania County, Suksdorf 579; Larm River, Suksdorf 471; Blue Mountains, Horner 469; Piper.

Zonal distribution: Canadian.

3. Corallorhiza multiflora occidentalis Lindl. Gen. & Sp. Orch. 534, 1840.

Type locality: California.

Range: British Columbia to California.

Specimens examined: Clallam County, Elmer 2553; Chehalis County, Lamb 1163; upper Valley Nisqually, Allen 33; Mount Ranier, Flett 280; Admiralty Head, Piper, May, 1898; Olympia, Henderson in 1892; Roy, Allen, June, 1889; Blue Mountains, Piper, July, 1896; Horner 468; without locality, Vascy in 1889; Big Meadow, Kreager 414, 420.

Zonal distribution: Transition and Canadian.

4. Corallorhiza mertensiana Bong. Mem. Acad. St. Petersb. VI. 2: 165, 1832.

Type locality: Sitka.

Range: Alaska to California.

Specimens examined: Challam County, Elmer 2554; Baldy Peak, Lamb 1292; Mount Constitution, Henderson, July, 1892; Nisqually Valley, Allen 234; Skamania County, Suksdorf, July 25, 1886; Fort Vancouver, Tolmie; without locality, Vascy in 1889.

ZONAL DISTRIBUTION: Canadian.

CEPHALANTHERA.

1. Cephalanthera austinae (A. Gray) Heller, Cat. N. A. Pl. ed. 2, 4, 1900.

Chloroca austinae A. Gray, Proc. Am. Acad. 12: 83, 1876.

Cephalanthera oregana Reichenb. Linnaea 41: 53, 1877.

Type locality: "Banks of a wooded ravine in the Sierra Nevada, California, near Quiney in Plumas Co." Collected by Mrs. R. M. Austin.

Range: Washington and Idaho to California.

Specimens examined: Upper Nisqually Valley, Allen 149; Elbe, Flett 289; Falcon Valley, Suksdorf 500: Wind River, Flett 1109; Blue Mountains, Piper 2428; Green River Hot Springs, Piper in 1887.

Zonal distribution: Canadian.

CYTHEREA.

1. Cytherea bulbosa (L.) House, Bull. Torr. Club 32: 382, 1905.

Calypso,

Cypripedium bulbosum L. Sp. Pl. 2: 951, 1753.

Calypso borealis Salish, Parad. Lond. t. 89, 1806.

Cytherea borealis Salisb. Trans. Hort. Soc. Lond. 1: 301, 1812.

Calypso bulbosa Oakes, Cat. Vermont Pl. 28, 1842.

Calypso bulbosa "forma occidentalis" Holzinger, Contr. Nat. Herb. 3: 251, 1895

Calypso occidentalis Heller, Bull. Torr. Club 25: 193, 1898.

Type locality: "Habitat in Lapponia, Russia, Sibiria."

RANGE: Alaska to Labrador, south to California, Michigan, and Maine.

Specimens examined: Whidby Island, Piper, May, 1898; Seattle, Piper 193; Tacoma, Flett 111; Olympia, Cooper; Roy, Allen, April 19, 1889; Blue Mountains, Horner 467.

ZONAL DISTRIBUTION: Transition and Canadian.

The western form of this species has the hairs on the lip white instead of yellow. It grows commonly in places carpeted by Hypnum, but we have never found it occurring in Sphagnum, as it does in the New England States.

OPHRYS.

Column very short, 5 mm. long.	1. O. cordata.
Column 2 to 3 mm, long.	
Lip 5 mm. long; ovary glabrous.	2. O. caurina.
Lip 9 mm. long: ovary glandular	3. O. convallarioides.

Ophrys cordata L. Sp. Pl. 2: 946, 1753.

Listera cordata R. Br. in Ait. Hort. Kew. ed. 2, 5: 201, 1813.

Listera nephrophylla Rydberg, Mem. N. Y. Bot, Gard. 1: 108, 1900.

Type locality: "Habitat in Europae frigidae sylvis humentibus."

RANGE: Alaska to Labrador, south to Oregon and Pennsylvania. Europe. Asia.

Specimens examined: Westport, Lamb 1093; Cascade Mountains, latitude 49°, Lyail in 1859; Skokomish Valley, Kincaid, May, 1892; Stevens Pass, Sandberg & Leiberg 780; Ilwaco, Piper 4951; Seattle, Piper in 1885.

Zonal distribution: Humid Transition.

2. Ophrys caurina (Piper) Rydberg, Bull. Torr. Club 32: 610, 1905.

Listera caurina Piper, Erythea 6: 32, 1898.

Listera retusa Suksdorf, Deutsch. Bot. Monatss. 18: 155, 1900.

Type locality: Cascade Mountains, Washington. Type collected by Henderson.

Range: British Columbia to Oregon.

Specimens examined: Clallam County, Elmer 2548; Baldy Peak, Lamb 1295; Mount Baker, Flett 865; Skamania County, Suksdorf 2326; Green-River Hot Springs, Piper 380; Stampede Pass, Henderson, July, 1892.

Zonal distribution: Canadian.

3. Ophrys convallarioides (Sw.) W. F. Wight, Bull. Torr. Club 32: 380, 1905.

Epipactis envallarioides Sw. Kongl. Vet. Akad. Handl. Stockh. H. 21: 232, 1800.

Listera convallarioides Torr. Comp. 320, 1826.

Type locality: "E. Terra Nova Amer. sept."

RANGE: Alaska to Nova Scotia, south to California and Vermont.

Specimens examined: Big Creek Prairie, Lamb 1402; near Mount Rainier, Smith, August, 1890; Lake Wenache, Sandberg & Leiberg 641; Blue Mountains, Piper 2426; Davis ranch, Kreager 301.

Zonal distribution: Canadian.

LEPTORCHIS.

Leptorchis Ioeselii (L.) MacM. Met. Minn. 173, 1893.

Ophrys locsclii L. Sp. Pl. 2: 947, 1753.

Liparis locselii Richard, Mem. Mus. Par. 4:60, 1818.

Type locality: "Habitat in Succiae, Borussiae paludibus."

Range: Washington to Nova Scotia, south to Missouri and Pennsylvania.

Specimens examined: Falcon Valley, Sulesdorf, June 25, August, 1881.

PERAMIUM.

1. Peramium decipiens (Hook.).

Rattlesnake plantain.

Spiranthes decipiens Hook, Fl. Bor, Am. 2: 203, 1839.

Goodycra menziesii Lindl, Gen. & Sp. Orch. 492, 1840.

Peramium menzicsii Morong, Mem. Torr. Club 5: 124, 1894.

Type locality: Lake Huron. Range: British Columbia to Quebec, south to California and New York.

Specimens examined: Clallam County, Elmer 2547; Seattle, Piper in 1885; Cascade Mountains, latitude 49°, Lyall in 1859-60; Railroad Creek, Elmer 860; Nisqually Valley, Allen 32; Skagit Pass, Lake & Hull 786; without locality, Vasey in ISS9; Davis ranch, Kreager 209; Lake Kalispel, Kreager 340.

Zonal distribution: Transition.

LYSIAS.

Lysias orbiculata (Pursh) Rydberg in Britton, Man. 294, 1901.

Orchis orbiculata Pursh, Fl. 2: 588, 1814.

Habenaria orbiculata Hook, Exot. Fl. 2: t, 145, 1825.

Platanthera menziesii Lindl, Gen. & Sp. Orch, 286, 1835.

Type locality: "On the mountains of Pennsylvania and Virginia."

RANGE: British Columbia to Newfoundland, south to Washington and North Carolina.

Specimens examined: Mount Baker, Flett 867; Monte Cristo Lake, Misses Coffin & Goodspeed, August, 1895; Cascade Mountains, latitude 49°, Lyall in 1859; Green River Hot Springs, Piper in 1887; without locality, Yasey in 1889; Kalispel Lake, Kreager 342.

Zonal distribution: Canadian.

PIPERIA.

Spur slender, 2 to 3 times as long as the lip.

Lip linear to lanceolate.

Spike loose; lip 4 to 5 mm, long; spur 8 to 10 mm, long.... 2. P. leptopetala. Spike dense; lip 6 mm. long; spur 15 to 18 mm. lon 3. P. multiflora.

Lip ovate to ovate-lanceolate.

Spike usually loose; stems 40 to 70 cm, high................. 4. P. elegans. Spike very dense; stems stout, 20 to 30 cm, high.......... 5. P. michaeli.

1. Piperia unalaschensis (Spreng.) Rydberg, Bull. Torr. Club 28: 270, 1901.

Spiranthes unalaschensis Spreng, Syst. 3: 708, 1826.

Habenaria schischmareffiana Cham. Linnaea 3:29, 1828.

Habenaria foetida Wats. Bot. King Explor. 341, 1871.

Type locality: "Ins. Aleut."

Range: Alaska to California, eastward to Alberta and Colorado.

Specimens examined: Clallam County, Elmer 2552; Cascade Mountains, latitude 49°, Lyall in 1859; Seattle, Piper in 1885; Olympia, Kincaid, July, 1896; McAllisters Lake, Henderson, June, 1892; Brooklyn, Savage 19; Twisp River, Whited, July, 1896; Nason Creek, Sandberg & Leiberg 617; Mount Stuart, Sandberg & Leiberg 568; Mount Rainier, Allen; Klickitat River, Henderson, August, 1892; Wind River, Flett 1111; Blue Mountains, Piper, July, 1896; without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Transition and Canadian.

Piperia leptopetala Rydberg, Bull. Torr. Club 28: 637, 1901.

Type locality: "Mountains east of San Diego," California. Collected by Parry.

RANGE: Washington to California.

Specimens examined: Nisqually River, Wilkes Expedition 146; Point Orchard, Piper 1081 in part.

This supposed species may prove to be only a form of P, elegans.

3. Piperia multiflora Rydberg, Bull. Torr. Club 28: 638, 1901.

Type locality: Grays Harbor, Washington. Collected by the Wilkes Expedition.

Range: Washington to California and Montana.

Specimens examined: Grays Harbor, Wilkes Expedition in 1838-1842; Cascade Mountains, Brandegee 475.

Like the preceding, this may have to be reduced to P. elegans. Good suites of specimens in this group are needed to clear up the species.

4. Piperia elegans (Lindl.) Rydberg, Bull. Torr. Club 28: 270, 1901.

Platanthera elegans Lindl, Gen. & Sp. Orch. 285, 1835.

Habenaria elegans Boland, Cat. Pl. San Franc. 29, 1870.

Piperia elongata Rydberg, Bull. Torr. Club 28: 270, 1901.

Type locality: "Hab, in America boreali-occidentali," Collected by Douglas.

RANGE: British Columbia to Idaho and California.

Specimens examined: Coupeville, Gardner 275, 271; Orchard Point, Piper, July, 1895; Seattle, Piper, August, 1891; Tacoma, Flett, June 20, 1896; Mount Adams, Henderson 68; Rock Island, Henderson, July 3, 1892; Hayen's ranch, Henderson, August 2, 1892; Simcoe Mountains, Howell 352; Lake Wenache, Sandberg & Leiberg 647a; Blue Mountains, Piper August 2, 1896; Johns Island, Laurence 199.

Zonal distribution: Transition.

5. Piperia michaeli (Greene) Rydberg, Bull. Torr. Club 28: 640, 1901.

Habenaria miehaeli Greene, Man. Bay Reg. 306, 1891.

Type locality: "Open hills, under oaks, etc., from near Livermore southward," California.

Range: Washington to California.

Specimens examined: Grays Harbor, Wilkes Expedition 1554 in part; Nisqually River, Wilkes Expedition 146 in part.

LIMNORCHIS.

Flowers green or sometimes purple-tinged.

Spur clavate, much shorter than the lanceolate lip; spike

Spur not clavate, about as long as the lanceolate lip; spike

Flowers white or whitish.

Lip linear; spike loose, few-flowered 3. L. laxiflora.

Lip lanceolate, broadest at base.

29418--06 м----14

Spur clavate, usually shorter than the lip................... 1. L. dilatata.

Spur not clavate, longer than the lip.

Spike moderately dense; spur acutish......................... 5. L. leucostachys.

1. Limnorchis stricta (Lindl.) Rydberg, Mem. N. Y. Bot. Gard. 1:105, 1900.

Platanthera stricta Lindl. Gen. & Sp. Orch. 288, 1835.

Habenaria gracilis Wats. Proc. Am. Acad. 12: 277, 1877.

Type locality: "In America boreali-occidentali." Collected by Douglas.

Range: Alaska to Washington and Colorado.

Specimens examined: Clallam County, Elmer 2549; Mount Rainier, Smith 874; Piper 2094; Cascade Mountains, latitude 49°, Lyall in 1859; Silverton, Bouck; Seattle, Piper, June, 1889; Olympia, Henderson, May, 1892; upper Nisqually Valley, Allen 76; Mount Adams, Suksdonf 41; Wind River, Flett 110; Skagit Pass, Lake & Hull 624 in part; Ellensburg, Whited 532; Stampede Pass, Henderson, October, 1892; Sinicoe Mountains, Howell 302; Lake Wenache, Sandberg & Leiberg 647; Ilwaco, Piper 5001; Kreager 189; Green River Hot Springs, Piper 415.

Zonal distribution: Transition to Hudsonian.

2. Limnorchis viridiflora (Cham.) Rydberg, Bull. Torr. Club 28: 616, 1901.

Habenaria borealis viridiflora Cham. Linnaea 3: 28, 1828.

Type locality: "In Unalaschka."

RANGE: Alaska to Washington and Colorado.

Specimens examined: Spokane County, Suksdorf 452.

Perhaps not distinct from L. hyperborea (L.) Rydb. (Habenaria hyperborea R. Br.), to which it has been referred.

3. Limnorchis Iaxiflora Rydberg, Bull. Torr. Club 28: 630. 1901.

Type locality: Coast Mountains, Oregon.

Range: Washington and Oregon to Colorado.

Specimens examined: Eastern Washington, without locality, Wilkes Expedition.

4. Limnorchis dilatata (Pursh) Rydberg in Britton, Man. 294, 1901.

Orchis dilatata Pursh, Fl. 2: 588, 1814.

Habenaria dilatata Hook, Exot. Fl. 2: t. 95, 1825.

Habenaria borealis Cham, Linnaea 3: 28, 1828.

Type locality: Labrador.

RANGE: Alaska to New England, Colorado, and Washington.

Specimens examined: Olympic Mountains, Piper, August, 1895; Stevens Pass, Whited 1840; Mount Stuart, Elmer 1213; Mount Adams, Subsdorf 2298.

Limnorchis leucostachys (Lindl.) Rydberg, Mem. N. Y. Bot, Gard. 1; 106, 1900.
 Platenthera leucostachys Lindl. Gen. & Sp. Orch. 288, 1835.

rate material tentosiatelys Tantii, etch. & op. Often, 200. is

Habenaria lencostachys Wats. Bot. Cal. 2: 134, 1880.

Type 1. California occidentali Americae septentrionalis." Collected by Douglas.

Range: Alaska to California and Utah.

Specimevs examined: Challam County, Elmer 2551; Blue Mountains, Lale & Hull, July, 1892; Waitsburg, Horner 188; Salmon River, Blue Mountains, Horner 462.

ZONAL PISTRIBUTION: Transition.

5a. Limnorchis leucostachys robusta Rydberg, Bull. Torr. Club 28: 626, 1901.

Type locality: "Washington." Collected by G. R. Vasey in 1889,

Range: British Columbia to Oregon and Idaho.

Specimens examined: Scattle, Piper 291, July, 1897; Olympia, Heller 4046; Kincaid, July, 1896; Nisqually Valley, Allen 75. Skagit Pass, Lake & Hull 624 in part; Wenache region, Tweedy, July, 1883; Mount Stuart, Sandberg & Leiberg 576; Ellensburg, Whited 532, 698; Falcon Valley, Suksdorf 1356; Marshall Junction, Prper, July 2, 1896; Mount Carlton, Kreager 195; without locality, Vascy in 1889.

Zonal distribution: Transition and Canadian.

IBIDIUM.

1. Ibidium romanzoffianum (Cham.) House, Muhlenbergia 1: 129, 1906.

Spiranthes romanzoffiana Cham, Linnaca 3; 32, 1828.

Gyrostackys romanzoffiana MacM. Met. Minn. 171, 1892.

Gyrostachys stricta Rydberg, Mem. N. Y. Bot, Gard. 1: 107, 1900.

Type locality: "Unalaschka."

Range: Alaska to Newfoundland, south to California, Colorado, and New York.

Specimens examined: Whidby Island, Gardner 272; Cascade Mountains 49°, Lyall in 1859; Mount Adams, Henderson, August, 1892; Haven's ranch, Henderson, August, 1892; Tacoma, Flett 125; Fort Vancouver, Tolmie; Stevens Pass, Whited 1439; without locality, Vascy in 1889; Blue Mountains, Horner 471; Kalispel Lake, Kreager 337; without locality, Cooper; Scattle, Piper in 1885; Mount Rainier, Piper, August, 1888.

ZONAL DISTRIBUTION: Transition.

This species was referred to *Spiranthes cernna* in Hooker's Flora and in Cooper's Report. Subalpine forms of it from sphagnums bogs are much smaller and with short spikes.

2. Ibidium porrifolium (Lindl.) Rydberg, Bull. Torr. Club 32: 610, 1905.

Spirantles partifolia Lindl, Gen. & Sp. Orch. 167, 1840.

Gyrostachys porrifolia Kuntze, Rev. Gen. Pl. 2: 664, 1891.

Type locality: "In Louisiana."

Range: Washington to California.

Specimens examined: Falcon Valley, Suksdorf, September 3, 1881.

EPIPACTIS.

1. Epipactis gigantea Dough; Hook, Fl. Bor, Am. 2: 202. f. 202. 1839.

Type locality: "N. W. America. On the subalpine regions of the Blue and Rocky Mountains. *Douglas*. Columbia River, about Fort Vancouver. *Dr. Scouler*."

Range: Washington to California and Texas.

Specimens examined: Clallam County, Elmer 25.0; Rock Island, Sandberg & Leiberg 453; near Priest Rapids, Brandegee 1091; Spokane County, Suksdorf 240; Seattle, Taileton; Lake Crescent, Lawrence 301.

Zonal distribution: Upper Sonoran and Transition.

SALICACEAE. WILLOW FAMILY.

Stamens 1 to 5 in ours; bracts entire. Salix (p. 211)
Stamens numerous; bracts fimbriate. Populus (p. 217).

SALIX. WILLOW

Trees with furrowed bark; stamens 5 or more, aments on short leafy branchlets

Petioles short, bearing glands; leaves narrowly lanceolate.

Leaves pale beneath, attenuate from the middle.......... 2. S. lasiandra.

Leaves green beneath, long, attenuate nearly from the base . 2a. S. candata.

Shrubs, rarely trees, with smooth or at least not furrowed bark, stamens 2 or 1.

Stamen 1; aments appearing before the leaves; leaves very silky

Stamens 2.

Scales of the aments pale; leaves narrow, appearing before the aments.

Stigmas long and slender.	
Leaves canescent, becoming glabrate	S. sessilifolia.
Leaves silvery-velvety on both sides	7. S. macrostachya.
Stigmas short and thick.	
Capsules pubescent	5. S. argophylla.
Capsules glabrous.	
Leaves canescent, at least when young, entire	
• or denticulate	6. S. exigua.
Leaves green, glabrous, pale beneath, usually	
prominently serrate	4. S. melanopsis.
Scales of the aments dark (pale in S. bebbiana); leaves ap-	
pearing with or after the aments.	
Capsules glabrous.	
Low shrub; leaves entire	8. S. myrtilloides.
Tailer shrubs; leaves serrulate.	
Leaves not shiny above nor glaucous beneath,	
subcordate	9. S. cordata.
Leaves glaucous beneath, shining green above,	
not subcordate	S. piperi.
Capsules pubescent.	
Tall shrubs or trees, not alpine.	
Aments sessile, appearing with or before the	
leaves.	
Scales black.	
Style none.	
Capsule pubescent	11. S. scouleriana.
Capsule tomentose	12. S. hookeriana.
Style elongate	13. S. bella.
Scales pink or pale	14. S. bebbiana.
Aments peduncled, appearing with the narrow	
leaves	15. S. geyeriana.
Low alpine shrubs.	
Stems erect, 1 to 2 meters high.	
Leaves glabrous above, glaucous beneath.	
Leaves pubescent on both sides	17. S. commutata.
Stems prostrate.	
Leaves acute at each end	18. S. tenera.
Leaves obtuse, reticulate-veiny.	
Leaves 1 to 3 cm, long, aments many-	
flowered	19. S. saximontana.
Leaves .5 to 1 cm. long, aments 3 to	
12-flowered	20. S. nivalis.
ix amygdaloides Anders, Proc. Am. Acad. 4: 53, 1858.	
CLOCALITY: "Fort Pierre, Missouri."	
GE: British Columbia to Quebec, southward to New York, Texa	is and Oregon

1. Sali:

TYPE

Rang

County, Tweedy in 1882; Wawawat, Peper 1932, 3591; Almota, Piper 1776.

ZONAL DISTRIBUTION: Upper Sonoran.

2. Salix lasiandra Benth. Pl. Hartw. 335, 1857.

Salix tasiandra Iyallii Sarg. Gard. & Forest 8: 463, 1895.

Salix tyallii Heller, Bull. Torr. Club 25: 580, 1898.

Type locality: "Ad flumen Sacramento," California.

Range: British Columbia to California.

Specimens examined: Montesano, Heller 3856; Clallam County, Elmer 2429; west Klickitat County, Suksdorf, May 20, 1886; Cowlitz, Engelman & Sargent, August 16, 1880; Nisqually Valley, Allen 109; Lake Chelan, Lake & Hull, August 12, 1892; Steliekin, Griffiths & Cotton 191.

Zonal distribution: Humid Transition.

Hooker (Fl. Bor. Am. 2: 148) erroneously referred our plant to S. lucida Muhl.

2a. Salix lasiandra caudata (Nutt.) Sudw. Bull. Forr. Club 20: 43, 1893.

Salix pentandra candata Nutt. Sylva 1:61, 1842.

Salix findleriana Anders, Ofv. Vet. Akad. Foerh. 15: 415, 1858.

Salir lasiandra fendleriana Bebb in S. Wats, Bot, Cal. 2: 84, 1880.

Type locality: "By streams in the valleys of the Rocky Mountains toward their western slope, in Oregon, and also in the Blue Mountains of the same territory."

Range: British Columbia to New Mexico and Arizona.

Specimens examined: Ellensburg, Whited 332; Wenache, Whited 1044; Cottonwood Creek, Vascy in 1901; Thorn Creek, Vascy in 1901; Mabton, Cotton 369; Cascade Mountains, Watson 368; Rock Lake, Sandberg & Leiberg 111; Ritzville, Sandberg & Leiberg 197; Sprague, Sandberg & Leiberg 197; Blue Mountains, Piper, July 17, 1896; Waitsburg, Horner 449, 450; Pullman, Elmer 835; Piper 1775; Hull 768; without locality, Vascy in 1889; Cow Creek, Griffiths & Cotton 539; North Yakima, Griffiths & Cotton 60.

Zonal distribution: Upper Sonoran and Arid Transition.

3. Salix sessilifolia Nutt. Sylva 1:68, 1842.

Type locality: "On the rocky borders of the Oregon at the confluence of the Wahlamet."
This species is included in Suksdorf's list, but we have seen no Washington specimens.
As it is abundant at the mouth of the Willamette, however, it will certainly be found on the north bank of the Columbia.

4. Salix melanopsis Nutt. Sylva 1: 78, 1842.

Type locality: "At Fort Hall * * * on the alluvial lands of Lewis River," Idaho. Collected by Nuttall.

RANGE: British Columbia to Idaho and Oregon.

Specimens examined: Snoqualmie Falls, Piper & Smith 614; Yehn Prairie, Piper, August 5, 1889; Trout Lake, Suksdorf 36, 38, 37; Klickitat River, Suksdorf 35; North Yakima, Elmer 1081; Conconully Creek, Griffiths & Cotton 315; Peshastin, Sandberg & Leiberg 480; Spokane, Piper 3522; Wawawai, Piper 2915, 3597, 3593.

Zonal distribution: Upper Sonoran and Transition.

5. Salix argophylla Nutt. Sylva 1:71, 1812.

Type locality: "On the Boise River, toward its junction with the Shoshonee," Idaho. Collected by Nuttall.

Range: Washington, Oregon, and Idaho.

Specimens examined: West Klickitat County, Suksdorf 34, 6; North Yakima, Henderson, May 26, 1892; Conconully, Griffiths & Cotton 276; Cow Creek, Griffiths & Cotton 528; Sprague, Sandberg & Leiberg 134; North Palouse River, Vascy in 1901.

Zonal distribution: Upper Sonoran.

6. Salix exigua Nutt. Sylva 1:75, 1842.

Type locality: "A native of the territory of Oregon." According to Nuttall this species grows with S. fluciatilis Nutt. on "the immediate border of the Oregon below its confluence with the Wahlamet."

Range: Washington, Oregon, Idaho.

Specimens examined: Ellensburg, Whited 333; Crab Creek, Lake & Hall 767; Thorn Creek, Vasey in 1901; Pullman, Piper 3585; Almota, Piper 3586; Wawawai, Piper 3596, 1774, 3594.

Zonal distribution: Upper Sonoran and Arid Transition.

This differs from S, argophylla only in its glabrous capsules, and intermediate examples are abundant.

Salix macrostachya Nutt. Sylva 1: 72, 1845.

Type locality: "On the banks of the Oregon." Collected by Nuttall.

Range: Washington and probably Oregon.

Specimens examined: Wawawai, Piper 2916, 3592, 3595.

Zonal distribution: Upper Sonoran.

 Λ very rare species. All the above specimens are staminate, no pistillate bushes having been seen.

8. Salix myrtilloides L. Sp. Pl. 2: 1019, 1753.

Type locality: "Habitat in Suecia septentrionali."

RANGE: Arctic regions southward to Washington and Connecticut. Europe.

Specimens examined: Seattle, Piper 672; Mount Adams, Henderson, August 5, 1892; Flett 1348; Henderson in 1883; McAllisters Lake, Henderson, June 22, 1892; White Salmon, Suksdorf in 1879.

Zonal distribution: Canadian!

This species occurs only in sphagnum bogs.

9. Salix cordata Muhl. Neue Schr. Ges. Naturf. Berlin 4: 236, 1803.

Type locality: Pennsylvania.

Raxge: British Columbia to New Brunswick, south to California, Colorado, and Pennsylvania.

Specimens examined: Scattle, Piper 559; North Yakima, Henderson, May 26, 1892; Wenache, Whited 4014, 4020; Cottonwood Creek, Vasey in 1901; Thorn Creek, Vasey in 1901; North Palouse River, Vasey in 1901; Spokane Valley, Watson 373; Hangman Creek, Sandberg & Leiberg 29, 6, 41; without locality, Brandegee 1080; Almota, Piper, May 29, 1891; Pullman, Piper 3588; Elmer 411; Prosser, Griffiths & Cotton 44; Wenache Mountains, Griffiths & Cotton 409; Conconully, Griffiths & Cotton 318; Riverside, Griffiths & Cotton 369.

Zonal distribution: Transition.

10. Salix piperi Bebb, Gard. & For. 8: 482, 1895.

Type locality: Seattle, Washington.

Range: Washington and Oregon.

Specimens examined: Hoquiam, Lamb 1004; Seattle, Piper in 1888; Olympia, Henderson, August 23, 1892; Yelm Prairie, Piper in 4888; Spokane, Piper, September 3, 1896; Pullman, Piper 1777, 3587, 3598; Columbia River, Suksdorf in 1886.

Zonal distribution: Transition.

All the Washington specimens that have been referred to S. lasiolepis higelocii (Torr.) Bebb seem to belong rather to S. piperi, which is perhaps only of subspecific rank.

11. Salix scouleriana Barratt: Hook. Fl. Bor. Am. 2: 145, 1838.

Salix flavescens Nutt. Sylva 1: 65, 1842.

Salix nuttallii Sargent, Gard. & For. 8: 463, 1895.

Salix capreoides Anders, Proc. Am. Acad. 4: 60, 1858.

Type locality: "North West America, on the Columbia. Dr. Scouler. Fort Vancouver. Tolmic."

Range: Vancouver Island to Assiniboia, south to California and New Mexico.

Specimens examined: Ellensburg, Whited 1267; Thorn Creek, Vascy in 1901; Cottonwood Creek, Vascy in 1901; Wenache, Whited 7; Larm River, Suksdorf 24, 25; White Salmon, Suksdorf in 1879; Fort Vancouver, Tolmie: Seattle, Engelmann & Sargent, July 18, 1880; Piper in 1890; without locality, Brandegee 1081; Spokane Valley, Watson 367, 372; Spangle, Piper 3012; Wilson Creek, Lake & Hull, September 1, 1892; Skagit Pass, Lake

& Hull, August 24, 1892; Almota, Piper 1931; Pullman, Piper 2923; Elmer 84; Waitsburg, Horner 448;

Zonal distribution: Transition and Canadian.

An exceedingly variable species as to foliage and habit, but in floral characters apparently not capable of being divided. In rich soils it often becomes a tree 10 to 20 meters high and 15 to 40 cm, in diameter. The young leaves and bark have a peculiar fetid odor. Owing to the fact that Tohnie's specimens were a mixture of this species and of 8, sitchensis Sanson, some botanists have discarded the name scoulcriana. It is, however, not probable that the real types, namely, Scouler's specimens, were similarly a mixture, hence the action is not justifiable. Barratt's original types seem to be lost.

12. Salix hookeriana Barratt; Hook. Fl. Bor. Am. 2: 145, 1838.

Type Locality: "Near the Grand Rapids of the Sashatehewan, rare. *Douglas*. Northwest Coast of America. *Scouler*." The former locality is doubtless erroneous.

Range: Near the seashore, Vancouver Island to southwestern Oregon.

Specimens examined: Grays Harbor City, Lamb 1035; Cohasset Beach, Lamb 1126; Long Beach, Henderson, September 6, 1891; Seattle, Piper 887.

ZONAL DISTRIBUTION: Humid Transition.

13. Salix bella Piper, Bull. Torr. Club. 27: 399, 1900.

Type locality: Garrison, Whitman County, Washington.

Range: Washington and Idaho.

Specimens examined: Klickitat River, Flott 1342; Spokane, Piper 3517; Garrison, Henderson, October 14, 1895, August 18, 1895, May 5, 1896, April 4, 1896; Piper 2922, 3590; Mount Adams, Suksdorf, July 11, August, 1886.

Zonal distribution: Arid Transition,

14. Salix bebbiana Sargent, Gard. & For. 8: 463, 4895.

Salix rostrata Richards, Bot. App. Frankl. Journ. 753, 1823, not Thuill, 1799.

Type locality: British America, latitude 54° to 64°.

RANGE: British Columbia to Ontario southward to Pennsylvania and Arizona.

Specimens examined: Lower Fraser Valley, latitude 49°, Lyall in 1859; Falcon Valley, Suksdorf 21, 43, 44; Cottonwood Creek, Uasey in 1901; North Palouse River, Vasey in 1901; Rattlesnake Mountains, Cotton 325; Coulee City, Lake & Hull, August 6, 4892; Spokane, Watson 370; Spokane Valley, Lyall in 1860; Hangman Creek, Sandberg & Leiberg 12; Pullman, Piper 1772, 3589; Elmer 72; without locality, Vasey in 1889; Wenache Mountains, Griffiths & Cotton 405; Conconully, Griffiths & Cotton 309; Steamboat Rock, Griffiths & Cotton 428.

Zonal distribution: Arid Transition and Upper Sonoran.

15. Salix geyeriana Anders, Proc. Am. Acad. 4: 63, 1858.

Salix macrocarpa Nutt. Sylva 1:67, 1842, not Trauty, 1832.

Type locality: "Hab, Missouri v. Oregon." Collected by Gever.

Range: British Columbia to Oregon.

Specimens examined: Seattle, Piper 673; Olympia, Henderson in 1892; upper Nisqually, Allen 407; Olympia, Henderson in 1892; Yelm Prairie, Piper in 1888; Atanum River, Flett 1345, 1352; Falcon Valley, Suksdorf; Columbia banks, Nuttall.

Zonal distribution: Humid Transition.

16. Salix barclayi Anders, Proc. Am. Acad. 4: 66, 1858.

Salix conjuncta Bebb, Bot. Gaz. 13:111, 1888.

Type locality: Kodiak, Alaska.

Range: Alaska to Montana and Oregon.

Specimens examined: Olympic Mountains, Piper, August, 1895; Elmer 2427; Mount Rainier, Piper 2163, 700; Smith 701; Mount Adams, Henderson, August 4, 1892; Suksdorf; Stevens Pass, Sandberg & Leiberg 721; Skamania County, Suksdorf 22; Bridge Creek, Elmer in 1897; Hell Roaring River, Cotton 1530.

Zonal distribution: Arctic and Hudsonian.

17. Salix commutata Bebb, Bot. Gaz. 13: 110, 1888.

Type locality: Alpine bogs, Eagle Creek, Wallowa Mountains, Oregon.

Range: Washington and Oregon.

Specimens examined: Olympic Mountains, Piper, August, 1895; Mount Rainier, Smith, August, 1890; Cascade Mountains, 1.940 meters altitude, Tweedy: Stevens Pass, Sandberg & Leiberg, 757.

ZONAL DISTRIBUTION: Arctic and Hudsonian.

17a. Salix commutata mixta nom. nov.

Salix commutata sericea Bebb, Bot. Gaz. 13: 111. 1888, not S. sericea Muhl.

Type locality: "North side of Mt. Hood," Oregon.

Range: Washington and Oregon.

Specimens examined: Olympic Mountains, Piper, August, 1890; Flett 112; Horseshoe Basin, Lake & Hull 765.

17b. Salix commutata denudata Bebb, Bot. Gaz. 13: 111, 1888.

Type locality: Eagle Creek meadows, Wallowa Mountains, Oregon.

Range: Washington and Oregon.

Specimens examined: Cascade Mountains, Tweedy in 1882.

Salix commutata differs in but slight and seemingly inconstant characters from S. barclayi. Additional material and field study is needed to clear up their relationships.

18. Salix tenera Anders.; DC. Prod. 162: 288, 1861.

Type Locality: "Ad Cascade Mountain, Lat. 49°, alt. 7,000 ped." Collected by Lyall.

RANGE: Cascade Mountains, Washington and British Columbia.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1860; mountains north of Ellensburg, Brandeger 1083; Mount Rainier, Flett 2118.

Zonal distribution: Arctic.

19. Salix saximontana Rydberg, Bull. N. Y. Bot. Gard. 1: 261, 1899.

Type locality: Grays Peak, Colorado.

RANGE: Washington and Montana to Colorado and California.

Specimens examined: Mount Rainier, Flett 2119.

Zonal distribution: Arctic.

Probably not specifically distinct from S. nivalis.

20. Salix nivalis Hook, Fl. Bor, Am. 2: 152, 1839.

Type locality: "Near the summits of the peaks in the Rocky Mountains."

RANGE: Washington to Montana and Wyoming.

Specimens examined: Mount Rainier, Flett 2278.

Zonal distribution: Arctic.

21. Salix sitchensis Sanson in Bong. Mem. Acad. St. Petersl., VI. 2: 162, 1832.

Salix cuneata Nutt. Sylva. 1: 66, 1842.

Type locality: Sitka.

RANGE: Alaska to middle California, eastward to the Blue Mountains.

Specimens examined. Clallam County, Elmer 2428; Seattle, Piper 557; Smith in 1889; Tacoma, Flett 31; Nisqually, Allen 108, White Salmon, Suksdorf in 1879; Atanum River, Flett 1346; Mount Adams, Suksdorf 31; west Klickitat County, Suksdorf 24; Skagit Pass, Lake & Hull 809; Stevens Pass, Sandberg & Leiberg 720; Spokane, Sandberg & Leiberg, May, 1893; Hangman Creek, Sandberg & Leiberg 72; Blue Mountains, Piper, August 2, 1896; Stehekin, Griffiths & Cotton 243.

ZONAL DISTRIBUTION: Transition and Canadian.

Salix chlorophylla Anders, Vet. Acad. Handl. Stock. 6: 138, 1867. Imperfect specimens of a willow collected by Suksdorf on Mount Adams, July 31, 1883, and in the mountains of Skamania County, September 6, 1883, are referred to this species with much hesitation.

Salix cinerea L. Sp. Pl. 2: 1021, 1753. Anderson a refers thus, but doubtfully, a specimen collected by Geyer (no. 636) in "thickets along rivulets, Columbia River Valley near Fort Colville," said to be "15-20 feet high, shrubby." Hooker b calls the same specimen S. grisca? We have not seen the specimen, but suspect it to be a form of S. bebbiana.

Salix longifolia Muhl, does not occur in our limits, all such references pertaining to closely related species.

POPULUS.

Bark smooth; petioles flattened; capsules oblong-conic, smooth ... 1. P. tremuloides. Bark rough; petioles terete; capsule globose, hairy ... 2. P. trichocarpa.

1. Populus tremuloides Michx. Fl. 2: 243, 1803,

Aspen.

Type locality: "Hab. in Canada et Noveboraco."

Range: Alaska to Labrador, southward to Pennsylvania, Missouri, New Mexico, and California.

Specimens examined: Egbert Springs, Sandberg & Leiberg 391; Darling Mountains, Flett 1350; Pullman, Piper; Wenas, Griffiths & Cotton 104.

ZONAL DISTRIBUTION: Transition.

Two apparently distinct aspens occur in eastern Washington and we suspect that neither is good *P. tremuloides*. The herbarium material is, however, very imperfect and the settlement of the problem must await more field study and better collections.

Populus trichocarpa Torr. & Gray; Hook. Icon. 9: t. 878, 1852.
 Populus balsamifera y Hook. Fl. Bor. Am. 2: 154, 1839.

Type Locality: Santa Clara River near Buenaventura, California. Collected by Parry, Range: British Columbia to Montana and California.

Specimens examined: Egbert Springs, Sandberg & Leiberg 394; Atanum River, Flett 1343; Wenache Mountains, Whited 1343; Spokane, Piper, July 26, 1896; Colfax, Piper, August 2, 1896; Almota, Piper 1791; Wenas, Griffiths & Cotton 69.

ZONAL DISTRIBUTION: Transition and Upper Sonoran.

In Cooper's report this tree was referred to *Populus angustifolia* James, a species that is not known in Washington.

POPULUS BALSAMIFERA Ait, has several times been ascribed to Washington, but there are no specimens to substantiate the ascription, all thus referred so far as seen being P. trichocarpa.

MYRICACEAE. SWEET GALE FAMILY.

MYRICA.

1. Myrica gale L. Sp. Pl. 2: 1024, 1753.

SWEET GALE.

Type locality: Europe.

RANGE: Alaska to Newfoundland, southward to Washington, Michigan, and New York. Asia. Europe.

Specimens examined: Weiser Lake, Suksdorf 1003; Ilwaco, Henderson 2164; Seattle, Piper in 1887.

Zonal distribution: Humid Transition and Canadian.

2. Myrica californica Cham. Linnaea 6: 535, 1831.

Type locality: "Ad portum sancti Francisci Californiae."

Range: Seacoasts, Washington to California.

Specimens examined: Cohasset, Lamb 1122; Ilwaco, Henderson, September 9, 1892; Westport, Heller 394; Henderson, June 26, 1892; Ilwaco, Piper 4952.

Zonal distribution: Humid Transition.

BETULACEAE. BIRCH FAMILY.

Fruit a nut inclosed in a leafy involucre	Corylus.
Fruit cone-like, without involucre.	
Cone scales deciduous.	Betula.
Cone scales persistent	Alnus.

CORYLUS.

Corylus californica (Λ. DC.) Rose, Gard. & For. 8: 263, 1895.
 Corylus rostrata californica Λ. DC. Prod. 17²: 133, 1864.

Corylus americana Walt, err. det. Cooper, Pac. R. Rep. 122: 68, 1860.

Type Locality: Santa Cruz, California. Range: British Columbia to California.

Specimens examined: Montesano, Heller 3971; Seattle, Piper 189; west Klickitat County, Suksdorf 1214; Sumas, Lyall; Fort Colville, Watson; without locality, Vascy in 1889; Box Canyon, Kreager 410; Kettle Falls, Beattle & Chapman 2191.

Zonal distribution: Transition.

BETULA. BIRCH.

Branchlets glandular-warty.

1. Betula glandulosa Michx. Fl. 2: 180, 1803.

Type locality: "Circa lacus, a sinu Hudsonis ad Mistassins."

Range: Oregon and Colorado to New England and northward.

Specimens examined: Cascade Mountains, latitude 49°, Lyoll in 1860; Seattle, Piper, May 25, 1891; Tacoma, Flett 29; Steilacoom, Piper 183; McAllisters Lake, Henderson, June 22, 1892; Klickitat County, Suksdorf: Falcon Valley, Suksdorf; Klickitat River, Flett 1344. Zonal distribution: Canadian? Always found in sphagnum bogs.

2. Betula occidentalis Hook, Fl. Bor, Am. 2:155, 1839.

Betula piperi Britt. Bull. Torr. Club 31:165, 1904.

Type locality: "Straits of De Fuca." Collected by Scouler.

RANGE: British Columbia, Washington, and Idaho.

Specimens examined: Gulf of Georgia, Henderson in 1888; Everson, Piper, September, 1892; Sumas Prairie, Lyall in 1858-59; Cascade Mountains, latitude 49°, Lyall in 1859; Tukanon River, Lake & Hull, July 5, 1892; Blue Mountains, Piper, July 15, 1896; ten miles southwest Pullman, Piper 3807.

ZONAL DISTRIBUTION: Transition.

This is the Betula lutea Michx.! of Suksdorf's List.

A variable tree as it occurs in Washington and perhaps only a subspecies of the eastern B. papyrifera. Typical occidentalis occurs in northwestern Washington, where it is a rather dark-gray barked tree, occasionally 3 feet in diameter. The very similar tree in Stevens County and in the Blue Mountains is somewhat smaller in size and often white-barked. The name Betala piperi was meant by its author to apply to the third unnamed species in the Flora of the Palouse Region, but the specimen actually cited is the eastern Washington form of B. occidentalis Hook.

3. Betula microphylla Bunge, Mem. Acad. St. Petersb. VI. 2:606, 1835.

Betula fontinalis Sargent, Bot. Gaz. 31:239, 1901.

Type locality: "Hab. ad Tschujae ripam in deserto curaico," Siberia.

RANGE: British Columbia to Alberta, south to California and New Mexico. Siberia.

Specimens examined: Wenache, Whitel 1003; Coulee City, Lake & Hull 790; Spokane, Sandberg & Leiberg in 1893; Hangman Creek, Sandberg & Leiberg 76; Pullman, Elmer 882; Touchet River, Waitsburg, Piper, July 19, 1896; Almota, Piper 1642, April 20, 1895; without locality, Vasey in 1889; ten miles southwest of Pullman, Piper 3808, 3806; Conconully, Grighths & Cotton 317; Wenache, Grighths & Cotton 149; Colville Reservation, Grighths & Cotton 380.

Zonal distribution: Arid Transition.

The Almota specimens form the basis for the third unnamed species in the Flora of the Palouse Region. This is a tall graceful tree with drooping branches, appearing very different from the ordinary form of B. microphylla, and probably distinct from it.

ALNUS. ALDER.

Leaves simply denticulate, not at all lobed. 1. A. rhombifolia. Leaves doubly dentate and more or less lobed.

Peduncles slender, longer than the cones; shrub with shining leaves. 2, .1, sinuata.

Peduncles shorter than the cones; leaves dull.

Winter buds acute; leaves rusty pubescent on the veins beneath. 3. A. oregona.

Winter buds obtuse; leaves pubescent but not rusty....... 1. 1. tennifolia.

1. Alnus rhombifolia Nutt. Sylva 1: 33, 1842.

Type locality: Monterey, California.

RANGE: British Columbia to Idaho and California.

Specimens examined: Bingen, Suksdorf 224; Satus Creek, Brandegee 1078; Blue Mountains, Piper, August 2, 1896; Almota, Piper 1635, May 2, 1897; September 9, 1896; Wawai, Piper; Elmer 896.

Zonal distribution: Upper Sonoran.

2. Alnus sinuata (Regel) Rydberg, Bull. Torr. Club 24: 190, 4897.

Alnus viridis sinuata Regel in DC, Prod. 264: 183, 1868.

Type locality: Kamchatka.

RANGE: Alaska to Oregon and Colorado. Siberia.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1860; Seattle, Piper, July 4, 1897; Baldy Peak, Lamb 1341; Olympia, Henderson; Steilacoom, Cooper; Silverton, Bonck 468; Nisqually Valley, Allen 309; Klickitat River, Flett 1347; Chambers Lake, Henderson, June 20, April 10, 1892; Nason Creek, Sandberg & Leiberg 609; Bridge Creek, Elmer 711; Blue Mountains, Piper 2415; without locality, Vasey in 1889; Stehekin, Griffiths & Cotton 218.

ZONAL DISTRIBUTION: Hudsonian to Transition.

A species of wide altitudinal range, most abundant along subalpine streams, but occasionally occurring at sea level. It is usually a shrub, but sometimes truly arborescent. It has been confused with the eastern A. vividis DC.

3. Alnus oregona Nutt. Sylva 1: 28, 1842.

RED ALDER.

Alius rubra Bong, Mem. Acad. St. Petersb. VI. 2; 462, 1837, not Betula-alius rubra Marsh, 1785.

Type locality: "In our progress to the west we first observed this tree on the borders of the Rivers Boisee and Brulee, which pass into the Shoshonee not far from Walla Walla, and at intervals it continues more or less common to Point Chinook, near the shores of the Pacific." Nuttall has here confused two species, as A. oregona occurrs only west of the Cascade Mountains.

Range: Alaska to middle California in the coast region.

Specimens examined: Clallam County, Elmer 2759; Hoquiam, Lamb 1022; Olympia, Henderson, August 23, 1892; upper Valley Nisqually, Allen 211; west Klickitat County, Suksdorf 2184.

Zonal distribution: Humid Transition.

For illustration see Plate VIII, facing page 41.

4. Alnus tenuifolia Nutt. Sylva 1: 32. 1842.

Alnus incana virescens Wats. Bot. Cal. 2: 81, 1880.

Alnus occidentalis Dippel, Handb. Laubh. 2: 158, 1892.

Type locality: "On the borders of small streams within the range of the Rocky Mountains, and afterwards in the vallies of the Blue Mountains of Oregon."

RANGE: British Columbia to California and New Mexico.

Specimens examined: Peshastin Creek, Watson 363, October 16, 1880; Peshastin, Sandberg & Leiberg 543; Falcon Valley, Suksdorf 2193, 2183; Ellensburg, Whited 256; Elmer 413, July, 1897; Wenache, Whited 52, 1002; Atanum River, Flett 1351; Pleasant Valley, Lake & Hull, August 2, 1892; Spokane, Piper, July 2, 1896, September 3, 1896; Blue Mountains, Piper, July 16, 1896; Pullman, Piper, August, 1896, January, 1896; Mount Carlton, Kreager 226.

Zonal distribution: Arid Transition.

FAGACEAE. BEECH FAMILY.

Involuere 1-flowered, becoming a scaly cup. Quercus.

Involuere 1 to 3-flowered, becoming a prickly bur Castanopsis.

QUERCUS. OAK.

1. Quercus garryana Dougl.; Hook. Fl. Bor. Am. 2: 159, 1839.

Quercus jacobi R. Br. Campst. Ann. & Mag. Nat. Hist. IV. 7: 255, 1871.

Quercus gilberti Greene, West Coast Oaks 77. pl. 37. 1889.

Type locality: "Plentiful on plains near Ft. Vancouver, on the Multnomah, and at Puget Sound."

Range: Vancouver Island to California in the coast region.

Specimens examined: Swauk, Watson 365; White Salmon, Suksdorf 308; Tampico, Flett; near Mount Adams, Cotton 1495; Seattle, Piper; Steilacoom, Piper; Fairhaven, Piper in 1892; Bingen, Piper 6453, 6454.

Zonal distribution: Transition.

Professor Greene considers the Washington-British Columbia form as a different species from that of California, but if this is so, it is the California plant that should have its name altered, as all the above names belong to the northern plant. Quereus gilberti is the low, often prostrate, oak occurring about the Gulf of Georgia and locally known as vine oak. It is remarkably variable in foliage, but no fruiting specimens have been found. In sheltered places it assumes the ordinary form of Q. garryana.

For an illustration of this species see Plate IX, facing page 42.

CASTANOPSIS.

1. Castanopsis chrysophylla (Dougl.) A. DC. in Seem. Journ. Bot. 1: 182, 1863.

Castanca chrysophylla Dougl.; Hook. Fl. Bor. Am. 2: 159, 1839.

Type locality: "On the Grand Rapids of the Columbia." Collected by Douglas.

Range: Washington to middle California.

Specimens examined: Moffatt's Springs, Skamania County, Gorman, May 15, 1904, the only known station north of the Columbia River.

ELM FAMILY. ULMACEAE.

CELTIS.

1. Celtis douglasii Planch, Ann. Sci. Nat. III, 10: 293, 1848.

Hackberry.

Type locality: "In aridis scopulosis regionem interiorum, secus flumen Columbia." Collected by Douglas.

Range: Washington, Oregon, and Idaho.

Specimens examined: West Klickitat County, Suksdorf 39; Snake River region, Brandegee 1073; Almota, Piper, May 2, 4897; Wawawai, Elmer 1016; Piper 1511 and October, 1893.

Zonal distribution: Upper Sonoran.

Our tree has been referred to both ℓ , occidentalis L, and ℓ , reticulata Torr. It is perhaps only a geographical race of the former. Ordinarily it is a very scraggly tree, with very scabrous leaves, commonly distorted by insect work. In irrigated land, however, it is a graceful and attractive tree, the leaves becoming thinner, darker green, and much less

The Wilkes Expedition specimens are said to have been collected at Port Discovery, but this is probably an error.

URTICACEAE. NETTLE FAMILY.

Leaves opposite, possessing stinging hairs.	URTICA.
Leaves alternate; no stinging hairs	Parietaria.

URTICA. NETTLE.

Leaves glabrous above, sparsely pubescent beneath. 2. U. lyallii.

Urtica holosericea Nutt. Journ. Acad. Phila. H. 1: 183, 1847.

Type locality: "Near Monterey, Upper California."

Range: Washington and Idaho to California.

Specimens examined: Yakima County, Henderson 2498; west Klickitat County, Suksdorf 1381; Marshall Junction, Piper, July 2, 1896; Almota, Piper, September 9, 1896; Union Flat, Piper 3045; Wawawai, Piper 1509.

Zonal distribution: Upper Sonoran and Arid Transition.

2. Urtica lyallii, S. Wats, Proc. Am. Acad. 10: 348, 1875.

Type locality: "In the Cascade Mts. in lat. 49°." Collected by Dr. Lyall.

RANGE: British Columbia to Idaho and California.

Specimens examined: Montesano, Heller 3920; Clallam County, Elmer 2760; Seattle, Piper 2316; Cascade Mountains, 49°, Lyall; Ellensburg, Brandegee 1075; Klickitat County, Suksdorf 58; Horseshoe Basin, Elmer 709; Wilson Creek, Lake & Hull 654; Spokane, Piper, July 2, 1896; Blue Mountains, Lake 654; Piper, July 47, 1896; Union Flat, Piper 3046; Pullman, Piper 3046, 1510; Clarks Springs, Kreager 42.

Zonal distribution: Transition.

Washington specimens referred to U, gracilis Ait, belong here, as does the specimen listed by Suksdorf as "U, breveri(t)." Specimens from the immediate seaconst tend to have thicker, more deeply cordate leaves, but this character is apparently due to maritime influences and is not sufficient to distinguish the plant.

PARIETARIA.

Parietaria pennsylvanica Muhl.; Willd. Sp. Pl. 42: 955, 1805.

Type locality: "Habitat in Pennsylvania."

RANGE: British Columbia to Canada, southward to Florida and Mexico.

Specimens examined: White Salmon, Suksdorf 487; without locality, Brandegee 1076; Almota, Lake & Hull 707; Piper 1507; Wawawai, Elmer 755.

Zonal distribution: Upper Sonoran.

LORANTHACEAE. MISTLETOE FAMILY.

RAZOUMOFSKYA.

1. Razoumofskya americana (Nutt.) Kuntze, Rev. Gen. Pl. 2: 587, 1891.

Arcenthobium americanum Nutt.; Engelm. Bost Journ. Nat. Hist. 6: 211. 1850.

Type locality: Oregon. Collected by Nuttall.

Range: British Columbia and Saskatchewan to California and Colorado.

Specimens examined: Big Klickitat River, Henderson 2539, 2538; Falcon Valley, Saksdorf 211; near Ellensburg, Brandegee 1069; Spokane Valley, Lyall in 1861.

Zonal distribution: Canadian.

Common on Pinus contorta, but apparently only east of the Cascade Mountains.

2. Razoumofskya campylopoda (Engelm.).

Arccuthobium campylopodum Engelm. Bost. Journ. Nat. Hist. 6: 214, 1850.

Arcenthobium occidentale Engelm, in S. Wats. Bot. Cal. 2: 107, 1880.

Type locality: "Oregon, on Pinus ponderosa." Collected by Geyer. The specimens are from north Idaho or northeast Washington, as Geyer did not collect in Oregon proper.

RANGE: British Columbia to California and Idaho.

Specimens examined: West Klickitat County, Suksdorf 1364, 672; Peshastin, Sandberg & Leiberg 593; Spokane, Piper, July 18, 1895; Sandberg, McDongol, & Heller 925; Spokane Valley, Watson; Railroad Creek, Elmer, September, 1897; Medical Lake, Elmer 1246.

ZONAL DISTRIBUTION: Arid Transition.

Common on *Pinus ponderosa*, often forming large clusters. The staminate plants are yellow, the pistillate olivaceous. It is locally more or less well known as "snappers," owing to the explosive fruits.

3. Razoumofskya douglasii (Engelm.) Kuntze, Rev. Gen. Pl. 2: 587, 1891.

Arcenthobium douglasii Engelm, in Rothr, Bot, Wheeler Surv. 253, 1878.

The typical form of this species occurs on *Pseudotsuga mucronata*. This occurs from Idaho to Arizona and New Mexico. Doubtless it will be found in Washington also. The forms on Tsuga, Larix, and Abies are apparently distinct, at least in their host relations, but satisfactory morphological characters to separate them have not been detected. They may conveniently be considered as subspecies.

3a. Razoumofskya douglasii tsugensis (Rosendahl).

Razonmofskya tsugensis Rosendahl, Minn. Bot. Stud. HI. 2: 272, 1903.

Type locality: "West coast of Vancouver island."

Range: British Columbia and Washington.

Specimens examined: Port Ludlow, Binns; Scattle, Piper 663; Nisqually Valley, Allen 303.

Zonal distribution: Humid Transition.

Locally abundant on Tsuga heterophylla, causing large "witches-brooms."

3b. Razoumofskya douglasii laricis subsp. nov.

Range: Washington and Idaho on Larix occidentalis.

Specimens examined: Mount Adams, Henderson 2536; near Ellensburg, Brandegee 1071.

ZONAL DISTRIBUTION: Arid Transition and Canadian.

3c. Razoumofskya douglasii abietina (Engelm.).

Arccuthobium donglasii abictinum Engelm, in S. Wats, Bot, Cal. 2: 106, 1880.

Type locality: Sierra Valley, California. Range: Washington to California and Utah.

Specimens examined: Falcon Valley, Suksdorf 2246, on Abics grandis.

SANTALACEAE. Sandalwood Family.

COMANDRA:

Flowers many, corymbosely-clustered; leaves pallid. Leaves oblong; fruit globular ... 1. C. umbellata.

1. Comandra umbellata (L.) Nutt. Gen. 1: 157, 1818.

Thesium umbellatum L. Sp. Pl. 1: 208, 1753.

Type locality: "Habitat in Virginiae, Pensylvaniae pascuis siceis."

Range: British Columbia to Labrador southward to California and Georgia.

Specimens examined: Whidby Island, Gardner 103; White Salmon, Suksdorf 494, 614; Fort Vancouver, Tolmic.

ZONAL DISTRIBUTION: Transition.

2. Comandra pallida A. DC. Prod. 14: 636, 1857.

Type locality: "Prope Clearwater," Idaho. Collected by Spalding.

RANGE: British Columbia to Manitoba, Texas, and California.

Specimens examined: North Yakima, Steinway in 1891; Flett 1032; Henderson, May 1892; Wenache, Whited 1073; Ellensburg, Piper, May 20, 1897; Whited 335; Morgans Ferry, Suksdorf 615; Cheney, Tucker in 1890; Columbia Valley, Lyall in 1861; Pasco, Hindshaw 26; Piper 2999; Crab and Wilson creeks, Sandberg & Leiberg 326; Sprague, Sandberg & Leiberg 154; Kamiak Butte, Sandberg, McDongal, & Heller 499; Piper, July 20, 1899; Almota, Piper 1650; Wawawai, Piper, May 19, 1894; Hull, June 4, 1892; Elmer 772; Kettle Falls, Beattie & Chapman 2206.

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

The nuts of this plant are sweet and edible. Where abundant, they form a favorite food for hogs.

3. Comandra livida Richards, Bot, App. Frankl. Journ. 734, 1823.

Type locality: "In shady mossy woods. Not seen to the northward of Great Slave Lake.''

Range: Washington to Vermont and northward. Specimens examined: Box Canvon, Kreager 386.

ZONAL DISTRIBUTION: Canadian.

ARISTOLOCHIACEAE. BIRTHWORT FAMILY.

ASARUM.

 Asarum caudatum Lindl. Bot. Reg. 17: under pl. 1399, 4831. WILD GINGER. Asarum hookeri Fielding, Sert. Plant. pl. 32, 1844.

Asarum canadense β Hook, Fl. Bor, Am. 2: 139, 1838.

Type locality: "In pinetis prope arcem Vancouver"—that is, Fort Vancouver, Washington. Collected by Douglas.

RANGE: British Columbia and Idaho to California

Specimens examined: Clallam County, Elmer 2834; Silverton, Bouck 154; Tacoma, Flett 58; upper Nisqually Valley, Allen 60; Skohomish Valley, Kincaid, May, 1892; Falcon Valley, Suksdorf 493; mouth of the Pend Oreille, Lyall in 1860; Nason Creek, Sandberg & Leiberg 625; Blue Mountains, Piper, July, 1896; without locality, Vasey in 1889; without locality, Cooper.

ZONAL DISTRIBUTION: Transition.

POLYGONACEAE. BUCKWHEAT FAMILY.

PULIGUNAUEAE, DUCKWHEAT FAMILI.	
Flowers not involucrate; stipules sheathing. Leaves reniform; sepals 4	Oxyria (p. 224).
Leaves not reniform; sepals 6. Sepals unequal, the inner becoming much larger; stigmas tufted	
Involucre 1-flowered, coriaceous, its teeth cuspidate, often hooked	Сногіzалтне (р. 239).
Teeth of the involuere awn-pointed	
OXYRIA.	
1. Oxyria digyna (L.) Hill, Hort. Kew. 158, 1768. Rumer digynus L. Sp. Pl. 1; 337, 1753. Type locality: "Habitat in Alpibus Lapponicis, Helveticis, W RANGE: Alaska to Greenland, south to New England, Colorado, a	
Asia. Specimens examined: Clallam County, Elmer 2685; Cascade Lyull; Mount Rainier, Piper 2104; Mount Adams, Henderson, Aug Basin, Lake & Hull 653; Bridge Creek, Elmer 692; Loomis, Elmer Zonal distribution: Arctic.	gust 3, 1892; Horseshoe
RUMEX. Dock.	
Flowers dioecious; leaves hastate; small species. Inner sepals not longer than the granular akene Inner sepals longer than the smooth akene Flowers not dioecious; leaves not hastate; coarse species. Outer sepals without tubercles.	
Fruiting sepals cordate, 2 to 5 cm, long; leaves flat Fruiting sepals ovate, 4 to 9 mm, long.	3. R. venosus.
Leaves flat, pale, lanceolate, rounded at baseLeaves crisped, oblong, truncate at baseOuter sepals, or some of them with tubercles. Sepals entire or nearly so.	
Leaves flat; all lanceolate	. 6. R. salicifolius.
Panicle leafy; pedicel longer than the fruit Panicle not leafy; pedicel not longer than the frui Sepals with slender teeth.	it - 8. R. conglomeratus.
Annual; tubercles 3; pedicels very short	

Perennial; tubercle 1; pedicels long......................... 10. R. obtusifolius.

1. Rumex acetosella L. Sp. Pl. 1: 338, 1753.

Sheep sorrel.

Type locality: Europe.

Specimens examined: Pullman, Piper, July 2, 1894.

A troublesome weed throughout the State, especially in poor soils.

2. Rumex paucifolius Nutt. Journ. Acad. Phila. 7: 49, 1834.

Rumex engelmanni geyeri Meisn, in DC, Prod. 14: 64, 1856.

Rumex geyeri Trelease, Rep. Mo. Bot. Gard. 3: 78, 1892.

Type locality: "Near Flat-Head River." Collected by Wyeth.

RANGE: British Columbia to Colorado and California.

Specimens examined: Wenache Mountains, Elmer 448; Wenache region, Brandeger 1068; Yakima River, Lyall in 1860; Flathead River, Wyeth; without locality, Vasey in 1889; Wenache Mountains, Cotton 1192.

Zonal distribution: Canadian.

3. Rumex venosus Pursh, Fl. 2: 733, 1814.

Type locality: "In Upper Louisiana." Collected by Bradbury.

RANGE: Washington to Saskatchewan, south to Missouri and Nevada.

Specimens examined: Wenache, Whited 1224; Sunnyside, Cotton 382; North Yaki.na, Flett 1058; Pasco, Hindshaw, May 25, 1896; Piper 2983; Moses Lake, Sandberg & Leiberg, 274; Spokane, Sandberg & Leiberg, May, 1893; Hangman Creek, Sandberg & Leiberg 28; Almota, Piper 1549, 2940; without locality, Vascy 124; Moxee, Griffiths & Cotton 37.

ZONAL DISTRIBUTION: Upper Sonoran.

4. Rumex hesperius Greene, Pittonia 4: 234, 1901.

Type locality: "Bottom lands near Bingen, Washington." Collected by Suksdorf.

Range: Known only from the type locality.

Specimens examined: West Klickitat County, Suksdorf 2259.

5. Rumex occidentalis S. Wats. Proc. Am. Acad. 12: 253, 1876.

Type Locality: "From Alaska to Northern California, eastward to the Saskatchewan and Labrador, and southward in the mountains to Colorado and New Mexico."

Range: Alaska to Labrador, south to California and Texas.

Specimens examined: Fidalgo Island, Lyall in 1858; Rock Island, Sandberg & Leiberg 447; west Klickitat County, Suksdorf 1401, 604; Wilson Creek, Lake & Hull 650; Pullman, Piper 1548; Mount Carlton, Kreager 200.

ZONAL DISTRIBUTION: Transition.

In the older botanical works our plant was usually referred to R, domesticus Hartm. It is probable, too, that the name R, domesticus names a also belongs to our species, in which case it has priority.

6. Rumex salicifolius Weinm. Flora 1821: 28, 4821.

Type locality: "In California."

RANGE: British Columbia to Labrador, south to Florida and California.

Specimens examined: Orchard Point, Piper, July, 1895; Tacoma, Flett 93; west Klickitat County, Suksdorf 1402; Colville, Lyall in 1860. Crab and Wilson creeks, Sandberg & Leiberg 329; Wilson Creek, Lake & Hull 651; Tukanon River, Lake & Hull 651; Pullman, Piper, July 24, 1893.

Zonal distribution: Transition.

7. Rumex crispus L. Sp. Pl. 1: 335, 1753.

Yellow Dock.

Type locality: Europe.

Specimens examined: Wenache, Whited 1252. Egbert Springs, Sandberg & Leiberg 400; Pullman, Piper, July, 1894.

8. Rumex conglomeratus Murr. Prod. Fl. Goett. 52, 1770.

Type locality: None given, but European.

Specimens examined: Whidby Island, Gardner 257; Seattle, Piper 627.

9. Rumex persicarioides L. Sp. Pl. 1: 335, 1753.

Type locality: "In Virginia."

RANGE: British Columbia to New Brunswick, southward to California, New Mexico, and Virginia.

Specimens examined: Clallam County, Elmer 2684; Whidby Island, Gardner 256; Seattle, Piper 714; Silver Lake, Henderson 2423; Coulee City, Henderson, July 11, 1892; Ophir, Elmer in 1897; Alma, Elmer, 1897; Rock Lake, Lake & Hull 652; Alkali Lake, Sandberg & Leiberg 411; Southbend, Spillman, Aug. 17, 1899; without locality, Cooper; Mission, Kreager 484; Meyers Falls, Kreager 500.

Zonal distribution: Transition.

10. Rumex obtusifolius L. Sp. Pt. 1: 335, 1753.

Type locality: "Habitat in Germania, Helvetia, Gallia, Anglia."

Specimens examined: Seattle, Piper in 1888.

A common and troublesome weed in western Washington.

Rumex acetosa L. is included in Suksdorf's list, but we have been unable to secure any evidence that it occurs in the State.

POLYGONIIM

POLYGONUM.	
Stems twining; leaves cordate.	
Outer calyx segments winged in fruit; akenes shining	I. P. dumetorum
Outer calyx segments not winged; akenes dull	2. P. convolvulus.
Stems not twining; leaves not cordate.	
Leaves small, usually narrow; stems wiry.	
Blades of the leaves jointed on the pedicels.	
Perennial with woody rootstocks; seashore plant	3. P. paronychia.
Annuals; roots fibrous.	
Plants prostrate.	
Akenes not longer than the calyx	4. P. ariculare.
Akenes protruding from the calyx	
Plants erect or ascending.	
Flowers in rather dense terminal bracteate	
spikes.	
Bracts oblong, white-margined	6. P. polygaloides.
Bracts lanceolate, green.	
Styles nearly obsolete; akenes	
brown, smooth	7. P. kelloggii.
Styles evident; akenes black,	
striate	8 P. confertitlorun
Flowers axillary, or in loose or interrupted	
spikes.	
Leaves rather broad, scarcely reduced	
upward.	
Tall, branched throughout; style	
3-cleft	9. P. erectum.
Low alpine plant; style 3-parted.	10. P. minimum.
Leaves narrow, decidedly reduced	
upward.	
Flowers in virgate, much elon-	

gated, loose spikes.

```
Fruiting pedicels erect.
                          Stout; akenes dull..... 11. P. ramosissimum.
                          Slender: akenes smooth.
                            Fruiting pedicels reflexed.
                          Flowers campanulate, 2
                            to 3 mm, long..... 13, P, donglasii.
                          Flowers funnel-form.
                           3.5 to 4.5 mm. long. 14. P. majus,
                   Flowers in interrupted, but rather
                     close spikes.
                       Style 3-cleft; filaments slen-
                        Style 3-parted; filaments
                        dilated...... 16. P. mittallii.
   Blades of the leaves not jointed on the pedicels.
      Segments of the ocreae not rigid . . . . . . . . . . 18. P. parryi.
Leaves comparatively large; flowers mainly terminal.
   Perennials.
      Styles 3: plants with thick roots.
         Flowers in a single dense spike-like raceme;
           styles long.
             Raceme thick not bulbiferous; akones
              smooth 19. P. histortoides.
             Raceme slender, often bulbiferous; akenes
              Flowers in racemes or panicles; styles short;
           alpine plants.
             Racemes mainly axillary; leaves pubes-
              Racemes panicled.
                Leaves ovate; akene ovoid....... 22. P. phytolaccaefolium
                Leaves lanceolate; akene obovoid.... 23. P. alpinum.
      Styles 2; aquatic or swamp plants with flowers in
        spike-like racenies.
         Ocreae fringed at the spreading summit...... 24. P. hartwrightii.
         Ocreae not fringed nor spreading.
             Leaves oblong-elliptic, obtuse............ 25. P. amphibium.
             Annuals: flowers in several spike-like racemes.
      Styles 2-cleft; akenes lenticular.
         Ocreae naked; racemes drooping.
             Akenes broad; style 2-cleft.................................. 28. P. lapathitolium.
             Akenes narrow; style 2-parted. 29. P. incarnatum.
         Ocreae bristly-ciliate.
             Calvx not glandular; raceme dense...... 30. P. persicaria.
             Calvx glandular; racemes interrupted.
```

1. Polygonum dumetorum scandens (L.) Gray, Man. ed. 5, 418, 4867.

Polygonum scandens L. Sp. Pl. 1: 364, 1753,

Type locality: "Habitat in America."

RANGE: British Columbia to Nova Scotia, south to Texas and Florida.

Specimens examined: Near latitude 49°, Lyall in 1858. Perhaps the locality is east of Washington.

2. Polygonum convolvulus L. Sp. Pl. 1: 364, 1753.

BINDWEED.

Type locality: Europe.

Specimens examined: North Yakima, Watt, August 1895; Lake Chelan, Lake & Hull 648; Pullman, Piper 1842; Almota, Piper 1815; Wawawai, Piper, July 31, 1893; Mount Carlton, Kreager 143.

3. Polygonum paronychia Cham. & Schlecht. Linnaea 3: 51, 1828.

Type locality: "Ad portum S. Francisci Novae Californiae in arenosis littoralibus,

RANGE: Seashores, British Columbia to California.

Specimens examined: Challam County, Elmer 2680; Shoalwater Bay, Cooper; Oyhut, Lamb 1256; Port Angeles, Piper 2304; Whidly Island, Gardner 263; Ocosta, Henderson, June 26, 1892.

Zonal distribution: Humid Transition.

4. Polygonum aviculare L. Sp. Pl. 1: 362. 1753.

Type locality: Europe.

Specimens examined: Along Wilson Creek, Lake & Hull 644; Almota, Piper 2652, 1841; Pullman, Piper 1550.

5. Polygonum fowleri Robinson, Rhodora 4: 67. 1902.

Type locality: New Brunswick.

Range: Seashores, New Brunswick to Virginia: British Columbia to Washington.

Specimens examined: Seattle, Piper 2861: Port Angeles, Piper 2305.

Zonal distribution: Humid Transition.

6. Polygonum polygaloides Meisn, in DC. Prod. 14: 101, 1856.

Type locality: Clearwater River, Idaho. Collected by Spalding.

Range: Washington, Idaho, and Oregon.

Specimens examined: Rockford, Watson 341; Spokane, Henderson 2421; Leiberg 23; Spokane County, Suksdorf 431; Pullman, Piper 1551.

ZONAL DISTRIBUTION: Arid Transition.

Polygonum kelloggii Greene, Fl. Fran. 134, 1891.

Polygonum imbricatum Nutt. Am. Nat. 7: 665, 1873, not Raf. Fl. Tellur. 3: 16, 4836.

Polygonum watsoni Small, Mon. Polyg. 138, 1895, as to synonymic type.

Type locality: "Frequent in the mountains, alpine and subalpine, from Colorado to Oregon and Northern California."

Range: Washington to California and Colorado.

Specimens examineo: Mount Adams, Henderson, August 3, 1892; Mount Cleman, Henderson 2422; Mount Stuart, Elmer 1188; Falcon Valley, Suksdorf 608; Klickitat County, High Prairie, Suksdorf 2286; Skamania County, Suksdorf 897.

ZONAL DISTRIBUTION: Canadian and Hudsonian.

8. Polygonum confertiflorum Nutt. in herb.

Polygonum watsoni Small, Mon. Polyg. 138, pl. 56, 1895, as to description and figure, but not as to synonymic type.

Type Locality: Columbia Plains. Collected by Nuttall. Type in the Gray Herbarium. RANGE: British Columbia to Saskatchewan, Colorado, and California.

Specimens examined: Klickitat River, Flett 1045; Falcon Valley, Suksdorf 478; Coulce City, Piper 3901, 3902, 3903; Douglas County, Spillman; Pullman, Elmer 1008; Major Creek, Suksdorf 2289; without locality, Vascy in 1883; Klickitat County, Suksdorf 2286, 2289; Colville to Spokane, Wilkes Expedition.

ZONAL DISTRIBUTION: Arid Transition.

9. Polygonum erectum L. Sp. Pl. 1: 363, 1753.

Type locality: "Habitat in Philadelphia."

Specimens examined: Yakima, Piper, July 9, 1897

10. Polygonum minimum S. Wats. Bot. King. Explor. 315, 1871.

Type locality: "Wahsatch and Uinta Mountains; 9-11,000 feet altitude."

RANGE: Alaska to California and Utah.

Specimens examined: Olympics, Piper 1085; Mount Rainier, Piper 2122; Goat Mountains, Allen 264; Mount Adams, Suksdorf 605; Howell 421; east of Mount Adams, Flett 1047; Klickitat River, Flett 1042; Stevens Pass, Sandberg & Leiberg 799; Horseshoe Basin, Elmer 725; Blue Mountains, Piper 2436, 2421.

Zonal distribution: Arctic.

11. Polygonum ramosissimum Michx. Fl. 1: 237, 1803.

Type locality: "In regione Illinoense."

RANGE: Washington to Saskatchewan, south to California and New Mexico; Maine to New Jersey near the coast.

Specimens examined: Falcon Valley, Suksdorf 475; Bingen, Suksdorf 1406; Yakima City, Piper, July 9, 1897; Kalispel Lake, Kreager 450.

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

12. Polygonum sawatchense Small, Bull. Torr. Club 20: 213, 1893.

Type Locality: "on the Sawatch Range, Colorado."

Range: Washington to Dakota and Colorado.

Specimens examined: Falcon Valley, Suksdorf, July 19, 1886.

13. Polygonum douglasii Greene, Bull. Cal. Acad. 1: 125, 1885.

Type locality: None cited.

Range: British Columbia to Vermont, south to California and Texas.

Specimens examined: Clallam County, Elmer 2683; Olympic Mountains, Piper 2230; Flett, July 21, 1897; Whidby Island, Gardner 260; Mount Rainier, Piper 2130; Lake Cushman, Piper 2240, Goat Mountains, Allen 263; Mount Adams, Suksdorf 607; Mason County, Piper 903; Wenache, Whited, June, 1896; Ellensburg, Whited 541, 542; Harrington, Sandburg & Leiberg 216; Charleston, Piper 2263; Blue Mountains, Piper, July 46, 1896; Pullman, Piper 1853.

ZONAL DISTRIBUTION: Transition.

This species was formerly mistaken for P, tenne Michx, and references to it appear in the older works under that name.

13a. Polygonum douglasii montanum Small, Mon. Polyg. 118, 1895.

Polygonum tenne latifolium Engelm.; Gray, Proc. Acad. Phila. 1863; 75, 1864, not P. aviculare latifolium Michx. 1803.

Polygonum douglasii latifolium Greene, Bull. Cal. Acad. 1: 125, 1885.

Type locality: Colorado.

Range: Washington to California and Arizona.

Specimens examined: Blue Mountains, Horner 426, 427.

14. Polygonum majus (Meisn.) Piper, Fl. Palouse Reg. 63. 1901.

Polygonum coarctatum majus Meisn, in DC, Prod. 14: 101, 1856.

Type locality: "Ad flum, Columbia (Dougl.!) in mont, Scopulosis (Geyer n. 355!)."
The Geyer plant is really from the Kooskoosky River, Idaho.

Range: Washington, Oregon, and Idaho.

Specimens examined: White Salmon, Suksdorf: Wenache, Whited 1298, 1127; Ellensburg, Elmer 386; North Yakima, Steinwey in 1894; Rock Island, Sandberg & Leiberg 431; west Klickitat County, Suksdorf 212; Pasco, Hindshaw 31; Loon Lake, Winston, July 20.

1897; Spokane River, Henderson, June 1, 1892; Spangle, Suksdorf 1409; Pullman, Lake & Hull 647; without locality, Vascy in 1889; Chelan, Griffiths & Cotton 160.

Zonal distribution: Arid Transition.

15. Polygonum spergulariaeforme Melsn.; Small, Bull. Torr. Club 19: 366. 1892.

Polygonum coarctatum Dougl.; Hook. Fl. Bor. Am. 2: 133. 1838, not Willd. 1825.

Polygonum lineare Menzies; Hook. Fl. Bor. Am. 2: 133, 1838, as synonym.

Type locality: "N. W. America." Collected by Menzies.

Range: British Columb'a to Oregon in the coast region.

Specimens examined: Bellingham Bay, Suksdorf 2047; Fidalgo Island, Flett 2125; Seattle, Piper & Smith in 1888; Tacoma Flett; De Fuca, Dr. Scouler; Rockland, Howell.

Zonal distribution: Humid Transition.

16. Polygonum nuttallii Small, Mon. Polyg. 132. pl. 53, 1895.

Polygonum intermedium Nutt.; S. Wats. Proc. Am. Acad. 17: 378, 1882, not Ehrh. 1791, Type locality; "On bluffs of the Columbia plains." Collected by Nuttall.

Range: Washington and Oregon.

Specimens examined: Olympic Mountains, Henderson 2420; Lake Cushman, Piper 2241; Mount Constitution, Henderson 2419; Evergreen, Conard 424; Stehekin, Gorman 737, Zonal distribution: Canadian.

17. Polygonum greenei S. Wats, Proc. Am. Acad. 14: 295, 1879.

Type Locality: "Plains of Shasta," and "near Chico." Collected by Greene and by Mrs. Bidwell.

Range: Washington to California.

Specimens examined: West Klickitat County, Suksdorf 1002.

18. Polygonum parryi Greene, Bull. Torr. Club 8: 99. 1881.

Type locality: Yosemite Valley, California. Collected by Parry.

Range: Washington to California.

Specimens examined: Falcon Valley, Suksdorf 609, 1410.

19. Polygonum bistortoides Pursh, Fl. 1: 271. 1814.

Polygonum bistorta oblongifolium Meisn, in DC, Prod. 14: 126, 1856.

Polygonum glastifolium Greene, Pittonia 5: 199. 1903.

Type locality: "In low grounds on the banks of the Missouri, called Quamash-flats." Collected by Lewis. The date and locality on original label show the place to be what is now Weippe, Idaho.

RANGE: Subarctic regions, south to California and Arizona.

Specimens examined: Challam County, Elmer 2681; Mount Rainier, Piper, August 15, 1895; Allen 42; Silverton, Bouck 195; Klickitat River, Flett 1043; Stevens Pass, Sandberg & Leiberg 748; Falcon Valley, Suksdorf 1413; Ellensburg, Whited 728; Horseshoe Basin, Elmer 740; Lake & Hull 649; 6 miles east of Pullman, Lake & Hull, May 20, 1892; without locality, Vascy in 1889; Vancouver, Piper 4934.

Zonal distribution: Arid Transition as to the typical plant, but recurring in the Arctic-Alpine meadows.

20. Polygonum viviparum L. Sp. Pl. 1: 360. 1753.

Type locality: Europe.

RANGE: Alaska to Greenland, south to New England and Colorado. Europe, Asia.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1860.

Zonal distribution: Arctic.

21. Polygonum newberryi Small, Bull. Torr. Club 21: 170. 1894.

Type locality: Cascade Mountains of Oregon at Crater Pass.

Range: Washington and Oregon.

Specimens examined: Mount Rainier, Flett 305; Piper 2112; Mount Stuart, Elmer 1232, Brandegee 1066; Goat Mountain, Allen 127; Mount Adams, Henderson, August 9, 1892; Suksdorf, September, 1877; Flett 1044.

Zonal distribution: Aretic.

This species was formerly confused with the more southern P. davisiae Brewer, and appears under that name in Suksdorf's list.

22. Polygonum phytolaccaefolium Meisn.; Small, Bull. Torr. Club 19: 360. 1892.

Type LOCALITY: California.

RANGE: Washington and Idaho to California.

Specimens examined: Mount Adams, Suksdorf 85; 10 miles north of Mount Adams, Flett 1053.

Zonal distribution: Hudsonian and Arctic.

23. Polygonum alpinum foliosum (Keller) Small, Bull. Torr. Club 19: 360. 1892.

Polygonum polymorphum foliosum Keller, Bull. Soc. Bot. Belg. 30: 49. 1891.

Type locality: Mount Adams, Washington.

RANGE: Washington.

Specimens examined: Mount Adams, Suksdorf 610 in 1885; Howell & Henderson in 1882.

24. Polygonum hartwrightii A. Gray, Proc. Am. Acad. 8: 294. 1870.

Type locality: "Sedgy bogs, New York from Herkimer to Yates County, and Michigan."

RANGE: British Columbia and Saskatchewan, south to California, Kansas, and Maine.

Specimens examined: White Salmon, Suksdorf 482; Coupeville, Gardner 254; Seattle, Piper 720; Smith, July 11, 1889; Spokane, Dewart, June 6, 1901; Davis Lake, Kreager 438. Zonal distribution: Transition.

25. Polygonum amphibium L. Sp. Pl. 1: 361, 1753.

Type locality: Europe.

Range: Alaska to Quebec, south to California, Colorado, and Pennsylvania. Europe, Asia.

Specimens examined: Seattle, Piper, August, 1892; Lake City, Flett 170; Lake Washington, Piper, August, 1892; Wenache Mountains, Elmer 432; Lake Conconully, Whited 1316; Pend Oreille River, Lyall in 1861; 6 miles east of Pullman, Piper, July 7, 1899; Lake Kalispel, Kreager 338.

Zonal distribution: Transition.

26. Polygonum emersum (Michx.) Britton, Trans. N. Y. Acad. Sci. 8: 73. 1889.

Polygonum amphibium emersum Michx, Fl. 1: 240, 1803.

Polygonum muhlenbergii Wats. Proc. Am. Acad. 14: 295. 1879.

Polygonum amphibium terrestre Torr. Fl. U. S. 1: 403. 1824.

Type locality: "Ad ripas fluminis Ohio."

RANGE: Brit sh Columbia to New England, southward to Mexico, Louisiana, and Virginia. Specimens examined: Western Washington, latitude 49°, Lyall in 1858; Coulee City, Lake & Hull 645; Rock Lake, Lake, August 3, 1893; Chelan, Elmer 857; junction Crab and Wilson creeks, Sandberg & Leiberg 328; Union Flat, Lake & Hull 646; Pullman, Piper 1829; Uniontown, Henderson 2699; Prosser, Cotton 812.

Zonal distribution: Arid Transition.

Prof. E. L. Greene considers the *Polygonum emersum* as generally understood to be an aggregate of many species. Among these Elmer's 857 is made the type of *Persicaria chelanica* Greene. Some other segregates of this and related species, namely, *Persicaria cusickii* Greene and *Persicaria oregana* Greene c occur in Washington and adjoining States. This group of species should receive much careful field study.

27. Polygonum hydropiperoides Michx. Fl. 1: 239. 1803.

Type locality: "In Pennsylvania, Virginia, Carolina."

Range: Washington to New Brunswick, south to Mexico and Florida.

Specimens examined: West Klickitat County, Suksdorf 668, 56, 483.

28. Polygonum lapathifolium L. Sp. Pl. 1: 360. 1753.

Polygonum nodosum Pers. Syn. 1: 440, 1805.

Type locality: "Habitat in Gallia."

Specimens examined: Latitude 49°, Lyall in 1858; Southbend, Spillman; Alma, Elmer 540; Methow River, Whited 11, 213; Ellensburg, Whited 596; North Yakima, Watt, August, 1895; White Salmon, Suksdorf; Squaw Creek, Cotton 870.

28a. Polygonum lapathifolium incanum (Schmidt) Koch, Syn. Fl. Germ. 617. 1837.

Polygonum incanum Schmidt, Fl. Boem. 4: 90, 4795.

Type locality: Not ascertained.

Range: British Columbia and Washington to Nova Scotia and New York, probably introduced.

Specimens examined: Usk, Kreager 360; Wawawai, Piper, August 24, 1894.

29. Polygonum incarnatum Ell. Bot. S. C. and Ga. 1: 456. 1817.

Type locality: None given, but South Carolina and Georgia understood.

Range: Vermont to Nebraska, south to Louisiana and Florida.

Specimens examined: Egbert Springs, Sandberg & Leiberg 406; Wawawai, Piper, August 23, 1899.

The above specimens are in all probability introduced.

30. Polygonum persicaria L. Sp. Pl. 1: 361, 1753.

Type locality: European.

Specimens examined: Seattle, Savage 47; Puyallup, Piper 2364; Tacoma, Flett 126; Almota, Piper 2362.

31. Polygonum punctatum Ell. Bot. S. C. & Ga. 1: 455, 1817.

Polygonium acre II. B. K. Nov. Gen. 2: 179, 1817, not Lam. 1805.

Type Locality: South Carolina and Georgia.

Range: Temperate North America.

Specimens examined: White Salmon, Suksdorf 484; North Yakima, Piper 1820; Lindsleys Ranch, Clarke County, Henderson, September 6, 1892.

31a. Polygonum punctatum leptostachyum (Meisn.) Small, Bull. Torr. Club 19: 356, 1892.

Polygonum acre leptostachyum Meisn. in DC. Prod. 14: 108. 1856.

Type locality "In Amer. boreale et australi, praecipue tropica."

RANGE: The whole United States and southward.

Specimens examined. Latitude 49°, Lyall in 1858-59, west Klickitat County, Suksdorf 1412.

32. Polygonum hydropiper L. Sp. Pl. 1: 361, 1753.

Type locality: European.

Specimens examined: Puyallup, Piper 2320.

POLYGONUM PENNSYLVANICUM L. appears on Suksdorf's list, credited to Klickitat County. We have seen no Washington specimens.

Pterostegia drymarioides Fisch. & Mey. Ind. Sem. Hort. Petrop. 2: 23, 1835. Type locality, "In portu Bodega Novae Californiae." Included by Suksdorf in his list, but he writes that he has seen no Washington specimens. A specimen in the Gray Herbarium is labeled "Columbia, Tolmie."

ERIOGONUM.

Billodon old.	
Flowers not stipe-like at base. Involuere nerveless; branches leafy; annual	1 F anguloson
Involucre distinctly nerved.	1. 12. ungatosam.
Outer perianth segments much broader than the inner.	
Umbel simple, close; plants densely cespitose.	
· Involucre campanulate; flowers 3 to 4 mm.	
long, white or yellow	2. E. ovalifolium.
Involucre turbinate; flowers 4.5 to 5.5 mm.	2. 13
long, wine red	3. E. vineum.
Umbel compound; plants loosely cespitose.	
Involucres in clusters; flowers white, yellow,	
or purple	4. E. proliferum.
Involucres scattered, mostly solitary; flowers	1 3
white.	
Plants erect or ascending	5. E. niveum.
Plant decumbent	6. E. decumbers.
Outer perianth segments like the inner.	
Shrub, much branched; leaves linear to oblanceo-	
late	7. E. microthecum.
Herbs.	
Annuals; stems wiry; leaves rosulate.	
Involuere 3 mm. long	11. E. vimineum.
Involucre 1 to 4.5 mm, long	12. E. baileyi.
Perennials.	
Plants very dwarf and very leafy; pe-	
duncles bearing a single involucre	13. E. minimum.
Plants tall, not very leafy; peduncles	
bearing more than one involucre.	
Peduncles stout, fistulous; involu-	
cres 3 to 6 in each cluster.	
Leaves ovate-oblong, acute, \tilde{o}	
to 15 cm. long	$8.\ E.\ \epsilon latum.$
Leaves oblong or ovate, obtuse,	
1 to 5 cm, long	9. $E.$ $nudum$.
Peduncles slender, not fistulous; in-	
volucres scattered in a loose	
cyme	10. E. strictum.
Flowers attenuate and stipe-like at base.	
Perianth pubescent.	
Involucre with reflexed lobes.	
Prostrate or nearly so, only the flowering stems	
upright; flowers cream color; leaves oblong	1 4 77 7 7 7 1
or spatulate, not revolute	14. E. douglasii.
Erect, much branched; flowers bright yellow;	1" 1' 1 7 7
leaves linear or linear-spatulate, often revolute.	15. E . $sphaerocephatum$.
Involucre with erect lobes or teeth.	10 L 1 1
Shrubby; leaves linear, revolute	10. E. tuymoutes.
Herbaceous; leaves oblong or obovate, not	
revolute. Flowers yellow; bracts 3 to 8	17 F. nimeri
Flowers purplish; bracts 2	18 F nurolactolium
Perianth glabrous.	in in Parmational
Chance granous.	

Leaves large, 2 to 8 cm. long, oblong-ovate, mostly

Leaves smaller, never cordate; peduncles not naked.

Leaves narrow, tomentose on both sides...... 20. E. heracleoides.

Leaves broader, glabrous or glabrate above.

Inflorescence umbellate.

Umbel simple.

1. Eriogonum angulosum Benth. Trans. Linn Soc. 17: 406, 1837.

Type locality: California.

RANGE: Washington to California and Arizona.

Specimens examined: Morgans Ferry, Suksdorf 438; Yakima region, Brandegie 1051.

Zonal distribution: Upper Sonoran.

2. Eriogonum ovalifolium Nutt. Journ. Acad. Phila. 7: 50, 1834.

Type locality: "Sources of the Missouri." Collected by Wyeth.

Range: British Columbia to California and Colorado.

Specimens examined: Mount Rainier, Smith 773; Mount Adams, Suksdorf 87; Flett 1051; Mount Stuart, Sandberg & Leiberg 827; Olympic Mountains, Elmer 2682.

Zonal distribution: Arctic.

3. Eriogonum vineum Small, Bull. Torr. Club 25: 45. 1898.

? Eucycla purpurca Nutt. Journ. Acad. Phila. 11, 1: 166, 1847.

? Eriogonum purpureum Nutt.; Benth. in DC. Prod. 14: 10. 1856.

Type locality: "California, near Rose mine, San Bernardino Mountains, altitude 2,100 meters."

Range: Washington to California.

Specimens examined: Olympics, Flett 127; Mount Adams, Henderson, August 10, 1892; Mount Stuart, Elmer 1221.

ZONAL DISTRIBUTION: Arctic.

4. Eriogonum proliferum Torr. & Gr. Proc. Am. Acad. 8: 164, 1873.

? Eriogonum oblongi folium minus Benth. in DC. Prod. 14: 113. 1856.

Type locality: "Idaho Mountains (Prof. O. Marcy, Prof. Swallow) to N. Fork of the Columbia, Wilkes Expedition, Weenas Valley and Walla Walla, Lyall."

RANGE: Washington and Idaho to California.

Specimens examined: Ellensburg, Whited 537, 658, 668; Elmer 382, 1087, 391; Piper 2719; Wenache, Whited 147, 1245, 1169; Satus, Elmer 1072; Pasco, Hindshaw 36, 14; Piper 2956; Mount Cleman, Henderson; Peshastin, Sandberg & Leiberg 493; Snipes Mountain, Cotton 386; North Yakima, Henderson 2426; Flett 1056; Watt: Steinweg: Leckenby; without locality, Henderson 2428; Goldendale, Suksdorf 440; Rattlesnake Mountains, Suksdorf 439; Morgans Ferry, Suksdorf 441; Wenas Valley and Walla Walla, Lyall in 1860; without locality, Vasey 145; between Spipen River and North Fork of the Columbia, Wilkes Expedition.

ZONAL DISTRIBUTION: Upper Sonoran.

Apparently all the Washington specimens that have been referred to E. oblongifolium belong to E. proliferum.

5. Eriogonum niveum Dougl.; Benth. Trans. Linn. Soc. 17: 414. 1837.

Eriogomum diehotomum Dougl.; Benth. op. cit. 415.

Type locality: "Valleys of the Blue Mountains." Collected by Douglas.

RANGE: British Columbia to Idaho and California.

Specimens examined: Wenache, Whited 723, 1157; Similkameen Valley, Lyall in 1860; Lake Chelan, Lake & Hull 673; Coulee City, Henderson 2427; Loomis, Elmer 605; Alkali Lake, Sandberg & Leiberg 419; Clarks Springs, Kreager 123; without locality, Cooper in 1853; Spokane, Sandberg, Piper 2811 Suksdorf 945; Watson 349; Sandberg, Heller & MacDongal 903; Wawawai, Piper 1334, 1547; Waitsburg, Horner 433; Marcus, Kreager 463.

ZONAL DISTRIBUTION: Upper Sonoran.

We have been quite unable to distinguish two species, as did Douglas, based on differences in degree of development of the bracts, and on the erect or spreading position of the calyx teeth.

6. Eriogonum decumbens Benth, Trans. Linn. Soc. 17: 415, 1837.

Eriogonum niveum decumbens Torr. & Gr.-Proc. Am. Acad. 8: 174, 1870.

Type locality: "Columbia River." Collected by Douglas.

Range: Washington and Oregon.

Specimens examined: Klickitat County, Leckenby: Sunnyside, Piper: without locality, Donglas.

Zonal distribution: Upper Sonoran.

This plant is perhaps only a subspecies of *E. niveum*, but its habit is quite distinct. It is confined to sand hills where it forms large decumbent masses often 50 cm, in diameter. The leaves also are broader than in *E. niveum*.

Eriogonum microthecum Nutt. Journ. Acad. Phila. II. 1: 162, 1847.

Type locality: "On the sides of hills in Oregon, east of Walla Walla." Collected by Nuttall.

Range: Washington to California, New Mexico, and Nebraska.

Specimens examined: Ellensburg, Whited 553; Egbert Springs, Sandberg & Leiberg, July, 1893; Tampico, Henderson, July 31, 1892; Moses Lake, Sandberg & Leiberg, July, 1893; Parker, Elmer 1078; North Yakima, Piper 1879; Henderson, October 5, 1892; Watt, August, 1895; without locality, Cooper; without locality, Lasey in 1889; Kiona, Cotton 734.

ZONAL DISTRIBUTION: Upper Sonoran.

We have seen no Washington specimens referable to E, corymbosum Nutt, and believe that such references really apply to E, microthecum.

8. Eriogonum elatum Dougl.; Benth. Trans. Linn. Soc. 17: 413. 1837.

Type locality: "Columbia River." Collected by Douglas.

RANGE: Washington to California and Nevada.

Specimens examined: Wenache, Whited, August, 1896; Ellensburg, Elmer 387; Whited 276; Piper, July, 1897; White Bluff Ferry, Lake & Hull 677; North Yakima, Watt, August, 1895; Steinweg in 1894; Peshastin, Sandberg & Leiberg, August, 1893; Rock Island, Sandberg & Leiberg 424; near Chelan River, Watson 347; Columbia Valley, Lyall in 1860; Tahlk Plain, Cooper; without locality, Vasey in 1889; Umtanum Creek, Cotton 820.

ZONAL DISTRIBUTION: Upper Sonoran.

9. Eriogonum nudum Dough; Benth. Trans. Linn. Soc. 17: 413, 1837.

Type locality: "Plains of the Multnomah," Oregon. Collected by Douglas.

Range: Washington to California.

Specimens examined: North of Mount Adams, Henderson 2429.

ZONAL DISTRIBUTION: Arid Transition.

10. Eriogonum strictum Benth. Trans. Linn. Soc. 17: 414, 1837.

Type locality: "Columbia River." Collected by Douglas. The original label gives the locality "Blue Mountains."

Range: Blue Mountains of Washington and Oregon.

Specimens examined: Along Salmon River, Horner 432.

11. Eriogonum vimineum Dougl.; Benth. Trans. Linn. Soc. 17: 416, 1837.

Type locality: "Columbia River." Collected by Douglas.

Range: Washington and Idaho to California and Nevada.

Specimens examined: Wenache, Whited 1156; Ellensburg, Whited 665; North Yakima Watt, August, 1895; Pasco, Elmer 1057; Piper, July 11, 1897; Waitsburg, Horner 584; Wawawai, Piper 1546; without locality, Vasey in 1889; Prosser, Cotton 807.

Zonal distribution: Upper Sonoran.

12. Eriogonum baileyi S. Wats. Proc. Am. Acad. 10: 348, 1875.

Type locality: Northwestern Nevada. Collected by W. W. Bailey.

RANGE: Washington to Arizona and Utah.

Specimens examined: Yakima, Howell in 1877; Vasey 147.

Zonal distribution: Upper Sonoran.

13. Eriogonum minimum Small, Bull. Torr. Club 25: 47. 1898.

Type locality: Cascade Mountains, Washington. Collected by Brandegee, probably on Mount Stuart.

RANGE: Known only by the type specimen.

Specimens examined: Cascade Mountains, Brandegee 372.

14. Eriogonum douglasii Benth. in DC. Prod. 14: 9, 1856.

Type locality: "In montibus Coeruleis. Gairdner! Douglas!"

RANGE: Washington to California.

Specimens examined: Wenache Mountains, Elmer 461; Whited 101; Ellensburg, Whited 355, 642, 100; Piper 2706; North Yakima, Steinweg in 1894; Tampico, Flett 1051; mountains between Ellensburg and Wenache, Whited 725; without locality, Vascy in 1889; Wenache Mountains, Griffiths & Cotton 118; Cotton 1297.

Zonal distribution: Arid Transition.

14a. Eriogonum douglasii ramosum subsp. nov.

Differs from the typical form in that the umbel is compound.

Foothills east of Ellensburg, Whited 643.

15. Eriogonum sphaerocephalum Dougl; Benth. Trans. Linn. Soc. 17: 407. 1837.

Type locality: "Columbia River." Collected by Douglas.

Range: Eastern Washington to California and Nevada.

Specimens examined: Ellensburg, Elmer 1083; Wenache, Whited 724, 1278; Yakima River, Wilkes Expedition 936; Tampico, Flett 1054; Simcoe Valley, Lyall in 1860; Crab Creek, Suksdorf 435; Wilson and Crab creeks, Sandberg & Leiberg 319; without locality, Douglas; Coulee City, Piper 3842; Rattlesnake Mountains, Cotton 704; Umtanum Creek, Cotton 814.

Zonal distribution: Upper Sonoran.

15a. Eriogonum sphaerocephalum tenue (Small).

Eriogonum tenne Small, Bull. Torr. Club 25: 41. 1898.

Type locality: West Klickitat County, Washington. Collected by Suksdorf.

Range: Eastern Washington and perhaps eastern Oregon.

Specimens examined: West Klickitat County, Suksdorf 433, 307, 434, 694; eastern Washington, Hilgard in 1882; Coulee City, Henderson, July 11, 1892; Wilson Creek, Lake & Hull 672.

Zonal distribution: Upper Sonoran.

16. Eriogonum thymoides Benth. in DC. Prod. 14: 9. 1856-7.

Type locality: "Ad fl. Spokan in regione Oregon superioris." Collected by the Wilkes Expedition.

Range: Washington and Oregon.

Specimens examined: Wenache, Whited 76, 33, 1091; Ellensburg, Whited 648; Piper 2710; North Yakima, Henderson, May 2 and 26, 1892; Steinweg in 1894; Rattlesnake Mountains, Cotton 361, 362; Pasco, Hindshaw 10; Bickleton, Suksdorf 432; Goldendale,

Henderson in 1882; Simcoe Hills, Lyall in 1860; Coulee City, Piper 3868; Douglas County, Spillman, May 26, 1896; near mouth of Swauk, Watson 348; Ritzville, Sandberg & Leiberg 167; Prosser, Cotton 59.

Zonal distribution: Upper Sonoran.

17. Eriogonum piperi Greene, Pittonia 3: 263, 1898.

Type locality: Blue Mountains, Columbia County, Washington.

Range: Washington to Montana.

Specimens examined: Blue Mountains, Piper 2453.

Zonal distribution: Hudsonian.

Eriogonum pyrolaefolium coryphaeum Torr. & Gr. Proc. Am. Acad. 8: 162
 1870

Type locality: "Summit of the Cascade Mountains, about lat. 49° on the east side at the height of 7,500 feet." Collected by Lyall.

Range: Washington and Oregon.

Specimens examined: Mount Rainier, Allen 206; Piper 2117; Piper & Smith 541; Mount Adams, Henderson, August 9, 1892; Paradise Valley, Flett 261; Mount Adams, Suksdorf 86; Flett 1050; Howell & Henderson in 1882; Skamania County, Suksdorf 1419; Cascade Mountains, Tweedy, August, 1882; Cascade Mountains, Lyall in 1860.

Zonal distribution: Aretic.

19. Eriogonum compositum Dougl.; Benth. Trans. Linn. Soc. 17: 410. 1837.

Type locality: "Columbia River." Collected by Douglas.

Range: Washington and Idaho to California.

Specimens examined: Wenache, Whited 1149; Mount Rainier, Piper 2127; Flett 230; Goat Mountain, Allen, September 20, 1893; Mount Stuart, Brandegee 1050; Klickitat County, Suksdorf 47, 437; Columbia Valley, Lyall in 1860; Vancouver, Nuttall; Columbia River, Douglas; banks of Columbia opposite Wenache, Watson 351; without locality, Brandegee 1048; Rock Island, Whited 1415; Ellensburg, Whited 560; North Yakima, Steinweg in 1894; Spokane, Leiberg 22; without locality, Vascy in 1889; Clarks Springs, Kreager 94.

Zonal distribution: Upper Sonoran.

19a. Eriogonum compositum leianthum Benth, in DC, Prod. 14: 12, 1856.

Type locality: "In regione Oregon superioris ad Clear Water (Spalding) ad fl. Spokan et Kooskoosky (Geyer n. 470)."

RANGE: Washington, Oregon, and Idaho.

Specimens examined: Wenache, Whited, May 13, 1900, and 92; North Yakima, Steinweg in 1894; mountains between Ellensburg and Wenache, Whited 726; Crab and Wilson creeks, Sandberg & Leiberg 289; Wawawai, Piper 1883; Elmer 773; mouth of Methow River, Watson 350; without locality, Vascy in 1889; Spokane, Henderson, June, 1892; without locality, Cooper in 1853; North Yakima, Griffiths & Cotton, June 1, 1902.

Zonal distribution: Upper Sonoran.

This is distinguished from typical E. compositum by having a smooth perianth.

20. Eriogonum heracleoides Nutt. Journ. Acad. Phila. 7: 49. 1834.

Eriogonum heracleoides minus Benth. in DC. Prod. 14:41. 1856.

Type locality: "Sources of the Missouri," Collected by Wyeth.

RANGE: British Columbia to Nevada and Utah.

Specimens examined: Ellensburg, Elmer 389; Whited 537½; Wenache, Whited 122, 1090, and June, 1896; North Yakima, Steinweg in 1894; Flett 1057; Concoully, Whited 1314; Rattlesnake Mountains, Cotton 404; Douglas County, Spillman, May 27, 1896; Wilson Creek, Sandberg & Leiberg 268; Columbia interior, Douglas in 1826; Sprague, Lake & Hull 675; Henderson, May 30, 1892; Spokane County, Suksdorf 436 in part; Cheney, Tucker in 1892; Cow Creek, Lyall in 1860; without locality, Vascy in 1889; Spokane, Dewart, June 5, 1901; Pullman, Piper 1545; Lake & Hull 676; Blue Mountains, Piper, August, 1896; Spokane, Kreager 11; 2 days before Fort Okanogau, Wilkes Expedition.

Zonal distribution: Arid Transition.

A form of this from the region of Mount Stuart, represented by Elmer's 1096, Brandegee's 1050, and Sandberg & Leiberg's 813, is distinguished by having small compact umbels and rather narrow lanceolate or lance-ovate leaves. It perhaps merits recognition as a subspecies.

Another form of the species, which includes Watson's 351, Whited's 1149 and 1415, and Brandegee's 1048, is characterized by unusually small and broad leaves, 2 to 4 cm. long, and small compact umbels of smaller flowers. Doctor Watson has labeled his specimen variety simplex, under which name the plant may be known.

20a. Eriogonum heracleoides angustifolium (Nutt.) Torr. & Gr. Proc. Am. Acad. 8:159, 1870.

Eriogonum angustifolium Nutt. Journ. Acad. Phila. H. 1: 164. 1847.

Type locality: "Western slope of the Rocky Mountains." Collected by Nuttall.

Range: Washington, Oregon, Idaho.

Specimens examined: Bickleton, Suksdorf 436.

21. Eriogonum tolmieanum Hook. Fl. Bor. Am. 2: 134. 1838.

Eriogonum umbellatum monocephalum Forr. & Gr. Proc. Am. Acad. 8: 160, 1870.

Type locality: "Banks of the Walla Walla River, among Artemisia." Collected by Tolmie.

Range: Washington to California!

Specimens examined: Walla Walla River, Tolmie: Yakima region, Tweedy, October, 1882.

22. Eriogonum umbellatum Torr. Ann. Lyc. N. Y. 2: 241. 1828.

Eriogonum latum Small; Rydberg, Mem. N. Y. Bot. Gard. 1: 121, 1900.

Type locality: "Near the Rocky Mountains." Collected by James.

RANGE: Washington and Montana to California and Colorado.

Specimens examined: Stehekin, Whited 1383; Wenache Mountains, Whited 1167; Tumwater Canyon, Sandberg & Leiberg 521; Mount Adams, Flett 1049; Henderson, August 9, 1892; Big Klickitat River, Cotton 1476.

Zonal distribution: Hudsonian.

22a. Eriogonum umbellatum hypoleium subsp. nov.

Leaves green on both sides, sparingly pubescent on the margins and petioles.

Specimens examined: Wenache Mountains, Whited 727, July 17, 1828 (type, deposited in the United States National Herbarium); Mount Stuart, Elmer 1192, August, 1898.

22b. Eriogonum umbellatum majus Benth. in DC. Prod. 14: 11. 1856.

Eriogonum subalpinum Greene, Pittonia 3: 18, 1896.

Type locality: "In montibus scopulosis region, sup. fl. Platte, Sweetwater, etc. (Gordon, Fremont, Burke, Geyer)."

Range: Washington to Montana and Colorado.

Specimens examined: Cascade Mountains, latitude 49°, Lyall; Mount Stuart, Elmer 1193; Mount Chapaca, Elmer 586; Yakima region, Tweedy, August, 1882; Nason Creek Sandberg & Leiberg 686; without locality, Vascy in 1889; Mount Carlton, Kreager 236.

23. Eriogonum stellatum Benth. Trans. Linn. Soc. 17: 409. 1837.

Eriogonum eroceum Small, Bull. Torr. Club 25: 43. 1898.

Type locality: "Interior of northwest America." Collected by Douglas.

Specimens examined: Blue Mountains, Piper 2447.

ZONAL DISTRIBUTION: Arid Transition.

OXYTHECA.

1. Oxytheca dendroides Nutt. Journ. Acad. Phila. 11. 1: 169. 1847.

Type locality: "On the sand hills of the Rocky Mountains, near Lewis River." Collected by Nutall.

Range: Washington to Wyoming and Nevada.

Specimens examined: Sunnyside, Piper 2847; Pasco, Elmer 1053; Morgans Ferry, Suksdorf 444; Egbert Springs, Sandberg & Leiberg 380; Priest Rapids, Brandegee 1061; junction of Crab and Wilson creeks, Sandberg & Leiberg 302.

Zonal distribution: Upper Sonoran.

CHORIZANTHE.

1. Chorizanthe watsoni Torr. & Gr. Proc. Am. Acad. 8: 199, 1873.

Type locality: "Nevada, on the borders of the desert, Humboldt, Reese River, and Grass valleys."

Range: East Washington to Nevada and California.

Specimens examined: Morgans Ferry, Suksdorf 415; Yakima, Leckenby, June, 1898; North Yakima, Henderson 2424; Pasco, Piper 2960; junction of Crab and Wilson creeks, Sandberg & Leiberg 258; without locality, Brandegee 145; Coulee City, Piper 3876.

Zonal distribution: Upper Sonoran.

CHENOPODIACEAE. GOOSEFOOT FAMILY.

Embryo spirally coiled; endosperm scanty or wanting.	
Shrub with monoecious flowers	Sarcobatus (р. 239).
Herbs with perfect flowers.	
Leaves becoming spiny; fruiting calyx surrounded by a	
wing	Salsola (p. 240).
Leaves fleshy; fruiting calyx wingless	Pondia (p. 240).
Embryo annular.	
Endosperm none; stems jointed; leaves scale-like	Salicornia (p. 240).
Endosperm copious; stems not jointed; leaves not scale-like.	
Pericarp adherent to the seed; fruit much exceeding the	
calyx	Совівревмим (р. 241).
Pericarp not adherent; fruit inclosed.	
Flowers unisexual; fruit inclosed by 2 bractlets.	
Shrubs; testa membranous.	
Pericarp hairy	Епраты (р. 241).
Pericarp glabrous	Grayia (p. 241).
Mostly herbs; testa coriaceous	Atriplex (p. 241).
lowers perfect.	
Sepal 1, bract-like; stamen 1	Monolepis (p. 243).
Sepals 5, united; staniens 5.	
Flowers capitate; calyx fleshy and red infruit.	Вытим (р. 243).
Flowers panieled; calyx dry or scarcely fleshy	
in fruit	Спехородим (р. 242).

SARCOBATUS.

 Sarcobatus vermiculatus (Hook.) Torr. in Emory, Rep. 149, 1848. Greasewood. Batis? vermiculatus Hook, Fl. Bor, Am. 2: 128, 1838.

Type Locality: "Common on the barren grounds of the Columbia, and particularly near salt marshes." Collected by Douglas.

RANGE: Washington to Montana, New Mexico, and Arizona.

Specimens examined: Coulce City, Lake & Hull 699; Alkali Lake, Sandberg & Leiberg 410; North Yakima, Steinweg in 1894; Henderson, June 18, 1892; Yakima City, Piper, July 10, 1897; Pasco, Elmer 1064; Morgans Ferry, Suksdorf 449; Walla Walla, Lyall, June, 1860; without locality, Vasey in 1889; Cow Creek, Griffiths & Cotton 540.

Zonal distribution: Upper Sonoran.

For illustration see Plate IV, facing page 25.

SALSOLA.

 Salsola kali tragus (L.) Moq. in DC. Prod. 13²: 187, 1849. RUSSIAN THISTLE. Salsola tragus L. Sp. Pl. ed. 2. 1:322, 1762.

Type locality: "Habitat in Europa australi."

Specimens examined: Pasco, Piper, July 10, 1897; Spokane, Kreager 531.

The Russian thistle probably first reached Washington in 1895 or 1896. It is now widely spread in the State.

DONDIA.

Fruiting calyx without crests or appendages.................. 3. D. maritima. Fruiting calyx developing keels or crests.

Calvx developing crests on one or more of its lobes; leaves linear,

Calyx at length surrounded by a transverse lobed wing; leaves

1. Dondia occidentalis (S. Wats.) Heller Cat. N. A. Plants 3, 1898.

Schoberia occidentalis S. Wats. Bot. King Explor. 5: 295, 1871.

Suaeda occidentalis S. Wats. Proc. Am. Acad. 9: 90, 1874.

Type locality: "Ruby Valley, Nevada."

Range: Washington to Nevada.

Specimens examined: Coulee City, Henderson 2557; Crab Creek, Suksdorf 448; Lincoln County, Elmer 1241; Yakima City, Piper 2749, 2752.

Zonal distribution: Upper Sonoran.

2. Dondia depressa (Pursh) Britton, Ill. Fl. 1:585, 1896.

Salsola depressa Pursh, Fl. 1: 197, 1814.

Suaeda depressa Ledeb.; S. Wats, Bot, King Expl. 5: 294, 1871.

Type locality: "On the volcanic plains of the Missouri."

Range: Washington to Saskatchewan, south to Nevada and Nebraska.

Specimens examined: White Bluff Ferry, Lake & Hull 678. A doubtful immature specimen perhaps referable to the preceding.

Zonal distribution: Upper Sonoran.

3. Dondia maritima (L.) Druce, Ann. Scot. Nat. Hist. 1896: 42, 1896.

Chenopodium maritimum L. Sp. Pl. 1:221, 1753.

Suaeda maritima Dum. Fl. Belg. 22, 1827.

Type locality: "Habitat in Europae maritimis."

Range: Seacoasts, Maine to New York. Washington. Europe.

Specimens examined: Salt marshes near Coupeville, Gardner 365.

SALICORNIA.

Salicornia ambigua Michx. Fl. 1: 2, 1803.

Type locality: "In Carolinae scirpetis maritimis."

RANGE: Seabeaches, Massachusetts to Texas, British Columbia to California.

Specimens examined: Port Angeles, Piper, September, 1895; Port Ludlow, Binns, September 3, 1890; Seattle, Piper; Union City, Piper in 1890; Port Townsend, Barber 188, 189.

Zonal distribution: Humid Transition.

The Pacific Coast plant, judging from a small amount of herbarium material, is somewhat different from the typical *ambigua* of the Atlantic slope. Our plant was called *S. herbacea* L. in Cooper's Report and *S. radicans* L. in Hooker's Flora.

CORISPERMUM.

 Akenes 3 to 5 mm. long, winged
 2. C. hyssopifolium.

 Akenes 2 to 2.5 mm. long, wingless
 1. C. villosum.

1. Corispermum villosum Rydberg, Bull. Torr. Club 24: 191, 1897.

Type Locality: Manhattan, Montana. Range: Washington, Montana, Nevada.

Specimens examined: Sunnyside, Cotton 753.

ZONAL DISTRIBUTION: Upper Sonoran.

2. Corispermum hyssopifolium L. Sp. Pl. 1: 4, 1753.

Bugseed.

Type locality: "Habitat ad Volgam Tartariae, Cillan Borussiae, Monspelii arenosis."

Range: British Columbia and Saskatchewan, south to Arizona and Texas.

Specimens examined: junction of Crab and Wilson creeks, Sandberg & Leiberg 300; west Klickitat County, Saksdorf 1385; Wawawai, Piper 1770; Rattlesnake Mountains, Cotton 885; Sunnyside, Cotton 754.

Zonal distribution: Upper Sonoran.

EUROTIA.

 Eurotia lanata (Pursh) Moq. Cherop, Mon. Emim. 81, 1840.
 Winter fat. Diotis lanata Pursh, Fl. 2: 602, 1814.

Type locality: "On the banks of the Missouri in open prairies." Collected by Lewis. Range: Washington to Saskatchewan, south to California and New Mexico.

Specimens examined: Egbert Springs, Sandberg & Leiberg 347; Sunnyside, Piper 2846; Rattlesnake Mountains, Dunn, September 40, 1902; Sunnyside, Cotton 752.

ZONAL DISTRIBUTION: Upper Sonoran.

GRAYIA.

Grayia spinosa (Hook.) Moq. in DC, Prod. 13²: 119, 1849.
 Chenopodium? spinosum Hook. Fl. Bor. Am. 2: 127, 1838

Grayia polygaloides Hook, & Arn. Bot. Beech. Voy. 388, 1841.

Eremosemium spinosum Greene, Pittonia 4: 225, 1901.

Type locality: "Interior of North California. Douglas, 1826."

RANGE: Washington to Wyoming, Utah, and California.

Specimens examined: Coulee City, Piper 3896; Crab and Wilson creeks, Sandberg & Leiberg 226; North Yakima, Flett 1028; Mrs. Steinweg in 1894; Leckenby, May 9, 1898; Pasco, Piper 2974; Hindshaw 40; Morgans Ferry, Suksdorf 447; Snipes Mountains, Cotton 389; Prosser, Griffiths & Cotton 16.

ZONAL DISTRIBUTION: Upper Sonoran.

ATRIPLEX.

Leaves densely scuriy and silvery 4. .1. argentea.

Leaves fleshy and mealy, not silvery.

Flowers in axillary clusters; leaves linear.................. 3. A. zosteracjolia.

Flowers in terminal panicles.

Leaves ovate-triangular, usually dentate 1. A. hastata.

Leaves lanceolate, mostly entire 2. A. patula.

1. Atriplex hastata L. Sp. Pl. 2: 1053, 1753.

Type locality: "Habitat in Europa frigidiori."

29418-06 м---16

Range: Washington to California, Nebraska, and Manitoba. Atlantic seacoast. Europe. Specimens examined: Prosser, Cotton 889.

Evidently introduced, and said to be spreading rapidly.

2. Atriplex patula littoralis Gray, Man. ed. 5, 409, 1867.

Atriplex littoralis L. Sp. Pl. 2: 1054, 1753.

Type locality: "Habitat in Europae septentrionalis littoribus maris."

Range: Seacoasts of North America, Europe, and Asia. Great Lakes.

Specimens examined: Port Angeles, *Piper*, September, 1895; Shoalwater Bay, *Henderson*, August, 1885; Seattle, *Piper* in 1887.

ZONAL DISTRIBUTION: Humid Transition.

3. Atriplex zosteraefolia (Hook.) S. Wats. Proc. Am. Acad. 9: 109, 1874.

Chenopodium? zosteraefolium Hook. Fl. Bor. Am. 2: 127, 1838.

Type locality: "N. W. C. of America. Menzies. Columbia and Straits of De Fuca." Dr. Scouler.

Specimens examined: Straits of De Fuca [Wash.?], Scouler.

This peculiar species is known only from the type collections. Its rediscovery would be of much interest.

4. Atriplex argentea Nutt. Gen. 1: 198. 1818.

Type locality: "On sterile and saline plains near the Missouri." Collected by Nuttall. Range: Washington to Minnesota, southward to Colorado and Utah.

Specimens examined: Alma, Elmer 31; Ellensburg, Piper, July 9, 1897; Yakima City, Piper 2753; Egbert Springs, Sandberg & Leiberg 372; Waitsburg, Horner 419.

Zonal distribution: Upper Sonoran.

5. Atriplex nuttallii S. Wats. Proc. Am. Acad. 9: 116, 1874.

Atriplex canescens Nutt. Gen. 1: 197. 1818, not Atriplex canescens (Pursh, 1814) James.

Type locality: "On the denudated saline hills of the Missouri, commencing about 15 miles below the confluence of White River, and continuing to the mountains."

Range: Washington and Alberta to Nevada and Colorado.

Specimens examined: Egbert Springs, Sandberg & Leiberg 349.

Zonal distribution: Upper Sonoran.

CHENOPODIUM. GOOSEFOOT.

Pericarp firmly attached to the seed; leaves dentate.

Herbage glandular-pubescent 3. C. botrys

Herbage not glandular.

 Leaves mealy beneath
 1. C. album.

 Leaves glabrous
 2. C. hybridum.

Lamb's quarters.

1. Chenopodium album L. Sp. Pl. 1: 219. 1753.

Type locality: European.

Specimens examined: Skamania County, Suksdorf 2055; Wilson Creek, Lake & Hull, August 6, 1892; Sandberg & Leiberg 257; Pullman, Piper, July 29, 1894; Hardwick, July 31, 1895.

1a. Chenopodium album viride (L.) Moq. in DC. Prod. 132: 71. 1849.

Chenopodium viride L. Sp. Pl. 1:219, 1753.

Type locality: European.

Specimens examined: Klickitat County, Suksdorf 1391, 669; Wawawai, Piper 3584.

2. Chenopodium hybridum L. Sp. Pl. 1:219, 1753.

Type locality: European.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1858-59; Wenache, Whitel 65; Yakima, Piper 1798; Rock Lake, Lake & Hull, August 3, 1892; Loomis, Elmer 590; Waitsburg, Horner 418; Pend Oreille River, Lyall in 1861; Clarks Springs, Kreager 567.

3. Chenopodium botrys L. Sp. Pl. 1: 219, 1753.

Type locality: "Habitat in Europae australis arenosis."

Specimens examined: Almota, Piper 1824; without locality Vascy in 1889; Belleview, Kreager 496.

Chenopodium leptophyllum (Moq.) Nutt.; S. Wats. Proc. Am. Acad. 9: 94, 1873. Chenopodium album leptophyllum Moq. in DC. Prod. 13²: 71, 1849.

Type locality: "In Nova California (Nuttall); Laplatte, Gordon."

Range: Washington to Saskatchewan, southward to Arizona and Missouri.

Specimens examined: Columbia River above Chelan River, Watson 338; Great Northern Tunnel, east side, Piper, July, 1895; Moses Lake, Sandberg & Leiberg 377; Crab and Wilson creeks, Sandberg & Leiberg 316; Ellensburg, Piper, July 9, 1897; Pasco, Piper 2963; Waitsburg, Horner 1089.

Zonal distribution: Upper Sonoran.

5. Chenopodium rubrum L. Sp. Pl. 1: 218, 1753.

Type locality: European.

Range: British Columbia to Newfoundland, south to Oregon, Nebraska, and New Jersey. Europe. Asia.

Specimens examined: Cascade Mountains near Columbia River, Suksdorf 670: Bingen, Suksdorf 2325; Wawawai, Piper in 1901; Meyers Falls, Kreager 512.

Zonal distribution: Upper Sonoran?

5a. Chenopodium rubrum humile (Hook.) S. Wats. Bot. Cal. 2: 48, 1880.

Chenopodium humilė Hook. Fl. Bor. Am. 2: 127, 1838.

Type locality: "Marshes of the Saskatchewan."

Range: British Columbia to Manitoba, south to California and Colorado.

Specimens examined: Port Townsend, Edwards in 1896; Seattle, Piper 2857; Shoalwater Bay, Henderson 694.

Zonal distribution: Humid Transition.

BLITUM.

Blitum capitatum L. Sp. Pl. 1: 4, 1753.

BLITE.

Type locality: "Habitat in Europa: praesertim in comit. Tyrolensi."

Range: Yukon to California, the Great Lakes, and New Mexico.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Spokane, Piper, June 25, 1897; Pullman, Hull 682; Piper, July 25, 1900.

Zonal distribution: Arid Transition.

MONOLEPIS.

Monolepis pusilla Torr.; S. Wats. Bot. King Explor. 289, 1871.

Type locality: "Near Carson City, and rather frequent in the alkaline valleys of Western Nevada."

Range: Eastern Washington to Nevada.

Specimens examined: Coulee City, Piper 3886; Crab and Wilson creeks, Sandberg & Leiberg 241; Morgans Ferry, Suksdorf 446.

Zonal distribution: Upper Sonoran.

2. Monolepis nuttalliana (Roem. & Schult.) Greene, Fl. Fran. 168, 1891.

Blitum chenopodioides Nutt. Gen. 1: 4, 1818, not Lam.

Blitum nuttallianum Roem. & Schult. Mant. 1:65, 1822.

Monolepis chenopodioides Moq. in DC. Prod. 132: 85, 1849

Type locality: "On arid soils near the banks of the Missouri."

Range: Washington to Saskatchewan, southward to California and New Mexico.

Specimens examined: Ellensburg, Piper, May 20, 1897; Ritzville, Sandberg & Leiberg 165; Pullman, Piper 1844; Waitsburg, Horner 186.

Zonal distribution: Upper Sonoran and Arid Transition.

AMARANTHACEAE. AMARANTH FAMILY.

AMARANTHUS.

Flowers in dense terminal spikes.

Spikes green, stout, 8 to 14 mm. thick. 1. A. retroflexus.
Spikes purple, slender, 4 to 6 mm. thick. 2. A. paniculatus.

Flowers in small axillary clusters.

Plants prostrate; sepals 4 or 5. 3. A. blitoides.
Plants erect, much branched; sepals 3. 4. A. graceizons.

1. Amaranthus retroflexus L. Sp. Pl. 2: 991, 1753.

Pigweed.

Type locality: "Habitat in Pennsylvania."

RANGE: Temperate and subtropical North America, mainly spread as a weed.

Specimens examined: Pullman, Piper 1554.

2. Amaranthus paniculatus L. Sp. Pl. ed. 2. 2: 1406, 1763.

Type locality: "Habitat in America."

Range: Naturalized in the United States from subtropical regions.

Specimens examined: Clarks Springs, Kreager 569. According to Hooker collected in 1825 by Scouler on the Columbia.

3. Amaranthus blitoides S. Wats. Proc. Am. Acad. 12: 273, 1877.

Type locality: "Frequent in the valleys and plains of the interior, from Mexico to N. Nevada and Iowa, and becoming introduced in some of the Northern States eastward."

Range: Washington to Nevada, Colorado, and Mexico. Now spreading eastward.

Specimens examined: Pullman, Piper 1552; Spokane, Kreager 581.

ZONAL DISTRIBUTION: Arid Transition.

4. Amaranthus graecizans L. Sp. Pl. 2: 990, 1753.

Tumbleweed.

Amaranthus albus L. Syst. ed. 10, 1268, 1760.

Type locality: "Habitat in Virginia."

RANGE: Spread as a weed throughout temperate and subtropical North America.

Specimens examined: West Klickitat County, Suksdorf 2079; Pasco, Henderson in 1892; Pullman, Piper 1553; Wawawai, Piper, July 31, 1893.

NYCTAGINACEAE. FOUR-O'CLOCK FAMILY.

ABRONIA.

Plants of the seashore.

1. Abronia umbellata Lam. Ill. 1:469. pl. 105, 1791.

Type locality: "Ex Californiae maritimis."

Range: Seacoast, Washington to California.

Specimens examined: Port Angeles, Piper 2301; Clallam County, Elmér 2790; Point-no-point, Piper in 1890.

ZONAL DISTRIBUTION: Humid Transition.

2. Abronia latifolia Esch. Mem. Acad. St. Petersb. 10: 281, 1826.

Abronia arenaria Menzies; Hook. Exot. Fl. 3: pl. 193, 1827.

Type locality: "In arenosis maritimis Novae Californiae."

Range: Seashores, Vancouver Island to California.

Specimens examined: Shoalwater Bay, Cooper; Claffam County, Elmer 2791; Port Angeles, Piper 2303; Port Townsend, Henderson, June 25, 1892; Westport, Heller 3943; Lamb 1096; Whidby Island, Gardner 253.

ZONAL DISTRIBUTION: Humid Transition.

3. Abronia mellifera Dougl.; Hook. Bot. Mag. 56: pl. 2879, 1829.

Abronia suksdorfii Coult. & Fisher, Bot. Gaz. 17: 348, 1892.

Type locality: "Near the Great [Celilo] Falls of the Columbia." Collected by Douglas, Range: Eastern Washington and eastern Oregon.

Specimens examined: Rock Island, Sandberg & Leiberg 464; Morgans Ferry Suksdorf 429; Columbus, Suksdorf, June 11, 1886; Sand hills of Columbia, Nuttall; Walla Walla, Lyall, June, 1860; Douglas in 1826; Priest Rapids, Douglas in 1826; Prosser, Henderson 2439; Pasco, Piper 2989; Elmer 1055; Hindshaw 16; Kiona, Piper 1807, 2646; Cotton 724.

ZONAL DISTRIBUTION: Arid Transition.

Abronia fragrams Nutt. is listed by Suksdorf, but the plant probably does not occur in our limits.

AIZOACEAE.

MOLLUGO.

Mollugo verticillata L. Sp. Pl. 1: 89, 1753.
 Type Locality: "Habitat in Africa, Virginia."

CARPET WEED.

Range: Washington to New Brunswick and southward to Mexico and South America. Specimens examined: West Klickitat County, Suksdorf 1675; North Yakima, Henderson, October, 1892; Parker, Elmer 1077; Wawawai, Piper, August, 1894; Almota, Piper 1878, August, 1894; without locality, Vasey in 1889; Prosser, Cotton 632; Toppenish, Cotton 795. Zonal distribution: Upper Sonoran.

PORTULACACEAE. PURSLANE FAMILY.

Ovary half inferior; sepals partly united	Portulaca (p. 245).	
Ovary superior.	•	
Capsule circumscissile	Lewisia (p. 246).	
Capsule not circumscissile.		
Style branches 2; capsule 2-valved, sepals scarious	Spraguea (p. 251).	
Style branches 3; capsule 3-valved.		
Sepals deciduous.	Талич (р. 247).	
Sepals persistent.		
Petals 3 to 7; stamens 3 to 12; leaves fleshy, alter-		
nate	Calandrinia (p. 247).	
Petals 5.		
Corolla zygomorphic; styles short, cleft nearly		
to the base	Мохты (р. 247).	
Corollaregular; styleselongated, united nearly		
to the top	Сьаттохы (р. 248).	
PORTULACA.		

1. Portulaca oleracea L. Sp. Pl. 1: 445, 1753.

Purslane.

Туре locality: "Habitat in Europa australi, India, Ins. Ascensionis, America."

Specimens examined: White Salmon, Suksdorf, November, 1879; Almota, Piper, September, 1896; Wawawai, Piper, August, 1894; Meyers Falls, Kreager 517.

LEWISIA.

Sepals 4 to 8; scape jointed and with an involucre of 5 to 7 bracts. 1. L. rediviva. Sepals 2; scape 2-bracteolate.

Root elongate.

Seeds granulate, conspicuously strophiolate. 2. L. tweedyi. Seeds smooth, not at all strophiolate.

Plants 2 to 8 cm. high; flowers 1 to 3.

Sepals entire; petals white 3. L. nevadensis. Sepals crose; petals red 4. L. pygmaca.

1. Lewisia rediviva Pursh, Fl. 2: 368, 1814.

Rock rose. Bitterroot.

Type locality: "On the banks of Clark's River." Collected by Lewis. The exact place is the mouth of the Lou Lou fork of the Bitterroot River, Montana.

Range: British Columbia to Wyoming, Arizona, and California.

Specimens examined: Atanum River, Flett 1293; Wenache, Whited 1089; North Yakima Henderson, May, 1892; Rock Creek, Sandberg & Leiberg 127; Major Creek, Suksdorf 258; Sprague, Henderson, May, 1892; Spokane County, Mrs. Tucker in 1892; Spokane, Piper, July, 1896; without locality, Vasey in 1889; Ellensburg, Piper in 1897.

Zonal distribution: Arid Transition.

2. Lewisia tweedyi (A. Gray) Robinson in Gray, Syn. Fl. 1: 268, 1895.

Calandrinia tweedyi A. Gray, Proc. Am. Acad. 22: 277, 1887.

Type locality: "Wenatchee Mountains, Washington Territory." Collected by Tweedy and by Brandegee.

Range: Wenache Mountains, Washington.

Specimens examined; Mount Stuart, Tweedy 898; Brandegee; Sandberg & Leiberg 346; Wenache Mountains, Whited 1242.

Zonal distribution: Canadian?

3. Lewisia nevadensis (A. Gray) Robinson in Gray, Syn. Fl. 1: 268, 1895.

Calandrinia nevadensis A. Gray, Proc. Am. Acad. 8: 623. 1873.

Type locality: "Subalpine region of Wahsatch and East Humboldt Mountains [Nevada] and Sierra Nevada, California, at Summit and Cisco."

Range: Washington to California and Utali.

Specimens examined: Klickitat River, Flett 1275; Simcoe Hills, Howell 292; Wenache Mountains, Elmer 472; Blue Mountains, Piper 2391; Wenache Mountains, Cotton 1235.

Zonal distribution: Hudsonian.

4. Lewisia pygmaea (A. Gray) Robinson in Gray, Syn. Fl. 1: 268, 1895.

Talinum pygmaea A. Gray, Am. Journ. Sci. 11. 33: 407, 1862.

Oreobroma pygmaca Howell, Erythea 1: 33, 1893.

Type locality; Rocky Mountains.

RANGE: Washington and Oregon to Montana and Colorado.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1860; Paradise Valley, Flett 284; Mount Adams, Suksdorf 336.

5. Lewisia columbiana (Howell) Robinson in Gray, Syn. Fl. 1: 269, 1895.

Calandrinia columbiana Howell; Gray, Proc. Am. Acad. 22: 277. 1887.

Type locality: "Mountains of Oregon and Washington Territory (coll. by Lyall as far north as lat. 49°)."

RANGE: British Columbia to Oregon in the Cascades and Olympics.

Specimens examined: Olympic Mountains, Piper 2222; Cascade Mountains, latitude 49°, Lyall in 1860; Goat Mountain, Allen 205; Olympic Mountains, Flett 128; Llmer 2690; Mount Stuart, Elmer 1206; Sandberg & Leiberg 547; Brandegee 683; Head of Twisp River,

Whited, July, 1896; Mount Henderson, Henderson 2044; Lacentre, Mrs. Fanny Briggs in 1887.

ZONAL DISTRIBUTION: Hudsonian.

The Lyall specimen was referred to Calandrinia leana Porter in the Botany of California, a but that species does not reach our limits.

6. Lewisia triphylla (S. Wats.) Robinson in Gray, Syn. Fl. 1: 269, 1895.

Claytonia triphylla S. Wats. Proc. Am. Acad. 10: 345, 1875.

Type locality: "Above Cisco, California;" in Yosemite Valley . . . and . . . in Sierra County.

Range: Washington and Idaho to California.

Specimens examined: Mount Adams, Suksdorf, August, 1880; Henderson, August, 1892; Goat Mountain, Allen 154; Klickitat River, Flett 1274; Simcoe Mountains, Howell, June, 1879, 290; Wenache Mountains, Elmer 464; Blue Mountains, Piper 2431.

Zonal distribution: Hudsonian.

TALINUM.

1. Talinum spinescens Torr. Bot. Wilkes Exped. 250, 1873.

Type locality: "Bare rocks between Fort Okanogan and Grand Coulie, on the Upper Columbia River."

Range: Central Washington.

Specimens examined: North Yakima, Henderson, May, 1892; Steinweg in 1894; Yakima, Nevius, April, 1890; Johnson Canyon, Brandegee in 1883; Great Plains, Dr. T. E. Wilcox in 1883; Coal and Crab creeks, Sandberg & Leiberg 227; Wilson Creek, Lake & Hull, August, 1892; between Coulee City and Waterville, Spillman, May, 1896; Coulee City, Lake & Hull, August, 1892; Piper 3871; near Cottonwood, Suksdorf 257.

Zonal distribution: Arid Transition.

CALANDRINIA.

1. Calandrinia caulescens H. B. K. Nov. Gen. & Sp. 6: 78. pl. 526, 1823.

Type locality: "Crescit in Regno Quitensi, prope Chillo, villam contiguam planitiei Cachapambensi, alt. 1340 hex.; item prope urbem Mexici, alt. 1168 hex."

RANGE: Washington to Mexico. South America.

Specimens examined; Coupeville, Gardner 36; Oreas Island, Lyall in 1858; west Klickitat County, Suksdorf 955, 251; Seattle, Smith in 1889.

ZONAL DISTRIBUTION: Humid Transition.

Calandrinia caulescens menziesii (Hook.) A. Gray, Proc. Am. Acad. 22: 277. 1887
 Talinum menziesii Hook. Fl. Bor. Am. 1: 223. 1833.

Type locality: "North-West coast of America, south of the Columbia," Menzics.

RANGE: British Columbia to California in the coast region.

Specimens examined: Without locality, Cooper.

MONTIA.

1. Montia fontana L. Sp. Pl. 1: 87, 1753.

Montia minor Gmel, Fl. Bad. 1: 301, 1805.

Type locality: European.

Range: Subarctic regions, south to Maine and California. Europe. Asia.

Specimens examined: Whidby Island, Gardner 50; Tacoma, Flett 891, 27; Wonache, Whited 1015; Ellensburg, Piper 2715; Rock Creek, Sandberg & Leiberg 89; Seattle, Piper. Zonal distribution: Transition.

Perennials with thick roots or corms.

CLAYTONIA

 C. lanceolata.
2. C. megarrhiza.
3. C. asarifolia.
4. C. sibirica.
5. C. arenicola.
6. C. perfoliata.
7. C. parvitlora.
7a. C. parvi flora de press
8. C. spathulata.
9. C. chamissoi.
10. C. parvifelia.
11. C. diffusa.
12. C. dichotoma.
10 (11)
13. C. linearis.
14 () 1 1111
14. C. howellii.
Edible -
Lewis, the exact place of
1

Specimens examined: Olympic Mountains, Piper 2228; Mount Rainier, Piper 2108; Cascade Mountains, latitude 49°, Lyall in 1860; Goat Mountain, Allen 87; Cleman Mountain, Henderson, June 14, 1892; Klickitat County, Suksdorf, June, 1878; Stevens Pass, Sandberg & Leiberg 752; Simcoe Mountains, Howell, June, 1879; Blue Mountains, Horner 63; Klickitat Hills, Gorman, April, 1895.

Zonal distribution: Hudsonian and Canadian.

*

Edible 2. Claytonia megarrhiza (A. Gray) Parry; Wats. Bibl. Index 118, 1878.

Clayionia arciica megarrhiza A. Gray, Am. Journ. Sci. II. 33: 406, 1862. Type locality: Rocky Mountains. Collected by Parry.

Range: Washington to Alberta, Oregon, and Colorado.

Specimens examined: Mount Stuart, Elmer 1224; Fish Lake, Dunn, August 4, 1900.

3. Claytonia asarifolia Bong, Mem. Acad. St. Petersb. VI. 2: 137, 1832. Claytonia cordifolia Wats. Proc. Am. Acad. 17: 365, 1882. Montia asarifolia Howell, Erythea 1: 39, 1893.

Type locality: Sitka, Alaska.

RANGE: Alaska to Idaho and California.

Specimens examined: Olympic Mountains, Piper 2219; Flett 88; Goat Mountain, Alben 153; Cascade Mountains, Mrs. Steinweg in 1895; Silverton, Bonek 36; Klickitat River, Flett 1277; Kittitas Mountain, Whited 1284; head of Atanum River, Henderson, August 24, 1892; Falcon Valley, Suksdorf 103; Nason Creek, Sandberg & Leiberg 603; Pend Oreille River, Lyall in 1861; Blue Mountains, Piper, July 15, 1896; without locality, Vasey in 1889.

Zonal distribution: Canadian.

4. Claytonia sibirica L. Sp. Pl. 1: 204, 1753.

Claytonia alsinoides Sims, Bot. Mag. 32: pl. 1309, 1810.

Montia washingtoniana Suksdorf, Deutsch. Bot. Monatss. 16: 220, 1898.

Montia sibirica Howell, Erythea 1: 39, 1893.

Type locality: "Habitat in Siberia."

RANGE: Alaska to California and Idaho.

Specimens examined: Montesano, Heller 3861; Admiralty Head, Piper, May, 1898; Seattle, Piper, July, 1895; King County, Suksdorf 957; Silverton, Bonck 35; Olympia, Kincaid, July, 1896; Mount Rainier, Flett 241; upper Nisqually Valley, Allen 151; Mount Baker, Flett 854; Skokomish River, Kincaid, May, 1892; west Klickitat County, Suksdorf 2245, 256; Horseshoe Basin, Lake & Hull 426; Spokane, Watson 60; Dewart in 1901; without locality, Cooper in 1854; Clarks Springs, Kreager 32; Tukanon River, Lake & Hull 425.

ZONAL DISTRIBUTION: Transition.

5. Claytonia arenicola Henderson, Bull. Torr. Club 22: 19, 1895.

Montia archicola Howell, Fl. N. W. Am. 96, 1897.

Type locality: Lewiston, Idaho. Collected by Henderson.

Range: Idaho and Eastern Washington.

Specimens examined: Spokane Valley, Lyall in 1861; Spokane, Piper 2290; Henderson 2430; Hangman Creek, Sandberg & Leiberg 15; Waitsburg, Horner 64; Wawawai, Elmer 124; Piper 2799, 3822; Clarkston, Hunter 6.

Zonal distribution: Upper Sonoran and Arid Transition.

6. Claytonia perfoliata Donn; Willd. Sp. Pl. 12: 1186, 1797.

Montia perfoliata Howell, Erythea 1: 38. 1893.

Type locality: "Habitat in America boreali."

RANGE: British Columbia and Idaho to California and Arizona.

Specimens examined: Seattle, Piper in 1885; without locality, Vascy 171; west Klickitat County, Suksdorf 529, 530, 1879; Blue Mountains, Horner 67.

ZONAL DISTRIBUTION: Humid Transition.

6a. Claytonia perfoliata amplectens Greene, Fl. Fran. 179, 1891.

Type locality: "Middle elevations of the Sierra," California.

Specimens examined: Seattle, Piper in 1888; without locality, Vascy in 1889.

This is merely a form in which the cauline leaves are nearly or quite separate.

7. Claytonia parviflora Dougl.; Hook. Fl. Bor. Am. 1: 225, 1833.

Montia parviflora rupestris Suksdorf, Deutsch. Bot. Monatss. 16: 221, 1898.

Montia parviflora hydrophila Suksdorf, loc. cit.

Montia parviflora silvatica Suksdorf, op. cit. 222.

Montia interrupta Suksdorf, loc. cit.

Montin parviflora Howell, Erythen 1: 38, 1893.

Type locality: "Abundant along the course of the Columbia, in open parts of the forest where wood has been burned, or the ground turned up by deer." *Douglas*.

RANGE: British Columbia to California, Idaho, and Utah.

Specimens examined: Tacoma, Flett 83; Olympia, Henderson, May 24, 1892; west Klickitat County, Suksdorf 531, 956, 2017, 2097, 2092; Sprague, Saudberg & Leiberg 204;

Pullman, Elmer 845; Hull, May, 1892; Tukanon River, Lake, July 1, 1892; Waitsburg, Horner 66; Skamania County, Suksdorf 2304, 2305; Tacoma, Flett 2157, 2197.

Zonal distribution: Transition.

7a. Claytonia parviflora depressa A. Gray, Proc. Am. Acad. 22: 281, 1887.

Montia latifolia Suksdorf, Deutsch. Bot. Monatss. 16: 222, 1898.

Montia arcnaria Suksdorf, loc. cit.

Montia humifusa Howell, Fl. N. W. Am. 96, 1897.

Montia rubra Howell, Erythea 1:38, 1893.

Montia parriflora depressa Robinson in Gray, Syn. Fl. 1: 274, 1895.

?Claytonia parviflora glauca Nutt.; Torr. & Gr. Fl. N. Am. 1:200, 1838.

Type locality: "On river banks, probably sand-washes, Brit. Columbia to Oregon and adjacent Idaho."

Range: British Columbia to Oregon and Idaho.

Specimens examined: San Juan Island, Lyall in 1858; Coupeville, Gardner 53; Admiralty Head, Piper, May, 1898; Taconia, Flett 2259, 85; Ellensburg, Piper, May 20, 1897; Douglas County, Spillman; west Klickitat County, Suksdorf 532, 1880, 1881, 2009, 2010, 2199; Waitsburg, Horner 65; Blue Mountains, Horner 68.

Zonal distribution: Transition.

8. Claytonia spathulata Dougl.; Hook. Fl. Bor. Am. 1: 226, 1833.

Montia spathulata Howell, Erythea 1:38, 1893.

Montia spathulata disciformis Suksdorf, Deutsch. Bot. Monatss. 16: 222, 1898.

Type locality: "North-West coast of America" Menzies. "In the vallies of the Rocky Mountains" Douglas.

Range: British Columbia to California.

Specimens examined: Laidlaw, Lamb 1116; Tacoma, Flett 86, 4, 880; Klickitat County, Howell, June, 1879; Major Creek, Suksdorf 2095.

8a. Claytonia spathulata exigua (Torr. & Gr.)

Claytonia exigua Torr. & Gr. Fl. 1: 200, 1838.

Montia spathulata exigua Robinson in Gray, Syn. Fl. 1: 275, 1895.

Type locality: California. Collected by Douglas.

Range: British Columbia to California, in the coast region.

Specimens examined: Coupeville, Gardner 54; Bingen, Suksdorf 2094; White Salmon, Suksdorf 255.

9. Claytonia chamissoi Ledeb.; Spreng. Syst. 1: 790, 1825.

Claytonia chamissonis Esch. Linnaea 6: 562, 1831.

Montia chamissonis Greene, Fl. Fran. 180, 1891.

Type locality: "Unalaschka."

RANGE: Alaska to California and Colorado. Minnesota.

Specimens examined: Roy, Allen, May 17, 1889; Falcon Valley, Suksdorf 958; Upper Wenas River, Henderson, June, 1892; Klickitat River, Flett 1288; Spokane County, Sandberg & Leiberg 88; Pullman, Elmer 818; Piper 1712; without locality, Cooper.

Zonal distribution: Transition.

Claytonia parvifolia Moc.; DC. Prod. 3: 361, 1828.

Claytonia filicaulis Hook, Fl. Bor. Am. 1: 224. pl. 72. 1834.

Montia parvifolia Greene, Fl. Fran 181, 1891.

Type locality: Nootka Sound, Vancouver Island.

RANGE: Alaska to California and Montana.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Tacoma, Flett 213; Skokomish River, Henderson, May, 1892; Silverton, Bonek 37; Mount Rainier, Flett 1405; Piper, August, 1895; upper Nisqually Valley, Allen 152, 152a; west Klickitat County Suksdorf 1878; Klickitat River, Flett 1290; Yakima County, Brandegee 686; Peshastin,

Sandberg & Leiberg 585; Horseshoe Basin, Lake & Hull, August, 1892; Bridge Creek, Elmer 713; without locality, Cooper.

Zonal distribution: Canadian and Transition.

11. Claytonia diffusa Nutt.; Torr. & Gr. Fl. 1: 202. 1838.

Montia diffusa Greene, Fl. Fran. 181, 1891.

Type locality: "In pine woods, a few miles above Fort Vancouver." Collected by Nuttall.

Range: Washington to California in the coast region.

Specimens examined: Gig Harbor, Flett 5; Larm River, Suksdorf 104; Seattle, Piper in 1885

Zonal distribution: Humid Transition.

12. Claytonia dichotoma Nutt.; Torr. & Gr. Fl. 1: 202, 1838.

Montia dichotoma Howell, Erythea 1: 36. 1893.

Type locality: "In wet places on rocks, near the junction of the Waldamet with the Oregon." Collected by Nuttall.

Range: Washington, Idaho, and Oregon.

Specimens examined: Klickitat Hills, Gorman, April, 1895; Howell 89; White Salmon, Suksdorf, June, 1878; Spokane, Piper 2667, May 49, 1899; Pullman, Elmer 173; without locality, Geyer 648.

Zonal distribution: Arid Transition.

13. Claytonia linearis Dougl.; Hook. Fl. Bor. Am. 1: 224, pl. 71, 1834.

Montia linearis Greene, Fl. Fran. 181, 1891.

Type locality: "Moist rocky places; on the Great and Little Falls of the Columbia, abundant." *Douglas*.

RANGE: British Columbia to Montana and California.

Specimens examined: Whidby Island, Gardner 55; Tacoma, Flett 3; Klickitat River, Flett 1289; Hangman Creek, Sandberg & Leiberg 41; without locality, Donglas; without locality, Geyer 317; Pullman, Elmer 157; Piper 1713; Hull, May 24, 1892. Moore, May 16, 1893; Vancouver, Piper 4946; Seattle, Piper in 1889.

ZONAL DISTRIBUTION: Transition.

14. Claytonia howellii (S. Wats.).

Montia howellii S. Wats. Proc. Am. Acad. 18:191. 1883.

Type locality: "On Sauvies Island, in the Willamette River, Oregon." Collected by Howell.

Range: British Columbia to Oregon in the coast region.

Specimens examined: Seattle, Piper 241. Zonal distribution: Humid Transition.

SPRAGUEA.

1. Spraguea multiceps Howell, Erythea 1: 39, 1893.

Spraguea umbellata candicifera A. Gray, Syn. Fl. 1: 278, 1895.

Type locality: Mount Hood, Oregon.

Range: Washington and Oregon to Wyoming.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1860; Mount Raimer, Piper 2091, 37; Allen 101; Mount Adams, Suksdorf, September, 1877; Flett 1052; Nason Creek, Sandberg & Leiberg 659; without locality, Cooper.

Zonal distribution: Arctic.

SILENACEAE. PINK FAMILY.

Sepals united; petals long-clawed.	
Calyx 10 to many-nerved.	9.50
Styles 3, rarely 4 or 5; capsule with 3 or 6 teeth	Silene (p. 252).
Styles always 5; capsule with 5 or 10 teeth.	
Calyx with tooth-like lobes	
Calyx with the lobes foliaceous	Agrosteмма (р. 256).
Calyx 5-nerved; styles 2.	
Calyx cylindric, not angled.	Saponaria (p. 256).
Calyx ovate, angled	Vaccaria (p. 256).
Sepals free to the base or nearly so.	•
Stipules wanting.	
Petals 2-cleft or 2-parted, rarely none.	
Capsule cylindric, usually curved	Cerastium (d. 256).
Capsule ovate or oblong, not curved.	ALSINE (p. 257).
Petals entire or notched, rarely none.	111111111111111111111111111111111111111
Styles as many as the sepals and alternate with them.	Suciv. (p. 250)
Styles fewer than the sepals or opposite them.	олигал (р. 200).
	1
Disk of the receptacle conspicuous, 8 to 10-lobed. Disk wanting.	Аммонема (р. 200).
Seeds each with a strophiole	Morney (p. 260)
Seeds without strophioles.	Apexagia (p. 260)
Stipules present, scarious.	11112.Valua (p. 200).
Fruit a one-seeded utricle; sepals spine-tipped	Pertuguera (n. 964)
Fruit a capsule; sepals not spine-tipped.	1 ESTACAESA (p. 204).
Styles and valves of the capsule 5	Spencer (p. 263)
Styles and valves of the capsule 3.	Trees (p. 962)
Styles and varies of the capsule S	11884 (p. 200).
SILENE. CATCHELY.	
Calyx with 15 nerves or more.	1 S. multinomia
Nerves 18 to 23, prominent	1. S. multinervia.
Nerves 18 to 23, prominent Nerves 15 to 20, obscure.	
Nerves 18 to 23, prominent Nerves 15 to 20, obscure. Calyx with 10 nerves.	 S. multinervia. S. vulgaris.
Nerves 18 to 23, prominent Nerves 15 to 20, obscure. Calyx with 10 nerves. Plants annual or biennial.	2. S. vulgaris.
Nerves 18 to 23, prominent Nerves 15 to 20, obscure. Calyx with 10 nerves. Plants annual or biennial. Inflorescence a simple raceme.	2. S. vulgaris.
Nerves 18 to 23, prominent Nerves 15 to 20, obscure. Calyx with 10 nerves. Plants annual or biennial. Inflorescence a simple raceme. Inflorescence a cyme or a panicle.	 S. vulgaris. S. anglica.
Nerves 18 to 23, prominent Nerves 15 to 20, obscure. Calyx with 10 nerves. Plants annual or biennial. Inflorescence a simple raceme. Inflorescence a cyme or a panicle. Plant sticky hairy.	 S. vulgaris. S. anglica. S. noctiflora.
Nerves 18 to 23, prominent Nerves 15 to 20, obscure. Calyx with 10 nerves. Plants annual or biennial. Inflorescence a simple raceme. Inflorescence a cyme or a panicle. Plant sticky hairy. Plant glabrous, except that the middle portion of each	 S. vulgaris. S. anglica. S. noctyflora.
Nerves 18 to 23, prominent Nerves 15 to 20, obscure. Calyx with 10 nerves. Plants annual or bieunial. Inflorescence a simple raceme. Inflorescence a cyme or a panicle. Plant sticky hairy. Plant glabrous, except that the middle portion of each of the upper internodes is glutinous.	 S. vulgaris. S. anglica. S. noctyflora.
Nerves 18 to 23, prominent Nerves 15 to 20, obscure. Calyx with 10 nerves. Plants annual or biennial. Inflorescence a simple raceme. Inflorescence a cyme or a panicle. Plant sticky hairy. Plant glabrous, except that the middle portion of each of the upper internodes is glutinous. Plants perennial.	 S. vulgaris. S. anglica. S. noctiflora. S. antirrhina.
Nerves 18 to 23, prominent Nerves 15 to 20, obscure. Calyx with 10 nerves. Plants annual or biennial. Inflorescence a simple raceme. Inflorescence a cyme or a panicle. Plant sticky hairy. Plant glabrous, except that the middle portion of each of the upper internodes is glutinous. Plants perennial. Acaulescent and densely matted.	 S. vulgaris. S. anglica. S. noctiflora. S. antirrhina.
Nerves 18 to 23, prominent Nerves 15 to 20, obscure. Calyx with 10 nerves. Plants annual or bieunial. Inflorescence a simple raceme. Inflorescence a cyme or a panicle. Plant sticky hairy Plant glabrous, except that the middle portion of each of the upper internodes is glutinous. Plants perennial. Acaulescent and densely matted. Caulescent.	 S. vulgaris. S. anglica. S. noctiflora. S. antirrhina. S. acanlis.
Nerves 18 to 23, prominent Nerves 15 to 20, obscure. Calyx with 10 nerves. Plants annual or bieunial. Inflorescence a simple raceme. Inflorescence a cyme or a panicle. Plant sticky hairy Plant glabrous, except that the middle portion of each of the upper internodes is glutinous. Plants perennial. Acaulescent and densely matted. Caulescent. Flowers solitary in the forks of leafy branches	 S. vulgaris. S. anglica. S. noctiflora. S. antirrhina. S. acaulis. S. menziesii.
Nerves 18 to 23, prominent Nerves 15 to 20, obscure. Calyx with 10 nerves. Plants annual or bieunial. Inflorescence a simple raceme. Inflorescence a cyme or a panicle. Plant sticky hairy. Plant glabrous, except that the middle portion of each of the upper internodes is glutinous. Plants perennial. Acaulescent and densely matted. Caulescent. Flowers solitary in the forks of leafy branches. Flowers in terminal panicles, or occasionally solitary.	 S. vulgaris. S. anglica. S. noctiflora. S. antirrhina. S. acaulis. S. menziesii.
Nerves 18 to 23, prominent Nerves 15 to 20, obscure. Calyx with 10 nerves. Plants annual or bieunial. Inflorescence a simple raceme. Inflorescence a cyme or a panicle. Plant sticky hairy. Plant glabrous, except that the middle portion of each of the upper internodes is glutinous. Plants perennial. Acaulescent and densely matted. Canlescent. Flowers solitary in the forks of leafy branches. Flowers in terminal panicles, or occasionally solitary. Calyx cylindric, narrowed at base; ovary stipitate.	 S. vulgaris. S. anglica. S. noctiflora. Plant 5 to 10 cm. high; flowers 1 to 3. Plants taller; flowers often numerous.	 S. vulgaris. S. anglica. S. noctiflora. S. antirrhina. S. acaulis. S. menziesii. S. regana. S. spaldingii. S. scouleri. S. suksdorfii. S. douglasii.

1. Silene multinervia S. Wats. Proc. Am. Acad. 25: 126, 1890.

Type locality: "Near Jamuel," California.

Range: California.

Specimens examined: Whidby Island, Gardner 44, doubtless introduced from California.

2. Silene vulgaris (Moench.) Gareke, Fl. Deutschl. ed. 9, 64, 1869.

Behen vulgaris Moench, Meth. 709, 1794.

Silene cucubalus Wibel, Prim. Fl. Werth. 241, 1799.

Cucubalus behen L. Sp. Pl. 1: 414, 1753, not Silene behen L.

Type locality: European.

Specimens examined: Seattle. Piper 1817.

3. Silene anglica L. Sp. Pl. 1: 416, 1753.

Silene gallica L. Sp. Pl. 1: 417, 1753.

Type locality: "Habitat in Anglia, Gallia."

Specimens examined: Whatcom County, Suksdorf 1847; Seattle, Piper.

4. Silene noctiflora L. Sp. Pl. 1: 419, 1753.

Type locality: "Habitat in Succia, Germania."

Specimens examined: Whidby Island, Gardner 34; Silverton, Bouck 151 b; White Salmon, Suksdorf 525; Pullman, Piper 1854.

5. Silene antirrhina L. Sp. Pl. 1: 419, 1753.

Type locality: "Habitat in Virginia, Carolina."

Range: Temperate North America.

Specimens examined: Mason County, Kincaid, June, 1892; Clallam County, Elmer 2750; Tacoma, Flett, June, 1896; west Klickitat County, Suksdorf 1857; Stehekin, Whited 1404; Spokane, Henderson, June, 1892; Almota, Piper 1707; without locality, Vasey in 1889; Clarks Springs, Kreager 111; Seattle, Piper in 1888.

Zonal distribution: Upper Sonoran and Transition.

6. Silene acaulis L. Sp. Pl. ed. 2, 1: 603, 1762.

Type locality: "Habitat in alpibus Lapponicis, Austriacis, Helveticis, Pyrenaeis."

RANGE: Arctic regions, south to the White Mountains, and in the west to Washington and Arizona. Europe. Asia.

Specimens examined: Cascade Mountains, latitude 49°, Lyull in 1860; Mount Elinor, Miss Getty, August, 1902; Mount Rainier, Flett 31; Bridge Creek, Elmer in 1897.

ZONAL DISTRIBUTION: Arctic.

Silene menziesii Hook. Fl. Bor. Am. 1: 90. pl. 30, 1830.

Silene stellarioides Nutt.; Torr. & Gr. Fl. 1: 193, 1838.

Type locality: "North-West coast of America." Collected by Menzies.

Range: British Columbia and Assiniboia to California and Nebraska.

Specimens examined: Clallam County, Elmer 2751; Hope Island, Flett 2112; Whidby Island, Gardner 41; Admiralty Head, Piper, May, 1898; Thorp, Whited 634; Beaver Creek, Whited 231; Wenache, Whited 156; Falcon Valley, Suksdorf 1854; North Yakima, Henderson in 1892; Watt, August, 1895; Wilson Creek, Lake & Hull, August, 1892; Harrington, Sandberg & Leiberg 222; Spokane, Spalding: without locality, Vascy in 1889; "on the Okanogan," Douglas: Asotin Creek, Hunter, June, 1900; Clarks Springs, Kreager 48, 620, 260; Pullman, Piper, June, 1893; Blue Mountains, Horner, July 17, 1896.

Zonal distribution: Transition and Upper Sonoran.

Professor Greene has recently proposed the genus Anotites, based on this species which he regards as an aggregate of several. Of these A. viscosa Greenea is based on Horner's Blue Mountains collection and A. nodosa b on Whited's Wenache collection.

8. Silene oregana S. Wats, Proc. Am. Acad. 10: 343, 1875.

Type locality: "In the Blue Mountains, Oregon," Collected by Nevius.

Range: Oregon and Washington to Montana.

Specimens examined: Upper Naches River, Henderson 2567; Mount Stuart, Elmer 1237; White Salmon, Suksdorf in 1878; Simcoe Hills, Howell 311; Skamania County, Suksdorf 2038; Wenache Mountains, Whited 1297; Clarks Springs, Kreager 576; Blue Mountains, Piper 2393.

Zonal distribution: Canadian and Hudsonian.

9. Silene spaldingii S. Wats. Proc. Am. Acad. 10: 344, 1875.

Type locality: "On the Clear Water," Idaho. Collected by Spalding.

Range: Washington, Oregon, and Idaho.

Specimens examined: Cheney, Mrs. Tucker in 1900.

Zonal distribution: Arid Transition.

10. Silene scouleri Hook, Fl. Bor. Am. 1: 88, 1830.

Type locality: Fort Vancouver, Washington. Collected by Scouler.

RANGE: British Columbia to Oregon and Colorado.

Specimens examined: Chambers Prairie, Henderson, August 8, 1892; Yelm Prairie, Smith 621; Tacoma, Flett 875; Lake Park, Piper, July 27, 1896; near Mount Stuart, Brandegee 656; Tieton River, Cotton 491; Blue Mountains, Horner 571.

ZONAL DISTRIBUTION: Arid Transition.

11. Silene suksdorfii Robinson, Bot. Gaz. 16: 44, 1891.

Type locality: "Mt. Paddo (Adams), at 7,000 to 8,000 feet altitude." Collected by Suksdorf.

Range: Washington to California.

Specimens examined: Mount Rainier, Allen, 239; Piper 2135, 623; Mount Stuart, Elmer 1178; Brandegee 654; Mount Adams, Henderson, August, 1892; Suksdorf 47; Howell & Henderson, August, 1882; White River, Flett 304.

Zonal distribution: Arctic.

12. Silene douglasii Hook. Fl. Bor. Am. 1: 88, 1830.

Silene dilatata Suksdorf, Deutsch. Bot. Monatss. 16: 212, 1898.

Type locality: "Abundant in mountain valleys, above the Grand Rapids of the Columbia, and among the Rocky Mountains on their western declivity." Collected by Douglas.

RANGE: British Columbia to California and Montana.

Specimens examined: Olympic Mountains, Piper 2216; Elmer 2744, 2747; Wenache, Whitel 14; Mount Stuart, Sandberg & Leiberg 574; Goat Mountains, Allen 124a; west Klickitat County, Suksdorf 2156; Falcon Valley, Suksdorf 7; Blue Mountains, Lake & Hull, July 4, 1892; without locality, Vasey in 1889; Cape Horn, Piper 5016.

ZONAL DISTRIBUTION: Illudsonian to Transition.

12a. Silene douglasii monantha (S. Wats.) Robinson, Proc. Am. Acad. 28: 145. 1893. Silene monantha S. Wats. Proc. Am. Acad. 10: 340. 1875.

Type locality: "On the débris at the base of Castle Rock, Cascades," Washington, Collected by Harford & Dunn.

Specimens examined: Castle Rock, Harford & Dunn.

This is probably only a starved shade plant, and not distinct. It is known only from the type specimen.

12b. Silene douglasii brachycalyx Robinson, Proc. Am. Acad. 28: 145, 1893.

Silene columbiana Howell, Fl. N. W. Am. 78, 1897.

Type locality: Multnomah County, Oregon.

Range: Washington and Oregon.

Specimens examined: Cape Horn, Skamania County, Suksdorf 2436; Baldy Peak, Chehalis County, Lamb 1321.

Silene douglasii multicaulis (Nutt.) Robinson, Proc. Am. Acad. 28: 144, 1893.
 Silene multicaulis Nutt.; Torr. & Gr. Fl. 1: 192, 1838.

Type locality: "Woods from the west side of the Rocky Mountains to the Pacific," Collected by Nuttall.

Range: British Columbia to Oregon and Montana.

Specimens examined: Wenache, Whited 141, 1146; Ellensburg, Elmer 415; Spokane, Henderson, July, 1892; Ramm, July, 1883; Spokane County, Suksdorf 250; Kreager 97; Blue Mountains, Piper 2402; without locality, Vascy in 4889; Yakinea region, Brandegee 655 (doubtfully referred here, the plant being viscid throughout); Rattlesnake Mountains, Cotton 676.

Zonal distribution: Arid Transition.

13. Silene macounii S. Wats. Proc. Am. Acad. 26: 124, 1891.

? Silene Iyallii S. Wats. Proc. Am. Acad. 10: 342, 1875.

Silene douglasii macounii Robinson, Proc. Am. Acad. 28: 144, 1893.

Silene douglasii macrocalyx Robinson, op. cit. 145, in part.

Silene douglasii viscida, Robinson, loc. cit.

Silene tetragyna Suksdorf, Deutsch. Bot. Monatss. 16: 212, 1898.

Type locality: "Summit of the Rocky Mountains, British Columbia." Collected by Macoun.

Range: British Columbia to Oregon.

Specimens examined: Olympic Mountains, Piper 2237, 917; Loomis, Elmer 579; Skagit Pass, Lake & Hull 489; Peshastin, Sandberg & Leiberg 529; Mount Stuart, Elmer 1178; Sandberg & Leiberg 817; Cascade Mountains, latitude 49°, Lyall in 1860; Mount Adams, Suksdorf 2434, 2435; Mount Rainier, Piper 622, 2119, 2109; Smith 936; Skamania County, Suksdorf, 1851; without locality, Vascy in 1889.

ZONAL DISTRIBUTION: Aretic.

Piper no. 622 is referred by Doctor Robinson^a to Silene watsonii, but this seems to me an error. Better material collected later in the same place is certainly S. macounii. Smith's 936, once referred doubtfully b to S. grayii, is the same thing.

SILENE ARMERIA L. is occasionally encountered as a garden escape. Silene hookeri Nutt., included in Sukdorf's list, probably does not occur north of the Columbia River.

LYCHNIS.

1. Lychnis coronaria Desr. in Lam. Encycl. 3: 643. 1789.

Type locality: European,

Specimens examined: Mount Carlton, Kreager 144; Seattle, Piper in 1889.

A European species sometimes escaping from gardens and persisting.

2. Lychnis drummondii (Hook.) S. Wats. Bot. King Explor. 37, 432. 1872.

Silene drummondii Hook, Fl. Bor, Am. 1: 89, 1830.

Type locality: "Plains of the Saskatchewan." Collected by Richardson and by Drummond.

Hooker gives further: "Common on the clevated, gravelly soils, near Fort Vancouver, and skirting the Blue Mountains. *Douglas*." As this species has not been collected in Washington or Oregon since Douglas's time, it is almost certain that there is some error in connection with Hooker's note.

a Proc. Am. Acad. 28: 143. 1893; Gray, Syn. Fl. 1: 222. 1897.

b Proc. Am. Acad. loc. cit.

AGROSTEMMA.

1. Agrostemma githago L. Sp. Pl. 1: 435, 1753.

COCKLE.

Type locality: European.

Specimens examined: Ellensburg, Whited 693; Pullman, Piper, July, 1894.

SAPONARIA.

1. Saponaria officinalis L. Sp. Pl. 1: 408, 1753.

Type locality: European.

Specimens examined: Union Gap, Cotton 428.

VACCARIA.

 Vaccaria vaccaria (L.) Britton in Britt. & Br. III. Fl. 2: 18, 1897. Cow cockle. Saponaria vaccaria L. Sp. Pl. 1: 409, 1753.

Type locality: "Habitat inter segetes Galliae, Germaniae."

Specimens examined: Rock Island, Sandberg & Leiberg 464; Waitsburg, Horner 395; Wawawai, Lake & Hull 490; Pullman, Piper 1706; Meyers Falls, Kreager 498.

Very common and troublesome in grain fields.

CERASTIUM.

Petals not longer than the sepals.

Pedicels longer than the calyx. 1. C. vulgatum.
Pedicels not longer than the calyx. 2. C. viscosum.
Petals decidedly longer than the sepals.
Annual; viscid pubescent; pods nodding 3. C. nutans.

1. Cerastium vulgatum L. Sp. Pl. ed. 2, 1: 627, 1762.

Type locality: "Habitat in Scaniae & Europae australioris pratis, areis." Specimens examined: Spokane, Sandberg & Leiberg 40: Seattle, Piper.

2. Cerastium viscosum L. Sp. Pl. 1: 437, 1753.

Type locality: European.

Specimens examined: Whidby Island, Gardner 39; upper Nisqually Valley, Allen 112; Waitsburg, Horner 129; Seattle, Piper.

3. Cerastium nutans Raf. Prec. Decouv. 36, 1814.

Cerastium longe pedunculatum Muhl. Cat. 46, 1813, nom. nud.

Type locality: "En Pennsylvanie."

RANGE: British Columbia to Nova Scotia, south to New Mexico and North Carolina. Specimens examined: Wenache, Whited 47, 1016; Pend Oreille River, Lyall in 1861.

Cerastium arvense L. Sp. Pl. 1: 438, 1753.

Cerastium elongatum Pursh, Fl. 1: 321, 1814.

Type locality: "Habitat in Scania australiori Europa."

RANGE: North temperate zone in America, Asia, and Europe.

Specimens examined: Clallam County, Elmer 2749*; Otympic Mountains, Flett 87*, 808*; Humptulips, Lamb 1174; Goat Mountains, Allen 237*; Mount Adams, Flett 1060; Seattle, Smith, April, 1889; Cascade Mountains, latitude 49°, Lyall in 1859; Olympia, Henderson, March, 1892; Skokomish Valley, Kincaid, June, 1892; without locality, Vasey in 1889; Pullman, Moore, May, 1893; Elmer 177; Hull, May, 1892.

Zonal distribution: Transition to Arctic.

The specimens marked (*) are high alpine forms which approach C. alpinum behrringianum (Cham. & Schlecht.) Regel.—Flett's 808 was listed as C. alpinum L. by Wiegand.a

ALSINE. CINCKWEED.

· ·	
Lowest leaves petiolate.	
Stems pubescent with a line of hairs? leaves ovate	1. A. media.
Stems glabrons, except at base; leaves shiny, the upper linear-	
lanceolate	2. 1. nitens.
Leaves all sessile.	
Petals retuse or bifid at apex; leaves lanceolate; herbage gland-	
ular-pubescent	11. A. jamesiana.
Petals deeply 2-parted; herbage not glandular.	
Bracts of the inflorescence small, scarious.	
Pedicels spreading; cyme diffuse.	
Leaves linear, acute at each end; seeds smooth	3. A. longifolia.
Leaves lanceolate, broadest near the base; seeds	
rough	4. A. graminea.
Pedicels erect; cymes few-flowered	5. A. longipes.
Bracts of the inflorescence leafy.	
Leaves lanceolate; petals small or none	6. A. borealis.
Leaves ovate or ovate-lanceolate.	
Sepals obtuse, without scarious margins	7. A. obtusa.
Sepals acute, with scarious margins.	
Flowers cymose; leaves lance-ovate	8. A. calycantha.
Flowers solitary, axillary; leaves ovate.	
Herbage glabrous	9. A. crispa.
Herbage finely puberulent	10. A. washingtoniana.
1. Alsine media L. Sp. Pl. 1: 272, 4753.	Спіскwеер.

1.

Stellaria media Cirill, Char. Comm. 36, 1784.

Type locality: European.

Range: Europe and Asia. Introduced as a weed in North America.

Specimens examined: Almota, Piper, May, 1897. A common weed, nearly everywhere in the State.

2. Alsine nitens (Nutt.) Greene, Man. Bay Reg. 33, 1894.

Stellaria nitens Nutt.; Torr. & Gr. Fl. 1: 185, 1838.

Type locality: "Plains of the Oregon." Collected by Nuttall.

RANGE: British Columbia to California and Utah.

Specimens examined: Seattle, Smith 587; Tacoma, Flett 100, 23; Nisqually Valley, Allen 145; Hangman Creek, Sandberg & Leiberg 43; Pullman, Piper 1834; Elmer 108; Blue Mountains, Horner 111.

Zonal distribution: Upper Sonoran and Transition.

3. Alsine longifolia (Muhl.) Britton, Mem. Torr. Club 5: 150, 1894.

Stellaria longifolia Muhl.; Willd. Enum. 479. 1809.

Type locality: "Habitat in Pennsylvania."

Range: Alaska to Newfoundland, south to Washington and Kentucky.

Specimens examined: West Seattle, Piper 593; Marshall Junction, Piper 2270

4. Alsine graminea (L.) Britton, Mem. Torr. Club 5: 150, 1894.

Stellaria graminea L. Sp. Pl. 1: 422, 1753.

Type locality: European.

Specimens examined: Seattle, Piper 740; Pullman, Piper, September 6, 1899.

29418--06 м---17

5. Alsine longipes (Goldie) Coville, Contr. Nat. Herb. 4: 70. 1893.

Stellaria longi pes Goldie, Edinb. Phil. Journ. 6: 327. 1822.

Type locality: "Woods near Lake Ontario."

Range: Alaska to California, Colorado, and New England. Siberia.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1860; Falcon Valley, Suksdorf 102; Tacoma, Flett 193; Ocosta, Henderson, June, 1892; Clealum, Henderson, June 1892; Kittitas County, Whited, May, 1896; North Yakima, Henderson, May, 1892; Sprague, Sandberg & Leiberg 133a; Medical Lake, Henderson, June, 1892; Cold Creek, Cotton 397; Kreager 28; Pullman, Hull 481; Piper 1710, 1711; without locality, Brandegee 661. Zonal distribution: Transition.

6. Alsine borealis (Bigel.) Britton, Mem. Torr. Club 5: 149. 1894.

Stellaria borealis Bigel, Fl. Bost, ed. 2, 182, 1824.

Type locality: White Mountains, New Hampshire.

Range: Alaska to New England, south to California and New Jersey.

Specimens examined: Olympic Mountains, Piper, August, 1895; Seattle, Smith 231; Tacoma, Flett 162; Skokomish Valley, Kincaid, May, 1892; upper Nisqually Valley, Allen 155; Cascade Mountains, latitude 49°, Lyall in 1859; Mount Adams, Suksdorf 2302; Falcon Valley, Suksdorf 527; Skamania County, Suksdorf 2437; Nason Creek, Sandberg & Leiberg 605; Cascade Mountains to Colville, Lyall in 1860; Spokane, Watson, September 24, 1880; Tukanon River, Lake & Hull 480; Blue Mountains, Piper 2454; without locality, Brandegee

Zonal distribution: Transition and Canadian.

6a. Alsine borealis alpestris (Fries) Britton, Mem. Torr. Club 5: 149. 1894.

Stellaria al pestris Fries, Mant. 1: 10, 1832.

Stellaria borealis corollina Fenzl, in Ledeb. Fl. Ross. 1: 382, 1842.

Alsine brachypetala (Bong.) Howell, Fl. N. W. Am. 82, 1897.

Type locality: "In humidis alpium Jemtlandiae, Lapponiae, Norwegiae passim."

Range: Alaska to Oregon and the Great Lakes. Europe. Asia.

Specimens examined: Port Orchard, Piper 2313; Skamania County, Suksdorf 2438, 2439; west Klickitat County, Suksdorf 526; Spokane County, Suksdorf 1864; without locality, Brandegee.

7. Alsine obtusa (Engelm.) Rose, Contr. Nat. Herb. 3: 569, 1896.

Stellaria obtusa Engelm. Bot. Gaz. 7: 5, 1882.

Type locality: Gunnison River, Colorado.

RANGE: Washington to British Columbia and Colorado.

Specimens examined: Skokomish River, Piper, August, 1895.

8. Alsine calycantha (Ledeb.) Rydberg, Ment. N. Y. Bot. Gard. 1: 145, 1900.

Archaria calycantha Ledeb, Mem. Acad. St. Petersb. 5: 534, 1812.

Stellaria calycantha Bong, Mem. Acad. St. Petersb. VI. 2: 127, 1832.

Alsine simcoci Howell, Fl. N. W. Am. 1: 83, 1897.

Type locality; "Hab, in Siberia orientali."

Range: Alaska to California. Siberia.

Specimens examined: Mount Rainier, Piper 2134: Paradise River, Allen 159, 159a; Mount Adams, Suksdorf 2302, 2303: Mount Stuart, Brandegee 667; Klickitat County, Howell 313; Skamania County, Suksdorf 2194; Wenache trail, Brandegee 668.

Zonal distribution: Arctic.

The Mount Rainier specimens were erroneously referred to A. uliginosa (Murr.) Britton, by Howell.a

Alsine sincoer Howell differs from A. calycantha only in being unusually pubescent.

9. Alsine crispa (Cham. & Schlecht.) Holzinger, Contr. Nat. Herb. 3: 216, 1895.

Stellaria crispa Cham. & Schlecht. Linnaea 1: 51, 1826.

Type locality: "Unalaschka."

Range: Alaska to California.

Specimens examined: Olympic Mountains, *Piper*, August, 1895; Semiamoo Bay, *Lyall* in 1858; upper Nisqually Valley, *Allen* 156; Skamania County, *Suksdorf* 1863; Falcon Valley, *Suksdorf* 333; Blue Mountains, *Piper*, July, 1896.

ZONAL DISTRIBUTION: Transition and Canadian.

The Blue Mountains specimens are not typical, and probably represent a new subspecies.

10. Alsine washingtoniana (Robinson) Heller, Cat. N. A. Pl. ed. 2, 4, 1900.

Stellaria washingtoniana Robinson, Bot. Gaz. 25: 166. 1898.

Type locality: "In alder woods of the upper valley of the Nisqually, upon the slopes of Mount Rainier, Washington." Collected by O. D. Allen.

Specimens examined: Lake Cushman, Piper 2238; valley of the Nisqually, Allen 157.

Zonal distribution: Canadian.

11. Alsine jamesiana (Torr.) Heller, Cat. N. A. Pl. ed. 2, 4, 1900.

Stellaria jamesiana Torr. Ann. Lyc. N. Y. 2: 169, 1828.

Stellaria jamesii of authors.

Type locality: "Rocky Mountains."

Range: Washington to California and Colorado.

Specimens examined: Mount Stuart, Sandberg & Leiberg 818; Wenache Mountains Whited, June, 1896; Cleahum, Henderson 2568.

Zonal distribution: Hudsonian.

8. SAGINA.

Herbage glandular-puberulent 3. S. ciliata.
Herbage glabrous.
Stems slender; leaves searcely fleshy 1. S. occidentalis.
Stems rather stout; leaves fleshy 2. S. crassicanlis.

1. Sagina occidentalis S. Wats. Proc. Am. Acad. 10: 344, 1875.

Type locality: "In the valleys and borders of salt marshes from Oregon to San Francisco."

RANGE: British Columbia to California.

Specimens examined: Olympic Mountains, Piper; Seattle, Smith 744; Piper 470; Coupeville, Gardner 47, 48; Mount Rainier, Piper 2631, 745; Bridge Creek, Elmer.

2. Sagina crassicaulis S. Wats. Proc. Am. Acad. 18: 191, 1883.

Type locality: "On Dillon's Beach, Marin County, California."

Range: Washington to California.

Specimens examined: Port Orchard, Piper 2312; Ocosta, Henderson, June 26, 1892; Ilwaco, Henderson, September, 1885; Piper 4996.

The species of this genus are illy defined, and we seriously doubt that *S. crassicaulis* and *S. occidentalis* are really distinct. Alpine forms here referred to the latter have been considered to be *S. linnavi* Presl (*S. saginoides* (L.) Britt.), which, indeed, may be correct.

3. Sagina ciliata (Greene).

Alsinella ciliata Greene, Fl. Fran. 126, 1891.

Type locality; "Vicinity of Ione," California.

Range: Washington to California.

Specimens examined: Seattle, in dry soil, Piper in 1889.

10. MOEHRINGIA.

1. Moehringia lateriflora (L.) Fenzl, Verbr. Alsin. 18. 1833.

Arenaria laterifolia L. Sp. Pl. 1: 423, 1753.

Type locality: Siberia.

Range: Oregon to Colorado and New Jersey, and northward. Asia.

Specimens examined: Mason County, Piper 1022; Rock Lake, Sandberg & Leiberg 123; Sprague, Henderson, May, 1892; Pullman, Hull 483; Piper, June, 1893; Walla Walla, Brandegce 671.

Zonal distribution: Transition.

2. Moehringia macrophylla (Hook.) Torr. Bot. Wilkes Exped. 246, 1874.

Arenaria macrophylla Hook, Fl. Bor. Am. 1: 102, 1830.

Type locality: "North-West America, in shady woods." Collected by Douglas.

RANGE: British Columbia to California and eastward to Lake Superior.

Specimens examined: Clallam County, Elmer 2751; Tacoma, Flett 87; Mount Rainier, Piper 2128; upper Nisqually Valley, Allen 158; White Salmon, Suksdorf 250; Klickitat River, Flett 1356; Clealum, Whited 361; Nason Creek, Sandberg & Leiberg 627; without locality, Brandegee 670; Kamiak Butte, Moore 1705; Pend Oreille River, Lyall in 1861; Wawawai, Lake & Hull 784; Mount Carlton, Kreager 219; Cape Horn, Piper 5014.

ZONAL DISTRIBUTION: Transition to Hudsonian.

AMMODENIA.

Ammodenia peploides (L.) Rupr. Beitr. Pfl. Russ. Reich. 2: 25, 1845.

Arenaria peploides L. Sp. Pl. 1: 423, 1753.

Honkenya peploides Ehrh. Beitr. 2: 181, 1788.

Type locality: European.

RANGE: On the seashore, Arctic regions, southward to Washington and New Jersey. Europe. Asia.

Specimens examined: Shoalwater Bay, Cooper in 1854; Bellingham Bay, Suksdorf 1867: Ilwaco, Henderson 2156; Fidalgo Island, Lyall in 1858.

Zonal distribution: Humid Transition.

1a. Ammodenia peploides major (Hook.)

Archaria peploides major Hook, Fl. Bor, Am. 1: 102, 1830.

Honkenya oblongifolia Torr. & Gr. Fl. 1: 176, 1838.

Archaria sitchensis Dietr. Syn. Pl. 2: 1565, 1839-52.

Type locality: "De Fuca's Straits." Collected by Scouler.

Range: Alaska to Washington.

Specimens examined: Oyhut, Lamb 1248; Whidby Island, Gardner 45; near Seattle, Piper, July, 1897.

ZONAL DISTRIBUTION: Humid Transition.

ARENARIA.

Valves of the capsule 2-toothed. Perennials; leaves very narrowly linear. 2. A. capillaris. Sepals not obtuse. Petals longer than the ovate acute 3-nerved sepals. 3. A. congesta.

4. A. qlabrescens.

Petals shorter than the pungent, lanceolate 1-nerved sepals..... 5. A. franklinii. Valves of the capsule entire. Petals present. Leaves linear or lance-linear; marsh plants with soft and Leaves subulate or filiform, rather rigid. Sepals acute or cuspidate. Plants densely matted or tufted, alpine; cymes few-flowered. Herbage glandular; sepals not strongly nerved. 10. A. nuttallii. Herbage not glandular; sepals strongly nerved. 9. A. verna. Plants loosely or not at all matted; cymes dichotomously branched, several to many-flowered; low-

1. Arenaria serpyllifolia L. Sp. Pl. 1: 423, 1753.

Type locality: Europe.

Specimens examined: Fairhaven. Piper, July, 1897; Whidby Island, Gardner 369; Seattle, Piper 551; Tacoma, Flett 2022; Clarke County, Suksdorf 1868, 101.

land plant 7. A. tenella.

2. Arenaria capillaris Poir. Encycl. 6: 380, 1804.

Type locality: "Dans la Sibérie."

RANGE: British Columbia to California and Utah. Siberia.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1860; head of Twisp River, Whited 211; Wenache Mountains, Whited 1283; Nason Creek, Sandberg & Leiberg 681; Horseshoe Basin, Lake & Hull 486; without locality, Brandegee 674; Mount Carlton, Kreager 238; Wenache Mountains, Cotton 1187.

Zonal distribution: Arctic.

2a. Arenaria capillaris nardifolia (Ledeb.) Regel, Bull. Soc. Nat. Mosc. 35: 253, 1830.

Arenaria nardifolia Ledeb. Ic. Fl. Ross. 1: 4. pl. 6, 1829

Type locality: "Hab, in rupibus alpium Altaicarum."

RANGE: Alaska to California and Utah. Siberia.

Specimens examined: Olympic Mountains, Flett 806; Mount Rainier, Piper 620, 2121; Allen 238; Mount Stuart, Elmer 1115; Klickitat River, Flett 1059.

ZONAL DISTRIBUTION: Arctic.

3. Arenaria congesta Nutt.; Torr. & Gr. Fl. 1: 178, 1838.

Type locality: "Shady hills in the Rocky Mountain range, about Bear River of the Lake of Timpanagos." Collected by Nuttall.

Range: Washington to California and Colorado.

Specimens examined: Chelan, Whited 1377; Conconully, Whited 1320; White Bluff, Lake & Hull 485; Wilson Creek, Lake & Hull 482; Loon Lake, Winston, July 20, 1897; Spokane, Spaulding: Suksdorf 252; Piper, June, 1897; Blue Mountains, Lake & Hull, July, 1892; Piper, July, 1896; Clarks Springs, Kreager 100.

Zonal distribution: Arid Transition.

4. Arenaria glabrescens (S. Wats.)

Arenaria fendleri glabrescens S. Wats. Bot. King Explor. 40, 1871.

Arenaria fendleri subcongesta S. Wats, loc. cit.

Arenaria burkei Howell, Fl. N. W. Am. 85, 1897.

Type locality: Toyabe Mountains, Nevada.

RANGE: Washington to Alberta, Arizona, and California.

Specimens examined: Upper Wenas River, Henderson 2566; Cleman Mountain, Henderson in 1892; Ellensburg, Whited 666; Coulee City, Lake & Hull, August, 1892; junction Crab and Wilson creeks, Sandberg & Leiberg 294; Blue Mountains, Piper, July, 1896; without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Arid Transition.

5. Arenaria franklinii Dougl.; Hook. Fl. Bor. Am. 1: 101. 1830.

Type locality: "Abundant on barren sandy plains and undulating grounds of the Columbia, from the 'Great' to the 'Kettle' falls." Collected by Douglas.

Range: Eastern Washington and eastern Oregon.

Specimens examined: Pasco, Piper 2970; Hindshaw 6; Klickitat County, Leckenby, May, 1898; North Yakima, Henderson, May, 1892; Morgans Ferry, Suksdorf 254; Bickleton, Suksdorf 253; Columbia River, latitude 46° to 49°, Lyall in 1860; Wilson Creek Sandberg & Leiberg 296; Wallula, Cotton 1026, 1044.

Zonal distribution: Upper Sonoran.

6. Arenaria paludicola Robinson, Proc. Am. Acad. 29: 298, 1894.

Arenaria palustris S. Wats. Bot. Cal. 1: 70, 1876, not Gay, 1845.

Alsine palustris Kellogg, Proc. Cal. Acad. Sci. 3: 61, 1863.

Type locality: San Francisco, California.

RANGE: Washington to California.

Specimens examined: Near Tacoma, Flett, September, 1896.

Zonal distribution: Humid Transition.

7. Arenaria tenella Nutt., Torr. & Gr. Fl. 1: 179, 1838.

Arenaria stricta β Hook, Fl. Bor, Am. 1: 99, 1830.

Type locality: "Rocky places, plains of the Oregon." Collected by Nuttall.

Range: British Columbia to Oregon, in the coast region.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Whidby Island, Gardner 46; Tacoma, Flett 890, 190; Olympia, Kineaud, July, 1896; Henderson, May, 1892; Woodlawn, Henderson, June, 1892; Steilacoom, Suckley: Piper; Columbia River, Nuttall; Roy, Allen, May 23, 1889; Yelm, Piper in 1888, Stuart Island, Lawrence 42.

Zonal distribution: Humid Transition.

8. Arenaria pusilla S. Wats. Proc. Am. Acad. 17: 367, 1882.

Type locality: Yreka, California.

Range: Washington and Idaho to California

Specimens examined: White Salmon, Suksdorf 249; Waitsburg, Horner 128; Pullman, Piper 1885.

Zonal distribution: Arid Transition.

9. Arenaria verna rubella (Wahl.) S. Wats. Bibl. Index 99, 1878.

Alsine rubella Wahl, Fl. Lapp. 1: 28. pl. 6, 1812.

Arenaria hirta glabrata Cham. & Schlecht, Linnaea 1: 56, 1826.

Type locality: "Hab. in summitate alpis Lyngensis Nordlandiae septentrionalis circiter 3,000 pedes paris, supra mare elevata."

Range: Alaska to Greenland, south to Washington and Colorado.

Specimens examined: Mount Rainier, Prper 2415; Smith 777; Flett 228; Olympic Mountains, Piper, August, 1895; Elmer 2748.

ZONAL DISTRIBUTION: Arctic.

Hooker's plant can scarcely be the rare Alpine plant here considered.

Flett's 228 was referred by Wiegand b to the scarcely distinct A. propingua Richards.

10. Arenaria nuttallii Pax; Engler's, Bot Jahrb. 18: 30, 1893.

Arenaria pungens Nutt.; Torr. & Gr. Fl. 1: 179, 1838, not Clem. 1816.

Type locality: "Summit of hills in the Rocky Mountain range (lat. 41°)."

Range: British Columbia to California and Wyoming.

Specimens examined: Mount Stuart, Brandegee 676; Elmer 1118; Mount Adams, Suksdorf 48; Howell & Henderson, August, 1882; Henderson, August 10, 1892.

Zonal distribution: Arctic.

11. Arenaria sajanensis Willd. Schlecht. Berl. Gesell. Nat. Fr. Mag. 7: 200. 1813.

Type Locality: "Auf der östlichen Höhen des altaischen Gebirges," Siberia.

Range: Alaska to Greenland, south in the mountains to Arizona. Siberia.

Specimens examined: Olympic Mountains, Flett 805; Cascade Mountains, latitude 49°, Lyall in 1860; near Mount Baker, Flett 860; Mount Stuart, Brandegee 672; Elmer 1119; Mount Adams, Flett 1353; Suksdorf 175; Loomis, Elmer 623.

Zonal distribution: Arctic.

This species appears in Suksdorf's list as "A, biflora Wats, var,"

SPERGULA.

Spergula arvensis L. Sp. Pl. 1: 440, 1753.

Spurrey

Type locality: Europe.

Specimens examined: Pullman, Hardwick, July, 1895.

TISSA.

Maritime plants; leaves very fleshy.

Annual, fibrous-rooted; flowers smaller 2. T. marina.

Not maritime; leaves not fleshy.

1. Tissa macrotheca (Ilornem.) Britt. Bull. Torr. Club 16: 129, 1889.

Arenaria macrotheca Hornem.; Cham. & Schlecht, Linnaea 1: 53, 1826.

Lepigonum macrothecum Fisch, & Mey. Ind. Sem. Hort. Petrop. 3:11, 1835, nom. nud.

Type locality: 'In sabulosis Californiae."

Range: Washington to California.

Specimens examined: Port Angeles, Piper 2302 in part; Stuart Island, Lawrence 138.

ZONAL DISTRIBUTION: Humid Transition.

2. Tissa marina (L.) Britt. Bull. Torr. Club, 16: 126, 1889.

Arenaria rubra marina L. Sp. Pl. 1: 423, 1753.

Spergularia salina J. & C. Presl, Fl. Cech. 95, 1819.

Type locality: Europe.

Range: Atlantic and Pacific coasts and alkaline places in the interior.

Specimens examined: Clallam County, Elmer 2746; Whidby Island, Gardner 363; Seattle, Piper, September 4, 1890; Howell 372; Port Angeles, Piper 2302 in part; Whatcom County, Suksdorf 954; 1874, 1872.

ZONAL DISTRIBUTION: Humid Transition.

3. Tissa rubra (L.) Britt. Bull. Torr. Club 16: 127, 1889.

Arenaria rubra L. Sp. Pl. 1; 423, 1753.

Spergularia rubra J. & C. Presl, Fl. Cech. 94, 1819.

Type locality: Europe.

RANGE: British Columbia to California. Atlantic States. Europe.

Specimens examined: Clallam County, Elmer 2745; Tacoma, Flett 179; Oakesdale, Piper, July 19, 1894; Union Flat, Lake & Hull, July 18, 1892; Waitsburg, Horner 112; Newport, Kreager 452.

Zonal distribution: Transition.

3a. Tissa rubra perennans (Kindb.) Greene, Pittonia 2: 229, 1892.

Lepig num rubrum perennans Kindb, Monogr. 41, 1863.

Spergularia rubra percunans Robinson in Gray, Syn. Fl. 1: 250, 1897.

Type locality: Sweden.

RANGE: Washington and Idaho to California. Europe.

Specimens examined: Satsop, Heller 4026; Kalama, Piper, October, 1901; Lake Park, Piper 2126; Klickitat County, Brandegee 678; west Klickitat County, Suksdorf 2081; Stuart Island, Lawrence 196.

4. Tissa diandra bracteata (Robinson).

Spergularia salsuginea bracteata Robinson in Gray, Syn. Fl. 1: 251, 1897.

Type locality: Texas.

Range: Washington to California and Texas.

Specimens examined: West Klickitat County, Suksdorf 2082, 176; Egbert Springs Sandberg & Leiberg 346.

Zonal distribution: Upper Sonoran.

PENTACAENA.

Pentacaena ramosissima (Weinm.) Hook, & Arn.; Hook, Bot. Misc. 3: 338, 1833.
 Locflingia ramosissima Weinm. Bot. Zeit. 3: 608, 1820.

Paronychia? ramosissima DC, Prod. 3: 372, 1828.

Type locality: "In apricis siccis Chili."

RANGE: Washington to California. Chile.

Specimens examined: Westport, Heller 3939; Oyhut, Lamb 1262; Ilwaco, Piper.

ZONAL DISTRIBUTION: Humid Transition.

NYMPHAEACEAE. WATERLILY FAMILY.

 Leaves peltate; carpels several, 1-seeded
 Brasenia.

 Leaves cordate; carpel 1, many-seeded
 Nумрилел.

BRASENIA.

Brasenia εchreberi Gmel. Syst. Veg. 1: 853, 1796.

Watersheld,

Hydropeltis purpurea Michx. Fl. 1: 324, 1803.

Brasenia peltata Pursh, Fl. 2: 389, 1814.

Brasenia purpurea Casp. in Engl. & Prantl, Nat. Pfl. Fam. 32: 6, 1888.

Type locality: None given.

Range: British Columbia to Nova Scotia, southward to California, Texas, and Florida. Asia. Australia. Africa.

Specimens examined: Lake Washington, Piper, July, 1895; Silver Lake, Henderson, October, 1892; Davis Lake, Kreager 443.

Zonal distribution: Transition.

NYMPHAEA.

 Nymphaea polysepala (Engelm.) Greene, Bull. Torr. Club 15: 84, 1888. Wokas. Nuphar polysepalum Engelm. Trans. Acad. St. Louis 2: 282, 1865.

Type locality: "In small lakes, in the higher Rocky Mountains, from the sources of the Platte, near Long's Peak, lat. 40°, to those of the Columbia River, lat. 44°."

Range: Alaska to California and Colorado.

Specimens examined: Oyhut, Lamb 1260; Falcon Velley, Suksdorf 46; Union Flat, Lake & Hull 421; Big Meadows, Stevens County, Kreager <26.

ZONAL DISTRIBUTION: Transition to Hudsonian.

The common form of this species has floating leaves, but in some lakes a form occurs in which the leaf blade is held above the water. Forms with the outer sepals red-tinged

(Nuphar polysepalum pictum Engelm.) are of frequent occurrence. Nymphaca advena has several times been reported from Washington, but it is improbable that that species occurs so far west, the above being mistaken for it.

CERATOPHYLLACEAE.

CERATOPHYLLUM.

 Ceratophyllum demersum L. Sp. Pl. 2: 992, 1753. Hornwort. Type locality: Europe. Range: Temperate North America. Europe. Specimens examined: Lake Washington, Piper, July 12, 1895. This plant is common in lakes, but is rarely collected. Fruiting specimens are very rare. Good material is a desideratum, as there is some probability that more than one species occurs in Washington. RANUNCULACEAE. BUTTERCUP FAMILY. Carpels with solitary ovules; fruit an akene. Sepals imbricated in the bud: leaves not opposite. Cauline leaves three in a whorl. Cauline leaves alternate or leaves all basal. Petals none; flowers small, numerous in corymbs or panicles. Leaves ternately decompound..... Thalictrum (p. 268). Petals present. Akenes numerous on an elongate receptacle: flowers solitary on scapes; leaves entire... Myosurus (p. 269) Akenes in a globose or oblong cluster. Flowers white; akenes transversely wrinkled Batracinum (p. 270). Flowers vellow; akenes not transversely Carpels with several ovules, in fruit follicles or berries. Flowers regular. Leaves simple, palmate. Petals none; leaves cordate-orbicular...... Caltha (p. 277). Petals linear-spatulate; leaves palmately parted. Trollius (p. 277). Leaves compound. Sepals not spurred. Petals large ; sepals persistent ; flowers solitary . Paeonia (p. 278). Petals small; sepals deciduous. Carpels becoming berries; flowers in Carpels becoming follicles. Follicles stipitate; flowers solitary or umbellate: leaves coriaceous, ever-Follicles sessile: flowers racemose:

leaves membranous, deciduous... Cimicifuga (p. 278).

Flowers irregular.

CLEMATIS.

Erect herbs; leaves compound with narrow segments 1. C. hirsutissima. Half-woody climbers.

Flowers large, blue, solitary.

Leaves ternate, the leaflets mostly entire _______ 2. C. columbiana.

Flowers small, white, panicled.

Clematis hirsutissima Pursh, Fl. 2: 385, 1814.

Sugar bowls.

Clematis douglasii Hook, Fl. Bor, Am. 1: 1, 1829.

Type locality: "On the plains of the Columbia River." Collected by Lewis.

RANGE: British Columbia to Montana, Oregon, and New Mexico.

Specimens examined: Waterville, Whited 1211; Spokane County, Suksdorf 229; Hangman Creek, Sandberg & Leiberg 14; Pullman, Piper 1450.

Zonal distribution: Arid Transition.

The leaves of this plant taste like strychnine, and Geyer gives an account of the way the Nez Perce Indians used it to stimulate fagged horses by rubbing it in their nostrils.

2. Clematis columbiana (Nutt.) Torr. & Gr. Fl. 1: 11. 1838.

Atragene columbiana Nutt. Journ. Acad. Phila. 7: 7, 1834.

Chematis verticillaris columbiana Gray, Syn. Fl. 11: 8, 1895.

? Atragene grosseserrata Rydberg, Bull. Torr. Club 29: 156, 1902.

Type locality: "Flathead River." Collected by Wyeth.

Range: British Columbia and Alberta to Utah.

Specimens examined: Spokane, Henderson, June, 1892; Mount Carlton, Kreager 287, 291; Pend Oreille River, Lyall in 1861.

Zonal distribution: Arid Transition and Canadian.

Clematis alpina occidentalis (Hornem.) Gray in Powell, Geol. Surv. Dakota 531.

Atragene occidentalis Hornem. Hort. Havn. 520, 1813.

Clematis pseudoatragene pseudoalpina Kuntze, Verh. Bot. Ver. Brandenburg 26: 160. 1884.

Type locality: Unknown.

Range: Washington to Dakota and New Mexico.

Specimens examined: Upper Columbia, Wilkes Expedition 1095; Swauk Creek Mountains, Brandegee 600; Cowlitz Pass, Tweedy in 1882.

Doctor Rydberg a maintains that Hornemann's name belongs to the plant usually called Clematis rerticularis columbiana, and therefore takes up Kuntze's name in the combination Atragene pseudoalpina for the above species.

4. Clematis ligusticifolia Nutt.; Torr. & Gr. Fl. 1: 9, 1838.

Chematis liquistifolia brevifolia Nutt. loc. cit.

Clematis brevifolia Howell, Fl. N. W. Am. 8, 1897.

Type locality: "Plains of the Rocky Mountains." Collected by Nuttall.

RANGE: British Columbia and Saskatchewan to California and New Mexico.

Specimens examined: West Klickitat County, Suksdorf 1954, Egbert Springs, Sandberg & Leiberg 386; North Yakima, Watt, August, 1895; Henderson, October, 1892; Parker, Dunn, August S, 1901; Wenache, Whited 175, 1333; Spokane, Henderson, July, 1892; Wawawai, Piper 1455; Wilson Creek, Lake & Hull 408; Spokane County, Suksdorf 2338; Pullman, Elmer 291; without locality, Vasey in 1889; Clarks Springs, Kreager 122; Prosser, Cotton 623.

ZONAL DISTRIBUTION: Upper Sonoran, occasionally Arid Transition.

5. Clematis suksdorfii Robinson in Gray, Syn. Fl. 1: 4, 1895.

Type locality: Klickitat River, Washington. Collected by Suksdorf.

RANGE: Known only from the type locality.

Specimens examined: Klickitat River, Suksdorf in 1881.

CLEMATIS GRAVEOLENS Lindl., an Asiatic species, has been collected by Leckenby near Zillah as a garden escape.

ANEMONE.

Akenes densely woolly.

Leaves hairy, the lobes linear. 1. A. hudsoniana.

Akenes not woolly.

Involucral leaves 3 to 5-foliolate.

Flowers 20 to 35 mm, in diameter.

Sepals blue. 5. A. oregana. Sepals white 6. A. quinquefolia.

1. Anemone hudsoniana (DC.) Richards, Bot. App. Frankl. Journ. 741, 1823.

Anemone multifida hudsoniana DC. Syst. 1: 209, 1818.

Type locality: "Ad sinum Hudsonianum."

RANGE: Alaska to Labrador, south to Arizona, Nebraska, and Maine.

Specimens examined: Olympic Mountains, Grant in 1889; Elmer 2678; Flett 121; Goat Mountain, Allen 250; Columbia River, Donglas in 1830; Loomis, Elmer 566.

Zonal distribution: Hudsonian.

2. Anemone drummondii S. Wats. Bot. Cal. 2: 424, 1880.

Anemone baldensis L. err. det. Hook. Fl. Bor. Am. 1: 5, 1829.

Type locality: Sierra County, California.

Range: British Columbia and Alberta to California.

Specimens examined: Olympic Mountains, Piper 2007; Flett 131; Mount Adams, Suksdorf, July 41, 4886; Flett 1268; Mount Rainier, Flett 2171.

Zonal distribution: Arctic.

3. Anemone deltoidea Hook, Fl. Bor, Am. 1: 6, 1829.

Type Locality: "In thick shady woods of the Columbia, near its confluence with the sea." Collected by Douglas.

RANGE: In the coast region, Washington to north California.

Specimens exmained: Roy, Allen 81; upper Nisqually Valley, Allen 18; Olympia, Henderson, May, 1892; Skamania County, Suksdorf 2341; Lower Cascades, Suksdorf, May 29, 1886; Vancouver, Piper 4947; Cape Horn, Piper 5005; Eatonville, Flett 2214.

Zonal distribution: Canadian.

4. Anemone lyallii Britton, Ann. N. Y. Acad. Sci. 6: 227, 1891.

Anemone quinquefolia lyallii Robinson in Gray, Syn. Fl. 1: 13, 1895.

Type locality: Sumas woods, Lower Fraser River, British Columbia. Collected by Lyall.

Range: British Columbia to Oregon, west of the Cascade Mountains.

Specimens examined: Clallam County, Elmer 2675; Olympic Mountains, Henderson 2046; Silverton, Bonck 11a; Klickitat River, Flett 1273; Falcon Valley, Suksdorf 301; McNeils Island, Flett 54; Roslyn, Whited 299; Spokane County, Suksdorf 1958.

ZONAL DISTRIBUTION: Canadian and Transition.

5. Anemone oregana A. Gray, Proc. Am. Acad. 22: 308, 1887.

Anemone quinquefolia oregana Robinson in Gray, Syn. Fl. 1: 13, 1895.

Type locality: Hood River, Oregon. Collected by Mrs. Barratt.

Range: Washington and Oregon.

Specimens examined: Klickitat County, Suksdorf; Skamania County, Suksdorf 2; Falcon Valley, Suksdorf, May 9, 1886; Stampede Pass, Henderson in 1892; Roslyn, Whited 298; Blue Mountains, Horner 50; without locality, Vascy in 1889.

6. Anemone quinquefolia L. Sp. Pl. 1: 541, 1753.

Anemone piperi Britton, Bull. Torr. Club 29: 153, 1902.

Type locality: Virginia.

RANGE: British Columbia to New Brunswick, south to Oregon and Georgia.

Specimens examined: Skokomish Valley, Kincaid, May, 1892; Mount Adams, Henderson 4; Pend Oreille River, Lyall in 1861; foothills of Blue Mountains, Horner 51; Mount Carlton, Kreager 228, 253; Kamiak Butte, Elmer 393; Granville, Conard 361; Mount Baldy, Conard 263.

Zonal distribution: Canadian.

The western form of A. quinquefolia L. is considered by Doctor Britton a distinct species, but the apparent differences are very slight. Our plant has been referred to as A. trifolia L., and it is the basis of the "A. tetomnsis Porter!" in Suksdorf's list. Horner's 51 has dark purple flowers and may be distinct.

Anemone Narcissiflora L. is accredited to Washington by Torrey upon specimens collected at Port Discovery by the Wilkes expedition. The specimen in the National Herbarium is very young but it is not an Anemone. Apparently it is a Ranunculus, possibly an unusual form of R. occidentalis Nutt.

PULSATILLA.

1. Pulsatilla occidentalis (S. Wats.) Freyn, Deutsch. Bot. Monatss. 8: 78, 1890.

Anemone occidentalis S. Wats, Proc. Am. Acad. 11: 121, 1876.

Anemone alpina L. err. det. Hook. Fl. Bor. Am. 1: 5, 1829.

Type locality: "In the mountains from British Columbia southward to Mount Shasta and Lassen's Peak."

Range: British Columbia to California.

Specimens examined: Challam County, Elmer 2626; Cascade Mountains, latitude 49°, Lyall in 1859; Mount Rainier, Piper 2006; Allen 98; Nason Creek, Sandberg & Leiberg 654; Entiat Creek, Mrs. Howe; Horseshoe Basin, Lake & Hull 407; Bridge Creek, Elmer 694; above Lake Chelan, T. E. Wilcox in 1883.

Zonal distribution: Arctic.

THALICTRUM. MEADOW RUE.

1. Thalictrum occidentale A. Gray, Proc. Am. Acad. 8: 372, 1872.

Thalietrum dioicum oxycarpum Torr. Bot. Wilkes Exped. 212, 1874.

Type locality: Vancouver Island. Collected by Lyall.

RANGE: British Columbia to New Brunswick and Maine, south to California and Wyoming. Specimens examined: Clallam County, Elmer 2668; Goa. Mountain, Allea 247; Silverton, Bonck 1; Skamania County, Suksdorf 2339; Simcoe Mountains, Horrell 307; Wenache, Whited 8; Stevens Pass, Sandberg & Leiberg 788; Horseshoe Basin, Lake & Hull 405; Pend Oreille River, Lyall in 1861; Mount Rainier, Piper 2022; Spokane, Henderson, June, 1893; Kamiak Butte, Piper, July 20, 1899; Palouse City, Henderson, July 1892; Blue Mountains,

Piper, July, 1896; Pullman, Piper 1467, June, 1893; without locality, Brandegee 601; without locality, Vascy in 1889.

ZONAL DISTRIBUTION: Canadian and Hudsonian.

In Hooker's Flora our species was referred to T. dioicum L.

2. Thalictrum venulosum Trelease, Proc. Bost. Soc. Nat. Hist. 23: 302, 1886.

Type locality: "British America, Washington Territory, Wyoming, and Colorado."

Range: British Columbia to south Dakota, Colorado, and Oregon.

Specimens enamined: Upper Wenas River, Henderson, June, 1892; Rock Lake, Sandberg & Leiberg 113; Loomis, Elmer 599; Pullman, Lake & Hull 404; Piper 1467.

Zonal distribution: Arid Transition.

3. Thalictrum purpurascens L. Sp. Pl. 1: 546, 1753.

Type locality: "Habitat in Canada."

RANGE: Saskatchewan to Canada, Florida, Arizona, and Washington.

Specimens examined: Box Canyon, Kreager 377.

Thalictrum polycarpum Wats. This species appears in Suksdorf's list, but no good evidence exists of its occurrence in Washington.

TRAUTVETTERIA.

1. Trautvetteria grandis Nutt.; Torr. & Gr. Fl. 1: 37, 1838.

Type locality: "Shady woods of the Oregon." Collected by Nuttall.

RANGE: British Columbia to Idaho and northern California.

Specimens examined: Clallam County, Elmer 2676; Chebalis County, Lamb 1198; Mount Rainier, Piper, August, 1895; Flett 295; upper Valley Nisqually, Allen 17; Mount Adams, Suksdorf 494; Cascade Mountains near Stampede Tunnel, Henderson, July, 1892; Stevens Pass, Whited 1467; Nason Creek, Sandberg & Leiberg 692; Blue Mountains, Piper, July, 1896; without locality, Vasey in 1889; Mount Carlton, Kreager 257, 197.

Zonal distribution: Hudsonian and Canadian.

MYOSURUS. MOUSE TAIL.

Carpels prominently beaked: spikes 2 to 6 cm. long....... 1. M. apitalus.

Carpels obscurely beaked; spikes clongate.

Spikes very slender, 10 to 50 cm. long; seeds oblong...... 1a, M, apetalus lepturus. Spikes stouter and shorter; seeds oval.

Myosurus apetalus Gay, Fl. Chil. 1: 31. pl. 1. 1845.

Myosurus aristatus Benth; Hook. Lond. Journ. Bot. 6: 458 bis. 1847.

Type locality: "Provincia de Coquimbo." Chile.

RANGE: British Columbia to Arizona and California. Chile. New Zealand.

Specimens examined: West Klickitat County, Suksdorf 492; Ellensburg, Piper, May 20,

1897; Pasco, Hindshaw 32; Sprague, Sandberg & Leiberg 136; Rockland, Suksdorf 831; Sc.

Johns, Piper 2796; Almota, Piper 2789; Pullman, Piper 1355; Waitsburg, Horrer 182.

ZONAL DISTRIBUTION: Arid Transition.

1a. Myosurus apetalus lepturus A. Gray, Bull. Torr. Club 13: 2, 1886.

Myosurus tenellus Greene, Pittonia 3: 258, 1898.

Myosurus tenellus amphioxys Greene, loc. cit.

Type locality: California.

RANGE: British Columbia to Californ a and Utah.

Specimens examined: West Klickitat Coun y, Suksdorf 2343: Falcon Valley, Suksdorf

2346, 493; Mabton, Cotton 321; Rockland, Suksdorf 1959; Rock Creek, Piper 2790; Coulee City, Piper 3875; Rock Lake, Sandberg & Leiberg 112; Spokane, Piper 2283; Hangman Creek, Sandberg & Leiberg 3; Waverly, Suksdorf, 2342; Pullman, Elmer 184; Piper 1459. Zonal distribution: Arid Transition.

2. Myosurus minimus L. Sp. Pl. 1: 284, 1753.

Type locality: European.

Range: Washington and California to Illinois and Florida. Europe.

Specimens examined: West Klickitat County, Suksdorf 2344.

3. Myosurus major Greene, Pittonia, 3: 257, 1898.

Type locality: Siskyou County, California.

Specimens examined: Coupeville, Gardner 11: Clallam County, Elmer 2674; Stuart Island, Lawrence 77.

ZONAL DISTRIBUTION: Humid Transition.

BATRACHIUM.

1. Batrachium aquatile (L.) Wimm. Fl. Schles. 8, 1841. Water crowfoot.

Ranunculus aquatilis L. Sp. Pl. 1: 556, 1753.

Type locality: Europe.

RANGE: Alaska to California. Europe. Asia.

Specimens examined: Oyhut, Lamb 1261; Tacoma, Lockenby, May, 1898; Flett, May 9, 1895; White Salmon, Suksdorf: Rock Creek, Sandberg & Leiberg 90; Walla Walla region, Brandegee 606; Pullman, Elmer 841; Hull 409; Falcon Valley, Suksdorf 1960.

Zonal distribution: Transition to Canadian.

1a. Batrachium aquatile pantothrix (Brot.).

Ranunculus pantotlaix Brot. Fl. Lusit. 2: 375, 1804.

Ranunculus aquatilis trichophyllus A. Gray, Man ed. 5, 40, 1867.

Rammentus trichophyllus Chaix.; Vill. Fl. Dauph. 1: 335. 1786, nom. nud.

Type locality: "Circa Conimbricam" in Lusitania.

Range: Alaska to Nova Scotia, south to California and Tennessee. Europe. Asia.

Specimens examined: San Juan Island, Lyall in 1858; Cascade Mountains, latitude 49°, Lyall in 1859; Parker, Dunn, August 8, 1901; Cascade Mountains to Colville, Lyall in 1860; Crab and Wilson creeks, Sandberg & Leiberg 265; Harrington, Sandberg & Leiberg 220; Marshall Junction, Piper; Box Canyon, Kreager 395; Chewelah, Kreager 528; Pend Oreille River, Lyall in 1861; Pullman, Hull 410.

The form in flowing streams usually has longer and more flaccid leaf-segments. It is Ranunculus flaccidus Pers, or Batrachium flaccidum (Pers.) Rupr, and is probably worthy of recognition as a subspecies.

1b. Batrachium aquatile caespitosum (DC.)

Ranunculus aquatilis caespitosus DC. Prod. 1:26, 1824.

Type locality: None given.

Range: Same as of B. aquatile.

Specimens examined: Spokane, Piper 2633, 2943; Waitsburg, Horner 41.

RANUNCULUS. BUTTERCUP.

Plants aquatic or subaquatic; leaves finely dissected when submersed, less so when aerial.

Akenes corky margined; flowers 15 to 25 mm. broad. 1. R. delphinifolius.

Akenes marginless; flowers 7 to 15 mm. broad...... 2. R. purshii.

Plants terrestial but often growing in very wet places; leaves never finely dissected.	
Akenes thin-walled, the faces nerved; leaves crenate; plant	
spreading by runners	22. R. cymbalaria.
Akenes not thin-walled nor nerved.	
Leaves entire or nearly so.	
Stems creeping, rooting from the nodes.	
Leaves lanceolate, 2 to 5 cm, long	3. R. flammula unalasch- ensis.
Leaves linear-spatulate, ½ to 2 cm. long Stems erect, not rooting from the nodes.	3a. R. Jlammula reptans.
Plants 30 to 60 cm. high; leaves lanceolate or	
oblong	4. R. alismacfolius,
Plants 10 to 25 cm, high.	
Leaves oblong-lanceolate	mellus.
Leaves cordate or subcordateLeaves or some of them lobed or divided.	6. R. populago.
Faces of the akenes scabrous or muriculate; annuals.	
Pubescent: akenes hispid with hooked hairs	20. R. hebecarpus.
Nearly glabrous: akenes minutely spiny	21. R. muricatus.
Faces of the akenes smooth or merely pilose;	
mostly perennials.	
Herbage glabrous or nearly so; low species.	
Basal leaves 2 to 4 toothed or lobed, rarely	
entire; cauline 3-cleft or 3-parted	7. R. glaberrimus.
Basal and cauline leaves all divided.	
Annual; leaves 3 to 5 -lobed or parted, the	
lobes crenately incised or cleft; akenes	
apiculate	9. R. sceleratus.
Perennials.	
Leaves triternately divided, the seg-	
ments linear or linear-spatulate	8. R. triternatus.
Leaves roundish in outline 3 to 5-cleft	
into cuneate divisions; alpine	
plants.	
Head of akenes globose; petals large,	
showy	10. R. suksdorfii.
Head of akenes oblong.	
Leaves pubescent; mostly crenate	
or lobed	5. R. cardiophyllus,
Leaves glabrous or nearly so; deep-	
ly cleft.	
Style straight; leaves ciliate, not	
cordate	11. K. eschscholtzii,
Style recurved; leaves cordate,	10 D l
not ciliate	12. K. verecunaus.
Herbage pubescent or hirsute; mostly tall	
and coarse species. Ranky of the already hooked at tip	
Beaks of the akenes hooked at tip.	1.1 P and Latella
Petals showy; pubescence villous	14. It. OCCUTERUULIS.
Petals very small, pale: pubescence hirsute.	
Akenes smooth	12 R hongandii
Akenes hispid on the faces.	**
and the interest and in the interest	15a. 11. vongarate greenet.

Beaks of the akenes not hooked at tip.

Akenes with a short beak.

Plants decumbent, creeping by

stolons; petals showy 17. R. repens.

Plants erect or ascending, not stoloniferous.

Head of akenes oblong: petals

not longer than the sepals... 15. R. pennsylvanious.

Head of akenes globose; petals longer than the sepals.

Herbage smooth or but lit-

tle hirsute...... 16. R. oreganus.

Herbage very hirsute..... 16a. R. oreganus macounii

Akenes with a long beak. Leaf segments rathers mall, linear

to cuneate-obovate, and 2 or

to cuneate-obovate, and 2 or

3-lobed or toothed...... 18. R. orthorhynchus.

Leaf segments large, 2 to 6 cm. long, oblong to ovate, cleft and

1. Ranunculus delphinifolius Torr. in Eaton, Man. ed. 2, 395, 1818.

Rannaculus multifidus Pursh, Fl. 2: 736, 1814, not Forst, 1775.

Type locality: None given.

RANGE: British Columbia to Canada, south to California and North Carolina.

Specimens examined: Rock Creek, Sandberg & Leiberg 82; west Klickitat County, Suksdorf 2348; Cheney, Mrs. Tucker 83.

Zonal distribution: Arid Transition.

1a. Ranunculus delphinifolius terrestris (Λ. Grav).

Ranunculus multifidus terrestris A. Gray, Man. ed. 5, 41, 1872.

Type locality: Ann Arbor, Michigan.

Range: Same as of the species.

Specimens examined: Klickitat County, Suksdorf.

2. Ranunculus purshii Richards, Bot. App. Frankl. Journ. 741, 1823.

Ranunculus limosus Nutt.; Torr. & Gr. Fl. 1: 20, 1838.

Type locality: "Wooded country from latitude 51° to 64° north."

Range: Alaska to Nova Scotia, south to Washington, New Mexico, and Michigan.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Whatcom County, Gardner 401; Ellensburg, Whited 645; Lincoln County, Henderson 2369; near Sprague, Sandberg & Leiberg 209; Box Canyon, Kreager 394; Mission, Kreager 494; Valley, Beattie & Chapman 2161.

ZONAL DISTRIBUTION: Arid Transition.

Ranunculus flammula unalaschensis (Bess.) Ledeb. Bull. Soc. Nat. Mosc. 342: 41, 1861.

Ranunculus unalaschensis Bess. in Ledeb. Fl. Ross. 1:32, 1841, as synonym.

Ranunculus flammula intermedius Hook. Fl. Bor. Am. 1: 11. 1829.

Ranunculus intermedrus Helfer, Bull. Torr. Club 25: 580, 1898, not Poir, 1804.

Type locality: Unalaska.

Range: California to Newfoundland and northward.

Specimens examined: Claffam County, Elmer 2620, Montesano, Heller 3927; Seattle, Piper, July 2, 1896; Coupeville, Gardner 5; Silverton, Bouck 4; Tacoma, Flett 883, 34; Manor, Piper; Roslyn, Whited 471; cast base Mount Adams, Cooper; Toppenish, Henderson; Pend Oreille River, Lyall; Spokane, Piper 2635; Pullman, Hull 415; without locality, Vascy in 1889; Usk, Kreager 364.

ZONAL DISTRIBUTION: Transition and Canadian.

3a. Ranunculus flammula reptans (L.) Schlecht.; E. Meyer, Pl. Labr. 96, 1830.

Ranunculus reptans L. Sp. Pl. 1: 549, 1753.

Type locality: "Habitat in Suecia, Russia, ad ripas lacuum."

Range: Alaska to Hudson Bay and south to California, Colorado, and Pennsylvania.

Specimens examined: Oyhut, Lamb 1252; Cascade Mountains, latitude 49°, Lyall; Fidalgo Island, Flett 2114; Chelan, Elmer 490; Lake Chelan, Lake, August 13, 1892; Lake Kalispel, Kreager 319.

Ranunculus alismaefolius Geyer; Benth. Pl. Hartw. 295, 1848.

Type locality: "In uliginosis (Bear Valley) montium Sacramenti."

RANGE: British Columbia to California and Colorado.

Specimens examined: Klickitat County, Saksdoof: Pullman, Elmer 817; Piper 1561; Hull 776.

ZONAL DISTRIBUTION: Arid Transition.

Geyer's original specimens were from the "plains of Coeur d'Aleine," Idaho, but the species was first described as above. Dr. E. L. Greene (E. yt'rea, 3; 45, 4895) considers the Rocky Mountain plant distinct from the Californian and names it *R. calthae florus*.

4a. Ranunculus alismaefolius alismellus A. Gray, Proc. Am. Acad. 7: 327, 1868.

Ranunculus alismellus Greene, Fl. Fran. 297, 1892.

Type Locality: "Lake Tenaya and on Mt. Dana," California.

RANGE: Washington to Wyoming and California.

Specimens examined: Mount Adams, Henderson, August 3, 1892; Suksdorf 495; Howell: Falcon Valley, Suksdorf, June 6, 1886; Klickitat River, Flett 1271; Upper Yakima, Brandegee; Wenache Mountains, Cotton 1183.

Zonal distribution: Hudsonian.

5. Ranunculus cardiophyllus Hook, Fl. Bor, Am. 1:14, pl. 5, 1829.

Ranunculus affinis lasiococcus Torr. Bot. Wilkes Exped. 213, 1874.

Type locality: "From Canada to lat. 55°." Collected by Richardson.

Range: British Columbia to Assiniboia and New Mexico.

Specimens examined: Fort Colville, Lyall in 1861; Spokane to Fort Colville, Wilkes Expedition.

6. Ranunculus populago Greene, Erythea 3: 19. 1895 (February).

Rammeulus cusickii Jones, Proc. Calif. Acad. II. 5: 615, 1895.

Type locality: Eagle Creek, Wallowa Mountains, Oregon. Collected by Cusick.

Range: Blue Mountains of Washington and Oregon.

Specimens examined: Blue Mountains, Horner 269.

Zonal distribution: Hudsonian.

7. Ranunculus glaberrimus Hook, Fl. Bor, Am. 1: 12, 1829.

Type Locality: "Common on the mountains around the Kettle Falls, and on the Rocky Mountains near the limits of perpetual snow." Collected by Douglas.

RANGE: British Columbia to Dakota, Colorado, and California.

Specimens examined: Atanum River, Flett 1266; Rattlesnake Mountains, Cotton 307; Klickitat County, Suksdorf 232; Ellensburg, Whited. March 28, 1897; Hangman Creek. Sandberg & Leiberg 8; without locality, Brandegee 611; Walla Walla, Mrs. Anderson in 1884; Colville, Lyall in 1861; Pullman, Elmer 85; Piper 1462; Chency, Tucker.

ZONAL DISTRIBUTION: Arid Transition.

8. Ranunculus triternatus A. Gray, Proc. Am. Acad. 21: 370, 1886.

Type locality: "On high hills near Goldendale," Klickitat County, Washington. Collected by Howell.

Range: Klickitat County, Washington.

29418--06 м----18

Specimens examined: Near Goldendale, Howell, April 20, 1882; Klickitat Hills, Gorman, April, 1895.

ZONAL DISTRIBUTION: Arid Transition.

9. Ranunculus sceleratus L. Sp. Pl. 1:551, 1753.

Ranunculus cremogenes Greene, Erythea 4: 121, 1896.

Type locality: European.

RANGE: British Columbia to New Brunswick, Arizona, Kansas, and Florida. Asia. Europe.

Specimens examined: Whidby Island, Piper: Fairhaven, Henderson, July 2, 1892; Rock Creek, Piper 2793; junction Crab and Wilson creeks, Sandberg & Leiberg 285; Whidby Island, Gardner 4; Admiralty Head, Piper, May, 1898; Alma, Elmer 547; Coulee City, Lake & Hull 413; Meyers Falls, Kreager; Stuart Island, Lawrence 152.

Zonal distribution: Transition.

10. Ranunculus suksdorfii A. Gray, Proc. Am. Acad. 21: 371, 1886.

Type locality: Mount Adams, Washington, in damp ground at 6,000 to 7,000 feet altitude. Collected by Suksdorf.

Range: Washington and Oregon.

Specimens examined: Olympic Mountains, Henderson 1846; Mount Rainier, Allen 97; Piper 2005; Mount Adams, Suksdorf 234, 628; Stevens Pass, Sandberg & Leiberg 766.

Zonal distribution: Arctic.

11. Ranunculus eschsholtzii Schleet. Ranunc. 2: 16. 1820.

Type locality: "Hab, in insulis Unalaschka et St. Georgii." Collected by Chamisso, Range: Alaska to Colorado and California.

Specimens examined: Olympic Mountains, Piper 2004: Baldy Peak, Lamb 1361; Cascade Mountains, latitude 49°, Lyall in 1860; Mount Stuart, Brandegee 609; Elmer 1215; Mount Adams, Suksdorf 92; Horseshoe Basin, Lake & Hull 775; Stevens Tass, Sandberg & Leiberg 769.

Zonal distribution: Arctic.

12. Ranunculus verecundus Robinson, sp. nov.

Herba parva perennis ½ dm. alta; radice e fibris numerosis fuscis longis haud incrassatis composita; caudice erecto a basibus petiolorum latiusculis pallidis submembranaceis deinde in fibris dissolutis amplecto; caulibus \(\frac{1}{3}\) subcrectis vel valde nutantibus vel etiam procumbentibus saepius semel ramosis; foliis radicalibus paucis vel saepius sate numerosis, limbo reniformi vel suborbiculari conspicue cordato tripartito 2-2.5 cm. lato utrinque glabro, segmentis 3-5-lobatis vel profunde crenatis, lobis oblongis obtusis vel rotundatis, petiolo 2 1 cm. longo glabro vel sparse villosulo basi membranacco-expanso; foliis caulinis 1-3 distantibus breviter petiolatis fere ad basin 3-5-partitis, segmentis lineari-oblongis vel angustissime ellipticis; pedunculis teretibus glabris 3-7 cm. longis; sepalis 5 concavis suborbicularibus purpurascentibus dorso pubescentibus apice rotundatis margine pallescentibus 2-4 mm, longis; petalis obovatis sepala acquantibus vel vix superantibus flavis sed in specimine exsiceato albescentibus venosis persistentibus; staminibus numerosis, antheris flavibus quam filamenta filiformia brevioribus; achaeniis numerosis in capitulo ovoideo vel breviter cylindrico congestis glabris a latere compressis 1.8 mm. longis obovoideis apice stylo brevi recurvato coronatis; receptaculo ellipsoideo vel subcylindrico foveolato albescenti praeter apicem villosulum glaberrimo.

Washington: Wet gravelly places, Mount Paddo (Adams), altitude 1,850–2,150 meters, July 31, 1883, W. X. Suksdorf 93 (type, in 11b. Gray); same locality and collector, August 30, 1904; rocky ridges and ledges, Mount Rainier, altitude 2,300 meters, J. B. Flett 2177. Montana: Little Belt Mountains, altitude 2,600 meters, F. L. Scribner, August 12, 1883, 4 (11b. Gray).

From its nearest allies, this species may be distinguished as follows: From R. eschscholtzii Schlecht, it differs in its decidedly cordate scarcely or not at all ciliate leaves, and larger achienes with relatively shorter strongly recurved style. From R, pedatifidus J. E. Sm. (R, affinis | R, Br.) it differs in its glabrous achienes and less deeply and narrowly eleft foliage. From R, alpeophilus Λ . Nelson it may be distinguished by its cordate leaves and by the fact that the receptacle is villous only at the tip. Finally from R, allenii Robinson, a plant of Labrador which in many ways it rather closely simulates, it differs in its cordate leaves and somewhat larger achienes.

13. Ranunculus bongardi Greene, Erythea 3: 51. 1895.

Ranunculus tenellus Nutt.; Torr &. Gr. Fl. 1: 23, 1838, not Viviani 1831

Ranunculus nelsonii tenellus A. Gray, Proc. Am. Acad. 8: 371, 1872.

Ranunculus occidentalis tenellus A. Gray, Proc. Am. Acad. 21: 373, 1886

Ranunculus bongardi tenellus Greene, Erythea 3: 54, 1895.

Ranunculus donglasii Howell, Fl. X. W. Am. 1: 18, 1897.

Ranunculus arcuatus Heller, Bull. Torr. Club 24: 310. 1897.

Ranunculus bongardii douglasii Davis, Minn. Bot. Stud. 2: 479, 1900.

Type locality: "Shady woods of the Oregon and Wahlamet Rivers." Collected by

Range: Alaska to Idaho and California.

Specimens examined: Clallam County, Elmer 2672, 2679; Admiralty Head, Piper, April, 1898; Tacoma, Flett 38; Silverton, Bonck 52a; west Klickitat County, Suksdarf, May 20, 1886; Klickitat River, Flett 1272; Roslyn, Whited 409; Rock Creek, Sandberg & Leiberg 95; Spokane, Dewart, May 3, 1901; Pullman, Elmer 847; Hull 411; Piper, May 31, 1894; Waitsburg, Horner 43.

ZONAL DISTRIBUTION: Transition and Canadian.

This and the following were erroneously referred in older works to R. recurratus Poir.

13a. Ranunculus bongardi greenei (Howell).

Rannuculus greenei Howell, Fl. N. W. Am. 1: 18, 1897.

Ranunculus occidentalis Iyalli A. Gray, Proc. Am. Acad. 21: 373, 4886, not R. Iyalli Hook. f. 4864.

Ranunculus tenellus lyalli Robinson in Gray, Syn. Fl. 11: 33, 1895.

!Ranunculus oecidentalis parviflorus Torr. Bot. Wilkes Exped. 214, 1874.

Type Locality: Pend Oreille River, Idaho or Washington, near latitude 49°. Collected by Lyaff.

Range: Alaska to California and Idaho.

Specimens examined: Lake Washington, Suksdorf 951; Cascade Mountains, latitude 49°, Lyall in 1859; Port Ludlow, Binns: Admiralty Head, Piper, May, 1898; Silverton, Bouck 52; Hoquiam, Lamb 1029, 1071; Seattle, Piper 223; Nisqually Valley, Allen 62, Piper, July 30, 1895; Tacoma, Flett 39; Roy, Brodie, June, 1901; Olympia, Henderson 2372; Lower Cascades, Suksdorf; Pend Oreille River, latitude 49°, Lyall in 1861; Clarks Springs, Kreager 58; Blue Mountains, Piper, July 16, 1896; Horner 45.

Zonal distribution: Transition and Canadian.

14. Ranunculus occidentalis Nutt.; Torr. & Gr. Fl. 1: 22. 1838.

Ranunculus tennipes Heller, Muhlenbergia 1: 50. 1904.

Type locality: "Plains of the Oregon River, near woods." Collected by Nuttall.

Range: British Columbia to Oregon in the coast region.

Specimens examined: Near Montesano, Heller 3935; Humptulips, Lamb 1186; Whidby Island, Gardner 3; Tacoma, Flett 20; west Klickitat County, Suksdorf; Vancouver, Piper 4947.

Zonal distribution: Humid Transition.

15. Ranunculus pennsylvanicus L. f. Suppl. 272. 1781.

Type locality: "Habitat in Pennsylvania."

RANGE: British Columbia to Nova Scotia, southward to Arizona and Georgia.

Specimens examined: Whatcom County, Gardner: Puyallup, Piper, August 26, 1897; Alma, Elmer 542; Fort Colville, Geyer 580; McCloud Lake, Suksdorf 2213.

Zonal distribution: Transition.

16. Ranunculus oreganus (A. Gray) Howell, Fl. N. W. Am. 1: 19. 1897.

Ranunculus hispidus oregana A. Gray, Proc. Am. Acad. 21: 376, 1886.

Ranunculus macounii oreganus Davis, Minn. Bot. Stud. 2: 469. 1900.

Ranunculus nitidus Ell. err. det. Hook. Fl. Bor. Am. 1: 20. 1829.

Type locality: "Shady and wet grounds, Oregon, on the Columbia."

Range: British Columbia to Oregon in the coast region.

Specimens examined: Near Montesano, Heller 3850; Klickitat County, Suksdorf 233, May 20, 1886.

ZONAL DISTRIBUTION: Humid Transition.

16a. Ranunculus oreganus macounii (Britton).

Ranunculus macounii Britton, Trans. N. Y. Acad. Sci. 12: 3, 1892.

Ranunculus hispidus Michx. err. det. Hook. Fl. Bor. Am. 1: 19, 1830.

Type locality: "Banks of rivers from Canada to near the mouth of the Mackenzie River, lat. 67°; and from the shores of Hudson's Bay to the Pacific."

RANGE: British Columbia to Canada, southward in the mountains to New Mexico.

Specimens examined: Falcon Valley, Suksdorf, June 26, 1886; Cheney, Tucker 43; Sprague, Sandberg & Leiberg 152; Wilbur, Henderson, July 12, 1892; Ellensburg, Whited 475; Spokane, Piper, July 2, 1896; Marshall Junction, Piper 2261; Pullman, Piper 3526; Waitsburg, Horner 42; Loon Lake, Beattie & Chapman 2066.

Zonal distribution: Arid Transition.

17. Ranunculus repens L. Sp. Pl. 1: 554, 1753.

Type locality: European.

Specimens examined: Black River Junction, Piper.

18. Ranunculus orthorhynchus Hook, Fl. Bor, Am. 1: 21, 1829.

Type locality: "Not unfrequent on the low points of land near rivers, in North-West America." Collected by Douglas.

Range: British Columbia to Oregon in the coast region.

Specimens examined: New London, Lamb 1202: Whidby Island, Gardner 1, 8: Scattle, Piper 1126: Tacoma, Flett, May 5, 1895; Falcon Valley, Suksdorf, June 26, 1886; Manor, Piper, July 14, 1899.

Zonal distribution: Humid Transition.

19. Ranunculus platyphyllus (Λ . Gray).

Ramunculus orthorhynchus platyphyllus A. Gray, Proc. Am. Acad. 21: 377. 1886.

Ranunculus maximus Greene, Bull. Torr. Club 14: 118. 1887.

Type locality: "In wet places, Wasatch Mountains and Idaho to E. Oregon and California south to Marin County."

Range: British Columbia to California and Nevada.

Specimens examined: Klickitat County, Suksdorf: Klickitat River, Flett 1270; Pullman, Piper 1463; Elmer 838; Hull 414.

ZONAL DISTRIBUTION: Arid Transition.

All Washington references to Ranunculus septentrionalis Poir, really refer to R, platy-phyllus.

20. Ranunculus hebecarpus Hook. & Arn. Bot. Beech. 316. 1840.

Ranunculus hebecarpus pusillus Brewer & Wats. Bot. Cal. 1: 9, 1876.

Type locality: Cahfornia.

RANGE: Washington and Idaho to California.

Specimens examined: White Salmon, Suksdorf 228; Wawawai, Elmer 75; Piper 3821.

Zonal distribution: Upper Sonoran.

21. Ranunculus muricatus L. Sp. Pl. 1: 555, 1753.

Type locality: Europe.

Specimens examined: Seattle, Piper in 1885.

22. Ranunculus cymbalaria Pursh, Fl. 2: 392. 1814.

Type locality: "In saline marshes near the salt works of Onondaga, New York."

RANGE: Alaska to California and New Jersey. Central and South America. Asia.

Specimens examined: Seattle, Piper, September, 1898; Port Ludlow, Binns: Yakima, Leckenby, May 9, 1898; North Yakima, Henderson, May 29, 4892; Rattlesnake Mountains, Cotton 414; between Coulee City and Waterville, Spillman, May, 4896; Sprague, Sandberg & Leiberg 135; Prosser, Cotton 653.

ZONAL DISTRIBUTION: Upper Sonoran and Transition.

CALTHA.

Flowers yellow; stems decumbent. 1. C. asarifolia.
Flowers white; stems erect.

 Leaves reniform-orbicular, crenate
 2. C. biţlora.

 Leaves cordate, longer than broad
 3. C. leptosepula.

1. Caltha asarifolia DC. Syst. 1: 309, 4823.

Marsh Marigold.

Type locality: "Hab, in insula Ounalaschka una ex ins. Aleuterianis."

Range: Alaska to Oregon along the coast.

Specimens examined: Granville, Conard 367.

Zonal distribution: Canadian?

This seems fairly distinct from the eastern C. patustris L.

2. Caltha biflora DC, Syst. 1: 340, 4818.

Caltha malvacca Greene, Pittonia 4: 75. 1899.

Type locality; "In ora occidentali Americae borealis in continente prope insulam Banksii." Collected by Menzies.

RANGE: Alaska to Washington.

Specimens examined: Olympic Mountains, Piper, August, 1895; Elmer 2780; Mount Adams, Suksdorf 496; Yakima Pass, Watson 16; without locality, Vasey in 1889.

Zonal distribution: Arctic.

3. Caltha leptosepala DC, Syst. 1:310, 4818.

Caltha maconnii, Greene, Pittonia 4:77, 1899.

Caltha howellii Greene, op. cit. 79.

Type Locality: Prince Williams Sound, Alaska. Collected by Menzies.

Range: Alaska to Oregon and Colorado.

Specimens examined: Cascade Mountains, latitude 49°, Lyall; Mount Rainier, Piper 2001, Flett 251; Mount Adams, Suksdorf 74; Cascade Mountains, Henderson, August, 1892; Goat Mountain, Allen 147; Horseshoe Basin, Lake & Hull 406; Elner 731.

Zonal distribution: Arctic.

TROLLIUS.

1. Trollius laxus Salisb. Trans. Lian. Soc. 8: 303, 4807.

GLOBE FLOWER.

Trollius laxus albiflorus A. Gray, Am. Journ. Sci. 11, 33: 241, 4862.

Type locality: "Prope Lancaster in Pennsylvania."

. Range: British Columbia to New Hampshire, south to Washington, Utah, and Delaware.

Specimens examined: Olympic Mountains, Flett 96; Elmer 2668, Piper, August, 4895; Cascade Mountains, latitude 49, Lyall in 4860; Wenache, Elmer 439; without locality, Vascy in 4889; Wenache Mountains, Cotton 1241.

ZONAL DISTRIBUTION: Hudsonian.

ACTAEA.

1. Actaea spicata arguta (Nutt.) Torr. Pac. R. Rep. 4:63, 1856.

Actaea arguta Nutt.; Torr. & Gr. Fl. 1:35, 1838.

Actaea eburnea Rydberg, Mem. N. Y. Bot. Gard. 1: 153, 1900.

Type locality: "Woods of the Oregon and its tributary streams." Collected by Nuttall. Range: Alaska to Montana, California and New Mexico.

Specimens examined: Clallam County, Elmer 2664; Seattle, Piper, July, 1895; Silverton, Bouck 5; Lakeview, Henderson, July 1892; without locality, Brandeger 647; without locality, Vascy 164; Lake Chelan, Lake & Hull 446; Spokane, Piper, July, 1896; without locality, Henderson, June, 1892; Blue Mountains, Horner 270; Clarks Springs, Kreager 127; Mount Carlton, Kreager 292, 297.

ZONAL DISTRIBUTION: Humid Transition and Canadian.

The fruit of this species is usually scarlet, but white-berried forms occur, distinguishable by no other character.

COPTIS. GOLDTHREAD.

 Leaflets large, 5 to 8 cm. long, obscurely 3-lobed.
 1. C. occidentalis.

 Leaflets smaller, 3-parted and incised.
 2. C. laciniata.

1. Coptis occidentalis (Nutt.) Torr. & Gr. Fl. 1:28. 1838.

Chrysocoptis occidentalis Nutt. Journ. Acad. Phila. 7: 8, 1834.

Type locality: Rocky Mountains in North Idaho or West Montana. Collected by Wyeth.

Range: Idaho and adjacent Washington.

Specimens examined: Pend Oreille River, Lyall in 1861; Ione, Kreager 401; Newport, Piper 4213.

Zonal distribution: Canadian and Arid Transition.

Coptis Iaciniata Λ. Gray, Bot. Gaz. 12: 297, 1887

Type locality: Oregon. Collected by Hall. Range: Washington to northern California.

Specimens examined: Wind River, Flett 1297.

CIMICIFUGA.

Cimicifuga elata Nutt.; Torr. & Gr. Fl. 1:36, 1838.

Type locality: "Shady woods of the Oregon." Collected by Nuttall.

Range: Washington and Oregon in the coast region.

Specimens examined, Claffam County, Elmer 2662, Mashel Mountain, Piper in 1888; Skamania County, Suksdorf 1990; near Vancouver, Piper 3502.

ZONAL DISTRIBUTION: Canadian.

PAEONIA.

1. Paeonia brownii Dougl.; Hook. Fl. Bor. Am. 1:27, 1829.

Type locality: "Near the confines of perpetual snow on the subalpine range of Mount Hood," Oregon.—Collected by Douglas in 1826.

RANGE: Washington to Utah and California.

Specimens examined: Columbia Valley, Lyall in 1860; Falcon Valley, Suksdorf 329; Peshastin, Sandberg & Leiberg 497, Leavenworth, Savage 45; Blue Mountains, Piper 2424; without locality, Vasey in 1889.

Zonal distribution: Hudsonian or Canadian.

AQUILEGIA. COLUMBINE.

Flowers scarlet and yellow.	 A. formosa.
Flowers wholly yellow	

1. Aquilegia formosa Fisch.; DC. Prod. 1:50, 1824.

Aquilegia columbiana Rydberg, Bull. Torr. Club, 29: 145, 1902.

Type locality: "In Kamchatka."

RANGE: Alaska to California and Utah.

Specimens examined: Clallam County, Elmer 2671; Montesano, Heller 3936; Humptulips, Lamb 1180; Cascade Mountains, latitude 49°, Lyall; Goat Mountains, Allen 249; Silverton, Bouck 9; Egbert Springs, Sandberg & Leiberg 385; without locality, Vasey in 1889; Fish Lake, Dunn, August 8, 1900; Cold Creek, Cotton 395; Ellensburg, Elmer 409, Whited 714; Wenache Mountains, Whited 1299; Gilberts Mining Claim, Whited 45, 153; Horseshoe Basin, Lake & Hull 403; Wilson Creek, Lake & Hull, August, 1892; Wilbur, Henderson, July, 1892; Fresh Lake, McKay 28; Loomis, Elmer in 1897; Blue Mountains, Piper, August, 1896; Lake & Hull, July, 1892.

This species has great altitudinal range occurring from sea level up to 1,800 meters altitude. It also occurs in eastern Washington in the Upper Sonoran zone. Such plants are usually finely puberulent throughout and perhaps constitute a good subspecies.

2. Aquilegia flavescens S. Wats. Bot. King. Explor. 10, 1871.

Type locality: "Wahsatch and Uintah Mountains, Utah; 5-7,000 feet altitude."

RANGE: British Columbia to Utah and Montana.

Specimens examined: Silverton, Bouck 8; Swank Creek, Brandegic 614; Wenache Mountains, Elmer 446; Mount Baldy, Cotton 1702; Chewankum, Whited 2533.

ZONAL DISTRIBUTION: Hudsonian.

So far as northwestern specimens are concerned A. flarescens is a mere subspecies of A. formosa, all intergrades occurring between them. In some places the two grow together and then merge in all particulars.

DELPHINIUM. LARKSPUR.

Roots fasciculate, elongated, not tuberlike. Pedicels usually shorter than the flowers and fruit; plants about 1 meter high. Inflorescence densely short-villous; flowers greenish. 2. D. virideseens. Inflorescence not villous; flowers blue. Leaf divisions narrow; whole plant puberu-Leaf divisions broad, glaucous beneath, glabrous; flowers dulf blue 1b. D. scopulorum glaucum. Pedicels longer than the flowers and fruit; plants 30 to 60 cm. high. Flowers blue: inflorescence not glandular.... 3. D. bicolor Flowers ochroleucous; inflorescence glandular. 4. D. xantholeucum. Roots thickened, forming irregular tubers. Pedicels ascending or spreading, longer than the flowers and fruit. D. menziesii. Mature follicles contiguous or spreading only at the tips. Stems tall, leafy; leaf segments cleft into D. columbianum. narrow lobes; flowers 10 to 20..... 6. Stems low, few leaved; leaves pedately D. depareperatum. Pedicels erect or ascending, short, the inflorescence

spike-like.

D. simplex.

1. Delphinium scopulorum stachydeum A. Gray, Bot. Gaz. 12:52. 1887.

Type locality: "Interior of Oregon." Collected by Cusick.

Range: Washington to New Mexico and Arizona.

Specimens examined: Wenache Mountains, Whited 1264.

1a. Delphinium scopulorum subalpinum A. Gray, Bot. Gaz. 12: 52, 1887.

Type locality: "Headwaters of Clear Creek, Colorado."

Range: Blue Mountains to Colorado and New Mexico.

Specimens examined: Blue Mountains, Horner 267; Piper 2442.

Zonal distribution: Hudsonian.

1b. Delphinium scopulorum glaucum A. Gray, Bot. Gaz. 12: 52, 1887.

Delphinium glaucum Wats. Bot. Cal. 2: 427, 1880.

Type locality: "Big Tree Road," California. Collected by Brewer.

Range: Alaska to California.

Specimens examined: Olympic Mountains, Piper, August, 1895; Elmer 2677; Mount Rainier, Piper, August, 1888; Nisqually Valley, Allen 248; Yakima County, Brandegee 615. Zonal distribution: Hudsonian.

2. Delphinium viridescens Leiberg, Proc. Biol. Soc. Wash. 11:39, 1897.

Type locality: Near Peshastin, Washington.

RANGE: Chelan County, Washington.

Specimens examined: Wenache Vaffey, Sandberg & Leiberg 563; Leavenworth, Whited 2556.

ZONAL DISTRIBUTION: Canadian.

3. Delphinium bicolor Nutt. Journ. Acad. Phila. 7: 10, 1834.

Delphinium glarcosum Greene, Pittonia 3: 257, 1896.

Delphinium bicolor glarcosum Davis, Minn. Bot. Studies, 2: 439, 1900.

Type locality: "On dry hills, near Flathead or Sailish River, toward the south sources of the Columbia." Collected by Wyeth.

.Range: British Columbia to Utah and Montana.

Specimens examined: Goat Mountain, Allen 146; Olympic Mountains, Piper, August, 1895; Elmer 2665; Flett 81.

4. Delphinium xantholeucum sp. nov.

Perennial from thick elongate black roots 5 to 10 cm. long; stems 60 to 80 cm. high, glabrous and glaucous up to the inflorescence; leaf blades orbicular in outline, thickish, glabrous and glaucous, 2 to 8 cm. broad, parted nearly to the base into 5 cuncate segments, these deeply 2 to 3-cleft into linear lobes; petioles glabrous and glaucous, 2 to 3 times as long as the blades; bracts narrowly linear, or the lowest cuncate and 2 or 3-cleft; inflorescence viscid-pubescent, very loose, 15 to 40 cm. long; pedicels curved, spreading, the lower 5 cm. or more long; flowers pale yellow, the sepals greenish and viscid pubescent outside; sepals and petals 10 to 12 mm. long, the stout straight spur 15 mm. long; lateral petals white-bearded; filaments blue-veined; follicles 3, straight, crect, reticulate-veined, hairy, 10 to 15 mm. long; seeds dark-colored, the angles produced into white scarious wings.

Related to D. bicolor Nutt., but a larger plant, with constantly pale yellowish flowers, and the whole inflorescence viscid-pubescent even to the pods.

Collected by Kirk Whited at Wenache, Wash., May 14, 1899, in flower; May 24, 1899, in fruit; also by G. R. Vesey in 1889, no locality indicated.

5. Delphinium menziesii DC. Syst. 1; 355, 1818.

Delphinium pauperculum Greene, Pittonia 1: 284, 1889.

Type locality: "Hab. in Nova-Georgia." Collected by Menzies.

RANGE: British Columbia to California and Idaho.

Specimens examined: Whidby Island, Gardner 9; Drayton Harbor, Lyall, May 3, 1858; Cascade Mountains, latitude 49°, Lyall in 1859; Kickitat River, Flett 1269; Falcon Valley,

Suksdorf, May 10, 1886; west Klickitat County, Suksdorf, May 11, 1886; Mount Adams, Suksdorf, July 13, 1886; North Yakima, Leekenby, April 18, 1898; Ellensburg, Piper, May 20, 1897, 2698; Whited 306; Sprague, Henderson, May 30, 1892; Spokane, Piper, May 46, 1896; Hangman Creek, Sandberg & Leiberg 27; Colfax, Henderson; Pullman, Elmer 221; Piper 1457; Mount Carlton, Kreager 250; Seattle, Piper 217; Prosser, Cotton 583; Sunnyside, Cotton 349.

ZONAL DISTRIBUTION: Upper Sonoran and Transition.

6. Delphinium columbianum Greene, Erythea 2: 193, 1894.

Delphinium nuttallii Λ. Gray, Bot. Gaz. 12: 51, 54, 4887, not D. nuttallianum Pritzel.

Type locality: "Along and near the Columbia River above The Dalles."

Range: British Columbia to Oregon.

Specimens examined: Coupeville, Gardner; Clallam County, Elmer 2673; Montesano, Heller 3879; Cape Horn, Piper 4967; Woodlawn, Henderson; Olympia, Kineaid; Muckleshoot Prairie, Dr. Ruhn; Fourth Plain, Piper 3071; Klickitat County, Suksdorf, June 4, 1886; Falcon Valley, Suksdorf 326; Fort Vancouver, Tolmie; Clealum, Whited 402; without locality, Howell; Blue Mountains, Piper 2443; Lewis River, cultivated at Pullman, Piper 3818; Columbia River, Nuttall.

Zonal distribution: Transition.

7. Delphinium depauperatum Nutt.; Torr. & Gr. Fl. 1: 33, 1838.

Delphinium pauciflorum Nutt. loc. cit., not D. Don. 4803.

Delphinium nuttallianum Pritzel, in Walp. Rep. 2: 744, 1843.

Type locality: "In the shade of pine woods in the Blue Mountains of the Oregon." Collected by Nuttall.

RANGE: Washington to Colorado and California.

Specimens examined: Stevens Pass, Sandberg & Leiberg 785; Mount Carlton, Kreager 250.

Zonal distribution: Hudsonian.

Delphinium simplex Dougl.; Hook. Fl. Bor. Am. 1: 25, 1829.

Type locality: "On the subalpine range west of the Rocky Mountains near the Columbia, plentiful." Collected by Douglas.

RANGE: Idaho and adjacent Washington and Oregon.

Specimens examined: West Klickitat County, Suksdorf, June 4 and 24, 1886; Klickitat County, Howell, June, 1879; Falcon Valley, Suksdorf 497; Ellensburg, Piper 2740; Whited 523; Toppenish, Henderson 2374; Loomis, Elmer 594; Spangle, Suksdorf 235; Spokane, Piper June 25, 1897; Spokane County, Suksdorf 720; without locality, Vascy in 1889; Pullman, Piper 3100, 1458; Hardwick in 1895.

ZONAL DISTRIBUTION: Arid Transition.

8a. Delphinium simplex distichiflorum Hook. Lond. Journ. Bot. 6: 67, 1847.

Delphinium distichum Geyer; Hook, op. cit. 68, as synonym.

Delphinium azureum Michx, err. det. Torr. Bot. Wilkes Exped. 217, 1874.

Type locality: "Grassy stony borders of rivulets, high plains of Spokane and Nez Percez."

Range: Idaho, Eastern Washington, and Eastern Oregon.

Specimens examined: West Klickitat County, Suksdorf, June 25, 1886; Klickitat River, Suksdorf, July 16, 1886; Glenwood, Flett 1267; without locality, Vasey in 1889; Tieton River, Cotton 449; without locality, Hilgard in 1882; Big Meadows, Stevens County, Kreager 417.

Zonal distribution: Arid Transition.

ACONITUM.

1. Aconitum columbianum Nutt.; Torr. & Gr. Fl. 1: 34, 1838. Aconite.

Aconitum nasutum Fisch, err. det. Hook, Fl. Bor. Am. 1: 26, 1829.

Type locality: "Springy places on the Oregon below Walla Walla." Collected by Nuttall.

RANGE: British Columbia to California and Arizona.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1860; Mount Stuart, Sandberg & Leiberg 577; Wenache Mountains, Whited 1177; Tieton River, Cotton 453; Sincoe Mountains, Howell 305; Cascade Mountains, Mrs. Steinweg in 1894; Conconully, Whited 1310; Okanogan County, Whited 224; without locality, Vasey in 1889; Hangman Creek, Suksdorf 236; Blue Mountains, Piper 2416, 2456; Lake & Hull 400.

ZONAL DISTRIBUTION: Canadian.

BERBERIDACEAE. Barberry Family.

Shrubs; leaves evergreen, pinnate, spiny	Berberis.
Herbs; leaves deciduous, not pinnate nor spiny.	
Leaves ternately compound; flowers panicled	Vancouveria.
Leaves 3-parted; flowers spicate	Achlys.

BERBERIS.

Leaflets palmately nerved. Leaflets pinnately nerved.	1.	B. nervosa.
Leaflets 5 to 11, shining, strongly spinulose	2.	B. aquifolium.
Leaflets 3 to 7, dull, often glaucous, weakly spinulose	3.	B. repens.

1. Berberis nervosa Pursh, Fl. 1: 219, 1814.

Oregon grape.

Mahonia glumacca DC, Syst. 2: 21, 1821.

Type locality: Same place as that of Berberis aguifolium.

Range: British Columbia, Washington, and Oregon. Also local in North Idaho.

Specimens examined: Challam County, Elmer 2758; near Montesano, Heller 3991; Whidby Island, Gardner 12; Admiralty Head, Piper, April, 1898; Port Ludlow, Binus; Tacoma, Flett 109; Olympia, Henderson, October, 1892; upper Valley Nisqually, Allen 136; Roy, Allen 77; Lower Cascade Mountains, Suksdorf; Peshastin Canyon, Watson 25; Railroad Creek, Elmer, September, 1897; without locality, Vasey in 1889; Chewaukum, Whited 2546.

Zonal distribution: Humid Transition.

2. Berberis aquifolium Pursh, Fl. 1: 219, 1814.

OREGON GRAPE.

Type locality: "On the great rapids of the Columbia among rocks in rich vegetable soil." Collected by Lewis.

RANGE: British Columbia, Washington, and Oregon.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Admiralty Head, Piper, May, 1898; Tacoma, Flett 73; upper Nisqually Valley, Allen 135; Roy, Allen 98; Klickitat River, Flett 1265; Fort Vancouver, Tolmie; White Salmon, Suksdorf 231; Wenache Mountains, Whited, July 4, 4900; Fort Colville, Lyall; Watson 24; Lake Chelan, Lake & Hull 422; Spokane, Henderson, July, 1892; without locality, Cooper.

ZONAL DISTRIBUTION: Humid Transition, rarely Arid Transition.

Pursh's actual type specimen now preserved in the Philadelphia Academy is certainly the plant generally accepted under this name and not the same as *B. repens* Lindl, as has been claimed. Lewis's specimens of this and of *B. nervosa* were collected at the Great Rapids [Cascades] of the Columbia, in which vicinity *B. repens* seems not to occur.

3. Berberis repens Lindl. Bot. Reg. 14: pl. 1176, 1828.

Type locality: A native of the north-western part of North America." Originally collected by Lewis and Clark.

RANGE: British Columbia to California, Wyoming, and New Mexico.

Specimens examined: Ellensburg, Whited 4231; Union Flat, Piper, April, 1897; Spokane, Sandberg & Leiberg 73; Davis ranch, Kreager, July 21, 1902; Pullman, Beattie, May 7, 1902; without locality, Vascy in 1889.

Zonal distribution: Arid Transition.

VANCOUVERIA.

1. Vancouveria hexandra (Hook.) Morr. & Dec. Ann. Sci. Nat. H. 2: 351, 1834.

Epimedium hexandra Hook, Fl. Bor, Am. 1: 30, 1830.

Type locality: "North-West coast of America." Collected by Menzies.

RANGE: British Columbia to California in the coast region.

Specimens examined: Chehalis County, Lamb 247; Nisqually River, Piper 2059; Allen 66; Olympia, Kincaid, July, 1896; Lower Cascades, Suksdorf, May 30, 1886; Fort Vancouver, Dr. T. E. Wilcox, May, 1883; Manor, Piper, July 40, 1899; Cape Horn, Piper 5007; Vancouver, Piper 4924.

ZONAL DISTRIBUTION: Humid Transition and Canadian.

ACHLYS.

1. Achlys triphylla (Smith) DC. Syst. 2: 35, 1821.

VANILLA LEAF.

Leontice triphylla Smith, Rees' Cycl. 20: no. 5, 1812.

Type locality: "On the west coast of North America." Collected by Menzies.

RANGE: British Columbia to North California in the coast region.

Specimens examined: Clallam County, Elmer 2757; Roy, Allen 95; upper Nisqually Valley, Allen 64; Mason County, Kincaid, May, 1892; Marshfield, Henderson, June, 1892; Tacoma, Flett 62; Olympia, O. E. Pelton in 1879; White Salmon, Suksdorf 230; without locality, Vascy in 1889.

ZONAL DISTRIBUTION: Humid Transition.

PAPAVERACEAE. POPPY FAMILY.

Flowers regular.

Leaves alternate, lobed or dissected.

Sepals united, funnel-shaped; stigmas not united..... Eschscholzia (p. 283).

Flowers irregular.

Outer petals both spurred or gibbons. Bikukulla (p. 284).

ESCHSCHOLZIA.

Eschscholzia columbiana Greene, Pittonia 5: 231, 4905.

Type locality: "Lower Columbia River in Washington." Collected by Suksdorf.

Range: Lower Columbia Valley, Washington and Oregon.

Specimens examined: Klickitat County, Suksdorf, said to be native.

The commonly cultivated E. californica Cham, is a frequent garden escape, and it is probably such a plant that is recorded in Cooper's list as Chryseis californica.

PAPAVER.

1. Papaver argemone L. Sp. Pl. 1: 506, 1753.

Type locality: European.

Specimens examined: Spokane, Dewart, May 20, 1901.

PLATYSTIGMA.

 Platystigma oreganum (Nutt.) Benth. & Hook.; Brewer & Wats, Bot. Cal. 1; 20. 1876.

Meconella oregana Nutt.; Torr. & Gr. Fl. 1: 64, 1838.

Type locality: "Open plains of the Oregon near its confluence with the Wahlamet." Collected by Nuttall.

Range: British Columbia to Oregon in the coast region.

Specimens examined: Whidby Island, Gardner 13; Oreas Island, Lyall in 1858; Alki Point, Piper 1098; Tacoma, Flett 80; Klickitat County, Suksdorf in 1878.

ZONAL DISTRIBUTION: Humid Transition.

BIKUKULLA.

Inflorescence simple and racemiform.

Flowers nearly white; corolla divergently 2-spurred. 1. B. cucullaria.
Flowers pink; corolla saccate at base. 2. B. aniflora.
Inflorescence thyrsoid; flowers pink 3. B. formosa.

1. Bikukulla eucullaria (L.) Millsp. Bull. W. Va. Agr. Exp. Sta. 2: 327, 1892.

Dutchman's breeches.

Fumaria encullaria L. Sp. Pl. 2: 699, 1753.

Dielytra cucullaria DC, Syst. 2: 108, 1821.

Bieneulla occidentalis Rydberg, Bull. Torr. Club 29: 160, 1902.

Type locality: "Habitat in Virginia, Canada."

Range: Washington and Oregon to Nova Scotia, southward to Missouri and North Carolina.

Specimens examined: Klickitat County, Suksdorf 1946; Almota, Piper 1876; Waitsburg, Horner 118.

Zonal distribution: Upper Sonoran.

2. Bikukulla uniflora (Kellogg) Howell, Fl. N. W. Am. 1: 34, 1897.

Dicentra uniflora Kellogg, Proc. Cal. Acad. Sci. 4: 141, 1870.

Type locality: "At Cisco and at the summit of the Sierra Nevada mountains on the line of the Central Pacific Railroad."

Range: Washington to California and Wyoming.

Specimens examined: Mount Adams, Suksdorf 330; Flott 1264.

ZONAL DISTRIBUTION: Canadian?

3. Bikukulla formosa (Andr.) Coville, Contr. Nat. Herb. 4; 60, 1893.

Fumaria formosa Andr. Bot. Rep. 6: pl. 393, 1797?

Dielytra formosa DC, Syst. 2: 109, 1821.

Dielytra formosa G. Don, Hist. Diehl. Pl. 1: 140, 1831.

Dielytra saccata Nutt.; Torr. & Gr. Fl. 1: 67, 1838.

Type locality: Not known.

Range: British Columbia to California in the coast region.

Specimens examined: Challam County, Elmer 2816; Seattle, Smith 18; Piper, May, 1891; Tacoma, Flett 64; upper Valley Nisqually, Allen 63; Silverton, Bouck 13; Horseshoe Basin, Lake & Hull 119; Stevens Pass, Whited 1438; Kittitas County, Sandberg & Leiberg 702; without locality, Vascy in 1889.

Zonal distribution: Humid Transition.

CAPNOIDES.

Flowers pink; leaves very large. 1. C. scouleri. Flowers yellow; leaves moderate 2. C. aurea.

1. Capnoides scouleri (Hook.) Kuntze, Rev. Gen. Pl. 1: 15, 1891.

Corydalis scoulcri Hook, Fl. Bor, Am. 1: 36, 1829.

Corydalis macrophylla Nutt.; Torr. & Gr. Fl. 1: 69, 1838.

TYPE LOCALITY: "In dark shady woods of North-West America; plentiful near the confluence of the Columbia with the sea." Collected by Scouler and by Douglas.

Range: Washington and Oregon in the coast region.

Specimens examined: Near Montesano, Heller 3874; Little Hoquiam River, Lamb 1063, Succotash Valley, Piper, August, 1895; July, 1895; Skokomish Valley, Kincaid, June 1892; upper Valley Nisqually, Allen 118; Steilacoom; Ilwaco, Piper 4958.

ZONAL DISTRIBUTION: Canadian.

2. Capnoides aureum (Willd.) Kuntze, Rev. Gen. Pl. 1: 14, 1891.

Corydalis aurea Wiffd, Enum. 740, 1809.

Type locality: "Habitat in Canada."

Range: British Columbia to Hudson Bay and New England, southward to Arizona and Texas.

Specimens examined: Rock Island, Sandberg & Leiberg 432; Spokane, Piper, May, 1898; Marshall Junction, Piper, July, 1896; Wawawai, Elmer, June, 1897.

Zonal distribution: Arid Transition and Upper Sonoran.

BRASSICACEAE. MUSTARD FAMILY.

Pods indehiscent. Flowers red; pods elongate, cylindric, somewhat constricted	28. Raphanus (d. 307).
Flowers not red; pods orbicular or globose.	(1)
Pods globose, reticulated; Howers yellow Pods flattened, orbicular; flowers white.	25. Neslia (p. 306).
Fruit wingless; pubescence branched	26. Athysanus (p. 306).
Fruit winged; pubescence simple	
Pods dehiscent, 2-valved, either elongate (sifiques) or short	1,
(silicles).	
Pods elongate, therefore siliques.	
Siliques compressed parallel to the broad partition.	
Valves nerveless; leaves all petioled.	
Flowers red: stem 2 or 3-leaved near the	
summit	4. Dentaria (p. 288).
Flowers white; stem leafy below or	1
throughout	5. Cardamine (ρ. 289).
Valves 1-nerved; caufine leaves sessile.	1
Sifiques lanceolate, the valves reticulate	6. Parrya (p. 291).
Siliques linear.	1
Petals flat; anthers short, subcordate.	7. Arabis (p. 291).
Petals twisted; anthers long, sagit-	•
tate	8. Streptanthus (p. 296).
Siliques terete, not at all compressed.	\1
Pods 4 cm. long or more.	
Flowers white or red; stigmas entire; pods	
erect	11. Тиевуровим (р. 298).
Flowers yellow; stigmas 2-lobed; pods	•
spreading	12. Екүзімем тр. 299 г.
Pods less than 4 cm. long.	
Herbage canescent; flowers white; low al-	
pine perennials	13. Smelowskia (p. 300).
Herbage not canescent; flowers yellow or white.	-

```
Siliques beaked; seeds globose...... 14. Brassica (p. 301).
               Siliques beakless; seeds oblong.
                   Valves of the pods nerveless . . . 9. Roripa (p. 296).
                   Valves of the pods nerved.
                       Annuals: leaves pinnate or
                         Perennials.
                           Leaves entire or suben-
                             Leaves lyrate.......... 17. CAMPE (p. 303).
Pods short, therefore silicles.
   Silicles compressed parallel to the partition.
       Flowers solitary on scapes, white; seeds winged. 1. Platyspermum (p. 286).
       Flowers racemose; seeds wingless.
           Silicles orbicular....
                                                 2. Alyssum (p. 287).
           Silicles ovate or oblong.....
                                                 3. Draba (p. 287).
   Silicles not compressed, or compressed contrary to
     the partition.
       Plant aquatic, submerged; leaves subulate; pods
         Plants terrestrial: leaves not subulate.
           Pods terete, not compressed.
               Pubescence stellate; pods globose.... 10. Lesquerella (p. 298).
               Pubescence not stellate; pods oblong. 9. Roripa (p. 296).
           Pods compressed contrary to the partition.
               Valves nerveless; pod obcordate..... 24. Physaria (p. 306).
               Valves 1-nerved.
                   Nerves of the valves obtuse, not
                     prominent.
                       Silicles cuneate, notched at
                         apex..... 19. Bursa (p. 303).
                       Silicles not cuneate; not
                         notched at apex.
                           Cauline leaves sessile;
                             pod elliptic ......... 20. Hutemisia (p. 304).
                           Cauline leaves auricu-
                             late; pod obovoid . . . 21. Camelina (p. 304).
                   Nerves of the valves forming
                     acute keels or wings.
                       Silicles orbicular or obovate:
                         cells 1 or 2-seeded...... 22. LEPIDIUM (p. 304).
                       Sificles ovate or oblong; sili-
                         cles 2 to several seeded ... 23. Theaspi (p. 305).
```

PLATYSPERMUM.

1. Platyspermum scapigerum Hook. Fl. Bor. Am. 1: 68, 1830.

Type locality: "Moist rocks and in shallow soil at the Great Falls [Celilo Falls] of the Columbia." Collected by Douglas.

Range: Washington and Idaho to Nevada.

Specimens examined: Klickitat Valley, *Howell*; Colville, *Lyall*, March 31, 1861; Pullman, *Elmer* 82; *Piper*, April, 1894, May, 1893.

Zonal distribution: Arid Transition.

The stamens in this plant are variable in number, not uncommonly 4 or 5 in place of the normal 6. The peppery pods are eaten by children.

ALYSSUM.

1. Alyssum alyssoides (L.) Gouan, Hort. Monsp. 321, 1762.

Chypeola alyssoides L. Sp. Pl. 2: 652, 1753.

Allyssum calycinum L. Sp. Pl. ed. 2, 2: 908, 1763.

Type locality: "Habitat in Austria, Gallia."

Specimens examined; Seattle, Piper in 1885; Pullman, Piper.

DRABA.

Annuals.

Flowers white.

Flowers yellow.

Pods 6 to 8 mm. long, much shorter than pedicels . . 3. D. nemorosa,

Pods 8 to 15 mm. long, about equaling the pedicels . . 4. D. stenotoba.

Perennials.

Midrib of leaves becoming prominent.

Midrib of leaves not prominent.

Stems very leafy; flowers yellow..... r. D. aurcola.

Draba verna L. Sp. Pl. 2: 642, 1753.

Type locality: Europe.

Specimens examined: Vancouver, Suksdorf 499; T. E. Wilcox, March, 1883; Walla Walla, Leckenby, April, 1898; Waitsburg, Horner 606.

2. Draba caroliniana micrantha (Nutt.) A. Gray, Man. ed. 5, 72, 4867.

Draba micrantha Nutt.: Torr. & Gr. Fl. 1: 109, 1838.

Type locality: "Open plains and rocky places about St. Louis, and in Arkansas."

Range: Washington to Illinois, Texas, and New Mexico.

Specimens examined: North Yakima, Henderson, May, 1892; Spokane, Piper, May, 1897; Waitsburg, Horner 74; Wawawai, Piper 2801.

Zonal distribution: Arid Transition and Upper Sonoran.

3. Draba nemorosa L. Sp. Pl. 2: 643, 1753.

Type locality: "Habitat in Succiae nemoribus."

RANGE: British Columbia to Colorado and the Great Lakes. Europe. Siberia.

Specimens examined: Whidby Island, Gardner 25; White Salmon, Suksdorf 232; Fort Colville, Lyall in 1861; Geyer 626; Hangman Creek, Sandberg & Leiberg 4; Pullman, Piper 1794; Elmer 151; Almota, Piper, April, 1894; Waitsburg, Horner 608; Wawawai, Piper 2800.

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

4. Draba stenoloba Ledeb, Fl. Ross. 1: 154, 1841.

Type locality: "In ins. Unalaschka."

Range: Alaska to Colorado and California.

Specimens examined: Olympic Mountains, Flett 102; Mount Baker, Flett 851; Klickitat River, Flett 1142 in part; Yakima County, Henderson 2385 B; Stevens Pass, Sandberg & Leiberg 758; Wenache Mountains, Elmer 434; Wenache Mountains, Cotton 1288.

Zonal distribution: Hudsonian.

5. Draba glacialis Adams, Mem. Soc. Nat. Mosc. 5: 106, 1817.

Type locality: "In promontorio Byskofskoymys," near the mouth of the Lena River, Siberia.

RANGE: Athabasca to Colorado and California. Siberia.

Specimens examined: Olympic Mountains, Flett 844; Cascade Mountains, latitude 49°, Lyall in 1860; Mount Adams, Flett 1131; Chiquash Mountains, Suksdorf 2426; Blue Mountains, Piper 2404.

Zonal distribution: Arctic.

6. Draba douglasii A. Gray, Proc. Am. Acad. 7: 328, 1868.

Braya oregonensis A. Gray, Proc. Am. Acad. 17: 199, 1882.

Type Locality: "High Sierra Nevada; on the gravelly 'divide' between East Carson and West Walker Rivers." Collected by Anderson. Also from "the interior of Oregon or California." Collected by Douglas.

Specimens examined: Klickitat Hills, Howell 50, 386.

7. Draba Ionchocarpa Rydberg, Mem. N. Y. Bot. Gard. 1: 181, 1900.

Draba nivalis elongata S. Wats. Proc. Am. Acad. 23: 258, 1888, not D. elongata Host, 1827.

Type locality: "Rocky Mountains, from British America to Wyoming and the Uintas; Mt. Adams."

Range: British Columbia and Alberta to Utah.

Specimens examined: Mount Rainier, Piper 2060; Mount Baker, Flett 856; Mount Adams, Suksdorf 239; Chiquash Mountains, Suksdorf 2541.

ZONAL DISTRIBUTION: Arctic.

8. Draba aureola S. Wats. Bot. Cal. 2: 430, 1880.

Type locality: "Sierra Nevada, in Sierra County," California.

Range: Washington to California.

Specimens examined: Mount Rainier, Flett 286; Piper 2061; Smith & Piper 699.

Zonal distribution: Arctic.

Draba Lemmoni S. Wats. This species is accredited to Washington on a specimen collected by Flett in the Olympic Mountains and thus determined by Wiegand.^a This specimen certainly is not D, lemmoni, but is probably an undescribed species. The material is too young, however, for satisfactory description.

DENTARIA.

Basal leaves cordate-orbicular, crenate or sinuate........... 1. D. tenella.

Basal leaves parted or divided into 3 or 5 segments.

Dentaria tenella Pursh, Fl. 2: 439, 1814.

Type locality: "On the banks of the Columbia." Collected by Lewis, the exact place near the mouth of Sandy River, Oregon.

Range: Washington and Oregon.

Specimens examined: Whidby Island, Gardner 14; Silverton, Bouck 21; Tacoma, Flett 70; Snoqualmie, Hindshaw; upper Nisqually Valley, Allen 51; Nisqually tide flats, Flett 95; west Klickitat County, Suksdorf 4, 235; Seattle, Piper in 1888.

ZONAL DISTRIBUTION: Humid Transition.

2. Dentaria macrocarpa Nutt.; Torr. & Gr. Fl. 1: 88. 1838.

Cardamine querectorum Howell, Erythea 3:33. 1895.

Cardamine tenella covilleana Schulz; Engler's Bot. Jahrb. 32: 391. 1903.

Cardamine tenella dissecta Schulz, op. cit.

Cardamine tenella quercetorum Schulz, op. cit. 390.

Type locality: "Woods of the Oregon." Collected by Nuttall.

Range: British Columbia to north California.

Specimens examined: West Klickitat County, Suksdorf 1927, 95, 500, 501, 233; Darling Mountains, Flett 4136; Simcoe Mountains, Howell, June, 1879; Klickitat Hills, Gorman, April, 1895.

A variable species. Schulz's subspecies are based entirely on characters of leaf outline, but these seem too variable to rely upon. Field study and large suites of specimens are necessary before the species can be satisfactorily understood.

 Dentaria macrocarpa pulcherrima (Greene) Robinson in Gray, Syn. Fl. 1¹: 154, 1895.

Cardamine pulcherrima Greene, Erythea 1:148, 1893.

Type locality: Near Mosier, Oregon. Collected by Howell.

Range: Oregon and Washington.

Specimens examined: Klickitat Hills, Howell 1408.

CARDAMINE.

Leaves all simple.
4
Alpine dwarf; leaves ovate or elliptic, entire 1. C. belliditolia.
Subalpine, tall; leaves cordate or reniform, sinuate
Leaves, or some of them, pinnate.
Basal leaves simple; cauline 3 to 5-foliolate.
Leaf margin entire or merely simuate 3. C. breweri.
Leaf margin crenately 7 to 9-lobed
Basal leaves pinnate.
Leaves all 3-foliolate, sometimes 5-foliate; leaflets coarsely 3 to
5-toothed 5. C. angulata.
Leaves 3 to 9-foliolate.
Petals 4 mm. long; leaflets 5 to 9, orbicular 6. C. occidentalis.
Petals 2 to 4 mm. long; leaflets 3 to 7.
Flowers subumbellate
Flowers racemose.
Capsules 20 to 30-seeded; leaflets mostly ob-
long
Capsules 8 to 20-seeded; leaflets mostly round-

1. Cardamine bellidifolia L. Sp. Pl. 2: 654, 1753.

Type locality: "Habitat in Alpibus Lapponiae, Helvetiae, Brittaniae."

RANGE: Alaska to California, Montana, and the White Mountains. Europe. Asia.

Specimens examined: Chiquash Mountains, Suksdorf 2363.

Zonal distribution: Arctic.

2. Cardamine Iyallii S. Wats. Proc. Am. Acad. 22: 466, 1887.

Cardamine Iyallii pilosa Schulz, Engler's Bot. Jahrb. 32: 438, 1903.

Type Locality: "Banks of the Ashtnola, Cascade Mountains." Collected by Lyall in 1860.

RANGE: British Columbia to California and Utah.

Specimens examined: Klickitat River, Flett 1135; banks of the Ashnola, Cascade Mountains, Lyall in 1860; Blue Mountains, Piper 2455; Horner in 1897; without locality, Vascy in 1889; Wenache Mountains, Cotton 1642; Elmer 435; Cascade Mountains, Willies Expedition.

Zonal distribution: Hudsonian and Canadian.

Schulz's subspecies *pilosa* includes forms with more or less pubescence. It seems scarcely worthy of recognition.

29418--06 м----19

3. Cardamine breweri S. Wats. Proc. Am. Acad. 10: 339, 1875.

Cardamine orbicularis Greene, Pittonia 4: 202, 1901.

Type locality: California, "near Sonora Pass at 8-10,000 feet altitude." Collected by Brewer.

Range: Washington to Wyoming and California.

Specimens examined: Tacoma, Fiett 106, 178; upper Nisqually Valley, Allen 52; Quinault, Conard 173.

ZONAL DISTRIBUTION: Humid Transition.

4. Cardamine vallicola Greene, Pittonia 3: 116, 1896.

Cardamine callosicrenata Piper, Bot. Gaz. 22:488, 1897.

Type locality: "Wet meadows along Dale Creek, Wyoming."

RANGE: Washington to Wyoming and California.

Specimens examined: Mount Carlton, Kreager 302; Spokane, Piper in 1896.

ZONAL DISTRIBUTION: Arid Transition.

5. Cardamine angulata Hook. Fl. Bor. Am. 1: 41. 1829.

Cardamine angulata pentaphylla Schulz, Engler's Bot. Jahrb. 32: 407, 1903.

Type locality: "Banks of the Columbia." Collected by Scouler and by Douglas.

Range: Washington and Oregon west of the Cascade Mountains.

Specimens examined: Hoquiam. Lamb 1053; Montesano, Heller 3863; Tacoma, Flett 45; upper Valley Nisqually, Allen 128, 128a; Hwaco, Piper 4955.

ZONAL DISTRIBUTION: Humid Transition.

6. Cardamine occidentalis (S. Wats.) Howell, Fl. N. W. Am. 50, 1897.

Cardamine pratensis occidentalis S. Wats, in Gray, Syn. Fl. 11:158, 1895.

Type locality: Sauvies Island, Oregon. Collected by Howell.

Range: Washington and Oregon.

Specimens examined: West Klickitat County, Suksdorf; Tacoma, Flett 89 in part; North Yakima, Menderson, June 19, 1892.

7. Cardamine kamtschatica (Regel) Schulz, Engler's Bot. Jahrb. 32:470, 1903.

Cardamine sylvatica kandschatica Regel, Bull. Soc. Nat. Mosc. 342: 172, 1861.

Cardamine umbellata Greene, Pittonia 3: 154, 1897.

Type locality: Kamtschatea.

Range: Alaska to Oregon. Siberia.

Specimens examined: Olympic Mountains, Piper 1018, 2183; Mount Rainier, Piper 2061; near Fort Colville, Lyall in 1861; Mount Rainier, Flett 2149.

Zonal distribution: Arctic.

8. Cardamine pennsylvanica Muhl.; Willd. Sp. Pl. 31: 486, 1800.

Cardamine hirsuta acuminata Nutt.; Torr. & Gr. Fl. 1:85, 1838.

Cardamine acaminata Rydberg, Bull. Torr. Club 29:237, 1902.

Type locality: Pennsylvania.

Range: Temperate North America.

Specimens examined: Seattle, Piper 4116; Silverton, Bonck 18; Tacoma, Flett 89 in part; Cascade Mountains, latitude 49°, Lyall in 1859; Nisqually Valley, Allen 53; west Klickitat County, Suksdorf 503; Klickitat River, Flett 1139; Fort Colville, Lyall in 1861; Horseshoe Basin, Elmer 733; Wenache, Whited 38; Rock Lake, Piper 2797; Hangman Creek, Sandberg & Leiberg 63.

Zonal distribution: Transition.

9. Cardamine oligosperma Nutt.; Torr. & Gr. Fl. 1: S5. 1838.

Type locality: "Shady woods of the Oregon." Collected by Nuttall

RANGE: British Columbia to California.

Specimens examined: Hoquiani, Lamb 4026; Challam County, Elmer 2692; Whidby Island, Gardner 24; Seattle, Piper 546; Tacoma, Flett 76; San Juan Island, Lyall in 1858; Goat Mountains, Allen, August 23, 1895; without locality, Cooper.

ZONAL DISTRIBUTION: Humid Transition.

The following specimens seem to me ambiguous between C, oligosperma and C, pennsylvanica and I am unable to refer them elsewhere: Seattle, Piper 732; Tacoma, Flett, April 20, 1896; west Klickitat County, Suksdorf 505, 504; Skokomish River, Piper 2182; Kincaid; Pend Oreille River, Lyall in 1861; Waitsburg, Horner 588, 79; Wawawai, Elmer.

PARRYA.

1. Parrya menziesii (Hook.) Greene, Fl. Fran. 253, 1891.

Phoenicaulis menziesii Greene, Bull. Torr. Club. 13: 143, 1886.

Hesperis menziesii Hook, Fl. Bor, Am. 1:60, 1830.

Phoenicaulis cheiranthoides Nutt.; Torr. & Gr. Fl. 1:89, 1838.

Type locality: California. Collected by Menzies.

Range: Washington to California and Nevada.

Specimens examined: Ellensburg, Piper 2712; Kittitas Valley, Whited 68; Blue Mountains, Piper 2414.

Zonal distribution: Arid Transition.

Parrya menziesii lanuginosa S. Wats. in Gray, Syn. Fl. 11: 152, 1895.

Type locality: "Lower Columbia Valley, east of the Cascades, Douglas, Suksdorf."

Range: Washington to California.

Specimens examined: Columbia River, Douglas in 1830; between Klickitat Valley and Columbia River, Suksdorf 236; east side Columbia below the Chelan, Watson 28; near Goldendale, Howell 43; Wenache, Whited 1019; North Yakima, Mrs. Steinweg in 1891; Crab Creek, Sandberg & Leiberg 242; without locality, Vascy in 1889; Klickitat Hills, Gorman, April, 1895; Rattlesnake Mountains, Cotton 551.

Zonal distribution: Arid Transition.

ARABIS. ROCK CRESS. Seeds wingless; flowers white. Radical leaves pinnately cleft into short and broad segments... 1. A. lyrata occidentalis. Radical leaves entire. Cauline leaves not auriculate. Herbage wholly stellate-pubescent..... 2. A. whitedii. Herbage glabrous above, pubescent below with simple or forked hairs..... 3. A. nuttallii. Cauline leaves auriculate; plant glaucous, glabrous Seeds winged or wing-margined. Seeds arranged in a single row. Cauline leaves sessile not cordate or auricled. 5. A. furcata. Cauline leaves cordate or auriculate at base 6. 4. hirsuta. Seeds more or less distinctly in two rows. Cauline leaves not at all auriculate at base; leaves all entire, villous-hirsute. 18. 4. cusicky. Cauline leaves auriculate or cordate. Radical leaves dentate. Pods reflexed, usually straight; whole plant finely stellate-pubescent..... 7. A. holboellii.

> Flowers dark-purple; basal leaves somewhat pubescent, the upper glabrous and

glaucous..... S. A. atrorubens.

Pods arcuate, spreading.

Flowers rose-colored; whole plant roughly stellate-pubescent. Base of the stems woody and branched. 9. 4. perennans. Base of the stems herbaceous or Radical leaves entire or merely denticulate. Pods reflexed. Pubescence densely and finely stellate, Pubescence scant, stellate, or wanting; Pods divaricate; herbage soft pubescent Pods ascending. Plant glaucous; lower leaves finely and densely stellate-pubescent 14. A latifolia. Plant green; pubescence scanty. Stems several, slender, from a woody caudex; leaves small . . . 17. A. microphylla. Stems solitary or few from a herbaceous or scarcely woody base. Tall 30 to 60 cm.; plant somewhat glaucous; pubescence of 2-forked hairs....... 15. A. drummondii. Low 10 to 30 cm.; plant glabrous or somewhat stellate pubescent below....... 16. A. lyallii.

1. Arabis Iyrata occidentalis S. Wats. in Gray, Syn. Fl. 11: 159, 1895.

Type locality: "From Alaska to British Columbia and the eastern side of the Rocky Mts. in Brit. America: Point Pelee on Lake Erie, Macoun."

Range: Alaska to Washington and eastward to Lake Erie.

Specimens examined: "On Nooksack River near Mount Baker," Suksdorf 1999.

Zonal distribution: Hudsonian.

2. Arabis whitedii Piper, Bull. Torr. Club 28: 39, 1901.

Type locality: Wenache, Washington. Collected by Whited.

Range: Eastern Washington.

Specimens examined: Wenache, Whited 1057; Crab and Wilson creeks, Sandberg & Leiberg 275.

ZONAL DISTRIBUTION: Upper Sonoran.

Mature specimens collected by Whited, May 19, 1905, show the ripe pods to be nearly erect, 17 to 20 mm. long, finely and densely stellate-pubescent, and nearly always longer than the divergent pedicels with which they form a pronounced angle; seeds wingless, in a single row; cotyledons accumbent. It may be a biennial.

This species is not closely related to any other, in my opinion, but is to be associated perhaps with A. nuttallii Robinson.

3. Arabis nuttallii Robinson in Gray, Syn. Fl. 11: 160, 1895.

Arabis spathulata Nutt.; Torr. & Gr. Fl. 1: 81, 1838, not DC, 1821.

Type locality: "Lofty dry hills of the Platte, from the Black Mountains to the central chain."

Range; Washington to Montana and Nevada.

Specimens examined: Klickitat River, Flett 1142 in part; Mount Stuart, Elmer 1223 (2); North Yakima, Steinweg: Sprague, Sandberg & Leiberg 202; Lincoln County, Henderson 2387; Medical Lake, Sandberg & Leiberg 50; Spokane County, Suksdorf 237; Crab Creek, Suksdorf 238; Spokane Valley, Lyall in 1861; Spokane, Piper 2950; St. John, Piper 2792; Mount Adams, Cotton 1533.

Zonal distribution: Arid Transition and Upper Sonoran.

4. Arabis glabra (L.) Bernh. Syst. Verz. Erf. 195, 1800.

Turritis glabra L. Sp. Pl. 2: 666, 1753.

Arabis perfoliata Lam. Encyc. 1: 219, 1783.

Turritis macrocarpa Nutt.; Torr. & Gr. Fl. 1: 78, 1838.

Type locality: Europe.

Range: British Columbia to New England southward to California, Colorado, and New Jersey. Europe. Asia.

Specimens examined: Clallam County, Elmer 2694; Nisqually Valley, Allen, June 11, 1894; Klickitat River, Flett 1140; Rock Island, Henderson; Sprague, Sandberg & Leiberg 143; without locality, Vasey in 1889; Pullman, Piper 1472; Elmer 844; Clarks Springs, Kreager 110.

Zonal distribution: Transition.

Arabis furcata S. Wats. Proc. Am. Acad. 17: 362, 1882.

Type locality: "Bluffs of the Columbia River near the mouth of Hood River," Oregon. Collected by Howell.

Range: Washington and Oregon.

Specimens examined: Atanum River, Henderson, August, 1892; Mount Adams, Suksdorf; Howell; Henderson 58; without locality, Brandegee 625.

6. Arabis hirsuta Scop. Fl. Carn. ed. 2, 2; 30, 1772.

Arabis rupestris Nutt.; Torr. & Gr. Fl. 1: 81, 1838.

Type locality: Carniolia.

Range: Alaska to Labrador, southward to New Mexico and Virginia. Asia. Europe.

Specimens examined: Fairhaven, Piper, July, 1897; Semiamoo Bay, Lyall in 1858; Admiralty Head, Piper, April, 1898; Silverton, Bouck 20a, Skokomish Valley, Kincaid, May, 1892; Tacoma, Flett, April, 1896; Nisqually Valley, Allen, June, 1894; Klickitat River, Flett 1138; Coppei River, Horner 80; Almota, Piper, May 11, 1901; without locality, Geyer 565.

Zonal distribution: Transition.

When growing in dense shade, the plants are often nearly glabrous. This form is A, hirsuta glabrata Torr, & Gr. a

7. Arabis holboellii Hornem. Fl. Dan. 11: 5. pl. 1879. 1827.

Arabis retrofracta Graham, Edinb. New Phil. Journ. 1829: 344, 1829.

Type locality: "In rupibus Insulae Disco ad Jacobshavn detexit."

RANGE: Washington and Colorado to British America. Greenland.

Specimens examined: Wenache, Whited, May 28, 1898, 39; Ellensburg, Whited 312, 379; Piper 2707; Lower Cascades, Suksdorf, May 30, 1886; Klickitat River, Suksdorf, May 18, 1884; North Yakima, Henderson 2395; Sprague, Sandberg & Leiberg 139; Ritzville, Sandberg & Leiberg 158; Douglas County, Spillman, 2630; Pine City, Peper 2427; Spokane, Piper 2822, 2690; Spokane Valley, Lyall in 1861; Mount Carlton, Kreager 288; Blue Mountains, Horner 274 in part; Pullman, Elmer 207; without locality, Vasey in 1889.

Zonal distribution: Arid Transition.

7a. Arabis holboellii patula (Graham) S. Wats. in Gray, Syn. Fl. 11: 164, 1895.

Turritis patula Graham, Edinb. New Phil. Journ. 1829; 350, 1829.

Arabis columbiana Macoun, Cat. Canad. Pl. 2: 304, 1890.

Type locality: "The seeds of this species were gathered in Captain Franklin's expedition at Hudson Bay, in Canada and in the Rocky Mountains."

RANGE: British Columbia and Washington to Hudson Bay.

Specimens examined: Green River Hot Springs, Piper 544.

8. Arabis atrorubens Greene, Erythea 1: 223, 1893.

Arabis atriflora Suksdorf, Deutsch. Bot. Monatss. 16: 211, 1899.

Type locality: Klickitat County, Washington. Collected by Suksdorf.

Range: Eastern Washington.

Specimens examined: West Klickitat County, Suksdorf 2105; Wenache, Whited 67, 1531; Simcoe Mountains, Horell, June, 1879; Darling Mountains, Flett 1137; Klickitat Hills, Gorman, April, 1895; Wenache Mountains, Cotton 1290.

9. Arabis perennans S. Wats. Proc. Am. Acad. 22: 467, 1887.

Type locality: From northern Nevada and Utah to Arizona and the San Bernardino Mountains in California."

Range: Washington to California and Arizona.

Specimens examined: Without locality, Vascy in 1889.

10. Arabis sparsiflora Nutt.; Torr. & Gr. Fl. 1: 81, 1838.

Arabis arcuata subrillosa S. Wats, in Gray, Syn. Fl. 11: 164, 1895.

Type locality: "Forests of the Rocky Mountains, towards the sources of the Oregon."

Range: Washington and Idaho to California and Nevada.

Specimens examined: Ellensburg, Piper, May 21, 1897; Clealum, Whited 367; Mount Cleman, Henderson 2395; banks of the Columbia, Douglas in 1829; Colville, Lyall in 1861; Rock Creek, Sandberg & Leiberg 97; Spokane, Piper 2821; Pullman, Hull 471; Piper 1471, 1812, 1811; Elmer 88; without locality, Vasey in 1889.

Zonal distribution: Arid Transition.

There is considerable doubt as to the identity of Nuttall's species and it may not be our plant. The latter is unquestionably the subspecies *subvillosa* of Watson.

10a. Arabis sparsiflora secunda (Howell).

Arabis secunda Howell, Erythea 3: 33, 1895 (February).

Arabis arcuata sceunda Robinson in Gray, Syn. Fl. 11: 164, 1895 (October).

Type locality: Mount Adams, Washington. Collected by Howell.

Range: Eastern Washington.

Specimens enamined: Mount Adams, Horall 1487; west Klickitat County, Suksdorf 240, 241; Larm River, Suksdorf 97; Upper Yakima River, Lyall in 1860; Wenache, Whited 1031.

11. Arabis bolanderi S. Wats. Proc. Am. Acad. 22: 467, 1887.

Type locality: "Yosemite Valley or Mono Pass," California.

Range: Washington to California.

Specimens examined: Without locality, Brandegee 632.

12. Arabis puberula Nutt.; Torr. & Gr. Fl. 1: 82. 1838.

Arabis canescens Nutt.; Torr. & Gr. Fl. 1: 83, 1838.

Arabis tenuis Greene, Pittonia 4: 189. 1901.

Type locality. "Forests of the Blue Mountains of Oregon." Collected by Nuttall.

RANGE: Washington, Oregon, and Idaho.

Specimens examined: Mount Cleman, Henderson 2389; White Salmon, Suksdorf, July, 1881; Ellensburg, Whited 2707; Piper, July 9, 1897; Tampico, Flett 1125; Wenache, Whited, April, 1900; Blue Mountains, Horner 274; Coulee City, Piper 3848; west Klickitat County, Suksdorf 15.

Zonal distribution: Upper Sonoran and Arid Transition.

13. Arabis suffrutescens S. Wats. Proc. Am. Acad. 17: 362, 1882.

Type locality: "Bluffs of the Snake River and vicinity, Union County, Oregon." Collected by Cusick.

Range: Washington and Oregon.

Specimens examined: Mount Adams, Suksdorf 98, 511.

14. Arabis latifolia (S. Wats.).

Arabis canescens latifolia S. Wats. Bot. King Explor. 17, 1871.

Arabis lemmoni S. Wats, Proc. Am. Acad. 22: 467, 1887.

Type locality: Clover Mountains, Nevada. Collected by Watson.

RANGE: Washington to Montana and California.

Specimens examined: Mount Adams, Suksdorf 509, 510, 1920; Henderson 2391.

15. Arabis drummondii Λ. Gray, Proc. Am. Acad. 6: 187, 1863-65.

Turritis stricta Graham, Edinb. New Phil. Journ. 1829; 350, 4829, not Arabis stricta, Host, 4827.

Streptanthus angustifolius Nutt.; Torr. & Gr. Fl. 1: 76, 1838, not Arabis angustifolius Lam. 4783.

Type locality: Rocky Mountains. Collected by Drummond.

Range: California and Colorado, northward into British America.

Specimens examined: Olympic Mountains, Piper 2181; Clallam County, Elmer 2693 in part; Mount Rainier, Piper 2065; north of Mount Adams, Henderson 2397; Mount Baker, Flett 859; Horseshoe Basin, Lake & Hull, August 21, 1892; Stevens Pass, Sandberg & Leiberg 764.

ZONAL DISTRIBUTION: Hudsonian.

16. Arabis lyallii S. Wats, Proc. Am. Acad. 11: 122, 1876.

Arabis drummondii alpina S. Wats. Bot. King Explor. 18, 1871, not A. alpina L.

Type locality: "In the mountain: from Washington Territory to Mono Pass in the Sierra Nevada and eastward to W. Wyoming and Utah."

RANGE: British Columbia to California and Utalı.

Specimens examined: Olympic Mountains, Piper 2180; Flett 94; Mount Rainier, Piper 2066, 2064; Smith 801; Allen 299; Clallam County, Elmer 2693 in part; Mount Adams, Henderson 2390; Suksdorf 508, 96; Howell 557; Ashnola River, Cascade Mountains, Lyott; Blue Mountains, Horner 282.

Zonal distribution: Arctic.

17. Arabis microphylla Nutt.: Torr. & Gr. Fl. 1: 82, 1838.

Type locality: "Rocky Mountains." Collected by Nuttall.

Range: Washington to Wyoming and Nevada.

Specimens examined: White Salmon, Suksdorf 2.

18. Arabis cusickii S. Wats. Proc. Am. Acad. 17: 363, 1882.

Type locality: "On rocky ridges, Union County, Oregon." Collected by Cusick.

Range: Washington and Oregon.

Specimens examined: Ellensburg, Piper 2711; Cleman Mountain, Henderson 2388 in part; Johnson Canyon, Brandeger 624; Rock Creek, Sandberg & Leiberg 92; between Coulee City and Waterville, Spillman, May, 1896; Coulee City, Piper 3841. Spokane County, Suksdorf 1921; Pine City, Piper 2828, 2829, the latter ambiguous toward A. sparsiflora.

Zonal distribution: Arid Transition.

Arabis breweri S. Wats. Proc. Am. Acad. 11: †23, 1876. This species appears in Suksdorf's list, but we have seen no Washington specimens.

STREPTANTHUS.

1. Streptanthus longirostris S. Wats. Proc. Am. Acad. 25: 127, 1890.

Arabis longirostris S. Wats. Bot. King Explor. 17: pl. 2, 1871.

Type locality: "Growing in alkaline soil at the Steamboat Springs near Washoe City, about Humboldt Lake, Nevada, and on Stansbury Island in Salt Lake."

Range: Washington to Nevada and Utah.

Specimens examined: Pasco, Henderson 2378; without locality, Brandegee 629.

Zonal distribution: Upper Sonoran.

RORIPA.

Flowers white; leaves pinnately divided 1. R. nasturtium.
Flowers yellow; leaves various, mostly pinnate.

Plants perennial by rootstocks.

Pods glabrous or nearlyso 2. R. sinuata.

Pods not glabrous.

Pods pappilose-puberulent 3. R. calycina.

Pods soft pubescent, short-pediceled. 4. R. columbiae.

Plants annual or biennial, without rootstocks.

Pedicels short, 2 to 4 mm. long; stems diffuse.

Pods curved; leaf-lobes acute 5. R. curvisiliqua.

Pods straight; leaf-lobes obtuse 6. R. obtusa.

Pedicels longer, 6 to 8 mm. long; stems erect.

Pods oval or globose; stems hispid 7. R. hispida.

Pods oblong; stems glabrous or nearly so.

Pods 8 to 12 mm. long 9. R. pacifica.

Roripa nasturtium (L.) Rusby, Mem. Torr. Club 3³; 5, 1893.

Water cress.

Sisymbrium nasturtium L. Sp. Pl. 2: 657, 1753.

Nasturtium officinale R. Br. in Ait. Hort. Kew. ed. 2. 4: 110, 1812.

Type locality: "Habitat in Europa & America septentrionali ad fontes."

Specimens examined: Tacoma, Flett 6: Wawawai, Elmer 765; Hull 477; Clarks Springs, Kreager 124; Colville, Kreager 523.

2. Roripa sinuata (Nutt.) A. S. Hitchcock, Spring Fl. Manhat. 18, 1894.

Nasturtium sinuatum Nutt.; Torr. & Gr. Fl. 1: 73, 1838.

Type locality: "Banks of the Oregon and its tributaries." Collected by Nuttall.

RANGE: Washington to Saskatchewan, Arkansas, and New Mexico.

Specimens examined: West Klickitat County, Suksdorf 2103; Almota, Piper 2653, 2654.

Zonal distribution: Upper Sonoran.

3. Roripa calycina (Engelm.) Rydberg, Mem. N. Y. Bot. Gard. 1: 175, 1900.

Nasturtoum calycinum Engelm, in Warren, Prelim, Rep. 156, 1855-7

Type locality: "Sandy bottoms of Yellowstone River; Fort Sarpy to Fort Union."

RANGE: Washington and Oregon to Montana.

Specimens examined: Without locality, Sandberg & Leiberg in 1892.

4. Roripa columbiae Suksdorf; Howell, Fl. N. W. Am. 1: 40, 1897.

Nasturtium sinuatum columbiae Suksdorf; Robinson in Gray, Syn. Fl. 11: 147, 1895.

Nasturtrum columbiae Suksdorf, Deutsch. Bot. Monat. 16: 211. 1898.

Type locality: "Low gravelly banks of the Columbia River near Bingen," Washington.

Range: Oregon and Washington on gravelly river banks.

Specimens examined: Near Bingen, Suksdorf 952.

5. Roripa curvisiliqua (Hook.) Bessey, Mem. Torr. Club 5: 169, 1894.

Sisymbrium curvisiliqua Hook, Fl. Bor, Am. 1: 61, 1830.

Nasturtium curvisiliqua Nutt; Torr. & Gr. Fl. 1:73, 1838.

Nasturtium curvisiliqua nuttallii S. Wats. in Gray, Syn. Fl. 1: 148, 1895.

Type locality: "Common on the Northwest coast of America, lat. 47°-18°, in sandy soils, near streams." Collected by Douglas.

RANGE: British Columbia to Wyoming and Lower California.

Specimens examined: Montesano, Heller 3852; Seattle, Piper 1840; Tacoma, Flett 36; Skamania County, Suksdorf 517; Falcon Valley, Suksdorf 576, 1900; Bingen, Suksdorf 2361; Skokomish River, Piper in 1890; Ellensburg, Whited 674; Kalama, Piper, October 31, 1901; Roslyn, Whited 1205; Spokane, Dewart, July 15, 1901; October 11, 1900; Pullman, Elmer 819; Piper 1474, 1840; Lake & Hull 476; Tumwater Canyon, Sandberg & Leiberg 522; Spokane, Kreager 559.

Zonal distribution: Transition.

A very variable species divided by Nuttall into four, namely, Nasturtium byratum, N. polymorphum, N. cernuum, and N. curcisiliqua, a If there are good characters to separate these, they remain to be pointed out. The type specimen of byratum has an evident style; that of polymorphum is almost obsolete.

6. Roripa obtusa (Nutt.) Britton, Mem. Torr. Club 5: 169, 1894.

Nasturtium obtusum Nutt.; Torr. & Gr. Fl. 1:71, 1838.

Type locality: "Banks of the Mississippi."

RANGE: British Columbia to Michigan, California, and Texas.

Specimens examined: Falcon Valley, Suksdorf 2300; Bingen, Suksdorf 2299, 2353; Lake Chelan, Elmer, September, 1897, Spokane County, Suksdorf 1901.

The Bingen specimens have been referred to R, tenerrina Greene, but they seem not distinct from R, obtasa. The species is variable.

7. Roripa palustris (L.) Besser, Enum. 27. 1822.

Sisymbrium amphibium palustre L. Sp. Pl. 2: 657, 1753.

Nasturtium terrestre R. Br. in Ait. Hort. Kew. ed. 2. 4: 110, 1812.

Nasturtium palustre DC. Syst. 2: 191, 1821.

Type locality: Europe.

RANGE: Subarctic regions, south to California and North Carolina. Europe. Asia.

Specimens examined: Seattle, Piper, July 10, 1895; Lake Union, Suksdorf 1903; Colville, Lyall in 1860; Usk, Kreager 353; Wenache, Whited.

Zonal distribution: Transition.

8. Roripa pacifica Howell, Fl. N. W. Am. 40, 1897.

Roripa clavata Rydberg, Bull. Torr. Club 29: 235, 1902.

Nasturtium terrestre occidentale S. Wats, in Gray, Syn. Fl. 1¹: 148, 1895, not Nasturtium occidentale Greene, Fl. Fran. 268, 1891.

Type locality: Shumagin Islands, Alaska.

RANGE: Alaska to Oregon.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1858-59; west Klickitat County, Suksdorf 519, 721; Peshastin, Sandberg & Leiberg 509; Waitsburg, Horner 83: Hoquiam, Lamb 1221.

Zonal distribution: Transition.

9. Roripa hispida (Desv.) Britton, Mem. Torr. Club 5: 169, 1894.

Brachylobus hispidus Desv. Journ. Bot. 3: 183, 1814.

Nasturtium terrestre hispidum Fisch, & Mey. Ind. Sem. Hort. Petrop. 3: 11, 1837.

Nasturtium hispidum DC, Syst. 2: 201, 1821.

Type locality: "Habitat in Pennsylvania."

RANGE: British Columbia to New Brunswick, south to Arizona and Florida.

Specimens examined: North Yakima, Watt: Bingen, Suksdorf 2350, 2352; Coulee City, Lake & Hull 470.

Zonal distribution: Upper Sonoran.

LESQUERELLA.

1. Lesquerella occidentalis S. Wats. Proc. Am. Acad. 23: 251, 1888.

Vesicaria occidentalis S. Wats. Proc. Am. Acad. 20: 353, 1885.

Type locality: "Near Yreka, California."

Range: Washington to California.

Specimens examined: Near Mount Adams, Flett 430; Klickitat River, Flett 1137.

2. Lesquerella douglasii S. Wats. Proc. Am. Acad. 23: 255, 1888.

Type locality: "On the Columbia River east of the Cascade Mountains, Wilkes, Lyall, Suksdorf."

Range: Eastern Washington and eastern Oregon.

Specimens examined: Wenache, Whited 1119, 1065; Rock Island, Sandberg & Leiberg 426; White Bluffs of Columbia, Brandeque 635; near Columbus, Suksdorf in 1886; without locality, Vascy in 1889; Columbia Valley, Lyall in 1860; without locality, Douglas in 1829; Klickitat County, Suksdorf 842; Pasco, Hindshaw, May, 1896; between Coulee City and Waterville, Spillman, May, 1896; Conconully, Griffiths & Cotton 312.

Zonal distribution: Upper Sonoran.

The Brandegee specimens are erroneously associated with L, occidentalis S. Wats, in the Synoptical Flora,

THELYPODIUM.

Cauline leaves auriculate at base. 1. T. sayittutum. Cauline leaves not auriculate.

Biennial; racemes dense; pods spreading

Leaves pinnatifid.

1. Thelypodium sagittatum (Nutt.) Heller, Bull. Torr. Club 25: 265, 1898.

Streptanthus sagittatus Nutt. Journ. Acad. Phila. 7: 12, 1834.

Thelypodium nuttallii S. Wats. Bot. King Explor. 5:26, 1871.

Type locality: "On the banks of the Little Goddin river toward the sources of the Columbia." Collected by Wyeth.

Range: Washington to Utah and Nevada.

Specimens examined: North Yakima, Leckenby, May 18, 1898; without locality, Brandegee 638; without locality, Vasey in 1889; Coulee City, Piper 3883.

Zonal distribution: Upper Sonoran.

Thelypodium Iasiophyllum (Hook, & Arn.) Greene, Bull. Torr. Club 13: 142, 1886.
 Turritis (t) lasiophylla Hook & Arn. Bot. Beech, Voy. 321, 1840.

Sisymbrium reflexum Nutt. Proc. Acad. Phila. 3: 26, 1848.

Type locality: California.

Range: Washington to California.

Specimens examined: Whatcom County, Suksdorf 953.

3. Thelypodium integrifolium (Nutt.) Endl.; Walp. Rep. 1: 172, 1842.

Pachypodium integrifolium Nutt.; Torr. & Gr. Fl. 1:96, 1838.

Type locality: "Elevated plains of the Rocky Mountains, towards the Oregon, as far as Wallawallah." Collected by Nuttall.

Range: Washington to California and Nebraska.

Specimens examined: Yakima City, Piper, July, 1897; Coulee City, Lake & Hull 473; Satus, Elmer 1073; Squaw Creek, Cotton 874.

Zonal distribution: Upper Sonoran.

The " $Thely podium\ brachy carpum\ Torr.?"$ of Suksdorf's list is based on a specimen of T, integrifolium.

4. Thelypodium laciniatum (Hook.) Endl.: Walp. Rep. 1:172, 1842.

Macropodium laciniatum Hook, Fl. Bor, Am. 1:43, 1829.

Type locality: "Common on dry rocks about Wallawallah, and at Priest's Rapid on the Columbia." Collected by Douglas.

Range: Washington to California and Nevada.

Specimens examined: Wenache, Whited 200, 1246; North Yakima, Piper; Pasco, Piper 2986; Cascade Mountains, 49°, Lyall in 1860; Wallula, Leckenby; Crab and Wilson creeks, Sandberg & Leiberg 229; Rockland, Suksdorf 237; without locality, Vasey in 1889; Rock Lake, Piper 2792; Walla Walla, Leckenby; Douglas County, Spillman; Coulee City, Piper 3863; Rattlesnake Mountains, Cotton 391; Whitman County, opposite Clarkston, Hunter 21; Ritzville, Sandberg & Leiberg 190.

ZONAL DISTRIBUTION: Upper Sonoran.

5. Thelypodium streptanthoides Leiberg, in herb.

Stont erect from a bicnnial root, often branched from the base, 0.5 to 1 meter high, glabrous throughout; leaves oblong-lanceolate, irregularly simuate-toothed or pinnatifid with oblong or even linear lobes, green on both sides, 4 to 10 cm. long, all petioled; racemes dense, 30 to 60 cm. long; sepals becoming 6 to 8 mm. long, deep purple at least on the upper third, somewhat irregular, the lower pair often united for two-thirds of their length, conspicuously saccate at base, becoming tubulose-convolute at apex; petals narrowly linear with a dilated apex, flat, double the length of the sepals; filaments much clongated, nearly equal, free; pods 10 to 12 cm. long, on stout divariente pedicels 4 to 6 mm. in length, subterete, flexuous or curved, minutely tomentose, strongly nerved; style short or none; mature seeds not seen.

Type specimen in the U. S. National Herbarium, collected near Wilson Creek, Douglas County, altitude 680 meters, no. 229, Sandberg & Leiberg in 1893. Also collected on rocky cliffs at Almota, Piper 1473 and 3563; Lake Chelan, Elmer, July, 1897; and Soap Lake, McKay 2.

This species is closely allied to *T. laciniatum* (Hook.) Endl., but differs in its thinner not at all glaucous leaves and purple-tinged ealyx.

ERYSIMUM.

Pods 4-angled, spreading, 5 to 12 cm. long.

Seeds lenticular...... 3. E. clatum.

Pods flattened.

Erysimum cheiranthoides L. Sp. Pl. 2: 661, 1753.

Type locality: European.

Range: Alaska to Newfoundland, south to Oregon and North Carolina.

Specimens examined: Wilbur, Henderson 2380; Pullman, Piper 2820; Clarks Springs, Kreager 73.

2. Erysimum asperum (Nutt.) DC. Syst. 2: 505. 1821.

Cheiranthus asper Nutt. Gen. 2:69, 1818.

Cheiranthus capitatus Hook. Fl. Bor. Am. 1:38, 1829.

Type locality: "On the plains of the Missouri commencing near the confluence of White River." Collected by Nuttall.

Range: British Columbia and Saskatchewan, south to California and Texas.

Specimens examined: Baldy Peak, Lamb 1307; Clallam County, Elmer 2695; Mount Rainier, Piper 2062; Mount Stuart, Elmer 1198; 30 miles south of Mount Adams, Flett 1733; Wenache, Whited 1100, 130; Ritzville, Sandberg & Leiberg 182; Spokane, Piper 2948; Henderson; Soap Lake, McKay 8; Wawawai, Piper; Lake & Hull 474; Elmer 77; Almota, Piper 1499; Spokane, Kreager 161.

Zonal distribution: Transition and Upper Sonoran.

The types of *Cheiranthus capitatus* were collected "on rocky places of the Columbia, near the sea, and at Puget Sound." They can therefore scarcely be the same as *Erysimum grandiflorum* Nutt., to which *Cheiranthus capitatus* has been referred as a synonym.

3. Erysimum elatum Nutt.; Torr. & Gray Fl. 1:95. 1838.

Cheiranthus pacificus Sheldon, Bull. Torr. Club 30: 308. 1903.

Type locality: "Grassy situations by the banks of the Wahlamet." Collected by Nuttall.

Range: Washington to California.

Specimens examined: Waitsburg, Horner 82; Cape Horn, Piper 5028.

Zonal distribution: Humid Transition.

4. Erysimum arenicola S. Wats. Proc. Am. Acad. 26: 124, 1891.

Type locality: Mount Steele, Olympic Mountains, Washington, near the summit. Collected by Piper.

Range: Known only from the type locality.

Specimens examined: Olympic Mountains, Piper 2179, 916.

ZONAL DISTRIBUTION: Arctic.

5. Erysimum occidentale (S. Wats.) Robinson in Gray, Syn. Fl. 11: 144, 1895.

Cheiranthus occidentalis S. Wats. Proc. Am. Acad. 23: 261, 1888.

 $Erysimum\ asperum\ pumilum\ S.$ Wats. Bot. King Explor. 24. 1871, not $E.\ pumilum\ DC.$ 1821.

Type locality: In Washington Territory (Walla Walla, Lyall; Klickitat County, Suksdorf).

Range: Washington, Oregon, and Nevada.

Specimens examined: Ellensburg, Piper 2686; North Yakima, Henderson, May, 1892; Mrs. Steinweg in 1894; Watt, August, 1895; Flett 1128; Yakima, Leckenby, April, 1898; Columbus, Suksdorf in 1886; Rockland, Suksdorf in 1886; Tampico, Flett 1126; Sunnyside, Cotton 310; Walla Walla, Lyall in 1860; Hunts Junction, Leckenby, April, 1898.

Zonal distribution: Upper Sonoran.

SMELOWSKIA.

Capsule lanceolate, attenuate at each end. 1. S. calycina. Capsule ovate, nearly subcordate at base 2. S. ovalis.

1. Smelowskia calycina C. A. Meyer in Ledeb. Fl. Alt. 3: 170, 1831.

Smelowskia americana Rydberg, Bull. Torr. Club 29: 239, 1902.

Type locality: Siberia.

RANGE: Alaska to California and Colorado. Siberia.

Specimens examined: Clallam County, Elmer 2696; Mount Adams, Suksdorf, September, 1877; Mount Stuart, Brandegee 641; Elmer 1095.

Zonal distribution: Arctic.

Smelowskia ovalis Jones, Proc. Cal. Acad. H. 5: 624, 4895.

Type locality: Mount Adams, Washington.

Range: Washington to California.

Specimens examined: Olympic Mountains, J. M. Grant in 1889; Mount Adams, Henderson, August, 1892; Mount Rainier, Piper 2063; James Bryce in 1883; Allen 64.

Zonal distribution: Aretic.

BRASSICA.

Cauline leaves auricled at base and clasping. 1. B. campesteis.

Cauline leaves not auricled or clasping.

Beak of the pod very short, less than one-fourth the fertile portion . 2. B. nigra.

Beak of the pod long, about equaling the fertile portion.......... 3. B. arvensis.

1. Brassica campestris L. Sp. Pl. 2: 666, 1753.

Turnip.

Type locality: European.

Specimens examined: Spangle, Piper, June, 1899; Waitsburg, Horner 73; Pullman, Hardwick, July, 1895.

2. Brassica nigra (L.) Koch in Rochl. Deutschl. Fl. ed. 3, 4: 713, 1833.

Black mustard.

Sinapis nigra L. Sp. Pl. 2: 668, 4753.

Type locality: European.

Specimens examined: Pullman, Piper 4113; without locality, Vasey in 1889.

3. Brassica arvensis (L.) B. S. P. Prel. Cat. N. Y. 5, 1888.

Charlock.

Sinapis arvensis L. Sp. Pl. 2: 668, 1753.

Brassica sinapistrum Boiss, Voy. Espagne 2: 39, 1839-45.

Type locality: "Habitat in agris Europae."

Specimens examined: Scattle, Piper, June, 1891; Pullman, Piper, August, 1893; Meyers Falls, Kreager 514.

SISYMBRIUM.

Pubescence of simple hairs or none; leaves pinnatifid.

Pods subulate, appressed, 1 to 1.5 cm. long.................. 1. S. officinale.

Pods linear, spreading, 5 to 10 cm. long. 2. S. altissimum.

Pubescence of branched hairs.

Flowers white; leaves mainly in a basal rosette.............. 3. S. thalianum.

Flowers yellow; branches leafy.

Seeds biseriate in each cell. 4. S. canescens.

Seeds uniscriate in each cell.

Leaves pinnatifid or bipinnatifid, subglabrous.

Capsules 40 to 14 mm. long, spreading.

Pedicels 4 to 6 mm, long, shorter than the

Pedicels 10 to 20 mm. long, longer than the

Capsules 3 to 6 mm, long on subequal ascending pedicels. 7. S. hartwegianum.

1. Sisymbrium officinale (L.) Scop. Fl. Carn. ed. 2, 2; 26, 1772. Hedge Mustard. Erysimum officinale L. Sp. Pl. 2; 660, 1753.

Type locality: European.

Specimens examined: Pullman, Hardwick, August, 1895.

2. Sisymbrium altissimum L. Sp. Pl. 2: 659, 1753.

Tumbling mustard.

Type locality: "Habitat in Italia, Gallia, Siberia."

Specimens examined: Whatcom County, Gardner 446; Pullman, Piper 3513; Wawawai, Piper, May 31, 1903.

3. Sisymbrium thalianum (L.) Gay, Ann. Sci. Nat. 1, 7: 399, 1826.

Arabis thaliana L. Sp. Pl. 2: 665, 1753.

Type locality: European.

Specimens examined: Tacoma, Flett, May, 1899.

4. Sisymbrium canescens Nutt. Gen. 2: 68, 1818.

Type locality: "From Virginia to Georgia."

Range: Washington to Saskatchewan, Florida, and California.

Specimens examined: Yakima County, Henderson 2379; Waitsburg, Horner 77; without locality, Vasey in 1889.

5. Sisymbrium sophia L. Sp. Pl. 2: 659, 1753.

Type locality: European.

Specimens examined: Pullman, Piper 3511; Wawawai, Piper 2871; Waitsburg, Horner 599.

6. Sisymbrium incisum Engelm. in A. Gray, Pl. Fendl. S. 1849.

Type locality: "Santa Fe Creek and Mora River," New Mexico.

Range: Washington and Manitoba to California and New Mexico.

Specimens examined: Ellensburg, Piper, May 21, 1897; Blue Mountains, Horner 67; Wenache Mountains, Cotton 1286.

6a. Sisymbrium incisum filipes A. Gray, Pl. Fendl. 8, 1849.

Sisymbrium longi pedicellatum Fourn, Sisymb, 59, 1865.

Sophia filipes Heller, Bull. Torr. Club 24: 311, 1897.

Type locality: "Clearwater," Idaho. Collected by Spalding.

Range: British Columbia to Nevada.

Specimens examined: Ellensburg, Whited 438; North Yakima, Mrs. Steinerg; Flett 1129; Tacoma, Flett 51; Pasco, Piper 2972; Hunts Junetion, Leckenby, April, 1898; Spokane, Piper, May, 1896; Pullman, Piper 1477; Elmer 842; Almota, Piper, May, 1897; Wawawai, Hull, May, 1892; Piper, May, 1893; Mount Carlton, Kreager 145; Coupeville, Gardner 20; Wenache, Whited 1062, 603; Rattlesnake Mountains, Cotton 364; Sunnyside, Cotton 356; Cascade Mountains to Colville, Lyall in 1860; Rock Lake, Sandberg & Leiberg 101; Walla Walla, Mrs. Anderson in 1884; Wawawai, Piper 1477.

Zonal distribution: Upper Sonoran and Arid Transition.

7. Sisymbrium hartwegianum Fourn. Thèse Crucif. 66, 1865.

Sisymbrium incisum hartwegianum Wats, in Brewer & Wats, Bot, Cal. 1: 41, 1876.

! Sisymbrium canescens brevipes Nutt.; Torr. & Gr. Fl. 1: 92, 1838.

Type locality: "Crescit in imperio mexicano."

Range: British Columbia and Alberta to Mexico.

Specimens examined: Wenache, Whited 50; Charleston, Piper, June 21, 1895; Pasco, Piper 2996; Ritzville, Sandberg & Leiberg 161; Morgans Ferry, Suksdorf 242; Spokane Valley, Lyall in 1861; Myers Falls, Kreager; Coulee City, Piper 3879, 3880; Republic, Beattie & Chapman 2271.

Zonal distribution: Upper Sonoran.

The Sisymbrium brachycarpon Richards., in Hooker's Flora, is, in all probability, not that species, but S, hartwegianum, so far as the plant from the "Great Falls of the Columbia" is concerned.

SCHOENOCRAMBE.

1. Schoenocrambe linifolia (Nutt.) Greene, Pittonia 3: 127, 1896.

Sismabrium tinitolium Nutt.: Torr. & Gr. Fl. 1: 91, 1838.

Xasturtium linitolium Nutt. Journ. Acad. Phila, 7: 12, 1834.

Type locality: "Head of Salmon River, in dry soils," Montana? Collected by Wyeth. Range: Washington and Montana to Colorado and Arizona.

Specimens examined: Ellensburg, Whited 635; Piper, May, 1897; Whited 398; Klickitat County, Sukslorf 3; Wilbur, Henderson 2380; Crab and Wilson creeks, Sandberg & Leiberg 271; Coulee City, Piper 3851; without locality, Brandegee 640.

ZONAL DISTRIBUTION: Upper Sonoran.

CAMPE.

 Pods appressed, 1 to 1.5 cm. long
 1, C, stricta.

 Pods ascending, 2.5 to 3 cm. long
 2, C, barbarea.

1. Campe stricta (Andrz.) W. F. Wight.

Barbarea stricta Andrz, in Bess, Enum. 72, 1822.

Barbarea vulgaris stricta A. Gray, Man. ed. 2: 35, 1856.

Type locality: "In Podoliae austr."

Specimens examined: Seattle, Piper 754, introduced.

Mr. W. F. Wight has called attention to the fact that the genus name Barbarea of Robert Brown, 1812, is invalidated by reason of the older Barbarea of Scopoli, 1760.

2. Campe barbarea (L.) W. F. Wight.

Bitter cress.

Erysimum barbarea L. Sp. Pl. 2: 660, 1753.

Barbarea vulgaris R. Br. in Ait. Hort. Kew. ed. 2, 4: 109, 1812.

Barbarea barbarea MacMillan, Metasp. Minn. Val. 259, 1892.

Type locality: "Habitat in Europa."

RANGE: Alaska to Labrador, south to California and Virginia.

Specimens examined: Silverton, Bouck [16]; west Klickitat County, Suksdorf [2022]; Klickitat River, Flett 1134, 1141; Pend Oreille River, Lyall in 1861; Pullman, Piper, June 1893; Elmer 180; Waitsburg, Horner 605.

ZONAL DISTRIBUTION: Transition.

The western form of this plant is considered a distinct species by Dr. Rydberg as Barbarea americana Rydb.a To distinguish it the characters of erect pods and lyrate leaves are relied upon.

SUBULARIA.

Subularia aquatica L. Sp. Pl. 2: 642, 1753.

Type locality: "Habitat in Europae borealis inundatis lacustribus fluviis."

RANGE: British Columbia to Newfoundland, south to California and New England.

Specimens examined: Whatcom Lake, Suksdorf.

BURSA.

1. Bursa bursa-pastoris (L.) Weber in Wigg, Prim. Fl. Holst. 41, 1780.

Shepherd's purse.

Thlaspi bursa-pastoris L. Sp. Pl. 2: 647, 1753.

Capsella liursa-pastoris Medic. Pflanzengat. 1: 85, 1792.

Type locality: European.

A common weed all over the State.

a Mem. N. Y. Bot, Gard. 1; 174, 1900.

HUTCHINSIA.

1. Hutchinsia procumbens (L.) DC. Desv. Journ. Bot. 3: 168, 1814.

Lepidium procumbens L. Sp. Pl. 2: 643. 1753.

Capsella elliptica C. A. Meyer in Ledeb. Fl. Alt. 3: 199. 1831.

Capsella procumbens Fries, Novit. Fl. Suec. Mant. 1: 14. 1832.

Hymenolobus divaricatus Nutt.; Torr. & Gr. Fl. 1: 117. 1838.

Hymenolobus erectus Nutt. loc. cit.

Type locality: "Habitat Monspelii."

RANGE: British Columbia to Labrador and southward. Europe. Asia. Australia.

Specimens examined: Whidby Island, Gardner 26; Ellensburg, Whited, April, 1897; Rock Lake, Sandberg & Leiberg 117; Sunnyside, Cotton 315; Coulee City, Piper 3890; Lincoln County, Henderson 4382; Spokane, Piper 2944.

Zonal distribution: Arid Transition and Upper Sonoran.

CAMELINA.

1. Camelina microcarpa Andrez. in DC. Syst. 2: 517. 1818.

Camelina sylvestris Wallr. Sched. Crit. 347, 1822.

Type locality: European.

Specimens examined: Ellensburg, Whited 448; Wawawai, Piper 1475; Frontier, Kreager 465.

2. Camelina sativa Crantz, Stirp. Austr. 1: 18, 1769.

Type locality: Austria.

Specimens examined: Wilbur, Henderson, July, 1892.

LEPIDIUM. Peppergrass.

Apex of the capsules bidentate, the valves strongly reticulated. 6. L. dictyotum. Apex of the capsules merely emarginate, the valves not reticulated.

Capsules 2 to 3 mm. long, not shining.

Petals wanting or very minute.

Pods glabrous 1. L. apetalum.
Pods puberulent 2. L. lasiocarpum.

Petals present.

Basal leaves pinnately parted, pubescent..................... 3. L. menziesii.

Basal leaves dentate, glabrous 4. L. medium.

Lepidium apetalum Willd. Sp. Pl. 31: 439, 1800.

Lepidium elongatum Rydberg, Bull. Torr. Club 29: 234. 1902.

Type locality: "In Siberia."

Range: British Columbia to New England and southward. Asia.

Specimens examined: Wenache, Whited 1113; Yakima, Henderson, May, 1892; Pasco, Hindshow 13; west Klickitat County, Suksdorf 1942. Pasco, Piper, May, 1899; Sprague, Sandberg & Leiberg 175; Cascade Mountains to Colville, latitude 49°, Lyall in 1860; Lake Chelan, Elmer, September, 1897; Coulee City, Piper 3878, Walla Walla, Brandegee 645; Almota, Piper 2788; Wawawai, Piper, June, 1894, 3064; Pullman, Piper, July, 1894, 3507; Clarks Springs, Kreager 572; Almota, Elmer 21.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

2. Lepidium lasiocarpum Nutt.; Torr. & Gr. Fl. 1: 115. 1838.

Type locality: "Near St. Barbara, Upper California." Collected by Nuttall.

Range: Washington to California and Texas.

Specimens examined: Charleston, Piper, July 21, 1895; Coulee City, Piper 3877; between Coulee City and Waterville, Spillman, May, 1896.

ZONAL DISTRIBUTION: Upper Sonoran.

3. Lepidium menziesii DC. Syst. 2: 539, 1821.

Type locality: "Hab, in ora occidentali Americae borealis." Collected by Menzies.

RANGE: British Columbia to Oregon, near the seashore principally.

Specimens examined: Clallam County, Elmer 2697; Hoquiam, Lamb 1153; Fairhaven, Piper 2787; San Juan Island, Lyall in 1858; Scattle, Piper 444; White Salmon, Suksdorf 242; Scattle, Henderson 77.

Zonal distribution: Humid Transition.

This species was formerly confused with $L.\ virginicum\ L.$, which does not occur in Washington.

4. Lepidium medium Greene, Erythea 3: 36, 1895.

Lepidium intermedium A. Gray, Pl. Wright. 2: 15, 4853, not Richard.

Type locality: "Rayines of the Organ Mountains, northeast of El Paso," Texas.

Range: Washington and Idaho to California and Texas.

Specimens examined: Lake Cushman, Henderson 2045; Cascade Mountains, latitude 49°, Lyall in 1859; Bingen, Suksdorf 2362; Wawawai, Lake & Hull 479; Piper 3063, 3533, 3811; Waitsburg, Horner 4.

ZONAL DISTRIBUTION: Upper Sonoran.

5. Lepidium nitidum Nutt.; Torr. & Gr. Fl. 1: 116. 1838

Type locality: Near Santa Barbara, California.

Range: Washington to California.

Specimens examined: Klickitat County, Howell, June, 1879; Rockland, Suksdorf 241; Granddalles, Gorman, April, 1895.

Zonal distribution: Upper Sonoran.

6. Lepidium dictyotum A. Grav, Proc. Am. Acad. 7: 329, 1868.

Type locality: "Nevada, at Steamboat Springs."

Range: Washington to Nevada and California.

Specimens examined: Klickitat County, Suksdorf 844; Sprague, Sandberg & Leiberg 138; Duck Lake and Crab Creek, Suksdorf 244; Walla Walla, Brandegee 646; Waitsburg, Horner 604; Bolles Junction, Horner 607.

ZONAL DISTRIBUTION: Arid Transition.

THLASPI.

1. Thlaspi arvense L. Sp. Pl. 2: 646, 1753.

Penny cress.

Type locality: European.

Specimens examined: Pullman, Elmer, June, 1897.

Thlaspi alpestre L. Sp. Pl. ed. 2, 2: 903, 1763.

Type locality: "Habitat in Austria."

Range: British Columbia and Montana to Mexico. Europe. Asia.

Specimens examined: Thirty miles south of Mount Adams, Flett 1132; Mount Rainier, Flett 227; Mount Stuart, Elmer 1210; Sandberg & Leiberg 811; Yakima County, Henderson 2386; upper Nisqually Valley, Allen 300.

Zonal distribution: Arctic.

29418 - 06 M - - 20

3. Thlaspi glaucum A. Nelson, Bull. Torr. Club 25: 275, 1898.

Thlaspi alpestre glaucum A. Nelson, First Rep. Fl. Wyo. 84, 1896.

Type locality: La Plata Mines, Wyoming.

Range: Washington, Wyoming.

Specimens examined: Blue Mountains, Piper 2407.

ZONAL DISTRIBUTION: Canadian.

PHYSARIA.

1. Physaria geyeri (Hook.) A. Gray, Gen. Ill. 1: 162. 1848.

Vesicaria geyeri Hook, Lond. Journ. Bot. 6: 70. pl. 5, 1847.

Type locality: "Sunny, sandy declivities on elevated volcanic places, Upper Spokan River." Collected by Geyer.

Range: In the vicinity of Spokane, Washington.

Specimens examined: Spokane Valley, Lyall in 1861; upper Spokane River, Geyer 476; Spokane, Henderson 2384; Piper 2293; Marshall Junction, Piper 1843; Hangman Creek Sandberg & Leiberg 17; Clarks Springs, Kreager 117.

ZONAL DISTRIBUTION: Arid Transition.

Hooker a at first included this species in his Vesicaria didymocarpa, and this is perhaps the basis for the inclusion of *Physaria didymocarpa* (Hook.) Gray in Suksdorf's list.

NESLIA.

1. Neslia paniculata (L.) Desv. Journ. Bot. 3: 162. 1814.

Myagrum paniculatum L. Sp. Pl. 2: 641. 1753.

Type locality: "Habitat in Europa, juxta agros."

Specimens examined: Frontier, Kreager 467.

ATHYSANUS.

1. Athysanus pusillus (Hook.) Greene, Bull. Cal. Acad. 1: 72. 1885.

Thysanocarpus pusillus Hook, Ic. Pl. pl. 42, 1837.

Thysanocarpus oblongifolius Nutt.; Torr. & Gr. Fl. 1: 118, 1838.

Type locality: Monterey, California. Collected by Douglas.

RANGE: British Columbia to Idaho and California.

Specimens examined: Tacoma, Flett 885; Rock Creek, Sandberg & Leiberg 96; without locality, Uasey in 1889; Pullman, Elmer 124; Piper 1481; Hull, May, 1892.

Zonal distribution: Transition.

THYSANOCARPUS.

1. Thysanocarpus curvipes Hook. Fl. Bor. Am. 1: 69, 1830.

Thysanocarpus trichocarpus Rydberg, Bull. Torr. Club 30: 253, 1903.

Type locality: "On moist ground, near the Great Falls of the Columbia." Collected by Douglas.

RANGE: Washington and Idaho to California and Arizona.

Specimens examined: West Klickitat County, Nuksdorf, April 30, 1886; Rock Lake, Nandberg & Leiberg 118; Wawawai, Lake 478; Piper 1480 in part, April, 1897; Waitsburg, Horner 76 in part: without locality, Vascy 187.

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

1a. Thysanocarpus curvipes madocarpus subsp. nov.

Differs from the species in having its pods glabrous instead of puberulent.

From field observations this seems worthy of subspecific rank. While both forms may occur close together, yet so far as my observations go a particular colony of plants is of one form or the other; the two do not occur mixed.

Radish.

Mr. M. L. Fernald kindly examined the type of *T. curvipes* in the British Museum and writes that the pods are puberulent, a point not brought out in the original description.

Specimens examined: Pullman, Elmer, 79 (type); Wawawai, Piper 1480 in part; Spokane, Henderson, June, 1892; Tacoma, Flett 886; near Clarkston, Hunter 49; Whitsburg, Horner 76 in part.

RAPHANUS.

 Pods grooved, 4 to 10-seeded.
 1. R. raphanistrum.

 Pods not grooved, 2 or 3-seeded.
 2. R. sativus.

1. Raphanus raphanistrum L. Sp. Pl. 2: 669, 1753.

Type locality: "Habitat inter segetes Europae." Specimens examined: Pullman, Piper 4214.

2. Raphanus sativus L. Sp. Pl. 2: 669, 1753.

Type locality: Not given.

Specimens examined: Whidby Island, Gardner 18.

Conringly Perfoliata (L.) Link has been collected in Douglas County by Sandberg & Leiberg (no. 314). It can scarcely be said to be established.

CAPPARIDACEAE. CAPER FAMILY.

CLEOME.

1. Cleome lutea Hook, Fl. Bor, Am. 1: 70, 1830.

Type locality: "Common in North-West America; on the banks of the Columbia; and in the vallies of the Blue Mountains, sparingly; and as far as to the Rocky Mountains." Collected by Douglas.

Range: Washington to Nevada and Colorado.

Specimens examined: Wenache, Whited 1152; North Yakima, Watt, August, 1895; Piper 1805; Flett 1036; Egbert Springs, Sandberg & Leiberg 405; Snipes Mountain, Cotton 375; without locality, Vasey in 1889; Hangman Creek, Sandberg, Heller, & McDougal 907.

Zonal distribution: Upper Sonoran.

2. Cleome serrulata Pursh, Fl. 2: 441, 1814.

Cleome integrifolia Torr. & Gr. Fl. 1: 122, 1838.

Type locality: "On the banks of the Missouri." Collected by Lewis.

RANGE: Washington to Saskatchewan, New Mexico, and Arizona.

Specimens examined: Ellensburg, Whited 570; North Yakima, Watt, August, 1895.

Zonal distribution: Upper Sonoran.

POLANISIA TRACHYSPERMA TOTT, & Gr. appears in Suksdorf's list. There are no herbarium specimens of this plant from Washington to justify its inclusion in the flora.

DROSERACEAE. SUNDEW FAMILY.

DROSERA.

 Leaf blades round, long-petioled
 1. D. rotundifolia.

 Leaf blades spatulate
 2. D. longifolia.

1. Drosera rotundifolia L. Sp. Pl. 1: 281, 1753.

Sundew.

Type locality: "Habitat in Europae, Asiae, Americae paludibus."

RANGE: Alaska to Labrador, southward to California and Florida. Europe. Asia.

Specimens examined: Clallam County, Elmer 2785; Seattle, Piper in 1888; Tacoma, Flett 318; Falcon Valley, Suksdorf 370; Ilwaco, Henderson; Davis Lake, Kreager 437.

Zonal distribution: Humid Transition.

2. Drosera longifolia L. Sp. Pl. 1: 282, 1753.

Drosera anglica Huds. Fl. Angl. 135, 1778.

Type locality: "Habitat in Europa ubique."

RANGE: Subarctic regions, southward to Newfoundland, Idaho, and California. Europe. Asia.

Specimens examined: Mount Adams, Henderson; Falcon Valley, Suksdorf 371.

ZONAL DISTRIBUTION: Canadian.

CRASSULACEAE. STONECROP FAMILY.

Flowers cymose; perennials or biennials.

Leaves entire; flowers vellow. Petals free to the base. Sedum.

1. TILLAEASTRUM.

1. Tillaeastrum drummondii (Torr. & Gr.) Brittor, Bull. N. Y. Bot. Gard. 3: 1, 1903. Tillaca drummondii Torr. & Gr. Fl. 1: 558, 1840.

Type locality: Texas. Collected by Drummond.

RANGE: Washington to California and Louisiana.

Specimens examined: Lake Chelan, Gorman 693.

2. Tillaeastrum aquaticum (L.) Britton, Bull. N. Y. Bot. Gard. 3: 1. 1903.

Tillaea aquatica L. Sp. Pl. 1: 128, 1753.

Tillaea angustifolia Nutt. Torr. & Gr. Fl. 1: 558, 1840.

Type locality: European.

RANGE: Washington to Nova Scotia, southward to Lower California, Texas, and Maryland. Europe.

Specimens examined: Parker, Elmer, July, 1898.

RHODIOLA.

1. Rhodiola integrifolia Raf. Atl. Journ. 1: 146, 1832.

Sedum frigidum Rydberg, Bull. Torr. Club 28: 282, 1901.

Type locality: "On the Rocky Mountains."

Range: Alaska to California and Colorado.

Specimens examined: Cascade Mountains, latitude 49°, toward Fort Colville, Lyall in 1860; Mount Adams, Suksdorf 547, 859; Mount Stuart, Brandegee 773.

SEDUM. STONECROP.

Leaves not spatulate nor glaucous. Leaves subglobose, bright green. 2. S. divergens.

Leaves lanceolate, broadest at base. Leaves becoming scarious; carpels divergent.................. 3. S. douglasii.

Leaves not becoming scarious.

Biennial, carpels divaricate...... 5. S. leibergii.

1. Sedum spathulifolium Hook. Fl. Bor. Am. 1: 227, 1834.

Type Locality: "Common on dry rocky places of the Columbia and Salmon Rivers." Collected by Douglas.

RANGE: British Columbia to northern California in the coast region.

Specimens examined: Clallam County, Elmer 2691; Whidby Island, Gardner 121; Fidalgo Island, Flett 2115; west Klickitat County, Suksdorf 548; mouth of Columbia, Douglas 1825; Stuart Island, Lawrence 12.

Zonal distribution: Humid Transition.

2. Sedum divergens S. Wats. Proc. Am. Acad. 17: 372, 4882.

Type locality: "In the Cascade Mountains, Washington Territory; on Mount Adams and near the summit of Yakima Pass." Collected by Suksdorf and by Watson.

Range: British Columbia to Oregon.

Specimens examined: Olympic Mountains, Piper 2221; Mount Rainier, Piper in 1895; Mount Adams, Suksdorf 369; Henderson 4; Mount Stuart, Brandegee 774; Elmer 1181; Sundberg & Leiberg 809; Yakima Pass, Watson 142; Stampede Pass, Henderson, July 27, 1892, Horseshoe Basin, Elmer 856.

Zonal distribution: Canadian and Hudsonian.

3. Sedum douglasii Hook. Fl. Bor. Am. 1: 228. 1834.

Sedum uniflorum Howell, Fl. N. W. Am. 1: 213, 1898.

Type locality: "Common on rocky places of the Columbia to the mountains." Douglas, Range: British Columbia and Idaho to California.

Specimens examined: Mount Adams, Flett 1206; Tieton River, Cotton 486; Fort Colville, Watson; Loon Lake, Winston, July 20, 1897; Spokane, Henderson 2572; Piper; Spokane County, Suksdorf 302; Blue Mountains, Lake & Hull 442; Palouse, Cloud; Spokane, Kreager 6; Olympic Mountains, Flett 116.

ZONAL DISTRIBUTION: Arid Transition.

Sedum uniflorum Howell is apparently only a weak state of the species, having solitary or few flowers.

4. Sedum stenopetalum Pursh, Fl. 1: 324, 1814.

Type locality: "On tocks on the banks of Clark's River [Montana] and Kooskoosky" [Idaho]. Collected by Lewis.

Range: British Columbia to Montana and Oregon.

Specimens examined: Olympic Mountains, Flett 138; cast side Cascade Mountains, latitude 49°, Lyall in 1860; San Juan County, Cardner, June 23, 1899; East Sound, Henderson in 1892; Mount Stuart, Sandberg & Leiberg 555; Ellensburg, Elmer 416; near Ellensburg, Whited 540; Laconner, Gardner; Twisp River, Whited 237; without locality, Vasey in 1889; Blue Mountains, Horner 409; Stehekin, Griffiths & Cotton 209; Flat Top Island, Lawrence 114.

ZONAL DISTRIBUTION: Transition.

Sedum leibergii Britton, N. Am. Fl. 22¹:73, 1905.

Sedum divarientum S. Wats. Proc. Am. Acad. 17:372, 1882, not Aiton, 1789.

Type locality: "In Union County, Oregon." Collected by Cusick.

RANGE: Washington, Idaho, and Oregon.

Specimens examined: Klickitat County, Howell, June, 1879; Wawawai, Henderson 2571; Hull 442; Elmer 762; Peper; Rattlesnake Mountains, Cotton 703.

ZONAL DISTRIBUTION: Arid Transition.

GORMANIA.

Gormania oregana (Nutt.) Britton, Bull. N. Y. Bot. Gard. 3: 30, 1963.

Sedum oreganum Nutt.; Torr. & Gr. Fl. 1: 559, 1840.

Type locality: "Rocks, near the mouth of the Oregon." Collected by Nuttall.

Range: Oregon and Washington.

Specimens examined: Silvetton, Bouck 75; Whatcom County, Gardner 420; Cascade Mountains, latitude 49°, Lyall in 1859; Columbia River, Cascade Mountains, Suksdorf

126t; Columbia River, Nuttall (type); Mashel Canyon, Piper 2123; Stampede Pass, Heuderson, July 27, 1892; Horseshoe Basin, Lake & Hull 443; without locality, Cooper.

ZONAL DISTRIBUTION: Canadian and Humid Transition.

SAXIFRAGACEAE. SAXIFRAGE FAMILY.

Staminodia none; carpels 2, distinct, at least above Parnassia (p. 322). Staminodia present; carpels 3 or 4, united.

Placentae axial.

Carpels distinct; leaves coriaceous, without stipules . . Leptarrhena (p. 310) Carpels united, at least below.

Stamens 5.

Ovary superior Bolandra (p. 310).

Ovary not superior.

Rootstocks bearing bulblets; ovary al-

most wholly inferior Hemieva (p. 311).

Rootstocks not bearing bulblets; ovary

half-inferior Therofox (p. 311).

Placentae parietal or nearly basal.

Stamens 8 or 10.

Petals present; stamens 10.

Carpels equal; petals laciniate Tellima (p. 317).

Stamens 5 or 3.

Petals pinnatifid; stamens 5 MITELLA (p. 319).

Petals entire or none.

Stamens 5; calvx campanulate or turbinate. Heuchera (p. 320).

Stamens 3; calyx tubular Leptaxis (p. 322).

LEPTARRHENA.

1. Leptarrhena amplexifolia (Sternb.) Ser. in DC. Prod. 4: 48, 1830.

Saxifraga amplexifolia Sternb. Rev. Sax. Suppl. 1: 2. pl. 2. 1822.

Saxifraga pyrolifolia D. Don, Trans. Linn. Soc. 13: 389, 1822.

Leptarrhena pyrolifolia Ser. in DC. Prod. 4: 48, 1830.

Type locality. Unalaska.

Range: Alaska to Mount Adams, Washington, and Kootenai Pass, British Columbia.

Specimens examined. Olympic Mountains, Piper, August, 1895, Mount Ranier, Flett 255; Piper 2039, Allen 281, Mount Adams, Henderson, August, 1892, Suksdorf 543, Cascade Mountains, latitude 49°, Lyall in 1859, Stevens Pass, Sandberg & Leiberg 711; Bridge Creek, Elmer 658, without locality, Vascy in 1889.

ZONAL DISTRIBUTION Arctic.

BOLANDRA.

1. Bolandra oregana S. Wats. Proc. Am. Acad. 14: 292, 1879.

Type locality. "On wet rocky banks of the Willamette River, near Oregon City, Oregon." Collected by Howell.

Range Oregon and Washington.

Specimens examined: White Salmon River, Suksdorf in 1882; Cape Horn, Piper 5021. Zonal distribution. Humid Transition.

THEROFON.

Stipules scarious or foliaceous.	ſ.	$T.\ majus.$
Stipules represented by bristles.	2.	$T.\ elatum.$

1. Therofon majus intermedium.

Boykinia major intermedia Piper, Erythea 7: 172, 1899.

Therofon intermedium Heller, Muhlenbergia 1:53, 1904.

Type locality: New London, Chehalis County, Washington. Collected by Lamb.

Range: Known only from the type.

Specimens examined: New London, Lamb 1267.

2. Therofon elatum (Nutt.) Greene, Man. Bay Reg. 121, 1894.

Saxifraga elata Nutt. in Torr. & Gr. Fl. 1: 575, 1840.

Boykinia occidentalis Torr. & Gr. Fl. 1: 577, 1840.

Boykinia elata Greene, Fl. Fran. 190, 1891.

Boykinia nuttallii J. M. Macoun, Can. Rec. Sci. 6: 409, 1895.

Type locality: "In wet places near Chenook Point at the estuary of the Oregon." Collected by Nuttail.

RANGE: British Columbia to south California, along the coast.

Specimens examined: Olympic Mountains, Piper 2209; Quilcene, Gardner 109; Sno-qualmie, Parker, August, 1892; Piper in 1889; Smith in 1889; Silverton, Bouck; Nisqually Valley, Allen 118a.

Zonal distribution: Canadian.

Rydberg, a considers this distinct from T. elatum under the name of Therefon occidentale.

A careful reexamination of the above material and much more leaves our previous conclusion unchanged. The plant of California, *T. cincinnatum* Rosendahl & Rydberg loc. cit., is feebly distinguishable by a larger inflorescence with the branches more or less racemiform and curved pedicels. This is said to range from Washington to California, but we have seen specimens only from California.

HEMIEVA.

Petals violet, long-clawed	1.	II.	violacea.
Petals white, short-clawed.	2.	11.	ranunculifolia.

Hemieva violacea (A. Gray) Wheelock, Bull. Torr. Club 23: 71, 1896.

Suksdorfia violacea A. Gray, Proc. Am. Acad. 15: 42, 1879.

Type locality: "Wet rocks of the Columbia River in Washington Territory, near the junction of the White Salmon River."

Specimens examined: West Klickitat County, Saksdorf 68; April, 1878; April 29, 1882.
According to Professor Greene there are specimens in the British Museum collected by Douglas at Kettle Falls.

Hemieva ranunculifolia (Hook.) Raf. Fl. Tell. 2: 70, 1836.

Saxifraga ranunculifolia Hook, Fl. Bor, Am. 1: 246, pl. 83, 1833.

Suksdorfia ranunculifolia Engler in Engl. & Prantl, Nat. Pflanzenfam. 32a; 52, 1891.

Type Locality: "On the high grounds around the Kettle Falls of the Columbia, and on dae Rocky Mountains." Collected by Douglas.

RANGE: British Columbia to North California and east to North Idaho.

Specimens examined: Mount Rainier, Piper 2033; Goat Mountains, Allen 201; Mount Adams, Suksdorf 297; Howell in 1882; Klickitat River, Flett 1310; Stevens Pass, Sandberg & Leiberg 791; Bridge Creek, Elmer in 1897.

Zonal distribution: Hudsonian.

SAXIFRAGA. SAXIFRAGE.

Stems producing perennial branches, these densely beset with small leaves.	
Leaves coriaceous and evergreen, entire.	
Filaments clavate; leaves spatulate, obtuse, not ciliate	1. S. tolmiei.
Filaments subulate; leaves lanccolate, acute, ciliate	2. S. bronchialis.
Leaves not coriaceous thin, 3 to 5-lobed or cleft.	
Calyx united only at base; leaves cleft	3 S comitora
Calvx united to the middle; leaves lobed.	4. S. adscendens.
	4. D. austriarus.
Stems not producing perennial leafy branches.	
Calyx campanulate; stems leafy; basal leaves crenate; cauline	* 1 1:1°
few, entire or 3-lobed	5. S. debilis.
Calyx rotate; leaves all or mostly basal.	
Leaves serrate or coarsely dentate.	
Petals dissimilar; leaves spatulate, serrate, short-	
petioled	9. S. bongardi.
Petals similar; leaves cordate or reniform, coarsely	
toothed, long-petioled.	
Caudex bulbous; herbage somewhat glandular;	
leaves usually doubly dentate	6. S. mertensiana.
Caudex not bulbous; leaves glabrous, simply den-	
tate.	
Petals spatulate-obovate	7. S. odontophylla
Petals elliptic, not clawed	8. S. nelsoniana.
Leaves entire or merely crenate, all basal.	o. o. mumaaa
Leaves ovate or oblong, petioled, usually coarsely cre-	
nate.	
Leaves thick, subcoriaceous, red-tomentose beneath	10 0 1 772
at least when young	10. S. marshaum.
Leaves not subcoriaceous, often thin, glabrous or	11.0
nearly so.	11. S. californica.
Leaves entire or nearly so, oblong-spatulate to ovate.	
Calyx lobes erect, shorter than the tube; petals	
wanting	17. S. apetala.
Calyx lobes spreading, about as long as the tube;	
petals present.	
Petals not exceeding the calyx lobes.	
Petals obovate	12. S. plantaginea.
Petals narrowly oblong	13. S. columbiana.
Petals much longer than the calvx lobes.	
Stems 30 to 60 cm. tall; flowers 7 to 9	
mm. broad; leaves without petioles	14. S. oregana.
Stems 10 to 30 cm. high; flowers smaller;	•
leaves more or less distinctly petioled.	
Flowers 6 to 8 mm. broad; leaves el-	
liptic, villous and viscid above	15. S. intearif
Flowers 3.5 to 5 mm. broad; leaves	
usually broadly ovate; petals per-	
sistent	16 S framea
SISCHU	in in jugane.
1. Saxifraga tolmiei Torr. & Gr. Fl. 1: 567, 1840.	

1. Saxifraga tolmiei Torr. & Gr. Fl. 1: 567, 1840.

Type locality: "Northwest coast." Collected by Tolmie.

RANGE: Washington and Oregon in the Cascade and Olympic Mountains.

Specimens examined: Olympic Mountains, Piper, August, 1895; Elmer 2642; Mount Rainier, Allen 99; Smith in 1890; Piper 2038; Mount Adams, Henderson, August, 1892; Flett 1317; Suksdorf in 1877; Bridge Creek, Elmer 635.

ZONAL DISTRIBUTION: Arctic.

The specific name of this plant in the original publication was spelled *tolmaei*, evidently a typographical error.

2. Saxifraga bronchialis L. Sp. Pl. 1: 400, 1753.

Saxifraga austromontana Wiegand, Bull. Torr. Club 27: 389, 1900.

Saxifraga cognata E. Nelson, Bot. Gaz. 30: 118, 1900.

Type locality: Siberia.

Range: Alaska to Oregon and New Mexico; also Siberia and Russia.

Specimens examined: Olympic Mountains, Piper 2210: Baldy Peak, Lamb 1312: Whidby Island, Gardner 115; Mount Constitution, Henderson, July, 1892; Mount Rainier, Piper 2036 and August, 1888; Smith 348; Goat Mountains, Allen 197; Cascade Mountains, latitude 49°, Lyall in 1859; between Colville and the Cascade Mountains, latitude 49°, Lyall in 1860; Mount Adams, Suksdorf 11: Henderson, July, 1892; Stevens Pass, Sandberg & Leiberg 763; Loomis, Elmer 583; without locality, Vasey in 1889; Cape Horn, Piper 4972.

Zonal distribution: Hudsonian and Arctic.

Two forms of this variable species occur in Washington, both with white flowers. The alpine form has acute or acuminate leaves, while the plant common on the cliffs along the Columbia River and in Island County has thinner obtuse or obtusish leaves and larger corymbs. Mr. Howell has referred the latter form to S. cherlerioides D. Don, with which, however, it is not identical.

Small a recognizes Saxifraga austromontana Wiegand as valid (Leptasea austromontana Small, loc. cit.) and describes the second form mentioned above as Leptasea vespertina. Saxifraga bronchialis L. as generally accepted is a polymorphic species and the above are, as we believe, mere subspecies at best. Intergrading forms occur. They may be designated, however, Saxifraga bronchialis austromontana and S. bronchialis vespertina. The type of the latter is Lamb's 1312.

Saxifraga cespitosa L. Sp. Pl. 1: 404, 1753.

Type locality: North European.

RANGE: Subarctic regions, south to Quebec, Colorado, and Oregon. Europe. Asia.

Specimens examined: Olympic Mountains, Piper 2211: Elmer 2649; Flett 809; Mount Stuart, Brandegee 759; Elmer 1102; Goat Mountains, Allen 200; Mount Rainier, Flett 2176 258; Johns Island, Lawrence 194; Mount Storm King, Lawrence 343; Oreas Island, Henderson, July, 1892; Lopez Island, Lyall in 1858; Eatonville, Flett 2213.

Two forms of this variable species occur in our limits, one high alpine, densely cespitose, the leaves with short obtuse lobes and obscure veins; the other from cliffs along the Columbia River and the San Juan Islands, with thinner prominently veined leaves and a taller looser habit. The latter approaches closely S. caespitosa laxa Koch. The former is scarcely matched in European material. This has recently been proposed as a new species by Small b under the name Muscaria emarginata, the type being Elmer's 2649. This plant is, however, much nearer to true S. cespitosa than the thin-leaved form. Both are mere subspecies in our judgment.

Saxifraga adscendens L. Sp. Pl. 1: 405. 1753.

Type locality: "Habitat in Pyrenaeis, Baldo, Tauro Rustadiensi."

RANGE: British Columbia to Washington, Colorado, and Hudson Bay. Europe

Specimens examined: Mount Baker, Flett 855.

5. Saxifraga debilis Engelm.; Porter & Coulter, Fl. Colo. 38, 1874.

Type locality: Colorado.

Range: Washington to Montana and Colorado.

Specimens examined: Mount Rainier, Allen, August 20, 1895.

6. Saxifraga mertensiana Bong, Mem. Acad. St. Petersb. VI. 2: 141, 1832.

Saxifraga heterantha Hook, Fl. Bor. Am. 1: 252, 1833.

Type locality: "Sitcha," Alaska.

RANGE: Alaska to Idaho and the Blue Mountains; north California.

Specimens examined: Clallam County, Elmer 2643; Chehalis County, Lamb 1348; Cascade Mountains, latitude 49°, Lyall in 1859; Mount Rainier, Allen 17; Goat Mountains, Allen 241; Falcon Valley, Suksdorf 14; rocks of the Columbia, Nuttall; Blue Mountains, Horner; Cape Disappointment, Scouler.

Zonal distribution: Canadian.

Small a considers that two species have been confused under the above, which he distinguishes as *Heterisia mertensiana* and *H. eastwoodiae*, the former with bulblets in the inflorescence, the latter without. Both occur in Washington, and careful field study is needed to determine if the character relied upon is really specific.

7. Saxifraga odontophylla sp. nov.

Perennial by stout rootstocks, not bulbous, entirely glabrous up to the inflorescence; leaves all basal, reniform-orbicular, somewhat fleshy, coarsely and evenly dentate with 15 to 25 teeth, 2 to 8 cm. broad; petioles usually 2 to 3 times as long as the blade; scapes 10 to 40 cm. high; inflorescence a loose, erect panicle, glandular; bracts linear, the lower more or less dentate or occasionally foliaceous; pedicels slender; calyx 5-parted, the lobes oval, obtuse, 2 mm. long, reflexed in anthesis; petals white, orbicular and unguiculate, longer than the calyx; filaments spatulate, acuminate; ovary free; capsules usually purple, somewhat inflated, 7 to 8 mm. long, cleft to the middle, the beaks becoming divaricate.

This species has long passed in American herbaria as S, punctata L, a rare European species. Among American species it can only be confused with S, nelsoniana Don, which is a smaller plant with lobed rather than dentate leaves, pubescent stems and inflorescence, elliptical unclawed petals, and a more or less condensed flower cluster. S, odontophylla ranges from British Columbia to New Mexico and California.

Specimens examined: Olympic Mountains, Piper 2213; Elmer 2639; Mount Rainier, Piper 2025; Flett 236, 278; Cascade Mountains, latitude 49°, Lyall; Cascade Mountains above Stampede Tunnel, Henderson in 1892; Mount Adams, Suksdorf 544; Wenache Mountains, Whited 255; Silverton, Bouck 72a; Mount Stuart, Sandberg & Leiberg 570 (type); Stevens Pass, Sandberg & Leiberg, August, 1893; Blue Mountains, Piper, July 17, 1896; above Lake Chelan, Wilcox in 1883; without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Arctic and Hudsonian.

The type is in the National Herbarium, sheet no. 289646.

8. Saxifraga nelsoniana D. Don, Trans. Linn. Soc. 13: 355. 1822.

Saxifraga punctata nelsoniana Engler, Verh. Zool. Bot. Ges. Vienna 19: 548. 1869.

Type locality: Cape Newnham, Alaska.

Range: Alaska to Washington.

Specimens examined: Olympic Mountains, Piper 2214; Elmer 2640; Mount Rainier, Allen 16; Piper 2040; Smith, August, 1890; Cascade Mountains, latitude 49°, Lyall in 1859; Stevens Pass, Piper, July 7, 1895; Horseshoe Basin, Lake & Hull, August 24, 1892; Bridge Creek, Elmer 716.

The Lyall specimen is peculiar and is referred here with doubt. It has the leaves doubly dentate, scarcely cordate, pubescent on each side, perhaps viscid. It may be referable perhaps to S. mertensiana.

Zonal distribution: Arctic.

9. Saxifraga bongardi Presl, Verh. Zool, Bot. Ges. Vienna 19: 528, 1869.

Saxifraga stellaris brunoniana Bong, Mem, Acad. St. Petersb. Vi. 2: 140, 1831, not Naxifraga brunnoniana Wall.

Saxifraga leucanthemifolia brunoniana Eugler, Monog. Sax. 135, 1872.

Saxifraga notkana Moc.; Small, Bull. Torr. Club 23; 368, 1896,

Type locality: "Sitka."

RANGE: Alaska to Oregon in the Cascade Mountains and westward

Specimens examined: Olympic Mountains, Elmer 2644; Cascade Mountains, latitude 49, Lyall in 1859; Mount Rainier, Piper 2026, 446; Smith, August, 1889; Allen 49; Goat Mountains, Allen 199; Mount Adams, Suksdorf 542, 363; Klickitat River, Flett 1316; Silverton, Bouck 69; mountains north of Ellensburg, Brandegee 760; Skamania County, Suksdorf 2500; Bridge Creek, Elmer 691; Horseshoe Basin, Luke & Hull 468; Stevens Pass, Sandberg & Leiberg, August, 1893; Nason Creek, Sandberg & Leiberg 657.

ZONAL DISTRIBUTION: Arctic.

This species is allied to S. stellaris L. and has often been thus referred.

10. Saxifraga marshallii Greene, Pittonia 1: 159, 1888.

Saxifraga occidentalis S. Wats. Proc. Am. Acad. 23: 264, 1888.

Type Locality: "On damp rocky hillsides, Hoopa Valley, Humboldt County, California."
RANGE: British Columbia and Alberta to California.

Specimens examined: Mount Rainier, Piper 2034*: Goat Mountains, "Allen 242*: Wenache region, Brandegee 757*: Olympic Mountains, Piper 2212; Elmer 2646; lower Cascade Mountains, Skamania County, Suksdorf 967; White Salmon, Suksdorf 269; Goat Mountains, Allen, July 22, 1896; Mount Baker, Flett 857; Cape Horn, Piper 4969.

ZONAL DISTRIBUTION: Arctic and in the Columbia Gap.

The specimens marked with an asterisk agree with the type of *S. occidentalis* in having chivate filaments. The remaining specimens are very similar in all other respects but have subulate filaments. Watson included both forms in his original account of the species. If the filament character proves to be a real specific distinction, as may indeed be the case, we shall have two species of remarkable similarity. The form with subulate filaments is allied to *S. nivalis* L., under which name it has been distributed. The form from the Columbia Gap was referred in Hooker's Flora to *S. vernalis* Willd., and in Suksdorf's List to *S. reflexa* Hook.

Besides the above specimens a few others have been examined, evidently closely allied to S. marshallii, but which we hesitate to refer there, namely: Wenache Mountains, Whited 1040; Admiralty Head, Oscar Piper; Blue Mountains, Piper, July, 1896.

The whole group is in need of critical revision.

^a In the recent treatment of Saxifraga by Small in the North American Flora five species are recognized under the generic name Micranthes in what I have here referred to S. marshallii. The following characters are relied upon to distinguish them:

Petals wholly white.

Cymules permanently compact.

Petals rounded at apex; species of northern Rocky

Mountains M. occidentalis (8. Wats.).

Petals notelied at apex; species of the Northwest. M. allenii Small.

Cymules lax and open.

The value of the above characters will have to be determined by careful field study and larger series of material. *M. rufidula* Small is probably a valid species, and according to the above characters will include all of the specimens above not marked with an asterisk. It may be remarked that this embraces most of the specimens from the bluffs of the

11. Saxifraga californica Greene, Pittonia 1: 286, 1889.

Type locality: "Central parts of California in the Coast Range especially."

Range: Washington to California.

Specimens examined: Cascade Mountains to Fort Colville, latitude 49°, Lyall; Fort Vancouver, Scouler.

These two specimens are thus referred with much hesitancy.

12. Saxifraga plantaginea Small, Bull. Torr. Club 23: 366, 1896.

Type locality: Spokane, Washington. Collected by Sandberg & Leiberg.

RANGE: Known only from the type locality.

Specimens examined: Spokane, Sandberg & Leiberg, May, 1893.

Zonal distribution: Arid Transition.

13. Saxifraga columbiana Piper, Bull. Torr. Club 27: 393, 1900.

Type locality: Pullman, Washington.

Range: British Columbia to Oregon and Idaho.

Specimens examined: Fort Colville, Lyall in 1861; Spokane, Henderson, May 31, 1892; Hangman Creek, Sandberg & Leiberg 16; Pullman, Piper 1496, 1808; Elmer 126; Almota, Piper, May 27, 1893.

Zonal distribution: Arid Transition.

The Sandberg & Leiberg collection was referred by Small a to S. nidifica Greene.

14. Saxifraga oregana flowell, Erythea 3: 34. 1895.

Type locality: "Mountain marshes of Oregon and Washington."

Range: Washington, Oregon, and Idaho.

Specimens examined: Olympia, Kincaid, July 2, 1896; Henderson 2488; Tacoma, Flett

181; Falcon Valley, Suksdorf 1729; Steilacoom, Piper, May, 1888.

Zonal distribution: Humid Transition.

Saxifraga integrifolia Hook. Fl. Bor. Am. 1: 249, 1833.

Type locality: "Near the mouth of the Columbia." Collected by Scouler.

Range: British Columbia to California west of the Cascade Mountains.

Specimens examined: Puget Sound, Wilkes Expedition; Roy, Allen 87; Tacoma, Flett 22, 60.

Zonal distribution: Humid Transition.

16. Saxifraga fragosa Suksdorf, Bull. Torr. Club 23: 363, 1896.

Saxifraga elaytoniaefolia Canby, Bull. Torr. Club 23: 365, 1896.

Type locality: "Wet rocks near the Columbia River, W. Klickitat County, Washington." Collected by Suksdorf.

Specimens examined: Klickitat County, Suksdorf 1727: Falcon Valley, Suksdorf 1728, 2201; Klickitat River, Flett 1305a, 1309, 1311; Ellensburg, Whited 319; Wenache Mountains, Whited 1040; Lake River, Clarke County, Suksdorf 2496, 2497; without locality, Vasey in 1889; Almota, Piper 1797, 2793; Elmer 139; Wenache Mountains, Cotton 1179, 1311.

Zonal distribution: Arid Transition.

Columbia with thinner, nearly glabrous leaves, thus approaching S. californica closely, as well as the alpine plant with thick leaves red-tomentose beneath.

The character relied upon to separate M, allenii and M, occidentalis does not seem valid. At least a duplicate type specimen in the National Herbarium has most of its petals entire at apex. It is very questionable, too, if the character upon which M, acquidentata is based will suffice to distinguish it from M, allenii. Differences in the compactness of the cyme are subject to the degree of maturity of the specimens and to the effects of altitude and exposure.

a Bull. Torr. Club **23**: 366. 1896.

17. Saxifraga apetala Piper, Bull. Torr. Club 27: 393, 1900.

Type locality: Eastern Washington. Collected by Vasey.

Range: Wenache Mountains.

Specimens examined: Kittitas Mountains, Whited, May 6, 1896; north branch of Columbia, Wilkes Expedition 1070; without locality, Vascy in 1889; Wenache Mountains, Cotton 1204.

Saxifraga punctata acutidentata Engler, Verh. Zool. Bot. Ges. Vienna 19: 548, 1869. Type locality: "South Clear Creek, Cascade Mts." Collected by Lyall. Leaves deeply dentate, not cordate; petioles dilated above. It is quite probable that there is an error as to the above locality, as the Gray Herbarium specimen is labelled "Rocky Mts.. Lat. 49°". The plant has not been found in the Cascade Mountains by any recent collector.

TIARELLA.

Leaves merely lobed. 1. T. unifoliata.

Leaves trifoliolate.

Leaflets coarsely dentate. 2. T. trifoliata.

Leaflets deeply lobed or cleft. 3. T. laciniata.

1. Tiarella unifoliata Hook. Fl. Bor. Am. 1: 238. pl. 81. 1833.

Petalosteira unifoliata Rat. Fl. Tell. 2: 74, 1836.

Type locality: "Height of land in the Rocky Mts. near the source of the Columbia, and at Portage River." Collected by Drummond.

Range: Alaska to Northern California, eastward to west Montana.

Specimens examined: Mount Rainier, Piper 2031; along Nisqually River, Allen 188; Silverton, Bonek 70; Stampede Pass, Henderson, July, 1892; Yakima Pass, Watson 131; Mount Adams, Suksdorf 120, 121; Stevens Pass, Whited 1452; Fish Lake, Dunn, August 8, 1900; Nason Creek, Sandberg & Leiberg 673; Horseshoe Basin, Lake & Hull 466; Elmer 724; Blue Mountains, Piper, July, 1896; without locality, Vascy in 1889; Mount Carlton, Kreager 186; Usk, Kreager 371.

Zonal distribution: Canadian.

2. Tiarella trifoliata L. Sp. Pl. 1: 406, 1753.

Tiarella stenopetala Presl, Rel. Haenk. 2: 55, 1835.

Blondia trifoliata Raf. Fl. Tell. 2: 75, 1836.

Type locality: "Habitat in Asia boreali."

Range: Oregon to Alaska and northeast Asia.

Specimens examined: Challam County, Elmer 2775; Sumas Prairie, Lyall in 1859; Seattle, Smith 86; Snoqualmie, Parker, August, 1892; Steilacoom, Cooper in 1854; Skokomish Valley, Kincaid, June, 1892; upper Nisqually Valley, Allen 8; Roy, Allen 104; Mount Adams, Suksdorf 121; Cascade Mountains, Lyall in 1859; Silverton, Bouck 5a, 71; Stevens Pass, Sandberg & Leiberg, August, 1893.

ZONAL DISTRIBUTION: Humid Transition.

3. Tiarella laciniata Hook. Fl. Bor. Am. 1: 239. pl. 77. 1833.

Petalosteira laciwiata Raf. Fl. Tell. 2: 74, 1836.

Tiarella trifoliata laciniata Wheelock, Bull. Torr. Club 23: 72, 1896.

Type locality: "North-West coast of America." Collected by Menzies.

Range: British Columbia and Washington.

Specimens examined: Lower Cascades, Skamania County, Suksdorf 856 in part: Mount Constitution, Flett 2735.

TELLIMA.

Petals sessile, pinnately parted :	1. T. grandiflora
Petals clawed, palmately cleft.	
Calyx obconic; petals 3-eleft	2. T. parviflora.
Calyx campanulate; petals 3 to 7-cleft	$3.\ T.\ tenella$.

1. Tellima grandiflora (Pursh) Dougl. Bot. Reg. 14: pl. 1178. 1828.

Mitella grandiflora Pursh, Fl. 1: 314. 1814.

Tiarella alternifolia Fisch.; Ser. in DC. Prod. 4: 50. 1830.

Type locality: "On the northwest coast." Collected by Menzies.

Range: Alaska to Southern California, west of the Cascades and Sierras.

Specimens examined: Montesano, Heller 3862; Clallam County, Elmer 2645; Cascade Mountains, latitude 49°, Lyall in 1859; Seattle, Smith 88; Tacoma, Flett 61; upper Nisqually Valley, Allen 7; Silverton, Bonck 73; Roy, Allen 102, May 19, 1889; Klickitat County, Suksdorf 12; Horseshoe Basin, Lake & Hull 467; Elmer 743; Cape Horn, Piper 4973.

Zonal distribution: Humid Transition.

2. Tellima parviflora Hook. Fl. Bor. Am. 1: 239. pl. 78. 1833.

Lithophragma parviflora Nutt.; Torr. & Gr. Fl. 1: 584, 1840.

Mitella parviflora Dietr. Syn. 2: 539, 1840.

Type locality: "North California " Menzics.

RANGE: British Columbia to California, eastward to Colorado.

Specimens examined: Olympic Mountains, Grant in 1889; Oreas Island, Lyall in 1858; Admiralty Head, Piper, April, 1898; Wenache, Whited 1017; West Scattle, Piper 89; Rattlesnake Mountains, Cotton, 333; White Salmon, Suksdorf 273; Spokane, Henderson, May, 1892; Hangman Creek, Sandberg & Leiberg 32; Fort Colville, Lyall in 1861; Spokane County, Mrs. Tucker; Pullman, Elmer 171; Piper, May, 1893; Hull, May, 1892; Walla Walla, Leckenby, April, 1898.

Zonal distribution: Arid Transition.

3. Tellima tenella (Nutt.) Walp. Repert. 2: 371, 1843.

Lithophragma tenella Nutt.; Torr. & Gr. Fl. 1: 584, 1840.

Type locality: "In the central range of the Rocky Mountains, on the banks of the Big Sandy and Siskadee rivers of the Colorado of the West, about lat. 42°." Collected by Nuttall.

Range: British Columbia to Wyoming, southward to south California and New Mexico. Specimens examined: Wenache Region, Brandegie 761. Wenache, Whited 1017; Ellensburg, Whited 261: Falcon Valley, Suksdorf 272½; White Salmon, Suksdorf 272; Klickitat River, Flett 1307; Pullman, Elmer 80; Wawawai, Piper, May, 1893; Clarkston, Hunter 2.

ZONAL DISTRIBUTION: Arid Transition.

Rydberg ^a regards our plant as a distinct species under the name *Lithophragma bulbi-fera*, stating that it differs from its immediate allies in being bulbiferous in the leaf axils and in having fimbriate instead of entire sepals.

Tellima Glabra Steud.^b (Lithophragma glabra Nutt.c), found by Nuttall in the Blue Mountains of Oregon, is said by Rydberg d to differ from T, tenella, which is known only from the Rocky Mountains, in having muriculate seeds and pedicels larger than the capsules.

CHRYSOSPLENIUM.

1. Chrysosplenium scouleri (Hook.) Rose, Bot. Gaz. 23: 277. 1897.

Chrysosplenium oppositifolium scouleri Hook. Fl. Bor. Am. 1: 242, 1834.

Chrysosplenium glechomaefolium Nutt.; Torr. & Gr. Fl. 1: 589, 1840.

Type locality: "Columbia River on the North West coast." Collected by Scouler.

Range: British Columbia to Oregon in the coast region.

Specimens examined: Hoquiam, Lamb 1044; upper Nisqually Valley, Allen 150: Nisqually River, Flett 92; Mashel Mountain, Piper 2029, 748; Columbia River, Nuttall: without locality, Cooper; Ilwaco, Piper 4992; Quinault, Conard 131.

Zonal distribution: Humid Transition and Canadian.

a N. Am. Fl. 22²; 86, 1906.

c Torr. & Gr. Fl. 1: 584, 1840.

b Nom. ed. 2. 2: 665, 1841.

d N. Am. Fl. 222: 84, 85, 1906.

MITELLA.

Calyx green; petals pinnatifid.

Stems bearing 1 to 3 leaves; stoloniferous. 2. M. eaulesceus.

Stems leafless; not stoloniferous.

Leaves ovate. 4. M. ovalis.

Calyx white; petals trifid or entire.

Petals entire; calyx-lobes obtuse. 5. M. micrantha.

Petals 3-cleft or 3-parted.

Raceme secund; petals 3-parted with filiform divaricate

lobes 6. M. stauropetala.

Raceme not secund; petals cuneate, 3-cleft at apex, the

lobes not divaricate.

Calyx-lobes acute; leaves angularly lobed....... S. M. diversifolia.

1. Mitella pentandra Hook. Bot. Mag. 56: pl. 2933. 1829.

Drummondia mitelloides DC. Prod. 4: 50, 1830.

Mitellopsis drummondii Meisn. Pl. Vasc. Gen. 1: 100, 1836.

Type locality: "Rocky Mountains of North America." Type specimen raised from seed collected by Drummond.

RANGE: British Columbia to Saskatchewan, Colorado, and Oregon.

Specimens examined: Olympic Mountains, Piper, August, 1895; Henderson, July 11, 1892; Mount Rainier, Piper 2028; upper Nisqually Valley, Allen 5; Mount Stuart, Sandberg & Leiberg, June, 1893, 567; Stevens Pass, Piper, July, 1895; Wenache Mountains, Elmer 165; Skokomish Valley, Kincaid, June, 1892; Cascade Mountains, Henderson, August, 1892; Horseshoe Basin, Lake & Hull, August, 1892; Blue Mountains, Horner 122; Piper 2410.

Zonal distribution: Hudsonian.

Rydberg considers that two species have been confused under *M. pentandra*, designating them as *Pectiantia pentandra* and *P. latiflora* Rydberg.^a The somewhat larger flowers and hairy petioles of the latter are considered diagnostic, but we find all intermediates in the size of the flowers and also find hairy petioles on small-flowered plants. Both extremes as to the size of the flowers occur in the Cascade Mountains.

2. Mitella caulescens Nutt.: Torr. & Gr. Fl. 1: 586, 1840.

Mitellastra caulescens Howell, Fl. N. W. Am. 201, 1898.

Type locality: "Shady woods of the Oregon near the mouth of the Wahlamet." Collected by Nuttall.

RANGE: British Columbia to Oregon and north Idaho.

Specimens examined: Seattle, Piper 90; Skokomish Valley, Kincaid, May, 1892; upper Xisqually Valley, Allen 9; Falcon Valley, Suksdorf 365; woods of the Columbia, Nuttall; lower Frazer River, latitude 49°, Lyall in 1859; Mount Carlton, Kreager 203.

ZONAL DISTRIBUTION: Humid Transition.

3. Mitella breweri A. Gray, Proc. Am. Acad. 6: 533, 1865.

Type locality: "Mount Hoffman, in a damp place at about 11,000 feet altitude", California. Collected by Brewer.

RANGE: California to British Columbia and north Idaho.

Specimens examined: Baldy Peak, Lamb 1347; Mount Rainier, Piper 2030; Allen 48; Flett 303; Goat Mountains, Allen 86; Mount Adams, Henderson, August, 1892; Suksdorf 364; Nason Creek, Sandberg & Leiberg 661.

ZONAL DISTRIBUTION. Hudsonian.

4. Mitella ovalis Greene, Pittonia 1: 32. 1887.

Mitella hallii Howell, Erythea 3: 33. 1895.

Type locality: Mendocino County, California.

RANGE: Washington to north California near the coast.

Specimens examined: Hoquiam, Lamb 1056; Quinault, Conard 225.

Mitella micrantha Piper, Erythea 7: 162, 1899.

Type locality: Fort Colville, Washington. Collected by Watson.

Range: Known only by the type specimen.

Specimens examined: Fort Colville, Watson 135.

6. Mitella stauropetala Piper, Erythea 7: 161, 1899.

Type locality: Craig Mountains, Nez Perce County, Idaho.

Range: Idaho.

Common near the Washington line and to be expected on Kamiak Butte and in the Blue Mountains.

7. Mitella trifida Graham, Edinb. New Phil. Journ. 7: 185, 1829.

Mitellopsis hookeri Meisn. Pl. Vasc. Gen. 1: 100, 1836.

Type LOCALITY: Type raised from seeds presented by Mr. Drummond "after the return of the last overland journey to the arctic coast of America."

Range: Washington to Saskatchewan.

Specimens examined: Olympic Mountains, Flett 83: Mount Rainier, Allen 7; Goat Mountains, Allen 195: Mount Stuart, Sandberg & Leiberg 815: Mount Baker, Flett 858; west Klickitat County, Suksdorf 122: Wenache Mountains, Cotton 1281.

Rydberg a separates the Cascade and Olympic Mountain plant from that of the Rocky Mountains as Ozomelis pacifica. The distinction relied upon is the slightly larger size of the cally and corolla.

8. Mitella diversifolia Greene, Pittonia 1: 32. 1887.

Mitella diversiloba Greene; Piper, Erythea 7: 162, 1899, err. typ.

Type locality: "From the same region as the preceding," i. e. "summit of Trinity Mountains, California." Collected by C. C. Marshall.

Range: North California to Washington.

Specimens examined: White Salmon River, Suksdorf 13.

HEUCHERA.

Stamens exserted; flowers in loose panicles. Leaf lobes triangular, acute: herbage glabrous....... 1. H. glabra. Leaf lobes rounded; herbage pubescent, at least the under leaf surface 2. H. micrantha. Stamens included. 3. H. racemosa. Flowers in a loose raceme..... Flowers in a spike or spike-like panicle. Calvx white; leaves subcoriaceous, glabrous. Stems and petioles glabrous. 4. II. glabella. Calyx green, leaves not subcoriaceous. Leaves thickish, not glabrous. Pubescence villous or hirsute...... 5. H. cylindrica. Pubescence glandular. Spike 2 to 4 cm. long...... 6. H. ovalifolia.

Spike less than 2 cm. long....... 6a. H. ovalifolia alpina.

1. Heuchera glabra Willd.; Roem. & Schult. Syst. 6: 216, 1820.

Heuchera divaricata Fisch.; Ser. in DC. Prod. 4: 51, 1830.

Tiarella colorans Graham, Edinb. New Phil. Journ. 7: 349, 1829.

Type locality: Western North America.

Range: Alaska to Oregon.

Specimens examined: Snoqualmie, Parker, August, 1892; Mount Rainier, Smith, August, 1890; Piper 2027, 548; Goat Mountains, Allen 194; Baldy Peak, Lamb 1377; Mount Adams, Suksdorf 546; Skamania County, Suksdorf 968; Peshastin, Sandberg & Leiberg 485; Bridge Creek, Elmer 674.

Zonal distribution: Hudsonian.

2. Heuchera micrantha Dougl.: Lindl. Bot. Reg. 15: pl. 1302, 1829.

Heuchera barbarossa Presl, Rel. Haenk. 2: 56, 1835.

Type locality: "Mountainous woods, near the Grand Rapids [Cascades] of the Columbia." Collected by Douglas.

RANGE: British Columbia to north Idaho and California. Mexico.

Specimens examined: Clallam County, Elmer 2651: Snoqualmie, Parker, August, 1892; Skokomish Valley, Kincaid, May, 1892; upper Nisqually Valley, Allen 10; Silverton, Bouck 71a; Peshastin, Sandberg & Leiberg 485; Columbia River, Barclay: west Klickitat County, Suksdorf, June, 1874: Union City, Piper in 1890.

ZONAL DISTRIBUTION: Humid Transition and Canadian.

Two forms occur, one with the petioles very villous, the other having them nearly glabrous. The former seems to be the typical *H. micrantha* Dougl., but Rydberg *a* has recently considered it a distinct species, naming it *H. nuttallii*.

3. Heuchera racemosa S. Wats. Proc. Am. Acad. 20: 365, 1885.

Tellima racemosa Greene, Erythea 3:55, 1896.

Type locality: "On cliffs of Mt. Adams, Wash., at 7-8000 ft. altitude." Collected by Suksdorf.

Range: Washington.

Specimens examined: Olympic Mountains, Piper 2215, 913; Clallam County, Elmer 2641; Mount Rainier, Piper 2032; Allen 196; Mount Adams, Suksdorf, July, 1883; Henderson 2490; mountains north of Ellensburg, Brandeger 765; Nason Creek, Sandberg & Leiberg 662; Bridge Creek, Elmer 689.

Zonal distribution: Arctic.

This species forms the type of the genus Elmera proposed by Rydberg.b

4. Heuchera glabella Torr. & Gr. Fl. 1:581, 1840.

Heuchera eylindrica glabella Wheelock, Bull. Torr. Club 17: 203, 1890.

Type locality: "Rocky Mountains towards Oregon." Collected by Nuttall.

RANGE: Eastern Oregon to Montana and northward into British Columbia.

Specimens examined: Sprague, Henderson, May, 1892; Spokane County, Suksdorf 299; Blue Mountains, Piper, July, 1896; Pullman, Piper 1497; without locality, Vasey in 1889; Clarks Springs, Kreager 71; Chelan Butte, Cot'en 183.

ZONAL DISTRIBUTION: Arid Transition.

4a. Heuchera glabella columbiana (Rydberg).

Heuchera columbiana Rydberg, N. Am. Fl. 22: 116, 1905.

Type locality: "Near Swan Lake, Washington." Swan Lake is erroneous, the locality being Loon Lake, Stevens County.

Differs from II. glabella principally in the hirsute stems and petioles.

Specimens examined: Clarks Springs, Beattle & Chapman 2019; Loon Lake, Winston, July 20, 1897; Ellensburg, Elmer 419; Wenache Mountains, Whi'ed 1134.

5. Heuchera cylindrica Dougl.; Hook. Fl. Bor. Am. 1: 236, 1833.

Type locality: "On the declivities of low hills, and on the steep banks of streams on the west side of the Rocky Mountains." Collected by Douglas.

RANGE: British Columbia to southern Oregon and east to north Idaho.

Specimens examined: Montesano, Heller 4067; Sumas Prairie, Lyall in 1858; Orchard Point, Piper, July, 1895; Tacoma, Flett 123; Falcon Valley, Suksdorf 1739; Vancouver, Piper 4944.

ZONAL DISTRIBUTION: Humid Transition.

6. Heuchera ovalifolia Nutt.; Torr. & Gr. Fl. 1: 581, 1840.

Type locality: "Blue Mountains, Oregon, on rocks." Collected by Nuttall.

Range: British Columbia to Wyoming and Oregon.

Specimens examined: Mount Stuart, Elmer, August, 18984; Wenache Mountains, Whited 3: Leavenworth, Sarage 26: Cascade Mountains, Yakima County, Henderson 2492; between Coulee City and Waterville, Spillman, May 27, 1896, north fork of Columbia River, Wilkes Expedition.

6a. Heuchera ovalifolia alpina (S. Wats.)

Heuchera cylindrica alpina S. Wats, Bot, King Explor, 96, 1871.

Type locality: "Clover Mountains, Nevada: 11000 feet altitude."

Range: British Columbia to Nevada.

Specimens examined: Mount Adams, Henderson 2491; Suksdorf 14; Wenache Mountains, Elmer, July, 1897.

This seems to be merely a reduced alpine state of H. oralifolia Nutt.

Zonal distribution: Arctic.

7. Heuchera tenuifolia (Wheelock) Rydberg, N. Am. Fl. 22:116, 1905.

Heuchera cylindrica tennifolia Wheelock, Bull. Torr. Club 17: 204, 1890.

Type locality: Near the Dalles, Oregon. Collected by Howell.

Range: Oregon and Washington.

Specimens examined: Simcoe Mountains, J. Howell, June, 1879; Major Creek, Klickitat County, Suksdorf 857.

Heuchera suksdorfh Rydberg, N. Am. Fl. 22²: 116, 1906. Type locality: Falcon Valley. Collected by Suksdorf. This is closely related to *H. ovalifolia* Nutt., but is said to differ in having the leaves deeply lobed and the teeth broadly ovate.

LEPTAXIS.

1. Leptaxis menziesii (Pursh) Raf. Fl. Tell. 2: 75, 1836.

Tiarella menziesii Pursh, Fl. 1:313, 1814.

Henchera menziesii Hook, Fl. Bor, Am. 1:237, pl. 80, 1833.

Tolmiea menziesii Torr. & Gr. Fl. 1: 582, 1840.

Type locality: "On the northwest coast." Collected by Menzies.

RANGE: Alaska to Mendocino County, California, west of the Cascade Mountains.

Specimens examined: Montesano, Heller 3851; Clallam County, Elmer 2776; Hoquiam, Lamb 1054; Seattle, Piper 92; Skokomish Valley, Kincaid, May, 1892; upper Nisqually Valley, Allen 6, Silverton, Bouck 74; Cascade Mountains, latitude 49°, Lyall in 1859; Port Ludlow, Binns; Roy, Allen 78.

Zonal distribution: Humid Transition and Canadian.

PARNASSIA.

1. Parnassia fimbriata König, Ann. Bot. 1:391, 1805.

Type locality: "On the coast of northwest America." Collected by Menzies.

RANGE: Alaska to Oregon and Colorado.

Specimens examined: Olympic Mountains 2208; Mount Rainier, Piper 2037; Allen 282; Cascade Mountains, latitude 49°, Lyall in 1859; Stevens Pass, Whited 1430; Fish Lake, Dunn, August 8, 1900; Bridge Creek, Elmer 673.

ZONAL DISTRIBUTION: Hudsonian.

GROSSULARIACEAE. CURRANT FAMILY.

RIBES. CURRANT. GOOSEBERRY.

Stems usually armed with spines and frequently with prickles; leaves plicate in the bud.	
Peduncles 1 to 4-flowered; calyx tube campanulate or cylindric. Flowers about 2 cm. long, dark purple; berries warty, gland-	
	1. R. lobbii.
ular	1. A. 100011.
Flowers much smaller, greenish or purple or white.	
Berries prickly	2. R. watsonianum.
Berries smooth.	
Calyx lobes longer than the tube; stamens decid-	
edly longer than the whole calyx.	
Flowers white; calyx lobes narrow	3. <i>R. niveum</i> .
Flowers greenish or purplish; calyx lobes	
broader	4. R. divaricatum.
Calyx lobes equaling or shorter than the tube.	
Stamens searcely longer than the whole calvx;	
flowers greenish; prickles often wanting	5. R. inerme.
Stamens decidedly shorter than the whole calyx.	
Lobes equaling the campanulate tube	6. R. irrigmum.
Lobes shorter than the cylindric tube	7. R. cognatum.
Peduncles nodding; flowers rather numerous in a raceme; calyx	· · · · · · · · · · · · · · · · · · ·
tube saucer-shaped; berries glandular.	
Leaves glabrous or nearly so; berries black	8. R. lacustre.
Leaves guadious of hearty so, berries mack. Leaves pubescent or glandular; berries red.	9. R. lentum.
•	o. n. tentam.
Stems not thorny or prickly. Leaves convolute in the bud; flowers yellow; calyx-tube long	
cylindric	18 D grander
The state of the s	18. A. aureum.
Leaves plicate in the bud; flowers green, white or red.	
Calyx tube rotate.	1.4 7) '7'
Berries red, smooth.	14. K. cutosum.
Berries black, glandular.	41) T) 41 7
Flowers white	13. K. petiolare.
Flowers greenish.	
Racemes erect or ascending.	
Glands sessile	
Glands stalked.	•
Racemes pendent	12. R. howelfii.
Calyx tube cylindric or campanulate.	
Flowers red: raceme drooping, many-flowered	15. R , sanguineum.
Flowers white or greenish; inflorescence few-flowered.	
Berries red or orange, glabrous or slightly glandu-	
lar; leaves resinous-dotted; raceme drooping	16. R. cereum.
Berries black, glandular: leaves viscid-pubescent;	
inflorescence corymbose	17. R. viscosissimum.

1. Ribes lobbii A. Gray, Am. Nat. 10: 274, 1876.

Type locality: "Vancouver Island." Collected by Wood.

RANGE: Vancouver Island to North California west of the Cascade Mountains.

Specimens examined: Challam County, Elmer 2655; Puget Sound, Brandegee in 1885; upper Nisqually Valley, Allen 28; west Klickitat County, Suksdorf 17.

Zonal distribution: Humid Transition.

2. Ribes watsonianum Koehne, Deutsche Dendr. 197. 1893.

Ribes ambiguum S. Wats. Proc. Am. Acad. 18: 193, 1883, not Maxim, 1874.

Type locality: "Im Washingtongebiet."

Range: Cascade Mountains, Washington.

Specimens examined: Mount Adams, Suksdorf 18, 337, 54: Wenache region, Brandegee 770: without locality, Vasey in 1889.

3. Ribes niveum Lindl. Bot. Reg. 20: pl. 1692, 1835.

Ribes triflorum Willd. err. det. Hook. Fl. Bor. Am. 1: 230, 1831.

Type locality: "North-west America." Collected by Douglas.

Range: Idaho and adjacent Washington to Nevada.

Specimens examined: Almota, Piper 1887; Wawawai, Elmer 90.

Zonal distribution: Upper Sonoran.

4. Ribes divaricatum Dougl. Trans. Hort. Soc. Lond. 7: 515, 1830.

Type locality: "Northwest coast of North America from the 45° to the 52° N. Lat." Collected by Douglas.

Range: British Columbia to southern California west of the Cascade Mountains.

Specimens examined: Montesano, Heller 3921; Hoquiam, Lamb 1005; Admiralty Head, Piper, April, 1898; Seattle, Piper in 1897; Orchard Point, Piper, July, 1895; Port Ludlow, Binns; Puget Sound, Brandegee in 1885; Seattle, Eugelman & Sargent in 1880; upper Nizqually Valley, Allen 69; Ellensburg, Piper, May, 1897; Rock Island, Henderson, July, 1892.

Zonal distribution: Humid Transition.

5. Ribes inerme Rydberg, Mem. N. Y. Bot. Gard. 1: 202, 1900.

Type locality: "Slough Creek," Montana.

Range: Rocky Mountains from Montana to New Mexico and westward to the Sierras and Cascades.

Specimens examined: Near Ellensburg, Piper, May, 1897; Whited 288; Pullman, Piper 1801, 3538; Elmer 87, 1256; without locality, Vascy in 1889; Chewaukum, Whited 2545, Zonal distribution: Arid Transition.

6. Ribes irriguum Dougl. Trans. Lond. Hort. Soc. 7: 576, 1830.

Ribes leucoderme Heller, Bull. Torr. Club 24:93. 1897.

Type locality: "On the Blue Mts. in latitude 46° 33′, very common:" "also on hills on the banks of the Spokane River." Collected by Douglas.

Range: North Idaho and adjacent Washington.

Specimens examined: Spokane, Sandberg & Leiberg, May, 1893; Piper 2262, 2284; Spokane Valley, Lyall in 1861; Blue Mountains, Piper 2433; along Tukanon River, Lake & Hull 459; Mount Carlton, Kreager 215.

ZONAL DISTRIBUTION: Arid Transition.

7. Ribes cognatum Greene, Pittonia 3: 115. 1896.

Type locality: "River banks at Pendleton," Oregon. Collected by Howell.

Range: Eastern Washington and eastern Oregon.

Specimens examined: Wenache region, Brandegee 772; Sprague, Sandberg & Leiberg 150; Walla Walla, Mrs. Anderson: Union Flat Creek, Piper 1810, 2628, 3565, 3566; Elmer 116; Almota, Piper 2627; Wawawai, Piper 1501.

ZONAL DISTRIBUTION: Arid Transition.

8. Ribes lacustre (Pers.) Poir. Encyc. Suppl. 2: 856, 1811.

Ribes echinatum Dougl. Trans. Hort. Soc. Lond. 7: 517, 1830.

Type locality: Lake Mistassini, Canada.

Range: Labrador and New England to Alaska, and south to central California.

Specimens examined: Olympic Mountains, Henderson 321; Elmer 2656; Admiralty Head, Piper, April, 1898; Port Ludlow, Binns; upper Nisqually Valley, Allen 29; near Skagit Pass, Lake & Hull, August, 1892; Mount Adams, Suksdorf 19; Mount Stuart, Elmer 1257; Wenache Mountains, Whited 1243; Wenache region, Brandegee 771; Lake Wenache, Sandberg & Leiberg 645; Blue Mountains, Piper 2423, August, 1896; Lake & Hull, July, 1892.

Zonal distribution: Transition and Canadian.

9. Ribes Ientum (Jones) Coville & Rose, Proc. Biol. Soc. Wash. 15: 28, 1902.

Ribes lacustre molle A. Gray, Bot. Cal. 1: 206, 1880.

Ribes lucustre lentum Jones, Proc. Cal. Acad. II. 5: 681, 1895.

Ribes molle Howell, Fl. N. W. Am. 1: 209, 1898, not Poepp. 1858.

Ribes nubigenum McClatchie, Erythea 2: 80, 1894, not Phil. 1856.

Ribes montigenum McClatchie, Erythea 5: 38, 1897.

Type locality: Utah.

Range: Washington to California and Utah.

Specimens examined: Mount Adams, Henderson 2489; Klickitat River, Flett 1318.

10. Ribes bracteosum Dougl.; Hook. Fl. Bor. Am. 1: 233, 1831. Stink currant.

Type locality: "At the confluence of the Columbia with the ocean." Collected by Scouler and by Douglas.

RANGE: Alaska to north California, west of the Cascade Mountains.

Specimens examined: Hoquiam, Lamb 1011; Montesano, Heller 3912; Seattle, Piper 96; Silverton, Bouck 65; Clallam County, Elmer 2652; Cascade Mountains, Suksdorf 124; Mount Adams, Suksdorf 124; Nisqually valley, Allen 27; Stevens Pass, Sandberg & Leiberg 728; Horseshoe Basin, Elmer 861; without locality, Cooper; without locality, Vasey in 1889. Zonal distribution: Humid Transition to Hudsonian.

11. Ribes laxiflorum Pursh, Fl. 2: 731. 1814.

Ribes affine Dougl.; Bong. Mem. Acad. St. Petersb. VI. 2: 138, 1832.

Type locality: "On the northwest coast." Collected by Menzies.

Range: Alaska to Oregon, near the coast.

Specimens examined: Head of Duckaboose River, Olympic Mountains, *Piper* 2206; Chehalis County, *Lamb* 1064a; head of Twisp River, *Whited* 221; without locality, *Cooper*; Ilwaco, *Piper* 4954.

ZONAL DISTRIBUTION: Canadian.

12. Ribes howellii Greene, Erythea 4: 57, 1896.

Ribes accrifolium Howell, Erythea 3: 34, 1895, not Koch. 1869.

Ribes laxiflorum Pursh, err. det. Howell, Fl. N. W. Am. 1: 208, 1898.

Type locality: On Mount Hood, Oregon.

RANGE: Mount Hood, Oregon, northward into British Columbia in the mountains.

Specimens examined: Olympic Mountains, Piper 2207; Elmer 2657; Sargent, August 18, 1896; Mount Rainier, Piper 2035, August, 1888; Sargent, August 18, 1896; Goat Mountains, Allen 70; Klickitat River, Flett 1308, 1320; Nason Creek, Sandberg & Leiberg 669; Bridge Creek, Elmer 666; Mount Adams, Suksdorf 634, 367.

ZONAL DISTRIBUTION: Hudsonian.

13. Ribes petiolare Dougl. Trans. Hort. Soc. Lond. 7: 514, 1830.

Type locality: "On the western base of the Rocky Mts, from the 48° to the 52° N. Lat." Collected by Douglas.

RANGE: British Columbia to western Montana and northern Utah.

Specimens examined: Wenache region, Brandegee 769; Wenache, Whited, May, 1896; near Ellensburg, Piper 2626; Simcoe Mountains, Howell, June, 1879; Mount Stuart, Sandberg & Leiberg 566; Peshastin, Sandberg & Leiberg, July, 1893; along Salmon River, Horner 296; without locality, Vasey in 1889; Wenache Mountains, Cotton 1318.

ZONAL DISTRIBUTION: Arid Transition.

This species has been confused with *Ribes hodsonianum* Richards., which is not known west of the Rocky Mountains.

14. Ribes ciliosum Howell, Fl. N. W. Am. 1: 208, 1898.

Ribes migratorium Suksdorf, Deutsche Bot. Monatss. 18: 86. 1900.

Type locality: "Marshy ground about the base of Mt. Hood on the south side," Oregon. Collected by Howell.

Range: Cascade Mountains of Oregon and Washington.

Specimens examined: Skamania County, Suksdorf 969; Klickitat River, Flett 1320; without locality, Vasey in 1889.

15. Ribes sanguineum Pursh, Fl. 1: 164, 1814.

Red flowering currant.

Type locality: "On the Columbia River." Collected by Lewis. The exact locality was near Deer Island.

RANGE: British Columbia to California in the coast region.

Specimens examined: Clallam County, Elmer 2658, 2654; Caseade Mountains, latitude 49°, Lyall in 1859; Seattle, Piper 97; Lake Washington, Engelman & Sargent, July 16, 1880; Admiralty Head, Piper, April, 1898; Tacoma, Flett 69; upper Nisqually Valley, Allen 80; Port Ludlow, Binus; Silverton, Bouck 66; Columbia River, Douglas in 1833; without locality, Cooper; Lake Chelan, Lake & Hull 462.

Zonal distribution: Humid Transition.

The color of the flowers of this species varies from very dark to very pale crimson. Occasional specimens are white-flowered.

16. Ribes cereum Dougl. Trans. Hort. Soc. Lond. 7: 512, 1830.

Ribes reniforme Nutt. Journ. Acad. Phila. 7: 21, 1834.

Type locality: On "the river Columbia from the Great Falls 45° 46′ 17" N. Lat. to the source of that stream in the Rocky Mts." Collected by Douglas.

RANGE: British Columbia to New Mexico and South Dakota.

Specimens examined: Ellensburg, Piper 2625; Mount Adams Suksdorf, September, 1877; Columbia Valley, Lyall in 1860; Rock Island, Sandberg & Leiberg 442; Rattlesnake Mountains, Cotton 324; upper Naches River, Henderson, June, 1892; White Bluffs, Lake & Hull 461; Rock Lake, Sandberg & Leiberg, June, 1893; Rock Creek, Sandberg & Leiberg 93; Coulee City, Henderson, July, 1892; Spokane, Sandberg, MeDougal & Heller, April 20, 1892; Heller 2936; Pullman, Piper, May, 1894; near Almota, Piper, April, 1894, June, 1894; without locality, Vasey in 1889.

Zonal distribution: Arid Transition and Upper Sonoran.

17. Ribes viscosissimum Pursh, Fl. 1: 163, 1814.

Type locality: "On the Rocky Mountains in the interior of North America." Collected by Lewis. The exact locality is on the Lolo Trail, Bitterroot Mountains, Idaho.

RANGE: British Columbia to California and Montana.

Specimens examined: Twisp River, Whited 181, and July, 1896; Klickitat River, Flett 1306; Conconully, Whited 1323; Nason Creek, Sandberg & Leiberg 684; Spokane, Sandberg & Leiberg, May, 1893; Blue Mountains, Piper, July, 1896; Sargent, July 3, 1896; with out locality, Brandegee in 1883; without locality, Uasey in 1889; Mount Carlton, Kreager 251; Wenache Mountains, Cotton 1278.

ZONAL DISTRIBUTION: Arid Transition and Canadian.

18. Ribes aureum Pursh, Fl. 1: 164, 1814.

GOLDEN CURRANT.

Type locality: "On the banks of the rivers Missouri and Columbia." Collected by Lewis.

RANGE: Washington to Montana and southward to California.

Specimens examined: Wenache, Whited 22; 1349; Ellensburg, Piper in 1897; Naches River, Henderson in 1892; Douglas County, Spillman in 1896; North Yakima, Flett in

1027; Rattlesnake Mountains, Cotton 320; Spokane, Heller 2935; Dewart, May 3, 1901; Spokane Valley, Lyall in 1861; Spokane County, Suksdorf 301; Hangman Creek, Sandberg & Leiberg 21; Clarks Springs, Kreager 64; west Klickitat County, Suksdorf 20; Union Flat, Piper in 1897; Almota, Piper 4886; Lake & Hull 460.

ZONAL DISTRIBUTION: Upper Sonoran.

The fruit of this plant in Washington is commonly yellow, but near Ellensburg forms with yellow, red, and black fruits occur growing together. Excepting for this character they appear indistinguishable.

HYDRANGEACEAE. HYDRANGEA FAMILY.

WHIPPLEA.

1. Whipplea modesta Torr. Pac. R. Rep. 4: 90, pl. 7, 1857.

Type locality: "Redwoods, California."

Range: Washington to California.

Specimens examined: Chehalis County, Lamb.

PHILADELPHUS.

1. Philadelphus lewisii Pursh, Fl. 1: 329, 1814.

Syringa.

Philadelphus confusus Piper, Bull. Torr. Club 29: 225, 1902, as to type.

Type Locality: "On the waters of Clark's River." Collected by Lewis, July 4, 1806. On this date Lewis, according to Coues, was on "Hellgate River, between Missoula, Montana, and the mouth of the Big Blackfoot River, Montana."

Range: British Columbia to Oregon from the Cascade Mountains eastward to Montana and Utah.

Specimens examined: Wenache, Whited 143; Ellensburg, Elmer 380; Yakima region, Brandegee; Rock Island, Sandberg & Leiberg 452; Cowiche Creek, Cotton 465; Grand Coulee, McKay 17; Spokane, Piper, September 1, 1899; Spangle, Suksdorf 300; Blue Mountains, Piper in 1896; Sargent in 1896; Colfax, Piper; Wawawai, Lake & Hull 464; Piper 3828; Tum Tum Mountain, Allen 221; Cape Horn, Piper 5030.

ZONAL DISTRIBUTION: Arid Transition.

Philadelphus gordonianus Lindl. Bot. Reg. 24: Misc. 21, 1838.
 Syringa. Philadelphus confusus Piper, Bull. Torr. Club 29: 225, 1902, as to most specimens cited.
 Type locality: "Along the banks of the Columbia." Collected by Douglas.

RANGE: British Columbia to North California in the coast region.

Specimens examined: Near Satsop, Heller 4023; Cascade Mountains, latitude 49°, Lyall in 1859; Scattle, Piper in 1888; Tacoma, Flett 113; Muckleshoot Prairie, Dr. Ruhn; Fidalgo Island, Flett 2100; Devils Head, Flett 2101; without locality, Vascy in 1889; without locality, Cooper; Scattle, Sargent & Englemann in 1880; Crescent Lake, Sargent in 1896; Cape Horn, Piper 5031.

Zonal distribution: Humid Transition.

The types of gordonianus and levisii are the same as to style character. Relying upon this as a better character than leaf pubescence, I proposed P. contusus. Upon further study however, I am convinced that the leaf characters, including pubescence, separate the two species more truly than does the style character.

Rydberg, in his recent treatment of the genus in the North American Flora, recognizes 6 species in this group. The characters relied upon, however, are not at all convincing. $P.\ confusus$ Piper is considered a valid species; $P.\ columbianus$ Koehne a supposed to be from British Columbia, is identified with specimens here referred to $P.\ gordonianus$; and $P.\ angustifolius$ Rydberg b is described from specimens collected at "Palace Camp" on the Willis trail to Mount Rainier.

ROSACEAE. Rose Family.

```
Carpels few, in fruit becoming 2 to several-seeded follicles or cansules;
 shrubs.
   Leaves not palmately lobed.
      Stamens united at base; leaves twice or thrice palmately
        Stamens not united at base; flowers in panicles or corymbs.
          Stamineal disk adherent, entire: ovules 2...... Scmzonotus (p. 330).
          Stamineal disk free at the edge, not entire; ovules
            several.
             Shrubs with simple leaves; flowers perfect..... Spiraea (p. 330).
             Herbs with compound leaves; flowers dioecious. Aruncus (p. 332).
Carpels few to many, becoming akenes or drupelets in fruit.
   Fruit consisting of akenes.
       Akenes in fruit inclosed in the more or less enlarged tur-
        binate or campanulate receptacle.
          Receptacle cup-shaped and fleshy in fruit; prickly
            Receptacle dry in fruit; herbs.
              Petals yellow; calyx prickly...... Agrimoxia (p. 335).
              Petals none; calvx not prickly.
                 Leaves palma(ely lobed; flowers axillary.. Alchemilla (p. 335).
                 Leaves pinnate; flowers spicate...... Sanguisorba (p. 335).
       Akenes in fruit on a plane or merely concave receptacle.
          Herbs.
             Styles deciduous, naked, terminal or lateral.
                 Styles terminal.
                    Stamens inserted near the base of the
                      receptacle cup on an annular thicken-
                      Stamens inserted well up in the recep-
                      tacle cup; no annular thickening... Horkelia (p. 339).
                 Styles lateral.
                    Carpels glabrous; herbs.
                        Stamens 5; carpels 10 to 15; leaves
                          Stamens 20; carpels numerous.
                           Leaves trifoliolate; receptacle
                             fleshy in fruit; petals white. Fragaria (p. 340).
                           Leaves pinnate; receptacle
                             not fleshy.
```

Flowers dark purple; receptacle spongy...... Comarum (p. 341). Flowers yellow; receptacle dry. Plant stoloniferous; flowers solitary.... Argentina (p. 341). Plant not stoloniferous; flowers cymose. Drymocallis (p. 342). Styles persistent, terminal, mostly plumose or geni-Calyx lobes and petals 8 or 9................................ Dryas (p. 343). Calyx lobes and petals 5. Styles jointed, the upper part deciduous__ Geum (p. 343). Styles not jointed, plumose or naked.... Sieversia (p. 344). Shrubs or trees. Styles very long and plumose in fruit; petals none. Cercocarpus (p. 345)

OPULASTER. NINEBARK.

Carpels pubescent, not exceeding the calyx. 1. 0. paneiglorus. Capsules glabrous, much exceeding the calyx. 2. 0. opulifolius.

1. Opulaster pauciflorus (Torr. & Gr.) Heller, Bull. Torr. Club 25: 581, 1898.

Spiraea opulifolia paueiflora Torr. & Gr. Fl. 1: 414. 1840.

Neillia malvacea Greene, Pittonia 2: 30, 1889.

Opulaster malvaccus Greene, E: ythea 2: 194, 1895.

Physocarpus pauci florus Piper, Fl. Palouse Reg. 94, 1901.

Type locality: Blue Mountains, Oregon. Collected by Nuttall.

RANGE: British Columbia to Utah and Montana.

Specimens examined: Foit Colville, Lyall in 1861; Spokane, Piper 2693; Rock Lake, Sandberg & Leiberg 102; Kamiak Butte, Piper 3088, 3557; Elmer 808; Blue Mountains, Piper, July 16, 1896; Clarks Sp.ings, Kreager 35; Spokane, Kreager 625.

Zonal distribution: Arid Transition.

2. Opulaster opulifolius (L.) Kuntze, Rev. Gen. Pl. 2: 989, 1891.

Spiraca opulifolia L. Sp. Pl. 1:489, 1753.

Neillia opulifolia Benth. & Hook.; Brewer & Wats. Bot. Cal. 1: 171, 1876.

Physocarpa opulifolia Raf. New Fl. 3:73, 1836.

Spiraea eapitata Pursh, Fl. 1:342. 1814.

Type locality: "In Virginia, Canada."

RANGE: Canada to Georgia and Kentucky; British Columbia to Oregon and Idaho.

Specimens examined: Challam County, Elmer 2520; Cascade Mountains, latitude 49°, Lyall in 1859; Coupeville, Gardner 99; Scattle, Piper in 1885; Montesano, Heller 3858; Olympia, Kincaid, July 4, 1896; Chehalis County, Lamb 1154; Silverton, Bouck 46; Manor, Piper 3074; Roslyn, Whited 459; Klickitat River, Flett 1330; Blue Mountains, Piper, July, 1896.

ZONAL DISTRIBUTION: Transition.

LUTKEA.

1. Lutkea pectinata (Pursh) Kuntze, Rev. Gen. Pl. 1:217, 1891.

Lutkea sibbaldioides Bong, Mem. Acad. St. Petersb. VI. 2: 130, 1833.

Saxifraga peetinata Pursh, Fl. 1:312, 1814.

Eriogynia pectinata Hook. Fl. Bor. Am. 1: 255. pl. 88, 1834.

Type locality: "Northwest coast." Collected by Menzies.

RANGE: Alaska to Mount Shasta and the Blue Mountains.

Specimens examined: Olympic Mountains, Piper 1992; Elmer 2531; Cascade Mountains, latitude 43°, Lyall in 1859; Silverton, Bouck 51; Mount Rainier, Allen 122; Piper 2041; Mount Adams, Henderson, August, 1892; Suksdorf, September, 1877; Skagit Pass, Lake & Hull 491; between Cascade Mountains and Colville, Lyall in 1860; Nason Creek, Sandberg & Leiberg 655; Bridge Creek, Elmer 639; without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Aretic.

SCHIZONOTUS.

1. Schizonotus discolor (Pursh) Raf. New Fl. 3: 75, 1836.

Ocean spray.

Holodiscus discolor Maxim. Act. Hort. Petrop. 6: 254, 1879.Spiraea discolor Pursh, Fl. 1: 342, 1814.

Spiraea ariacfolia Smith, Rees Cycl. 33: no. 16, 1816.

Type locality: "On the banks of the Kooskoosky." Collected by Lewis.

RANGE: British Columbia to Idaho and California.

Specimens examined: Clallam County, Elmer 2522; Cascade Mountains, latitude 49°, Lyall in 1859; Scattle, Piper 64; Port Ludlow, Binns; near Satsop, Heller 4025; upper Nisqually Valley, Allen 2; Atanum Soda Springs, Walt, August, 1895; Skagit Pass, Lake & Hull, August, 1892; Fort Vancouver, Tolmic; Peshastin, Sandberg & Leiberg 478; Wenache, Whited 1176; Ellensburg, Whited 543; Cowiche Creek, Cotton 466; Horseshoe Basin, Elmer 708; without locality, Vasey in 1889; Tukanon River, Lake & Hull 512; Loon Lake, Winston, July 20, 1897; Clarks Springs, Kreager 78; Mount Carlton, Kreager 261. Zonal distribution: Transition, tarely Upper Sonoran.

SPIRAEA.

Low depressed shrubs with entire leaves.

Calyx lobes acute; leaves canescent. 1. S. cincrascens.
Calyx lobes obtuse; leaves glabrous 2. S. hendersonii.
Taller shrubs with serrate or incised leaves.

Inflorescence pyramidal.

Leaves glabrous beneath.

Flowers red. 4. S. menziesii.
Flowers white. 5. S. pyramidata.

Inflorescence flat-topped.

Flowers red, crowded. 6. 8. densiflora. Flowers white, looser. 7. 8. corymbosa.

1. Spiraea cinerascens Piper, Erythea 7: 171, 1899.

Type locality: "On bluffs of the Columbia River, Wash., 12 miles south of Chelan, in crevices of basaltic rock." Collected by Elmer.

Range: Known only from the type collection.

Specimens examined: Okanogan County, Elmer 910.

2. Spiraea hendersoni (Canby) Piper, Erythea 7: 171, 172.1899.

Lutkea hendersoni Greene, Pittonia 2:219, 1892.

Eriogynia hendersoni Canby, Bot. Gaz. 16: 236. 1891.

Type locality: Mount Steele, Olympic Mountains, Washington.

Range: Olympic Mountains.

Specimens examined: Olympic Mountains, Piper 910, 1991; Elmer 2517; Henderson 1874; Baldy Peak, Lamb 1374; Mount Storm King, Lawrence 344.

ZONAL DISTRIBUTION: Hudsonian.

3. Spiraea douglasii Hook. Fl. Bor. Am. 1: 172, 1830.

Type locality: "North West coast of America about the Columbia and the Straits of De Fuca." Collected by Douglas and by Scouler.

Range: British Columbia to Oregon in the coast region.

Specimens examined: Clallam County, Elmer 2523; San Juan Island, Lyall in 1858; Muckleshoot Prairie, Dr. Ruhn; Shoalwater Bay, J. G. Cooper in 1854; Seattle, Smith 62; Piper, August, 1892; Tacoma, Flett 899; Woodlawn, Henderson, June, 1892.

ZONAL DISTRIBUTION: Humid Transition.

4. Spiraea menziesii Hook. Fl. Bor. Am. 1:73, 1830.

Spiraea douglasii menziesii Presl, Epimel. Bot. 195, 1849.

Type locality: "North West coast of America." Collected by Menzies.

RANGE: Alaska to Idaho and California.

Specimens examined: Montesano, Heller 4004; Chehalis River, Lamb 1241; Cascade Mountains, latitude 49°, Lyall in 1859; upper Nisqually Valley, Allen 1; Cascade Mountains, Henderson, July, 1892; Ellensburg, Elmer 399; Whited 490; Fish Lake, Dunn, July 31, 1900; Skagit Pass, Lake & Hull 787; Lake Chelan, Lake & Hull 511; Peshastin, Sandberg & Leiberg 512; Columbia River, latitude 49°, Lyall in 1860; Palouse City, Cloud, June, 1895; without locality, Vasey in 1889; Mount Carlton, Kreager 193; Lake Chelan, Cutton 844.

Zonal distribution: Canadian and Arid Transition.

Spiraea pyramidata Greene, Pittonia 2: 221, 1892.

Type locality: Clealum, Washington. Collected by Greene.

RANGE: Washington, Oregon, and Idaho.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859-60; Mount Adams, Suksdorf 115; Peshastin, Sandberg & Leiberg 514; Ellensburg, Elmer 411; North Yakima, Watt, August, 1895; Roslyn, Whited 463; Lake Keechelus, Piper 1112; near Leavenworth, Whited 188; Kittias County, Henderson 2325; Horseshoe Basin, Lake & Hull, August, 1892; Fish Lake, Dunn, August, 1900; Loon Lake, Winston, July 20, 1897; without locality, Vascy in 1889.

Zonal distribution: Canadian.

6. Spiraea densiflora Nutt.; Torr. & Gr. Fl. 1:411, 1840.

Spiraea betulaefolia rosea A. Gray, Proc. Am. Acad. 8: 381, 1872.

Spiraca arbuscula Greene, Erythea 3:63, 1895.

Type locality: Blue Mountains, Oregon. Collected by Nuttall.

Range: British Columbia to California and Idaho.

Specimens examined: Olympic Mountains, Piper, August, 1895; Elmer 2514; Henderson 245; Mount Rainier, Piper 1993; Allen 57; near Skagit Pass, Lake & Hull 510; Stevens Pass, Sandberg & Leiberg 712; Bridge Creek, Elmer 656.

Zonal distribution: Hudsonian.

7. Spiraea corymbosa Raf. Prec. Dec. 36, 1814.

Spiraea lucida Dough: Greene, Pittonia 2:221, 1892.

Type locality: "En Virginie."

RANGE: British Columbia to Oregon and the Black Hills; also Kentucky and New Jersey to Georgia.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Klickitat County, Suksdorf: Green River Hot Springs, Piper in 1887; Tieton River, Cotton 456; Roslyn, Whited 463; Wenache, Whited 188, 1184; Fort Vancouver, Tolmic: Peshastin, Sandberg & Leiberg 599; Columbia River, latitude 46° to 49°, Lyall in 1860; without locality, Vasey in 1889; Pullman, Piper 1522; Hull, May, 1892; Blue Mountains, Lake 509; Clarks Springs, Kreager 72; Vancouver, Piper 4941; Lake Chelan, Cotton 223.

ZONAL DISTRIBUTION: Arid Transition.

In Cooper's Report this species was referred to S. betulacidia Pallas.

ARUNCUS.

1. Aruncus aruncus (L.) Karst. Deutsch. Fl. 779, 1880-83.

Goatsbeard.

Spiraea aruncus L. Sp. Pl. 1:490, 1753.

Aruncus sylvester Kostel, Ind. Hort. Prag. 15, 1844.

Type locality: "Habitat in Austriae, Alvorniae montanis."

RANGE: Alaska to Oregon and in the Eastern States from Iowa to Pennsylvania and southward. Europe. Asia.

Specimens examined: Clallam County, Elmer 2527; Silverton, Bouck 50; Mount Stuart, Sandberg & Leiberg 561; Skokomish Valley, Kincaid, June, 1892; west Klickitat County, Suksdorf, August 7, 1886; Yakima Pass, Watson: Cascade Mountains, Suksdorf, 2044; Horseshoe Basin, Lake & Hull 507; Bridge Creek, Elmer 655; without locality, Vasey in 1889.

Zonal distribution: Transition.

RUBUS.

Herbs; stems trailing, unarmed.

Shrubs.

Stems trailing, biennial.

Leaves shiny, 3-lobed or rarely 3-parted; berries red 3. R. nivalis.

Stems erect or ascending.

Leaves 3 to 5-lobed; stem unarmed, perennial 5. R. parviflorus.

Leaves 3 to 5-foliolate; stems prickly, mostly biennial.

Flowers red; fruit yellow or garnet 6. R. spectabilis.

Flowers white; fruit black.

Stems perennial, very prickly; berry cylindric.... 10. R. laciniatus.

Stems biennial; berry hemispheric.

Berry black; stems glaucous.

1. Rubus lasiococcus A. Gray, Proc. Am. Acad. 17: 201, 1882.

Type locality: "Near Mount Hood, Oregon."

Range: British Columbia to Oregon.

Specimens examined: Chehalis County, Lamb 1403; Clallam County, Elmer 2524; Mount Rainier, Allen 124; Piper 1994; Mount Adams, Suksdorf 541, 10; Klickitat River, Flett 1336; Stevens Pass, Whited 1433; Stampede Pass, Henderson, June, October, 1892; Cascade Mountains near Berne, Piper, July, 1895; Yakima Pass, Watson 106; Nason Creek, Sandberg & Leiberg 664; without locality, Vasey in 1889.

Zonal distribution: Hudsonian.

2. Rubus pedatus Smith, Ic. Pl. 3: pl. 63, 1791.

Type locality: "In Americae borealis tractu occidentali." Collected by Menzies.

Range: Alaska to California and Idaho.

Specimens examined: Baldy Peak, Lamb 1304; Cascade Mountains, latitude 49°, Lyall in 1859; Mount Rainier, Piper 2042, Allen 280, 310a; Mount Adams, Suksdorf 540; Silverton, Bouck 57; Stampede Pass, Henderson, June, October, 1892; Okanogan County, Elmer 697; Stevens Pass, Sandberg & Leiberg 736; Cascade Mountains, latitude 49°, toward Colville, Lyall; without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Canadian and Hudsonian.

3. Rubus nivalis Dougl.; Hook. Fl. Bor. Am. 1: 181, 1833.

Type locality: "On the high snowy ridges of the Rocky Mountains." Collected by Douglas.

Range: Washington, Oregon, and Idaho.

Specimens examined: Upper Nisqually Valley, Allen 78; Mashel Mountain, Piper 710; Silverton, Bouck 57a; Alma, Piper 1995; Olympic Mountains, Piper in 1890.

Zonal distribution: Canadian.

This species is abundant in deep forests near the base of Mount Rainier. In such places, however, it never blooms. Fertile plants must be sought either in recent burns or on rocky outeroppings. The flowers are dull purplish in color.

4. Rubus macropetalus Dongl.: Hook. Fl. Bor. Am. 1: 178, 1833. Dewberry.

Type locality: "In the valley of the Columbia." Collected by Douglas.

Range: British Columbia to Idaho and Oregon.

Specimens examined: Challam County, Elmer 2530; Montesano, Heller 3887; Hoquiam, Lamb 1017; Fairhaven, Piper, July, 1897; upper Nisqually Valley, Allen 79; De Fuca Straits, Cooper; Silverton, Bouck 58; Lakeview, Henderson, July, 1892; Tacoma, Flett 1; McAllisters Lake, Henderson, June, 1892; Yakima Pass, Watson; Skokomish Valley. Kincaid, May, 1892; Nason Creek, Sandberg & Leiberg 649; without locality, Vascy in 1889; Roslyn, Whited 408.

Zonal distribution: Humid Transition.

This species is very close to R. ursinus Cham. & Schlecht, of California, but it seems distinct. It never has unifoliolate leaves, which are so commonly produced in the latter. The plant referred by Cooper to R. trivialis Michx, is probably R. macropetalus, but we have been unable to find the specimen.

5. Rubus parviflorus Nutt. Gen. 1:308, 1818.

Thimble Berry.

Rubus nutkanus Moc.; DC. Prod. 2: 566, 1825.

Rubus velutinus Hook, & Arn. Bot. Beech. 140, 1832.

Type locality: "Island of Michilimackinack, Lake Huron." Range: Alaska to California, New Mexico, and Lake Superior.

Specimens examined: Clallam County, Elmer 2518; Seattle, Piper 66; Tacoma, Flett 13; Mount Adams, Suksdorf 1758; Muckleshoot, Doctor Ruhn; Silverton, Bouck 53; Skokomish Valley, Kincaid, May, 1892; upper Nisqually Valley, Allen 25; Peshastin, Sandberg de Leiberg 542; Falcon Valley, Suksdorf 1758; Tieton River, Cotton 455; Roslyn, Whited 400; without locality, Vascy in 1889; Kamiak Butte, Elmer 804; Piper, July 20, 1899; Skagit Pass, Lake & Hull, August, 1892; Blue Mountains, Lake & Hull 502; Clarks Springs, Kreager 38.

Zonal distribution: Transition.

6. Rubus spectabilis Pursh, Fl. 1:348, 1814.

Salmon Berry.

Type locality: "On the banks of the Columbia." Collected by Lewis, the exact

locality very near Deer Island. RANGE: Alaska to northern California and north Idaho. In Washington it ascends to 1,600 feet altitude.

Specimens examined: Challam County, Elmer 2543; Port Ludlow, Binns, April 10, 1889; Roy, Allen 97; Silverton, Bonck 56; Seattle, Piper 67; Tacoma, Flett 110; Woodlawn, Henderson, June, 1892; upper Nisqually Valley, Allen 26; Stampede Tunnel, Henderson, June, 1892; Skagit Pass, Lake & Hull 503; Stevens Pass, Sandberg & Leiberg 726; without locality, Vasey in 1889.

Zonal distribution: Humid Transition.

Two forms of this species occur, one with claret-colored or nearly black fruit, the other with vellow fruit, the latter being the better flavored. The former may be distinguished even in flower by the purple color of its twigs.

Д

7. Rubus strigosus Michx. Fl. 1: 297, 1803.

RED RASPBERRY.

Type locality: "In montibus Pennsylvania et in Canada."

Range: British Columbia to Labrador, southward to New Mexico and North Carolina.

Specimens examined: Fort Colville, Watson; Horseshoe Basin, Elmer, September, 1897; without locality, Brandegee 739; Spokane, Piper 2268; along Salmon River, Horner 295.

Zonal distribution: Arid Transition and Canadian.

8. Rubus leucodermis Dougl.; Torr. & Gr. Fl. 1: 454, 1838.

Blackcap.

Type locality: "North West Coast of America."

Range: British Columbia to California and Wyoming.

Specimens examined: Challam County, Elmer 2516; Cascade Mountains, latitude 49°, Lyall in 1858-59; near Satsop, Heller 4033; Seattle, Piper 68; Tacoma, Flett 16; upper Nisqually Valley, Allen 24; Kittitas County, Sandberg & Leiberg 704; Skagit Pass, Lake & Hull 500; Snake River Bluffs, Bishops Bar, Piper 2881; Blue Mountains, Piper 2400.

Zonal distribution: Transition.

9. Rubus hesperius Piper, Erythea 5: 103, 1898.

Type Locality: "Snake River Cañon at Wawawai and Almota, Whitman County, Washington."

Range: Eastern Washington.

Specimens examined: West Klickitat County, Suksdorf 116; Almota, Piper 1552; Wawawai, Piper 1788.

Zonal distribution: Upper Sonoran.

10. Rubus laciniatus Willd. Hort. Berol. pl. 82, 1816. EVERGREEN BLACKBERRY. Type locality: Not known.

THE EXAMETT. AND KHOWN.

Specimens examined: Montesano, Heller 4001; Ilwaco, Piper.

This species readily escapes from cultivation and along the coast is becoming abundantly established in the woodlands.

ROSA. Rose.

Flowers mostly solitary; fruit globose, 2 cm. broad. 2. R. nutkana. Flowers in corymbs; fruit ovoid or oblong, 1 cm. broad or less. 3. R. pisocarpa.

1. Rosa gymnocarpa Nutt.; Torr. & Gr. Fl. 1: 461, 1840.

Type locality: Oregon. Collected by Nuttall.

RANGE: British Columbia to Idaho and middle California.

Specimens examined: Clallam County, Elmer 2515; Montesano, Heller 3897; Silverton, Bouck 60; upper Nisqually Valley, Allen 72; Falcon Valley, Suksdorf 359; Mount Adams, Flett 1333; Trout Lake, Flett 1338; Clealum, Henderson, October, 1892; Chambers Prairie, Henderson, August, 1892; without locality, Vasey in 1889; without locality, Cooper in 1854; Columbia woods, Nuttall; Fort Colville, Watson; Kamiak Butte, Piper, July 20, 1899; Blue Mountains, Piper, August, 1896.

Zonal distribution: Transition.

2. Rosa nutkana Presl, Epimel. Bot. 203, 1849.

Type locality: Nutka Sound. Collected by Haenke.

RANGE: Sitka to California and Utah.

Specimens examined: Near Montesano, Heller 3875; Seattle, Piper 81; Engelmann & Sargent, July 18, 1880; Port Ludlow, Binns: Goat Mountains, Allen 292; near Skagit Pass, Lake & Hull 770; Roslyn, Whited 464; Wenache Region, Brandegue 753; Wenache Mountains, Whited 1268; Klickitat River, Flett 1407; west Klickitat County, Suksdorf

633, 631, 632, 178, 177; without locality, Vasey in 1889; Fort Colville, Watson 119; Pullman, Piper 1539; Clallam County, Elmer 2519; Stehekin, Griffiths & Cotton 222.

Zonal distribution: Transition.

2a. Rosa nutkana macdougali (Holzinger).

Rosa nutkana hispida Fernald, Bot. Gaz. 19: 335, 1894, not Rosa hispida Moench, 1770. Rosa macdongali Holzinger, Bot. Gaz. 21: 36, 1896.

Type locality: Canyons near Farmington Landing, south end of Lake Coeur d'Alene, Idaho.

Range: Eastern Washington to Montana and Oregon.

Specimens examined: Pullman, Piper 1540.

ZONAL DISTRIBUTION: Arid Transition.

3. Rosa pisocarpa A. Gray, Proc. Am. Acad. 8: 382, 1872.

Type locality: Oregon. Collected by Hall.

Range: British Columbia to California and Utah.

Specimens examined: Satsop. Heller 4032; Scattle, Piper, September, 1896, October, 1892; Port Orchard, Piper, July, 1895; Ellensburg, Whited 677, 443; Port Ludlow, Binns 625, 628, 180, 181; Wenache, Whited 1125, 1334; North Yakima, Steinweg in 1894; near North Yakima, Henderson, May, 1892; Prosser, Henderson, May, 1892; Rattlesnake Mountains, Cotton 469; Cleahim, Henderson, June, 1892; upper Nisqually Valley, Allen 123; Klickitat County, Suksdorf 623, 621, 627, 179, 182, 620, 629; Colville, Watson 120; without locality, Vasey in 1889; Kreager 47; Crab and Wilson creeks, Sandborg & Leiberg 320; Tukanon River, Lake & Hull 819; Pullman, Piper 1538, 1541, July, 1893.

The typical form of this species occurs west of the Cascade Mountains. The eastern Washington forms are very variable as to leaf and fruit and consist perhaps, of two species. Specimens have frequently been referred to as *Rosa fendleri* Crepin, but it is not at all clear how this is to be distinguished.

Rosa californica Cham. & Schlecht, in typical form at least, seems not to reach Washington. Specimens so referred are probably forms of R. pisocarpa.

AGRIMONIA.

1. Agrimonia gryposepala Wallr. Beitr. Bot. 1: 49, 1842.

Type locality: "Auf frein Grassplatzen Pennsylvaniens und auf den Anhöhen des Berges 'Peaks of Otter.'"

Range: British Columbia and Northern Washington to New Brunswick, south to North Carolina and Kansas.

We have seen no Washington specimens of this plant, but under the name of A. eupatoria L. it is reported by Lyall "along the banks of the Sumass Lake and River and on the clear grounds or prairies of the same name."

ALCHEMILLA.

1. Alchemilla arvensis occidentallis (Nutt.) Piper, Fl. Palouse Reg. 96, 1901.

Alchemilla occidentalis Nutt.; Torr. & Gr. Fl. 1, 432, 1840.

Type locality: "Rocky plains of the Oregon toward the sea." Collected by Nuttall.

Range: British Columbia to Idaho and California.

Specimens examined: Whidby Island, Gardner 184: Seattle, Piper 602: west Klickitat County, Suksdorf 1765: Pullman, Piper, May, 1894.

Zonal distribution: Transition.

SANGUISORBA.

Annual; flowers greenish 1. P. annua.

Perennial; flowers white or reddish 2. P. latifolia.

1. Sanguisorba annua Nutt.; Torr. & Gr. Fl. 1: 429, 1840.

Sanguisorba occidentalis Nutt.; Torr. & Gr. Fl. 1: 429, 1840.

Poterium annuum Nutt.; Hook. Fl. Bor. Am. 1: 198. 1834.

Type locality: "Red River in Louisiana."

Range: Vancouver Island to California and Arkansas.

Specimens examined: Klickitat County, Howell; Fourth Plain, Piper, July 14, 1899; Pullman, Piper 1537; Clarks Springs, Kreager 106.

Zonal distribution: Arid Transition.

2. Sanguisorba latifolia (Hook.) Coville, Contr. Nat. Herb. 3: 339, 1896.

Sanguisorba canadensis latifolia Hook. Fl. Bor. Am. 1: 198, 1834.

Sanguisorba sitchensis C. A. Meyer; Trauty. & Meyer, Fl. Ochot. 35, 1856.

Poterium sitchense S. Wats. Bibl. Ind. 303. 1878.

Type locality: "Observatory Inlet." Collected by Scouler.

RANGE: Alaska to Oregon and Idaho.

Specimens examined: Silverton, Bouck in 1889; Snoqualmie Pass, Piper; Big Creek Prairie, Lamb 1394; Fort Vancouver, collector not indicated: Skamania County, Suksdorf 966; Blue Mountains, Horner 415.

Zonal distribution: Canadian.

The red-flowered form of this species is referred by Howell a to S. officinalis L. The white-flowered ordinary form was referred to S. media L. in Hooker's Flora. It is also the basis for the entry "Poterium canadense B. & H.?" of Suksdorf's list.

POTENTILLA.

Cymes leafy; annuals or biennials with small flowers.		
Lower leaves pinnate, upper ternate	1.	P. rivalis.
Leaves all ternate.		
Petals as long as the sepals	2.	P. monspeliensis
Petals much shorter than the sepals.		z i manapettenata
Cymes loose, rather broad; leaflets oblanceolate	3.	P. millearana.
Cymes narrow, elongated; leaflets obovate		P. biennis.
Cymes not leafy; perennials.		
Leaves pinnate.		
Flowers white; receptacle long-bristly	16.	P. newberryi.
Flowers yellow; receptacle not long-bristly.		
Calvx silky; leaflets 1 to 2 cm. long	14.	P. cascadensis.
Calyx hairy: leaflets 2 to 6 cm. long		
Leaves digitate.		
Leaflets 3.		
Plant densely silky-villous	12.	$P.\ villosa.$
Plant glabrous or nearly so		
Leaflets 5 to 9.		
Low alpine plant, 20 to 30 cm. high; cyme few flowered.	5.	$P.\ dissecta.$
Taller lowland plants, 40 to 80 cm. high; cymes many		
flowered.		
Leaflets pubescent on both sides.		
Pubescence tomentose	6.	$P.\ permollis.$
Pubescence grayish-silky	7.	$P.\ fastigiata.$
Leaflets glabrous at least above.		
Under side of leaves white tomentose.		
Teeth of the leaflets triangular	8.	$P.\ gracilis.$
Teeth of the leaflets elongate	9.	$P.\ blaschkeana.$
Under side of leaves green.		
Leaflets slightly tomentose beneath		
Leaflets glabrous on both sides	11.	P. nuttallii.

1. Potentilla rivalis Nutt + Torr. & Gr. Fl. 1: 437, 1840.

Type locality: "In alluvial soil along the Lewis River." Collected by Nuttall.

Range: Washington and Saskatchewan to Mexico.

Specimens examined: Almota, Piper 2734.

Zonal distribution: Upper Sonoran.

2. Potentilla monspeliensis L. Sp. Pl. 1: 499, 1753.

Potentilla hirsuta Michx. Fl. 1: 303, 1803.

Potentilla norvegica American authors.

Type locality: "Monspelii."

Range: Labrador to Virginia and westward. Asia.

Specimens examined: Latitude 49°, Lyall in 1858-9; Green River Hot Springs, Piper 441; Yelm Prairie, Piper 483; Segualiche Lake, Piper 442; Silverton, Bouck 51a; Marshall Junction, Piper 2256.

Zonal distribution: Transition and Canadian.

3. Potentilla millegrana Engelm.; Lehm. Ind. Sem. Hort. Hamb. 1849: 11, 1849.

Potentilla leucocarpa Rydberg in Britt. & Br. Ill. Fl. 2: 212, 1897.

Type locality: America borealis.

Range: Washington to Illinois, California, and New Mexico.

Specimens examined: Tacoma, Flett 879, 68, 22; west Klickitat County, Suksdorf 1760; Mission, Kreager 491.

ZONAL DISTRIBUTION: Arid Transition.

4. Potentilla biennis Greene, Fl. Fran. 1: 65, 1891.

Potentilla lateriflora Rydberg, Bull. Torr. Club 23: 261, 1896.

Type locality: California "in moist places in the mountains from Butte Co. to Kern and San Luis Obispo."

RANGE: British Columbia and Assiniboia to California and Arizona.

Specimens examined: Tacoma, Flett 22, 68, 877; Clealum, Henderson, August, 1892; Wenache, Whited 76, 1077; Ellensburg, Whited 458; Elmer 381; Piper, May, 1897; Pasco, Hindshaw 42; Crab and Wilson creeks, Sandberg & Leiberg 279; Almota, Lake & Hull 521; Piper 1847; without locality, Vascy 313; Meyers Falls, Kreager 501.

ZONAL DISTRIBUTION: Arid Transition.

5. Potentilla dissecta Pursh, Fl. 1: 355, 1814.

Potentilla diversifolia Lehm. Nov. Stirp. Pug. 2: 9, 1830,

Type locality: "Near Hudson's Bay."

Range: British Columbia and Saskatchewan to California and Colorado.

Specimens examined: Goat Mountains, Allen 121, 251; Cascade Mountains to Fort Colville, latitude 49°, Lyall in 1860; without locality, Vascy; Wenache Creek, Cotton 1650, 1932.

Potentilla dissecta glaucophylla (Lehm.) S. Wats, Proc. Am. Acad. 8: 556, 1873. Potentilla diversifolia glaucophylla Lehm. Rev. Pot. 73, 1856.

Type locality: Black Hills. Collected by Nuttall.

Range: California to Colorado and northward.

Specimens examined: Mount Rainier, Piper 1998.

6. Potentilla permollis Rydberg, Bull. Torr. Club 28: 175, 1901.

Type locality: Endicott, Whitman County, Washington. Coffeeted by Elmer.

Range: Eastern Washington.

Specimens examined: Crab and Wilson creeks, Sandberg & Leiberg 315; Endicott Elmer 1830; without locality, Uasey in 1889.

ZONAL DISTRIBUTION: Arid Transition.

29418-06 м---22

7. Potentilla fastigiata Nutt.; Torr. & Gr. Fl. 1: 440. 1840.

Type locality: "Plains of the Rocky Mountains."

Range: Washington to Saskatchewan, south to California.

Specimens examined: Klickitat County, Suksdorf 2488.

8. Potentilla gracilis Dougl.; Hook. Bot. Mag. 57: pl. 2984, 1830.

Type locality: "On the banks of the Columbia and the plains of the Multnomah rivers." Collected by Douglas.

Range: Alaska to Oregon in the coast region.

Specimens examined: Olympic Mountains, Flett 108; Whidby Island, Gardner 97; Coupeville, Gardner, July, 1898; Port Townsend, Edwards in 1896; Tacoma, Flett 900; Olympia, Kincaid, July, 1896; Muckleshoot Prairie, Doctor Ruhn; Manor, Piper, July 14, 1899; Falcon Valley, Suksdorf 325; Fort Vancouver, Tolmie; Scouler; Piper 4937; Cape Horn, Piper 5017.

Zonal distribution: Humid Transition.

9. Potentilla blaschkeana Turcz.; Lehm. in Otto, Gart. & Blum. 9: 506, 1853.

Potentilla flabelliformis etenophora Rydberg, Bull. Torr. Club 24: 7. 1897.

Potentilla etenophora Rydberg, Mon. N. A. Pot. 75, 1898.

Type locality: In the Russian American Colonies, California.

RANGE: British Columbia to California and Wyoming.

Specimens examined: Pullman, Piper 1529, 3534, 3535, 4134, 4135; Clarks Springs, Kreager 21; Wenache, Whited 146, 1303; without locality, Vasey in 1889; Spokane County, Mrs. Tucker.

Zonal distribution: Arid Transition.

10. Potentilla viridescens Rydberg, Mon. N. A. Pot. 69, 1898.

Type locality: "Manitoba."

RANGE: Washington to Colorado and Manitoba.

Specimens examined: North Yakima, Watt: Ellensburg, Piper 2736; Klickitat Meadows, Flett 1326; Rattlesnake Mountains, Cotton 423. Fresh Lake, McKay 13; without locality, Vascy in 1889; Wilson Creek, Lake & Hull 518; Toppenish, Cotton 781; Snipes Creek, Cotton 662; Blue Mountains, Piper 2445; Wenache Mountains, Cotton 1646; Satus, Cotton 1125.

Zonal distribution: Upper Sonoran and Arid Transition.

11. Potentilla nuttallii Lehm. Ind. Sem. Hort. Hamb. 1852; 12. 1852.

Potentilla recta Nutt. Gen. 1: 310, 1818, not L. 1753.

Potentilla rigida Nutt. Journ. Acad. Phila. 7: 20, 1834, not Wall.

Potentilla gracilis rigida S. Wats. Proc. Am. Acad. 8: 557, 1873.

Type locality, "On the Missouri from Fort Mandan to the Rocky Mountains," Collected by Nuttall.

Range: British Columbia and Saskatchewan to California and Colorado.

Specimens examined: North Yakima, Watt, August, 1895; Pullman, Elmer 69; Piper 1877, without locality, Vasey 322.

ZONAL DISTRIBUTION: Arid Transition.

12. Potentilla villosa Pall.; Pursh, Fl. 1: 353, 1814.

Potentilla fragiformis rellosa Regel & Tiling, Fl. Ajan. Nov. Mem. Soc. Mosc. 11: 85, 1859. Type locality: "On the northwest coast."

Range: Alaska to Mount Rainier, Washington.

Specimens examined: Olympic Mountains, Flett 129; Mount Rainier, Piper 1999; Smith 783.

Zonal distribution: Arctic.

13. Potentilla flabellifolia Hook.; Tor., & Gr. Fl. 1: 442, 1838.

Potentilla gelida American authors, not Meyer.

Type locality: "Summit of Mount Rainier, Oregon, *Douglas*." The specimen was probably collected by Tolmie, as Douglas was never on Mount Rainier.

Range: Alaska to Oregon in the mountains.

Specimens examined: Clallam County, Elmer 2521; Cascade Mountains, latitude 40°, Lyall in 1859; Mount Rainier, Piper 1996; Allen; Smith 396; Mount Adams, Henderson, August, 1892; Suksdorf; Flett 1331; Stevens Pass, Sandberg & Leiberg, 747; Horseshoe Basin, Lake & Hull 520; Bridge Creek, Elmer 648; without locality, Brandegee 744.

ZONAL DISTRIBUTION: Arctic.

14. Potentilla cascadensis Rydberg, Mon. N. A. Pot. 109, 1898.

Type locality: Chiquash Mountains, Washington. Collected by Suksdorf.

Range: Washington and Oregon in the Cascade Mountains.

Specimens examined: Near Mount Adams, Flett: Chiquash Mountains, Suksdort 2165; Olympic Mountains, Elmer 2523.

15. Potentilla drummondii Lehm, Nov. Stirp. Pug. 2: 9, 1830.

Type locality: "Rocky Mountains north of the Smoking River, in lat. 56°, scarce, Drummond"—according to Hooker, a Lehmann does not note the locality of his specimens which however, were received from Hooker.

RANGE: British Columbia and Alberta to California. Specimens enamined: Mount Adams, Suksdorf 539.

16. Potentilla newberryi arenicola Rydberg, Mon. N. A. Pot. 112, 1898.

Type locality: Wallula, Wash. Collected by Howell.

Range: Eastern Washington and eastern Oregon.

Specimens examined: Wallula, Howell.

HORKELIA.

Filaments dilated; flowers white.

Filaments filiform; flowers yellow.

Cymes rather loose; receptacle cup shallow. 2. H. utahensis.

Cymes subcapitate; receptacle cup deep....................... 3. II. gordoni al picola

Horkelia fusca Lindl. Bot. Reg. 23: pl. 1997, 1837.

Potentilla donglasii Greene, Pittonia 1: 103, 1887.

Type locality: "In California." Collected by Douglas.

RANGE: Washington to California.

Specimens examined: Mount Adams, Henderson in 1892; without locality, Vasey in 1889, August 7, 1882.

1b. Horkelia fusca tenella S. Wats, in Brewer & Wats, Bot, Cal. 1: 181, 1876.

Horkelia tenella Rydberg, Bull. Torr. Club 25: 55, 1898.

Type locality: Sierra County, California.

Range: California to Washington.

Specimens examined: Klickitat River, Flett 1334.

2. Horkelia utahensis (S. Wats.) Rydberg, Mon. N. A. Pot. 150, 1898.

Ivesia utaliensis S. Wats, Proc. Am. Acad. 17: 371, 1882.

Type Locality: "Summit of Bald Mountain in the Wasatch range, above Alta, at over 12000 feet altitude," Utah.

Range: Washington to California and Utah.

Specimens examined: Cascade Mountains, *Brandegec* in 1883; Mount Stuart, *Elmer*; without locality, *Vascy* in 1889.

Zonal distribution: Arctic.

3. Horkelia gordoni alpicola Rydberg, Mon. N. A. Pot. 152, 1898.

Ivesia alpicola Rydberg; Howell, Fl. N. W. Am. 1: 182, 1898.

Type locality: Mount Adams, Washington.

RANGE: Washington to Montana and California.

Specimens examined: Mount Adams, Henderson in 1892; Flett 1020; Blue Mountains, Piper, July, 1896; Horner 424.

ZONAL DISTRIBUTION: Arctic.

SIBBALDIA.

Sibbaldia procumbens L. Sp. Pl. 1: 284, 1753.

Type locality: "Habitat in Alpibus Lapponiae, Helvetiae, Scothiae."

RANGE: Alaska and Greenland, southward to California, Colorado, and the White Mountains. Europe. Asia.

Specimens examined: Olympic Mountains, Piper, August, 1895; Mount Rainier, Piper 2024; Allen 64; Mount Stuart, Brandegie 748; east Cascade Mountains, latitude 49°, Lyall in 1860; Blue Mountains, Piper, July, 1896.

ZONAL DISTRIBUTION: Arctic.

FRAGARIA. STRAWBERRY.

Leaves not at all tomentulose.

Leaflets thin subsessile, pale green; akenes superficial.

Flowers white 4. F. bracteata. Flowers pink 5. F. helleri.

Leaflets somewhat glaucous, thicker, petiolulate; akencs s t in pits;

flowers white. 6. F. platypetala,

1. Fragaria cuneifolia Nutt.; Howell, Fl. N. W. Am. 1: 174, 1898.

Type locality: Oregon. Collected by Nuttall.

Range: British Columbia to Oregon.

Specimens examined: Falcon Valley, Suksdorf 486; Palace Camp, Pierce County, Mrs. Bailey Willis in 1883.

This is probably not distinct from F, chiloensis.

2. Fragaria chiloensis (L.) Duch. Hist. Nat. Frais. 165, 1766

Fragaria vesca chiloensis L. Sp. Pl. 1: 495, 1753.

Fragaria chiloensis scouleri S. Wats. Bibl. Ind. 282, 1878.

Type locality: "In arvis circa civitatem Conception," Chile.

Range: British Columbia to California. Chile.

Specimens examined: Clallam County, $Elner\ 2528$; Humptulips, $Lamb\ 1098a$; Hwaco, $Piper\ 4993$.

Zonal distribution: Humid Transition.

3. Fragaria crinita Rydberg, Mon. N. A. Pot. 171, 1898.

Type locality: Washington. Collected by the Wilkes Expedition.

Range: Washington to California.

Specimens examined: Admiralty Head, Piper, April 17, 1898; Easton, Whitel 147; Roslyn, Whitel 418; Mount Storm King, Lawrence 337.

4. Fragaria bracteata Heller, Bull. Torr. Club 25: 194, 1896.

Type locality: Santa Fe, New Mexico.

Range: British Columbia to California and New Mexico.

Specimens examined: Whidby Island, Gardner 102; Lopez Island, Lyall in 1858; Silverton, Bouck 54; Cascade Mountains, latitude 49°, Lyall; Skokomish River, Kincaid, June 9, 1892; west Klickitat County, Suksdorf 117.

Zonal distribution: Transition.

5. Fragaria helleri Holzinger, Bot. Gaz. 21: 36, 1896.

Type locality: Idaho.

Range: Idaho and Washington.

Specimens examined: Olympia, Henderson in 1892; Woodlawn, Henderson in 1892.

These specimens may really be forms of the preceding.

6. Fragarla platypetala Rydberg, Mon. N. A. Pot. 177, 1898.

Type locality: Alaska.

RANGE: Alaska to California and Colorado.

Specimens examined Along Twisp River, Whited 180; Klickitat River, Flett 1408; Rock Creek, Sandberg & Leiberg 86; without locality, Vasey in 1889; Spokane Valley Lyall in 1861; Spokane, Piper, May 16, 1896; Marshall Junction, Piper, July, 1896; Mount Carlton, Kreager 262.

Zonal distribution: Arid Transition.

This is the western representative of F. virginiana Duch., to which it has been referred,

ARGENTINA.

1. Argentina anserina (L.) Rydberg, Mon. N. A. Pot. 159, 1898.

Potentilla anserina L. Sp. Pl. 1: 495, 1753.

Potentilla anserina grandis Torr. & Gr. Ft. 1: 444, 1840.

Potentilla pacifica Howell, Fl. N. W. Am. 179–1898.

Type locality: "Habitat in Europae pascuis; in argillosis argentea."

Range: Circumboreal, extending southward in North America to New Jersey, Arizona, and California.

Specimens examined: Hoquiam, Lamb 1080; Clallam County, Elmer 2525; Orchard Point, Piper, July, 1895; Tacoma, Flett 242; Ilwaco, Piper 4920.

Zonal distribution: Humid Transition.

1a. Argentina anserina concolor Rydberg, Mon. N. A. Pot. 160, 1898.

Potentilla anserina concolor Ser. in DC. Prod. 2: 582, 1825.

Type locality: None given.

Range: Alaska to New Mexico. Maine. Siberia.

Specimens examined: Along Methow River, Whited 9, 226; Alma, Elmer 545; Cascade Mountains to Fort Colville, Lyall in 1860; Spangle, Piper, May 31, 1901; Marshall Junction, Piper 2255; without locality, Vascy 319; Mission, Kreager 485.

ZONAL DISTRIBUTION: Arid Transition.

COMARUM.

Comarum palustre L. Sp. Pl. 1: 502, 1753.

Potentilla palustris Scop. Fl. Carn. ed. 2, 1: 359, 1772.

Type locality: European.

Range: Northern portion of North America. Europe. Asia.

Specimens examined: Port Ludlow, Binns; Scattle, Piper, July, 1892; White Salmon Suksdorf; Marshaff Junction, Piper, July, 1896; Big Meadows, Stevens County, Kreager 427.

ZONAL DISTRIBUTION. TRANSITION.

DASIPHORA.

1. Dasiphora fruticosa (L.) Rydberg, Mon. N. A. Pot. 188, 1898.

Potentilla truticosa L. Sp. Pl. 1: 495, 1753.

Type locality: "Habitat in Eboraco, Anglia, Oelandia australi, Sibiria."

Range: Alaska to Labrador, southward to California, New Jersey, and New Mexico. Europe. Asia.

Specimens examined: Cascade Mountains to Colville, Lyall in 1860; without locality, Vascy 316; Mission, Kreager 490; Wenache Mountains, Cotton 1651½.

ZONAL DISTRIBUTION: Canadian!

Dasiphora fruticosa tenuifolia (Willd.) Rydberg, Mon. N. A. Pot. 190, 1898.
 Potentilla tenuifolia Willd.; Schlecht, Mag. Ges. Naturf, Freunde Berlin 7: 285, 1813.

Potentilla fruticosa tenuifolia Lehm. Monog. Pot. 20/1820.

Type locality: "Aus Sibirien."

RANGE: Same as of the preceding.

Specimens examined: Olympic Mountains, Grant in 1889; Mount Rainier, Piper 1997; Wenache Mountains, Elmer 462; Horseshoe Basin, Lake & Hull 519.

Zonal distribution: Hudsonian.

DRYMOCALLIS.

Style filiform, more than twice as long as the akenes 1. D. rhomboidea. Style filiform, less than twice as long as the akenes.

Flowers cream-color.

Flowers vellow.

Herbage nearly glabrous. 6. D. glabraía.

Herbage very glandular.

Petals much larger than the sepals. 4. D. valida.

Petals scarcely larger than the sepals. 5. D. glandulosa.

1. Drymocallis rhomboidea Rydberg, Mon. N. A. Pot. 203, 1898.

Potentilla rhomboidea Rydberg, Bull. Torr. Club 23: 248, 1896.

Type locality: Nevada. Collected by Watson.

Range: Washington to Montana, Nevada, and Oregon.

Specimens examined: Mount Adams, Suksdorf 119: Flett 1332.

2. Drymocallis pseudorupestris Rydberg, Mon. N. A. Pot. 194, 1898.

Potentilla pseudorapestris Rydberg, Bull. Torr. Club 24: 250, 1897.

Potentilla glandulosa nevadensis S. Wats, in Brewer & Wats, Bot, Cal. 1: 178, 1876, not P. nevadensis Boiss.

Type locality: Little Belt Mountains, Montana.

RANGE: Alberta to Washington and California.

Specimens examined: Klickitat County, Suksdorf in 1885.

This supposed species seems to me quite identical with the Old World Potentilla rupestris L.

3. Drymocallis convallaria Rydberg, Mon. N. A. Pot. 193, 1898.

Potentilla convallaria Rydberg, Bull. Torr. Club 24: 249, 1897.

Type locality: Bozeman, Montana.

Range: Washington to Wyoming and Assiniboia.

Specimens examined: Conconully, Whited 1312: Rattlesnake Mountains, Colton 470; Loomis, Elmer 565; Pullman, Peper 1528; Elmer 820.

Zonal distribution: Arid transition.

This species is very closely allied to the eastern D. arguta, to which it has often been referred.

4. Drymocallis valida (Greene).

Potentilla valida Greene, Pittonia 3: 20, 1896.

Potentilla glutinosa Nutt.; Torr. & Gr. Fl. 1: 446, 1840, as synonym.

Drymocallis glutinosa Rydberg, Mon. N. A. Pot. 196, 1898.

Potentilla fissa major Torr. & Gr. Fl. 1: 446, 1840, not P. verna major Wahl.

Type locality: "In the vicinity of Victoria, Vancouver Island."

RANGE: British Columbia to Wyoming, Utah, and Oregon.

Specimens examined: Olympic Mountains, Flett 110: Falcon Valley, Suksdorf 2241: Wenache, Whited 110: Clealum, Whited 415: Wenache Mountains, Whited 732: Spokane County, Mrs. Tucker: Pend Oreille River, Lyall in 1861: Loomis, Elmer 564: without locality, Vasey 317: Pullman, Piper 1528.

Zonal distribution: Arid Transition.

5. Drymocallis glandulosa Rydberg, Mon. N. A. Pot. 198, 1898.

Potentilla glandulosa Lindl. Bot. Reg. 19: pl. 1583, 1833.

Type locality: California.

RANGE: British Columbia and Alberta to New Mexico and California.

Specimens examined: Glenwood, Flett 1335; Steilacoom, Piper 78; Wenache Mountains 1095; Blue Mountains, Piper 2444, 2446; Olympic Mountains, Flett 82.

ZONAL DISTRIBUTION: Arid Transition and Canadian.

Some of the above specimens have been referred to D. reflexa (Greene) Rydberg.

5a. Drymocallis glandulosa incisa (Lindl.) Rydberg, Mon. N. A. Pot. 199, 1898.

Potentilla glandulosa incisa Lindl. Bot. Reg. 23: pl. 1973. 1837.

Type locality: California.

RANGE: Idaho and Washington to California.

Specimens examined: Skamania County, Suksdorf 2307.

6. Drymocallis glabrata Rydberg, Mon. N. A. Pot. 201, 1898.

Type locality: Ellensburg, Washington. Collected by Elmer.

RANGE: Known only from the type locality.

Specimens examined: Ellensburg, Elmer 412.

7. Drymocallis wrangelliana (Fisch. & Lall.) Rydberg, Mon. N. A. Pot. 201, 1898.

Potentilla wrangelliana Fisch, & Lall, Animad, Bot, Ind. Sem. Hort, Petrop. 7: 54, 1840.

Type locality: In the Russian colony of New California.

Range: Washington to California.

Specimens examined: Challam County, Elmer 2526; Olympic Mountains, Piper 2024, 2000; west Klickitat County, Suksdorf 1761; Manor, Piper: Bingen, Suksdorf 2209; Vancouver, Piper 4927.

ZONAL DISTRIBUTION: Transition and Hudsonian.

DRYAS.

1. Dryas octopetala L. Sp. Pl. 1: 501, 1753.

Type locality: "Habitat in alpibus Lapponicis, Helveticis, Austriacis, Sabandicis, Hibernicis, Sibiricis."

RANGE: Alaska to Greenland, southward to Labrador and in the mountains, to Washington and Colorado.

Specimens examined: Cascade Mountains, latitude 49°, Lyoll in 1860; near Loomis, Elmer in 1897; Mount Rainier, Flett 2166.

Zonal distribution: Arctic.

GEUM.

Flowers large: style glabrous. 2. G. macrophyllum.
Flowers small: style puberulent 3. G. oregonense.

1. Geum strictum Soland.; Ait. Hort. Kew. 2: 217, 1789.

Type locality: "North America."

Range: British Columbia to Newfoundland, southward to Arizona, Missouri, and New Jersey.

Specimens examined: Along Tukanon River, Loke & Hall 516; nine miles southwest Pullman, Piper, July 9, 1901.

2. Geum macrophyllum Willd. Enum. 557, 1809.

Type locality; "Camtschatca."

RANGE: Alaska to California and Colorado, Siberia.

Specimens examined: Clallam County, Elmer 2524; Montesano, Keller 3947; Cascade Mountains, latitude 49°, Lyall in 1859; Silverton, Bouck 53; Falcon Valley, Suksdorf 288; Skokomish Valley, Kincaid, May, 1892; Beaver Creek, Whited 192; Rock Lake, Lake & Hull 515.

Zonal distribution: Transition.

This species is very close to if not identical with Genm japonicum Thunb. a

3. Geum oregonense Scheutz, Nov. Act. Soc. Sci. Upsala 7: 26, 1869.

Type locality: "Habit, in regione Oregonensi."

Range: Washington and Oregon to Montana.

Specimens examined: Ellensburg, Whited 528 (t); Spokane County, Suksdorf 289; Mrs. Susan Tucker: Harrington, Sandberg & Leiberg 219; Marshall Junction, Piper, July, 1896; without locality, Vascy in 1889; Clarks Springs, Kreager 39; Loon Lake, Beattie & Chapman 2083.

Zonal distribution: Arid Transition.

SIEVERSIA.

Flowers pale purplish; styles plumose. 1. S. ciliata. Flowers yellow; styles glabrous. 2. S. rossii.

1. Sieversia ciliata (Pursh).

Genm ciliatum Pursh, Fl. 1:352, 1814.

Geum triflorum Pursh, Fl. 2: 736, 1814.

Type locality: "On the Kooskooskee." Collected by Lewis; the exact spot on the Quamash Flats, now Weippe, Idaho.

RANGE: British Columbia to Labrador, southward to Arizona, Missouri, and New York. Specimens examined: Clallam County, Elmer 2529: Olympic Mountains, J. M. Grant in 1889; Whidby Island, Gardner 105; Klickitat River, Flett 1324; Wenache, Whited 126, 1163; Ellensburg, Whited 731; Spokane, Dewart, May 6, 1901; Hangman Creek, Sandberg & Leiberg 64; Pullman, Hull 517; Piper 1532; Clarks Springs, Kreager 22; Rattlesnake Mountains, Cotton 554.

Zonal distribution: Arid Transition.

Dr. E. L. Greene has proposed a new genus for this species and its immediate allies, Erythrocoma. A subspecies of S. ciliata, characterized by having the bractlets cut into filiform segment is designated Erythrocoma ciliata ornata Greene.

2. Sieversia rossii R. Br. in Parry's 1st Voyage App. 276, 1824.

Genm rossii Ser. in DC. Prod. 2: 553, 1825.

Type locality: Melville Island.

RANGE: Arctic regions, south to Washington and Colorado.

Specimens examined: Mount Stuart, Elmer 245, 1182.

Dr. Greene has recently proposed a new genus Acomastylis with this species as its type. Elmer's number 1182 is considered a new species, A. depressa Greene.

CERCOCARPUS.

1. Cercocarpus ledifolius Nutt; Torr. & Gr. Fl. 1: 427, 1840. Mountain manogany, Type locality: Bear River, Idaho. Collected by Nuttall.

Range: Washington and Wyoming, southward to California and Arizona.

Specimens examined: Near Salmon River, Horner 298; Blue Mountains, Lake & Hull, July, 1892; Piper 2449.

Zonal distribution; Arid Transition.

KUNZIA.

1. Kunzia tridentata (Pursh) Spreng. Syst. 2: 475. 1825. Antelope brush.

Purshia tridentata DC. Trans. Linn. Soc. 12: 158, 1817.

Tigarea tridentata Pursh, Fl. 1: 333. 1814.

Type locality: "In the prairies of the Rocky Mountains and on the Columbia River," Collected by Lewis.

RANGE: Washington to California, New Mexico, and Montana.

Specimens examined: Wenache, Whited 77, 1064; Ellensburg, Elmer 384; Piper, May, 1897; North Yakima, Flett 1037; Pasco, Hindshaw 34; Clealum, Henderson, June, 1892; Hunts Junetion, Leckenby, April, 1898; Crab and Wilson creeks, Sandberg & Leiberg 293; Moses Coulee, Lake & Hull 497; without locality, Vasey in 1889; Wenas, Griffiths & Cotton 97.

Zonal distribution: Upper Sonoran.

MALACEAE. APPLE FAMILY.

Flowers racemose; carpels fleshy in fruit	Amelanchier (p. 345)
Flowers corymbose.	
Carpels stony in fruit	Crataegus (p. 346).
Carpels papery in fruit	Pyrus (p. 347).
	•

AMELANCHIER. SERVICEBERRY.

Twigs pale or ashy.	
Leaves cuneate at base	4. A. cuncata.
Leaves rounded at base.	2. A. utahensis.
Twice not peliv	

Leaves (omentose beneath when young, serrate only toward the apex 1, 1, florida. Leaves glabrous when young.

Petals 2 cm. long; leaves bright green 3. A. cusickii.
Petals 1 to 1.5 cm. long; leaves pallid 5. A. basalticola.

1. Amelanchier florida Lindl. Bot. Reg. 19: pl. 1589, 1833.

Amelanchier ovalis semiintegrifolia Hook. Fl. Bor. Am. 1: 202. 1834.

Type locality: "Northwest America." Collected by Douglas.

Range: British Columbia to California.

Specimens examined: Montesano, Heller 3958; Lopez Island, Lyull in 1858; Fidalgo Island, Flett 1940; Cascade Mountains, latitude 49°, Lyull in 1859; Scattle, Piper, July 4, 1897; Olympia, Henderson, May 24, 1892; Rock Island, Henderson, July 3, 1892; Klickitat River, Flett 1325; Ellensburg, Whited 322; without locality, Vascy in 1889; Lake Chelan, Lake & Hull, August 25, 1892; Rock Creek, Piper 2831; Almota, Hull 499; Union Flat, Piper, April 29, 1897; Henderson, July 48, 1892; Pullman, Piper 1534; Clallam County, Elmer 2512; Nisqually Valley, Allen 214; Mount Adams, Flett 1325.

Zonal distribution: Transition.

This is by far the most abundant species in Washington and it has commonly been referred to A. almfolia Nutt. In Cooper's Report it was named A. canadensis var.

2. Amelanchier utahensis Koehne, Berlin Ostern. 32: fig. 2. 1890.

Amelanchier alnifolia utahensis Jones, Proc. Cal. Acad. Sci. 5: 679. 1895.

Type locality: Leeds, Utah. Range: Washington to Utah.

Specimens examined: Wenache, Whited 1028 in part; Rattlesnake Mountains, Cotton 569, 571, 365; Rock Creek, Sandberg & Leiberg 94.

Zonal distribution: Upper Sonoran.

3. Amelanchier cusickii Fernald, Erythea 7: 121. 1899.

Type locality: "On stony hillsides, Union County, Oregon." Collected by Cusick.

RANGE: Washington, Oregon, and Idaho.

Specimens examined: Wenache, Whited 1028 in part, 1344; Fort Colville, Lyall in 1861; Rock Lake, Piper 2830; Spokane, Piper 2694; Union Flat, Piper 2732; Elmer 135; Wawawai, Piper 3812; Meyers Falls, Beattie & Chapman 2175.

ZONAL DISTRIBUTION: Arid Transition.

4. Amelanchier cuneata Piper, Bull. Torr. Club 27: 392. 1900.

Type locality: Ellensburg, Washington.

Specimens examined: Ellensburg, Piper 2713.

5. Amelanchier basalticola Piper, Fl. Palouse Reg. 100, 1901.

Type locality: Bluffs of Snake River, Whitman County, Washington, opposite Clarkston.

Range: Bluffs of Snake River in Washington and Idaho.

Specimens examined: Wawawai Bluffs, Piper 3823; opposite Clarkston, Hunter 39.

Zonal distribution: Arid Transition.

AMELANCHIER sp.—Specimens collected by Heller (no. 3958) at Montesano and by Lamb (no. 1190) at Humptulips represent a species close to A. florida, but seemingly distinct. More and better material is needed.

CRATAEGUS. THORNAPPLE.

Fruit red; spines 4 to 6 cm. long.

Calyx and fruit glabrous. 1. C. columbiana. Calyx and fruit tomentose. 2. C. piperi.

1. Crataegus columbiana Howell, Fl. N. W. Am. 1: 163. 1898.

Type locality: "Common along the Columbia River and its tributaries east of the Cascade Mountains."

Range: Eastern Washington and eastern Oregon.

Specimens examined: Wilson Creek, Lake & Hull 505; Spokane, Piper 2387; Suksdorf 919; Rock Creek, Sandberg & Leiberg 91; 6 miles south of Pullman, Piper 3809; Colville, Kreager 523.

ZONAL DISTRIBUTION: Arid Transition.

This species has been mistaken for the eastern C. macracantha Lodd. It also forms the basis for the entry "C. tomentosa L. var." in Suksdorf's list.

2. Crataegus piperi Britton, Torreya 1: 55. 1901.

Type locality: Pullman, Washington.

Range: Eastern Washington, Idaho, and eastern Oregon.

Specimens examined: Wenache, Whited, September 2, 1899; 1209, 1293; Brandegee in 1883; Pullman, Piper 1535; Elmer in 1896.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

This may be only a subspecies of the former, with which it sometimes occurs, being indistinguishable except by the pubescence.

3. Crataegus brevispina (Dougl.) Heller, Cat. N. A. Pl. ed. 2, 98, 1900.

Cratacqus douglasii Lindl. Bot. Reg. 21: pl. 1810, 1835.

Crataegus punctata brevispina Dougl.; Hook. Fl. Bor. Am. 1: 201. 1833.

Type locality: "Common on banks of streams on the north-west coast of America." Collected by Douglas and by Scouler.

RANGE: British Columbia to California and Nevada.

Specimens examined: Seattle, Piper; Peshastin, Sandberg & Leiberg 544; Wenache, Whited 1292, 1070, 89; Ellensburg, Whited 348; Glendale, Lake & Hull 504; without locality Vasey in 1889; Spokane, Kreager 534; Puyallup, Piper, May 29, 1902; Pullman, Piper 3827, 3826.

Zonal distribution: Arid Transition.

The specimens from western Washington are somewhat different from those of eastern Washington and possibly distinct.

Near Pullman and Spokane occurs a form whose fruit is first chestnut-colored, later turning black. This blooms a little later than the ordinary form, but has no definite characters to distinguish it.

PYRUS.

Fruit coral-red: leaflets shining, serrate from near the base. 2. P. sitchensis.
Fruit purple, glaucous: leaflets dull, serrate near the apex. 3. P. occidentalis.

Pyrus diversifolia Bong, Mem. Acad. St. Petersb. VI. 2: 133, 1832. Crabapple.
 Pyrus rivularis Dougl.; Hook. Fl. Bor. Am. 1: 203, 1834.

Type locality: Sitka.

Range: Alaska to California in the coast region.

Specimens examined: Clallam County, Elmer 2510; Cascade Mountains, latitude 49°, Lyall: Admiralty Head, Piper, May, 1898; Steilacoom, G. C. Woolson; Nisqually Valley, Allen 213; Manor, Piper, July 14, 1899; without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Humid Transition and Canadian.

2. Pyrus sitchensis (Roem.) Piper, Mazama 2: 107, 1901. Mountain asii

Sorbus sitchensis Roem. Svn. Mon. 3: 139, 1847.

Type .Locality: Sitka.

Range: Alaska to California and Idaho.

Specimens examined: Lake Cushman, Piper 1980; Twisp River, Whited, July 19, 1896; Faston, Whited 424; Mount Rainier, Piper 1990; Bear Prairie, Allen 291; Cascade Mountains, latitude 49°, Lyall in 1859; Klickitat River, Flett 1341; Nason Creek, Sandberg & Leiberg 683; near Lake Chelan, Lake & Hull; Blue Mountains, Piper 2420; Mount Carlton, Kreager 265; without locality, Vasey in 1889; Scehekin, Griffiths & Cotton 204.

Zonal distribution: Canadian and Hudsonian.

Referred to Pyrus americana DC, in Cooper's Report. It is also the Sorbus sambucifolius or Pyrus sambucifolius of various reports so far as Washington specimens are concerned, but it is quite different from the real Pyrus sambucifolius Cham, & Schlecht.

3. Pyrus occidentalis S. Wats. Proc. Am. Acad. 23: 263, 1888. Mountain asii. Sorbus occidentalis Greene, Fl. Fran. 54, 1891.

Type locality: Cascade Mountains, latitude 49°. Collected by Lvall.

Range: British Columbia to Oregon in the Cascade Mountains.

Specimens examined: Clallam County, Elmer 2500; Cascade Mountains, latitude 49°, Lyall in 1859; Baldy Peak, Lamb 1365, 1365a; Mount Rainier, Piper 1988, Flett 277; Goat Mountains, Allen 125; Mount Adams, Henderson, August, 1892; mountains, Skamania County, Suksdorf, August 13, 1886; near Skagit Pass, Lake & Hull, August, 1892; Stampede Pass, Henderson, October, 1892; Stevens Pass, Sandberg & Leiberg 750; Bridge Creek, Elmer 663; without locality, Uascy in 1889.

ZONAL DISTRIBUTION: Hudsonian.

AMYGDALACEAE. ALMOND FAMILY.

Flowers perfect; carpel solitary	Prunus.
Flowers dioecious; carpels five	

PRUNUS.

1. Prunus demissa (Nutt.) Dietrich, Syn. Pl. 3: 43, 1843.

CHOKECHERRY.

Cerasus demissa Nutt.; Torr. &. Gr. Fl. 1: 411, 1840.

Type locality: "Plains of the Oregon toward the sea and mouth of the Wahlamet."

Range: Oregon, Washington, and Idaho. Perhaps also farther eastward.

Specimens examined: Whidby Island, Gardner 100; Wenache, Whited 117, 1071; Yelm Prairie, Piper 1120; North Yakima, Mrs. Steinweg in 1894; Sunnyside, Cotton 371; Rock Lake, Sandberg & Leiberg 104; upper Columbia, Lyall; Lake Chelan, Lake & Hull in August, 1892; without locality, Vasey in 1889; Spokane Valley, Watson 97; Pullman, Piper 1530, August, 1896; Wawawai, Lake, May, 1892; Blue Mountains, Piper, August, 1896. Zonal distribution: Arid Transition and Upper Sonoran.

Two forms or perhaps distinct species occur in eastern Washington, one with densely flowered stiff racemes blooming about a week later than the other, which has looser, laxer racemes. The former is often arborescent, and tends to have broader leaves.

2. Prunus emarginata (Dougl.) Walp. Rep. 2: 9, 1843.

WILD CHERRY.

Cerasus emarginata Dougl.; Hook. Fl. Bor. Am. 1: 169, 1830.

Type locality: "On the upper part of the Columbia River, especially about the Kettle Falls." Collected by Douglas.

RANGE: British Columbia to Idaho and California.

Specimens examined: Klickitat River, Flott 1327; Wenache Mountains, Whited 1005; Peshastin, Sandberg & Leiberg 590; White Bluff, Lake & Hull, August, 1892; Fllensburg, Piper, May, 1897; without locality, Vasey in 1889; Blue Mountains, Lake & Hull, July, 1892; Piper, August, 1896; Mount Carlton, Kreager 245.

Zonal distribution: Arid Transition.

2a. Prunus emarginata villosa Sudw. U.S. Dept. Agr. Div. Forest. Bull. 14: 240, 1897. Cerasus mollis Dougl.; Hook, Fl. Bor, Am. 1: 169, 1830, not Torr, 1824.

Primus mollis Walp, Repert. 2: 9, 1843.

Prunus emarginata mollis Brewer in Brewer and Wats. Bot. Cal. 1: 167, 1876.

Type locality: "Northwest coast of America, near the mouth of the Columbia, and on subalpine hills, near the sources of that river." Collected by Douglas.

Range: British Columbia to Oregon and Idaho.

Specimens examined: Claffam County, Elmer 2525; Montesano, Heller 4036; Port Ludlow, Binns; Tacoma, Flett 56; Admiralty Head, Piper, May, 1898; upper Nisqually Valley, Allen 120; Cascade Mountains, latitude 19°, Lyall; Lake Chelan, Lake & Hull 513.

Zonal distribution: Humid Transition.

OSMARONIA.

1. Osmaronia cerasiformis (Torr. & Gr.) Greene, Pittonia 2: 191, 1891. Indian flum. Nuttallia cerasiformis Torr. & Gr.; Hook & Arn. Bot. Beech. Vov. 337. pl. 82, 1841.

Type locality: "On the Columbia." Collected by Nuttall, by Douglas, and by Scouler. Range: British Columbia to California in the coast region.

Specimens examined: Montesano, Heller 3874; Admiralty Head, Piper, March, 1898; Scattle, Piper 61; upper Nisqually Valley, Allen 59; west Klickitat County, Suksdorf 13; Maxfield, Henderson, April, June, 1892; Clallam County, Elmer 2511.

ZONAL DISTRIBUTION: Humid Transition.

Allen's 59 is considered a distinct subspecies by Professor Greene, Osmaronia cerasiformis nigra, a based principally upon the drupes which seem to lack the usual glaucous coating.

FABACEAE. BEAN FAMILY.

Stamens 5, monadelphous: leaves pinnate	Petalostemum (p. 350),
Stamens 10.	
Filaments distinct; leaves trifoliolate	Thermopsis (р. 349).
Filaments united, either monadelphous or diadelphous, 9 and 1.	
Anthers of two forms, round and oblong.	
Leaves digitate with 5 to 11 leaflets; ours herbs	Lupinus (p. 350).
Leaves with solitary leaflets; spiny shrub	Ulex (p. 358).
Anthers all alike.	•
Leaves digitate, or if pinnace then trifoliolace.	
Pods curved or coiled; flowers in spikes	Medicago (p. 363),
Pods straight.	,
Flowers in long racemes	Melhotes (p. 358).
Flowers in heads or head-like umbels	Trifolium (p. 358).
Leaves pinnate; leaflets mostly more than 3; no ten-	•
drils.	
Herbage dotted with conspicuous glands.	
Leaflets 3; pods not spiny	Psoralea (p. 363).
Leaflets many; pods spiny	•
Herbage not dotted with conspicuous glands.	
Leaves unequally pinnate, no. tendril bear-	
ing.	
Flowers umbellate or solitary; pods	
linear	Hosackia (р. 364).
Flowers spicate or racemose, rarely	,
solitary, then pods not linear.	
Pod a loment	Hedysarum (d. 366).
Pod not a loment.	,
Keel of the corolla acute or	
subulate at apex	Aragallus (p. 367).
Keel of the corolla obtuse at	•
apex	Ридса (р. 367).
Leaves abruptly pinna.e, usually tendril-	
bearing.	
Style filiform, hairy only near the tip	Vicia (p. 374).
Style flattened, hairy on the inner side.	

THERMOPSIS.

1. Thermopsis montana Nutt.; Torr. & Gr. Fl. 1: 388, 1840.

Type locality: "High valleys of the Rocky Mountains, in bushy places by streams, near the line of Upper California."—Collected by Nuttall.

Range: Washington to Montana and Arizona.

Specimens examined: Walla Walla region, Brandeger 695.

This or the following was referred to T, fabacea (Pall.) DC, by Hooker,b

1a. Thermopsis montana ovata Robinson, subsp. nov.

Leaflets broader than in T, montana, ovate.

RANGE: North Idaho and adjacent Washington and Oregon.

Specimens examined: Chehalis Councy, Lamb 1197; Walla Walla, Leckenby, June, 1898; Blue Mountains, Piper, July, 1896; Palouse City, Moore, June, 1893; Henderson, July, 1892, Zonal, distribution: Arid Transition.

The type is Piper 1489, collected on Cedar Mountain, Latah County, Idaho.

PETALOSTEMUM.

1. Petalostemum ornatum Dougl.; Hook. Fl. Bor. Am. 1: 138, 1830,

Type locality: "Frequent in the arid prairies near the Blue Mountains of Lewis [Snake] River, North-West America." Collected by Douglas.

Range: Eastern Washington, eastern Oregon, and south Idaho.

Specimens examined: Pasco, Piper 2973; Leckenby in June, '898; Walla Walla, Lyall in 1860; near Columbia and Snake rivers, Brandegre 714.

Zonal distribution: Upper Sonoran.

LUPINUS. LUPINE.	
Subgen. I. PLATYCARPOS S. Wats.—Ovary 2-ovuled, forming a short and relatively broad 2-(1-)-seeded pod; annuals or biennials with deep often lignescent taproot and persisting cotyledons. Peduncles 1 to 2 cm. long; flowers small; corolla about 1 cm. long; Peduncles 5 to 15 cm. long; flowers larger; corolla 1.5 cm. long; Subgen. H. LUPINUS proper.—Ovary 3 to many-ovuled, forming an oblong to linear several-seeded pod; cotyledons not persisting.a § 1. Michanthi.—Annuals, slender, branching from the base; leaflets glabrous on the upper surface.	
Flowers subsessile; wings oblong, 6 mm, in length; corolla usually pale purple. Pedicels 4 mm, long; corolla deep blue; wings 8 mm, long. § 2. Sericel.—Perennials; calyx subsymmetrical at the base; corolla blue, varying to white or roscate; keel usually cilia:e; leaflets appressed-pubescent and silky (rarely tomentose) on both surfaces, canescent.	
Stems scapose or subscapose, 7 to 25 (rarely 40) cm, high; leaves chiefly basal; flowers sessile or on very short pedicels. Very dwarf (7 to 15, rarely 20, cm, high), cespitose; flowers subsessile, small; keel 6 to 8 mm, long.	
Leaflets 5 to 8, very small, 6 to 10 mm, long. Leaflets 7 to 12, at least 12 to 20 mm, long. Densely and somewhat shaggy sericeous-pubescent; vexillum	
obovate-oblong. (Covered with a fine and closely appressed sericeous pubescence; vexillum suborbicular	
a The following key will aid in locating a species in its proper section	
Annuals, branching from the base; flowers small	1. MICRANTHI.
Calyx saccate or spurred at the base. Calyx symmetrical or nearly so at base.	
Flowers yellow	5. Sulphurei.
Leaves green, the pubescence thin, never silky or villous Leaves sericeous or villous.	
Pubescence sericeous	

Pubescence villous.....

Commonly 20 to 30 (rarely 40) em. high; flowers somewhat	
larger; keel 9 to 11 mm. long.	
Pods 15 mm, long; flowers subsessile Pods 20 to 25 mm, long; pedicels about 3 mm, long;	8. L. lepidus.
Keel ciliate	
Stems leafy.	
Plants dwarf, scarcely 20 cm. high, somewhat cespitose; pedicels	
slender, in anthesis 4 to 8 mm. long	10. L. subscriccus.
Plants not dwarf.	
Decumbent or procumbent; maritime species	18. L. littorulis.
Erect, tall, 4 to 12 cm. high, not maritime.	
Keel narrow, bent almost at right angles, early exposed	
for much of its length; pubescence of stem and leaves	1. r 27. r.
inclining to velvety rather than silky	11. L. albicaulis.
Keel broader, only moderately falcate, the tip only ex-	
serted.	
Flowers subsessile in dense spiciform racemes.	
Stout: silky pubescence somewhat coarse, shaggy	
and inclining to spread.	10 1 1
Bracts scatterly exceeding the buds	12 L. wacopagaus.
Bracts linear-filiform, plumose, much longer than the buds	19a I Lawanhadlas ala-
(III DIAS	mosits.
Slender; silky pubescence very fine and Josely ap-	
pressed.	
Leaflets oblanceolate, acute or acuminate	13 L. canescens
	1.7. 75. (
Leaflets elliptic-oblanceolate, rounded and mucro-	
Leaflets elliptic-oblanceolate, rounded and mucro- nate at the apex	
Leaflets elliptic-oblanceolate, rounded and mucro- nate at the apex	13a. L. canescens amblyophyllus,
Leaflets elliptic-oblanceolate, rounded and mucro- nate at the apex	13a. L. canescens amblyophyllus,
Leaflets elliptic-oblanceolate, rounded and mucro- nate at the apex	13a. L. canescens amblyophyllus,14. L. suksdorpi,

Taller, 30 to 50 cm, high; keel naked or only obsoletely ciliate. Leaflets obtuse or rounded at the apex, about 4 cm, long, loosely hairy on both surfaces. Leaflets oblanceolate, acute, 5 to 6 cm, long, glabrous or nearly so on the upper surface.	
§ 4. RIVULARES.—Leaflets green and glabrous (or obscurely puberu- lent) above, glabrous or minutely appressed-pubescent beneath; corolla blue or purple, varying to roseate or white; ealyx sub- symmetrical at the base.	
Leaflets of the lower leaves 10 to 16, very large, 6 to 14 cm. long, 1.7 to 3.6 cm. wide Leaflets 6 to 9 in number, 4 to 9 cm. long, 5 to 15 mm. broad.	23. L. polyphyllus.
Bracts long, spreading-villous, usually persisting in anthesis; stems simple Bracts subulate, minutely appressed-pubescent and canescent, usually	24. L. burkei.
caducous; stems branched. § 5. Sulphure.—Perennials, leafy-stemmed; corolla yellow; calvx subsymmetrical at the base.	25. L. rivularis.
Flowers large: petals about 16 mm, long, deep yellow. Flowers smaller: petals about 1 cm, long, light yellow. § 6. Calcarati.—Perennials, leafy-stemmed, erect, not maritime: calyx strongly saccate or shortly spurred at the base.	26. L. sabinii. 27. L. sul plureus.
Corolla blue	28. L. laxiflorus. 28a. L. laxiflorus theiochrous.

Type locality: "On the banks of the Missouri." Collected by Lewis.

RANGE: Washington to Dakota, southward to Arizona, and New Mexico.

Specimens examined: Pasco, Piper 2982, July 11, 1897; Hindshaw 39; Mabton, Cotton 1115.

Zonal distribution: Upper Sonoran.

2. Lupinus microcarpus Sins, Bot. Mag. 50: pl. 2413, 1823.

Type locality: Chile.

Range: Washington to California. Chile.

Specimens examined: Coupeville, Gardner 88; Ellensburg, Piper, July 9, 1897; Whited 536; Elmer 371; North Yakima, Henderson, October 5, 1892; Watt, August, 1895; Mrs. Steinweg in 1894; without locality, Vasey 259; Prosser, Cotton 942; Wenas, Griffiths & Cotton 85.

Zonal distribution: Upper Sonoran.

3. Lupinus micranthus Dougl.; Lindl. Bot. Reg. 15: pl. 1251, 1829.

Type locality: "Upon the gravelly banks of the southern tributaries of the Columbia and on barren ground in the interior of California." Collected by Douglas.

Range: British Columbia to California.

Specimens examined: Whidby Island, Gardner, July, 1898; Tacoma, Flett 194, May 20, 1895; Leckenby, May, 1898; Olympia, Kincaid, July, 1896; Johns Island, Lawrence 185; Nisqually, Wilkes Expedition, 118.

Zonal distribution: Humid Transition.

4. Lupinus bicolor Lindl. Bot. Reg. 13: pl. 1109, 1827.

Type locality. "In the interior of the country about the Columbia River, from Fort Vancouver to the branches of Lewis and Clarke's River, always on dry gravelly soil under the shade of trees in the open plains." Collected by Douglas.

We suspect strongly that there is some error about the type locality. The species seems to be common in California and extends into Oregon, but no specimens from Washington have been seen.

5. Lupinus Iyallii A. Gray, Proc. Am. Acad. 7: 334, 1868.

Type locality: "Summit of the Cascade Mountains, latitude 49°." Collected by Lyall.

Range: Cascade Mountains, British Columbia to Oregon.

Specimens examined: Mount Rainier, Piper 2092; Allen 100; Mount Adams, Henderson, August 9, 1892; Flett 1257; Cotton 1516; Cascade Mountains, 49°, Lyall.

Zonal distribution: Arctic.

6. Lupinus aridus Dougl.; Lindl. Bot. Reg. 15: pl. 1242, 1829.

Type locality: "Same range of country as Lupinus leucophyllus and equally common." Collected by Douglas.

Range: Washington and Oregon.

Specimens examined: Mason County, Kincaid, June 15, 1892; Olympia, Kincaid, July 14, 1896; Woodlawn, Henderson, June 22, 1892; Glenwood, Flett 1258; Pasco, Henderson, June, 1892; North Yakima, Henderson, May 2, 1892; Ellensburg, Hindshaw, May, 1896.

Zonal distribution: Transition.

7. Lupinus minimus Dougl.; Hook. Fl. Bor. Am. 1: 163, 1830.

Type locality: "Mountain valleys in Northwest America near Kettle Falls; and very abundant towards the Rocky Mountains along the course of the Columbia." Collected by Douglas.

Range: British Columbia and Idaho to Oregon.

This species has not recently been collected in the State.

8. Lupinus lepidus Dougl.; Lindl. Bot. Reg. 14: pl. 1149, 1828.

Type locality: "From Fort Vancouver to the Great Falls of the Columbia." Collected by Douglas.

Range: Vancouver Island to Oregon.

Specimens examined: Clallam County, Elmer 2541; Thurston County, Heller 4048; Olympia, Kincaid, July 4, 1896; Tacoma, Flett 898, 195; Woodlawn, Henderson, June 2, 1892; Fourth Plain, Piper 3072; North Yakima Henderson, May 29, 1892; Vancouver, Piper 4923.

Zonal distribution: Humid Transition.

9. Lupinus piperi Robinson, sp. nov. (§ SERICEI).

Silky and canescent, leafy at the base; root single, perpendicular; stems 1 to 6, scapose, rather stout, simple, erect, curved-ascending, or decumbent, covered with a loosely appressed pubescence; leaflets 5 to 8, oblanceolate, acute, or acutish, about 3 cm. long; petioles 5 to 10 cm. long; peduncles 7 to 13 cm. in length, equaling the showy rather loose racemes; pedicels 3 to 4 mm. long, tomentose with widely spreading hairs; corolla deep blue; the standard broad, entirely glabrous, paler toward the center; keel ciliated; pods 20 to 21 mm. long, 4 or 5-seeded. This species is near L. hallerae Heller, but is paler in color and has shorter leaflets, spreading pubescence on the pedicels, glabrous standard, etc. Found in gravelly soil.

Specimens examined: Spokane, Henderson, June 2, 1892, 2338 in part; Sandberg & Leiberg, May, 1893; Piper 2730 (type), 2949, 2287; Spangle, Piper 2440, 3543.

Zonal distribution: Arid Transition.

9a. Lupinus piperi imberbis Robinson, subsp. nov.

Keel not ciliated; leaflets larger, 3.6 cm. long; pedicels 6 mm. in length; pubescence of the stems and petioles widely spreading.

Specimens examined: Wenache, K. Whited, no. 121, June, 1896, type.

29418-06 м-23

10. Lupinus subsericeus Robinson, sp. nov. (§ SERICEI).

Root stout, bearing a well-developed leafy crown; stems 15 to 25 cm. high, decumbent or curved-ascending, 2 or 3-leaved; petioles of the radical leaves slender, 7 to 10 cm. long; leaflets oblanceolate, obtusish, finely sericeous, but green on both surfaces, 16 to 24 mm. long, 3 to 6 mm. broad; peduncles short, 2 to 5 cm. in length; bracts lanceolate, rather promptly deciduous; racemes at length 10 to 13 cm. long, becoming rather loose; bractlets unusually large, oblong, 4 mm. in length; flowers 12 to 14 mm. long, on slender pedicels 4 to 6 mm. in length; upper calyx lobe cleft four-fifths of the way to the base, the lower distinctly and sharply 3-toothed; corolla indigo-blue with a spot of lighter color on the glabrous oboyate standard; keel ciliated; oyules about 5; pod densely sericeous.

Specimens examined: Ellensburg, Whited 602, May 5, 1898; Badger Mountain, Whited 1220.

11. Lupinus albicaulis Dougl.; Hook. Fl. Bor. Am. 1: 165.:1830.

Type locality: "About Fort Vancouver on the Columbia."

Range: Washington and Oregon in the coast region.

Specimens examined: Whidby Island, Gardner 427; near Olympia, Heller 4039; McAllisters Lake, Henderson, June, 1892; Fourth Plain, Piper, July 14, 1899; Union City, Piper, July 20, 1890.

Specimens collected by Suksdorf in Falcon Valley, nos. 345, 346, are closely allied to L. albicaulis, but probably represent a new species.

ZONAL DISTRIBUTION: Humid Transition.

12. Lupinus leucophyllus Dougl.; Lindl. Bot. Reg. 13: pl. 1124. 1827.

Type locality: "From the Great Falls of the Columbia in North America to the sources of the Missouri among the Rocky Mountains."

Range: Washington to Nevada and New Mexico.

Specimens examined: Ellensburg, Whited 551; upper Wenas River, Henderson 2336; Rock Lake, Lake & Hull 432; Spokane, Piper 1901, 2270; Dewart in 1900; Henderson 2335; Pullman, Piper, July 1893; July 28, 1894, and 1902; Hull 755; Waitsburg, Horner 86; Blue Mountains, Piper, July 15, 1896; Conconully Creek, Griffiths & Cotton 286; Colville Reservation, Griffiths & Cotton 398.

ZONAL DISTRIBUTION: Arid Transition.

12a, Lupinus leucophyllus plumosus (Dougl.) Robinson,

Lupinus plumosus Dougl. Bot. Reg. 15: pl. 1217; Hook. Fl. Bor. Am. 1: 165.

Bracts very long and narrow, plumose-ciliate, much exceeding the buds. Sometimes well marked, but in other cases vague and confluent with the typical form.

Type locality: "Common in northern California in 45° north, growing in gravelly soil; it is also found at the sources of the Wallawallah River, near the Blue Mountains." Collected by Douglas.

Specimens referable to this are included in the preceding.

13. Lupinus canescens Howell, Erythea 1:110, 1893.

Type locality: "At the western base of Buck's Mountain, a spur of the Blue Mountains of Oregon."

Range: Washington and Oregon.

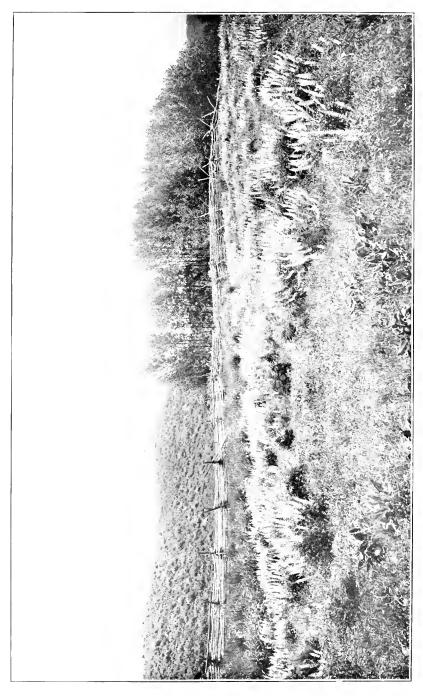

Specimens examined: Klickitat Valley, J. Howell, June, 1879.

13a. Lupinus canescens amblyophyllus Robinson, subsp. nov.

Leaflets elliptic-lanceolate, broader than in the typical form, rounded and mucronulate at the apex; seeds red.

Specimens examined: Near Egbert Springs, Douglas County, Washington, Sandberg & Leiberg 402 (type), July 5, 1893.

14. Lupinus suksdorfii Robinson, sp. nov. (§ Sericei).

Erect or nearly so, about 60 cm, high; stem stoutish, subsimple, terete, finely subappressed-pubescent or somewhat spreading-villous, leafy, especially near the middle; leaflets about 9, oblanceolate, acute, the larger 5 to 6 cm, long, 8 to 12 mm, wide, covered on both surfaces by a short dense sericeous appressed pubescence; petioles 4 to 11 cm, long; peduncles terminal and commonly solitary, 4 to 8 cm, long; racemes 20 cm, in length, 4 to 5 cm, in diameter; pedicels slender, 8 mm, long, scattered or subverticillate, tomentulose; upper calyx lobe 2-toothed, the lower entire; petals rich purplish blue, about 12 mm, long; standard glabrous; keel ciliolate; ovary 5 to 7-ovuled; pods spreading-pubescent, 3 to 4 cm, long, 9 mm, wide, about 4-seeded.—Dry grounds.

Specimens examined: Columbia River, west Klickitat County, Suksdorf 110, May 3 (in flower), June (in fruit), 1883; same locality, mountain sides, Suksdorf 109, May 2 (in flower), June (in fruit), 1883; same region and collector, April 24 (in flower), June (in fruit), 1886; Wenache, Whited 1032, April 23, 1899; sandy hillsides west of Wenache, Whited 1033, May 2, 1899.

15. Lupinus sericeus Pursh, Fl. 2: 468, 1814.

Type locality: "On the banks of the Kooskoosky," Collected by Lewis.

RANGE: Washington, Oregon, and Idaho.

Specimens examined: Wenache, Whited 1061; June, 1895; Klickitat, Howell, June, 1879; Spokane, Henderson 2338 in part; Walla Walla region, Brandegee 696; Waitsburg, Horner 90; Almota, Piper 2011; Kamiak, Piper 3087; without locality, Vasey 262.

Zonal distribution: Upper Sonoran and Arid Transition.

The following specimens are not typical but for the present are referred here: Wenache, Whited 1061, 155, July 9, 1896; Ellensburg, Whited 662; Twisp River, Whited 36; Douglas City, Lake & Hull 757; Coulee City, Spillman, May 27, 1896 in part.

16. Lupinus ornatus Dougl. Bot. Reg. 14: pl. 1216, 1828.

Plate XXII.

Type locality: "In mountain valleys, on the banks of the Spokan River, near Kettle Falls, on the River Columbia; and also near the chain of lakes of the last mentioned stream."

Revenue Wighington, On a proceed blocks.

Range: Washington, Oregon and Idaho.

Specimens examined: Pasco, Henderson 2334; Yakima County, Henderson 2332, 2340, 2342; Ellensburg, Whited 23; Ainsworth, Brandegee 700; Spekane, Piper 1903; Spokane County, Suksdorf 267; Concountly, Whited 1308; Steamboat Rock, McKay 22; Pullman, Henderson 2339; Piper 3037; without locality, Vascy in 1889; Wenas Creek, Cotton 1149; Kittitas Valley, Cotton 1337.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

16a. Lupinus ornatus bracteatus Robinson, subsp. nov.

Bracts much exceeding the buds, often recurved, somewhat persistent, much more conspicuous than in the typical form.—Gravelly prairies. Bearing much the same relation to the typical form of *Lupinus ornatus* Dougl. as subspecies *plumosus* Robinson does to *L. leucophyllus* Lindl., and no more constant.

Specimens examined: Spokane, Henderson 2338 in part; Piper 2728, 2823, 2947; Almota, Piper 2939.

17. Lupinus alpicola L. F. Henderson in herb.

Stems several from a thickish caudex, scaly at the base, erect, 30 to 50 cm, high, simple or nearly so, leafy, covered by a fine short closely appressed pubescence; petioles slender, erect, all but the upper exceeding the 7 or 8 leaflets; these linear-oblanceolate, acute, finely serice-ous-pubescent on both surfaces, 2.6 to 3.6 cm, long, 2 to 5 mm, broad; racemes mostly terminal on the stems, shortly peduncled, loosely flowered, 7 to 10 cm, long; bracts lanceolate, sericeous-pubescent, rather short, when persisting not equaling the tomentulose pedicels; petals purplish blue; standard suborbicular, sparingly villous near the middle

dorsally; keel strongly ciliated; pods lance-oblong, acute, silky, 2.4 to 3 cm. long, 4 or 5-seeded.—Flowering in August.

Specimens examined: Washington, Mount Adams, Henderson 1387; Suksdorf 111; Oregon, north side of Mount Hood, Howell.

18. Lupinus littoralis Dougl.; Lindl. Bot. Reg. 14: pl. 1198. 1828.

Type locality: "On the seashore from Cape Mendocino to Puget's Sound. Collected by Douglas.

Range: Seacoast of Washington, Oregon, and northern California.

Specimens examined: Challam County, Elmer 2537; Westport, Henderson, June 25, 1892; Lamb 1110; Coupeville, Gardner 65; Ilwaco, Piper 4097.

ZONAL DISTRIBUTION: Humid Transition.

This is the "liquorice root" mentioned by Lewis and Clark and formerly used as food by the natives.

19. Lupinus volcanicus Greene, Pittonia 3: 308, 1898.

Type locality: Mount Rainier, Washington.

Range: Known only from Mount Rainier.

Specimens examined: Mount Rainier, Piper 2120 and in 1889; Flett 296.

Zonal distribution: Arctic.

20. Lupinus saxosus Howell, Erythea 1: 110, 1893.

Type locality: "On high stony ridges, from near the Dalles castward, in Oregon and Washington." Collected by Howell.

Range: Eastern Washington and Eastern Oregon.

Specimens examined: Kittitas Mountains, Whited, May 27, 1896; Wenache, Whited 29, 98, 38.

ZONAL DISTRIBUTION: Arid Transition.

21. Lupinus subalpinus Piper & Robinson, sp. nov. (§ Saxosi).

Lupinus arcticus S. Wats, Proc. Am. Acad. 8: 526, 1873, as to plant of Lyall, not as to arctic elements.

Erect or somewhat decumbent, spreading-villous; stems simple, 25 to 40 cm. high, leafy; leaflets spatulate-oblanceolate, rounded or obtuse at the apex, villous beneath, sparsely so or rarely quite glabrous above, 3 to 4.2 cm. long; raceme terminal, 10 to 15 cm. long, many-flowered, borne on a stoutish peduncle 3 to 5 cm. in length; pedicels slender, 4 to 8 mm. long, spreading-pubescent; flowers large and showy; petals 12 to 16 mm. long; the standard glabrous; the keel entirely glabrous or with traces of ciliation; pods linear-oblong, about 3.5 cm. in length, obliquely sharp-pointed, 7 to 9-seeded.

Specimens examined: Cascade Mountains to Fort Colville, Lyall 1860; dry slopes on Mount Rainier, Piper 463, 4114; E. C. Smith 463; Wenache, Washington, Whited.

This species differs from L. suxosus, Howell, in its greater stature, larger leaflets, and only obsoletely ciliate keel; from L. wyeihii S. Wats., in the form of the leaflets, as well as in the sparse pubescence usually present on their upper surface.

Other specimens referable here are the following: Horseshoe Basin, Lake & Hull: Mount Adams, Flett 1254; Henderson 15; Suksdorf 2561, 108, 1787; Olympic Mountains, Piper, August, 1895; Mount Stuart, Brandegee 699; Elmer 1205; Goat Mountains, Allen 30.

22. Lupinus wyethii S. Wats. Proc. Am. Acad. 8: 525-1873.

Type locality: "Flat-Head River." Collected by Wyeth.

Range: Washington and Idaho.

Specimens examined: Waitsburg, Horner 89; Walla Walla region, Brandegee 702; Spangle, Suksdorf 266; Piper 3551; Pullman, Piper, June 13, 1896; Union Flat, Piper 1900; Wawawai, Elmer 764; Harrington, Sandberg & Leiberg 200.

Zonal distribution: Arid Transition.

23. Lupinus polyphyllus Lindl. Bot. Reg. 13: pl. 1096, 1827.

Type locality: "In the North-West of North America."

Range: British Columbia to California.

Specimens examined: Montesano, Heller 3878; Whatcom County, Gardner; Sea(tle, Péper, July, 1897; Woodlawn, Henderson, June 22, 1892; Maxfield, Henderson, June 22, 1892; Manor, Piper, July 14, 1899; Fourth Plain, Piper, July 14, 1899; Vancouver, Piper 4925.

Zonal distribution: Transition.

24. Lupinus burkei S. Wats. Proc. Am. Acad. 8: 525, 1873.

Type locality: "Snake Country." Collected by Burke.

RANGE: Washington, Oregon, and Idaho.

Specimens examined: Spangle, Piper 2875, 3548; Silver Lake, Henderson, July, 1892; Rock Lake, Sandberg & Leiberg, May, 1893; Cheney, Sandberg & Leiberg, May, 1893; Spokane County, Mrs. Tucker 16; without locality, Vascy 265.

The following specimens are not typical, but for the present are referred here: Mount Stuart, Elmer 1112: Wenache Mountains, Elmer 454: Peshastin, Sandberg & Leiberg, July, 1893

Zonal distribution: Arid Transition.

Lupinus rivularis Dougl. Bot. Reg. 19: pl. 1595, 1833

Type locality: "Native of California."

Range: British Columbia to California.

Specimens examined: Vancouver, Piper 4924; Clallam County, Elmer 2542; Orchard Point, Piper 2315; Montesano, Heller 3906; Hoodsport, Henderson 1875; Chehalis County, Lamb 1181; Kittitas County, Henderson, June 11, 1892; Falcon Valley, Suksdorf 2566; west Klickitat County, Suksdorf 2563; Moss Creek, Suksdorf 2565, 2564; Tacoma, Flett 112; Leckenby, June 10, 1898; Charleston, Piper, July 2, 1895; without locality, Vasey in 1889.

Zonal distribution: Humid Transition.

26. Lupinus sabinii Dougl.; Hook. Fl. Bor. Am. 1: 166. 1830.

Type locality: "On the Blue Mountains of North America, and on the dividing ridge of the Rocky Mountains near the confines of perpetual snow." Collected by Douglas.

RANGE: Blue Mountains of Washington and probably of Oregon.

Specimens examined: Mountains near Waitsburg, Piper 2331, Horner 91; near the same place, Cusick 3011.

Zonal distribution: Arid Transition.

These specimens have somewhat smaller flowers than Douglas' originals, and differ slightly in pubescence.

27. Lupinus sulphureus Dougl.; Hook. Fl. Bor. Am. 1: 166, 1830.

Type Locality: "On the Blue Mountains of North West Am rica and on elevated grounds near the sources of Clarke's River." Collected by Douglas.

Range: Washington, Oregon, and Idaho.

Specimens examined: Blue Mountains, Columbia County, Piper 2332: Horner 87, 88.

ZONAL DISTRIBUTION: Hudsonian or Canadian.

28. Lupinus laxiflorus Dougl. Bot. Reg. 14: pl. 1140. 1828.

Lupinus arbustus Dougl. Bot. Reg. 15: pl. 1230, 1829.

Type locality: "In dry, open, gravelly plains about the great rapids of the River Columbia." Collected by Douglas.

Range: British Columbia to Oregon and Idaho.

Specimens examined: Wenache Region, Brandegee 703; North Yakima, Henderson 2337; Ellensburg, Piper 2727; Falcon Valley, Suksdorf 2569; Columbus, Suksdorf 1792; For illustration of Lupinus rividaris, see Plate X, facing page 43.

Chenowith, Suksdorf 2568; without locality, Vasey 264; Blue Mountains, Horner 277; Piper 2329; Wenache Mountains, Cotton 1301; Hell Roaring River, Cotton 1519; Wenache, Whited 96, 41, 3, 104, and June 28, 1896; near Wenache, Whited 120; Wenache, Whited 1105. ZONAL DISTRIBUTION: Arid Transition.

28a. Lupinus laxiflorus, forma theiochrous Robinson, forma nov.

Corolla sulphur-yellow.

Specimens examined: Near top of ridge, northern slope of Rattlesnake Mountains, Yakima County, Washington, J. S. Cotton, July 16, 1900.

LUPINUS HOLOSERICEUS Nptt, LUPINUS ARGENTEUS PURSH, LUPINUS PARVIFLORUS Nutt. These three names are included in Suksdorf's list, but we have been unable to find good evidence that the species occur in the State.

ULEX.

 Ulex europaeus L. Sp. Pl. 2: 741, 1753. Type locality: "Habitat in Anglia, Gallia, Brabantia." This plant is well established on Alki Point near Seattle, and has a other localities. 	Gorse. Furze.
MELILOTUS.	
Flowers white. Flowers yellow.	
 Melilotus albus Desr. in Lam. Encyc. 4: 63, 1797. Type locality: Siberia. 	Sweet clover.
Specimens examined: North Yakima, Watt, August, 1895; Egbe Leiberg 398.	ert Springs, Sandberg &
 Melilotus officinalis (L.) Lam. Fl. Fr. 2: 594, 1778. Trifolium melilotus officinalis L. Sp. Pl. 2: 765, 1753. Type locality: Europe. Specimens examined: Okanogan, Griffiths & Cotton 345. 	YELLOW MELILOT.
TRIFOLIUM, CLOVER,	
Leaflets 5 to 7; flowers large, 2 to 3 cm. long Leaflet 3; flowers smaller. Heads not subtended by an involuere. Perennials; with thick roots or creeping rootstocks. Heads on axillary peduncles; introduced.	1. T. macroce phalum.
Flowers white; stems creeping	10. T. repens.
Flowers pink: stems procumbent	
Leaves glabrous; corolla red	2. T. donglasii.
Heads ovoid, becoming oblong Heads globose, Lobes of the calvx_subequal, 3 to 4	3. T. plumosum.
times as long as the tube Lobes of the calyx unequal, the anterior twice as long as the calyx	4. T. eriocephalum.
tube and the other lobes	5. T. arenatum.

Calyx teeth hairy, not plumose.	
Flowers red. stipules aristate	9. T. pratense.
Flowers whitish; stipules not aristate. Flowers pedicelled; heads globose.	v T) .C. C
Flowers subsessile.	0. 1 . tacijornim,
Heads obovate; corollas not	
inflated; leaflets soft; stip-	
ules acuminate	7. T. longipes.
Heads globose; corollas in-	
flated; leaflets firm; stip-	
ules obtusish	8. T. covillei.
Annuals; roots fibrous.	
Calyx teeth plumose.	
Heads ovate; flowers dark purple	
Heads oblong: flowers pink	13. T. arrense.
Calyx teeth not plumose.	
Corollas whitish, not becoming papery.	
Teeth of the calyx scarious-margined and	
ciliate	14. T. viliolatum.
Teeth of the calyx not scarious-margined	
nor ciliate.	. 5 (1)
Leaflets not notched at apex	'
Leaflets notched at apex	16. T. halln.
Corollas yellow, becoming papery in age.	
Heads 20 to 40-flowered; standard distinctly	17 T
striate	11. 1. procumbens.
striate	18 T. Julium
Heads subtended by an involucre.	10. 1. Wallam.
Corolla becoming conspicuously inflated, yellowish	19. T. davuluw.
Corolla not becoming inflated.	,,
Involucre deeply cleft, the lobes laciniately toothed;	
flowers dark purple.	
Perennial with creeping rootstocks	20. T. fimbriatum.
Annuals.	
Stems erect; calyx-lobes often 3-toothed;	
leaflets linear	21. T. tridentatum.
Stems decumbent: calyx-lobes usually entire.	
Leaflets linear,	
Leaflets obovate or obcordate	23. T. varagatum
Involucre not deeply cleft, its lobes serrate or entire;	
flowers white or pale pink, annuals.	21.0
Glabrous; calyx teeth slender and branched	24. T. cyathiferum.
Villous; calyx teeth scarnous-margined.	05 W 1 /
Involuere nearly inclosing the head	
Involucre merely basal	20. 1 . macroce phatum,
Trifolium macrocephalum (Pursh) Poir, Encyc. Suppl. 5: 3:	36, 1817.

Lupinaster macrocepalus Pursh, Fl. 2: 479. 1814.

Trifolium megaciphaliim Nutt. Gen. 2: 105, 1818.

Type locality: "Headwaters of the Missouri." Collected by Lewis. The specimens were really collected, however, at "Rock Fort Camp," the Dalles of the Columbia.

Range: Eastern Washington, eastern Oregon, and Idaho.

Specimens examined: Wenache Mountains, Whited 1355, 11: North Yakima, Mrs. Steinweg in 1894; Klickitat County, Howell 126; Cleman Mountain, Henderson in 1892; near Mount Adams, Flett 1259; "Ketetas" Valley, Lyall in 1860; Blue Mountains near source of Walia Walla River, Donglas in 1826; without locality, Vascy in 1889; Klickitat Hills, Gorman, April, 1895; Kittitas County, Cotton 1606.

Zonal distribution: Upper Sonoran.

2. Trifolium douglasii House, Bot. Gaz. 41: 335, 1906.

Trifolium altissimum Dougl.; Hook. Fl. Bor. Am. 1: 130, 1830, not Loisel. Fl. Gall. 2: 479, 1807.

Type locality: "Between the Spokane River and Kettle Falls of the Columbia." Collected by Douglas.

RANGE: North Idaho and adjacent Washington and Oregon.

Specimens examined: "E[†] of W. Walla," *Nuttall*; Spokane County, *Suksdorf*; Spokane, *Henderson*, June, 1892; Pullman, *Piper* 1485; *Hull* 436; without locality, *Geyer* 472.

Zonal distribution: Arid Transition.

3. Trifolium plumosum Dougl.; Hook. Fl. Bor. Am. 1: 130, 1830.

Type locality: "Blue Mts. in North-West America in alluvial soils." Collected by Douglas.

Range: Western Idaho, northeastern Oregon, and doubtfully southeastern Washington. Specimens examined: Columbia River, *Douglas* in 1830 (a Washington locality?). Zonal distribution: Canadian.

4. Trifolium eriocephalum Nutt.; Torr. & Gr. Fl. 1: 313, 1838.

Type locality: "Prairies of the Wahlamet and near Fort Vancouver." Collected by Nuttall.

Range: Washington to California in the coast region.

Specimens examined: Fort Vancouver, Nuttall.

ZONAL DISTRIBUTION: Humid Transition.

5. Trifolium arcuatum Piper, Bull. Torr. Club 28: 39, 1901.

Type locality: Simcoe Mountains, Washington. Collected by Suksdorf.

RANGE: Washington and Oregon east of the Cascade Mountains.

Specimens examined: Simcoe Mountains, Suksdorf 270.

ZONAL DISTRIBUTION: Arid Transition.

6. Trifolium (atifolium (Hook.) Greene, Pittonia 3: 223, 1897.

Trifolium longipes latitolium Hook, Lond, Journ. Ect. 6: 209, 1847.

TYPE LOCALITY: "Open pine woods on the undulating ridges of the Coeur d'Alene Mountains, near St. Josephs," Idaho. Collected by Geyer.

Range: Washington, Idaho, and Oregon.

Specimens examined: Upper Naches River, Henderson, June, 1892; Mount Adams, Henderson, August, 1892; Lake Keechelus, Henderson, July, 1892; Clealum, Henderson, June, 1892; Wenache Mountains, Elmer 437; Peshastin, Sandberg & Leiberg 527; Spokane County, Suksdorf 919, 918; Spokane Valley, Lyall in 1861.

ZONAL DISTRIBUTION: Canadian.

7. Trifolium longipes Nutt.; Torr. & Gr. Fl. 1: 314, 1838.

Trifolium caurinum Piper, Erythea 6: 29. 1898.

Type locality: "Vaileys of the central chain of the Rocky Mountains and on the moist plains of the Oregon as low as the Wahlamet." Collected by Nuttall.

RANGE: Washington and Idaho to California and Arizona.

Specimens examined: Big Creek Prairie, Lamb; Clallam County, Elmer 2538; Klickitat County, Suksdorf in 1878; Skamania County, Suksdorf 2577; Klickitat River, Flett 1263;

*Columbia and Walla Walla," *Nuttall*; without locality, *Brandegee* 708; without locality, *Vasey* in 1889; Clealum, *Cotton* 855; Wenache Mountains, *Cotton* 1317, 1314, 1316, 1462; Cape Horn, *Piper* 529, 4970.

Zonal distribution: Transition or Canadian.

8. Trifolium covillei House, Bot. Gaz. 41: 337, 1906.

Type locality: Bog lands in the Wenache Mountains, Kittitas County, Washington, collected by Coville.

Specimen examined: Wenache Mountains, Coville 1180.

9. Trifolium pratense L. Sp. Pl. 2: 768, 1753.

RED CLOVER.

Type locality: European. Abundantly cultivated and established in fields and by waysides.

10. Trifolium repens L. Sp. Pl. 2: 767, 1753.

WHITE CLOVER.

Type locality: European. Established in most parts of the State.

11. Trifolium hybridum L. Sp. Pl. 2: 766, 1753.

Alsike Clover.

Type locality: European.

Specimens examined: Pullman, Piper, July, 1893. Cultivated and established in fields and by waysides nearly everywhere.

12. Trifolium albopurpureum Torr. & Gr. Fl. 1: 313, 1838.

Type locality: California.

RANGE: Washington to California west of the Cascades.

Specimens examined: Whatcom, Suksdorf 2578; Port Ludlow, Binns in 1890; Seattle, Smith in 1889; Piper in 1889.

ZONAL DISTRIBUTION: Transition.

This species has been considered identical with the Chilean T. macraci Hook, & Arn., but it seems amply distinct.

13. Trifolium arvense L. Sp. Pl. 2: 769, 1753.

RABBIT-FOOT CLOVER.

Type locality: "Habitat in Europa, America septentrionali."

Specimens examined: Seattle, Piper; Pullman, Piper, July 24, 1899.

14. Trifolium ciliolatum Benth. Pl. Hartw. 304, 1848.

Trifolium ciliatum Xutt. Journ. Acad. Phila. n. s. 1: 152, 1817, not Clarke 1813-16.

Type locality: "In pascuis vallis Sacramenti," California.

RANGE: Klickitat County, Washington, to California.

Specimens examined: Klickitat County, Suksdorf 44.

15. Trifolium gracilentum Torr. & Gr. Fl. N. Am. 1: 316, 1838.

Type locality: California. Collected by Douglas.

RANGE: Washington to California.

Specimens examined: Whatcom, Suksdorf 1800; Port Ludlow, Binus, May 25, 1890.

ZONAL DISTRIBUTION: Humid Transition.

16. Trifolium hallii Howell, Fl. N. W. Am. 1: 135, 1898.

Trifolium bifidum decipiens Greene, Fl. Fran. 1: 24, 1891, not J. decipiens Hornem, 1815.

Trifolium greenet House, Bot. Gaz. 41: 334, 1906.

Type locality: "In the Bay district," California.

RANGE: Washington to California west of the Cascades.

Specimens examined. Alki Point, Piper in 1889; Smith in 1889; Klickitat County Sukydorf 8; White Salmon, Sukydorf 349.

Zonal distribution: Humid Transition.

17. Trifolium procumbens L. Sp. Pl. 2: 772, 1753.

Type locality: European.

Specimens examined: Seattle, Piper, July, 1895; Suksdorf 1804; Tacoma, Leckenby, May, 1898.

18. Trifolium dubium Sibth. Fl. Oxon. 231. 1794.

Trifolium minus Smith, Engl. Bot. pl. 1256, 1799.

Type locality: Near Oxford, England.

Specimens examined: Chenowith, Suksdorf 2585.

19. Trifolium flavulum Greene, Pittonia 2: 223. 1892.

Type locality: Western California.

Range: Western California.

Specimens examined: Port Ludlow, Binns, May 25, 1890; Whatcom, Suksdorf 1892; Scattle, Piper in 1889.

These are probably all introduced from California.

20. Trifolium fimbriatum Lindl. Bot. Reg. 13: pl. 1070. 1827.

Trifolium spinulosum Dougl.; Hook, Fl. Bor, Am. 1: 133, 1830.

Trifolium heterodon Torr. & Gr. Fl. 1; 318. 1838.

Type locality: Columbia River. Collected by Douglas.

RANGE: British Columbia, Washington, Oregon, and Idaho.

Specimens examined: Grays Harbor, Lamb 1165; Westport, Henderson, June 25, 1892; North Yakima, Mrs. Steinweg, Henderson: Spokane, Piper, Sandberg, Heller, & MacDongal 1028; Marshall Junction, Piper; Clallam County, Elmer 2539; Coupeville, Gardner 70; Seattle, Piper 2761; Smith 473; Henderson 2329; Olympia, Henderson 2329; Muckleshoot, Dr. Ruhn; Spangle, Suksdorf 272; Medical Lake, Henderson 2330; Walla Walla, Lyall in 1860; without locality, Cooper in 1854; Ilwaco, Piper 4989.

The Californian T. wormskioldii Lehm, is distinguished by its less deeply lobed involuere.

Zonal distribution: Transition.

21. Trifolium tridentatum Lindl. Bot. Reg. 13: under pl. 1070. 1827.

Type locality: Columbia River. Collected by Douglas.

Range: Vancouver Island to California in the coast region.

Specimens examined: Clallam County, Elmer 2536; Lopez Island, Lgall in 1858-59; Coupeville, Gardner 71; Tacoma, Flett 203; Fourth Plain, Piper 3073; Rock Island, Henderson; Vancouver, Piper 4933.

ZONAL DISTRIBUTION: Humid Transition.

22. Trifolium oliganthum Steud. Nom. ed. 2. 2: 707. 1841.

Trifolium pauciflorum Nutt.; Torr. & Gr. Fl. 1: 319, 1838, not Urv. 1822.

Type locality: "Wet places on the higher plains of the Oregon, particularly abundant near the outlet of the Wahlamet." Collected by Nuttall.

Range: Vancouver Island to California in the coast region.

Specimens examined: Lopez Island, Lyall in 1858; Seattle, Piper 727; Tacoma, Flett 904, 188; Rock Island, Henderson, July, 1892.

ZONAL DISTRIBUTION: Humid Transition.

23. Trifolium variegatum Nutt.; Torr. & Gr. Fl. 1: 317, 1838.

Trifolium melananthum Hook, & Arn. Bot. Beech, Voy. 331, 1839.

Type locality: "Springy places near the mouth of the Wahlamet," Oregon. Collected by Nuttall.

RANGE: British Columbia to California and Idaho.

Specimens examined: Coupeville, Gardner 68; Seattle, Piper in 1888; Smith; Olympia, Henderson 2327, 2328; west Klickitat County, Suksdorf 2580; Fort Vancouver, Tolmic (!); Yakima County, Suksdorf 273; Yakima, Watt; Ellensburg, Whited 491; Elmer 402; Egbert

Springs, Sandberg & Leiberg 401; Wilson Creek, Lake & Hull 435; Spokane, Pipér; Spokane County, Suksdorf 2581; Meyers Falls, Kreager 504; Prosser, Cotton 737, 810; without locality, Vasey in 1889.

Zonal distribution: Upper Sonoran and Transition.

24. Trifolium cyathiferum Lindl. Bot. Reg. 13: under pl. 1070, 1827.

Type locality: "Columbia River." Collected by Douglas.

RANGE: British Columbia to Idaho and north California.

Specimens examined: Klickitat County, Suksdorf 9; Klickitat River, Flett 1263a; junction Crab and Wilson creeks, Sandberg & Leiberg 303; Spokane County, Suksdorf 2584; Pullman, Piper 1484; Clealum, Henderson, June, 1892; Wilson Creek, Lake & Hull 433; Blue Mountains, Horner 316.

Zonal distribution: Arid Transition.

25. Trifolium microdon Hook, & Arn. Hook, Bot. Misc. 3: 180, 1833.

Type locality: Valparaiso, Chile.

Range: Vancouver Island to California. Chile.

Specimens examined: Oyhut, Lamb 1266; Bellingham Bay, Suksdorf 1803; Alki Point, Piper in 1889; Port Ludlow, Binns; Cascade Mountains, latitude 49°, Lyall; Ilwaco, Piper 4994, 4961.

Zonal distribution: Humid Transition.

26. Trifolium microcephalum Pursh, Fl. 2: 478, 1814.

Type locality: "On the banks of Clark's River." Collected by Lewis. The exact spot is on the Bitter Root River, Montana, near the mouth of the Lolo.

RANGE: British Columbia to west Montana and California.

Specimens examined: Whidby Island, Gardner 69; Puget Sound, Suckley: Everett, Piper, July, 1892; Tacoma, Flett 905; Charleston, Piper, July, 1895; Woodlawn, Henderson, June, 1892; Ellensburg, Elmer 404; Egbert Springs, Sandberg & Leiberg 421; Muckleshoot, Dr. Ruhn; Wilson Creek, Lake & Hull 434; Spokane, Piper, July, 1896; Dewart in 1900; Henderson, July, 1892; Spangle, Suksdorf 274; Coppei River, Horner 597; without locality, Vascy in 1889; Clarks Springs, Kreager 138; Fort Vancouver, Scouler.

Zonal distribution: Transition.

MEDICAGO.

1. Medicago lupulina L. Sp. Pl. 2: 779, 1753.

YELLOW TREFOIL.

Type locality: European.

Specimens examined: Fairhaven, Piper, July, 1897; Seattle, Piper, July, 1895; Bingen, Suksdorf 2587; Walla Walla, Leckenby, May, 1898.

2. Medicago denticulata Willd. Sp. Pl. 3: 1414, 1803.

BUR CLOVER.

Type locality: None cited.

Specimens examined: Whatcom, Suksdorf 1806; Tacoma, Flett 52; Scattle, Piper in 1888.

3. Medicago sativa L. Sp. Pl. 2: 778, 1753.

ALFALFA.

Type locality: "Habitat in Hispaniae, Galliae apricis."

Abundantly cultivated, especially in eastern Washington, and a frequent escape.

PSORALEA.

Leaflets broadly ovate	1. P. physodes.
Louflots lanconlate	9 P lanecolata

1. Psoralea physodes Dougl.: Hook. Fl. Bor. Am. 1: 136, 1830.

Type locality: "From the Great Falls of the Columbia to the Rocky Mountains." Collected by Douglas.

Range: British Columbia to Idaho and north California.

Specimens examined: San Juan Island, Lyall in 1858; Coupeville, Gardner 89; Seattle, Piper 58; between Olympia and Gate City, Heller 4049; White Bluff Ferry, Lake & Hall August, 1892; without locality, Cooper.

ZONAL DISTRIBUTION: Humid Transition.

Through an unquestionable error Piper no. 58 was referred to *P. pedanculata* Mill, in the Torrey Bulletin, a—The latter species is not known west of the Rocky Mountains.

The type locality as above given is very likely the result of an error. This species is at present known from east of the Cascade Mountains at but a single station—near Troy, Idaho.

2. Psoralea lanceolata scabra (Nutt.).

Psoralia scabra Nutt.; Torr. & Gr. Fl. 1: 300, 1838.

Psoralea purshii Vail, Bull. Torr. Club 21: 94, 1889.

Type locality: "On the Walla-Wallah." Collected by Townsend.

Range: Eastern Washington and eastern Oregon.

Specimens examined: Egbert Springs, Sandlerg & Leiberg 384; Morgans Ferry, Suksdorf 275; White Bluffs, Dunn 206; White Bluff Ferry, Lake & Hull 664; Columbia River, latitude 46° to 49°, Lyall in 1860; west Klickitat County, Suksdorf 963; Moses Lake, Sandlerg & Leiberg, July, 1893; Almota, Piper 1851; Wawawai, Lake & Hull 429; Elmer 748; Pasco, Henderson, June, 1892; Sentinel Bluffs, Cotton 1364; Craigs Ferry, Cotton.

Zonal distribution: Upper Sonoran.

This plant as to type specimen differs from P. lanceolata Fursh only in its white villous pods, and all intergrades as to the amount of this pubescence occur.

GLYCYRRHIZA.

1. Glycyrrhiza lepidota Nutt. Gen. 2: 106, 1818.

WILD LICORICE

Type locality: "St. Louis," Missouri.

Range: Washington to Hudson Bay, Arkansas, and New Mexico.

Specimens examined: Egbert Springs, Sandberg & Leiberg 342; west Klickitat County, Suksdorf 1809; Almota, Piper 1582; Wawawai, Piper 1482; Spokane, Kreager 539.

Zonal distribution: Upper Sonoran.

This species has been reported as a bad weed in Washington, but there is no recent evidence to this effect.

1a. Glycyrrhiza lepidota glutinosa (Nutt.) S. Wats. Pot. Cal. 1: 144, 1876.

Glycyrrhiza glutinosa Nutt.; Torr. & Gr. Fl. 1: 298, 1838.

Type locality: "Banks of Lewis's River" in South Idaho. Collected by Nuttall.

RANGE: Washington and Idaho to California.

Specimens examined: Columbia River, latitude 46° to 49°, Lyall.

HOSACKIA.

Perennials; flowers in umbels.

Pods linear, glabrous, many-seeded.

Leaflets 5 to 9, glabrous or nearly so.

Peduncles usually naked; corolla with yellow standard and

white wings 1. II. bicolor.

Peduncles with a bract at the umbel; corolla with yellow

standard and purple wings. 2. H. gracilis.

Pods curved, pubescent, 1 or 2-seeded; flowers yellow; foliage

pubescent 4. II. decumbens.

Annuals: flowers solitary or sometimes two on the peduncles of the first species.

Peduncles usually exceeding the leaves.

Flowers 3 to 4 mm, long; leaflets oblong to ovate, usually gla-

Flowers 5 to 6 mm, long; leaflets ovate to lanceolate, usually

villous 6. II. americana.

Peduncles very short, the flowers nearly sessile; caly x lobes denticu-

1. Hosackia bicolor Dougl. Bot. Reg. 15: pl. 1257, 1829.

Lotus pinnatus Hook, Bot, Mag. 56: pl. 2913, 1829 (December 1).

Type locality: "In overflowed meadows between Fort Vancouver and the Grand Rapids of the Columbia." Collected by Douglas.

Range: Washington and Idaho to California.

Specimens examined: Woodlawn, Henderson, June, 1892; Olympia, Kincaid, July, 1896; Mount Stuart, Elmer 1161; Columbia Valley, Lyall in 1860; Palonse River, Lyall in 1860; Pullman, Hull 782; without locality, Cooper; Scattle, Piper in 1888.

ZONAL DISTRIBUTION: Transition.

2. Hosackia gracilis Benth, Trans. Linn. Soc. 17: 365, 1837.

Lotus formosissimus Greene, Pittonia 2: 147, 1890.

Type locality: California. Collected by Douglas.

RANGE: Washington to Monterey Bay, California.

Specimens examined: Montesano, Heller 3934; Henderson 2350.

3. Hosackia crassifolia Benth, Trans. Linn. Soc. 17: 365, 1837.

Hosackia stolonifera Lindl. Bot. Reg. 23: pl. 1977, 1837.

Hosackia platycarpa Nutt.; Torr. & Gr. Fl. 1: 323, 1838.

Lotus crassifolius Greene, Pittonia 2: 147, 1890.

Type locality: California. Collected by Douglas.

Range: Washington to southern California.

Specimens examined: Montesano, Heller 3925; Mason County, Piper 1044; Chehalis County, Lamb 1170; Tacoma, Flett 55; Steilacoom, Howell in 1878; Dalles, Lyall in 1860; Klickitat County, Suksdorf.

Zonal distribution: Transition.

4. Hosackia decumbens Benth. Bot. Reg. 15: under pl. 1257, 1829.

Lotus douglasii Greene, Pittonia 2: 149, 1890.

Type locality: "Northwest coast of America." Collected by Douglas.

Range: Washington to Idaho and California.

Specimens examined: Mason County, Piper 57; between Olympia and Gate City, Heller 4047; west Klickitat County, Suksdorf 112; Loon Lake, Winston, July 29, 1897; Spokane, Piper, July, 1896; Henderson, July, 1892; Elmer 376; Spokane, Kreager 2; Dalles, Lyall in 1860.

ZONAL DISTRIBUTION: Transition.

5. Hosackia parviflora Benth. Bot. Reg. 15: under pl. 1257, 1829.

Hosackia microphylla Nutt.; Torr. & Gr. Fl. 1: 326, 1838.

Lotus micranthus Benth, Trans. Linn. Soc. 17: 367, 1837.

Type locality: "Northwest coast of America." Collected by Douglas.

Range: British Columbia to California west of the Cascades.

Specimens examined: Montesano, Heller 3911; Chehalis County, Lamb 1151; Scattle, Piper, July, 1895; Olympia, Henderson, May, 1892; Port Ludlow, Binns, May 5, 1889; west Klickitat County, Suksdorf 533; without locality, Cooper; Lyall; Vancouver, Piper 4930.

Zonal distribution: Humid Transition.

6. Hosackia americana (Nutt.).

Trigonella americana Nutt. Gen. 2: 120. 1818.

Lotus sericeus Pursh, Fl. 2: 489, 1814, not DC, 1813.

Hosackia purshiana Benth. Bot. Reg. 15: pl. 1257, 1829.

tHosackia unifoliata Hook. Fl. Bor. Am. 1: 135, 1830.

Hosackia elata glabra Nutt.; Torr. & Gr. Fl. 1; 327, 1838.

Hosackia elata Nutt. loc. eit.

Hosackia floribunda Nutt. loc. cit.

Type locality: "On the banks of the Missouri."

Range: Washington to Minnesota, south to California and Texas.

Specimens examined: Ellensburg, Whited 578; North Yakima, Watt: Rock Island, Sandberg & Leiberg 427; Wenache, Whited 1148; Tacoma, Flett 902; Falcon Valley, Suksdorf 2332; Fort Colville, Lyall in 1860; Lake Chelan, Lake & Hull 430; Chelan, Elmer 493; Rock Lake, Lake & Hull, August 3, 1892; head of Grand Coulce, McKay 24; Pullman, Hull in 1892; Wawawai, Piper 1483; without locality, Pasey 270; Mount Carlton, Kreager 155; Clarks Springs, Kreager 108; Rattlesnake Mountains, Cotton 692; Walla Walla, Griffiths & Cotton 552.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

Nuttall's *Hosackia elata glabra* is a nearly glabrous plant matched by Cotton's 801 from Toppenish. It should perhaps be accorded subspecific rank.

6a. Hosackia americana pilosa (Nutt.).

Hosackia pilosa Nutt.; Torr. & Gr. Fl. 1: 327, 1838.

Hosackia mollis Nutt. loc. cit.

Type locality: "Plains of the Rocky Mountain range, towards the Oregon."

Range: Washington, Oregon, and Idaho.

Specimens examined: Pullman, Hull, July 16, 1892.

7. Hosackia denticulata Drew, Bull. Torr. Club 16: 151, 1889.

Lotus denticulatus Greene, Pittonia 2: 139, 1890.

Type locality: "Mad River near Jarnigan's," California.

Range: Washington to California.

Specimens examined: Gulf of Georgia, Henderson in 1892; Whidby Island, Gardner 66; Fairhaven, Piper 2809; Columbia River, latitude 46° to 49°, Lyall in 1860; Ellensburg, Elmer 370; Whited 509; Piper 2743; without locality, Vasey in 1889; Colville Reservation, Griffiths & Cotton 371.

ZONAL DISTRIBUTION: Upper Sonoran and Transition.

This species has been confused with H. subpinnata Torr. & Gr., from which it appears clearly distinct.

HEDYSARUM.

Flowers purple	1. <i>II</i> .	$occidental \epsilon$.
Flowers yellowish	2. H.	sulphurescens.

1. Hedysarum occidentale Greene, Pittonia 3: 19, 1896.

Hedysarum nintahensi A. Nelson, Proc. Biol. Soc. Wash. 15: 186, 1902, at least in part. Type_locality: Olympic Mountains, Washington.

RANGE: Washington to Saskatchewan and Wyoming.

Specimens examined: Olympic Mountains, Piper 2227; Henderson 1850; J. M. Grant 156; Baldy Peak, Lamb 1318; without locality, Sandberg & Leiberg 494; Clallam County, Elmer 2529.

ZONAL DISTRIBUTION: Arctic.

This species is very close to *II*, boreale Nu(t. (II, americanum (Michx.) Britton.), perhaps not distinct from it.

2. Hedysarum sulphurescens Rydberg, Bull. Torr. Club 24: 251, 1897.

Hedysarum flarescens Coult. & Fisher, Bot. Gaz. 18: 300, 1893, not Regel & Schmallt, 1882.

Type locality: Helena, Montana.

Range: British Columbia to Saskatchewan and Wyoming.

Specimens examined: Loomis, Elmer 551.

ARAGALLUS. LOCOWEED.

Aragallus gracilis A. Nelson, Erythea 7: 60, 1899.

Type locality: "Limestone Range in the Black Hills, Wyoming."

Range: Washington to Montana and Wyoming.

Specimens examined: Olympic Mountains, Elmer 2532; Loomis, Elmer 595.

Professor Greene erects a new species, A. lutcolus, on Elmer's 2532.a

2. Aragallus monticola (A. Gray) Greene, Pittonia 3: 212, 1897.

Oxytropis monticola A. Gray, Proc. Am. Acad. 20: 6, 1885.

Type locality: Northwestern Wyoming. Collected by Parry.

RANGE: Washington to Wyoming, Dakota, and Alberta.

Specimens examined: Olympic Mountains, Grant 21; Flett 134, 803; Goat Mountains, Allen 245.

PHACA. MILK VETCH,

Pods membranaccous, thin, much inflated.	
Herbage slightly pubescent; pods 2-celled	1. P. lentiginosa.
Herbage silky or villous; pods t-celled.	
Pods very thin, 3 to 5 cm. long.	2. P. hookeriana.
Pods firm, 10 to 12 mm, long	
Pods coriaceous or chartaceous, not inflated.	
Herbage long-hairy or woolly.	
Pods woolly or villous, not compressed.	
Pods 1-celled, somewhat curved, soft-woolly.	
Flowers ochroleucous	4. P. parshii.
Flowers purple.	•
Stems clongate, prostrate: leaflets 21 to 25	5. P. intlexa.
Stems erect, very short: leaflets 7 to 11	6. P. glarcosa.
Pods 2-celled, small, ovate, short-villous.	
Spike dense; flowers 10 mm. long	7. P. spaldingii.
Spike loose; flowers 6 mm. long.	8. P. lyallii.
Pods glabrous, strongly compressed, falcate.	9. P. succumbens.
Herbage and pods glabrous or short-pubescent.	
Pods conspicuously stipitate, the stipe equaling or exceeding	
the calyx.	
Calyx oblique; pods curved or coiled, the sutures promi-	
nent.	
Pods coiled, glabrous	10. P. speirocarpa.
Pods curved, not coiled.	
Leaflets 5 to 7 pairs, oblong or obovate; stipe as	
long as the calyx	11. P. sinuata.
Leaflets 6 to 9 pairs, linear; stipe much exceed-	
ing the calyx	 P. podocarpa.
Calvx not oblique; pods straight or nearly so.	
Neither suture of the pods impressed.	

Pods somewhat flattened, pendent, smooth and	
shining	15. P. stenophylla.
Pods not at all flattened.	
Flowers and pods reflexed	16. P. collina.
Flowers spreading; pods erect	 P. tweedyi.
One of the sutures of the pod impressed or intruded.	
Pods compressed. •	
Pods reflexed, the dorsal suture intruded	
to divide the pod into 2 cells	13. P. misella.
Pods pendent, the ventral suture intruded.	14. P. alpina.
Pods obcompressed, the dorsal suture impressed.	
Leaflets glabrous, broadly oval	18. P. beckwithii.
Leaflets pubescent, lance-oblong	19. P . arrecta.
Pods sessile or nearly so.	
Pods 2-celled by the intrusion of the sutures.	
Flowers greenish or yellowish; pods oblong	20. P. mortoni.
Flowers purple or purplish.	
Pods oblong: flowers spicate	21. P. adsurgens.
Pods ovate: flowers capitate	22. P. agrestis.
Pods 1-celled.	
Flowers subsessile in the leaf axils; leaflets rigid,	
prickly-pointed	30. P. viridis.
Flowers in racemes or spikes; leaflets not rigid nor	
prickly-pointed.	
Inflorescence racemose; pods not linear.	
Pods subglobose, pubescent, chartaceous	26. P. misera.
Pods oblong or ovate, coriaceous.	
Sutures of the turgid pod both promi-	
nent; flowers greenish	
Sutures of the pod not both prominent,	
the dorsal impressed.	
Flowers greenish; leaflets 21 to 29.	24. P. hoodiana.
Flowers purplish; leaflets 11 to 21.	25. P. conjuncta.
Inflorescence spicate; pods linear, chartaceous.	
Keel of the corolla with a long inflexed beak.	27. P. convallaria.
Keel of the corolla short-beaked.	
Calyx teeth nearly as long as the tube.	28. P. decumbens.
Calyx teeth one-third as long as the	
tube	29. P. serotina.

1. Phaca lentiginosa (Dougl.).

Astragalus lentiginosus Dougl.; Hook. Fl. Bor Am. 1: 151, 1830.

(Astragalus diaphanus Dougl.; Hook. Fl. Bor. Am. 1: 151, 1830.

Type locality: "Subalpine ranges of the Blue Mountains." Collected by Douglas.

Range: Washington to Nevada and California.

Specimens examined: Coulee City, Piper 3885; Henderson 2353; between Coulee City and Waterville, Spillman, May, 1896; Wilson Creek, Lake & Hull 663; Ellensburg, Piper 2674; Toppenish, Piper, July 10, 1897; Sprague, Sandberg & Leiberg 132; Cow Creek, Lyull in 1860; Klickitat County, Howell; Coulee City, Piper 3885; Washtucna, Cotton 975.

Zonal distribution: Upper Sonoran.

Astragalus diaphanus Dough, said to be abundant "on sandy soil near the Great Falls of the Columbia," has never been satisfactorily identified. While possibly referable to A. lentiginosus, the characters of "pilose-scabrous" herbage and "linear falcate" pods point strongly to some other species.

2. Phaca hookeriana Torr. & Gr. Fl. 1: 693, 1840.

Astragalus hookerianus A. Gray, Proc. Am. Acad. 6: 215, 1864.

Astragalus olympicus Cotton, Bull. Torr. Club 29: 573, 1902.

Type locality: "Interior of Oregon." Collected by Douglas.

Range: Washington to Nevada and California.

Specimens examined: Olympic Mountains, Elmer 2531; Mount Stuart, Brandegee 725; upper Yakima River, Brandegee 33; Blue Mountains, Piper 2405; Horner B146.

Zonal distribution: Hudsonian.

3. Phaca suksdorfii (Howell).

Astragalus suksdorfii Howell, Erythea 1: 111, 1893.

Type locality: "In loose volcanic soil near the base of Mount Adams," Washington, Collected by Suksdorf.

Range: Known only from the type locality.

Specimens examined: Falcon Valley, Suksdorf 113.

4. Phaca purshii (Dougl.).

Astragalus purshii Dougl.; Hook, Fl. Bor, Am. 1: 152, 1830.

Type locality: "On the low hills of the Spokan River," Washington. Collected by Douglas.

Range: British Columbia and Washington to California and Utah.

Specimens examined: Wenache, Whited 1023; Fort Colville, Lgall in 1861; Coulee City, Piper 3861; Spokane, Piper 2288; Henderson 2357; Sandberg & Leiberg, May, 1893; Hangman Creek, Sandberg & Leiberg 18; Spangle, Piper, May, 1898; Chelan Butte, Griffiths & Cotton 168.

Zonal distribution: Arid Transition.

4a. Phaca purshii tincta (Jones).

Astragalus purshii tinetus Jones, Zoe 4: 269, 1893.

Type locality: "Edgewood, near Mt. Shasta," California.

Range: Washington to California and Nevada.

Specimens examined: Bingen, Suksdorf 50.

5. Phaca inflexa (Dougl.).

Astragalus intlexus Dougl.; Hook. Fl. Bor. Am. 1: 151, 1830.

Type Locality: "On the barren sandy grounds of the Columbia, from the junction of Lewis and Clarke's River to the Mountains." Collected by Douglas.

RANGE: Washington, Idaho, and Oregon.

Specimens examined: Opposite Umatilla, Howell 42: Kooskooskee to Walla Walla, Wilkes Expedition 529: without locality, Brandegee 722: Wawawai, Elmer 112: Hull in 1892; Almota, Piper 1492, 2938; Illia, Lake & Hull 665: without locality, Vasey in 1889; without locality, Samlberg & Leiberg in 1892.

ZONAL DISTRIBUTION: Upper Sonoran.

6. Phaca glareosa (Dougl.).

Astragalus glareosus Dougl.; Hook, Fl. Bor, Am. 1: 52, 1830.

Astragalus allamaris Sheidon, Minn. Bot. Studies 1: 141, 1894.

Type locality: "Plentiful on dry gravelly banks of rivers, from the confluence of Lewis and Clarke's River with the Columbia to the mountains." Collected by Douglas.

Range: Eastern Washington.

Specimens examined: Ellensburg, Piper 2680; Whited, April, 1897, and 18; North Yakima, Mrs. Steinweg in 1894; Leckenby, April, 1898; Henderson 2356; Pasco, Hindshaw 16; Coulee City, Piper 3861; Rattlesnake Mountains, Cotton 552.

The above identification of Douglas's A. glarcosus with Sheldon's A. allanaris is not without misgivings, but the original description points to this species rather than to any other.

7. Phaca spaldingii (A. Gray).

Astragalus spaldingii A. Gray, Proc. Am. Acad. 6: 524, 1865.

Astragalus chactodon Torr.; A. Gray, Proc. Am. Acad. 6: 194, 1866, not Bunge, 1851.

Type locality: "Clearwater" River, Idaho. Collected by Spalding.

RANGE: Northern Idaho and adjacent Washington and Idaho.

Specimens examined: Sprague, Sandberg & Leiberg 149b; Henderson in 1892; Rattle-snake Mountains, Suksdorf 283; Walla Walla region, Brandegee 716; Pullman, Piper 1494; Henderson in 1892; Connell, Leckenby, June, 1897.

Zonal distribution: Arid Transition.

8. Phaca lyallii (A. Gray).

Astragalus lyallii A. Gray, Proc. Am. Acad. 6: 195, 1865.

Type locality: "Upper Yakima River," Washington. Collected by Lyall in 1860.

Range: Eastern Washington.

Specimens examined: Ellensburg, Elmer 366; Henderson 2354; Piper 2683; North Yakima, Henderson 2354; Upper Yakima River, Lyall in 1860; Morgans Ferry, Suksdorf 282; Pasco, Hindshaw 52; Coulee City, Piper 3856; Sprague, Sandberg & Leiberg 149a; Walla Walla Region, Brandegee 717; without locality, Vascy in 1889; Rattlesnake Mountains, Griffiths & Cotton 23; Prosser, Griffiths & Cotton 3.

Zonal distribution: Upper Sonoran.

9. Phaca succumbens (Dougl.).

Astragalus succumbens Dougl.: Hook. Fl. Bor. Am. 1: 151, 1830.

Astragalus doryenioides Dougl.; G. Don, Hist. Dichl. Pl. 2: 151, 1832.

Type locality: "On the barren grounds of the Columbia and near the Wallawallah River." Collected by Douglas.

RANGE: Eastern Washington and Eastern Oregon.

Specimens examined: Klickitat, J. Howell: Pasco, Hindshow, May, 1896; Wallula, Brandegee 749; Hunts Junction, Leckenby, May, 1898; Walla Walla, Lyall in 1860; Wallula, Cotton 1063, 1040; Craigs Ferry, Cotton 1342.

Zonal distribution: Upper Sonoran.

10. Phaca speirocarpa (A. Gray).

Astragalus speirocarpus A. Gray, Proc. Am. Acad. 6: 225, 1865.

Type locality: "Wenass" River, Washington. Collected by Lyall.

Range: Eastern Washington.

Specimens examined: Yakima, Leckenby, May, 1898; North Yakima, Leckenby, April 22, 1898; Yakima County, Brandegee 32, 728; Henderson 2351; Naches Valley, Piper 2758; Morgans Ferry, Suksdorf 277; Bickleton, Suksdorf 278; Wenas, Lyall in 1860; opposite Alkali, Horvell 46; Moxee, Griffiths & Cotton 45; between Mabton and Satus, Cotton 1117.

Zonal distribution: Upper Sonoran.

11. Phaca sinuata (Piper).

Astragalus sinuatus Piper, Bull. Torr. Club, 28: 40, 1901.

Astragalus whitedii Piper, Bull. Torr. Club, 29: 224, 1902.

Type locality: Eastern Washington. Collected by Brandegee.

Range: Eastern Washington.

Specimens examined: Colockum Creek, Whited 1353; Eastern Washington, Brandegee 739.

12. Phaca podocarpa Hook, Fl. Bor, Am. 1: 142, 1830.

Astragalus selerocarpus A. Gray, Proc. Am. Acad. 6: 225, 1865.

Type locality: "Great [Celilo] Falls of the Columbia." Collected by Douglas.

Range: Eastern Washington and Eastern Oregon.

Specimens examined: Ellensburg, Hindshaw, May, 1896; North Yakima, Henderson 2352; Morgans Ferry, Suksdorf 279, 280; near the Great Falls of the Columbia, Douglas; near Columbia River, Yakima County, Brandegee 727; Columbia Valley, Lyall in 1860; Pasco, May 26, 1890; Henderson 2352; opposite Willows, Howell; Junction Craft and Wilson creeks, Sandberg & Leiberg 312; near Eltopia, Cotton 1021; near Delight, Cotton 999; Wallula, Cotton 1043.

ZONAL DISTRIBUTION: Upper Sonoran.

13. Phaca misella (S. Wats.).

Astragalus misellus S. Wats. Proc. Am. Acad. 21: 449, 1886.

Type locality: Mitchell, Oregon. Collected by Howell.

Range: Eastern Oregon and Eastern Washington.

Specimens examined: Ellensburg, Whited 291; Piper 2681.

Zonal distribution: Upper Sonoran.

14. Phaca alpina (L.).

Astragalus alpinus L. Sp. Pl. 2: 760, 1753.

Type locality: "Habitat in alpibus Lapponicis, Helveticis."

RANGE: British Columbia to Hudson Bay and Colorado.

Specimens examined: Damp thickets, Concorolly, Whited 1307.

15. Phaca stenophylla (Torr. & Gr.).

Astragalus stenophyllus Torr. & Gr. Fl. 1: 329, 1838.

Astragalus leptophyllus Nutt. Journ. Acad. Phila, 7: 18, 1834, not Desf. 1800.

Astragalus filipes Torr. Bot. Wilkes Exped. 278, 1874.

Type locality: "Headwaters of the Missouri." Collected by Wyeth.

RANGE: British Columbia to Montana and California.

Specimens examined: Ellensburg, Whited 565; Piper 2717; Johnsons Canyon, Yakima County, Brandegee 732; between Coulee City and Waterville, Spillman, May, 1896; Coulee City, Henderson 2358; Ritzville, Sandberg & Leiberg, June, 1893; Crab Creek, Suksdorf 281; without locality, Vascy in 1889; Grand Coulee, Griffiths & Cotton 440.

ZONAL DISTRIBUTION: Upper Sonoran.

16. Phaca collina Hook, Fl. Bor, Am. 1: 141, 1830.

Astragalus collinus Dougl.; G. Don, Hist. Dichl. Pl. 2: 256, 1832.

Astragalus cyrtoides A. Gray, Proc. Am. Acad. 6: 201, 1865.

Type Locality: "On the subalpine range of the Blue Mountains, in dry soils," tollected by Douglas.

Range: Washington, Oregon, and Idaho.

Specimens examined: Columbia Valley, Lyall in 1860; Ritzville, Sandberg & Leiberg 196; Sprague, Henderson 2360; Sandberg & Leiberg in 1893; Wawawai, Elmer 749; Piper 1792; Waitsburg, Horner 98; Wallula, Brandegee 730.

Zonal distribution: Upper Sonoran.

17. Phaca tweedyi (Canby).

Astragalus tweedyi Canby, Bot. Gaz. 15: 150, 1890.

Type locality: "In prairies, Eastern Oregon."

Range: Eastern Washington and Eastern Oregon.

Specimens examined: Hills along Columbia River, Yakima County, Brandegee 731.

18. Phaca beckwithii (Torr. & Gr.).

Astragalus beckwithii Torr. & Gr. Pac. R. Rep. 22: 120, 1854.

Type locality: "Cedar Mountains," Utah.

Range: British Columbia to Utah and California.

Specimens examined: Tukanon River, Brandegee 726.

19. Phaca arrecta (A. Gray).

Astragalus arrectus A. Gray, Proc. Am. Acad. 8: 289, 1870.

Astragalus palousensis Piper, Bot. Gaz. 22: 489, 1896.

Astragalus arrectus palousensis Jones, Contr. Western Bot. 10: 68, 1902.

Type locality: Kooskooskee [Clearwater] River, Idaho. Collected by Gever.

Range: Eastern Washington, Eastern Oregon, and adjacent Idaho.

Specimens examined: Pullman, Piper 1493; Elmer in 1896; without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Arid Transition.

19a. Phaca arrecta leibergii (Jones).

Astragalus arrectus leibergii Jones, Contr. Western Bot. 10: 68, 1902.

Astragalus leibergii Jones, Proc. Cal. Acad. II. 5: 663, 1895.

Type locality: "Egbert Springs," Douglas County, Washington. Collected by Sandberg & Leiberg.

Range: Eastern Washington.

Specimens examined: Egbert Springs, Sandberg & Leiberg 354.

20. Phaca mortoni (Nutt.).

Astragalus mortoni Nutt. Journ. Acad. Phila, 7: 19, 1834.

Type locality: "About the sources and upper branches of the Missouri." Collected by Nuttall.

RANGE: Washington to Saskatchewan, Dakota, and Nevada.

Specimens examined: Ellensburg, Whited; North Yakima, Henderson, May, 1892; Watt, August, 1895; Mrs. Steinweg in 1894; Simcoe Valley, Lyall in 1860; Egbert Springs, Sandberg & Leiberg 341; Beaver Creek, Whited 22, 232; Wilson Creek, Lake & Hull 667; Spokane, Henderson, July, 1892; Piper, June, 1897; Blue Mountains, Piper, July, 1896; Almota, Piper 1864; without locality, Vasey in 1889; Clarks Springs, Kreager 79.

Zonal distribution: Arid Transition and Upper Sonoran.

21. Phaca adsurgens (Pall.).

Astragalus adsurgens Pall. Astrag. 40. pl. 31, 1800.

Astragalus adsurgens robustior Hook, Fl. Bor, Am. 1: 149, 1830.

Astragalus nitidus Dougl.; Hook, loc, cit, as synonym.

Astragalus striatus Nutt.: Torr. & Gr. Fl. 1: 330, 1838.

Type Locality: "In regionem Trans-Baicalensibus, frequens ad Selengum, Ononem circa Tarei-noor et usque in Mongoliae desertum."

Range: British Columbia to Saskatchewan, south to Oregon and Kansas. Siberia.

Specimens examined: Silver Lake, Henderson 2359.

22. Phaca agrestis (Dougl.).

Astragalus agrestis Dougl.; Hook. Fl. Bor. Am. 1: 148, 1830, as synonym.

Astragalus hypoglottis of American authors.

Type locality: "On the fertile plains of the Red River, and in the south, towards Pembina."

RANGE: Alaska to Hudson Bay, Nebraska, and Colorado.

Specimens examined: Ophir, Elmer 422; Ellensburg, Whited 457; Coulee City, Piper 3872; Spillman, May, 1896; Sprague, Henderson 2361; Sandberg & Leiberg 137; Spokane County, Mrs. Susan Tucker, in 1892; Spangle, Piper, June, 1899; Crab Creek, Suksdorf 286; Loomis, Griffiths & Cotton 344; Okanogan, Griffiths & Cotton 265.

Zonal distribution: Arid Transition.

23. Phaca reventa (A. Gray).

Astragalus recentus A. Gray, Proc. Am. Acad. 15: 46, 1879.

Type locality: "Interior of Oregon." Collected by Lyall.

Range: Eastern Oregon and Eastern Washington.

Specimens examined: North Yakima, Henderson in 1892; Mrs. Steinweg; Tampico, Henderson in 1892; Klickitat County, J. Howell, in 1878 and 1882. Cleman Mountain, Henderson: Bishops, Piper 2887; Wawawai, Elmer 795, 3059; Blue Mountains, Lake & Hull 688; without locality, Vascy, in 1889.

Zonal distribution: Arid Transition.

23a. Phaca reventa canbyi (Jones).

Astragalus reventus cambyi Jones, Contr. Western Bot. 8: 11, 1898.

Type locality: "Yakima Region," Washington. Collected by Brandegee.

Range: Central Washington.

Specimens examined: Yakima Region, Brandegee 36.

24. Phaca hoodiana (Howell).

Astragalus hoodianus Howell, Erythea 1: 111. 1893.

Astragalus conjunctus oxytropidoides Jones, Proc. Cal. Acad. 11, 5: 665, 1895.

Type locality: "Hood River to a point a few miles east of The Dalles," Oregon.

RANGE: Klickitat County, Washington, and adjacent Oregon.

Specimens examined: Mountains east of Lyle, Suksdorf 2589; west Klickitat County, Suksdorf 2588.

25. Phaca conjuncta (S. Wats.).

Astragalus conjunctus S. Wats, Proc. Am. Acad. 17: 371, 1882.

Type locality: "John Day Valley" and "Baker County," Oregon. Collected by Howell and by Cusick.

Range: Eastern Oregon and Eastern Washington.

Specimens examined: Wenache, Whited 1041; Ellensburg, Brandegie 724; Piper 2716; Whited 618; White Salmon, Suksdorf 266; without locality, Vascy in 1889.

Zonal distribution: Upper Sonoran.

26. Phaca misera (Dougl.).

Astragalus miser Dougl.; Hook, Fl. Bor, Am. 1: 153, 1830.

Astragalus microcystis A. Gray, Proc. Am. Acad. 6: 220, 1865.

Type locality: "On low hills of the Spokane River, sixty miles from its confluence with the Columbia." Collected by Douglas.

RANGE: North Idaho and adjacent Washington and British Columbia.

Specimens examined: Fort Colville, Lyall: Old Fort Colville, Watson 90; Box Canyon, Kreager 396.

ZONAL DISTRIBUTION: Arid Transition.

27. Phaca convallaria (Greene).

Astragalus convallarius Greene, Erythea 1: 207, 1893.

Astragalus campestris A. Gray, Proc. Am. Acad. 6: 229, 1865, not L. 1753.

Homalobus campestris Nutt.; Torr. & Gr. Fl. 1: 351, 1838.

Type Locality: "Sandy plains of the Colorado of the West, near the sources of the Platte."

Range: Washington to Montana and Colorado.

Specimens examined: Peshastin, Sandberg & Leiberg, August, July, 1893; Wenache, Whited 5, 211; Ophir, Elmer 528; Conconully, Whited 1309; Methow River, Whited, July 14, 1896; Beaver Creek, Whited 28; Ritzville, Sandberg & Leiberg 163; without locality, Vascy, in 1889.

ZONAL DISTRIBUTION: Arid Transition.

28. Phaca decumbens (Nutt.).

Astragalus decumbens (Nutt.) A. Gray, Proc. Am. Acad. 6: 229, 1865.

Homalobus decumbens Nutt.; Torr. & Gr. Fl. 1: 352, 1838.

Type locality: "Sandy plains of the Colorado of the West, near the sources of the Platte" Collected by Nuttall.

RANGE: Washington to Montana and Colorado.

Specimens examined: Cascade Mountains to Fort Colville, latitude 49°, Lyall in 1860; near Spokane and Columbia Rivers, Geyer 475.

29. Phaca serotina (A. Gray).

Astragalus scrolinus A. Gray, Pac. R. Rep. 12²; 51, 1860.

Type locality: "On the Okanogan, near the Columbia River," Washington. Collected by Cooper.

Range: Eastern Washington.

Specimens examined: "On the Okanogan, near the Columbia River, Lat. 48°, Oct. Cooper"; Walla Walla Region, Brandegee 733; Ritzville, Sandberg & Leiberg 473, 163; Conconully, Whited 1309; without locality, Vascy 273; Loomis, Griffiths & Cotton 343.

Zonal distribution: Arid Transition.

30. Phaca viridis (Nutt.).

Astragalus viridis (Nutt.) Sheldon, Minn. Bot. Stud. 13: 118, 1894.

Kentrophyta viridis Nutt.: Torr. & Gr. Fl. 353, 1838.

Kentrophyta montana Nutt.; Torr. & Gr. Fl. 353, 1838.

Astragalus kentrophyta A. Gray, Proc. Acad. Phila. 1863: 60, 4863.

Type locality: "Hills of the Platte." Collected by Nuttall.

Range: South Dakota to New Mexico, Washington, and British America.

Specimens examined: Walla Walla Region, Brandegee 734.

Astragalus lanocarpus Sheldon, Minn. Bot. Studies 1: 144, 1894, was based on a plant collected by Joseph Howell in 1878 at Klickitat Prairie, Washington. We have not seen this species.—It is a close ally of A. purshii, from which it is said to be distinguished by having narrow leaflets and stiff-hairy pods.

VICIA. VETCH.

Flowers in spikes or racemes on axillary peduncles.

Annuals: peduncles few-flowered: flowers very small, bluish-

white 4. V. hirsuta.

Perennials; peduncles mostly many-flowered.

Flowers ochroleucous or tawny................................ 3. V. gigantea.

Flowers violet or bluish-purple, rarely white.

Raceme 1-sided, densely 15 to 40-flowered..... 1. V. cracca.

Raceme loosely 5 to 20-flowered; leaflets ovate to

Flowers axillary, solitary or in twos, nearly sessile.

Leaflets linear or linear-oblong: pods black 6. V. angustifolia.

1. Vicia cracca L. Sp. Pl. 2: 735, 1753.

Type locality: Europe.

RANGE: British Columbia to Newfoundland, New Jersey, and Kansas.

Specimens examined: Whatcom County, Suksdorf 965: Gardner 418.

2. Vicia americana Muhl.; Willd. Sp. Pl. 3: 1096, 1801.

Vicia oregana Nutt.; Torr. & Gr. Fl. 1: 270, 1838.

Vicia sparsifolia Nutt.: Torr. & Gr. Fl. 1: 270, 1838.

Type locality: "Habitat in Pennsylvania."

RANGE: British Columbia to New York and southward to Mexico.

Specimens examined: Montesano, Heller 3951; Clallam County, Elmer 2534; Mason County, Kincaid; Olympia, Kincaid; Tacoma, Flett 897; west Klickitat County, Suksdorf 2014, 2122; North Yakima, Mrs. Steinerg; Wenache, Whited 150, 1266, 1080; Ellensburg, Whited; Cold Creek, Cotton 399; Sunnyside, Cotton 372; Little Spokane River, Kreager 599; Crab and Wilson Creeks, Sandberg & Leiberg 308; Almota, Piper 1486; Tukanon River, Lake & Hull 437; Loomis, Griffiths & Cotton 339.

Zonal distribution: Upper Sonoran and Transition.

Vicia americana truncata (Nutt.) Brewer in Brewer & Wats. Bot. Cal. 1: 158, 1876.
 Vicia truncala Nutt.; Torr. & Gr. Fl. 1: 270, 1838.

Type locality: "Plains of the Oregon." Collected by Nuttall.

Range: Washington to California.

Specimens examined: Seattle, Piper; Wenache, Whited 1080; without locality, Vascy in 1889.

2b. Vicia americana linearis (Nutt.) S. Wats. Proc. Am. Acad. 11: 134, 1876.

Lathyrus linearis Nutt.; Torr. & Gr. Fl. 1: 276, 1838.

Type locality: "Plains of the Platte."

Range: Washington to California and Wyoming.

Specimens examined: Port Ludlow, Binus, May 20, 1889; west Klickitat County, Suksdorf 2013, 2111; Waitsburg, Horner 97.

3. Vicia gigantea Hook, Fl. Bor, Am. 1: 157, 1830.

Vicia sitchensis Bong, Mem. Acad. St. Petersb. VI. 2: 129, 1832.

Type locality: "Open woods on the Columbia." Collected by Scouler and by Douglas. Range: Sitka to California in the coast region.

Specimens examined: Montesano, Heller 3849; Clallam County, Elmer 2530; Olympia, Henderson, May, 1892; Fairhaven, Suksdorf 964; Tacoma, Flett 36; Cascades, Suksdorf 534.

Zonal distribution: Humid Transition.

4. Vicia hirsuta (L.) Koch, Syn. Fl. Germ. 191, 1837.

Ervum hirsutum L. Sp. Pl. 2: 738, 1753.

Vicia mitchelli Raf. Prec. Decouv. 37, 1814.

Type locality: European.

Specimens examined: Tacoma, Leckenby, June, 1898; Flett 2225; Alki Point, Piper in 1889.

5. Vicia sativa L. Sp. Pl. 2: 736, 1753.

COMMON VETCH.

Type locality: European.

Specimens examined: Clallam County, Elmer 2533; Whidby Island, Gardner 75; Cascades, Suksdorf 535.

6. Vicia angustifolia Roth, Tent. Fl. Germ. 1: 310, 1788.

Vicia sativa augustifolia Ser. in DC. Prod. 2: 361, 1825.

Type locality: "Habitat in campis sterilissimis, inter segetes arenosas totius fere Germaniae."

Specimens examined: Seattle, Piper, July, 1895; Tacoma, Flett 214.

LATHYRUS. PEA.

Herbage densely silky-villous.	1. L. littoralis.
Herbage glabrous, or if pubescent not villou :.	
Plants erect; tendrils wanting or much reduced.	
Flowers solitary	2. L. torreyi.
Flowers 2 or more to each raceme.	
Corolla white: leaflets usually 3 pairs, oblong or	
ovate	3. L. obovatus
Corolla purple.	
Stems tall; leaflets 4 to 7 pairs.	
Leaflets oblong to ovate, pubescent	
beneath	4. L. nuttallii.
Leaflets lanceolate, pubescent on both	
sides	5. L. oregonensis.

Stems low; leaflets 1 or 2 pairs.

Leaflets elliptic to obovate...... 6. L. bijugatus. Leaflets linear to lanceolate........... Ga. L. bijugatus sandbergii. Plants climbing by simple or 3-forked tendrils. Stems wingless. Flowers yellowish becoming tawny...... 8. L. sulphureus. Flowers blue-purple. Leaflets very thin, 5 to 8 pairs. 9. L. polyphyllus. Leaflets firm, 3 to 6 pairs. Peduncles not exceeding the leaves: leaflets not cuspidate. Leaflets ovate-oblong, glabrous... 10. L. maritimus. Leaflets linear-lanceolate or ellip-Peduncles exceeding the leaves; leaflets cuspidate.

Leaflets oblong or elliptic...... 12. L. pauciflorus.

Leaflets linear or lanceolate..... 12a. L. pauciflorus tenuior.

Lathyrus littoralis (Nutt.) Endl.: Walp. Repert. 1: 722, 1842.

Astrophia littoralis Nutt.; Torr. & Gr. Fl. 1: 278, 1838.

Orobus littoralis A. Gray, Pac. R. Rep. 4: 54, 1859.

Type locality: "Sand hills near the estuary of the Oregon." Collected by Nuttall.

Range: On the seacoast of Washington and Oregon.

Specimens examined: Laidlaw, Lamb 1119; Shoalwater Bay, Cooper; Whidley Island, Gardner 82; Ocosta, Henderson, June, 1892; without locality, Wilkes Expedition.

Zonal distribution: Humid Transition.

Lathyrus torreyi A. Gray, Proc. Am. Acad. 7: 337, 1868.

Lathyrus torreyi tenellus Wiegan I, Pull. Torr. Club 26: 135, 1899.

Type locality: Mendocino or south part of Humboldt County, California.

Range: Washington to California west of the Cascades.

Specimens examined: Tacoma, Flett. June, 1897, 180; Steilacoom, Cooper; Phyallup, Piper 3826; La Camas, Henderson, May 30, 1889; Manor, Piper 3075.

Zonal distribution: Humid Transition.

3. Lathyrus obovatus (Torr.) White, Bull. Torr. Club 21: 455, 1894.

Lathyrus venosus obovatus Torr. Pac. R. Rep. 4: 77, 1857.

Lathyrus nevadensis S. Wats. Proc. Am. Acad. 11: 133, 1876.

Type locality: "Mammoth Grove and Duffield's Ranch, California."

Range: Washington to California.

Specimens examined: Waitsburg, Horner 93.

Lathyrus obovatus stipulaceus White, Bull. Torr. Club 21: 455, 1894.

Type locality: Colville to Spokane, Washington. Collected by the Wilkes Expedition.

Range: British Columbia and Washington.

Specimens examined: Spokane Valley, Lyall in 1861.

Lathyrus nuttallii S. Wats. Proc. Am. Acad. 21: 450, 1886.

Type locality: "Upper California." Collected by Nuttall.

Range: British Columbia to California in the coast region.

Specimens examined: Olympic Mountains, Henderson 2349; Cascade Mountains, latitude 49°, Lyall in 1859; Cascade Mountains, Henderson 2346; Admiralty Head, Piper; Seattle, Hindshaw; upper Nisqually Valley. Allen 297; Klickitat County, Henderson, June 1, 1884; Klickitat River, Flett 1261; Falcon Valley, Suksdorf 354; Lake Wenache, Sandberg & Leiberg 634; Clealum, Whited 364, 365; without locality, Vascy in 1889; La Camas, Gorman, June, 1884.

ZONAL DISTRIBUTION: Transition.

The *L. myrtifolius* Muhl, of Suksdorf's list is based on a specimen that we do not hesitate to refer to *L. muttallii*.

5. Lathyrus oregonensis White, Bull. Torr. Club 21: 456, 1894.

Type locality: Oregon. Collected by Cusick.

Range: Eastern Washington and eastern Oregon.

Specimens examined: Falcon Valley, Suksdorf 536.

6. Lathyrus bijugatus White, Bull. Torr. Club 21: 457, 1894.

Type locality: Latah County, Idaho. Collected by Sandberg.

Range: Washington and Idaho.

Specimens examined: Spokane County, Suksdorf 1824; Spokane, Wilkes Expedition 572; Hangman Creek, Sandberg & Leiberg 24; Pullman, Elmer 214.

Zonal distribution: Arid Transition.

6a. Lathyrus bijugatus sandbergii White, Bull, Torr, Club 21: 457, 1894.

Lathyrus sandbergii Howell, Fl. N. W. Am. 1:160, 1898.

Type locality: Latah County, Idaho.

Range: Idaho and adjacent Washington.

Specimens examined: Spokane Valley, Lyall in 1861; Pullman, Elmer 830; Piper 1488, and June, 1894.

Zonal distribution: Arid Transition.

7. Lathyrus paluster L. Sp. Pl. 2: 733, 1753.

Lathyrus occidentalis Nutt.; Torr. & Gr. Fl. 1:276, 1838, as synonym.

Type locality: Europe.

RANGE: Alaska to Labrador, south to California and New York. Europe.

Specimens examined: San Juan Island, Lyall in 1858; latitude 49° boundary, Lyall in 1858-59; Whidby Island, Gardner 91; Seattle, Piper 726; Smith: Yakima River, Henderson 2347; Everett, Piper 4916.

ZONAL DISTRIBUTION: Humid Transition.

8. Lathyrus sulphureus Brewer; A. Gray, Proc. Am. Acad. 7: 399, 1868.

Type locality: "In woods along foot hills of Sierra Nevada," California. Collected by Brewer.

Range: Washington to California west of the Cascades and Sierras.

Specimens examined: Seattle, Piper 482; Olympia, Henderson 2348; Loomis, Grif-fiths & Cotton 337

Zonal distribution: Transition.

This species seems too close to L, ochrolencus Hook.

9. Lathyrus polyphyllus Nutt.; Torr. & Gr. Fl. 1: 274, 1838.

Type locality: "Forests of the Oregon to the sea." Collected by Nuttall.

RANGE: British Columbia to north California in the coast region.

Specimens examined: Challam County, Elmer 2535; Seattle, Piper 481; Tacoma, Flett, May, 1895; west Klickitat County, Suksdorf 2021.

ZONAL DISTRIBUTION: Humid Transition.

10. Lathyrus maritimus (L.) Bigel, Fl. Bost, ed. 2, 268, 1824.

Pisum maritimum L. Sp. Pl. 2: 727, 1753.

Type locality: Europe.

RANGE: Seacoasts, Labrador to New Jersey, and Alaska to Oregon; shores of the Great Lakes.

Specimens examined: South Arbor, Lamb 1112; Fairhaven, Piper, July 2, 1897; Coupeville, Gardner 87; Port Ludlow, Binns, September 15, 1890; Fidalgo Island, Lyall in 1858; Bellingham Bay, Suksdorf 1823; Everett, Piper, July 9, 1892; Clallam County, Elmer 2528. Zonal distribution: Humid Transition.

11. Lathyrus coriaceus White, Bull. Torr. Club 21: 452, 1894.

Type LOCALITY: Wasatch Mountains, Utah.

Range: Washington to Arizona.

Specimens examined: Seattle, O. Piper; Wenache, Whitel 148; Ellensburg, Piper 2720; Whited, July 9, 1897; Toppenish and Tampico, Henderson 2345; Toppenish, Henderson in 1892; North Yakima, Leckenby; base Mount Adams, Flett 1260, 1260a; Klickitat River, Henderson 2344; Wenache, Griffiths & Cotton 147; Wenas, Griffiths & Cotton 106; Clealum Lake, Cotton 843; Kittitas Valley, Cotton 1208.

Zonal distribution: Upper Sonoran.

12. Lathyrus pauciflorus Fernald, Bot. Gaz. 19: 335, 1894.

Lathyrus parvifolius S. Wats. Proc. Am. Acad. 17: 345, 1882, not Roth. 1797.

Lathyrus shaffneri Rydberg, Mem. N. Y. Bot. Gard. 1: 258, 1900.

Type locality: Roseburg, Oregon.

Range: Washington and Idaho to California and Mexico.

SPECIMENS EXAMINED: Nisqually Valley, Allen 132; west Klickitat County, Suksdorf in 1886; Ellensburg, Piper 2679; Wenache Region, Brandegee 735; Wenache, Whited 1106; Waitsburg, Horner 96; Wawawai, Piper, June 13, 1896; Lake & Hull, June 4, 1892; Almota, Piper 2797 and May 27, 1893.

Zonal distribution: Upper Sonoran and Arid Transition.

Suksdorf's specimens were distributed and later listed as L. polymorphus Nutt., a species that does not reach our borders.

12a. Lathyrus pauciflorus tenuior Piper, Fl. Palouse Reg. 108, 1901.

Type locality: Near Almota, Washington.

Range: Eastern Washington.

Specimens examined: West Klickitat County, Suksdorf, April 23, 1886; Wenache, Whited 127, 150, 2, 1107; Waitsburg, Horner 95; Almota, Elmer 52; Union Flat, Piper 2733; without locality, Vascy in 1889; Wenas, Griffiths & Cotton 86; Wenache Mountains, Griffiths & Cotton 129.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

Lathyrus vexosus Muhl. Suksdorf lists this species, but we can discover no good evidence that it occurs in the State.

GERANIACEAE. GERANIUM FAMILY.

Leaves palmate, variously cleft or divided.	Geranium (p. 378).
Leaves pinnately compound (in ours)	Екоріим (р. 380).

GERANIUM.

Perennials; flowers large Annuals; flowers small.		1.G.riscosissimum.
Seeds reticulate or p	oitted.	

Flowers deep purple; seeds pitted 4. G. dissectum.

Flowers pale purple; seeds reticulately ri .ge 1.

Peduncles short; inflorescence compact 2. G. carolinianum. Peduncles long; inflorescence loose 3. 6. bicknellii.

Seeds smooth or nearly so.

Carpels canescent, not rugose 5. G. pusillum.

 Geranium viscosissimum Fisch, & Mey, Ind. Sem. Hort. Petrop. 11: Suppl. 48, 4846.

Geranium albiflorum incisum Torr. & Gr. Fl. 1: 206, 1838.

Geranium incisum Nutt.; Torr. & Gr. Fl. 1: 206, 1838, as synonym, not Andrews, Bot. Rep. 1: pl. 67, 1797.

Type locality: "Hab, in America septentrionalis occidentali."

RANGE: British Columbia to Saskatchewan, southward to California and Utah.

Specimens examined: Rock Lake, Sandberg & Leiberg 106; Fort Colville, Lyall in 1860; Spokane, Suksdorf 262; Pullman, Hull 451; Piper 1646; Blue Mountains, Piper 2399; Rattlesnake Mountains, Cotton 467; Tieton River, Cotton 457; Clarks Springs, Kreager 25; Sprague, Henderson, May 30, 1892; Colville Reservation, Griffiths & Cotton 409; Squaw Creek, Cotton 881; Easton, Piper.

Zonal distribution: Arid Transition.

Besides the typical form there are two others, one slender and canescent represented by *Cotton's* 881 from Squaw Creek, the other densely short-pubescent represented by *Whited*, Wenache, June, 1896; North Yakima, *Leckenby*, May 12, 1898, and Toppenish, *Henderson*, May 28, 1892. The latter especially seems to be a good subspecies of Upper Sonoran habitat.

2. Geranium carolinianum L. Sp. Pl. 2: 682, 1753.

Type locality: Carolina.

RANGE: Throughout the United States and in Canada.

Specimens examined: Fairhaven, Piper, July, 1897; Cascade Mountains, latitude 49°, Lyall in 1859; Beaver Creek, Whited 25, 66; west Klickitat County, Suksdorf 2027; Marshall Junction, Piper 2260; Almota, Piper 1828; Wawawai, Piper 1813; without locality, Vasey in 1889; Clarks Springs, Kreager 132; Loon Lake, Beattle & Chapman 2098.

ZONAL DISTRIBUTION: Upper Souoran and Transition.

3. Geranium bicknellii Britton, Bull. Torr. Club 24: 92, 1897.

Geranium carolinianum longipes S. Wats. Bot. King Explor. 50, 1871, not Geranium longipes DC, 1822.

Geranium nemorale Suksdorf, Deutsch. Bot. Monats. 16: 222. 1898.

Type locality: "Nova Scotia* Maine to western Ontario and southern New York."

Range: British Columbia to Nova Scotia, southward to California, Colorado, and New York.

Specimens examined: Seattle, Piper 41, 591; Vancouver, J. Howell 422; west Klickitat County, Suksdorf 2028; Fort Colville to Cascade Mountains, Lyall in 1860; Ophir, Elmer 527; Spokane, Dewart, June 5, 1901; Blue Mountains, Piper, August 2, 1896; Lake & Hull, July 4, 1892; Ione, Kreager 406; Clallam County, Elmer 2726; Cape Horn, Piper 5003.

Zonal distribution: Transition.

4. Geranium dissectum L. Amoen. Acad. 4: 282, 1759.

Type locality: "Habitat in Europa australiore."

Range: Vancouver Island to California; introduced from Europe.

Specimens examined: Lake Union, Suksdorf 1993; Tacoma, Flett 50.

Geranium pusillum Burm, f. Spec. Bot. Ger. 27, 1759.

Type locality: Not ascertained.

Specimens examined: Seattle, Smith 40; Piper, July, 1895; Tacoma, Flitt 81; Vancouver, J. Linell 21; Pullman, Hardwick, July, 1895; Stuart Island, Laurence, 176, 180.

6. Geranium molle L. Sp. Pl. 2: 682, 1753.

Type locality: European.

Specimens examined: Stuart Island, Laurence 55.

ERODIUM.

1. Erodium cicutarium (L.) L'Her.; Ait. Hort. Kew 2: 414, 1789. Alfilaria. Geranium cicutarium L. Sp. Pl. 2: 680, 1753.

Type locality: "Habitat in Europae sterilibus cultis."

Specimens examined: Olympic Mountains, J. M. Grant in 1889; Rattlesnake Mountains, Cotton 337; Spokane, Lyall in 1861; Pullman, Piper, May, 1894; Hull 452; Clarks Springs, Kreager 103, 573; Priest Rapids, Cotton 1389.

This plant has been common in western Washington for at least thirty years.

OXALIDACEAE.

OXALIS.

Caulescent; flowers yellow. 1. 0. pumila.

Acaulescent; flowers white.

Scapes 1-flowered; capsule ovoid. 2. 0. oregana.

Scapes several-flowered; capsule linear 3. 0. trilliifolia.

1. Oxalis pumila Nutt.; Torr. & Gr. Fl. 1: 212, 1838.

Oxalis suksdorfii Trelease, Mem. Bost. Soc. Nat. Hist. 4: 89, 1888.

Type locality: "Forests of the Rocky Mountains and Oregon."

Range: Washington to middle California.

Specimens examined: Five miles north of Vancouver, Piper 4939.

Zonal distribution: Humid Transition.

Nuttall's statement that this occurs in the Rocky Mountains is surely an error.

2. Oxalis oregana Nutt.; Torr. & Gr. Fl. 1; 211, 1838.

Type locality: "Shady woods of the Oregon in moist places." Collected by Nuttall. Range: Washington to California in the coast region.

Specimens examined: Montesano, Henderson, June, 1892; Skokomish Valley, Kincaid, May, 1892; upper Nisqually Valley, Allen 84; Piper 2007; Tacoma, Flett 98; Cape Horn, Suksdorf 2451; Ilwaco, Piper 4959.

Zonal distribution: Humid Transition and Canadian.

3. Oxalis trilliifolia Hook, Fl. Bor, Am. 1; 118, 1830.

Type locality: "North-West America, on the summits of the high mountains near the Grand Rapids of the river Columbia; and also in the vallies of the Rocky Mountains." Collected by Douglas.

Range: Washington and Oregon in the coast region.

Specimens examined: Upper Nisqually Valley, Allen 85; Longmire Springs, Piper 2096; Puyallup, Flett, August, 1897; Larm River, Suksdorf 106.

Zonal distribution: Canadian.

As this species is known only west of the Cascade Mountains, the latter part of Douglas's type locality is doubtless an error.

LINACEAE. FLAX FAMILY.

LINUM.

Flowers large, blue.

Annual; stigmas as long as the styles.

Perennial; stigmas short.

Perennial; stigmas short.

L. usitatissimum.

2. L. lewisii.

Flowers small, yellow; annual.

3. L. diggnum.

1. Linum usitatissimum L. Sp. Pl. 1: 277, 1753.

Common flax.

Type locality: European.

Specimens examined: Pullman, Piper, July, 1895; Meyers Falls, Kreager 476.

2. Linum lewisii Pursh, Fl. 1: 210, 1814.

Linum Iyallanum Alefeld, Bot. Zeit. 25: 251, 1867.

Type locality: "In the valleys of the Rocky Mountains and on the banks of the Missouri." Collected by Lewis.

RANGE: Washington to Hudson Bay, southward to Texas and California.

Specimens examined: Klickitat Valley, Lyall in 1860; Ellensburg, Whitel 428, 685; Rattlesnake Mountains, Cotton 424; near Leavenworth, Whitel, August, 1896; Pasco, Hindshaw 47; Wenas River, Henderson, June, 1892; Ritzville, Sandberg & Leiberg 198; Parrots, Lake & Hull, August 5, 1892; Pullman, Piper 1648; Hull 760; Elmer 814.

Zonal distribution: Arid Transition.

This species was formerly confused with L. perenne L.

3. Linum digynum A. Gray, Proc. Am. Acad. 7: 334, 1868.

Type locality: "Mariposa Trail, Yosemite Valley," California.

RANGE: Washington to California.

Specimens examined: Spangle, Suksdorf 261; Pullman, Piper 1803.

ZONAL DISTRIBUTION: Arid Transition.

EUPHORBIACEAE. EUPHORBIA FAMILY.

Flowers involuerate; capsule 3-celled.	Euphorbia.
Flowers not involucrate; capsule 1-celled, 1-seeded	Piscarta.

EUPHORBIA.

Glands of the	involucre	bearing	petal-like	appendages;	plants	prostrate or
nearly so.						

Herbage glabrous; seeds grav.

Seeds with sharp transverse ridges. 1. E. glyptosperma.

Glands of the involucre not bearing petal-like appendages; stems creet.

Leaves filiform, very numerous; seeds smooth................. 5. E. cyparissias.

Leaves not filiform nor very numerous; seeds not smooth.

Seeds pitted; leaves entire, oblong or obovate........... 4. E. peplus.

Seeds reticulated; leaves serrulate, spatulate............... 6. E. arkansana.

Euphorbia glyptosperma Engelm, in Torr. Bot. Mex. Bound, 187, 1859.

Euphorbia polygonifolia L. err. det. Hook. Fl. Bor. Am. 2: 140.

Type locality: "Canada (Pursh) to Carlton House Fort on the Saskatchewan. Drummond. On Menzies Island and at the Grand Rapids of the Columbia. Douglas."

RANGE: British Columbia to Canada, south to California, Texas, and Mexico.

Specimens examined: Columbia Valley, Lyall, June, 1860; White Salmon, Suksdorf 489; White Bluff Ferry, Lake & Hall 641; Wenache, Whited 197, 1154; North Yakima, Watt, August, 1895; Peshastin, Sandberg & Leiberg 472; Lake Chelan, Lake & Hall 642; Almota, Piper 1816; Wawawai, Piper 1893, August, 1894; Meyers Falls, Kreager, August 21, 1902; Marcus, Kreager 461.

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

2. Euphorbia serpyllifolia Pers. Syn. Pl. 2: 14, 1807.

Type locality: "Hab. in Amer. calidiore."

Range: Washington to Wisconsin, south to Mexico.

Specimens examined: Tacoma, Flett. 25; Loomis, Elmer. 602; Pullman, Piper. 1543; Yelm Prairie, Piper in 1888.

Zonal distribution: Transition.

2a. Euphorbia serpyllifolia consanguinea Boiss. in DC. Prod. 15²: 43, 1862.

Type locality: Ad lacum Winnipeg (Bourgeau), in valle Missouri superioris (Neuwied), territ. Nebraska (Hayden), Novo Mexico (Wright, Fendler), Kansas et Texas (ex Engelm.) California (Engelm.).

Range: Washington to Saskatchewan, Texas, and California.

Specimens examined: West Klickitat County, Suksdorf 210.

3. Euphorbia maculata L. Sp. Pl. 1: 455, 1753.

Type locality: "Habitat in America septentrionali."

Range: Most of temperate North America.

Specimens examined: Meyers Falls, Kreager, August 25, 1902.

4. Euphorbia peplus L. Sp. Pl. 1: 456, 1753.

Type locality: European.

Specimens examined: East Scattle, Hindshaw, June, 1897.

5. Euphorbia cyparissias L. Sp. Pl. 1: 461, 1753.

Type locality: "Habitat in Misnia, Bohemia, Helvetia, G. Narbonensi."

Specimens examined: Pullman, Piper, June, 1897.

6. Euphorbia arkansana missouriensis Norton, Rep. Mo. Bot. Gard. 11: 103, 1900.

Type locality: Randolph, Missouri.

Range: Washington to Minnesota, Kansas, and New Mexico.

Specimens examined: Walla Walla Region, Brandegee 1072; Almota, Lake & Hull 641; Wawawai, Elmer 758.

ZONAL DISTRIBUTION: Upper Sonoran.

Euphorbia platyphylla L. This European species was reported by Hooker a from the "plains of the Columbia River," collected by Douglas, but there is no recent evidence of such occurrence.

PISCARIA.

1. Piscaria setigera (Hook.)

Eremocarpus setigerus Benth. Bot. Sulph. 53, pl. 26, 1844.

Croton? setigerus Hook, Fl. Bor, Am. 2: 141, 1838.

Type locality: "Plentiful on Menzies' Island, and on sandy banks of the Columbia upwards." Collected by Douglas.

Range: Washington to California.

Specimens examined: Bingen, Piper, September, 1903; Granddalles, Westgate 927.

Zonal distribution: Arid Transition.

As pointed out by Coville, b Eremocarpus was first used for a genus of Hypericaceae by Reichenbach in 1837, and is therefore not available for our plant. The new name is given in allusion to the use of the plant by the Indians to stupefy fish by throwing quantities of it in the streams. It is rather strange that the plant should first have been found at the extreme northern point of its range.

CALLITRICHACEAE. WATER STARWORT FAMILY.

CALLITRICHE.

Styles about as long as the fruit. 2. C. rerna.
Styles twice as long as the fruit. 3. C. bolanderi.

a Fl. Bor, Am. 2: 140, 1838.
b Contr. Nat. Herb. 4: 194, 1893.

1. Callitriche palustris L. Sp. Pl. 2: 969, 1753.

Callitriche autumnalis L. Fl. Suec. ed. 2, 2, 1755.

Type locality: "Habitat in Europae fossis paludibus."

RANGE: British Columbia to Oregon, Colorado, and Canada. Europe.

Specimens examined: Lake Cushman, Henderson 1862; mouth of the Columbia, Scouler.

Callitriche verna L. Fl. Succ. ed. 2, 2, 1755.

Type locality: European.

Range: Temperate regions of America, Europe, and Asia.

Specimens examined: Hoquiam, Lamb 1012; North Yakima, Piper 1797; Mount Rainier, Allen 185; Pullman, Piper, July 28, 1899.

3. Callitriche bolanderi Hegelm, Verh. Bot. Verein Brandenb. 10: 116, 1868.

Type locality: Auburn, California.

Range: Vancouver Island to California.

Specimens examined: Clallam County, Elmer 2779; Lake Cushman, Piper 2236; Seattle, Piper, July 12, 1895; Usk, Kreager 352; Tacoma, Flett 2262.

EMPETRACEAE. CROWBERRY FAMILY.

EMPETRUM.

1. Empetrum nigrum L. Sp. Pl. 2: 1022, 1753.

CROWBERRY.

Type locality: European.

RANGE: Arctic regions southward to Maine, Michigan, and Washington. Europe. Asia Specimens examined: Mount Rainier, Piper 2051; Smith 1100; Copalis, Conard 409.

LIMNANTHACEAE. BUCKBEAN FAMILY.

FLOERKEA.

1. Floerkea proserpinacoides Willd. Neue Schrift. Ges. Naturf. Fr. Berlin 3: 119. 1801.

Floerkea occidentalis Rydberg, Mem. N. Y. Bot, Gard. 1: 208, 4900.

Type locality: "In Pennsylvanien."

RANGE: Washington to Ontario southward to California, Utah, and Pennsylvania.

Specimens examined: Ellensburg, Piper, May 21, 1897; Klickitat River, Flett 1018; without locality, Wilkes Expedition.

ZONAL DISTRIBUTION: Transition.

ANACARDIACEAE. CASHEW FAMILY.

RHUS.

Fruit red, pubescent; leaflets 11 to 31...................... 1. R. glabra. Fruit white, glabrous; leaflets 3.

Leaflets mostly subentire, the lateral ones petioled......... 2. R. toxicodendron.

1. Rhus glabra occidentalis Torr. Bot. Wilkes Exped. 257, 1874.

Sumac.

4

Rhus occidentalis Blankinship, Mont. Agr. Coll. Sci. Stud. 1: 86, 1905. Type locality: "Banks of rivers, near Fort Okanagan and Fort Vancouver; also on the Kooskooskee."

RANGE: British Columbia to Montana and Oregon.

Specimens examined: Near Wenache, Whited 56; Columbus, Suksdorf 2454; Morgan: Ferry, Suksdorf 265; Columbia River, Lyall in 1860; Rock Island, Sandberg & Leiberg 429; Almota, Lake & Hull 448; Wawawai, Lake & Hull 148; Elmer 872; Piper 1654; Waitsburg,

Horner 393; without locality, Vascy 213; Clarks Springs, Kreager 121; Spokane, Kreager 552; Prosser, Cotton 622; Kiona, Cotton 729.

Zonal distribution: Upper Sonoran.

2. Rhus toxicodendron L. Sp. Pi. 1: 266, 1753.

Poison ivy.

Rhus rydbergii Small, Mem. N. Y. Bot. Gard. 1: 268, 1900.

TYPE LOCALITY: "Habitat in Virginia, Canada."

RANGE: British Columbia to Nova Scotia, southward to Arizona and Florida.

Specimens examined: Wenache, Whited 241: Yakima, Leckenby, June, 1898; west Klickitat County, Suksdorf 263; Spokane, Henderson, July, 1892; Hangman Creek, Suksdorf 264; Wawawai, Lake 447; Spokane, Kreager 538; without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Upper Sonoran.

The western plant seems never to climb trees or walls, but is a low, erect, or decumbent shrub. Without better distinctions than this we see no reason for considering it a distinct species, as has been done by Small.

Professor Greene, however, not only considers R, rydbergii Small as well founded, but proposes three additional new species for Washington plants under the generic name Toxicodendron, a namely, T, hesperinm, founded on Whited's 241–T, lobadioides, and T, coriaceum, the two latter founded on specimens collected by Suksdorf.

3. Rhus diversiloba Torr. & Gr. Fl. 1: 218, 1838.

Poison oak.

Rhus lobata Hook, Fl. Bor, Am. 1: 127, 1830, not Poir, 1804.

Type locality: "Oregon." Collected by Douglas.

Range: Washington to California in the coast regions.

Specimens examined: Orchard Point, Piper, July, 1895; Seattle, Piper in 1887; Union City, Piper in 1900; Tacoma, Flett 141.

Zonal distribution: Humid Transition.

"Rius aromatica Ait, var." Suksdorf thus lists a species of the occurrence of which in Washington there is no direct evidence. Rhus trilobata occurs in southern Oregon, but probably does not reach Washington.

CELASTRACEAE. STAFFTREE FAMILY.

Stamens 4 or 5, as many as the petals and sepals.

Deciduous shrub; flowers 5-merous Euonymus.

Evergreen shrub; flowers 4-merous Pachistima.

Stamens 10; flowers 5-merous Forsellesia.

EUONYMUS.

1. Euonymus occidentalis Nutt.; Torr. Pac. R. Rep. 4: 74, 1856.

Type locality: "Oregon in dark woods." Collected by Nuttall.

Range: Washington to California and Nevada.

Specimens examined: Seven miles east of Vancouver, Gorman in 1905.

PACHISTIMA.

1. Pachistima myrsiaites (Pursh) Raf. Fl. Tellur. 42. 1838.

Her! mysinites Pursh, Fl. 1: 119, 1814.

Myginda myrtifolia Nutt. Gen. 1:109, 1818.

Oreophila myrtifolia Nutt.; Torr. & Gr. Fl. 1:259, 1838.

Type locality: "On the Rocky Mountains and near the Pacific Ocean" Collected by Lewis. The exact spot in the Rocky Mountains is on the Lolo Trail near Hungry [Lolo] Creek, North Idaho.

Range: British Columbia to California and New Mexico.

Specimens examined: Near Scattle, Piper, June, 1892; Tacoma, Flott 97; upper Nisqually Valley, Allen 106; along Twisp River, Whited 201; Stevens Pass, Sandberg & Leiberg 742; Wenache Mountains, Whited 1335; Skamania County, Suksdorf 2452; Cascade Mountains, latitude 49°, Lyall in 1859; Columbia Valley, Lyall in 1860; Lake Chelan, Lake & Hull 761; Blue Mourtains, Horner 428; Olympic Mountains, Elmer 2752; Mount Carlton, Kreager 286.

ZONAL DISTRIBUTION: Canadian and Transition.

FORSELLESIA.

1. Forsellesia spinescens (A. Gray) Greene, Erythea 1: 206, 1893.

Glossopetalon spinescens A. Gray, Pl. Wright, 2: 29, pl. 12, 1853.

Type locality: "In a mountain ravine near Frontera, New Mexico."

Range: Washington to California and Texas.

Specimens examined: Whitman County, Washington, near Lewiston, Hunter 46.

Zonal distribution: Upper Sonoran.

ACERACEAE. MAPLE FAMILY.

ACER. MAPLE.

 Leaves 3 to 5-lobed; fruit wings somewhat spreading
 2. A. douglasii.

 Leaves 7 to 9-lobed; fruit wings widely spreading
 3. 1. circinatum.

1. Acer macrophyllum Pursh, Fl. 1: 267, 1814.

Oregon maple.

Type locality: "On the great rapids [Cascades] of the Columbia River." Collected by Lewis.

RANGE: British Columbia to California in the coast region.

Specimens examined: Tacoma, Flett 42; Nisqually Valley, Allen 114; Silverton, Bouck 39; Peshastin, Sandberg & Leiberg 501; Peshastin Canyon, Watson; Lake Chelan, Lake & Hull 450; Bingen, Suksdorf 35; without locality, Vascy 225, 226; Clallam County, Elmer 2836; Stehekin, Griffiths & Cotton 219.

Zonal distribution: Humid Transition.

2. Acer douglasii Hook, Lond, Journ. Bot. 6: 77. pl. 6, 1847.

Acer glabrum douglasii Piper, Fl. Palouse Reg. 111, 1901.

Type locality: "Near springs of the Rocky Mountains about the sources of the Columbia," Collected by Douglas.

RANGE: Blue Mountains, Oregon, northeastward into west Montana and northwestward to British Columbia.

Specimens examined: Skagit Pass, Lake & Hull 449; Nisqually Valley, Allen 212; Mount Rainier, Piper 52; Mount Adams, Henderson, July, 1892; Cleman Mountain, Henderson, June, 1892; Wenache Mountains, Whited 1022; Tampico, Flett 1200; Hoodsport, Piper 1017; Fort Colville, Lyalt in 1860; Sprague, Sandberg & Leiberg 156; Blue Mountains, Piper, August, 1892; without locality, Vascy 229, 230; Davis ranch, Kreager 311; Wenas, Griffiths & Cotton 96.

ZONAL DISTRIBUTION: Transition and Canadian.

3. Acer circinatum Pursh, Fl. 1: 267, 1811.

VINE MAPLE.

Type locality: "On the great rapids [Cascades] of the Columbia River." Collected by Lewis.

Range: British Columbia to California in the coast region.

Specimens examined: Near Montesano, Heller 3859; Grays Harbor, Lamb 1034a; Tacoma, Flett 41; upper Nisqually Valley, Allen 115; Silverton, Bouck 38; Yakima Pass,

 $29418 - 06\ \mathrm{m} - - 25$

Watson 73: White Salmon, Suksdorf 261; Cascade Mountains, latitude 49°, Lyall in 1859; Stehekin, Whited 1408; Nason Creek, Sandberg & Leiberg 624; without locality, Vasey 227, 228; Clallam County, Elmer 2835; Stehekin, Griffiths & Cotton 221.

ZONAL DISTRIBUTION: Humid Transition.

IMPATIENTACEAE. Balsam Family.

IMPATIENS. JEWELWEED.

Posterior sepal not spurred. 1. I. ecalcarata.

Posterior sepal spurred.

Corolla orange-yellow; saccate sepal longer than broad. 2. I. biflora.

Corolla pale-yellow; saccate sepal nuch longer than broad. 3. I. nolitangere.

1. Impatiens ecalcarata Blankinship, Mont. Agr. Coll. Sci. Stud. 1: 85, 1905.

Type locality: Montana, "about half a mile east of Plains, Missoula County." RANGE: Washington to Montana.

Specimens examined: Columbia Valley, Lyall in 1860.

2. Impatiens biflora Walt. Fl. Car. 219, 1788.

Impatiens fulva Natt. Gen. 1: 146, 1818.

Impatiens aurella Rydberg, Bull. Torr. Club 28: 34, 1901.

Type locality: Carolina.

Range: Washington to Newfoundland, south to Kansas and Mississippi.

Specimens examined: Columbia Valley, Lyall in 1860; Wilbur, Henderson, July, 1892; Rock Lake, Lake & Hull 453; Spokane, Piper 2384; Spokane County, Suksdorf 1837; Meyers Falls, Kreager 472.

3. Impatiens nolitangere L. Sp. Pl. 2: 938, 1753.

Type locality: "Habitat in Europae, Canadae nemoribus."

Range: Alaska to Washington. Europe. Asia.

Specimens examined: Cascade Mountains, latitude 49°. Lyall in 1859; Deming, Flett 853; North Fork of Nooksack River, Suksdorf 969.

ZONAL DISTRIBUTION: Canadian.

This species is undoubtedly native, not introduced as indicated in the Synoptical Flora.

RHAMNACEAE. BUCKTHORN FAMILY.

Fruit a drupe: flowers solitary or umbelled. Rhamnus.
Fruit a dry capsule: flowers paniculate. Ceanothus.

RHAMNUS.

Shrub: petals wanting: leaves nearly glabrous beneath. 1. R. alnifolia. Tree; petals present: leaves downy beneath. 2. R. purshiana.

1. Rhamnus alnifolia L'Her. Sert. Angl. 5, 1788.

Type locality: "In America septentrionale."

Range: British Columbia to Maine, southward to California, Wyoming, and New Jersey. Specimens examined: Marshall Junction, *Piper* 2250; near Spangle, *Suksdorf* 2455; Box Canyon, *Kreager* 393.

ZONAL DISTRIBUTION: Canadian.

2. Rhamnus purshiana DC. Prod. 2: 25, 1825.

Cascara sagrada.

Rhamnus alnifolia Pursh, Fl. 1:166, 1814. Not L'Her.

Type locality. "On the banks of the Kooskooskee" [Clearwater], Idaho. The exact spot where Lewis collected the type is Camp Chopunish, opposite Kamiah.

RANGE: British Columbia to Idaho and California.

Specimens examined: Montesano, Heller 3885; Sumas Prairie, Lyall in 1858; upper Nisqually Valley, Allen 126; Columbia River, latitude 46° to 49°, Lyall in 1860; Lake Chelan, Lake & Hull 445; Pullman, Piper 1871; Blue Mountains, Piper, July, 1896; Wawawai, Piper 3817, 3816; without locality, Vascy 215, 216; without locality, Cooper 1854; Spokane, Kreager 554; Challam County, Elmer 2661.

Zonal distribution: Transition and Upper Sonoran.

CEANOTHUS.

Leaves alternate; erect shrubs.

Deciduous; leaves subentire; flewers usually blue............ 4. C. integerrimus.

1. Ceanothus prostratus Benth. Pl. Hartw. 302, 1848.

Type locality: "In montibus Sacramento," California.

Range: Washington to California.

Specimens examined: Falcon Valley, Suksdorf 641, 343; Klickitat Valley, Howell, May, 1878; Klickitat County, Brandegee 693.

2. Ceanothus velutinus Dougl.; Hook, Fl. Bor. Am. 1: 125, 1830. STICKY LAUREL. Type locality: "Subalpine hills near the source of the Columbia; and at the Kettle Falls." Collected by Douglas. The latter locality is in Stevens County, Washington.

Range: Washington to California, Colorado, and Dakota.

Specimens examined: Wenache Mountains, Whited 1109; Cedar Mountains, Elmer 800; Tacoma, Flett 173; Falcon Valley, Suksdorf 962; Clealum, Henderson, June, 1892; Whited 406; Peshastin, Sandberg & Leiberg 477; Kettle Falls, Douglas; Kamiak Butte, Sandberg, Heller & MacDongal 501; Columbia River, Lyall in 1860; without locality, Yasey 221; Box Canyon, Kreager 387; Clealum Lake, Colton 859.

ZONAL DISTRIBUTION: Transition.

The Sandberg, Heller, & MacDougal specimen has been published as C. relatious lacvigatus Torr. & Gr., a but it is better referred to the species.

3. Ceanothus sanguineus Pursh, Fl. 1: 167, 1814.

Buckbrush.

Ceanothus oregonus Nutt.; Torr. & Gr. Fl. 1: 265, 1838.

Type locality: "Rocky Mountains on the banks of the Missouri." Collected by Lewis. RANGE: British Columbia to Idaho and California.

Specimens examined: Olympia, Henderson, May, 1892; Nisqually Valley, Allen 111; Wenache Mountains, Whited, June 23, 1901 and 1233; Falcon Valley, Suksdorf 107; Manor, Piper, July 14, 1899; Vancouver, Piper, July 11, 1899; Trout Lake, Flett 1208; Cascade Mountains, latitude 49°, Lyall; Nason Creek, Sandberg & Leiberg 628; Kamiak Butte, Piper, July 20, 1899; Blue Mountains, Lake & Hull, July, 1892; Easton, Whited 403; Clallam County, Elmer 2659, 2660.

Zonal distribution: Transition.

The actual type specimen of this species is probably the sheet from the Lambert Herbarium, now in the Philadelphia Academy of Sciences. This is labeled "Ceanothus atropurpurcus. Near the foot of the Rocky Mountains on Collins Creek, June 27, 1806." Collins Creek is in Idaho, now known as Lolo Creek.

4. Ceanothus integerrimus Hook. & Arn. Bot. Beech. Vey. 329, 1839-40.

Type locality: California.

Range: Washington to California.

Specimens examined: West Klickitat County, Suksdorf 10; Dalles for the Washington side! Lyall, Suckley: Bingen, Piper, September, 1903.

According to Dr. E. L. Greene a the type of C, integerrimus proves to be the same as C, and ersonii Parry. On this account the name C, nevadensis Kellogg is taken up for the Californian plant, while the Washington and northern Oregon plant is considered a distinct species C, peduncularis Greene, b

MALVACEAE. MALLOW FAMILY.

Style branches filiform.			

Stamens simply monadelphous; bractlets 3. Malva.
Stamens united in two series; bractlets none. Sidalcea.

Style branches each tipped with a capitate stigma.

Ovules 1 to 3 in each cell, ascending. Sphaeralcea.

Ovules solitary, pendulous. Sida.

MALVA.

 Leaves 5 to 9-lobed; carpels puberulent.
 1. M. rotundifolia.

 Cauline leaves dissected; carpels very hairy.
 2. M. moschata.

Malva rotundifolia L. Sp. Pl. 2: 688, 1753.

Mallow.

Type locality: "Habitat in Europae ruderatis, viis, plateis."

Specimens examined: North Yakima, Watt, August, 1895; Colfax, Hardwick, August, 1895; Meyers Falls, Kreager, August 28, 1902; Port Crescent, Lawrence 294.

2. Malva moschata L. Sp. Pl. 2: 690, 1753.

Musk Mallow.

Type locality: "Habitat in Italia, Gallia."

Specimens examined: Montesano, Heller 4030; Puyallup, Piper, September, 1895.

Malva borealis Wallm, is included by Suksdorf in his list. We have seen no Washington specimens.

SIDALCEA.

Flowers red; mature carpels smooth. 1. 8. hendersonii.
Flowers pink; mature carpels rugose.
Calyx canescent; stems puberulent. 2. 8. oregana.

Sidalcea hendersonii S. Wats, Proc. Am. Acad. 23: 262, 1888.

Type locality: Clatsop Bay, Oregon. Collected by Henderson.

Range: Seacoast, Vancouver Island to Oregon.

Specimens examined: Whidby Island, Gardner, 58; Hoquiam, Lamb 1218; near Everett, Claypool, September, 1895; Seattle, Piper 723; Everett, Piper 4915.

Zonal distribution: Humid Transition.

2. Sidalcea oregana A. Gray, Pl. Fendl. 20, 1848.

Sida oregana Nutt.; Torr. & Gr. Fl. 1: 234, 1838.

Type locality: "West side of the Rócky Mountains." Collected by Nuttall.

Range: Idaho and Washington to California.

Specimens examined: Skamania County, Suksdorf 2448; Falcon Valley, Suksdorf, July 20, 1886, and 2446; west Klickitat County, Suksdorf 2447, 2449; Klickitat River, Flett 1014; Ellensburg, Whited 486; Tieton River, Cotton 458; Coulee City, Lake & Hull, August, 1892; Henderson 2433; Blue Mountains, near Waitsburg, Piper 2396; Cow Creek, Griffiths & Cotton 534.

ZONAL DISTRIBUTION: Arid Transition.

The plant listed by Suksdorf as "S. spicata Greene!" seems to be referable to S. oregana.

3. Sidalcea campestris Greene, Bull. Cal. Acad. 1: 76, 1885.

Sidalcea asplenifolia Greene, Pittonia 3: 158, 1897.

Type locality: Oregon. Collected by Howell.

Range: British Columbia to California.

Specimens examined: North Yakima, Watt. August, 1895; Wenas River, Henderson, June 17, 1892, 2436; between Wenache and Ellensburg, Whited, August 13, 1896; Peshastin, Sandberg & Leiberg 586; Pullman, Piper 1644, 1645; Lake & Hull 428; Henderson 2434; Union Flat, Hull 428; Medical Lake, Henderson, July 12, 1892; Seattle, Piper.

Zonal distribution: Transition.

SPHAERALCEA.

1. Sphaeralcea munroana (Dougl.) Spach, Hist. Veg. 3: 353, 1834.

Malva munroana Dougl.; Lindl. Bot. Reg. 16: pl. 1306, 1830.

Type locality: "Upon the barren plains of the Columbia." Collected by Douglas.

Range: British Columbia to Nevada and Wyoming.

Specimens examined: Wenache, Whited 1120; Elmer 526; North Yakima, Piper 1819; Watt, August, 1895; Mrs. Steinweg in 1894; near Yakima River, Suksdorf 259; Columbia River, latitude 46° to 49°, Lyall; Snipes Mountain, Cotton 390; Prosser, Henderson, May, 1892; Pasco, Hindshaw 3; Piper 2991; between Coulee City and Waterville, Spillman, May, 1896; Wilson Creek, Lake & Hull 759; junction Crab and Wilson Creek, Sandberg & Leiberg 276; Coulee City, Piper 3846; Soap Lake, McKay 9; Washtuena, Elmer 1040; opposite mouth Wenache, Watson, October 14, 1880.

Zonal distribution: Upper Soboran.

2. Sphaeralcea rivularis (Dougl.) Torr. in A. Gray, Pl. Fendl. 23, 1848.

Malva rivularis Dougl.; Hook. Fl. Bor. Am. 1: 107, 1830.

Sphaeraleca accrifolia Nutt.; Torr. & Gr. Fl. 1: 228, 1838.

Type locality: "Common on the banks in North-West America, from the ocean to the Rocky Mountains." Collected by Douglas.

Range: British Columbia to Dakota and Nevada.

Specimens examined: Columbia River, latitude 43° to 49°, Lyall in 4860; Mount Adams, Flett 1015; Columbus, Suksdorf, June 40, 4886; Naches Valley, Henderson, June, 1892; Wenache, Whited 225; Meyers Falls, Kreager 600; Rock Lake, Lake & Hull, 427; Almota, Piper 1790; Wawawai, Piper 4643; Blue Mountains, Piper 2443; Lake & Hull, 427; Guy, Elmer 42; Pullman, Piper, July 15, 1901.

Zonal distribution: Upper Sonoran and Arid Transition.

3. Sphaeralcea longisepala Torr. Bot. Wilkes Exped. 255, 1874.

Type locality: "Upper Columbia, Washington Territory." Collected by the Wilkes Expedition.

Range: Kittitas and Chelan counties, Washington.

Specimens examined: Rock Island, Sandberg & Leiberg 430; Wenache Mountains, Whited 1291; banks of Columbia near mouth of Wenache, Tweedy 918; Brandegee 692.

Zonal distribution: Upper Sonoran.

SIDA.

Sida hederacea (Dougl.) Torr. in A. Gray, Pl. Fendl. 23, 1848.

Malva hederacea Dougl.; Hook. Fl. Bor. Am. 1: 107, 1830.

Malva plicata Nutt.; Torr. & Gr. Fl. 1: 227, 1838.

Sida obliqua Nutt.; Torr. & Gr. Fl. 1: 233, 1838.

Type locality: "In the interior districts of the Columbia." Collected by Douglas.

Range: Washington to California and Texas.

Specimens examined: Walla Walla, Douglas, according to Hooker.

It is not certain that this species really occurs in Washington limits, though the above specimen was apparently collected by Douglas at old Fort Walla Walla.

HYPERICACEAE. St. Johnswort Family.

HYPERICUM. St. Johnswort.

Plants low, forming dense mats.

Alpine; leaves crowded; flowers solitary..................... 2. II. bryophytum. Not alpine; leaves not crowded; flowers often several....... 1. II. anagalloides. Plants erect, simple or nearly so.

Stamens 5 to 10; stems about 30 cm. high..................... 3. II. canadense.

Stamens numerous; stems tall.

Hypericum anagalloides Cham. & Schlecht. Linnaca 3: 127, 1828.

Type locality: San Francisco, California.

RANGE: British Columbia to California and Montana.

Specimens examined: Seattle, Piper in 1885; Woodlawn, Henderson, June 22, 1892; Montesano, Heller 3916.

Zonal distribution: Humid Transition.

Hypericum anagalloides nevadense Greene, Fl. Fran. 113, 1891.

Type locality: "Foothills of the Sierra."

Range: Washington to California.

Specimens examined: Pullman, Piper 2650.

2. Hypericum bryophytum Elmer, Bot. Gaz. 36: 60, 1903.

Type locality: Olympic Mountains, Clallam County, Washington. Collected by Elmer.

Range: Mountains of Washington.

Specimens examined: Olympic Mountains, Elmer 2833; Big Creek Prairie, Lamb 1399; Cascade Mountains, latitude 49°, Lyall in 1859; Bridge Creek, Elmer, September, 1897; Horseshoe Basin, Lake & Hull 783; Mount Rainier, Piper, August, 1895; upper Nisqually Valley, Allen 117; Nason Creek, Sandberg & Leiberg 607; without locality, Vascy in 1889. Zonal distribution: Acetic.

3. Hypericum canadense majus A. Gray, Man. ed. 5, 86, 1867.

Type locality: Lake Superior.

Range: Washington to New Brunswick, south to Texas and Georgia.

Specimens examined: Green Lake, Piper 1115.

4. Hypericum perforatum L. Sp. Pl. 2: 785, 1753.

Type locality: European.

Specimens examined: Vancouver, Suksdorf: Piper, July 14, 1899.

5. Hypericum scouleri Hook. Fl. Bor. Am. 1: 111. 1830.

Hypericum formosum scouleri Coult. Bot. Gaz. 11: 108, 1886.

Type locality: "Abundant in dry gravelly soils and limestone rocks on the North-West coast of America, near the Columbia." Collected by Scouler and by Douglas.

Range: British Columbia to Arizona and New Mexico.

Specimens examined: Tacoma, Flett 120, 90; North Yakima, Watt, August, 1895; Montesano, Heller 4037; Columbus, Suksdorf June 10, 1886; Columbia River, Lyall in

1860; Egbert Springs, Sandberg & Leiberg 361; Wenache, Whited 1253; Ellensburg, Whited 499; Tieton River, Cotton 454; Muckleshoot, Dr. Ruhn; Seattle, Piper in 1885; Mission, Kreager 486; valley of Columbia below the Chelan, Watson, October 14, 1880; without locality, Vasey in 1889; Pullman, Elmer 880; Piper 1653; Hull 656; Tukanon River, Lake & Hull, July, 1892; Rattlesnake Mountains, Cotton 693; Cleahun Lake, Cotton 853, Zonal, Distribution: Upper Sonoran and Transition.

ELATINACEAE. Waterwort Family.

Plants glabrous; flowers parts 2 to 4. Elatine.
Plants pubescent; flower parts 5. Bergia.

ELATINE.

Flower parts 2 or 3; seeds nearly straight. 1. E. triandra.
Flower parts 4; seeds strongly curved. 2. E. californica.

1. Elatine triandra Schkuhr, Handb. 1: 345. pl. 109b. f. 2. 1791.

Type locality: Germany.

Range: Illinois, Nebraska, Wyoming, Washington. Europe.

Specimens examined: Usk, Kreager 367.

Elatine californica A. Gray, Proc. Am. Acad. 13: 361, 364, 4878.

Type localaty: "In Sierra Valley, on the Sierra Nevada, alt. 5000 feet," California, Collected by Lemmon.

Range: Washington to California.

Specimens examined: Spokane County, Suksdorf 258; Spokane, Piper 2643.

Zonal distribution: Arid Transition.

BERGIA.

1. Bergia texana (Hook.) Scub.; Walp. Repert. 1: 285, 1842.

Merimea texana Hook. Ic. 3: pl. 278, 1840.

Elatine texana Torr. & Gr. Fl. 1: 678, 1840.

Type locality: Texas. Collected by Drummond.

RANGE: Washington to California and Texas.

Specimens examined: West Klickitat County, Suksdorf 959, 618; Almota, Piper, September, 1897.

Zonal distribution: Upper Sonoran.

VIOLACEAE. VIOLET FAMILY.

Caulescent.

Flowers yellow.

Stems prostrate, stolon-like; leaves evergreen.

Leaves cordate; leafy branches producing petaliferous flowers. 6, V, sempervirens.

Leaves reniform; leafy branches producing only cleisto- gamous flowers.	7.	V. orbiculata.
Stems erect, not stoloniferous; leaves not evergreen.	•	
Leaves palmately dissected.	11.	I'. sheltonii.
Leaves not dissected.		
Herbage pubescent; leaves lanceolate to ovate, sub-		
entire	8.	V. nuttallii.
Herbage glabrous.		
Leaves ovate, veined, simuate-dentate or lobed		
Leaves cordate or reniform, acuminate	10.	$V.\ glabella.$
Flowers blue or violet.		
Leaves dissected into narrow lobes.	12.	$V.\ trinervata.$
Leaves cordate, not dissected.		
Stipules scarious, entire.		
Leaves cordate, acuminate	13.	V. canadensis.
Leaves reniform, obtuse.	14.	V. flettii.
Stipules herbaceous, at least some of them serrate or in-		
eised.		
Leaves usually brown-dotted, at least beneath;		
stipules all serrate or laciniate.		
Herbage glabrous or nearly so.	16.	V. adunca.
Herbage pubescent, the pubescence retrorse	17.	V. retroscabra.
Leaves dotless; cauline stipules entire		
1. Viola macloskevi Llovd, Erythea 3: 74, 1895.		

Viola macloskeyi Lloyd, Erythea 3: 74, 1895.

Type locality: "In the Cascades, Oregon."

Range: British Columbia to Oregon.

Specimens examined: Scattle, Piper; Tacoma, Flett 108, 2222; Olympia, Henderson 2054.

Zonal distribution: Humid Transition.

This species has commonly been referred to V. blanda Willd., but it seems distinct.

2. Viola nephrophylla Greene, Pittonia 3: 141, 1896.

Viola cognata Greene, Pittonia 3: 145, 1896.

Viola subjuncta Greene, Pittonia 5: 31, 1902.

Type locality: "Valley of the Cimarron River, western Colorado."

RANGE: British Columbia to Saskatchewan and Maine, south to Colorado.

Specimens examined: Admiralty Head, Piper, May, 1898; Columbus, Suksdorf, April 13, 1886; Ellensburg, Piper, May 21, 1897; North Yakima, Piper 1836; Henderson 2500; Rock Lake, Piper 2798; Medical Lake, Sandberg & Leiberg 56.

Zonal distribution: Arid Transition.

3. Viola cuspidata Greene, Pittonia 3: 314, 1898.

Type locality: Rock County, Wisconsin.

Range: Washington to Wisconsin.

Specimens examined. Pend Oreille River, Lyall in 1861.

4. Viola langsdorfii Fischer; DC, Prod. 1: 296, 1824.

Type locality: "In insula Unalaschka."

Range: Alaska to Oregon.

Specimens examined: Port Crescent, Lawrence 273.

5. Viola palustris L. Sp. Pl. 2; 934, 1753.

Type locality: European

RANGE: Alaska to Labrador, southward to Colorado and the White Mountains. Europe. Asia.

Specimens examined: Clallam County, Elmer 2794; Olympic Mountains, Piper, August, 1895; Cascade Mountains, latitude 49°, Lyall in 1858; Seattle, Piper 1017; Tacoma, Flett 88; Nisqually Valley, Allen 57; Westport, Lamb 1097; Mount Adams, Suksdorf July 12, 1886; Klickitat County, Suksdorf in 1878; Silverton, Bouck 25; Wenache Mountains, Elmer 442; Mount Rainier, Flett 2178.

Zonal distribution: Humid Transition to Hudsonian.

6. Viola sempervirens Greene, Pittonia 4: 8, 4899.

Viola sarmentosa Dougl.; Hook. Fl. Bor. Am. 1: 80, 1830, not Bieb. 1808-1819.

Type locality: "Near Fort Vancouver and in the high grounds of Lewis and Clarks River, N. W. America." Collected by Douglas.

Range: British Columbia to California in the coast region.

Specimens examined: Montesano, Heller 3888; Scattle, Piper in 1885; Silverton, Bouck 25; Whidby Island, Piper, April, 1898; upper Nisqually Valley, Allen 56; without locality, Henderson, May, 1892; Walla Walla, Nuttall.

Zonal distribution: Humid Transition.

7. Viola orbiculata Gever; Hook, Lend. Journ. Bot. 6: 73, 1847.

Viola sarmentosa orbiculata A. Gray, Syn. Fl. 1: 199, 1895.

Type locality: Cocur d'Alene Mountains, Idaho. Collected by Geyer.

Range: Idaho and adjacent Washington.

Specimens examined: Blue Mountains, Horner 60; Usk, Kreager 369.

ZONAL DISTRIBUTION: Arid Transition and Canadian.

8. Viola nuttallii Pursh, Fl. 1: 174, 1814.

Viola linguaciolia Nutt.; Torr. & Gr. Fl. 1: 141, 1838.

Type locality: "On the banks of the Missouri."

RANGE: British Columbia and Saskatchewan to California and Colorado.

Specimens examined: West Klickital County, Suksdorf 248; Fort Vancouver, Tolmic; without locality, Cooper; near Fort Colville, Lyall in 1861; Spokane Valley, Lyall in 1861; Roy, Allen, May 6, 1889; Waterville, Whitel 1216; Pullman, Hull 418; Spangle, Suksdorf 248.

Zonal distribution: Arid Transition.

A very variable species and possibly, as here accepted, a complex of several. More field study and abundant specimens are necessary to clear up this matter.

8a. Viola nuttallii praemorsa (Dougl.).

Viola praemorsa Dougl. Bot. Reg. 15: pl. 1354, 1829.

Type locality: "On the banks of the Columbia, and the plains of the River Aguilar, in California." Collected by Douglas.

Range: Washington to California in the coast region.

Specimens examined: Whidby Island, Gardner 30; Tacoma, Flett 17.

8b. Viola nuttallii major Hook. Fl. Bor. Am. 1: 79, 1830.

Viola glarcosa Dougl.; Hook, loc. cit. as synonym.

Viola flavovirens Pollard, Bull. Torr. Club 24: 405, 1897.

Type locality: "Abundant under the shade of pines on the dry sandy plains of the Columbia." Collected by Douglas.

Specimens examined: Blue Mountains, Horner 58; Spokane, Sandberg & Leiberg 47; near Almota, Piper 1715; Ellensburg, Whited, April 18, 1897.

9. Viola venosa (S. Wats.).

Viola aurea venosa S. Wats. in Brewer & Wats. Bot. Cal. 1: 56, 1876.

Viola nuttallii venosa S. Wats. Bot. King. Explor. 35, 1871.

Viola praemorsa venosa A. Gray, Syn. Fl. 1: 200, 4895.

Type locality: "In the mountains from the West Humboldt to the Wahsatch, usually near the snow line."

RANGE: Washington to Nevada and California.

Specimens examined: Mount Stuart, Brandegee 648; Klickitat County, Suksdorf in 1878; Falcon Valley, Suksdorf, May 9, 1886; Klickitat River, Flett 1063; Blue Mountains, Piper 2432.

ZONAL DISTRIBUTION: Hudsonian.

10. Viola glabella Nutt.; Torr. &. Gr. Fl. 1: 142, 1838.

Type locality: "Shady woods of the Oregon." Collected by Nuttall.

RANGE: Alaska to California and Idaho.

Specimens examined: Clallam County, Elmer 2796; Silverton, Bouck 27; Paradise Valley, Flett 290; upper Nisqually Valley, Alten 55; Skokomish Valley, Kincaid, May 11, 1892; west Klickitat County, Suksdorf, June 24, 1886; Wenache Mountains, Whited 1244; Columbia woods, Nuttall; Pend Oreille River, Lyall in 1861; without locality, Cooper; Mount Carlton, Kreager 204, 253; Blue Mountains, Piper, July 15, 1896; Ilwaco, Piper 4918.

ZONAL DISTRIBUTION: Canadian, rarely Transition.

11. Viola sheltoni Torr. Pac. R. Rep. 4: 67-1856.

Type locality: Yuba, California.

RANGE: Washington to California.

Specimens examined: White Salmon Valley, Suksdorf 5.

12. Viola trinervata Howell; A. Gray, Bot. Gaz. 11: 290, 1886.

Viola beckwithii trinervata Howell, Bot. Gaz. 8: 207, 1883.

Viola chrysantha glaberrima Torr, Bot. Wilkes Exped, 238, 1874, not Viola hastata glaberrima Ging, 1824.

Type locality: Near Goldendale, Washington.

Range: Central Washington.

Specimens examined: Goldendale, Howell 59; Ellensburg, Whited 264; North Yakima, Watt in 1892; Piper, April, 1903; Henderson, May 27, 1892; Kittitas Mountain, Whited 40; Klickitat, Howell, April, 1882, 1878; North Yakima, Nevius, March, 1889; Simcoe Mountains, Suksdorf 249; between Spipen and Columbia, Pickering & Brackenridge; Klickitat River, Flett 1062; Waterville, Whited 1215; Coulee City, Piper 3865.

Zonal distribution: Upper Sonoran.

13. Viola canadensis L. Sp. Pl. 2: 936, 1753.

Viola geminiflora, Greene, Pittonia 5: 29, 1902.

Type locality: Canada.

RANGE: Washington to Newfoundland, south to Arizona and Carolina.

Specimens examined: Nason Creek, Sandberg & Leiberg 672.

14. Viola flettii Piper, Erythea 6: 69, 1898.

Type locality: Near Mount Constance, Olympic Mountains, Washington. Collected by Flett.

Range: Olympic Mountains.

Specimens examined: Olympic Mountains, Flett 106, July 20, 1897, August, 1898; Henderson 1847; Mount Elinor, Jennie V. Getty, August, 1902.

Zonal distribution: Hudsonian.

15. Viola howellii A. Gray, Proc. Am. Acad. 22: 308, 1887.

Viola subcordata Greene, Pittonia 3: 316, 1898.

Type locality: "Damp fir woods in the vicinity of Portland, Oregon." Collected by Howell.

Range: British Columbia to Oregon west of the Cascade Mountains.

Specimens examined: Coupeville, Gardner 28, 29; Scattle, Piper 1020; Meany 237; Tacoma, Flett 80, 107; Coupeville, Gardner 31; Olympia, Henderson, May 24, 1892; Olympic Mountains, Piper, August, 1895.

ZONAL DISTRIBUTION: Humid Transition.

16. Viola adunca Smith; Rees' Cycl. 37: no. 63. 1817.

Viola longipes Nutt.; Torr. & Gr. Fl. 1: 140, 1838.

Viola canina adunea A. Gray; Proc. Am. Acad. 8:377, 1872.

Type locality: "From the west coast of North America." Collected by Menzies.

Range: Alaska to California and Arizona.

Specimens examined: Clallam County, Elmer 2795; Oreas Island, Lyall 1861; Muckleshoot, Dr. Ruhn; Seattle, Smith, May 3, 1889; Mount Rainier, Piper 2138 in part; Montesano, Heller 3928; Westport, Lamb 1102; Rockland, Suksdorf, April 10, 1858; Klickitat River, Flett 1061; Falcon Valley, Suksdorf 522; Roy, Allen, May 3, 1889; White Bluff Ferry, Lake & Hull, August 10, 1892; Yakima, Leckenby, April 22, 1898; Mrs. Steinweg; Ellensburg, Whited 274, 346, 366; Badger Mountain, Whited 1217; Fort Colville, Lyall 1861; Spangle, Suksdorf 246; without locality, Vascy 202; Rock Creek, Piper 2795; Spokane, Piper, May 8, 1898, 2824; Sandberg & Leiberg 33; Pullman, Piper 1714, Elmer 123, Hall 417; Waitsburg, Horner 55, 54.

Zonal distribution: Upper Sonoran to Hudsonian.

 $\dot{\Lambda}$ very variable species. The alpine forms especially are aberrant and perhaps constitute a different species.

16a. Viola adunca oxyceras (S. Wats.)

Viola canina oxyceras S. Wats, in Brewer & Wats, Bot, Cal. 1: 56, 1876.

Type locality: "In the Sierra Nevada, in Yosemite Valley, and near Donner Pass."

Range: Washington to California.

Specimens examined: North Yakima, Henderson 2501.

17. Viola retroscabra Greene, Pittonia 4: 290. 1901.

Type locality: Southern Colorado.

RANGE: Washington and Montana to Colorado.

Specimens examined: Olympic Mountains, Piper, August, 1895; Mount Rainier, Piper 2138 in part; Allen, July, 1892; Methow River, Whited 185; Klickitat River, Suksdorf 523; Stevens Pass, Sandberg & Leiberg 739.

ZONAL DISTRIBUTION: Hudsonian.

Viola tricolor L., the garden pansy occasionally occurs as an escape.

VIOLA HALLII Gray, listed by Suksdorf, probably does not grow within our limits.

LOASACEAE. LOASA FAMILY.

MENTZELIA.

Biennials: flowers large; placentae with 2 rows of ovules, which are separated by horizontal lamellae.

Petals 2.5 to 3 cm. long; capsule 1.5 cm. long 1. M. brandeqei.

Petals 5 to 6 cm. long; capsules 3 cm. long. 2. M. laccicaulis.

Annuals; flowers small; placentae each with a single row of ovules; no

horizontal lamellae.

Leaves not pinnatifid; seeds not tuberculate.

Seeds nearly smooth with grooved angles, leaves ovate, entire

or sinuate-dentate. 4. M. integrifolia.

Seeds sharply angled and pitted; leaves linear, entire 5. M. tenerrima.

Mentzelia brandegei S. Wats, Proc. Am. Acad. 20: 367, 1885.

Type locality: "Near the Simcoe Mountains on the mesa bordering Satus Creek," Washington. Collected by Brandegee.

RANGE: Known only by the type collection.

Specimens examined: Without locality, Brandeger 792.

2. Mentzelia Iaevicaulis (Dougl.) Torr. & Gr. Fl. 1: 535, 1840,

Bartonia laevicaulis Dougl.; Hook. Fl. Bor. Am. 1; 221, 1833.

?Bartonia parviflora Dougl. loc. cit.

Type locality: "On the gravelly islands and rocky shores of the Columbia, near the 'Great Falls;' llowering in June and July." Collected by Douglas.

Range: Washington to California and Utah.

Specimens examined: West Klickitat County, Suksdorf 1679; Wenache, Whited 24; North Yakima, Watt, August, 1895; Parker, Cotton 433; Coulee City, Lake & Hull 439; Egbert Springs, Sandberg & Leiberg 378; Spokane, Piper, September, 1896, July, 1894; Loon Lake, Winston, July 20, 1897; Waitsburg, Horner 312; without locality, Vascy in 1889; Almota, Piper, August, 1894; Lake Kalispel, Kreager 329; Prosser, Cotton 808; Moses Lake, Cotton 611.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

3. Mentzelia albicaulis Dougl.; Hook. Fl. Bor. Am. 1: 222, 1833.

Bartonia albicaulis Dougl.; Hook. Fl. Bor. Am. 1: 222, 1833.

Type locality: "On arid sandy plains of the river Columbia." Collected by Douglas.

RANGE: Washington to California, Nebraska, and New Mexico.

Specimens examined: Wenache, Whited 1122; North Yakima, Watt, August, 1895; Flett 1041; Ellensburg, Piper 2682; Simcoe Valley, Lyall in 1860; without locality, Uascy in 1889; "Barren grounds of the Columbia," Douglas: Pasco, Hindshaw 7; Piper 2975; Ritzville, Sandberg & Leiberg 160; Clarks Springs, Kreager 115; Moses Lake, Cotton 615.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

4. Mentzelia integrifolia (S. Wats.) Rydberg, Mem. N. Y. Bot. Gard. 1: 271, 1901.

Mentzelia albicanlis integrifolia S. Wats. Bot. King Explor, 114, 1871.

Mentzelia dispersa S. Wats. Proc. Am. Acad. 11: 137, 1876.

Type locality: East Humboldt Mountains, Nevada.

RANGE: Washington and Montana to California and Colorado.

Specimens examined: Similkameen, Lyall in 1860; Wenache, Whited 1121; Tumwater Canyon, Sandberg & Leiberg 519; Ellensburg, Elmer, July, 1897; Piper 2739; Spokane, Piper 1846; Leiberg 20; Marshall Junction, Piper 2252; without locality, Vascy in 1889; Wawawai, Lake & Hull 586; Wenas, Cotton 84.

Zonal distribution: Arid Transition and Upper Sonoran.

5. Mentzelia tenerrima Rydberg, Mem. N. Y. Bot. Gård. 1: 271, 1900.

Type locality: "Foot of Electric Peak," Montana.

Range: Washington to Montana.

Specimens examined: Klickitat River, Flett 1017.

CACTACEAE. CACTUS FAMILY.

Plants jointed, the segments flat; leaves subulate and deciduous. Opuntia.

Plants globose or ovoid, tubereled. Cactus.

OPUNTIA. PRICKLY PEAR.

Joints tumid, ovate, rarely 5 cm. long. 2. 0. fragilis.

Joints compressed, orbicular, or elliptic, 5 to 10 cm. long.

Opuntia polyacantha Haw, Suppl. Pt. Succ. 82, 1819.

Cactus ferox Nutt. Gen. 1: 296, 1818, not Willd. 1809.

Opuntia missouriensis DC. Prod. 3: 472, 1828.

Type locality; "In arid situations on the plains of the Missouri."

RANGE: British Columbia to North Dakota, south to Arizona and New Mexico.

Specimens examined: Kennewick, Piper: Morgans Ferry, Suksdorf 314; Walla Walla to Fort Colville, Lyall in 1860; Almota, Piper.

Zonal distribution: Upper Sonoran.

1a. Opuntia polyacantha borealis Coulter, Contr. Nat. Herb. 3: 436, 1896.

Opuntia missouriensis microsperma Engelm. & Bigel. Pac. R. Rep. 4: 46, 1856, not O. mesacantha microsperma Engelm.

Type locality: "On the Missouri about Fort Pierre."

Range: British Columbia to Oregon and South Dakota.

Specimens examined: Whidby Island, Gardner, July, 1897; Sucia Island, Randolph.

Zonal distribution: Humid Transition.

2. Opuntia fragilis (Nutt.) Haw. Suppl. Pl. Succ. 82, 1819.

Cactus fragilis Nutt. Gen. 1: 296, 1818.

Type locality: "From the Mandans to the mountains, in sterile but moist situations," probably in North Dakota.

RANGE: South Dakota to British Columbia and Colorado.

Specimens examined: Rock Island, Chelan County, Sandberg & Leiberg 441, July 13, 1893.

ZONAL DISTRIBUTION: Probably Upper Sonoran.

CACTUS.

1. Cactus sp. indet.

Specimens examined: Sentinel Bluffs, Cotton, July 14, 1903; Wenache Mountains, Cotton 1570; Near Egbert Springs, according to Leiberg.

ZONAL DISTRIBUTION: Upper Sonoran.

This species is quite certainly new, but can not be satisfactorily described at present.

ELEAGNACEAE. OLEASTER FAMILY.

LEPARGYREA.

1. Lepargyrea canadensis (L.) Greene, Pittonia 2: 122, 1890. Buffalo Berry.

Hippophae canadensis L. Sp. Pl. 2: 1024, 1753.

Shepherdia canadensis Nutt. Gen. 2: 240, 1818.

Type Locality: "Habitat in Canada."

Range: Alaska to Newfoundland, southward to Oregon, Utah, and New York.

Specimens examined: Fairhaven, Henderson, July 2, 1892; Piper 2806, September, 1892; Whidby Island, Gardner 264; Easton, Henderson, June 11, 1892; Semiamoo Bay, Lyall in 1858-59; without locality, Yasey in 1889; Fidalgo Island, Flett 2117; Conconully, Whited 1326; Griffliks & Cotton 316; Box Canyon, Kreager 400.

ZONAL DISTRIBUTION: Transition and Canadian.

In Gorman's paper on the Washington Forest Reserve appears the name Lepargyrea argentea. Mr. Gorman informs me, however, that the plant is really L. canadensis.

LYTHRACEAE. LOOSESTRIFE FAMILY.

Calyx tube cylindric, striate. Lythrum.
Calyx tube campanulate.
Capsule bursting irregularly Ammanna.
Capsule septicidally dehiscent Rotala.

LYTHRUM.

1. Lythrum hyssopifolia L. Sp. Pl. 1: 447, 1753.

Type locality: "Habitat in Germaniae, Helvetiae, Angliae, Gallia inundatus."

RANGE: Maine to New Jersey. Washington to California. Introduced from Europe.

Specimens examined: Lake Washington, Suksdorf 971; Seattle, Smith 100; Piper 1049, July, 1895.

This was included in Suksdorf's list as L. album H. B. K. The species has long been established and appears native.

AMMANNIA.

1. Ammannia coccinea Rottb. Pl. Hort. Havn. Descr. 7, 1773.

Ammannia latifolia Torr. & Gr. Fl. 1: 480, 1840.

Type locality: Not ascertained.

RANGE: Washington to Indiana and Florida. Central and South America.

Specimens examined: West Klickitat County, Suksdorf 1720.

ROTALA.

Rotala ramosior (L.) Koehne; Mart. Fl. Bras. 13²: 194, 1874.

Ammannia ramosior L. Sp. Pl. 1: 120, 1753.

Ammannia humilis Michx. Fl. 1: 99, 1803.

Type locality: Virginia.

RANGE: Washington to Massachusetts, southward to Central and South America.

Specimens examined: Lake Chelan, Lake & Hall, August, 1892; Spokane County, Suksdorf 303; Spokane, Piper 2644; Almota, Piper, September, 1897.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

ONAGRACEAE. EVENING PRIMROSE FAMILY.

Parts of the flower in twos; fruit indehiscent............ CIRCAEA (p. 399). Parts of Hower in fours. Fruit few-seeded, nut-like; leaves alternate................. Gaura (p. 399). Fruit many-seeded. Calvx limb divided to the ovary, persistent, petals minute or wanting Isnardia (p. 399). Calvx limb deciduous: petals conspicuous. Seeds comose; lower leaves mostly opposite..... Ериовим (р. 399). Seeds naked, not comose: leaves all alternate. Anthers versatile. Stamens of equal length. Stigmas deeply 4-cleft, the lobes linear. Ovules in 1 row; flowers yellow. Oenothera (p. 407). Ovules in 2 rows; flowers pink. Anogra (p. 407). Stigmas entire or nearly so. Calvx-tube longer than the Calvx-tube shorter than the Stamens of unequal length, the outer ones longest. Annuals, small-flowered; caulescent. Gayophyttm (р. 407). Biennials; large-flowered, acaulescent. Capsule 4-angled; seeds grooved Capsule 4-winged; seeds not

grooved Lavauxia (p. 409).

Anthers not versatile.

Petals sessile.

Calyx lobes reflexed; petals entire... Godetia (p. 409). Calyx lobes erect; petals 2-lobed.... Boisduvalia (p. 410). Petals clawed; calyx lobes reflexed..... Clarkia (p. 411).

CIRCAEA.

 Leaves denticulate: racemes bractless.
 2. C. pacifica.

 Leaves dentate: racemes with minute bracts.
 1. C. alpina.

Circaea alpina L. Sp. Pl. 1: 9, 1753.

Type locality: "Habitat ad radices montium in frigidis Europae."

RANGE: Alaska to Labrador, southward to Washington, Dakota, and Georgia.

Specimens examined: Olympic Mountains, J. M. Grant 11: Skokomish Valley, Kineaid, May 29, 1892; Blue Mountains, Lake & Hull 533; Snoqualmie Falls, Piper, September, 1902; Quinault, Conard 133.

Zonal distribution: Canadian.

2. Circaea pacifica Aschers, & Magnus, Bot, Zeit. 29: 392, 1871.

Type locality: San Francisco, California.

RANGE: British Columbia and Idaho to California.

Specimens examined: Seattle, Piper 100; Silverton, Bouck: upper Nisqually Valley, Allen 301; near Skagit Pass, Lake & Hull 533; Peshastin, Sandberg & Leiberg; Blue Mountains, Piper 2409.

Zonal distribution: Transition.

GAURA.

1. Gaura parviflora Dougl.; Hook. Fl. Bor. Am. 1: 208, 1830; Lehm. Pug. 2: 15, 1830.

Type locality: "Sandy banks of the Wallawallah River." Collected by Douglas, according to Hooker.

RANGE: Washington to Dakota, Louisiana, and Mexico.

Specimens examined: Wawawai, Elmer 898; Piper, July, 1898, and 4629; without locality, Brandeque 789; Prosser, Cotton 741.

Zonal distribution: Upper Sonoran.

ISNARDIA.

Isnardia palustris L. Sp. Pl. 1; 120, 1753.

Ludwigia nitida Michx. Fl. 1: 87, 1803.

Ludwigia palustris Ell. Bot. S. C. & Ga. 1: 211, 1821.

Type locality: "Habitat in Galliae, Alsatiae, Russiae, Virginiae fluviis."

Range: Washington to Nova Scotia, southward to California, Mexico, and Florida, Europe. Asia.

Specimens examined: Yakima Region, Brandegee 777; Clarke County, Henderson, September 6, 1892; Waitsburg, Horner 585; Seattle, Piper in 1885.

ZONAL DISTRIBUTION: Humid Transition.

EPILOBIUM. WILLOW BERB.

Calyx tube not prolonged beyond the ovary; flowers large. Stems
1 to 2 m. tall; bracts small; style pubescent at base 1. E. angustifolium.
Stems 15 to 50 cm. high; bracts leaf-like; style glabrous 2. E. latifolium.

Calyx teeth prolonged beyond the ovary; flowers mostly small.

Flowers white or pink.

Annuals; leaves narrow; stigmas mostly 4-cleft.

Stems simple or but little branched, 8 to 20

Stems usually much branched, 30 to 90 cm.	
high; herbage glabrous or glandular.	
Flowers small, 10 to 15 mm, broad	
Flowers large, 20 to 40 mm. broad	
Demonstrate disease enhancing	jucundum.
Perennials; stigmas subentire.	
Stems tall, 30 to 90 cm. high.	
Leaves linear-oblong, sessile, nearly entire, the	P. F
margins revolute	6. E. palustre.
late, not revolute.	
Petals 6 to 10 mm, long; herbage canescent-	- E P
puberulent	7. E. franciscanum.
Petals 3 to 5 mm, long; herbage not canes-	
cent-puberulent.	
Capsule pedicelled.	
Pedicels shorter than the capsules;	S. L. Jtun
leaves ovate-lanceolate, petiolate	5. E. une nocumon.
Pedicels equaling the capsules;	
leaves oblong-lanceolate, sessile,	0 E 1.11
decurrent	9. E. halleanum.
Capsule sessile: leaves ovate or elliptic,	10 E la sistala.
sessile	10. E. nrevisequim.
Stems low; species mostly alpine or subalpine.	
Seeds smooth.	
Leaves entire; plants creeping or stolon-	
iferous.	
Stems ascending, usually curved; leaves	11 F a. a. a. H. P. P
spreading, oval or oblong, thick	11. Е. ападаталующт.
Stems erect; leaves ascending, linear	19 E gov. cvo.
or oblong-lanceolate	12. E. oregonense.
Flowers white, 5 to 6 mm. broad	19 F. alminum
Flowers purple, 10 to 15 mm. broad	
	14. L. normemorne.
Seeds papillate. Foliage glaucous and glabrous	15 E fastigiatum
Foliage not glaucous.	10. 12. justigiatum.
Plants producing stolons.	
Leaves narrow, erect, keeled	
below	16 F windleavum
Leaves broader, spreading, not	To. 12. pringa acam.
keeled.	
Matted; leaves firm, pale	
green, sessile	17 F claratum
Not matted: leaves thin,	
bright green, petiolate	
Plants not producing stolons.	
Stems branched.	
Seeds 1 mm, long; stem pubes-	
cent in lines: pedicels about	
as long as the capsules	18. E. leptocarmim.
Seeds 2 mm. long; stems	<i>i</i>
pubescent but not in lines:	
pedicels much shorter than	
the capsules	19. E. mirabile.
the culture contract to	

Stems simple.

Herbage pilose-pubescent . . . 20. E. ursinum.

Herbage not pilose-pubescent.

Leaves sessile, narrow,

erect, acute 21. E. drammondii.

Leaves petioled, broadish,

spreading, obtuse..... 22. E. delicatum.

1. Epilobium angustifolium L. Sp. Pl. 1: 347, 1753.

FIREWEED.

Epilobium spicatum Lam. Fl. Fr. 3: 482. 1778.

Type locality: European.

RANGE: Alaska to Labrador, southward to California, New Mexico, and Carolina.

Specimens examined: Silverton, Bouck 77; Fish Lake, Dunn, August 1, 1900; near Egbert Springs, Sandberg & Leiberg 407; North Fork Bridge Creek, Elmer 637; Coulce City, Lake & Hull 528; Fort Colville, Lyall in 1860; Cascade Mountains, latitude 49°, Lyall in 1859; without locality, Vasey 242; Rock Lake, Lake & Hull, August, 1892; Clarks Springs, Kreager 126; Clallam County, Elmer 2566; North Yakima, Watt, August, 1895.

Zonal distribution: Upper Sonoran and Transition.

Ерцовим орасим, a said by Hooker to have been collected by Douglas and by Scouler about Fort Vancouver, is probably a form of E. angustifolium.

2. Epilobium latifolium L. Sp. Pl. 1: 347, 1753.

Type locality: Siberia.

Range: Arctic America, southward to Oregon, Colorado, and Canada.

Specimens examined: Olympic Mountains, Piper 2343; Mount Rainier, Smith 875; Silverton, Bouck; Horseshoe Basin, Lake & Hull 530; North Fork Bridge Creek; Elmer 664, Zonal distribution; Arctic.

3. Epilobium luteum Pursh, Fl. 1: 259, 1814.

Type locality: Northwest coast of America. Collected by Menzies.

Range: Alaska to Oregon.

Specimens examined: Mount Rainier, Flett 300; Piper, August, 1895; Allen 293; Mount Adams, Suksdorf 549; Stampede Tunnel, Henderson 2440; Horseshoe Basin, Lake & Hull 529; Mount Stuart, Elmer 1091; Stevens Pass, Sandberg & Leiberg 730; Cascade Mountains, latitude 49°, Lyall; Clallam County, Elmer 2560.

ZONAL DISTRIBUTION: Canadian and Hudsonian.

4. Epilobium paniculatum Nutt.; Torr. & Gr. Fl. 1: 490, 1840.

Type locality: "Plains of the Oregon and Rocky Mountains." Collected by Nuttall, Range: British Columbia to California, Arizona, and Colorado.

Specimens examined: Seattle, Piper 103; Silverton, Bonck in 1889; Tacoma, Flett 130; Nisqually Valley, Allen 14; Lake Park, Piper in 1895; Mount Stuart, Elmer 1092; Wenache, Whitel 1330, 1159; North Yakima, Watt in 1895; Tieton River, Cotton 488; Peshastin, Sandberg & Leiburg 538; Lake Chelan, Lake & Hull 525; Spokane, Piper 2361, 2360; Blue Mountains, Piper, August 2, 1896, 2358; Pullman, Piper 1631; Hull in 1892; without locality, Vasey in 1889; Spokane, Kreager 573, 536; Clallam County, Elmer 2558, 2561; Mount Carlton, Kreager 152.

Zonal distribution: Transition.

4a. Epilobium paniculatum jucundum (A. Gray) Trelease, Rep. Mo. Bot. Gard. 2: 85, 1891.

Epilobium jueundum A. Gray, Proc. Am. Acad. 12: 57, 1876.

Type locality: Scott Valley, California. Collected by Greene.

Range: Washington to California.

Specimens examined: Klickitat County, Suksdorf 17: Leavenworth, Whited 247.

Epilobium paniculatum is a very variable species, or perhaps a complex of several. Suksdorf, besides recognizing E. jucundum as a valid species, proposes two others, E. apricum and E. fasciculatum.a

5. Epilobium minutum Lindl.; Hook. Fl. Bor. Am. 1: 207, 1833.

Type locality: "North-West coast of America. Fort Vancouver. Near the Grand Rapids of the Columbia." Collected at these points respectively by Menzies, Scouler, and Douglas.

Range: British Columbia to California in the coast region mainly.

Specimens examined: Seattle, Piper 459; Whidby Island, Gardner 123; Cascade Mountains, latitude 49°, Lyall; Silverton, Bouck; Mount Stuart, Elmer 1203; Nisqually Valley, Allen 253; west Klickitat County, Suksdorf 81, 2108, 18; Rock Lake, Sandberg & Leiberg 109; Blue Mountains, Horner 290.

Zonal distribution: Transition.

A rather variable species, but it will require further material and study to determine how many of the forms are worthy of recognition. Torrey and Gray recognized $E.\ minutum\ foliosum, b$ based on Nuttall's MSS. name $E.\ foliosum$. Haussknecht c recognized three subspecies, namely, stenophyllum (=foliosum Nutt.), platyphyllum, and adenophorum.

Suksdorfd considers foliosum a good species and also describes A. minutum canescens and A. foliosum qlabrum.

6. Epilobium palustre L. Sp. Pl. 1: 348, 1753.

Type locality. European.

RANGE: Alaska to Washington, Colorado, and Canada. Europe. Asia

Specimens examined: Falcon Valley, Suksdorf 374.

7. Epilobium franciscanum Barbey in Brewer & Wats. Bot. Cal. 1: 220, 1876.

Type locality: "Near San Francisco," California.

Range: Washington to California.

Specimens examined: Lake Kalispel, Kreager, July 30, 1902; Spokane, Piper 2269.

Zonal distribution: Arid Transition.

The specimen listed by Suksdorf as *E. watsoni* Barbey is the same as the Spokane plant above mentioned.

8. Epilobium adenocaulon Haussk. Oestr. Bot. Zeitschr. 29: 119, 1879.

Type locality: Ohio.

Range: British Columbia to New Brunswick, south to California, Colorado, and Pennsylvania.

Specimens examined: Claffam County, Elmer 2568; Montesano, Heller 3992, 3974; Mount Constitution, Henderson 2460; Seattle, Piper 102; Sumas Prairie, Lyall in 1858-59; Nisqually Valley, Allen 15; North Yakima, Watt, August, 1895; Henderson 2461; Rattlesnake Mountains, Cotton 420; Falcon Valley, Suksdorf 2150; Lake Keechelus, Henderson 2462; Coulee City, Lake & Hull 174, 744; Alkali Lake, Sandberg & Leiberg 412; Spokane, Piper 3515.

Zonal distribution: Upper Sonoran and Transition.

A very variable species. The specimens referred in Cooper's Report to *Epilobium tetra-gonum* L. doubtless belong here.

8a. Epilobium adenocaulon occidentale Trelease, Rep. Mo. Bot. Gard. 2: 95, 1891. Type locality: Beaver City, Utah.

Range: Washington to California and Arizona.

Specimens examined: Wenache, Whited in 1895, 1300; Beaver Creek, Whited 3; Spokane, Piper, June 25, 1897; Pullman, Piper 3056, 3057, 1632; Hull 792.

a West Am. Scientist 11:77, 1901. CMonog. Epil. 248, 1884.

b Fl. 1: 490, 1840.

9. Epilobium halleanum Haussk. Monog. Epil. 261, 1884.

Type locality: "Hab, in Oregon." Collected by Hall.

Range: Vancouver Island to Oregon in the coast region.

Specimens examined: Seattle, Piper 1130; Falcon Valley, Suksdorf 2308; Klickitat County, Suksdorf 15; Skamania County, Suksdorf 2309; Vancouver, Piper 4929.

Zonal distribution: Humid Transition.

Epilobium brevistylum Barbey in Brewer & Wats. Bot. Cal. 1: 220, 1876.

Type locality: Sierra County, California.

Range: Washington to California.

Specimens examined: Olympic Mountains, Piper 2345; Chiquash Mountains, Suksdorf 2189; Mount Adams, Suksdorf 550; Mount Stuart, Elmer 1202; Railroad Creek, Elmer 701; Olympic Mountains, Elmer 2569.

Zonal distribution: Hudsonian.

11. Epilobium anagallidifolium Lam. Encyc. 2: 376, 1786.

Type locality: "Mont-d'Or."

Range: Arctic America, south to Labrador and in the mountains to California and Colorado. Europe. Asia.

Specimens examined: Olympic Mountains, Piper 2354; Tatoosh Mountains, Allen 189; North Fork Bridge Creek, Elmer 640; Mount Adams, Flett 1241.

ZONAL DISTRIBUTION: Artic.

12. Epilobium oregonense Haussk, Monog, Epil. 276, 1884.

Type locality: Oregon. Collected by Hall.

RANGE: British Columbia to Oregon.

Specimens examined: Olympic Mountains, Piper 2351; Lake Keechelus, Henderson in 1802

Zonal distribution: Canadian and Hudsonian.

13. Epilobium alpinum L. Sp. Pl. 1: 348, 1753.

Epilobium lactiflorum Haussk, Oesterr, Bot, Zeitsehr, 29: 89, 1879.

Type locality: "Habitat in Alpibus Helveticis, Lapponicis."

RANGE: Subarctic regions, southward to Oregon, Utah, and New Hampshire. Europe. Specimens examined: Mount Rainier, Allen 190; Piper 2166; Mount Constitution, Henderson 2453; Mount Adams, Suksdorf 16; Silverton, Bonck in 1899; Skokomish River, Kincaid 2250½; Stevens Pass, Sandberg & Leiberg in 1893; Stampede Tunnel, Henderson 2454; Chiquash Mountains, Suksdorf 2032; Cascade Mountains to Colville, latitude 49°, Lyall in 1860; Nason Creek, Sandberg & Leiberg 677.

Zonal distribution: Hudsonian and Arctic.

14. Epilobium hornemanni Reichenb. Ic. Crit. 2:73, 1825.

Epilobium nutans Hornem, in Oeder, Fl. Dan. 1387, 1810, not Schmidt, 1795.

Type locality: "In turfosis alpinis Norvegiae."

RANGE: British Columbia to Canada, south to California, Colorado, and the White Mountains. Europe. Asia.

Specimens examined: Olympic Mountains, Piper 2355, 1047, 2353, 2346, 2348, 2347; Mount Adams, Suksdorf 553; Mount Stuart, Brandegee 778; Atanum River, Henderson 2445; Wenache Mountains, Elmer 469; Mount Rainier, Allen 191; Bridge Creek, Elmer 744; Mount Rainier, Piper 2168, 1648; Blue Mountains, Piper 2359; Horner 289.

Zonal distribution: Hudsonian.

Both the characters relied upon to separate this species from E, alpinum, namely, the rough seed and larger, darker flowers, break down completely in our material, and there is no evidence that the connecting forms are hybrids.

15. Epilobium fastigiatum (Nutt.)

Epilobium affine fastigiatum Nutt.; Torr. & Gr. Fl. 1: 489. 18 to.

Epilobium glaberrimum latifolium Barbey in Brewer & Wats. Bot. Cal. 1: 220, 1876.

Epilobium glaberrimum fastigiatum Trelease, Rep. Mo. Bot. Gard. 2: 105, 1891.

Type locality: "Plains of the Oregon." Collected by Nuttall.

Range: Washington to California and Utah.

Specimens examined: Olympic Mountains, Flett 115; Mount Rainier, Allen 193; Smith 755; Piper 2167, August 1895; Mount Adams, Henderson 2444; Mount Stuart, Brandegee 777; Cascade Mountains, latitude 49°, Lyall in 1859; Blue Mountains, Horner 288; Clallam County, Elmer 2559.

15a. Epilobium fastigiatum glaberrimum (Barbey).

Epilobium glaberrimum Barbey in Brewer & Wats. Bot. Cal. 1: 220. 1876.

Type locality: Yosemite Valley, California.

RANGE: Washington to California and Nevada.

Specimens examined: White Salmon, Suksdorf in 1878.

16. Epilobium pringleanum Haussk. Mittheil. Geogr. Gesells. Jena 7: 5. 1888.

Epilobium oregoneuse gracillineum Trelease, Rep. Mo. Bot. Gard. 2: 109. 1891.

Type Locality: "California, mountains about the headwaters of the Sacramento River." Range: Washington to California.

Specimens examined: Falcon Valley, Suksdorf, July, 1886; White Salmon, Suksdorf in 1878; Mount Adams, Suksdorf 552; without locality, Vasey in 1889.

17. Epilobium clavatum Trelease, Rep. Mo. Bot. Gard. 2: 111. 1891.

Type locality: Kicking Horse River, British Columbia.

Range: British Columbia to Oregon and Utah.

Specimens examined: Olympic Mountains, Piper 2350, 2349; Mount Rainier, Piper 2165, 2164; Allen 192; Goat Mountains, Allen 252; Mount Adams, Suksdorf, September, 1877, August 28, 1886; North Fork Bridge Creek, Elmer 654; Clallam County, Elmer 2570, Zonal distribution: Arctic.

18. Epilobium leptocarpum macounii Trelease, Rep. Mo. Bot. Gard. 2: 103, 1891.

Type locality: "Lake Athabasca." Collected by Macoun.

Range: British America to Washington.

Specimens examined: Olympic Mountains, Piper 2352, 2356; Mount Adams, Suksdorf 551.

Zonal distribution: Hudsonian.

19. Epilobium mirabile Trelease, sp. nov.

Turioniferous; stems rather slender, terete, crisp-pubescent, ascending from near the base, about a foot high, with rather short strict branches; leaves scarcely 25 mm, long, somewhat ascending, broadly ovate-lanceolate, obtuse, remotely very low denticulate, rounded at base and very short-petioled, rather thick, minutely crisp-puberulent or at length subglabrescent; inflorescence somewhat glandular; flowers suberect, crowded at summit; petals about 5 mm, long, pale; capsules short-stalked, about 40 mm, long, curved, fusiform; seeds as in E. puniculatum, the at first very white ample coma soon falling and at length dingy.—Meadows at 1,500 meters altitude, in the Olympic Mountains, Washington (Piper, August, 1895, no. 2344).—A very peculiar plant, with the seed and foliage characters of E. minutum, but exaggerated, and the turions of the delicatum section, in which in stem and pubescence characters it falls near E. leptocarpum.

20. Epilobium ursinum Parish; Trelease, Rep. Mo. Bot. Gard. 2: 100, 1891.

Type locality: San Bernardino County, California.

Range: Washington to California.

Specimens examined: Falcon Valley, Suksdorf 2148, 372; Klickitat River, Flett 1238.

21. Epilobium drummondii Haussk. Monog. Epil. 271. 1884.

Type locality: "Hab. in Rocky Mts." Collected by Drummond.

RANGE: British Columbia to Nevada and Colorado.

Specimens examined: Falcon Valley, Suksdorf 2149.

22. Epilobium delicatum tenue Trelease, Rep. Mo. Bot. Gard. 2: 99. 1891.

Type locality: Union County, Oregon. Collected by Cusick.

RANGE: Washington to Colorado.

Specimens examined: Olympic Mountains, Piper, August, 1895; Skamania County, Suksdorf 2309.

EPILOBIUM DAVURICUM Fisch, in Hornem, Flort, Bot, Havn, Suppl. 44, 1819. Hauss-knecht in his Monograph reports this from Tacoma, collected by Krause, but we have seen no specimens thus referable. It was originally described from Siberia, and ranges at least as far east as Alaska.

EPILOBIUM ORIGANIFOLIUM Lam. This name appears on Suksdorf's list, but the species is not known to occur in North America.

TARAXIA.

White-pubescent; leaves deeply pinnatifid. 1. T. tanacetifolia. Glabrous or nearly so.

Leaves entire or denticulate. 2. T. heterantha.

Leaves pinnatifid 2a. T. lieterantha taraxacifolia.

1. Taraxia tanacetifolia (Torr. & Gr.).

Oenothera tanacetifolia Torr. & Gr. Pacif. R. Rep. 2: 121. pl. 4. 1854.

Taraxia longiflora Nutt.; Small, Bull. Torr. Club 23: 185, 1896.

Oenothera nuttallii Torr. & Gr. Fl. 1: 506. 1840, not Sweet, 1830.

Type locality: "On the higher parts of the Sierra Nevada; latitude 41°, California.

Range: Washington to Nevada and California.

Specimens examined: Ritzville, Sandberg & Leiberg 162; Crab Creek country, Suksdorf 308; Spokane Country, Suksdorf 309; Marshall Junction, Piper 2259.

Zonal distribution: Arid Transition.

2. Taraxia heterantha (Nutt.) Small, Bull. Torr. Club 23: 185. 1896.

Oenothera heteratha Nutt. Journ. Acad. Phila. 7: 22, 1834.

Type locality: "Towards the sources of the Columbia, in dry prairies." Collected by Wyeth.

RANGE: Washington and Idaho to Nevada and Utah.

Specimens examined: Klickitat River, Flett 1012; Rock Creek, Sandberg & Leiberg 130; Spangle, Piper 2835; without locality, Vascy in 1889; Wenache Mountains, Cotton 1195, Zonal distribution: Arid Transition.

Taraxia heterantha taraxacifolia (S. Wats.) Small, Bull. Torr. Club. 23: 185. 1896.

Oenothera heterantha taraxacifolia S. Wats. Proc. Am. Acad. 8: 589, 1873.

Taraxia taraxacifolia Heller, Muhlenbergia 1:1. 1900.

Type locality: Near Austin, Nevada.

Range: Washington to California.

Specimens examined: Rock Creek, Spokane County, Sandberg & Leiberg, 120 in part; Grand Coulee, Griffiths & Cotton 451; Walla Walla, Griffiths & Cotton 451.

Zonal distribution: Arid Transition.

SPHAEROSTIGMA.

Flowers white or rose-colored, in nodding spikes.

Herbage viscid-glandular 4, S. boothii, Herbage puberulent, not glandular 5, S. alyssoides.

1. Sphaerostigma contortum (Dougl.) Walp. Repert. 2: 78. 1843.

Oenothera contorta Dougl.; Hook. Fl. Bor. Am. 1: 214. 1833.

Type locality: "Sandy barren soil on the interior banks of the Columbia River." Collected by Douglas.

Specimens examined: 1. Form with stalked pods: Wilson Creek, Sandberg & Leiberg 263; without locality, Vasey in 1889; Pasco, Piper 2965a; North Yakima, Henderson, May 27, 1892.

2. Form with pods sessile: Pasco, Piper 2965b; west Klickitat County, Suksdorf 555, 85; Bingen, Suksdorf 2311; Ilia, Lake & Hull.

ZONAL DISTRIBUTION: Upper Sonoran.

The two forms above listed are probably distinct, but it remains to be determined which is typical S. contortum, as the distinguishing character does not appear in the original description. The sessile-podded form was later described as S. strigulosa Fisch. & Mey. from California. The whole group is in need of critical study.

2. Sphaerostigma andinum (Nutt.) Walp. Repert. 2: 79. 1843.

Oenothera andina Nutt.: Torr. & Gr. Fl. 1: 512. 1840.

Type locality: "Dry plains in the Rocky Mountains, near Black-Foot River." Collected by Nuttall.

Range: Washington and Montana to Nevada and Utah.

Specimens examined: Wenache, Whited 86; Ellensburg, Piper 2675; Elmer 429; North Yakima, Henderson, May, 1892; Klickitat County, Suksdorf 311; Flett 1230; Klickitat Valley, Howell 1503; Pasco, Piper 2994; Spangle, Piper, June, 1899; Walla Walla region, Brandegee 786; without locality, Vascy 235; Coulee City, Piper 3907, 3908; Ellensburg, Cotton 865.

Zonal distribution: Upper Sonoran.

3. Sphaerostigma hilgardi (Greene) Small, Bull. Torr. Club 23: 188. 1896.

Ocnothera hilgardi Greene, Bull. Torr. Club 10: 41. 1883.

Type locality: "On moist alkaline soil of the Klickitat Swale," Washington. Collected by Hilgard.

Range: Eastern Washington.

Specimens examined: Wenache, Whited 1093; Ellensburg, Piper, May 20, 1897; North Yakima, Elmer 1082; Crab and Wilson creeks, Sandberg & Leiberg 290; Sprague, Sandberg & Leiberg 145; between Coulee City and Waterville, Spillman, May 27, 1896; Ellensburg, Cotton 865.

Zonal Distribution: Upper Sonoran.

4. Sphaerostigma boothii (Dougl.) Walp. Rep. 2: 77, 1843.

Oenothera boothii Dougl.; Hook. Fl. Bor. Am. 1: 213, 1833.

Wenothera pygmasa Dough; Hook, Fl. Bor, Am. 1: 213, 1833.

Type Locality: "On low exposed gravelly hills, near the branches of Lewis and Clark's River, lat. 46° north." Collected by Douglas.

Range: Washington to California and Nevada.

Specimens examined: Rock Island, Sandberg & Leiberg 441: Snake River, Walla Walla region, Brandegee 785; Tweedy, June, 1883.

Zonal distribution: Upper Sonoran.

 Sphaerostigma alyssoides minutiflorum (S. Wats.) Small, Bull. Torr. Club 23: 192 – 1896.

Oenothera alyssoides minutiflora S. Wats. Proc. Am. Acad. 8: 591, 1873.

Type locality: "Northern Nevada and about Salt Lake, Utah."

RANGE: Washington to Nevada and Utah.

Specimens examined: Near Morgans Ferry, Suksdorf 310; Crab and Wilson creeks, Sandberg & Leiberg 262.

Zonal distribution: Upper Sonoran.

OENOTHERA. EVENING PRIMROSE.

1. Oenothera biennis muricata (L.) Lindl. Bot. Reg. 19: under pl. 1604, 1833.

Oenothera muricata L. Syst. Veg. ed. 12, 263, 1767.

Type locality: "Canada."

Range: British Columbia and Washington; New England to Nova Scotia and Quebec. Specimens examined: Whidby Island, Gardner 407; Tacoma, Flett 149; Waitsburg,

Horner 181; Meyers Falls, Beattie & Chapman 199.

Zonal distribution: Transition.

1a. Oenothera biennis strigosa (Rydberg).

Onagra strigosa Rydberg, Mem. N. Y. Bot. Gard. 1: 278, 1900.

Ocnothera biennis canescens Torr. & Gr. Fl. 1: 492, 1840, not Oenothera canescens Torr. & Frem. in Frem. Rep. 315, 1845.

Type locality: Pony, Montana.

RANGE: Washington to Montana and Colorado.

Specimens examined: Wenache, Whited 1250; North Yakima, Watt. August, 1895; Egbert Springs, Sandberg & Leiberg 397; Chelan, Elmer 495; Wilson Creek, Lake & Hall, August, 1892; Medical Lake, Henderson, July, 1892; Almota, Piper, September, 1897; Wawawai, Horner 673.

Zonal distribution: Arid Transition and Upper Sonoran.

ANOGRA.

1. Anogra pallida (Lindl.) Britton, Bull. Torr. Club 23: 175, 1896,

Oenothera pallida Lindl. Bot. Rog. 14: pl. 1142, 1828.

Type locality: "In the Northwest of North America." "Growing among sand in all the dry country west of the Rocky Mountains." Collected by Douglas.

Range: British Columbia to Mexico.

Specimens examined: Wenache, Whited 1110; Klickitat County, Suksdorf 970; White Bluff Ferry, Lake & Hull, August, 1892; Pasco, Piper 2992; Hindshaw 43; Glendale, Lake & Hull 522; Crab and Wilson creeks, Sandberg & Leiberg 217; Lake Chelan, Howard in 1899; Columbia River, latitude 46° to 49°, Lyall in 1860; without locality, Vascy 537; Kiona, Piper, July, 1897; Steamboat Rock, McKay 20.

Zonal distribution: Upper Sonoran.

GAYOPHYTUM.

Seeds can escent with appressed hairs. 1. G. lusiospermum. Seeds glabrous.

Stems branched at base, very leafy, the shoots erect; capsules

olong, nearly sessile, 4. G. pumilum.

Stems usually much-branched above, remotely leafy; capsules on

elongated pedicels.

Flowers large, 6 to 12 mm. broad. 2. G. diffusum.

1. Gayophytum Iasiospermum Greene, Pittonia 2: 164, 1891.

Type locality: Near Julian, California.

Range: Washington to California and Nevada.

Specimens examined: Wenache, Whited 168; Ellensburg, Piper 2634; Mount Adams, Henderson 2466; Chelan, Elmer 488; Crab and Wilson creeks, Sandberg & Leiberg 252;

Concornly, Whited 1313; Spokane, Piper 2634; Henderson 2467; Nile, Henderson 2464; Sprague, Lake & Hull, August, 1892.

Zonal distribution: Arid Transition.

2. Gayophytum diffusum Torr. & Gr. Fl. 1: 513. 1840.

Type locality: "Rocky Mountains and plains of Oregon." Collected by Nuttall.

RANGE: Washington and Idaho to California and Colorado.

Specimens examined: Wenache, Whited; along Methow River, Whited 220: Loomiston, Elmer 609: Lake Chelan, Lake & Hull, August, 1892; Klickitat River, Flett 1405; Columbia River, latitude 46° to 49°, Lyall in 1860; without locality, Geyer 546.

Zonal distribution: Arid Transition.

3. Gayophytum ramosissimum Torr. & Gr. Fl. 1: 513, 1840.

Type locality: Rocky Mountains. Collected by Nuttall.

RANGE: Washington and Montana to California and Arizona.

Specimens examined: Mount Adams, Suksdorf 2310, 2297, 2296, 2295, 22; Henderson, August, 1892; Mount Rainier, Piper, August, 1895; Falcon Valley, Suksdorf 2257, 20, 21; North Yakima, Piper, June, 1897; Henderson, May, 1892; Wenache, Whited in 1896; Washtucha, Elmer 1042; Peshastin, Sandberg & Leiberg 528; Cascade Mountains, Piper, July, 1895; Nason City, Sandberg & Leiberg, July, 1893; without locality, Brandegee 781; Ritzville, Sandberg & Leiberg 159; without locality, Vasey in 1889; Blue Mountains, Horner 293, 292; Walla Walla, Nuttall.

ZONAL DISTRIBUTION: Arid Transition.

Hooker a recognizes two subspecies, but evidently his names have become interchanged in respect to the characters.

4. Gayophytum pumilum S. Wats. Proc. Am. Acad. 18: 193, 1883.

Type locality: "From San Bernardino County, California, to Washington Territory," Range: Washington to California.

Specimens examined: Mount Adams, Suksdorf 376; Falcon Valley, Suksdorf, June, 1881, and 19; Klickitat River, Suksdorf 82; bars of Touchet River, Horner 286; near Salmon River, Horner 284; Blue Mountains, Horner 317, 119; Skamania County, Flett 1236.

Zonal distribution: Canadian!

Gayophytum racemosum Torr. & Gr., and Gayophytum caesium Torr. & Gr. Both these names, which are considered to represent one species, appear in Suksdorf's list. The type of the latter was collected in "Oregon, on dry open plains near Walla Walla," by Nuttall, possibly a Washington locality, but many of Nuttall's plants so labelled were collected far to the southeast of Wallula (Old Fort Walla Walla). At any rate we have seen no Washington specimens of the plant, those labelled G. racemosum being as a rule G. ramosissimum.

PACHYLOPHUS.

 Leaves green, glabrous, except the villous margins.
 1. P. marginatus.

 Leaves canescent-puberulent on both sides.
 2. P. canescens.

1. Pachylophus marginatus (Nutt.)

Oenothera marginata Nutt.; Torr. & Gr. Fl. 1: 500, 1840.

Type locality: "Rocky Mountains in Upper California, about lat. 42°," probably in Idaho. Collected by Nuttall.

Specimens examined: Steptoe Canyon, McKay.

Zonal distribution: Upper Sonoran.

2. Pachylophus canescens sp. nov.

Acaulescent or nearly so, cespitose, the whole plant canescent with a fine appressed pubescence; root stout and woody, becoming 30 cm. long or more; leaves rather numerous, pale green, oblanceolate, repandly dentate or subentire, obtuse or acute, each attenuate into a petiole with margins narrower than the broad white midrib; calyx canescent, the tube very narrow, 5 to 6 cm. long, twice the length of the lanceolate attenuate lobes; petals broadly obovate, pink, 2 to 3 cm. long; pods 2 to 3 cm. long, linear-oblong, attenuate into a stout beak, canescent like the leaves.

This species is distinguishable from the others of the genus only by the character of the pubescence.

Specimens examined: Washington—Sentinel Bluffs in gravelly soil, Cotton 1345 (type); Priest Rapids, Brandegee 77, July 14, 1903. Oregon—near Harper Ranch, Leiberg 2103; near Westfall on road to Ontario, Coville 504; without locality, Cusick in 1885. California—Without locality, Vasey in 1880.

Zonal distribution: Upper Sonoran.

The type is in the National Herbarium.

LAVAUXIA.

1. Lavauxia triloba (Nutt.) Spach, Hist. Veg. 4: 367, 1835.

Oenothera triloba Nutt. Journ. Acad. Phila. 2: 118, 1821.

Type locality: "In the arid and partly denudated prairies of Red River," Arkansas.

RANGE: Washington and Saskatchewan, south to California and Mexico.

Specimens examined: Yakima River, Suksdorf 1703.

GODETIA.

1. Godetia quadrivulnera (Dougl.) Spach, Hist. Veg. 4: 389, 1835.

Oenothera quadrivulnera Dougl. Bot. Reg. 13: pl. 1119. 1827.

Godetia bingensis Suksdorf, Deutsch. Bot. Monatss. 18: 88, 1900.

Type locality: "Northwest America." Collected by Douglas.

Range: Washington to California in the coast region.

SPECIMENS EXAMINED: Fox Island, Flett 84: Tacoma, Flett 907, 167; Olympia to Gate City, Heller 4050; Steilacoom, Piper in 1885; Suckley in 1885; Bingen, Suksdorf, July 4, 1892; June 13, July, 1881; Yelm, Smith 428; Puget Sound, Wilkes Expedition 133.

Zonal distribution: Humid Transition.

2. Godetia tenella (Cav.) Spach; Steud. Nom. ed. 2. 1: 697, 1840.

Oenothera tenella Cav. Icon. 4: 66. pl. 396. 1797.

Type locality: "Habitat prope urbem Talcahuano in Chile."

RANGE: Washington to California. Chile.

Specimens examined: Klickitat County, Suksdorf 2152; Clallam County, Elmer 2567

3. Godetia amoena (Lehm.) Lilja, Linnaea 15: 265. 1841.

Oenothera amoena Lehm. Ind. Sem. Hort. Hamb. 8, 1821.

Oenothera lindleyi Dougl. Hook. Bot. Mag. 55: pl. 2832. 1828.

Godetia vinosa Lindl. Bot. Reg. 22: pl. 1856, 1836.

Type locality: "Amer[ica] Septentr[ionalis]."

RANGE: Washington to California in the coast region.

Specimens examined: Sinclair Inlet, Piper, July, 1895; Steilacoom, Suckley: Skamania County, Suksdorf 2129; Chambers Prairie, Henderson, August, 1892; Johns Island, Lawrence 189; Klickitat County, Suksdorf, May 27, July 1881 and 23.

ZONAL DISTRIBUTION: Humid Transition.

4. Godetia caurina Abrams, sp. nov.

Stems erect, simple below, more or less branched above, 30 to 60 cm, high; herbage minutely and rather sparsely puberulent throughout; leaves linear-lanceolate, entire; flower heads mainly erect, oblong, obtuse at apex, 12 to 14 mm, long; calyx tube 2 mm, long; petals obovate, 15 to 18 mm, long, purple with a blotch of deeper color near the center; anthers 3 mm, long, fertile to the tip, glabrous; stigmas linear-oblong, 3 mm, long, yellow; capsule 8-ribbed, stoutly beaked at apex, 25 mm, long, tapering at base into a pedicel fully half as long.

Nearest G, amoena (Lehm.) Lilja from which it is best distinguished by its much smaller glabrous anthers, which are not sterile at tip, and oblong obtuse flower buds,

Type locality: Olympic Mountains, Challam County, collected by *Elmer* 2565, June, 1900 (type, United States National Herbarium, no. 401890).

Specimens examined: Mount Finlayson, Vancouver Island, Macoun, June 28, 1887; Beacon Hill, Vancouver Island, Macoun, May 25, 1887.

Godetia viminea (Dougl.) Spach, Godetia lepida Lindl. Both these names appear in Suksdorf's list, but there are no specimens to indicate that these species occur in Washington. The species of this genus are very poorly understood.

BOISDUVALIA.

Upper leaves much broader than the lower ones; capsule septifragal in dehiscence.	1 P. Lavidona
Upper leaves not broader than the lower ones; capsule loculicidal in dehiscence.	1. D. ae ust gora.
Leaves narrowly lanceolate, pubescent	

Boisduvalia densiflora (Lindl.) S. Wats, in Brewer & Wats, Bot, Cal. 1: 233, 1876.
 Boisduvalia donglasii Spach, Hist, Veg. 4: 385, 1835.

Oenothera densiftora Lindl. Bot. Reg. 19: pl. 1593, 1833.

Type Locality: Northern California.

RANGE: British Columbia to California and Nevada.

Specimens examined: Scattle, Piper, July, 1897; Ellensburg, Whited 573; west Klickitat County, Suksdorf 2254; Leavenworth, Whited 248; Falcon Valley, Suksdorf 557; Peshastin, Sandberg & Leiberg 588; Spokane, Piper, October 1, 1900; Pullman, Hull, July 16, 1892; Piper, 1839; Ellensburg, Cotton 866.

Zonal distribution: Transition and Upper Sonoran.

Boisduvalia densiflora pallescens Suksdorf, Deutsch. Bot. Monatss. 18: 88, 1900.
 Type locality: Near Bingen, Klickitat County, Washington.

Specimens examined: Near Bingen, Suksdorf.

Distinguished by having white flowers and somewhat larger seeds.

2. Boisduvalia stricta (A. Gray) Greene, Fl. Fran. 225, 1891.

Gayophytum strictum A. Gray, Proc. Am. Acad. 7: 340, 1867.

Boisduralia torreyi S. Wats. in Brewer & Wats. Bot. Cal. 1: 233, 1876.

Oenothera torreyi S. Wats. Proc. Am. Acad. 8: 384, 1873.

Type locality: Cloverdale, California.

Range: Washington and Idaho to California.

Specimens examined: Seattle, Smith 411; Falcon Valley, Suksdorf 378, 558; foothills Blue Mountains, Horner 176; Blue Mountains, Horner, August, 1896; Spokane, Piper, June, 1897, Sandberg, McDongal, & Heller, 905; Pullman, Henderson 2470; Piper 2657; 2655; Wawawai, Elmer 757; Piper, June 23, 1901; Squaw Creek, Cotton 877; Rattlesnake Mountains, Cotton 690.

ZONAL DISTRIBUTION: Transition.

3. Boisduvalia glabella (Nutt.) Walp. Repert. 2: 89, 1843.

Oenothera glabella Nutt.; Torr. & Gr. Fl. 1: 505, 1840

Type locality: "Plains of the Oregon east of Wallawallah." Collected by Nuttall.

RANGE: British Columbia to Montana and California.

Specimens examined: Pullman, Piper 2656; Hull, July, 1892.

ZONAL DISTRIBUTION: Arid Transition.

CLARKIA.

Petals entire. 1. C. rhomboidea.
Petals 3-lohed. 2. C. palehella.

1. Clarkia rhomboidea Dougl.; Hook. Fl. Bor. Am. 1: 214, 1833.

Type locality: "From the Great Falls of the Columbia to the Rocky Mountains." Collected by Douglas.

Range: Washington and Idaho to Nevada and California.

Specimens examined: Wenache Region, Brandeger 780; Wenache Gulch, Whited 1165; Klickitat River, Flett 1234; Cascade Mountains, Mrs. Steinweg in 1894; Stehekin, Whited, July 5, 1901; Loon Lake, Winston, July 20, 1897; without locality, Vascy 238; without locality, Lyall in 1861; Blue Mountains, Piper, July, 1896.

ZONAL DISTRIBUTION: Arid Transition.

2. Clarkia pulchella Pursh, Fl. 1: 260, 1814.

Type locality: "On the Kooskooskee and Clark's Rivers." Collected by Lewis. The first locality is in Idaho, opposite the town of Kamiah, the Camp Chopunnish, where Lewis collected many plants.

Range: Washington and Idaho to California.

Specimens examined: North Yakima, Mrs. Steinvey in 1894; Pasco, Hindshaw 38; Columbia River, latitude 46° to 49°, Lyall in 1861; between Coulee City and Waterville, Spillman, May, 1896; Sprague, Henderson, May, 1892; Sandberg & Leiberg 211; Tukanon River, Lake & Hull 531; Pullman, Piper 1630; Tampico, Flett 1232; Colville Reservation, Griffiths & Cotton 376.

Zonal distribution: Arid Transition and Upper Sonoran.

HALORAGIDACEAE. WATER MILEOIL FAMILY.

Stamen 1; ovary 1-celled	Hippuris.
Stamens 2 to 8; ovary 2 to 4-celled.	Мукібричььим.

HIPPURIS. MARESTAIL.

Alpine plant 2 to 5 cm. high.	1. II. montana.
Lowland plant 20 to 50 cm. high.	2. H. vulgaris.

Hippuris vulgaris L. Sp. Pl. 1: 4, 1753.

Type locality: European.

Range: Arctic regions, southward to California, New Mexico, and Maine. Europe, Asia.

Specimens examined: Oyhut, Lamb 1254; Lake Cushman, Piper 2225; Whidby Island, Gardner 350; Admiralty Head, Piper, May, 1898; Seattle, Piper; Longmire Springs, Piper, August, 1895; Columbia Valley, Lyall.

ZONAL DISTRIBUTION: Transition.

2. Hippuris montana Ledeb.; Reichenb. Ic. Fl. Germ. 1: 76. pl. 86. f. 181. 1823.

Type Locality: "Unalaschka." Range: Alaska to Washington.

Specimens examined: Olympic Mountains, Piper, August, 1895; Mount Rainier, Allen 186; Piper 2136; Stevens Pass, Sandberg & Leiberg 792.

Zonal distribution: Hudsonian.

MYRIOPHYLLUM. WATER MILFOIL.

Floral leaves shorter than the flowers. 1. M. spicatum.

Floral leaves longer than the flowers. 2. M. corticillatum.

Stamens 3 or 4; floral leaves denticulate. 2. 3. W. hippuroides,

1. Myriophyllum spicatum L. Sp. Pl. 2: 992, 1753.

Type locality: European.

RANGE: British Columbia to Newfoundland, southward to California and Florida.

Specimens examined: Lake Cushman, Piper 2230; Seattle, Piper 1132; Yakima region, Brandegee 776; Ellensburg, Hindshaw.

2. Myriophyllum verticillatum L. Sp. Pl. 2: 992. 1753.

Type locality; European.

Range: Washington to Canada, southward to California and Florida.

Specimens examined: Segualiche Lake, Piper, May, 1888; Lake Chelan, Elmer, August, 1897; Parker, Dunn, August 8, 1901; Lake Chelan, Gorman in 1897; Tacoma, Flett 2146; Lake Crescent, Lawrence 310.

3. Myriophyllum hippuroides Nutt.; Torr. & Gr. Fl. 1: 530, 1840.

Type locality: "Oregon, in ponds of the Wahlamet." Collected by Nuttall.

Range: Washington to California.

Specimens examined: West Klickitat County, Suksdorf, 2176; Lindsleys, Clarke County, Henderson.

ARALIACEAE. GINSENG FAMILY.

Herb; leaves compound Aralia.
Shrub; leaves simple Echinopanax.

ARALIA.

1. Aralia nudicaulis L. Sp. Pl. 1: 274, 1753.

Type locality: "In Virginia."

RANGE: Washington to Newfoundland, Missouri, and North Carolina.

Specimens examined: Mount Carlton, Kreager 206.

ECHINOPANAX.

1. Echinopanax horridum (Smith) Dec. & Planch, in Rev. Hertic. 3: 105, 1854.

DEVIL'S CLUB.

Panax horridum Smith, Rees' Cycl. 26: No. 10, 1812.

Aralia erinacea Hook, Edinb. Journ. Sci. 6: 64, 1827.

Fatsia horrida Benth. & Hook. Gen. Pl. 1: 939, 1867.

Type locality: Nootka Sound. Collected by Menzies.

Range: Alaska to California and the Blue Mountains, Lake Superior.

Specimens examined: Seattle, Piper, June, 1891; upper Valley Nisqually, Allen 116; near Skagit Pass, Lake & Hull 772; Stampede Pass, Henderson, October 4, 1892; Stevens Pass, Sandberg & Leiberg 753; Yakima Pass, Watson, November 19, 1880; Blue Mountains, Piper, July, 1896; Horner: Clallam County, Elmer 2508; Big Meadow, Kreager 424; without locality, Vascy in 1889.

ZONAL DISTRIBUTION: Humid Transition and Canadian.

APIACEAE. CELERY FAMILY. Flowers in dense heads; fruit scaly or tuberculate..... Envirgium (p. 414). Flowers in umbels. Fruit more or less bristly. Bristles hooked covering the whole fruit surface.... Sanicula (p. 414). Bristles only on the ribs of the fruit. Stylopodium obsolete; bristles barbed at tip... Daucus (p. 415). Stylopodium conical; bristles not barbed. Carpels linear Washingtonia (p. 416). Fruit glabrous, not at all bristly. Carpels strongly flattened dorsally. Stylopodium conical; petals obcordate...... Heracleum (p. 417). Stylopodium flat or obsolete. Calyx teeth evident; stylopodium flat.... Cyxomarathrum (p. 417). Calyx teeth obsolete or nearly so; stylopodium obsolete. Plant caulescent and branching: flowers white. Ultimate segments of the leaves Ultimate segments of the leaves small Conioselinum (p. 419). Plants acaulescent; or, if caulescent, flowers not white. Mostly acaulescent; lateral ribs thin Loматим (р. 419). Mostly caulescent; lateral ribs thick Leptotaenia (p. 425). Carpels not dorsally flattened. Oil tubes present; leaves not peltate. Fruit with a single oil tube in each interval. Stylopodium conical. Leaflets lanceolate to ovate Cicuta (p. 426). Stylopodium flat or obsolete. Flowers yellow : leaves simple or trifoliolate Zizia (p. 427). Flowers white. Fruit elongate Leibergia (p. 427).

> Fruit with more than one oil tube in each interval.

Leaves reduced to hollow

Leaves decompound Oenanthe (p. 427).

petioles Lilaeopsis (p. 428).

Stylopodium conical. Fruit globose..... Bercla (p. 428). Fruit oblong...... Ligusticum (p. 428). Stylopodium flat or obsolete. Ribs of the fruit wing-like. Wings thick and corky; flowers white Glehnia (p. 429). Wings thin; flowers yellow .. Pteryxia (p. 429). Ribs of the fruit not wing-like. Plants acaulescent. Fruit with all the ribs filiform: root not tuberous Hesperogenia (p. 430). Fruit with the dorsal ribs filiform, the lateral ones corky; root tuberous.. Orogenia (p. 430). Plants caulescent; ribs of the fruit all thick and corky. Leaflets linear or narrowly lanceolate...... Sigm (p. 430). Leaflets ovate...... Coelopleurum (p. 430).

ERYNGIUM.

Oil tubes obsolete or very obscure; leaves peltate. Hydrocotyle (p. 431).

Bractlets little longer than the pale blue heads. 1. E. articulatum, Bractlets twice as long as the green heads. 2. E. petiolatum.

1. Eryngium articulatum Hook. Lond. Journ. Bot. 6: 232, 1847.

Eryngium harknessii Curran, Bull. Cal. Acad. 1: 153, 1885.

Type locality: "Stony edges of the Spokane River, and Skitsoë and Coeur d'Alene Lakes." Collected by Geyer. The first locality is probably in Washington: the others are in Idaho.

RANGE: From northern Idaho, through Washington and Oregon to central California.

Specimens examined: Spokane, Spalding: White Salmon, Suksdorf: Pullman, Piper 1559 and October 10, 1897; without locality, Geyer 583.

The specimens reported a as collected at Olympia by Henderson 2518, 2519, are really from Eastern Washington.

ZONAL DISTRIBUTION: Arid Transition.

2. Eryngium petiolatum Hook, Fl. Ber. Am. 1: 259, 1833.

Eryngium petiolatum juncifolium A. Gray, Proc. Am. Acad. 8: 385, 1872.

Type locality: "Moist soils on the plains of the Multnomah [Willamette] River," Oregon. Collected by Douglas.

RANGE: Western Oregon to Klickitat County, Washington.

Specimens examined: White Salmon, Suksdorf: Columbia Plains, Nuttall [Oregon or Washington!].

SANICULA.

 Sanicula menziesii Hook. & Arn. Bot. Beech. 142, 1832.

Sanicula nudicaulis Hook. & Arn. Bot. Beech. Vov. 347, 1839-40.

Type locality: Not given, but California according to Hooker.a

Range: British Columbia to California near the coast.

Specimens examined: Port Ludlow, Binns; Scattle, Piper, July, 1895; Smith 643; Olympia, Kincaid, July, 1896; west Klickitat County, Suksdorf: McAllisters Lake, Henderson, June, 1892.

Zonal distribution: Humid Transition.

2. Sanicula howellii Coult. & Rose, Bot. Gaz. 13: 81, 1888.

Type locality: "Sandy shores, Tilamook Bay and Ocean Beach, Oregon." Collected

Range: Sea coast of Oregon to Vancouver Island.

Specimens examined: Oreas Island, Lyall; Whidby Island, Gardner; Granville, Conard

ZONAL DISTRIBUTION: Humid Transition.

3. Sanicula septentrionalis Greene, Erythea 1: 6, 1893.

Sanicula divaricata Greene, Erythea 3: 64, 1895.

Type locality: "Chase River, Vancouver Island." Collected by Macoun.

Range: From northern California to Vancouver Island and western Montana.

Specimens examined: Tacoma, Flett 21; Olympic Mountains, Elmer 2772; Skamania County, Flett 1301; Goat Mountains, Allen 254; White Salmen River, Suksdorf 276; Little Klickitat River, Henderson 2577: Blue Mountains, Piper 2338.

ZONAL DISTRIBUTION: Transition and Canadian.

This species was formerly confused with the more southern S. nevadensis S. Wats.

4. Sanicula bipinnatifida Dougl.; Heok. Fl. Bor. Am. 1: 258. pl. 92, 1834.

Type locality: "Fort Vancouver on the Columbia." Collected by Douglas and Scouler.

RANGE: From Vancouver Island to southern California, and extending into Lower California.

Specimens examined: Whidby Island, Gardner 137; Puget Sound, Cooper.

Zonal distribution: Humid Transition.

Sanicula Marilandica, L. has been reported from "undulating gravelly soils, near Fort Vancouver, Douglas." b Not since seen in Washington, but it occurs in northern Idaho.

Sanicula Bipinnata Hook. & Arn. was found on "Prairie near Steilacoom" by Cooper, according to Torrey.c Probably some related species was mistaken for it.

DAUCUS.

Daucus pusillus Michx. Fl. 1: 164, 1803.

Daucus pusillus microphyllus Torr. & Gr. Fl. 1: 636, 1840.

Daueus pusillus scaber Torr. & Gr. loc. cit.

Type locality: "In campestribus Carolinae."

RANGE: From the Carolinas and Florida to California, thence northward to Vancouver

Specimens examined: Orchard Point, Piper 2010; Whidby Island, Gordner 132; East Sound, Henderson, July 3, 1892; Port Ludlow, Binns; Seattle, Piper; Fidalgo City, Flett 2103; Clallam County, Elmer 2770; Klickitat County, Suksdorf, June, 1881.

Zonal distribution: Transition.

a Fl. Bor. Am. 1: 258, 1834.

b Hook, Fl. Bor, Am. 1: 257, 1834.

c Pac. R. Rep. 12²; 62, 1860.

WILD CARROT. &

CAUCALIS.

Caucalis microcarpa Hook. & Arn. Bot. Beech. Vov. 348, 1839-40.

Type locality: California. Collected by Douglas.

RANGE: From Washington and Idaho to southern California and Arizona, and extend-

Specimens examined; Clallam County, Elmer 2766; Almota, Piper, May 2, 1897; Wawawai Elmer 93; Piper 1890, May 19, 1894; Lake 706; Klickitat County, Suksdorf 16. Zonal distribution: Transition.

WASHINGTONIA.

Fruit with bristly ribs.

Flowers white.

Foliage strigose-pubescent 2. W. brevipes. Foliage glabrous or nearly so.

Fruit with a conspicuous sharp beak 3. W. divaricata. Fruit constricted below the apex and with truncate tip... 4. W. leibergi.

Fruit glabrous.

Rays erect in fruit. 5. W. occidentalis,

1. Washingtonia purpurea Coult. & Rose, Contr. Nat. Herb. 7: 67, 1900.

Type locality: "Sitka, Alaska."

Range: Mountains of northern Oregon to Alaska. Specimens examined: Chehalis County, Lamb 1382.

2. Washingtonia brevipes Coult. & Rose, Contr. Nat. Herb. 7: 66, 1900.

Tyle locality: "Mount Shasta and vicinity, Siskiyou County, Cal." Collected by Palmer.

RANGE: From northern Washington and adjacent Idaho to southern California.

Specimens examined: Scattle, Piper 110; Smith 110; Chebalis County, Heller 3975; Whidby Island, O. Piper, May, 1898; Tacoma, Flett 63; Wenache Mountains, Whited 467; Roslyn, Whited 467; Mount Stuart, Elmer 1176; Falcon Valley, Suksdorf 2115; Blue Mountains, Horner 215; Clarks Springs, Spokane County, Kreager 44; Clallam County, Elmer 2774: Stuart Island, Lawrence 56.

Zonal distribution: Transition.

3. Washingtonia divaricata Britton III. Fl. 2: 531. 1897.

Washingtonia intermedia Rydberg, Mem. N. Y. Bot. Gard. 1: 289, 1900.

Osmorliza divaricata Nutt.; Torr. & Gr. Fl. 1:639, 1840, nom. nud.; Britt. & Br. Ill. Fl. 2: 531, 1897, as synonym.

Type locality: "Oregon." Collected by Nuttall.

RANGE: From Oregon and northern California to South Dakota, and northward to Alaska.

Specimens examined: Puget Sound, Wilkes Expedition 365; Silverton, Bouck 85; Nisqually Valley, Allen 34; Olympia, Henderson 376; Yakima County, Henderson 376; Rock Creek, Spokane County, Suksdorf 1195; Spokane, F. W. Dewart; Tukanon River, Lake & Hull 764; without locality, Vascy 306; Cape Horn, Piper 4979; Klickitat River, Cotton

ZONAL DISTRIBUTION: Transition.

4. Washingtonia leibergi Coult. & Rose, Contr. Nat. Herb. 7: 66, 1900.

Type locality: "Nason Creek, branch of Wenatchee River, Kittitas County, Washington." Collected by Sandberg & Leiberg.

Range: Mountains of Washington and Idaho.

Specimens examined: Olympic Mountains, Piper 911; Mount Adams, Suksdorf 1194; Nason Creek, Sandberg & Leiberg 666.

5. Washingtonia occidentalis (Nutt.) Coult. & Rose, Contr. Nat. Herb. 7: 67. 1900.

Glycosma occidentalis Nutt. in Torr. & Gr. Fl. 1: 639. 1840.

Osmorhiza oecidentalis Nutt.; Torr. Bot. Mex. Bound. 71, 1859.

Type locality: "Western side of the Blue Mountains of Oregon." Collected by Nuttall. RANGE. From Alberta to northern California and the mountains of Colorado.

Specimens examined: Wenache Mountains, Whited 1413; Simcoe Mountains, Howell; Blue Mountains, Piper 2334; Nuttall; without locality, Vasey 304; Roslyn, Whited 465; near Wenache, Whited 7; Easton, Henderson, June 11, 1892; Mount Carlton, Kreager 282; Wenache Mountains, Cotton 1681.

Zonal distribution: Canadian.

6. Washingtonia ambigua (A. Gray) Coult. & Rose, Contr. Nat. Herb. 7: 69. 1900.

Glycosma ambiguum A. Gray, Proc. Am. Acad. 8: 386, 1872.

Osmorhiza ambigua Coult, & Rose, Rev. N. A. Um. 119, 1888.

Type locality: "Foot of Cascade Mountains, Oregon." Collected by Hall.

Range: Mountains of Oregon and Washington.

Specimens examined: Goat Mountains, Allen 256; Mount Adams, Henderson in 1892; Falcon Valley, Suksdorf 382; foothills near Ellensburg, Piper, May, 1897; Peshastin, Sandberg & Leiberg 502; upper Atanum River, Henderson, August 2, 1892.

Zonal distribution: Canadian.

Osmoriiza longistylis (Torr.) DC. is reported in Hooker a as found by Douglas in "Shady woods, North-West America, in the lat. of the Columbia." Some related species is doubtless here confused.

Osmoriiza brevistylis DC, is reported in Hooker b as found "From the mouth of the Columbia to Observatory Inlet, in lat. 55°, North-West America," the specimens collected by Scouler and Douglas. Here again some related species has probably been confused.

HERACLEUM.

Heracleum Ianatum Michx. Fl. Bor. Am. 1: 166, 1803.

COW PARSNIP.

N

Heracleum lanatum vestitum Torr. & Gr. Fl. 1: 632, 1840.

Heracleum douglasii DC. Prod. 4: 193, 1830.

Type locality: "Canada."

Range: Wet ground from Canada to North Carolina and Tennessee, and extending westward to New Mexico, California, and Alaska.

Specimens examined: Fidalgo Island, Lyall in 1858; Silverton, Bouck; Skagit Pass, Lake & Hull 538; Skokomish Valley, Kincaid, June 10, 1892; Cascade Mountains, Lyall; Pullman, Piper 1558; Roslyn, Whited 466; North Palouse River, Vasey, June 6, 1901; Spokane County, Clarks Springs, Kreager 139; Spokane River, Wilkes Expedition 397; Olympic Mountains, Elmer 2763; Piper in 1895; Seattle, Piper.

Zonal distribution: Transition to Hudsonian.

Abundant in moist soil in most parts of the State. Douglas records that the "roots and young stems are eaten by Chenook Indians."

CYNOMARATHRUM.

1. Cynomarathrum brandegei Coult. & Rose, Contr. Nat. Herb. 7: 246, 1900.

Peucedanum brandegei Coult. & Rose, Bot. Gaz. 13: 210. 1888.

Type locality: "Walla Walla region, Washington." Collected by Brandegee.

Range: Eastern Washington.

a Fl. Bor, Am. 1: 271 1834.

b Fl. Bor, Am. 1: 272, 1834.

Specimens examined: Stehekin, Whited 1388; without locality, Vasey 296, 299; Peshastin, Sandberg & Leiberg 516; Wellington, Savage 18; Cascade Mountains, lat. 49°, Lyoll in 1860; Bridge Creek, Elmer 651; Mount Stuart, Elmer 116; Walla Walla region, Brandegec 799; Stehekin, Griffiths & Cotton 236.

Zonal distribution: Arid Transition.

ANGELICA.

Oil tubes in pairs in the lateral intervals. 1. A. canbyi.
Oil tubes solitary in all the intervals.

Leaves densely tomentose beneath. 2. A. hendersoni. Leaves glabrous or nearly so.

Involucels of numerous bractlets. 3. A. genuflexa. Involucels usually wanting.

Fruit 6 to 8 mm. long with lateral wings thick and corky. 4. A. arguta. Fruit 4 to 6 mm. long, the lateral wings not thick and corky. 5. A. lyallii.

1. Angelica canbyi Coult. & Rose, Rev. N. A. Umb. 40, 1888.

Type locality: "Low grassy ground along streams, Klickitat River, near Mount Adams," Washington. Collected by Suksdorf.

Range: Eastern Washington.

Specimens examined: Wenache Mountains, Whited 1410, 1188; Ellensburg, Whited 535; Atanum Soda Springs, Watt, August, 1895; Mount Adams, Suksdorf 638; near Mount Paddo, Suksdorf 763; Blue Mountains, Piper 2335; Horner 302; Touchet River, Horner 301; without locality, Vasey 301; without locality, Brandegee 796½; Alkali Lake, Sandberg & Leiberg 420.

Zonal distribution: Arid Transition and Canadian.

2. Angelica hendersoni Coult. & Rose, Bot. Gaz. 13: 80, 1888.

Type Locality: "Bluffs moistened by sea spray, Long Beach, Ilwaco (Pacific County), Washington." Collected by Henderson.

Range: Seacoast, from southern Washington to San Francisco.

Specimens examined: Ilwaco, Henderson, September 7, 1892; Nahcotta, Brodie in 1900, Zonal distribution: Humid Transition.

3. Angelica genufiexa Nutt.; Torr. & Gr. Fl. 1: 620, 1840.

Archangelica peregrina Nutt.; Torr. & Gr. Fl. 1: 622, 1840.

Type locality: Wappatoo Island, [Oregon] and near Fort Vancouver [Washington]. Collected by Nuttall.

RANGE: From Oregon to southern Alaska, west of the Cascade Mountains.

Specimens examined: Port Ludlow, Binns in 1890; Montesano, Heller 4035a; West Scattle, Piper 628 and August 3, 1889; Tacoma, Flett 167; upper Valley Nisqually, Allen 36; Skamania County, Suksdorf; Falcon Valley, Suksdorf 187; Sumas, Lyall; Mount Adams, Suksdorf 627, 186; Olympic Mountains, Elmer 2765.

Zonal distribution: Humid Transition.

4. Angelica arguta Nutt.; Torr. & Gr. Fl. 1: 620, 1840.

Type locality: "Wappatoo Island [Oregon] and near Fort Vancouver [Washington]." Collected by Nuttail.

Specimens examined: Type specimen of Nuttall in the Herbarium of the New York Botanical Garden.

This species is known only from the original specimens of Nuttall. Unless these represent some unusual condition of A. lyallii it is difficult to understand why the species has not been found since by the numerous botanists who have collected in and about the type locality.

5. Angelica Iyallii S. Wats. Proc. Am. Acad. 17: 374, 1882.

Type locality: "In the Galton and Cascade Mountains, near the British boundary," Collected by Lvall.

Range: In the mountains, from eastern Oregon to northwestern Wyoming and northward to Alberta.

Specimens examined: Olympic Mountains, Piper 2023; Mount Rainier, Piper in 1890; Allen; upper Valley Nisqually, Allen; Stampede Pass, Henderson in 1892; Mount Adams, Suksdorf 636; Falcon Valley, Howell in 1882; Suksdorf 128; without locality, Brawlegee 796; Cascade Mountains, latitude 49°, Lyall; Horseshoe Basin, Elmer 855; Blue Mountains, Piper 2336, August 2, 1896; Dry Creek, Whitman County Vascy, July 30, 1901; Clealum Creek, Cotton 830.

Zonal distribution: Canadian and Hudsonian.

Angelica sp. An undescribed species of Angelica occurs on Mount Adams, of which immature specimens have been collected by Henderson. It has been referred erroneously to A. kingii (Selimm kingii S. Wats.) to which it is perhaps nearest related.

CONIOSELINUM.

1. Conioselinum gmelini (Cham. & Schlecht. Coult. & Rose, Contr. Nat. Herb. 7: 150, 1900,

Liquiticum quielini Cham. & Schlecht. Linnaea 1: 391, 1826.

Selinum benthami S. Wats. Bibl. Index 432, 1878.

Selimum hookeri S. Wats.; Coult. & Rose, Rev. N. A. Umb. 45, 1888.

Conioselinum fischeri Auct. Amer.

Type locality: "Unalaska."

RANGE: From Alaska and Northwest Territory southward to the Columbia River along the coast.

Specimens examined: Mason County, Piper July, 1890, 631; Port Ludlow, Binus in 1890; Seattle, Piper in 1888; Tacoma, Flett 131; Steilacoom, Suckley: Ilwaco, Henderson 2160; Straits of De Fuca, Scouler: Puget Sound, Wilkes Expedition 7.

Zonal distribution: Humid Transition.

In Cooper's report this plant was referred to Conium maculatum 1., and spoken of by Torrev as "the large form of the northwest coast."

LOMATIUM.

Low plants arising from thick tubers

r plants arising from thick tubers.	
Flowers white; tubers globose.	
Fruit puberulent	1. L. gormani.
Fruit glabrous.	
Oil tubes none: tubers often moniliform	2. L. geyeri.
Oil tubes present.	
Tubers large; oil tubes solitary in the	
intervals.	3. L. cambyi.
Tubers small; oil tubes several in each	·
interval.	
Pedicels slender, longer than the	
fruits	4. L. farinosun.
Pedicels stout, much shorter than	•
the fruits	5. L. piperi.
Flowers yellow; tubers elongate.	
Fruit puberulent.	
Oil tubes 3 to 6 in each interval.	6. L. watsoni.
Oil tulos solitant in the interest.	- I

Fruit glabrous; oil tubes solitary in the intervals. S. L. circumdatum.

Taller plants, the roots elongate, hardly tuberous. Peduncles stout, often much swollen at the summit. Fruit very large, 18 to 28 mm. long; leaf segments narrow.... 9. L. suksdorfii. Fruit smaller 8 to 14 mm, long. Peduncles less stout, never swollen at the top, Bractlets conspicuous. Flowers white. Bractlets small or wanting. Fruit linear: flowers long-pedicelled...... 15. L. ambignum. Fruit oblong. Leaves pinnate. Oil tubes solitary in the intervals... 16. L. martindalei. Oil tubes 3 in each interval...... 17. L. hallii. Leaves ternate. Wings of the fruit broad. Ill-scented, the leaves finely Not ill-scented, the leaves not Wings of the fruit narrow. Ovaries puberulent. Leaf segments lanceolate,

1. Lomatium gormani (Howell) Coult. & Rose, Contr. Nat. Herb. 7: 208. 1900.

Peucedanum gormani Howell, Fl. N. W. Am. 1: 252, 1898 (April 1).

Peucedanum confusum Piper, Erythea 6: 29, 1898 (April 10.)

Type locality: On "high hills opposite The Dalles," Washington. Collected by Howell.

Leaf segments oblong, rather

elongate, usually entire... 20. L. robustius.

short, often toothed..... 22. L. brevifolium.

Range: Eastern Oregon, eastern Washington, and adjacent Idaho.

Specimens examined: Wenache Mountains, Whited 60; North Yakima, Mrs. Steinweg in 1894; Klickitat, Howell 411; Rock Creek, Sandberg & Leiberg 84; Pullman, Piper 1565; Elmer 73; Wawawai, Piper 1566; Colfax, Vascy, April 13, May 5, 1902; Waitsburg, Horner 4; Spokane County, Leiberg 750; Klickitat Hills, Gorman, April, 1895.

ZONAL DISTRIBUTION: Arid Transition.

2. Lomatium geyeri (S. Wats.) Coult. & Rose, Contr. Nat. Herb. 7: 209. 1900.

Pencedanum geyeri S. Wats. Proc. Am. Acad. 14: 293, 1879.

Pencedanum evittatum Coult. & Rose, Bot. Gaz. 14: 277, 1889.

Type locality: "Sandy woods and plains, upper Columbia River: the biscuit-root of the Indians." Collected by Geyer, no. 458, probably along the lower Spokane River.

Range: Eastern Washington and northern Idaho.

Specimens examined: Wenache, Whited 1007 and May 17, 1896; Badger Mountain, Whited, April 22, 1900; Roslyn, Whited, April 25, 1898; Ellensburg, Whited 270; Piper, May 20, 1897; Fort Colville, Lyall in 1861; Spokane, Piper 2300, 2941, 2697; Henderson 2502; Hangman Creek, Sandberg & Leiberg 7; Ellensburg, Vasey in 1889.

Zonal distribution: Arid Transition and Upper Sonoran.

3. Lomatium canbyi Coult. & Rose, Contr. Nat. Herb. 7: 210, 1900.

Peucedanum canbyi Coult. & Rose, Bot. Gaz. 13: 78, 1888.

Type locality: "High ridges, E. Oregon." Collected by Howell.

Range: Eastern Oregon, eastern Washington, and Idaho.

Specimens examined: Wenache, Whited 287; Ellensburg, Whited 287, 258 and May 4, 1898; North Yakima, Mrs. Steinwey in 1894; Klickitat Valley, Howell 1367, 67; near Columbus, Suksdorf, April 13, 1886; Davenport, Geo. R. Sawyer, April 13, 1901; Rattle-snake Mountains, Cotton 567; Klickitat Hills, Gorman, April, 1895.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

4. Lomatium farinosum (Gever) Coult. & Rose, Contr. Nat. Herb. 7: 210, 1900.

Peucedanum farinosum Gever; Hook. Lond. Journ. Bot. 6: 235, 1847.

Ferula farinosa Gever; Hook. Lond. Journ. Bot. loc. eit.

Type locality: "On an isolated rock in the Coeur d' Aleine Mountains on wet clay." Collected by Gever.

Range: Eastern Washington and Idaho.

Specimens examined: Pine City, Piper, May 6, 1898; Rock Lake, Sandberg & Leiberg, May, 1893; Rock Creek, Sandberg & Leiberg 131; near Spangle, Piper, May 31, 1901; Almota, Piper 2794; Wawawai, Elmer 98; Piper 1567; Coulee City, Piper 3874; North Palouse River, Vasen, May 25, 1902.

ZONAL DISTRIBUTION: Arid Transition.

5. Lomatium piperi Coult. & Rose, Contr. Nat. Herb. 7: 211, 1900.

Type locality: "Ellensburg, Kittitas County, Wash." Collected by G. R. Vasey.

Range: From the mountains of northern California to Washington,

Specimens examined: Klickitat Valley, Howell, February 15, May, 1878; Klickitat River, Flett 1304; White Salmon, Suksdorf 278; Klickitat Hills, Gorman, April, 1895.

ZONAL DISTRIBUTION: Arid Transition.

Lomatium watsoni Coult. & Rose, Contr. Nat. Herb. 7: 211, 1900.

Peucedanum watsoni Coult. & Rose, Bot. Gaz. 13: 209, 1888.

Type locality: "Simcoe Mts.," Yakima County, Wash. Collected by Howell.

Range: Mountains of Oregon and Washington.

Specimens examined: Near Columbus, Suksdorf: Klickitat, Howell 412, 413; Klickitat Hills, Gorman, April, 1895; Simcoe Mountains, Howell 180.

Zonal distribution: Arid Transition.

7. Lomatium cous (S. Wats.) Coult. & Rose, Contr. Nat. Herb. 7: 214, 1900.

Cous. Biscuit root.

Peneedanum eous S. Wats, Proc. Am. Acad. 21: 453, 1886.

Type locality: "John Day's Valley," Oregon. Collected by Howell.

Range: Eastern Oregon and Washington and adjacent Idaho.

Specimens examined: Blue Mountains, Piper 2341; Wawawai, Elmer 97; above Wawawai, Piper, May 6, 1901; Whitman County near Lewiston, B. Hunter 45.

ZONAL DISTRIBUTION: Arid Transition.

8. Lomatium circumdatum (S. Wats.) Coult. & Rose, Contr. Nat. Herb. 7: 213, 1900.

Peucedanum circumdatum S. Wats. Proc. Am. Acad. 22: 474, 1887.

Type locality: "On hillsides in the Wallowa region of eastern Oregon." Collected by Cusick.

Range: Eastern Oregon and Washington and adjacent Idaho.

Specimens examined: Blue Mountains, Horner 222.

This species is not very satisfactorily distinguished from *L. c.ms.* Good series of specimens for both of these species are needed before their relations can be made clear.

9. Lomatium suksdorfii (S. Wats.) Coult. & Rose, Contr. Nat. Herb. 7: 239, 1900.

Pencedanum suksdorfii S. Wats. Proc. Am. Acad. 20: 369, 1885.

Type locality: "On dry rocky mountain sides, W. Klickitat County, Washington Territory." Collected by Suksdorf.

Range: Eastern Washington.

Specimens examined: West Klickitat County, Suksdorf 132: Peshastin, Sandberg & Leiberg 489; without locality, Vascy 300.

Lomatium nudicaule (Pursh) Coult. & Rose, Contr. Nat. Herb. 7: 238, 1900.
 Smyrnium nudicaule Pursh, Fl. 1: 196, 1814.

Seseli leiocarpum Hook, Fl. Bor, Am. 1: 263, pl. 93, 1834.

Pencedanum leiocarpum Nutt.; Torr. & Gr. Fl. 1: 626, 1840.

Peucedanum leiocarpum campestre Nutt. loc. cit.

Type Locality: "On the Columbia River." Collected by Lewis April 15, 1806, then at the Dalles.

Range: From central California to British Columbia and Idaho.

Specimens examined: Admiralty Head, O. Piper, May, 1898; Fairhaven, Piper 2805; Lopez Island, Lyall in 1858; Tacoma, Flett 47; west Klickitat County, Suksdorf 130; Mount Stuart, Brandegee 797; without locality, Cooper in 1854; without locality, Vascy 297, 295; Olympic Mountains, Elmer 2773.

Zonal distribution: Transition.

11. Lomatium platyphyllum Coult. & Rose, Contr. Nat. Herb. 7: 238, 1900.

Pencedanum latifolium Xutt.; Torr. & Gr. Fl. 1: 625, 1840, not DC, 1830.

Peucedanum nuttallii S. Wats. Bot. King. Explor. 128, 1871, not Seseli nuttallii A. Gray. 1870.

Type locality: "Plains east of Wallawallah River, Oregon."—Collected by Nuttall.

Range: From northern Nevada to eastern Washington and adjacent Idaho.

Specimens examined: Wenache Mountains, Elmer 475; Wenache, Piper, March 26, 1895; Whited 26, 1021, 1078; Ellensburg, Whited 656; Peshastin, Sandberg & Leiberg, 487; Wenache Mountains, Cotton 1285.

Zonal distribution: Arid Transition.

Lomatium utriculatum (Nutt.) Coult. & Rose, Contr. Nat. Herb. 7: 215, 1900.
 Pencedanum utriculatum Nutt. Torr. & Gr. Fl. 1: 628, 1840.

Type locality: "Rocky plains, particularly near the confluence of the Wahlamet and Oregon [Columbia] Rivers," Oregon.—Collected by Nuttall.

Range: From southern California to British Columbia.

Specimens examined: Admiralty Head, O. Piper, April 17, 1898; Whidby Island, Gardner 136; Oreas Island and Lopez Island, Lyall in 1858; Tacoma, Flett 28; Steilacoom Plains, Piper 635; Olympic Mountains, Elmer 2769; Woodlawn, Henderson 395; Vancouver, Piper 4931.

Zonal distribution: Humid Transition.

Not known to occur east of the Cascade Mountains. The Wilkes Expedition specimens (no. 359) undoubtedly belong to this species, but it is more than doubtful that they were collected at old Fort Walla Walla (Wallula).

The specimens referred by Hooker, a to Pencadanum fornicular um Nutt. very probably belong to L. utriculatum. The Cooper specimens also referred to P, fornicular um b are P, utriculatum.

Lomatium macrocarpum (Nutt.) Coult. & Rose, Contr. Nat. Herb. 7: 217, 1900.
 Penerdanum macrocarpum Nutt.; Torr. & Gr. Fl. 1: 627, 1840.

Pencedanum macrocarpum enrycarpum A. Gray, Proc. Am. Acad. 8: 385, 1872.

Peucedanum eurycarpum Coult. & Rose, Rev. N. A. Umb. 61, 1888.

Type locality: "Barren hills on the Oregon" (Columbia). Collected by Nuttall.

Range: From central California through eastern Oregon and Washington to British America, eastward to western Colorado and western Wyoming.

Specimens examined: Wenache, Whited 1118, 1202, 1035; Wenache Mountains, Whited 1274; Fort Colville, Lyall in 1861; Spokane, Piper, May 16, 1896; Hangman Creek, Sandberg & Leiberg 61; Pullman, Elmer 96; Piper, June 24, 1894; Garrison, Piper 1563; Almota, Piper, April 7, 1894; Blue Mountains, Piper, July 15, 1896; North Palouse River, Vasey, May 6, 1902; Waitsburg, Horner 221.

ZONAL DISTRIBUTION: Arid Transition.

13a. Lomatium macrocarpum semivittatum Piper, Bull. Torr. Club 29: 224, 1902.

Type locality: "Hood River," Oregon. Collected by Henderson.

Range: Klickitat County, Washington, and adjacent Oregon.

Specimens examined: West Klickitat County, Suksdorf 279.

This subspecies has been confused with L. bicolor (S. Wats.) Coult. & Rose, a species not known to occur in Washington. It has apparently been since redescribed as Lomatium flavum Suksdorf.a

14. Lomatium artemisiarum Piper.

Lomatium macrocarpum artemisiarum Piper, Bull. Torr. Club 29: 223, 1902.

Type locality: Pasco, Washington. Collected by Piper.

Range: Eastern Washington.

Specimens examined: Coulee City, Piper 3884; Crab Creek, Sandberg & Leiberg 243; without locality, Vascy 398; North Yakima, Henderson 2509, 2511, 2574; Prosser, Henderson 2510; Pasco, Piper 2976; Hunts Junction, Leckenby, April 19, 1898; Coulee City, Piper 3884; Prosser, Cotton 588; Rattlesnake Mountains, Cotton 564; Wallula, Cotton 1069, Zonal distribution: Upper Sonoran.

15. Lomatium ambiguum (Nutt.) Coult. & Rose Contr. Nat. Herb. 7: 212, 1900.

Eulophus ambiguus Nutt. Journ. Acad. Phila. 7: 27, 1854.

Peucedanum ambiguum Nutt.; Torr. & Gr. Fl. 1:626, 1840.

Type locality: "Borders of Flat-Head River," Montana. Collected by Wyeth.

Range: From eastern Oregon to British Columbia, and eastward to Montana and western Wyoming.

Specimens examined: Wenache, Whited; Clealum, Whited 613; Mount Adams, Henderson, August, 1892; Badger Mountains, Whited 1222; Peshastin, Sandberg & Leiberg 481; between Coulee City and Waterville, Spillman, May, 1896; Spokane, Henderson, July 9, 1892; Piper 2299; Lyall in 1861; Hangman Creek, Sandberg & Leiberg 44, 22; Pullman, Piper 1562; Elmer 827; Blue Mountains, Piper 2337; Spokane County, Suksdorf 319; without locality, Uasey 298; near Colfax, Vasey, May 25, June 26, 1962; Mount Carlton, Kreager 1561.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

Lomatium martindalei angustatum Coult. & Rose, Contr. Nat. Herb. 7: 225, 1900.

Peucedanum martindulei angustatum Coult. & Rose, Bot. Gaz. 13: 143, 1888.

Type locality: Rocky places "Cascade Mountains," Oregon. Collected by Howell.

Range: Mountains of Oregon, Washington, and British Columbia.

Specimens examined: Mount Baldy, Olympic Mountains, Lamb 1325; Olympic Mountains, Piper, August, 1895; Flett; Mount Rainier, Piper 2008; Stampede Tunnel, Henderson 2514; Stevens Pass, Sandberg & Leiberg, August, 1893, 795; Goat Mountains, Allen 258; Mount Adams, Henderson, August 9, 1892; Suksdorf 383; Flett 1269; Skamania County, Suksdorf 2112; Olympic Mountains, Elmer 2771; without locality, Vasey in 1889.

Zonal distribution: Hudsonian.

17. Lomatium hallii (S. Wats.) Coult. & Rose, Contr. Nat. Herb. 7: 224, 1900.

Pencedanum ballii S. Wats. Proc. Am. Acad. 11: 141, 1876.

Type locality: "Northern Oregon."

RANGE: Alpine in northern Oregon and Washington.

Specimens collected on Mount St. Helens by Mrs. Briggs in 1885, have been somewhat doubtfully referred to this species. It is otherwise known only from the neighborhood of Mount Hood, Oregon.

18. Lomatium laevigatum (Nutt.) Coult. & Rose, Contr. Nat. Herb. 7: 225, 1990.

Pencedanum laurigatum Nutt. in Torr. & Gr. Fl. 1:627, 1840.

Type locality: "Blue Mountains of Oregon." Collected by Nuttall.

Range: Along the upper Columbia in Oregon and Washington.

Specimens examined: Near Columbus, Suksdorf 863.

Lomatium triternatum (Pursh) Coult. & Rose, Contr. Nat. Herb. 7: 227, 1900. Seseli triternatum Pursh, Fl. 1: 197, 1814.

Pencedanum triternatum Nutt.; Torr. & Gr. Fl. 1: 626, 1840.

Type Locality: "On the waters of Columbia." The type was collected May 6, 1806, by Lewis, on which date the Lewis and Clark Expedition was on the Clearwater River, Idaho, near the mouth of Potlatch River.

RANGE: From northeastern California to British Columbia.

Specimens examined: Yelm, Piper 568; Smith, July, 1890; between Olympia and Gate City, Heller 4056; Goat Mountains, Allen 257; Wenache, Whitel 1021; Ellensburg, Whitel 658; North Yakima, Henderson 2513; Peshastin, Sandberg & Leiberg 596; Fort Colville, Lyall; Spokane County, Suksdorf 318; Spangle, Piper, July 24, 1899; Pullman, Piper 1568; Elmer 846; Waitsburg, Horner 104; Cottonwood Creek, Vascy, June 6, 1902; Colville, Kreager 603.

ZONAL DISTRIBUTION: Upper Sonoran and Transition.

This species varies much in the form of the fruit and in the breadth of the wings. Wide-winged forms have been referred to L. platycarpum (Peucedanum simplex). If the latter be characterized by having the wings of the fruit broader than the body, our plants would all seem referable to triternatum. Wherever the line of division is drawn, the fact remains that a complete series of intergrades exists.

20. Lomatium robustius Coult. & Rose, Contr. Nat. Herb. 7: 228, 1900.

Pencedanum triternatum macrocarpum Coult. & Rose, Rev. N. A. Umb. 70, 1888, not Pencedanum macrocarpum Nutt. 1840.

Peucedanum triternatum robustius Coult. & Rose, Contr. Nat. Herb. 3: 228, 1895.

Type locality: "Low grounds, W. Klickitat County, Wash." Collected by Suksdorf, Range: Eastern Washington and eastern Oregon.

Specimens examined: Klickitat County, Suksdorf 131; Ellensburg, Piper 2742.

21. Lomatium grayi Coult. & Rose, Contr. Nat. Herb. 7: 229, 1900.

Peucedanum millefolium S. Wats. in Bot. King Explor. 129, 1871, not Sonder, 1861-62. Peucedanum grayi Coult. & Rose, Bot. Gaz. 13: 209, 1888.

Type locality: "Antelope Island, (Great) Salt Lake," Utah. Collected by Watson.

RANGE: From eastern Washington and Oregon to Wyoming and Colorado.

Specimens examined: Wenache, Whited 1050; Ellensburg, Whited 657; North Yakima, Henderson, May 29, 1892; west Klickitat County, Suksdorf 280, 24; Morgans Ferry, Suksdorf 322; Fort Colville, Lyall in 1861; Hangman Creek, Sandberg & Leiberg 5; Ritzville, Sandberg & Leiberg 180; Pullman, Elmer 95; Wawawai, Piper 1767; Touchet River, Horner 609; Blue Mountains, Piper 2339; Dry Creek, Vasey, May 5, June 7, 1902; Cape Horn, Piper 5012.

Zonal distribution: Arid Transition and Upper Sonoran.

22. Lomatium brevifolium Coult. & Rose, Contr. Nat. Herb. 7: 232, 1900.

Peucedanum triternatum brevifolium Coult. & Rose, Rev. N. A. Umb. 70, 1888.

Type locality: "Klickitat County," Washington. Collected by Howell.

Range: Oregon and Washington.

Specimens examined: Columbus, Suksdorf, June 10, 1886; Klickitat River, Suksdorf 639; Flett 1303; Klickitat County, Howell 1368; Pasco, Hindshaw 15.

Lomatium dasycarpum (Torr. & Gr.) Coult. & Rose (Pencedanum dasycarpum Torr. & Gr.) is a Californian species reported from Washington on the basis of specimens collected in Klickitat County by Joseph Howell. a The Howell specimens prove to be L. canbin Coult. & Rose.

LEPTOTAENIA.

Leptotaenia dissecta Nutt.; Torr. & Gr. Fl. 1: 630, 1840.

Ferula dissecta A. Gray, Proc. Am. Acad. 7: 348, 1868.

Ferula dissoluta S. Wats, in Brewer & Wats, Bot, Cal. 1: 271, 1876.

Type locality: "Plains of the Oregon (Columbia) near the confluence of the Wahlamet." Collected by Nuttall.

Range: From northern California to Vancouver Island.

Specimens examined: Klickitat County, Howell, Suksdorf: Rattlesnake Mountains, Cotton 332; Clallam County, Elmer 2764; Wenache, Whitel 1340 and 1058, 1207, April 9, 1900; Piper 2013; Ellensburg, Whitel 320; Colville, Lyall in 1861.

ZONAL DISTRIBUTION: Arid Transition.

2. Leptotaenia multifida Nutt.; Torr. & Gr. Fl. 1: 630, 1840.

Ferula multifida A. Gray, Proc. Am. Acad. 7: 348, 1868.

Type locality: "Plains of the Oregon [Columbia], east of Wallawallah, and in the Blue Mountains." Collected by Nuttall.

RANGE: From western Wyoming and Montana to New Mexico and west to Washington and California.

Specimens examined: Blue Mountains, Piper, July, 1896; between Coulee City and Waterville, Spillman, May, 1896; Medical Lake, Sandberg & Leiberg 54; Sprague, Henderson, May, 1892; Sandberg & Leiberg 212; Pullman, Elmer 136; Steptoe, Vasey, May 15, 1901; Coulee City, Piper 3845; Colville Reservation, Griffiths & Cotton 403; Chelan Butte, Griffiths & Cotton 185.

Zonal distribution: Arid Transition.

3. Leptotaenia purpurea (S. Wats.) Coult. & Rose, Rev. N. A. Umb. 52, 1888.

Ferula purpurea S. Wats. Proc. Am. Acad. 21: 453, 1886.

Type locality: "On rocky hillsides near the lower Columbia River, in Klickitat County, Wash." Collected by Suksdorf.

Range: Klickitat County, Washington, and adjacent Oregon.

Specimens examined: Simcoe Mountains, *Howell* in 1879; west Klickitat County, Suksdorf 98, 325, 26, 281.

4. Leptotaenia watsoni Coult. & Rose, Rev. N. A. Umb. 52, 1888.

Type locality: "In the Wenatchee region," Chelan County, Washington. Collected by Brandegee and by Tweedy.

Range: Cascade Mountains about Mount Stuart, Washington.

Specimens examined: Wenache region, Brandegee 801; Mount Stuart, Sandberg & Leiberg 808; Elmer 1171.

5. Leptotaenia salmoniflora Coult. & Rose, Contr. Nat. Herb. 7: 201. 1900.

Pencedanum salmoniflora Coult. & Rose, Contr. Nat. Herb. 3: 228, 1895.

Type locality: "On basaltic rocks, near upper ferry, Clearwater River, above Lewiston," Nez Perces County, Idaho. Collected by Sandberg, MaeDougal, & Heller.

RANGE: Bluffs of the Snake River, Washington, and of the Clearwater River, Idaho.

Specimens examined: Almota, Piper 2781; Wawawai, Piper 2782; Elmer 92.

Zonal distribution: Upper Sonoran.

CARUM.

Carum gairdneri (Hook, & Arn.) A. Gray, Proc. Am. Acad. 7; 344, 1867.
 Menia gairdneri Hook, & Arn. Bot. Beech. Voy. 349, 1839-40.

Edosmia gairdneri Nutt.; Torr. & Gr. Fl. 1: 612, 1840.

Type Locality: Near San Francisco or Monterey, California. Collected by Douglas.

RANGE: From British Columbia to southern California, eastward to the Black Hills of South Dakota, and to Colorado and Arizona.

Specimens examined: North Yakima, Watt, August, 1895; Falcon Valley, Suksdorf 635; Cascade Mountains, latitude 49°, Lyall; Leavenworth, Whited, August 6, 1896; Coulee City, Henderson, July 11, 1892; White Bluff Ferry, Lake & Hull, August 1, 1892; Fort Colville, Lyall; Mason County, Piper 1651; Spokane, Piper, July, 1896; Pullman, Hull 537; Almota, Piper 1935; without locality, Vasey 307; Alkali Lake, Sandberg & Leiberg 414; Steptoe, Vasey, August 10, 1902; Clarks Springs, Spokane County, Kreager 575; Rattlesnake Mountains, Cotton 661.

Zonal distribution: Transition.

The roots of this plant have a sweet mutty flavor and were formerly much used for food by the Indians. Forms of this species from Washington have been mistaken for *Carum* kelloggii, Carum oreganum, and Eulophus bolanderi.

CICUTA. WATER HEMLOCK.

1. Cicuta douglasii (DC.) Coult. & Rose, Contr. Nat. Herb. 7: 95, 1900.

!Sium !douglasii DC. Pred. 4: 125, 1830.

Cicuta purpurata Greene, Pittonia, 2: 8, 1889.

Type locality: "In America boreali occid." Collected by Douglas.

Range: In marshes from Oregon to Alaska.

Specimens examined: Straits of De Fuca Scouler: Yakima County, Henderson, July, August, 1892; confluence of Columbia, Douglas: Clealum, Greene, August 14, 1889.

ZONAL DISTRIBUTION: Transition.

2. Cicuta vagans Greene, Pittonia 2: 9, 1889.

Type locality: In an estuary of Lake Pend Oreille, Idaho. Collected by Greene.

RANGE: In wet places and marshes, from northeastern California to Idaho, British Columbia, and Vancouver Island.

Specimens examined: Montesano, Heller 4069; Sumas, Henderson 373; Olympia, Henderson 373; Nisqually Valley, Alien 255; Falcon Valley, Suksdorf, July, September, 1883; Kitsap County, Piper 640; Puyallup Reservation, Brodie, September, 1900; Chambers Lake, Henderson, August 23, 1892; Samish Lake, Suksdorf 1192; Cottonwood Creek, Vasey, September 18, 1901; Waitsburg, Horner 620, 571; Clallam County, Elmer 2761.

ZONAL DISTRIBUTION: Transition.

The characters used to differentiate this from the preceding are admittedly not very satisfactory. Good series of specimens may demonstrate them to be illusive.

3. Cicuta occidentalis Greene, Pittonia 2: 7, 1889.

Type locality: Trinidad, Colo., "near the New Mexican line."

RANGE: In the Pocky Mountain region, from the Black Hills of South Dakota to Washington, and southward through Colorado and northern Nevada to New Mexico.

Specimens examined: Spokane, *Piper* 3516; Pullman, *Piper*, August 23, 1897, 3512; Spokane, *Kreager* 555; Meyer's Falls, *Kreager* 503.

Zonal distribution: Arid Transition.

The three foregoing species appear in Suksdorf's list under the names C. virosa L., C. maculuta L., and C. californica A. Gray, for which they were formerly mistaken.

ZIZIA.

Zizia cordata (Walt.) Koch; DC. Prod. 4: 100, 1830.

Smurnium cordatum Walt, Fl. Car. 114, 1788.

Thaspium trifoliatum apterum A. Gray, Man. ed. 2, 156, 1856.

Type locality: None mentioned, but Carolina by implication.

RANGE: From eastern Canada to North Carolina and Alabama and extending westward to Assiniboia, Alberta, Washington, and Colorado.

Specimens examined: Crab Creek, Suksdorf 316; Wilbur, Henderson 2516; Hangman Creek, Sandberg & Leiberg 46; Pullman, Elmer 890; Piper 1557; Lake & Hull 534.

ZONAL DISTRIBUTION: Arid Transition.

LEIBERGIA.

1. Leibergia orogenioides Coult. & Rose, Contr. Nat. Herb. 3: 575. pl. 27, 1896.

* Type Locality: "Santianne Creek bottoms, Coeur d'Alene Mountains, Idaho, altitude 950 meters," Collected by Leiberg.

Range: Wet ground, along streams. Idaho and Washington.

Specimens examined: Spokane County, Suksdorf (the distributed specimens cultivated at Bingen, no. 1211).

Zonal distribution: Arid Transition.

A related and undescribed species is represented by imperfect specimens collected by Suksdorf between Cottonwood and Cheney (no. 314, June 14, 1884).

OENANTHE.

1. Oenanthe sarmentosa Presl.; DC. Prod. 4: 138, 1830. Water parsley.

Type locality: "Nootka Sound," Vancouver Island. Collected by Haenke.

RANGE: From British Columbia to central California.

Specimens examined: Olympic Mountains, J. M. Grant in 1889; Montesano, Heller 3985; Seattle, Piper 632; Tacoma, Flett 147; Sumas, Lyall; Port Ludlow, Binns, July 25, 1890; upper Nisqually Valley, Allen 35; Wind River, Flett 1300; west Klickitat County, Suksdorf 57; Skokomish Valley, Kincaid, June 1892; without locality, Vasey 303; Gray's Harbor, Wilkes Expedition; Olympic Mountains, Elmer 2762.

Zonal distribution: Humid Transition.

OENANTHE CALIFORNICA S. Wats, has been reported from Washington and it is listed by Suksdorf, but it is quite certain that it does not occur so far north.

LILAEOPSIS.

1. Lilaeopsis occidentalis Coult. & Rose, Bot. Gaz. 24: 48, 1897.

Type locality: "Wet places on coast of Yaquina Bay, Oregon." Collected by Hall.

Range: Coast region from Oregon to British Columbia and southern Alaska.

Specimens examined: Seattle, Piper 2759; Smith 642; Whidby Island, Gardner 129; Lake Washington, Suksdorf 972; Oyhut, Lamb 1272; Fidalgo City, Flett 2113; Clallam County, Elmer 2767; Shoalwater Bay, Henderson.

ZONAL DISTRIBUTION: Humid Transition.

This species was formerly considered the same as the Atlantic coast plant L. lineata (Michx.) Greene (Crantzia lineata Nutt.).

BERULA.

1. Berula erecta (Huds.) Coville, Contr. Nat. Herb. 4: 115, 1893.

Sium erectum Huds, Fl. Angl. 103, 1762.

Sium angustifolium L. Sp. Pl. ed. 2, 2: 1672, 1763,

Berula angustifolia Mert. & Koch in Röhling, Deutschl. Fl. ed. 3. 2: 433, 1826.

Type locality: Not given, but presumably England.

Range: In swamps and streams, Ontario to Texas, westward to British Columbia and California, and extending into Mexico.

Specimens examined: Near Tacoma, Flett 221, September, 1896; Wilbur, Henderson; Spokane, Piper 2850; Elmer, September, 1897; Valley, Beattle & Chapman 2163.

Zonal distribution: Transition.

LIGUSTICUM.

Fruit merely ribbed, not winged. 1. L. apiifolium. Fruit winged.

Inflorescence glabrous; leaflets confluent. 2. L. canbyi.
Inflorescence puberulent; leaflets distinct. 3. L. leibergi.

1. Ligusticum apiifolium (Nutt.) A. Gray, Proc. Am. Acad. 7: 347, 1868.

Cynapium apiifolium Nutt.; Torr. Gr. Fl. 1: 641. 1840.

Type locality: "Plains of Oregon, near the confluence of the Wahlamet." Collected by Nuttall.

Range: Oregon and Washington west of the Cascade Mountains.

Specimens examined: Montesano, Heller 3973; Chehalis County, Lamb 1756; Olympia, Kincaid, July 4, 1896; Manor, Piper, July 14, 1899; Columbia River, Nuttall; Cape Horn, Piper 4914

Zonal distribution: Humid Transition.

2. Ligusticum canbyi Coult. & Rose, Rev. N. A. Umb. 86, 1888.

Type locality: "Low grounds near head waters of Jocko River, Montana." Collected by Canby.

RANGE: In the mountains of northwestern Montana, northern Idaho, eastern Washington, and adjacent British Columbia.

Specimens examined: Skagit Pass, Lake & Hall, August 24, 1892.

3. Ligusticum leibergi Coult. & Rose, Contr. Nat. Herb. 7: 134, 1900.

Type locality: "Traille River Basin, Kootenai County, Idaho." Collected by Leiberg. Range: Idaho and eastern Washington.

Specimens examined: Blue Mountains, Piper 2427; Horner 308; Latah Creek, Suksdorf 1199.

Zonal distribution: Canadian.

LIGUSTICUM TENUIFOLIUM S. Wats, was included in Suksdorf's list on the basis of the Suksdorf specimen above cited.

4. Ligusticum purpureum Coult. & Rose, Contr. Nat. Herb. 7: 137, 1900.

Type locality: "Goat Mountains, Washington." Collected by Allen.

Range: Cascade Mountains of Washington.

Specimens examined: Mount Rainier, Piper 2009, August, 1895; Allen 259; near Mount Adams, Henderson, August, 1892; Horseshoe Basin, Elmer 706; Mount Adams, Suksdorf 581, Zonal distribution; Hudsonian.

Related to the above species, but apparently distinct, are the following specimens: Mount Rainier, Piper 629; Stevens Pass, Sandberg & Leiberg 731; Whited 1464; Wenache Mountains, Cotton 1685; Cascade Mountains, Tweedy 288. Better material is needed to clear up the matter.

LIGUSTICUM SCOTHICUM L. Sp. Pl. 1: 250, 1753. Type locality, "Ad litora Maris in Anglia, Suecia." Range, salt marshes along the east coast from Labrador (and up the St. Lawrence) to Connecticut; along the entire Alaskan coast; also coasts of northern Asia and Europe. "Mouth of the Columbia," according to Hooker, basing on Douglas, a "Not rare along coast at Shoalwater Bay," according to A. Gray, basing on Cooper, b The species is common on the Alaskan coast, but there are no specimens preserved in American herbaria to show that it occurs on the Washington coast.

GLEHNIA.

 Glehnia littoralis (A. Gray) Schmidt, Mem. Acad. Petrop. VII. 12²: 138, 1868, as syn.; Coult. & Rose, Contr. Nat. Herb. 7: 165, 1900.

Cymopterus littoralis A. Gray, Pac. R. Rep. 12: 62, 1860.

Phellopterus littoralis Schmidt, Mem. Acad. Petrop. VII. 12²: 138, 1868.

Type locality: "On the sands of the seashore at Shoalwater Bay." Washington. Collected by Cooper.

RANGE: Sandy seashores from Oregon to Alaska; also in Korea and Japan.

Specimens examined: Oyhut, Lamb 1249; Shoalwater Bay, Cooper; Whidby Island, Gardner 138; Clallam County, Elmer 2768; Ilwaco, Piper 5002.

Zonal distribution: Humid Transition.

PTERYXIA.

 Leaves with pale rigid segments.
 1. P. terebinthina.

 Leaves greener with segments not rigid.
 2. P. for nicularea.

1. Pteryxia terebinthina (Hook.) Coult. & Rose, Contr. Nat. Herb. 7: 171, 1900.

Selimin terebinthimin Hook, Fl. Bor, Am. 1: 266, pl. 95, 1834.

Cymopterus terebinthinus Torr. & Gr. Fl. 1: 624, 1840.

Pteryria terebinthacea Nutt.; Torr. & Gr. Fl. 1: 624, 1840, as synonym.

Type locality: "Sandy grounds of the Wallawallah River, North-West coast of America." Collected by Douglas.

Range: Dry ground, eastern Oregon and eastern Washington.

Specimens examined: Cascade Mountains to Fort Colville, Lyall in 1860; Falcon Valley. Suksdorf 129; Morgans Ferry, Suksdorf 317; Atanum River, Flett 1295; Pasco, Hindshaw. May, 1896; Piper 2980; Henderson, May, 1892; Hunts Junction, Leckenby, April, 1898; Walla Walla region, Brandegee 803; junction Crab and Wilson creeks, Sandberg & Lecherg 230; Moxee to North Yakima, Griffiths & Cotton 39; Prosser, Cotton 1080; Rock Creek, Cotton 957.

Zonal distribution: Upper Sonoran.

Pteryxia foeniculacea (Torr. & Gr.) Nutt.; Coult. & Rose, Contr. Nat. Herb. 7: 171, 1900.

Cymopterus foeniculaceus Torr. & Gr. Fl. 1: 624, 1840.

Type locality: "On rocks, Blue Mountains of Oregon." Collected by Nuttall.

RANGE: Eastern Oregon, eastern Washington, and adjacent Idaho.

Specimens examined: Blue Mountains, Horner 305; Piper 2340; Tukanon River, Lake & Hull 535; Almota, Piper 2795; Wawawai, Elmer 770; without locality, Vasey 3094; Clarks Springs, Spokane County, Kreager 119.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

HESPEROGENIA.

1. Hesperogenia stricklandi Coult. & Rose, Contr. Nat. Herb. 5; 203, 1899.

Type locality: "Mount Rainier, Washington." Collected by Allen.

Range: Mount Rainier, Washington.

Specimens examined: Mount Rainier, Allen 278; Flett, August, 1897; Strickland in 1896,

Zonal distribution: Hudsonian.

OROGENIA.

1. Orogenia linearifolia S. Wats. Bot. King. Explor. 120. pl. 14. figs. 1 to 3, 1871.

Type locality: "Damp shaded ridge of the Wahsatch, north of Parley's Park, 7,500 feet altitude," Utah. Collected by Watson.

RANGE: From Washington and Idaho to Oregon, Utah, and southwestern Colorado.

Specimens examined: Falcon Valley, Suksdorf in 1882; east of the Cascade Mountains, Wilkes Expedition.

SIUM.

1. Sium cicutaefolium Schrank, Baier, Fl. 1: 558, 1798.

Soum lineare Michx. Fl. 1: 167, 1803.

Sium pusillum Nutt.; Torr. & Gr. Fl. 1:611. 1840.

Type locality: Not determined.

RANGE: In swamps from Newfoundland to Virginia, west to British Columbia and northern California. Europe. Asia.

Specimens examined: Sumas, Lyall in 1858-59, Seattle, Piper, September, 1892; Tacoma, Flett 144, 220; Lindsley's ranch, Clarke County, Henderson 375. Trout Lake, Suksdorf 185; Spokane County, Suksdorf 922; North Palouse River, Vascy, July 17, 1901; Pullman, Piper; Rock Lake, Lake & Hull 536; Toppenish, Cotton 768.

Zonal distribution: Transition.

COELOPLEURUM.

 Leaflets obtuse, very thick.
 1. C. maritimum.

 Leaflets acute or acuminate, thinner.
 2. C. longipes.

1. Coelopleurum maritimum Coult. & Rose, Bot. Gaz. 13: 145, 1888.

Type locality: "Wet ocean bluffs, Long Beach, Ilwaco (Pacific County), Wash." Collected by Henderson.

RANGE: Ocean bluffs near the mouth of the Columbia River.

Specimens examined: Ilwaco, Henderson, September, 1892; Piper 4995.

Zonal distribution: Humid Transition.

2. Coelopleurum longipes Coult. & Rose, Contr. Nat. Herb. 7: 142, 1900.

Type locality: "Tide marshes near Astoria, Oregon." Collected by Howell.

Range: Seacoast swamps, from the Columbia River to southern Alaska.

Specimens examined: Seattle, Piper 567; Tacoma, Piper; Union City, Piper in 1890; Fairhaven, Suksdorf 1200; Hoodsport, Henderson, August 15, 1890.

Zonal distribution: Humid Transition.

Formerly confused with the more northern, larger-fruited ℓ' , qualini (DC.) Ledeb.

HYDROCOTYLE.

1. Hydrocotyle ranunculoides L. f. Suppl. 177, 1781.

Type locality: "Mexico."

RANGE: Eastern Pennsylvania to Florida, thence westward to Texas, California, and Washington.

Specimens examined: Seattle, Piper 639; Tacoma, Flett 225; O'Briens, King County, Piper.

Zonal distribution: Humid Transition.

CORNACEAE, DOGWOOD FAMILY.

Flowers perfect in cymes, either loose or head-like	Cornus.
Flowers dioecious, in spikes	Garrya.

CORNUS.

Flowers in loose cymes, not involucrate: fruit white or blue.

Cyme branches hairy; leaves loosely pubescent beneath 1. C. occidentalis.

Cyme branches glabrous; leaves appressed-pubescent beneath..... 2. C. stolonifera.

Flowers in head-like cymes, surrounded by a conspicuous involucre; fruit

red.

Herbaceous, 8 to 20 cm, high; bracts 1 to 2 cm, long. 4. C. canadensis.

1. Cornus occidentalis (Torr. & Gr.) Coville, Contr. Nat. Herb. 4: 117. 1893.

Cornus pubeseens Nutt. Sylva. 3: 54, 1849.

Cornus sericea? occidentalis Torr. & Gr. Fl. 1:652, 1840.

Type locality: "N. W. coast, Douglas, Mr. Tolmie! Dr. Scouler!"

Range: British Columbia to north California, east to Idaho.

Specimens examined: Montesano, Heller 3857; Whidoy Island, Gardner 139; Seattle, Piper 262, July 10, 1895, July 4, 1897; Silverton, Bouck 91; Cascade Mountains, latitude 49°, Lyall in 1859; Spokane, Piper 2692; Clarks Springs, Kreager 50, 571; Clallam County, Elmer 2699; Valley, Beattle & Chapman 2156.

Zonal distribution: Transition.

Cornus drummondin Meyer, as recorded in Cooper's Report, is doubtless the above species.

2. Cornus stolonifera Michx. Fl. 1:92, 1803.

Red osier.

Type Locality: "Hab, ad ripas amniumque rivorumque Canadae et Novae Angliae."

RANGE: New Brunswick to Alaska, south to Virginia, and in the mountains to California and New Mexico.

Specimens examined: Wenache, Whited 205, 1135; Ellensburg, Piper, May 20, 1897; Tampico, Henderson, July 31, 1892; Mabton, Cotton 368; west Klickitat County, Suksdorf; Coulee City, Lake & Hull, August 8, 1892; New London, Lamb 1169; Sprague, Sandberg & Leiberg 151; Spokane, Henderson, June 12, 1892; Lake Chelan, Lake & Hull, August 25, 1892; Walla Walla, Mrs. L. P. Anderson; Pullman, Elmer 840; Piper 2648; Wawawai, Piper, June 9, 1894; Lake & Hull 440; Blue Mountains, Piper, August 2, 1896; Piper, July 15, 1896; without locality, Vascy in 1889.

Zonal distribution: Arid Transition and Upper Sonoran.

Cornus Baileyi Coult. & Evans has twice been reported from Washington. In each case the specimens are, in our opinion, really C. stolonifera.

3. Cornus nuttallii Audubon; Torr. & Gr. Fl. 1:652, 1840.

Dogwood.

Type locality: Oregon.

RANGE: British Columbia to California, west of the Cascade Mountains, and in north Idaho.

Specimens examined: Sumas Prairie, Lyall in 1858-59; Seattle, Piper 113; upper Valley Nisqually, Allen 208: Railroad Creek, Elmer in 1897; without locality, Vasey in 1889; Clallam County, Elmer 2698; Stehekin, Griffiths & Cotton 225.

Zonal distribution: Humid Transition.

This species very commonly blossoms a second time in the fall, when the fruit from the spring flowers is ripe. These fall flowers are often pink-tinged.

4. Cornus canadensis L. Sp. Pl. 1:118, 1753.

Type locality: "In Canada."

Range: Alaska to Newfoundland, southward to California, Colorado, Minnesota, and New Jersey.

Specimens examined: Ilwaco, Henderson, September 9, 1892; Silverton, Bonek 89; Mount Rainier, Flett 293; Piper; Stevens Pass, Sandberg & Leiberg 776; Cascade Mountains, latitude 49°, Lyall; "Columbia River, frequent," Douglas: Entiat Creek, Mrs. Howe; Big Meadows, Kreager 423; Lake Kalispel, Kreager, July 3, 1902; without locality, Vasey in 1889; Ilwaco, Piper 4950.

Zonal distribution: Canadian.

Cornus suecica var. β Hook. Fl. Bor. Am. 1: 277. "Fort Vancouver on the Columbia. Dr. Scouler." The above reference is all the evidence we have of the occurrence of this species in Washington. It is probable that the specimen is increby a form of C. canadensis L.

GARRYA.

1. Garrya fremontii Torr. Pac. R. Rep. 4: 136, 1857.

Type locality: "On the Upper Sacramento, above the Great Canon." Collected by Fremont.

RANGE: Middle California to Washington.

Specimens examined: Wind River, Flett 1211.

Garrya elliptica Douglas is included by Suksdorf in his list, but there are no specimens to substantiate its occurrence in Washington.

PYROLACEAE. Pyrola Family.

Flowers solitary; style long	Moneses.
Flowers not solitary.	
Inflorescence a corymb; style short	Спимарина.
Inflorescence a raceme; styles mostly long	Pyrola.

MONESES.

1. Moneses uniflora (L.) Λ. Gray, Man. ed. 1: 273. 1848.

Pyrola uniflora L. Sp. Pl. 1: 397, 1753.

Moneses grandiflora S. F. Gray, Nat. Arr. Brit. Pl. 2: 403, 1821.

Moneses reticulata Nutt. Trans. Am. Phil. Soc. 8: 271, 1843.

Type locality: "Habitat in Europae borealis sylvis."

RANGE: Alaska to Labrador, southward to Pennsylvania, Colorado, and Oregon.

Specimens examined: Humptulips, Lamb 1084a: upper Nisqually Valley, Allen 67; Silverton, Bouck 127; mountains north of Ellensburg, Brandegee 949; Skamania County, Suksdorf 2243; Green River Hot Springs, Piper in 1888: Big Meadows, Kreager 413; Ilwaco, Piper 5023.

Zonal distribution: Canadian.

CHIMAPHILA.

Flowers many; leaves cuneate-oblanceolate, numerous	1.	C.	umbellata.
Flowers few; leaves ovate or oblong-lanceolate, few	2.	C.	menziesii.

1. Chimaphila umbellata (L.) Nutt. Gen. 1:274. 1818.

Pyrola umbellata L. Sp. Pl. 1: 396, 1753.

Chimaphila corymbosa Pursh, Fl. 1: 300, 1814.

Type locality: "Habitat in Europae, Asiae and Americae septentrionalis sylvis."

RANGE: British Columbia to Canada, southward to Mexico and Georgia. Europe, Asia.

Specimens examined: Mount Constitution, Henderson, July 4, 1892; near Skagit Pass, Lake & Hull 564; Fort Vancouver; Wenache Valley, Sandberg & Leiberg 565; head of Twisp River, Whited 189; without locality, Vasey 372; Olympic Mountains, Elmer 2471; Davis ranch, Kreager 179.

Zonal distribution: Transition and Canadian.

2. Chimaphila menziesii (R. Br.) Spreng, Syst. 2: 317, 1825.

Pyrola menziesii R. Br.; D. Don, Mem. Wern. Soc. 5: 245, 1824.

Type locality: "Habitat in Americae ora boreali-occidentali."

Range: British Columbia to California and Idaho.

Specimens examined: Cascade Mountains, latitude 49°, Lyall; upper Nisqually Valley, Allen 103; Mount Rainier, Piper, August, 1895; Mount Adams, Flett 1215; Mount Stuart, Sandberg & Leiberg 569; Falcon Valley, Suksdorf 39; Stampede Tunnel, Henderson, October 5, 1892; Blue Mountains, Lake & Hull, July 4, 1892; Mount Carlton, Kreager 284.

ZONAL DISTRIBUTION: Canadian.

PYROLA.

St	17	ما	stra	io	bŧ	
IJι	χ.	æ	SUL	ug.	111	

Leaves orbicular; style very short 1. P. minor. Leaves ovate; style long 2. P. secunda,

Style curved downward.

Green leaves none, or very rudimentary.

Flowers red. 3. P. aphylla. Flowers white 5a. P. picta integra.

Green leaves present.

Calyx lobes obtuse, very short; flowers greenish 4. P. chlorantha.

Calvx lobes acute.

Flowers white or whitish.

Veins of leaves white-bordered 5. P. picta.

Veins of leaves not white-bordered.

Leaves spatulate-oblong, not glaucous. 5a. P. picta dentata. Leaves ovate, glaucous 5b. P. picta integra,

Flowers red or pink.

1. Pyrola minor L. Sp. Pl. 1: 396, 1753.

Type locality: "Habitat in Europa frigidiore."

Range: Alaska to Greenland, southward to Oregon, New Mexico, and New England, Europe. Asia.

Specimens examined: Cascade Mountains, Suksdorf 2036; Wenache Region, Brandegee 948½; Stevens Pass, Sandberg & Leiberg 715; Klickitat County, Suksdorf, July, 1886; Fort Vancouver, Garry: Davis ranch, Kreager 208.

Zonal distribution: Canadian.

2. Pyrola secunda L. Sp. Pl. 1: 396, 1753.

Type locality: "Habitat in Europae borealis sylvis."

RANGE: Alaska to Labrador, southward to Virginia, Michigan, New Mexico, and California. Europe. Asia.

29418--06 м---28

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Mount Rainier, Piper 2046; Lake Wenache, Sandberg & Leiberg 637; Stampede Pass, Henderson, July 26, 1892; Vancouver, May, 1826; Horseshoe Basin, Elmer 727; Cascade Mountains to Colville, latitude 49°, Lyall in 1860; Blue Mountains, Piper, July, 1896; without locality, Vasey 369; Clallam County, Elmer 2468; Davis ranch, Kreager 180; Big Meadows, Stevens County, Kreager, August 5, 1902; Kalispel Valley, Kreager in 1902.

ZONAL DISTRIBUTION: Canadian.

3. Pyrola aphylla Smith, Rees' Cycl. 29: n. 7, 1814.

Pyrola aphylla paucifolia Howell, Fl. N. W. Am. 425. 1901.

Type locality: "Gathered on the west coast of North America." Collected by Menzies, at Nootka Sound according to Don.

Range: British Columbia to Idaho and California.

Specimens examined: Whidby Island, Gardner 190: Seattle, Piper 142; Tacoma, Flett 115; west Klickitat County, Suksdorf in 1886; Nason Creek, Sandberg & Leiberg 622; Blue Mountains, Piper, August 2, 1892; without locality, Vasey 371; Kalispel Lake, Kreager 341.

Zonal distribution: Transition and Canadian.

4. Pyrola chlorantha Sw. Vet. Acad. Handl. Stockh. 1810: 190. pl. 5. 1810.

Type locality: Carlsberg, near Stockholm, Sweden.

Range: British Columbia to Labrador, southward to Oregon, Colorado, Nebraska, and Virginia.

Specimens examined: Island County, Henderson 2416; Whidby Island, Gardner 191; Nisqually Valley, Allen, July 21, 1894; Wenache Region, Brandegee 948; Klickitat River, Suksdorf 158; Mount Adams, Flett 1212; Falcon Valley, Suksdorf 542; Blue Mountains, Lake & Hull 769; without locality, Vasey 367; Davis ranch, Spokane County, Kreager 207. ZONAL DISTRIBUTION: Canadian and Transition.

5. Pyrola picta Smith, Rees' Cycl 29: n. 8. 1814.

Type locality. "Found on the west coast of North America." Collected by Menžies, whose specimens, Hooker states, are from Nootka Sound.

RANGE: Vancouver Island to California, Wyoming, and Utah.

Specimens examined: Cascade Mountains, Suksdorf 2036; Mount Adams, Flett 1216; Baldy Peak, Lamb 1293; Peshastin, Sandberg & Leiberg, August, 1893; Nason Creek, Sandberg & Leiberg 620; Blue Mountains, Piper, August 2, 1896; without locality, Vasey 370; Seattle, Piper in 1888.

Zonal distribution: Transition.

5a. Pyrola picta dentata (Smith).

Pyrola dentata Smith, Rees' Cycl. 29: n. 6. 1814.

Type locality: "Gathered by Mr. Menzies on the west coast of North America," at Nootka, according to Don.

RANGE:

Specimens examined: Near Union City, Piper 935; Mount Elinor, Mason County, Jennie V. Getty in 1902; Clallam County, Elmer; Mount Storm King, Lawrence 336.

Zonal distribution: Humid Transition.

5b. Pyrola picta integra (Λ . Gray).

Pyrola dentata integra A. Gray; Cooper, Pac. R. Rep. 12: 54. 1860.

Pyrola pallula Greene, Pittonia 4: 39. 1899.

Pyrola sparsifolia Suksdorf, Allg. Bot. Zeitschs. 12: 26. 1906.

Type locality: "On high wooded hills, east of Mount Adams."

Range: Washington to southern California.

Specimens examined: Simcoe Mountains, Howell 332; Mount Adams, Suksdorf 440; Cascade Mountains, Cooper in 1853; Valley, Beattie & Chapman 2277.

ZONAL DISTRIBUTION: Canadian.

6. Pyrola bracteata Hook. Fl. Bor. Am. 2: 47, 1834.

Purola rotundifolia bracteata A. Grav in Brewer & Wats. Bot. Cal. 1: 460, 1876.

Type locality: "N. W. Coast." Collected by Scouler.

RANGE: British Columbia to Idalio and California.

Specimens examined: Mount Constitution, Henderson, July 4, 1892; Skokomish River, Henderson, June 15, 1892; Nisqually Valley, Allen 68; Mount Rainier, Piper 2048; Mount Adams, Flett 1213; Falcon Valley, Suksdorf 1546 in part; Fish Lake, Chelan County, A. D. Dunn, August 8, 1900; Klickitat River, Henderson, August 4, 1892; Big Meadows, Stevens County, Kreager, August 5, 1902; Blue Mountains, Piper, July 15, 1896; Clallam County, Elmer 2465.

ZONAL DISTRIBUTION: Transition.

7. Pyrola incarnata (DC.) Fisch.; DC. Prod. 7: 773. 1839, as synonym.

Pyrola rotundifolia incarnata DC. Prod. 7: 773. 1839.

Pyrola elata Nutt. Trans. Am. Phil. Soc. 8: 270, 1843.

Type locality: "In Dahuria."

RANGE: Alaska to New England and Oregon. Asia.

Specimens examined: Seattle, Piper 2760; San Juan Island, Lyall in 1858; Cascade Mountains, latitude 49°, Lyall in 1859-60; Nason Creek, Sandberg & Leiberg 614; Railroad Creek, Elmer, September. 1897; Twisp River, Whited 219; Skagit Pass, Lake & Hull, August 25, 1892; Falcon Valley, Suksdorf 1546 in part; Blue Mountains, Lake & Hull 565; Yakima County, Mrs. Steinweg in 1894; Big Meadow, Stevens County, Kreager, August 6, 1902; Davis ranch, Kreager 182.

ZONAL DISTRIBUTION: Transition.

One of Lyall's specimens, which has been considered to be P, elliptica Nutt., is probably a form of P, incarnata. We have seen no satisfactory evidence that P, elliptica occurs west of the Rocky Mountains.

MONOTROPACEAE. INDIAN PIPE FAMILY.

Ovary 4 or 5-celled.

Corolla present; flowers solitary or racemose.

Flowers solitary. Monotropa.

Flowers racemose.

Ovary 1-celled.

Calyx of 2 entire sepals; corolla tubular HEMITOMES.

ALLOTROPA.

1. Allotropa virgata Torr. & Gr. Pac. R. Rep. 6³: 80, 81, 1857.

Type locality: "Cascade Mountains of northern Oregon." Collected by Pickering.

RANGE: Washington to California from the Cascades and Sierras to the coast.

Specimens examined: Seattle, Piper 478: Lake Keechelus, Henderson, July 27, 1892;

Lake Wenache, Sandberg & Leiberg 631; Olympic Mountains, Elmer 2470.

ZONAL DISTRIBUTION: Humid Transition and Canadian.

PTEROSPORA.

1. Pterospora andromedea Nutt. Gen. 1: 269, 1818.

Type locality: "In Upper Canada near the Falls of Niagara."

RANGE: British Columbia to Canada, southward to California and Pennsylvania.

SPECIMENS EXAMINED: Mount Rainier, Piper, August, 1895; Lake Chelan, Lake & Hull, August 24, 1892; Pend Oreille River, Lyall in 1859; Loon Lake, Winston; Lake Wenache,

Sandberg & Leiberg 632; Blue Mountains, Piper, July 15, 1896; without locality, Vasey 375; Clallam County, Elmer 2462; Clarks Springs, Kreager 125.

Zonal distribution: Canadian.

MONOTROPA.

1. Monotropa uniflora L. Sp. Pl. 1: 387, 1753.

INDIAN PIPE.

Type Locality: "Habitat in Marilandia, Virginia, Canada."

Tire localiti. Itabicat in Mathandia, Viginia, Canada.

Range: Alaska to Labrador, southward to California and Florida. Asia.

Specimens examined: Snoqualmie, *Parker*, July 25, 1892; upper Nisqually River, *Piper*, August, 1895; Cascade Mountains to Colville, *Lyall* in 1860; Silverton, *Bouck*; west Klickitat County, *Suksdorf* 78; without locality, *Vascy* 376; Clallam County, *Elmer* 2436; Kalispel Lake, *Kreager* 348.

Zonal distribution: Transition and Canadian.

HYPOPITYS.

1. Hypopitys hypopitys (L.) Small, Mem. Torr. Club. 4: 137, 1894.

Monotropa hypopitys L. Sp. Pl. 1: 387, 1753.

Type locality: "Habitat in Succiae, Germaniae, Angliae, Canadae sylvis. Parasitica radicum."

Range: British Columbia to New Brunswick, southward to Arizona and Florida. Europe. Asia.

Specimens examined: Mount Rainier, Flett 238; Piper 2045; Baldy Peak, Lamb 1297; Wilkeson, Flett 32; Cascade Mountains, Suksdorf 199; Cascade Mountains to Colville, Lyall in 1860; Stampede Tunnel, Henderson, October 5,11892; Mount Adams, Suksdorf; Yakima Pass, Watson 261a; Nason Creek, Sandberg & Leiberg 623; Clallam County, Elmer 2464.

ZONAL DISTRIBUTION: Humid Transition, Canadian.

PLEURICOSPORA.

1. Pleuricospora fimbriolata A. Gray, Proc. Am. Acad. 7: 369, 1868.

Type locality: "In or near the Mariposa Sequoia gigantea Grove," California.

Range: California to Washington.

Specimens examined: Green River Hot Springs, Piper, July, 1888; Skamania County, Suksdorf, July 25, 1886.

Zonal distribution: Humid Transition and Canadian.

HEMITOMES NEW BERRYA

1. Hemitomos congestum A. Gray, Pac. R. Rep. 63: 80. 1855.

Newberrya Torr. Ann. Lyc. N. Y. 8: 55. 1867.

Type locality: "Upper Des Chutes Valley," Oregon. Collected by Newberry.

Range: Western Washington, western Oregon, and northern California.

Specimens examined: Near Tacoma, Flett, October 2, 1897; Snoqualmie, Miss Parker, August 1, 1892; Mount Adams, Suksdorf 987; Seattle, Tarleton in 1894; Mount Elinor, Jennie V. Getty, August, 1902; Skamania County, Suksdorf, August 19, 1892 and 2168; without locality, Geo. Gibbs; Mount Storm King, Lawrence 339.

Doctor Gray referred the Gibbs specimen to Newberrya spicata Λ . Gray in the original description, but the specimen seems to us to be N, congesta.

Zonal distribution: Canadian.

ERICACEAE. HEATHER FAMILY.

Fruit a berry or drupe.

Fruit a dry capsule. Anther cells each tipped with a recurved awn. Anther cells not appendaged. Corolla gamopetalous. Bracts firm, persistent; no scaly leaf-buds. Leaves heath-like; corolla without pouches. Phyllodoce (p.439). Leaves lanceolate; corolla with 10 pouches, which hold the anthers...... Kalmia (p. 439). Bracts thin, deciduous; leaf-buds scaly. Corolla globose, 4-toothed Menziesia (p. 440). Corolla choripetalous; bracts deciduous. Flowers white, umbelled; leaves evergreen..... Ledum (p. 440).

ARBUTUS.

Flowers coppery, solitary; leaves deciduous..... Cladothamnus (p. 442).

1. Arbutus menziesii Pursh, Fl. 1: 282. 1814

Madrona

Type Locality: "On the northwest coast of America." Collected by Menzies.

Range: British Columbia to California along the coast.

Specimens examined: Mat Mats Bay, Binns: Seattle, Piper in 1888.

ZONAL DISTRIBUTION: Humid Transition.

Not uncommon, especially on the bluffs along Puget Sound, and in similar situations where the trees receive abundant light.

ARCTOSTAPHYLOS.

Erect shrubs 1 to 2 meters high 1. A. tomentosa.

Prostrate creeping shrubs.

Leaves retuse at apex 2. A. ura-ursi.

Leaves cuspidate at apex 3. A. nevadensis.

Arctostaphylos tomentosa (Pursh) Dougl. Bot. Reg. 21: pl. 1791, 1836.

Manzanita.

Arbutus tomentosa Pursh, Fl. 1: 282, 1814.

Type locality: "On the North-west Coast of America." Collected by Menzies.

RANGE: Western Washington to California and Arizona.

Specimens examined: Tacoma, Flett, April 20, 1896; McNeils Island, Flett, June, 1895; Mason County, Piper 898; Mount Constitution, Henderson, July 4, 1892; west Klickitat County, Suksdorf 985, 660; Olympic Mountains, Elmer 2473; Vancouver, Piper, September, 1902; Vancouver, Piper 4936.

ZONAL DISTRIBUTION: Humid transition.

Hooker a recognizes two forms of this species A. tomentosa hispida and A. tomentosa nuda, the former with hispid, the latter with smooth branchlets. The first form is apparently typical A. tomentosa.

2. Arctostaphylos uva-ursi (L.) Spreng. Syst. 2: 287, 1825.

Kinnikinnick.

Arbutus uva-ursi L. Sp. Pl. 1: 395, 1753.

Type locality: "Habitat in Europa frigida, Canada."

RANGE: Arctic regions, southward to Pennsylvania, New Mexico, and California. Europe. Asia.

Specimens examined: Orchard Point, Piper, July, 1895; Tacoma, Flett 65; Mount Rainier, Piper 2058; Cascade Mountains, latitude 49°, Lyall in 1859; Loomis, Elmer 585; Conconully, Whited 1324; Cascade Mountains to Colville, latitude 49°, Lyall in 1860; Spokane, Piper, May 16, 1896, May 8, 1898; Hangman Creek, Sandberg & Leiberg 69; without locality, Cooper; Olympic Mountains, Elmer 2474; Spokane, Kreager 170; near Delight, Cotton 998.

Zonal distribution: Transition to Hudsonian.

3. Arctostaphylos nevadensis A. Gray, Syn. Fl. 21: 27, 1878.

Type locality: "Sierra Nevada, California, common at 8-10000 feet."

Range: Washington to California in the Cascades and Sierras.

Specimens examined: Skagit Pass, Lake & Hull, August 24, 1892; Stampede Tunnel, Henderson, June 20, 1892; near Longmire Springs, Piper 2047; upper Nisqually Valley, Allen 110; Mount Adams, Suksdorf, July 12, 1886; Mount Stuart, Sandberg & Leiberg 548; west Klickitat County, Suksdorf, May 7, 1886; Roslyn, Whited 357; without locality, Vasey 379.

Zonal distribution: Hudsonian.

Arctostaphylos media Greene, Pittonia 2: 171. 1891—Type locality: "On dry gravelly ground in Mason County," Washington. Collected by Piper. Range: Western Washington. Specimens examined: Port Orchard, Patterson: near Union City, Piper 899 (type). This plant is unquestionably a hybrid between A. uva-ursi and A. tomentosa. It occurs sparingly and only where both of the parents are abundant.

CASSIOPE.

Leaves with a deep dorsal furrow. 1. C. tetragona.

Leaves not dorsally furrowed. 2. C. mertensiana.

Cassiope tetragona (L.) D. Don, Edinb. New Phil. Journ. 17: 158, 1834.
 Androneda tetragona L. Sp. Pl. 1: 393, 1753.

Type locality: "Habitat in Alpibus Lapponicis."

RANGE: Alaska to Greenland, southward to Washington [Oregon!] and Hudson Bay. Asia.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1860; Loomis, Elmer, August, 1897.

Zonal distribution: Hudsonian.

2. Cassiope mertensiana (Bong.) G. Don, Hist. Dichl. Pl. 3: 829, 1834.

Andromeda mertensiana Bong, Mem. Acad. St. Petersb. VI. 2: 152, 1832.

Andromeda eupressina Hook. Fl. Bor. Am. 2: 30, 1838

Type locality: Sitka, Alaska.

Range: Alaska to California.

Specimens examined: Olympic Mountains, Piper 2184; J. M. Grant; Cascade Mountains to Colville, Lyall in 1860; Silverton, Bouck 124; Mount Rainier, Flett 302; Allen 202; Piper 2053; Mount Stuart, Elmer 1109; Mount Adams, Henderson, August 9, 1892; Stevens Pass, Sandberg & Leiberg 714; Horseshoe Basin, Lake & Hull 563.

Zonal distribution: Hudsonian.

Cassiope excorphoides D. Don is included in Suksdorf's list, but the species is not known south of Alaska.

HARRIMANELLA. Alaska heather.

Harrimanella stelleriana (Pall.) Coville, Proc. Biol. Soc. Wash. 3: 574, 1901.

Andromeda stelleriana Pall. Fl. Ross. 12: 58, 1788.

Cassiope stelleriana DC. Prod. 72: 611. 1839.

Type locality: Kamtschatka.

RANGE: Alaska to Mount Rainier. Siberia.

Specimens examined: Mount Rainier, Allen 203; Flett 233; Piper 2050, August, 1895; Bridge Creek, Elmer 686.

Zonal distribution: Hudsonian and Arctic.

PHYLLODOCE.

Corolla ovoid, yellowish. 1. P. glandulṛflora.
Corolla eampanulate, red. 2. P. empetriformis.

Phyllodoce glanduliflora (Hook.) Coville, Mazama 1: 196. 1897.

Menziesia glanduliflora Hook. Fl. Bor. Am. 2: 40. 1834.

Bryanthus glandulitorus A. Gray, Proc. Am. Acad. 7: 368, 1868.

Type locality: "Mountains north of Smoking River, Lat. 56°." Collected by Drummond.

RANGE: Sitka to Montana and Oregon.

Specimens examined: Olympic Mountains, Piper, August, 1895; Mount Rainier, Flett 299; Piper 2052; Allen, July 20, 1892; Mount Stuart, Brandegee 945; Mount Adams, Suksdorf 434; Parry & Suksdorf, September 8, 1880; Horseshoe Basin, Lake & Hull, August 24, 1892; Bridge Creek, Elmer 870.

Zonal distribution: Arctic.

Phyllodoce empetriformis (Smith) D. Don, Edinb. New Phil. Journ. 17: 160, 1834.
 Menziesia empetriformis Smith, Linn. Trans. 10: 380, 1811.

Bryanthus empetriformis A. Gray, Proc. Am. Acad. 7: 367, 1868.

Type locality: "On the west coast of North America." Collected by Menzies.

Range: British Columbia to Wyoming and California.

Specimens examined: Olympic Mountains, Grant 22; Silverton, Bouck 123; Mount Rainier, Piper 2043; Paradise Valley, Flett 298; Goat Mountains, Illen 104; Baldy Peak, Lamb 1354; Mount Adams, Henderson, August 5, 1892; Stevens Pass, Sandberg & Leiberg, August, 1893; Cascade Mountains, latitude 49°, Lyall in 1859; Fish Lake, Dunn; Loomis, Elmer 573; Horseshoe Basin, Lake & Hull 562; Nason Creek, Sandberg & Leiberg 668; Entiat River, Mrs. Howe; Olympic Mountains, Elmer 2478.

ZONAL DISTRIBUTION: Arctic and Hudsonian.

KALMIA.

Kalmia glauca Ait. Hort. Kew. 2: 64, 1789.

Kalmia glauca rosmarinifolia Pursh, Fl. 1: 296, 1814.

Type locality: Newfoundland.

Range: Alaska to Newfoundland, south to California, the Great Lakes, and New Jersey. Specimens examined: Seattle, Smith 135; Piper in 1885; Tacoma, Flett 27; Nisqually Valley, Allen 4; Ilwaco, Piper 4949.

Zonal distribution: Humid Transition.

Kalmia glauca microphylla Hook, Fl. Bor, Am. 2: 41, 1834.

Kalmia microphylla Heller, Bull. Torr. Club 25: 581. 1898.

Type locality: "Swamps in the Rocky Mountains." Collected by Drummond.

Range: British Columbia to California and Colorado.

Specimens examined: Mount Rainier, Piper 2090; Allen 96; Stevens Pass, Sandberg

& Leiberg 718; Mount Stuart, Elmer 1103; Horseshoe Basin, Lake & Hull 771.

ZONAL DISTRIBUTION: Hudsonian.

RHODODENDRON.

1. Rhododendron californicum Hook. Bot. Mag. 11: pl. 4863. 1855.

Rhododendron macrophyllum G. Don, Hist. Dichl. Pl. 3: 843, 1834.

Type locality: "From the mountains of California."

Range: Washington to California in the coast region.

Specimens examined: Whidby Island, Gardner 193; Mat Mats Bay, Binns, June 2, 1890; Goat Mountains, Allen, June, 1893; Seattle, Piper; near Union City, Piper; Clallam County, Elmer 2475.

Zonal distribution: Humid Transition.

This species is closely related to the eastern R. maximum L., to which Hooker once referred our plant.

2. Rhododendron albiflorum Hook. Fl. Bor. Am. 2: 43, 1834.

Cladothamnus campanulatus Greene, Erythea 3: 65. 1895.

Type locality: "Alpine woods of the Rocky Mts." Collected by Drummond.

Range: British Columbia to Oregon and Montana.

Specimens examined: Olympic Mountains, Piper 387; Cascade Mountains, latitude 49°, Lyall in 1859-60; Mount Rainier, Piper 2049; Allen 216, 309a; Mount Adams, Subsdorf 435; Cascade Mountains, Henderson, August 5, 1892; Stevens Pass, Sandberg & Leiberg, August, 1893; head of Twisp River, Whited 209; Bridge Creek, Elmer 712; Nason Creek, Sandberg & Leiberg 663; without locality, Vasey 365; Clallam County, Elmer 2461.

Zonal distribution: Hudsonian.

MENZIESIA.

1. Menziesia ferruginea Smith, Ic. Pl. 3: pl. 56, 1791.

Menziesia urceolaris Salisb. Par. Lond. pl. 44, 1806.

Menziesia glabella A. Gray, Syn. Fl. 2: 39, 1878.

Type locality: "In Americae borealis tractu occidentali copiosissime crescit." Collected by Menzies.

Range: Alaska to Oregon and Montana.

Specimens examined: Olympic Mountains, Piper 2186, 2185; J. M. Grant in 1889; Mason County, Piper 1079; Montesano, Heller 3868; Hoquiam, Lamb 1015; Cascade Mountains, latitude 49°, Lyall; Silverton, Bouck 121; Mount Rainier, Piper, August, 1895; Nisqually Valley, Allen 3; Mount Adams, Flett 1214; Suksdorf 587; Skamania County, Suksdorf, August 10, 1889; Stevens Pass, Sandberg & Leiberg 727; Stampede Tunnel, Henderson 2418; Watson 254; Markham, Lamb 1115; without locality, Cooper; Mount Carlton, Kreager 272; Ilwaco, Piper 4991.

Zonal distribution: Canadian to Hudsonian.

The characters relied upon by Doctor Gray to distinguish M. glabella break down completely.

LEDUM.

Leaves oval or oblong, not revolute-margined. 1. L. glandulosum.

Leaves lanceolate, the margins revolute.

Rusty-tomentose beneath. 2. L. groenlandicum. Glaucous beneath. 3. L. columbianum.

1. Ledum glandulosum Nutt. Trans. Am. Phil. Soc. 8: 270, 1843.

Type locality: "In the central chain of the Rocky Mountains on the sides of mountains which close up Thornburg's ravine." Collected by Nuttall.

RANGE: British Columbia to California and Wyoming.

Specimens examined: Loomis, Elmer 574; near Lake Chelan, Gorman 583, 768.

ZONAL DISTRIBUTION: Hudsonian.

2. Ledum groenlandicum Oeder, Fl. Dan. 4: pl. 567, 1770.

Labrador tea.

Ledum latifolium Jacq. Coll. 2: 308. 1788.

Type locality: "In Groenlandia."

Range: Alaska to Greenland, southward to New Jersey, Wisconsin, and Oregon.

Specimens examined: Fidalgo Island, Lyall in 1858; Fairhaven, Suksdorf 986; Admiralty Head, O. Piper, May, 1898; Whidby Island, Gardner 194; Seattle, Piper 137; Tacoma, Flett 219.

ZONAL DISTRIBUTION: Humid Transition.

3. Ledum columbianum sp. nov.

Erect with erect branches, 60 to 90 cm. high; bark becoming smooth and brown; leaves oblong, reticulate, 4 to 6 cm. long, rather obtuse but apiculate, strongly revolute, dark green and glabrous above, whitish and resinous-dotted beneath, the midrib and short petiole minutely puberulent as well; corymbs terminal, convex, 3 to 5 cm. broad; pedicels slender, puberulent and resinous-dotted, recurved in fruit, 1.5 to 3 cm. long; lobes of the calyx very small, broadly rounded; petals white, oval, 5 to 6 mm. long, obtuse; stamens 5 to 7, the filaments sparsely hirsuite at base; ovary minutely canescent and resinous-dotted; capsules oblong, acutish.

Collected by the writer in a sphagnum bog at Ilwaco, Pacific County, June 22, 1904 (no. 6451). The type is deposited in the U. S. National Herbarium. Also collected at Clatsop, Oreg., by Coville, September, 1, 1898 (no. 869).

- This species is nearest related to *L. groenlandicum*, from which it may at once be distinguished by the absence of the tomentose pubescence. In this respect it resembles *L. glandulosum* alone, but the capsule characters are those of the former species. Its zonal position is apparently Humid Transition.

GAULTHERIA.

 Leaves ovate or subcordate, 2 to 4 cm. long.
 2. G. avatifolia.

 Leaves oval, about 1 cm. long.
 3. G. bumifusa.

Gaultheria shallon Pursh, Fl. 1: 283, 1814.

SALAL.

Type locality: "On the falls of the Columbia [i.e. Celilo] and near the Western Ocean" [mouth of Columbia]. Collected by Lewis.

Range: British Columbia to Central California west of the Cascades and Sierras.

Specimens examined: Montesano, Heller 3870; Cascade Mountains, latitude 49°, Lyall; upper Nisqually Valley, Allen 102; Yakima Pass, Watson 251; Skamania County, Suksdorf 1540; without locality, Vasey 381; without locality, Cooper; Olympic Mountains, Elmer 2477; Seattle, Piper.

Zonal distribution: Humid Transition.

2. Gaultheria ovatifolia A. Gray, Proc. Am. Acad. 19: 85, 1883.

Type locality: "Wooded banks of streams and canons of the Cascade Mountains, borders of British Columbia, Washington Territory, and N. Oregon."

RANGE: British Columbia to Oregon and North Idaho.

Specimens examined: Olympic Mountains, Piper 2187; Cascade Mountains, latitude 49°, Lyall in 1859; upper Nisqually Valley, Allen 101a; Mount Rainier, Piper 2055; Flett 250; Mount Adams, Suksdorf 154; Stampede Tunnel, Henderson, June 25, October 4, 1892-Yakima Pass, Watson 252; Goose Lake, Flett 1218; Pend Oreille River, Lyall in 1860; without locality, Vasey 380; Box Canyon, Pend Oreille River, Kreager 398.

Zonal distribution: Canadian and Hudsonian.

Gaultheria humifusa (Graham) Rydberg, Mem. N. Y. Bot. Gard. 1: 300, 1900.
 Vaccinium humifusum Graham, Edinb. N. Phil. Journ. 1831 (Apr.-Oct.): 193, 1831.
 Gaultheria myrsinites Hook, Fl. Bor. Am. 2: 35, t. 129, 1834.

Type locality: Type raised from seed collected by Drummond in the Rocky Mountains of British America.

Range: British Columbia to Colorado and California.

Specimens examined: Mount Rainier, Piper 2044; Mount Adams, Suksdorf 153; Kittitas County, Sandberg & Leiberg 706.

Zonal distribution: Hudsonian.

CLADOTHAMNUS.

Cladothamnus pyrolaeflorus Bong, Mem. Acad. St. Petersb. VI. 2: 155. t. 1, 1832.
 Tolmiea occidentalis Hook. Fl. Bor. Am. 2: 45, 1834.

Type locality: Sitka, Alaska.

Range: Alaska to Oregon.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Baldy Peak, Lamb 1368.

Zonal distribution: Hudsonian.

VACCINIACEAE. BLUEBERRY FAMILY.

Erect shrubs; corolla cylindric or urceolate	VACCINIUM.
Trailing vines; corolla deeply 4-cleft, the lobes spreading	Oxycoccus.

VACCINIUM. BLUEBERRY.

Leaves evergreen; filaments hairy	. 1. V. ovatum.
Leaves deciduous; filaments glabrous.	

Flowers in clusters of 2 to 4; corolla mostly 4-lobed; ealyx deeply 4 or 5-parted.

Leaves thick, prominently veiny, obtuse or retuse...... 2. V. uliginosum.

Leaves thinner, obscurely veiny, obtuse or acute _________3. V. occidentele. Flowers solitary; corollas mostly 5-lobed; calvx obscurely lobed.

Low shrubs, less than one-half meter high.

Branches sharply angled; berries red or wine-color.... 4. V. seoparium. Branches terete; berries blue with a bloom.

Leaves rather thin, bright green on both sides;

Leaves thicker, pale and glaucescent; corolla

globose 6. V. deliciosum.

Taller shrubs 1 to 3 meters high.

Leaves serrate; berries blackish without bloom 7. V. macrophyllum. Leaves entire.

Berries blue with a bloom 8. V. ovalifolium.
Berries red 9. V. parvifolium.

1. Vaccinium ovatum Pursh, Fl. 1: 290, 1814.

Type locality: "On the Columbia River." Collected by Lewis, the exact spot Fort Clatsop near Astoria, Oregon.

Range: British Columbia to California, west of the Cascades and Sierras.

Specimens examined: Montesano, Heller 3942; Grays Harbor City, Lamb 1037; Olympia, Henderson, May, August, 1892; Admiralty Head, O. Piper, April 24, 1898; near Lake Washington, Suksdorf 984; Seattle, Suksdorf 984; Port Ludlow, Binns; Tacoma, Flett 59; without locality, Cooper.

Zonal distribution: Humid Transition.

Very variable as to fruit, being black and shiny or blue and glaucous. The berries vary likewise in flavor and texture.

2. Vaccinium uliginosum L. Sp. Pl. 1: 350, 1753.

Type locality: "Habitat in Succiae borealibus et alpinis, uliginosis."

Range: Arctic regions, southward to Oregon, Lake Superior, and New York. Europe.

Specimens examined: Mount Constitution, Henderson, July 4, 1892.

ZONAL DISTRIBUTION: Hudsonian.

3. Vaccinium occidentale A. Gray, Bot. Cal. 1: 451. 1876.

Type locality: "Sierra Nevada at 6000 or 7000 feet, from Mariposa to Sierra Co.," California. "Mountains of Utah."

RANGE: Washington to Idaho, southward to California and Utah.

Specimens examined: Simcoe Mountains, Howell 330; Mount Adams, Suksdorf, August, 1886; White Salmon, Suksdorf 1878; Signal Peak, Henderson, August 13, 1892.

ZONAL DISTRIBUTION: Canadian.

4. Vaccinium scoparium Leiberg, Mazama 1: 196, 1897.

Vaccinium myrtillus microphyllum Hook. Fl. Bor. Am. 2: 33. 1834.

Vaccinium microphyllum Rydberg, Bull. Torr. Club 24: 251, 1897, not Reinw. 1826.

Type locality: "Alpine woods near the Height of Land and Columbia Portage." Collected by Drummond.

RANGE: British Columbia to California and Colorado.

Specimens examined: Mount Rainier, Piper 2054; Goat Mountains, Allen 219; mountains north of Ellensburg, Whited 765; Wenache Mountains, Whited 1241; Mount Stuart, Elmer 1175; Big Klickitat River, Henderson, August 4, 1892; Stevens Pass, Sandberg & Leiberg 741; Blue Mountains, Piper, July, 1896.

Zonal distribution: Hudsonian and Canadian.

5. Vaccinium caespitosum Michx. Fl. 1: 234. IS03.

Vaccinium caespitosum cuneifolium Nutt.; A. Gray, Syn. Fl. 21: 24. 1878.

Vaccinium caespitosum arbuscula A. Gray, Syn. Fl. 21: 24. 1878.

Type locality: "In borealibus Americae, praesertim circa sinum Hudsonis."

Range: Alaska to Labrador, southward to California, Colorado, and New England.

Specimens examined: Near Union City, Piper 1078; Humptulips, Lamb 1188; Segua-

liche Lake, Piper 269; Snoqualmie Falls, Piper 717; Simcoe Mountains, J. Howell, June, 1879; Falcon Valley, Suksdorf 584; Columbia Plains, Nuttall; Lake Wenache, Sandberg & Leiberg 635; Hangman Creek, Sandberg & Leiberg 78; Pullman, Piper 1720; Elmer 183; without locality, Vasey 382.

Zonal distribution: Transition.

6. Vaccinium deliciosum Piper, Mazama 2: 103. 1901.

Type locality: Mount Rainier, Washington.

Range: Cascade and Olympic Mountains, Washington.

Specimens examined: Olympic Mountains, Piper in 1895; Cascade Mountains, latitude 49°, Lyall; Mount Rainier, Allen 217; Piper 2056; Mount Adams, Henderson, August 12, 1892; Suksdorf 585, 198; Stevens Pass, Sandberg & Leiberg 746; Olympic Mountains, Elmer 2460.

Zonal distribution: Hudsonian.

7. Vaccinium macrophyllum (Hook.).

Vaecinium myrtilloides maerophylla Hook. Fl. Bor. Am. 2: 32. 1834.

Vaccinium membranaeeum Dougl.; Hook. loc. cit., as synonym.

Type locality: "N. W. Coast." Collected by Menzies.

Range: British Columbia and Oregon to Lake Superior.

Specimens examined: Olympic Mountains, J. M. Grant in 1889; Cascade Mountains, latitude 49°, Lyall in 1859; Skagit Pass, Lake, August 24, 1892; Mount Rainier, Piper 2057; Allen 218; Mount Adams, Suksdorf 77 and July 13, 1886; Flett 1217; Wenache Lake, Sandberg & Leiberg 688; head of Twisp River, Whited, July 19, 1896; Stevens Pass,

Blueberry

Sandberg & Leiberg 744; Stampede Tunnel, Henderson, June 20, 1892; above Lake Chelan, Lake & Hull 561; Blue Mountains, Piper, July 16, 1896; without locality, Vasey 385; Kreager 233.

ZONAL DISTRIBUTION: Canadian mainly.

The form in the Blue Mountains and the Bitterroots tends to have the leaves pale or glaucous beneath. This seems to be *V. globulare* Rydberg, but we do not deem it distinct enough to be worthy of nomenclatorial recognition.

8. Vaccinium ovalifolium Smith, Rees' Cycl. 36: no. 2, 1817.

Type locality: "Brought by Mr. Menzies from the west coast of North America."

Range: Alaska to Lake Superior and Oregon.

Specimens examined: Montesano, Heller 3892; Mount Rainier, Piper, August, 1895; Nisqually Valley, Allen 220a, 220; Mount Adams, Suksdorf 152; Big Creek prairies, Lamb 1410; Stampede Tunnel, Henderson, June, October, 1892; Stevens Pass, Sandberg & Leiberg 786; Skamania County, August 10, 1886; without locality, Vascy 384; Stevens Pass, Whited 1455.

ZONAL DISTRIBUTION: Canadian.

9. Vaccinium parvifolium Smith, Rees' Cycl. 36: no. 3, 1817. RED HUCKLEBERRY, Type locality: "Gathered by Mr. Menzies on the west coast of North America."

RANGE: Alaska to California west of the Cascade Mountains.

Specimens examined: Hoquiam, Lamb 1016; Grays Harbor City, Lamb 1214; Montesano, Heller 3869; Admiralty Head, O. Piper, April 3, 1898; Port Ludlow, Binns, May 15, 1890; Cascade Mountains, latitude 49°, Lyall in 1859; Silverton, Bouck; Tacoma, Flett 40; upper Nisqually Valley, Allen 71; Yakima Pass, Watson 250; Mount Adams, Suksdorf 586; Vancouver, Suksdorf 151; without locality, Cooper; Clallam County, Elmer 2459; Fort Vancouver, Douglas, Scouler.

ZONAL DISTRIBUTION: Humid Transition and Canadian.

OXYCOCCUS.

1. Oxycoccus oxycoccus intermedius (A. Gray). Western Cranberry, Vaccinium oxycoccus intermedium A. Gray, Syn. Fl. ed. 2. 21: 396, 1886.

Type locality: "Washington Territory and N. Oregon." Collected by Suksdorf and by Henderson.

RANGE: British Columbia to northern Idaho and western Oregon.

Specimens examined: Seattle, Piper, May, 1891; Tacoma, Flett 224; Klickitat County, Suksdorf; mouth of Columbia, Douglas.

Zonal distribution: Humid Transition.

PRIMULACEAE. PRIMROSE FAMILY.

Stems short; leaves in a basal rosette.

Corolla lobes reflexed; stamens exserted.

Corolla salverform; stamens included.

Stems leafy; corolla rotate or wanting.

Flowers sessile or nearly so, solitary-axillary.

Corolla none; capsule dehiseent by valves; leaves usually opposite.

Corolla present; capsule circumscissile; leaves usually alternate.

Centunculus (p. 447).

Flowers not solitary-axillary or if so long-petioled.

Flowers solitary-axillary; leaves not punctate..... Steironema (p. 448). Flowers in axillary spikes; leaves punctate...... Naumburgia (p. 448).

DODECATHEON. SHOOTING STAR.

Capsule dehiscing by valves from the apex.

Filaments united into a yellow tube half as long as the anthers.

Plant glabrous 1. D. vulgare.
Plant puberulent 2. D. puberulum.

Filaments free.

Flowers white; leaves dentate 3. D. dentatum.

Flowers purple; leaves entire 4. D. campestre.

Capsule circumseissile; filaments free or nearly so, black.

Flowers normally tetramerous 5. D. tetrandrum.

Flowers normally pentamerous.

Herbage viscid-puberulent 6. D. viscidum.

Herbage glabrous.

Capsules ovate.

Leaves broadly elliptic to oboyate 7. D. latifolium.

Leaves oblong-lanceolate, crenate 9. D. jeffréyi.

Capsules cylindric.

Leaves spatulate-oblong, obtuse 8. D. conjugens.

1. Dodecatheon vulgare (Hook.)

Dodecatheon integrifolium Michx. err. det. Hook. Fl. Bor. Am. 2: 118, 1838.

Dodecatheon integrifolium vulgare Hook. l. c.

Dodecatheon meadia pauciflorum Durand, Pl. Pratt. 95, 1855.

Dodecatheon pauciflorum Greene, Pittonia 2: 72. 1890.

Type locality: "Woody country of the Hudson's Bay territories to Carlton House Fort, and in prairies of the Rocky Mountains."

Range: Washington to Saskatchewan and New Mexico.

Specimens examined: Coupeville, Gardner 201; Admiralty Head, Piper, May, 1893; Oreas Island, Lyall in 1859; Pullman, Piper 1730; Elmer 174; Toppenish, Cotton 1137.

Zonal distribution: Transition.

2. Dodecatheon puberulum (Nutt.)

Dodecatheon meadia puberula Nutt. Journ. Acad. Phila. 7: 48, 1834.

Dodecatheon cusickii Greene, Pittonia 2: 73, 1890.

Dodecatheon puberulentum Heller, Bull. Torr. Club 24: 311. 1897.

Type locality: "Near the borders of Flathead river."

Range: British Columbia to Oregon and Idaho.

Specimens examined: Rock Lake, Sandberg & Leiberg, May, 1893; Pasco, Hindshaw 5; Spangle, Piper, May 24, 1898; Spokane, Nelson 2880; Piper, May 16, 1896; Waitsburg, Horner 117; Kamiak Butte, Moore, June 4, 1893; Pullman, Piper 1814, 1730; Elmer 174; Almota, Piper 1793; White Salmon, Suksdorf 280; Wenache, Whited 1018; Rattlesnake Mountains, Cotton 357.

ZONAL DISTRIBUTION: Arid Transition.

The types of meadia puberula and puberulentum are identical, the whole plant excepting the blades being puberulent. The type of cusickii has the whole herbage puberulent, but otherwise is the same. Both forms occur together and thus the difference seems of no value.

3. Dodecatheon dentatum Hook, Fl. Bor, Am. 2: 119, 1838.

Dodecatheon meadia latilobum A. Gray, Syn. Fl. 21: 58, 1878.

Type locality: "N. W. interior." Collected by Douglas.

RANGE: British Columbia to Utah.

Specimens examined: Wenache Mountains, Elmer 438; Brandeger 956; Cascade Mountains, latitude 49°, Lyall in 1860; Icicle Creek, Sandberg & Leiberg 558; without locality, Vasey in 1889; Cape Horn, Piper 4974.

4. Dodecatheon campestre Howell, Fl. N. W. Am. 1: 432, 1901.

? Dodecatheon integrifolium minus Hook. Fl. Bor. Am. 2: 119. 1838.

Type locality: "In prairies on the Klickitat Hills, Klickitat Co., Washington."

Range: Eastern Washington.

Specimens examined: West Klickitat County, Suksdorf 290; Fort Colville, Lyall; plains of the Columbia River, Nuttall.

This is the species to which Nuttall first applied the herbarium name of *ellipticum*, but in describing what he thought to be Nuttall's *D. ellipticum*, Durand really described the plant later named *D. patulum* Greene.

5. Dodecatheon tetrandrum Suksdorf, Ervthea 3: 40. 1895.

Type locality: Chiquash Mountains, Washington.

Range: Washington and Oregon.

Specimens examined: Chiquash Mountains, Suksdorf 998; Mount Adams, Suksdorf August 7, 1885; Skamania County, August 11, 1886, Suksdorf.

Zonal distribution: Hudsonian.

6. Dodecatheon viscidum Piper, Bull. Torr. Club 28: 43. 1901.

Type locality: "Ten miles west of Spangle," Washington.

Range: Eastern Washington.

Specimens examined: Spangle, Piper 3542; ten miles west of Spangle, Piper 2832.

Zonal distribution: Arid Transition.

7. Dodecatheon latifolium (Hook.)

Dodecatheon integrifolium latifolium Hook. Fl. Bor. Am. 2: 119, 1838.

Dodecatheon hendersoni A. Gray, Bot. Gaz. 2: 232. 1886.

Type locality: "Dry banks about Fort Vancouver on the Columbia."

Range: Washington to California.

Specimens examined: Coupeville, Gardner 200; Tacoma, Flett 91.

Zonal distribution: Humid Transition.

8. Dodecatheon conjugens Greene, Erythea 3: 40. 1895.

Type locality: "On dry hills near Helena, Montana."

RANGE: Washington and Oregon to Montana.

Specimens examined: White Salmon, Suksdorf 289; west Klickitat County, Suksdorf 160; Ellensburg, Whited 280; Waitsburg, Horner 116; Pullman, Piper 2017; Moore 1731; Elmer 175; Klickitat Hills, Howell 1942; Gorman, April, 1895.

ZONAL DISTRIBUTION: Arid Transition.

8a. Dodecatheon conjugens leptophyllum (Suksdorf).

Dodecatheon hendersoni leptophyllum Suksdorf, Deutsch. Bot. Monatss. 18: 132. 1900.

Type locality: Falcon Valley, Klickitat County, Washington.

Range: Eastern Washington.

Specimens examined: Falcon Valley, Suksdorf 2202; near Mount Adams, Flett 1210; Okanogan County, Whited 57.

9. Dodecatheon jeffreyi Van Houtte, Fl. de Serres 16: 99. 1865.

Dodecatheon viviparum Greene, Erythea 3:38.1895.

Dodecathcon crenatum Greene, Pittonia 2: 74. 1890.

Type locality: "Montagnes-Rocheuses."

Range: British Columbia to Oregon and Idaho.

Specimens examined: Olympic Mountains, Piper 2223; Mount Rainier, Greene in 1890, Piper 2102; Baldy Peak, Lamb 1357; Skagit Pass, Lake & Hull 455; Stevens Pass, Sandberg & Leiberg 713.

ZONAL DISTRIBUTION: Hudsonian.

The illustration in the Flora de Serres seems to be exactly the plant common in the Bitterroot Mountains, of Idaho, so far as one may judge from the flowering plant alone. The
Cascade Mountains plant (D. viviparum) differs only in having the leaves obscurely crenate
instead of entire or denticulate. The capsule characters are the same in both

DOUGLASIA.

 Leaves canescent with forked hairs.
 1. D. dentata.

 Leaves glabrous or nearly so.
 2. D. laevigata.

1. Douglasia dentata S. Wats. Proc. Am. Acad. 17: 375, 1882.

Douglasia nivalis dentata A. Gray, Syn. Fl. ed. 2, 2 1; 399, 1886.

Androsace dieckiana Haussk, Mitt, des Bot, Ver, für gesammt-Thuringen 1890: 22, 1890.

Type locality: "On a dry ridge above Peshastin Cañon," Washington. Collected by Watson.

RANGE: In the Wenache region, Washington.

Specimens examined: Mount Stuart, Elmer 1230: Sandberg & Leiberg 545; Wenache Mountains, Whited in 1896: Wenache Region, Brandegee 952; Yakima Region, Brandegee; Peshastin Canyon, Watson 264; Kittitas County, Henderson 2365; Clealum, Henderson in 1892; without locality, Vasey in 1889.

2. Douglasia laevigata A. Gray, Proc. Am. Acad. 16: 105, 1880.

Type Locality: Mount Hood, Oregon. Collected by Howell.

Range: Washington and Oregon.

Specimens examined: Olympic Mountains, Piper, August, 1895; Flett 804: Henderson July, 1890, 2366; J. M. Grant in 1889; Elmer 2801; Goat Mountains, Allen 187.

ZONAL DISTRIBUTION: Hudsonian.

Douglasia xivalis Lindl., listed by Suksdorf, is not known west of the Rocky Mountains.

GLAUX.

1. Glaux maritima L. Sp. Pl. 1: 207, 1753.

Type locality: Europe.

RANGE: Sea coasts, California to Alaska and New England to Greenland. Europe. Asia.

Specimens examined: Westport, Henderson, June 25, 1892; Whidby Island, Gardner 199; Seattle, Piper; Whatcom County, Suksdorf 989; without locality, Cooper.

The last three specimens are referable to G. maritima obtusifolia Fernald, a differing from the species in its more erect habit, simple or sparingly branched stems, and broader leaves.

ZONAL DISTRIBUTION: Humid Transition.

CENTUNCULUS.

1. Centunculus minimus L. Sp. Pl. 1: 116, 1753.

Type locality: "Habitat in Italiae, Galliac, Scaniae arenosis."

Range: Washington to Illinois, south to Florida and Texas. South America. Europe. Specimens examined: Falcon Valley, Suksdorf. June, 1880; Spokane, Piper 2765; Silver Lake, Henderson, July 13, 1892; Lake Kalispel. Kreager 322.

ZONAL DISTRIBUTION: Arid Transition.

TRIENTALIS. STAR FLOWER.

 Leaves crowded near the summit of the stem.
 1. T. latifolia.

 Leaves scattered along the stem; bog plant.
 2. T. arctica.

1. Trientalis latifolia Hook. Fl. Bor. Am. 2: 121. 1838.

Trientalis europaea latifolia Torr. Proc. Am. Acad. 4: 118, 1860.

Type locality: "About Fort Vancouver. Wallawallah River." Collected by Tolmie. Range: Vancouver Island to North California and the Blue Mountains.

Specimens examined: Montesano, Heller 3880; Hoquiam, Lamb 1051; San Juan Island, Lyall in 1859; Seattle, Piper 150; Tacoma, Flett 11: Olympia, Henderson, May 25, 1892; Skokomish Valley, Kincaid, May 10, 1892; upper Nisqually Valley, Allen 22: Silverton, Bouck 137; Nason Creek, Sandberg & Leiberg 650; lower Cascade Mountains, Suksdorf, May 30, 1886; Roslyn, Whited 412; Nason City, Sandberg & Leiberg, August, 1893; Blue Mountains, Horner 52; without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Humid Transition and Canadian.

In Cooper's Report a this plant was referred to as T. $\epsilon uropa \epsilon a$.

2. Trientalis arctica Fisch.; Hook. Fl. Bor. Am. 2: 121, 1838.

Trientalis europea arctica Ledeb. Fl. Ross. 3: 25, 1847.

Type locality: "Western shore and islands, from Sandy Bay, in Clarence Straits, to Unalaschka."

Range: Alaska to Oregon.

Specimens examined: Clallam County, Elmer 2799; Whidby Island, Gardner 198; Fidalgo Island, Lyall in 1859; Mount Constitution, Henderson, July 4, 1892; upper Nisqually Valley, Allen 20; Tacoma, Flett 317; Skamania County, Suksdorf 1528; Ilwaco, Henderson: Piper 5022; Stevens Pass, Sandberg & Leiberg 733; Blue Mountains, Piper, July, 1896.

Zonal distribution: Humid Transition.

STEIRONEMA.

1. Steironema ciliatum (L.) Raf. Ann. Gen. Phys. 7: 192, 1820.

Lysimachia ciliata L. Sp. Pl. 1: 147, 1753.

Type locality: Habitat in Virginia, Canada.

Range: British Columbia to Nova Scotia, south to New Mexico and Georgia.

Specimens examined: Wenache, Whited 1424; Cascade Mountains, 49°, Lyall in 1859; White Salmon, Suksdorf 443; along Methow River, Whited 177; Lake Chelan, Lake & Hull 456; Pend Oreille River, Kreager, August, 1902; Clarks Springs, Kreager 131; Spokane, Kreager 546; Piper, September, 1896; Henderson, July 9, 1892; Pullman, Piper 1729; without locality, Vasey in 1889; Mabton, Cotton 751.

Zonal distribution: Arid Transition and Upper Sonoran.

NAUMBURGIA.

1. Naumburgia thyrsiflora (L.) Duby in DC. Prod. 8: 60. 1844.

Naumburgia guttatta Moeneh, Meth. Suppl. 23, 1802.

Lysimachia thyrsiflora L. Sp. Pl. 1: 147, 1753.

Type locality: Europe.

Range: Alaska to Labrador, south to Oregon and Pennsylvania. Europe, Asia.

Specimens examined: Cascade Mountains, latitude 49°. Lyall in 1859; Whateom County, Gardner 407; Falcon Valley, Suksdorf 442; Toppenish, Henderson 2425; junction Crab and Wilson Creeks, Sandberg & Leiberg 250, Rock Lake, Lake & Hull 685.

ZONAL DISTRIBUTION: Upper Sonoran and Transition.

Primula hornemanniana Lehm, is said to have been collected at Fort Vancouver by Garry, b—This is evidently an error, as the species is not known to occur west of the Rocky Mountains.

PLUMBAGINACEAE.

STATICE.

Statice armeria L. Sp. Pl. 1: 274, 1753.

Thrift,

Armeria vulgaris Willd. Enum. 333, 1809.

Type locality: "Habitat in Europae Americae septentrionalis campis."

Range: Subarctic regions, south to California and Labrador. South America. Europe, Asia.

Specimens examined: Whidby Island, Gardner 196; Olympia, Kincaid, July 4, 1896; Roy, Allen, May 13, 1889; Yelm Prairie, Piper: Stuart Island, Lawrence 201; Port Crescent, Lawrence 260.

Zonal distribution: Humid Transition.

OLEACEAE.

FRAXINUS.

1. Fraxinus oregana Nutt. Sylva 3: 59. pl. 99. 1849.

Oregon asil.

Fraxinus oregana riparia Nutt. loc. cit.

Type locality: "In the Oregon territory." "We never saw it above the first falls of the Oregon." Collected by Nuttall.

RANGE: British Columbia to California, in the coast region.

Specimens examined: Seattle, Piper, June, 1892; Satsop, Heller 4024; White Salmon Suksdorf 445.

A common tree in the river valleys of western Washington.

Zonal distribution: Humid Transition.

GENTIANACEAE. GENTIAN FAMILY.

Style filiform, usually deciduous; anthers oblong to linear, mostly

Style stout and persistent or none; anthers remaining straight,

Corolla funnelform or bell-shaped, without glands............ Gentiana (p. 450).

Corolla rotate, with a fringed glandular spot on each lobe..... Frasera (p. 451).

CENTAURION.

Basal leaves not in rosettes.

Pedicels slender, much longer than the flowers............... 2. C. exaltata.

1. Centaurion centaurium (L.) W. F. Wight.

Gentiana centaurium L. Sp. Pl. 1: 229, 1753.

Erythraea centaurium Pers. Syn. 1: 283, 1805.

Type locality: Europe.

Specimens examined: Olympia, Kincaid, July 4, 1896; Yesler, Hindshaw, July, 1897.

2. Centaurion exaltatum (Griseb.) W. F. Wight.

Cicendia exaltata Griseb. in Hook. Fl. Bor. Am. 2: 69, 1838.

Erythraea douglasii A. Gray, Bot. Cal. 1: 480, 1876.

Erythraea exaltata Coville, Contr. Nat. Herb. 4: 150, 1893.

Type locality: "Between the Kettle Falls, and 'Narrows' of the Columbia River." Collected by Douglas.

RANGE. Eastern Washington to California and Utah.

29418--06 м---29

Specimens examined: Chelan, Elmer 497, Walla Walla Region, Brandegee 957; Prosser, Cotton 658; Rattlesnake Mountains, Cotton 665.

Zonal distribution: Upper Sonoran.

3. Centaurion muehlenbergii (Grisch.) W. F. Wight.

Erythraea muchlenbergii Griseb. Gen. & Sp. Gent. 146, 1839.

Erythraea eurvistaminea Wittrock, Erythr. Exsice. 2: 21. 1885.

Type locality: "California." Collected by Douglas.

Range: Washington to California.

Specimens examined: Pullman, Piper 2649, 1622; Henderson 2272; Falcon Valley, Suksdorf, August 4, 1893.

Zonal distribution: Arid Transition.

GENTIANA. GENTIAN.

Annual; corolla without appendages in the sinuses. 1. G. acuta. Perennial; corolla with appendages in the sinuses.

Uppermost pair of leaves forming an involuere about the 1 to 3 flowers. 2. G. calycosa.

Uppermost leaves not involucrate.

Corolla appendages laciniately cleft.

Calyx lobes oblong to ovate-lanceolate. 4. G. oregana.
Calyx lobes linear to narrowly lanceolate. 5. G. affinis.

1. Gentiana acuta Michx. Fl. 1: 177. 1803.

Gentiana amarella acuta Herder, Act. Hort. Petrop. 1: 428. 1872.

Gentiana anisose pala Greene, Pittonia 3: 309, 1898.

Amarella anisosepala Greene, Leaflets 1: 53, 1904.

Amarella macounii Greene, op. cit. 54.

Type locality: "In altis montibus Carolinae et in Canada, prope Tadoussack."

Range: Alaska to Labrador, southward to Maine, Minnesota, New Mexico, and California. Specimens examined: Padden Lake, Suksdorf 990; Cascade Mountains, 49°, Lyall in 1859; Whidby Island, Gardner 202; Fidalgo Island, Flett 2111; East Sound, Henderson, July 3, 1892.

Zonal distribution: Transition.

2. Gentiana calycosa Griseb, in Hook, Fl. Bor, Am. 2: 58. t. 146, 1838.

Gentiana calycosa stricta Griseb, loc, cit.

Gentiana gormani Howell, Fl. N. W. Am. 1: 446, 1901.

Type locality: "Mt. Rainier," Washington. Collected by Tolmie.

RANGE: British Columbia to California and Montana.

Specimens examined: Olympic Mountains, Piper 2224; Elmer 2727; Mount Rainier, Piper 2113; Allen 93; Baldy Peak, Olympic Mountains, Lamb 1332; Mount Adams, Henderson 33 and August 8, 1892; Suksdorf in 1878. Bridge Creek, Elmer 714; Horseshoe Basin, Lake & Hull 551; Gorman 757 (type collection of Gentiana gormani Howell).

ZONAL DISTRIBUTION: Arctic.

In Lyall's report this species was confused with the Rocky Mountains G. parry. Engelm.

3. Gentiana sceptrum Griseb, in Hook, Fl. Bor, Am. 2: 57, 1838.

Type locality: "Plentiful in low moist soil near Fort Vancouver," Washington. Collected by Douglas.

RANGE. British Columbia to Oregon west of the Cascade Mountains.

Specimens examined: Chambers Lake, *Henderson*, August 23, 1892, between Union City and Shelton, *Piper* in 1890. Segualiche Lake, *Piper* in 1887; Fort Vancouver, *Tolmie*; Hwaco, *Henderson*, September 9, 1892; without locality, *Vasey* in 1889.

ZONAL DISTRIBUTION: Humid Transition.

4. Gentiana oregana Engelm.; A. Gray, Syn. Fl. 21: 122, 1878.

Gentiana affinis ovata A. Gray, Bot. Cal. 1: 483, 1876, not G. ovata F. G. Dietr. Vollst. Lexik, Gaertn. Nachtr. 3: 458, 1815-21.

Type locality: "From near San Francisco." Collected by Bolander.

RANGE: British Columbia to Idaho and California.

Specimens examined: Fish Lake, Dunn, August 8, 1900; Pend Oreille River, Lyall in 1861; Spokane County, Suksdorf 937; Cheney, Mrs. Susan Tucker in 1890; Pullman, Piper 1623; Blue Mountains, Piper, July, 1896; Davis Ranch, Spokane County, Kreager 304; Clarks Springs, Spokane County, Kreager 564.

Zonal distribution: Arid Transition.

5. Gentiana affinis Grisch, in Hook, Fl. Bor. Am. 2: 56, 1838.

Type locality: "Carlton House to Edmonton House." Collected by Drummond.

RANGE: British Columbia to Minnesota, south to California and New Mexico.

Specimens examined: Parrotts Post-office, Hull 552; Spokane County, Suksdorf 938; Mission, Kreager 489.

ZONAL DISTRIBUTION: Arid Transiton.

"Abundant in mountain valleys, between Spokane and Kettle Falls, in alluvial deposits." Douglas, according to Hooker.

Gentiana Douglasiana Patens Griseb, in Hook, Fl. Bor. Am. 2: 60, 1838. Near Fort Vancouver, Garry, according to Hooker. If the plant really occurs in Washington it has not at any rate been seen since. It has been collected at Port Renfrew, Vancouver Island, by Rosendahl & Brand.

FRASERA.

Plants 1 to 2 meters tall; leaves marginless.

Plants about ½ meter tall; leaves with firm white margins.

Whole plant finely pubescent 3. F. albicanlis.
Whole plant glabrous 4. F. nitida.

1. Frasera fastigiata (Pursh) Heller, Bull. Torr. Club 24: 312. 1897.

Swertia fastigiata Pursh, Fl. 1: 101. 1814.

Frasera thyrsitlora Hook, Kew Journ. Bot. 3: 288, 1851.

Frasera carolinensis Walt, err. det. Griseb, in Hook, Fl. Bor, Am. 2: 66, 1838.

Type locality: "On the Missouri Flats near the Rocky Mountains." Collected by Lewis. The Lewis specimen in the herbarium of the Philadelphia Academy of Science is ticketed: "In moist places on the Squamash Flats," that is, Weippe, Idaho. The plant does not occur on the Missouri, Pursh's note being doubtless an error.

Range: Northern Idaho and adjacent Washington.

Specimens examined: Spokane County, Suksdarf 933; Henderson 2211; Rockford, Piper: Palouse, Henderson, July 15, 1892; Kamiak Butte, Elmer 802; Piper, July 20, 1899.

According to Hooker also collected by Douglas, in "mountain valleys, Spokane and Kettle Falls."

Zonal distribution: Arid Transition and Canadian.

This species is really an inhabitant of rather dry pine woods. At "Quamash Flats" the plant occurs only at the very margins of the moist meadows, but it is abundant in the pine woods adjoining.

2. Frasera speciosa Dougl.; Griseb, in Hook, Fl. Bor, Am. 2: 66, t. 153, 1838

Type Locality: "On the low hills near Spokan and Salmon Rivers and subalpine parts of the Blue Mountains, near the Kooskooka River." Collected by Douglas.

Range: East Washington to Wyoming, south to California and New Mexico.

Specimens examined: Upper Naches River, Henderson, June, 1892.

3. Frasera albicaulis Griseb, in Hook, Fl. Bor, Am. 2: 67, 1838.

Type locality: "In the mountain vallies between Spokan and Kettle Falls," Washington. Collected by Douglas.

Range: Eastern Oregon and eastern Washington to western Montana.

Specimens examined: Ellensburg, Piper 2695; between Coulee City and Waterville, Spillman, May, 1896; Ritzville, Sandberg & Leiberg 186; Sprague, Sandberg & Leiberg, June, 1893; Henderson, July 9, 1892; Spokane, Piper, June 25, 1897; Henderson, May 30, 1892; Spokane County, Suksdorf 389; Spangle, Piper 3035; Pullman, Elmer 823; Hull, June, 1892; Piper 1619; without locality, Vascy 426.

ZONAL DISTRIBUTION: Arid Transition.

4. Frasera nitida Benth. Pl. Hartw. 322, 1849.

Type locality: "In montibus Sacramento," California. Collected by Hartweg.

Range: California to Klickitat County, Washington.

Specimens examined: Klickitat County, Suksdorf 40; Klickitat River, Flett 1023.

ZONAL DISTRIBUTION: Arid Transition.

MENYANTHACEAE.

MENYANTHES.

1. Menyanthes trifoliata L. Sp. Pl. 1: 145, 1753.

Buck bean.

Type locality: Europe.

RANGE: Alaska to Greenland, south to Pennsylvania, Minnesota, and California.

Specimens examined: Whidby Island, Gardner 203; Seattle, Piper in 1888; Tacoma, Flett 33; Cascade Mountains, latitude 49°, Lyall in 1859; Davis Lake, Kreager, August 9, 1902; Rock Lake, Lake & Hull, August 3, 1892; Olympia, Henderson, May 24, 1892; Hangman Creek, Sandberg & Leiberg 39.

Zonal distribution: Transition.

NEPHROPHYLLIDIUM.

 Nephrophyllidium crista-galli (Menzies) Gilg in Engler & Prantl, Nat. Pflanzenfam. 4²: 106. 1895.

DEER CABBAGE.

Menyanthes erista-galli Menzies; Hook. Bot. Misc. 1: 45. pl. 24. 1830.

Type locality: "In marshy pastures in Prince William's Sound," Alaska.

Range: Alaska to Washington near the coast.

Specimens examined: Wreck Creek Prairie, south of Granville, Conard 360.

ZONAL DISTRIBUTION: Canadian and Hudsonian.

APOCYNACEAE.

APOCYNUM.

Corolla lobes spreading or recurved; leaves ovate.

Leaves glabrous.

Tall; leaves ovate or oval................................... 1. A. androsaemifotium.

Corolla lobes erect; leaves oval or oblong.

Calvx and bracts entire.

Cymes large, many-flowered................. 3. A. cannabinum.

Cymes small, few-flowered...... 4. A. suksdorfii.

1. Apocynum androsaemifolium L. Sp. Pl. 1: 213, 1753.

Type locality: "In Virginia, Canada."

RANGE: British Columbia to Nova Scotia, south to Arizona and Georgia.

Specimens examined: Seattle, Piper in 1897; Lake Chelan, Lake & Hull 550; Wenache, Whited 1423.

Zonal distribution: Transition.

Apocynum androsaemifolium pumilum A. Gray, Syn. Fl. 21: 83. 1878.

Type locality: "California to British Columbia."

Specimens examined: Pullman, Piper 1620, 3508; Hull in 1892; Peshastin, Sandberg & Leiberg 475; Falcon Valley, Suksdorf in 1886; Loon Lake, Winston, July 20, 1899; Clarks Springs, Kreager 89; North Yakima, Mrs. Steinweg; without locality, Wilkes Expedition 422; Clealum Lake, Cotton 858.

RANGE: British Columbia and Idaho to California.

ZONAL DISTRIBUTION: Arid Transition.

1b. Apocynum androsaemifolium detonsum subsp. nov.

Like the preceding, but the whole plant clothed with a short dense pubescence. Type specimen collected in eastern Washington by G. R. Vasey (no. 429) in 1889.

2. Apocynum ciliolatum sp. nov.

Stems erect, very leafy, branched above, 60 to 70 cm. high, glabrous; leaves elliptic or elliptic-lanceolate, puberulent on both sides, 4 to 7 cm. long, 2 to 3 cm. wide, nearly sessile; panicle ample, rather loose, its branches erect, glabrous; bracts lanceolate, ciliate; pedicels pubescent; calvx lobes deltoid, acute, erect, ciliolate, shorter than the corolla tube; corolla pink, 5 mm. long, the erect lanceolate acutish ciliolate lobes as long as the tube, which is nearly glabrous within.

Collected at Wawawai, Washington, July 17, 1892, Lake & Hull, no. 549.

A near ally of A. cannabinum L., but distinct from any described species in its ciliolate calvx and corolla.

3. Apocynum cannabinum L. Sp. Pl. 1: 213, 1753.

Indian hemp. 🏖

Type locality: "In Canada, Virginia."

Range: British Columbia to Nova Scotia south to Florida and California.

Specimens examined: North Yakima, Watt. August, 1895; Peshastin, Sandberg & Leiberg 591; without locality, Vascy in 1889.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

4. Apocynum suksdorfii Greene, Pittonia 5: 65. 1902.

? Apocynum cannabinum glaberrimum A. DC. Prod. 8: 439, 1844.

Type locality: "Sandy banks of the Columbia River." Collected by Suksdorf.

Range: Eastern Washington and Eastern Oregon.

Specimens examined: Wenache, Whitel; west Klickitat County, Suksdorf 1522; Ophir, Elmer 507; Wawawai, Piper 1621 and August 24, 1894; Columbia Valley, Lyall in 1860; Waitsburg, Horner 335B.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

ASCLEPIADACEAE.

ASCLEPIAS. MILKWEED.

Leaves linear or lanceolate, glabrous; follicles smooth........................ 2. A. mexicana, Leaves oval or oblong, white-tomentose; follicles warty............ 1. A. speciosa.

1. Asclepias speciosa Torr. Ann. Lyc. N. Y. 2: 218, 1823.

Type locality: "On the Canadian?" Collected by James.

Range: Washington to California and Arkansas.

Specimens examined: Columbia River, latitude 46° to 49°, Lyall in 1860; Egbert Springs, Sandberg & Leiberg 379; without locality, Vasey 428; Wenache, Whited 68; Ellensburg, Whited 489; North Yakima, Watt, August, 1895; Union Flat, Lake & Hull 555; Waitsburg, Horner 404; Almota, Piper 1868; Pullman, Elmer 899; Piper 1625; Mission, Kreager, August 20, 1902.

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

2. Asclepias mexicana Cav. Ic. 1: 42, 1791.

Asclepias fascicularis Dec. in DC. Prod. 8: 569, 1844.

Type locality: "Habitat prope Mexico."

Range: Washington to California, Arizona, and Mexico.

Specimens examined: Tampico, Flett 1025; Fort Simcoe, Henderson; Spokane, Sandberg, August, 1892; Dewart, July 15, 1901; Wawawai, Piper 2664; Horner 664.

Zonal distribution: Upper Sonoran and Arid Transition.

CONVOLVULACEAE.

CONVOLVULUS. MORNING-GLORY.

1. Convolvulus soldanella L. Sp. Pl. 1: 159, 1753.

Type locality: "Habitat in Angliae, Frisiae littoribus maris."

RANGE: Washington to California on the seashore. Europe.

Specimens examined: Whidby Island, Gardner 219; Copalis, Lamb 1257; Shoalwater Bay, Cooper; Ocosta, Henderson in 1892; Ilwaco, Piper 4999.

Zonal distribution: Humid Transition.

2. Convolvulus sepium americanus Sims, Bot. Mag. 19: pl. 732. 1804.

Type locality: America.

Range: Washington to Canada and Carolina.

Specimens examined: Mount Adams, Suksdorf, July 14, 1886; Henderson: Klickitat River, Flett 1022; Ophir, Elmer 607; Almota, Piper, August 9, 1896; Wawawai, Piper 1694.

Zonal distribution: Upper Sonoran and Arid Transition.

3. Convolvulus arvensis L. Sp. Pl. 1: 153. 1753.

Type locality: Europe.

Specimens examined: Ellensburg, Whited 525. A troublesome weed becoming wide-spread. It has been noted at Pullman, Walla Walla, Garfield, and Edwall.

CUSCUTACEAE.

CUSCUTA. DODDER.

Stigmas filiform: corolla scales crenulate.

Calyx lobes not keeled; corolla lobes triangular, acute.. 1. C. epithymum.

Calyx lobes keeled; corolla lobes ovate, obtuse 2. C. planiflora.

Stigmas capitate; corolla scales fringed.

Capsule pointed.

Flowers pedicelled; dry corolla enveloping the cap-

sule. 4. C. indecora.

Capsule globose.

Flowers sessile; style shorter than the ovary...... 5. C. arrensis.

Flowers pedicelled.

Stems coarse; calyx lobes obtuse. 6. C. cephalanthi. Stems fine; calyx lobes acute. 7. C. californica.

1. Cuscuta epithymum Murr.; L. Syst. ed. 13; 140, 1774.

Type locality: None given, but European.

Specimens examined: Vashon Island, Gardner 210; Seattle, Piper.

2. Cuscuta planiflora Tenore, Fl. Nap. 3: 250, 1824-29.

Type locality: Near Naples, Italy.

RANGE: Introduced in the western United States. SPECIMENS EXAMINED: Entiat, Mr. Grover in 1898.

That this species is perfectly distinct from C, epithymum has clearly been demonstrated by the studies of Mr. F. H. Hillman.

3. Cuscuta squamigera (Engelm.).

Cuscuta californica squamigera Engelm. Trans. St. L. Acad. 1: 499, 1859.

Cuscuta subinclusa abbreviata Engelm. op. cit. 500. 1859.

Cuscuta salina Engelm. in A. Gray, Bot. Cal. 1: 536, 1876.

Type locality: "Saline soil in the Rio Virgen, Utah, on Suaeda."

RANGE: British Columbia to California and Arizona.

Specimens examined: Port Angeles, Piper, September 1, 1895; Port Ludlow, Binns; Coupeville, Gardner 218; Seattle, Piper in 1889; Shelton, Piper, August 10, 1899; Tacoma, Flett 77.

In Cooper's report this species was called C. umbrosa Beyrich.

ZONAL DISTRIBUTION: Humid Transition.

4. Cuscuta indecora Choisy, Mem. Soc. Phys. Geneva 9: 278, 1841.

Type locality: "Hab. Mexicam ad Matamoras."

Range: Washington to California, eastward to Illinois and Florida.

Specimens examined: Waitsburg, Horner, October 5, 1893, on alfalfa and prickly lettuce.

5. Cuscuta arvensis Beyrich: Hook. Fl. Bor. Am. 2: 77. 1838.

Type locality: "N. W. America." Collected by Douglas.

RANGE: Washington to New York, southward to California and Florida.

Specimens examined: Waitsburg, Horner, on alfalfa, October 5, 1893.

5a. Cuscuta arvensis calycina Engelm. Trans. St. Louis Acad. 1: 495, 1859.

Type locality: Texas.

In the original description Engelmann includes Geyer's no. 674, collected at the "mouth of the Walla Walla River, on the muddy borders, infesting the stems of *Xanthium microcarpou*, September." We have not seen this specimen nor do we know the plant.

6. Cuscuta cephalanthi Engelm. Am. Journ. Sci. 43: 336. 1842.

Cuscuta tenuiflora Engelm.; A. Gray, Man. 350, 1848.

Type locality: "Near St. Louis," Missouri.

Range: Washington to Saskatchewan, southward to Arizona, Texas, and Pennsylvania. Specimens examined: Ophir, Elmer; North Yakima, Piper 1796; Snohomish County, Gardner 217; Waitsburg, Horner 569.

Zonal distribution: Transition.

7. Cuscuta californica Choisy, Mem. Soc. Phys. Geneva 9: 279, 1841.

Type locality: "Hab. nov. California." Collected by Douglas.

Range: Washington to California.

Specimens examined: Skamania County, Suksdorf 1487; Peshastin, Sandberg & Leiberg 495; Spokane, Henderson 2273; Blue Mountains, Piper 2448.

ZONAL DISTRIBUTION: Arid Transition.

POLEMONIACEAE. PHLOX FAMILY.

Calyx distended and at length burst by the capsule.	
Corolla large, salverform: leaves all opposite, entire; seeds not becoming mucilaginous when wetted; ours all suffruticose	
perennials P	шох (р. 456),
Corolla tubular, funnelform or salverform, usually small;	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1
leaves mostly alternate, usually not entire G	ilia (p. 459).
Calyx not distended nor burst by the capsule.	
Corolla not rotate.	(
Calyx lobes spine-tipped; leaves pinnatifid	огломіа (р. 464).
PHLOX.	
Densely tufted species with crowded leaves; flowers solitary on the shoots.	e
Herbage beset with woolly hairs	. 1. P. canescens.
Herbage not beset with woolly hairs.	
Calyx not at all wooly; leaves hispid-ciliate.	0 D
Leaves grooved, 5 to 6 mm. long	
Leaves usually plane, 8 to 14 mm. long	. 3. P. caespitosa.
Herbage finely glandular	. 4. P. rigida.
Herbuge not glandular.	. 1. 1 . 1 . 1 . 1 . 1 . 1 . 1 . 1 . 1
Leaves all acerose; style half as long as corolla	. 5. P. donglasii.
Leaves not all acerose; style nearly as long as co	
rolla	. 6. P. diffusa.
Loosely tufted taller species; flowers in cymes.	
Style long, usually equaling the corolla tube.	= D 1 - '47'
Inflorescence not glandular: leaves narrowly linear Inflorescence glandular.	. 7. P. longifolia.
Whole plant viscid-pubescent; leaves linear, 2 to 4 mm	1
wide	
Only the inflorescence viscid-pubescent; leaves linear,	1
mm. wide	
Style short, not longer than the ovary.	
Upper leaves on flowering stem dilated at base.	
Leaves linear, soft; cymes loose	
Leaves lanceolate, rigid; cymes dense	. 11. P. tanceotata.
Leaves linear or narrowly lanceolate	12 P whitedii
Leaves broader, lanceolate	
·	

1. Phlox canescens Torr. & Gr. Pac. R. Rep. 2²: 122, pl. 6, 1855.

Type locality: "On the Cedar Mountains, south of Great Salt Lake," Utah.

Range: Eastern Washington to California and Colorado.

Specimens examined: Wenas, Cotton 917; Horse Heaven, Cotton 589; Rattlesnake Mountains, Cotton 566; Kliekitat Hills, Gorman, April, 1895; Columbus, Suksdorf, April 13, 1896.

ZONAL DISTRIBUTION: Arid Transition.

2. Phlox condensata (A. Gray) E. Nelson, Rev. West. N. A. Phloxes 13, 1899.

Phlox eaespitosa condensata A. Gray, Proc. Am. Acad. 8: 254, 1870.

Phlox condensata hendersoni E. Nelson, loc. cit. 14.

Type locality: "From the headwaters of Clear Creek, and the alpine ridges lying east of Middle Park," Colorado. Collected by Parry.

RANGE: Washington, Oregon, and Colorado.

Specimens examined: Olympic Mountains, Flett 817; J. M. Grant 4; Mount Stuart, Brandegee 958; Mount Adams, Henderson, August 10, 1892; (type of subspecies hendersoni E. Nelson); Suksdorf 390; Horell in 1882; Flett 1245.

ZONAL DISTRIBUTION: Arctic.

3. Phlox caespitosa Nutt. Journ. Acad. Phila. 7: 41, 1834.

Type locality: "Flat-Head River on the sides of dry hills." Collected by Wyeth.

RANGE: Washington and Montana, southward to New Mexico.

Specimens examined: Without locality, Brandegee in 1883.

4. Phlox rigida Benth. in DC. Prod. 9: 306, 1845.

Phlox piperi E. Nelson, Rev. West. N. A. Phloxes 18, 1899.

Type locality: "In montibus coeruleis Americae boreali-occid." Collected by Douglas in the Bluc Mountains of Oregon.

Range: Eastern Washington, eastern Oregon, and adjacent Idaho.

Specimens examined: Spokane, Piper 2286, 2946; Henderson 2412; Spokane Valley, Lyall, May, 1861; Hangman Creek, Sandberg & Leiberg 37; junction Crab and Wilson creeks, Sandberg & Leiberg 274; without locality, Vasey 392; Spokane, Kreager 164; Mount Carlton, Kreager 243; Chelan Butte, Cotton 596.

Zonal distribution: Arid Transition.

5. Phlox douglasii Hook. Ft. Bor. Am. 2: 73, 1838.

Type locality: "N. W. America; common on the Limestone range of the Blue Mountains [Oregon], and on the Rocky Mountains, near the confines of snow." Collected by Douglas.

RANGE: Washington and Idaho to Nevada and California.

Specimens examined: Cascade Mountains, Yakima County, Mrs. Steinweg; Klickitat County, Suksdorf 11; also April 22, 1881.

ZONAL DISTRIBUTION: Hudsonian.

Phlox diffusa Benth, Pl. Hartw. 325, 1849.

Phlox douglasii diffusa A. Gray, Proc. Am. Acad. 8: 254, 1870.

Type locality: "Prope Bear Valley in montibus Sacramento," California. Collected by Hartweg.

Range: British Columbia, Washington, Idaho, and Oregon.

Specimens examined: Olympic Mountains, Piper; Henderson: Nason Creek, Sandberg & Leiberg 660; Mount Rainier, Allen 265; Piper 2132; Mount Stuart, Elmer 1108; Mount Adams, Henderson: Cascade Mountains, latitude 49°, Lyall: Horseshoe Basin, Lake & Hull 595; Skamania County, Suksdorf: Klickitat River, Flett 1246; without locality, Brandegee 960; Olympic Mountains, Elmer 2820.

Zonal distribution: Arctic.

Phlox longifolia Nutt. Journ. Acad. Phila. 7: 41. 1834.

Phlox speciosa linearifolia Hook, Journ. Bot. 3: 289, 1851.

Phlox speciosa latifolia Hook, loc, cit.

Phlox linearifolia A. Gray, Syn. Fl. 21: 133, 1878.

Phlox humilis Dougl.; Benth. in DC. Prod. 9: 306, 1845.

Type locality: "Valleys of the Rocky Mountains generally." Collected by Wyeth.

RANGE: Washington to Montana and Colorado.

Specimens examined: Wenache Mountains, Whited 39; Wenache, Whited 9, 1037; North Yakima, Mrs. Steinweg: Piper, April 22, 1898; Henderson 2415; Pasco, Hindshaw 19; Piper 2959; Spangle, Piper, June 24, 1899; Sprague, Henderson; Spokane, Piper, May 19, 1899; Rockland, Suksdorf, April 10, 1886; Columbia Plains, Douglas in 1886 (type of Phlox humilis); Hangman Creek, Sandberg & Leiberg 62; Almota, Piper, May 27, 1893; Wawawai, Piper 1513, 3009; Lake 594; Waitsburg, Horner 159; Pataha, Hull 594; without locality, Brandegee 961; without locality, Vascy 397, 399.

Zonal distribution: Arid Transition and Upper Sonoran.

8. Phlox viscida E. Nelson, Rev. West. N. A. Phloxes 24, 1899.

Type locality: "Blue Mts., Columbia Co.," Washington. Collected by Piper.

Range: Washington to California.

Specimens examined: Blue Mountains, Piper 2397; Horner 137; Klickitat Hills, Gorman, April, 1895; Wenas Creek, Cotton 1152; Klickitat Valley, Howell 1380.

ZONAL DISTRIBUTION: Arid Transition.

9. Phlox viridis E. Nelson, Rev. West. N. A. Phloxes 24, 1899.

Type locality: "Ellensburg, Washington." Collected by Piper.

Range: Eastern Washington and Idaho.

Specimens examined: Wenache, Whited 628; Ellensburg, Piper 2689.

Zonal distribution: Arid Transition.

10. Phlox speciosa Pursh, Fl. 1: 149. 1814.

Type locality: "On the plains of the Columbia." Collected by Lewis. The exact place is probably on the Clearwater below Kamiah, Idaho.

Range: Eastern Washington and adjacent Idaho.

Specimens examined: Spokane, Sandberg & Leiberg in 1893; Hangman Creek, Sandberg & Leiberg 75; Pullman, Piper 1894; Elmer 839; Almota Canyon, Piper; Union Flat, Piper 3008; without locality, Vasey 401.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

10a. Phlox speciosa elatior Hook. Fl. Bor. Am. 2: 72. 1838.

Phlox sabini Dougl.; Hook. loc. cit. as synonym.

Phlox speciosa sabini A. Grav, Proc. Am. Acad. 8: 256, 1870.

Type locality: "Limestone Rocks of the Blue Mountains." Collected by Douglas.

Range: Washington, Oregon, and Idaho.

Specimens examined: Spokane, Lyall in 1861; Spokane River, Douglas; Pullman, Hull, May 24, 1892; Union Flat, Piper 2008.

ZONAL DISTRIBUTION: Arid Transition.

11. Phlox lanceolata E. Nelson, Rev. West. N. A. Phloxes 29, 1899.

Type locality: "Ellensburg, Wash." Collected by Piper.

Range: Central Washington.

Specimens examined: Ellensburg, Piper, May 20, 1897; Cleman Mountain, Henderson 2413; Rock Island, Sandberg & Leiberg 443.

Zonal distribution: Arid Transition and Upper Sonoran.

12. Phlox whitedii E. Nelson, Erythea 7: 167, 1899.

Type locality: Wenache, Washington. Collected by Whited.

Range: Central Washington.

Specimens examined: Wenache, Whited 1036; Cascade Mountains, Yakima County, Mrs. Steinweg: Rattlesnake Mountains, Cotton 573.

Zonal distribution: Arid Transition.

13. Phlox occidentalis Durand, Pac. R. Rep. 4: 125, 1856.

Type locality: "Hillsides, near Duffield's Ranch," California.

Range: Washington to California.

Specimens examined: Wenache, Whited 1069; Kittitas Valley, Lyall, June 1860; west Klickitat County, Suksdorf, May 18, 1886 and 2208; Chelan Butte, Griffiths & Cotton 184; Umtanum Ridge, Cotton 918.

ZONAL DISTRIBUTION: Arid Transition.

GILIA.

Shrubs: corolla salverform, yellow: leaves acerose.	
Leaves straight	
Leaves recurved	1b. G. pungens squarrosa.
Herbs.	
Perennials or biennials.	
Flowers in an elongate panicle; corolla large, tubular-	
funnelform, usually scarlet	G. aggregata.
Flowers in corymbs or heads, rather small, white or	
whitish.	
Leaves palmately 3 to 7-parted; flowers in cor-	
ymbs	8. G. nuttallii.
Leaves pinnately 3 to 9-divided; flowers in heads	9. G. congesta.
Annuals.	
Leaves or some of them opposite.	
Lower leaves dissected like the upper, into fili-	
form segments, all opposite.	
Flowers in a capitate leafy cluster; corolla 10	
to 12 mm. long.	2. G. bicolor.
Flowers scattered, on slender pedicels.	
Corolla almost rotate, 8 to 10 mm.	
broad	3. G. pharnaceoides.
Corolla tubular-funnelform.	
Ovules solitary in each cell, corolla	
whitish, 3 mm. long	4. G. harknessii.
Ovules 2 to 5 in each cell, corolla	T. C. Millandout.
purplish, 12 mm. long	5. G. bolanderi.
Lower leaves opposite, the upper alternate, both	The Committee of the Co
entire.	
Stems simple below; flowers 8 to 10 mm.	
long.	6. G. gracilis.
Stems branched from the base; flowers 5 to	o. o. yacatis.
7 mm. long	7. G. humilis.
Leaves all alternate.	1. C. amaca.
Herbage woolly: flowers pale blue, clustered	11 G flifolia
Herbage not woolly.	11. O. Jagotai.
Leaves not in a basal rosette.	
Flowers blue, in dense globose clusters on	
long naked peduncles; leaves dissected	
into filiform segments.	
Calyx glabrous; corolla 8 to 10 mm.	
• 0	19 G. canitate
long	
long	
Flowers scattered; leaves filiform, mostly	10. a. aenawaejoua.
entire.	
Branches elongate, erect; corolla blue; pedicels short	1.1 G minutiflara
orue; pediceis snort	is. a. manaanora.

Branches divergent, not elongate;

Leaves mostly in a basal rosette.

Radical leaves dentate, not pubescent... 16. G. leptomeria. Radical leaves pinnatifid, pubescent 17. G. inconspicua.

corolla pink; pedicels slender..... 15. G. capillaris.

Gilia pungens hookeri A. Gray, Proc. Am. Acad. 8: 268. 1870.

Phlox hookeri Dougl.; Hook. Fl. Bor. Am. 2: 73, t. 159, 1838.

Gilia hookeri Benth. in DC. Prod. 9: 316. 1845.

Type locality: "Common on arid, sandy, and rocky soils near the narrows of the Oakanagan and Priest's Rapids of the Columbia," Washington. Collected by Douglas.

Range: British Columbia to Oregon east of the Cascade Mountains.

Specimens examined: North Yakima, Flett 1031; Yakima Region, Brandegee 965; near Morgans Ferry, Suksdorf 392; Spokane, Spulding; Soap Lake, McKay 7; Ritzville, Sandberg & Leiberg 181; without locality, Vascy 394; near Spokane, Kreager 168; Chelan, Elmer 502; Methow River, Whited 236; Yakima, Leckenby, May 11, 1898; Coulee City, Lake & Hull 669; North Yakima, Henderson, May 27, 1892; Chelan Butte, Cotton 594; Coulee City, Cotton 606.

Zonal distribution: Upper Sonoran.

1b. Gilia pungens squarrosa A. Gray, Proc. Am. Acad. 8: 268, 1870.

Type locality: "Near Carson City," Nevada. Collected by Anderson.

Range: Eastern Washington to Idaho and Nevada.

Specimens examined: Columbia River, latitude 46° to 49°, Lyall (very viscid-pubescent).

2. Gilia bicolor (Nutt.).

Leptosiphon bicolor Nutt. Journ. Acad. Phila. n. ser. 1: 156, 1847.

Linanthus bicolor Greene, Pittonia 2: 260. 1892.

Gilia tenella Benth. Pl. Hartw. 325. 1849.

Type locality: "On moist rocks of the Oregon near the outlet of the Wahlamet." Collected by Nuttall.

Range: Vancouver Island to California.

Specimens examined: Whidby Island, Gardner 207; Admiralty Head, Piper, May, 1898; Fidalgo Island, Flett 2105; Montesano, Henderson 2409; Heller 4012; Tacoma, Flett, May 31, 1896; Olympia, Henderson 2410; Steilacoom, Suckley; Klickitat County, Suksdorf 43; Clallam County, Elmer 2823.

Zonal distribution: Humid Transition.

3. Gilia pharnaceoides Benth. Bot. Reg. 19: under pl. 1622. 1833.

Linanthus pharmaceoides Greene, Pittonia 2: 254. 1892.

Type locality: "California." Collected by Douglas.

RANGE: British Columbia to California, eastward to the Rocky Mountains.

Specimens examined: Pasco, Piper, May 26, 1899; Cascade Mountains to Colville, Lyall in 1860; Wilbur, Henderson, July, 1892; Wilson Creek, Sandberg & Leiberg, June, 1893; Coulee City, Lake & Hull 585; Chelan, Elmer 499; Spokane County, Suksdorf 391; Piper, July 18, 1894; Henderson, May 31, 1892; Chimokane Valley, Geyer 535; Walla Walla, Spalding; junction Crab and Wilson creeks, Sandberg & Leiberg 283; Rattlesnake Mountains, Colton 473; Clarks Springs, Kreager 13.

"Sandy soils at Oakanagunea and Wallawallah," Douglas, according to Hooker.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

4. Gilia harknessii Curran, Bull. Cal. Acad. 1: 12, 1884.

Linanthus harknessii Greene, Pittonia 2: 255, 1892.

Type locality: "At the summit of the Sierra Nevada," California. Collected by Harkness.

Range: Idaho and Washington to California.

Specimens examined: Wenache, Whited, June, 1896; Falcon Valley, Suksdorf 42, 165; Simcoe Hills, Howell 290; Klickitat River, Flett 1223; Sprague, Henderson, July 10, 1892; Sprague, Sandberg & Leiberg 201; Kamiak Butte, Elmer 803; Blue Mountains, Horner 389; Piper 2398.

Zonal distribution: Arid Transition.

5. Gilia bolanderi A. Gray, Proc. Am. Acad. 8: 263, 1870.

Linanthus bolanderi Greene, Pittonia 2: 255. 1892.

Type locality: "Sonoma County, California, on dry hills; Russian River." Collected by Bolander.

Range: Washington to California.

Specimens examined: Klickitat County, Suksdorf 549; White Salmon, Suksdorf 293, Zonal distribution: Arid Transition.

6. Gilia gracilis (Dougl.) Hook. Bot. Mag. 56: pl. 2924. 1829.

Collomia gracilis Dougl.; Hook. loc. cit. as synonym.

Phlox gracilis Greene, Pittonia 1: 141. 1887.

Microsteris gracilis Greene, Pittonia 3: 300. 1898.

Gilia graeilis elatior Suksdorf, Deutsch. Bot. Monatss. 18: 132, 1900.

Gilia gracilis pratensis Suksdorf, loc. cit.

Type locality: "On the banks of the Spokane River and on high grounds near Flathead River." Collected by Douglas.

Range: British Columbia to Nebraska, Colorado, and California.

Specimens examined: Montesano, Heller 3909; Seattle, Smith 154; Olympia, Henderson 2405, 2406; Kincaid, July 4, 1893; upper Nisqually Valley, Allen 77; Silverton, Bouck 31; Tieton River, Cotton 485; Tacoma, Flett 196, 881, 882; Falcon Valley, Suksdorf 2114, 1508; Ellensburg, Whited 268; Pasco, Hindshaw 50; Chimokane, Lyall in 1860; Fort Vancouver, Douglas in 1825; Klickitat River, Flett 1229; Rock Creek, Sandberg & Leiberg 78; Spokane Valley, Lyall in 1861; Spokane, Piper, May 23, 1897; Pullman, Piper 1517; Hull 588; Waitsburg, Horner, April 12, 1897; Wawawai, Piper, May 19, 1894; Elmer 76; Davis Ranch, Kreager; Clallam County, Elmer 2824; Mount Rainier, Flett 2153.

Zonal distribution: Upper Sonoran and Transition.

7. Gilia humilis (Greene).

Microsteris humilis Greene, Pittonia 3: 301. 1898.

? Collomia graeilis humilior Hook. Fl. Bor. Am. 2: 76. 1838.

Gilia mierosteris Piper, Fl. Palouse Reg. 142, 1901.

Type locality: "South end of Lake Pend Oreille," Idaho. Collected by Leiberg.

Range: Eastern Washington and adjacent Oregon and Idaho.

Specimens examined: Wenache, Whited 13; Ellensburg, Piper, May 20, 1897; Whited 268; Skamania County, Suksdorf 2314; Falcon Valley, Suksdorf 163; Tampico, Flett 1030; Rattlesnake Mountains, Cotton 308; Spokane, Piper 2291; Henderson 2404; Hangman Creek, Sandberg & Leiberg 25; Spangle, Piper 3547; Pullman, Hull, April 12, 1892; Piper 1518; Coulee City, Piper 3851.

ZONAL DISTRIBUTION: Arid Transition.

7a. Gilia humilis glabella (Greene).

Microsteris glabella Greene, Pittonia 3: 301. 1898.

Gilia gracilis glabella Suksdorf, Deutsch. Bot. Monatss. 18: 132. 1900.

Type locality: Falcon Valley, Washington. Collected by Suksdorf.

Range: Washington and Oregon.

Specimens examined: Faleon Valley, Suksdorf 2206.

8. Gilia nuttallii A. Gray, Proc. Am. Acad. 8: 267, 1870.

Type locality: "Rocky Mountains of Colorado and Utah to the Sierra Nevada in California."

Range: Washington to Colorado, Arizona, and Southern California.

Specimens examined: Mount Rainier, Smith 882; Flett 240; Goat Mountains, Allen 119; mountains north of Ellensburg, Brandegée 964; Blue Mountains, Piper 2419.

ZONAL DISTRIBUTION: Hudsonian and Canadian.

9. Gilia congesta Hook. Fl. Bor. Am. 2: 75. 1838.

Type locality: "Sandy plains of the Columbia." Collected by Douglas.

RANGE: Washington and Wyoming to California and Colorado.

Specimens examined: Upper Columbia, Wilkes Expedition 436.

This specimen has narrow mostly entire leaves, approaching in character G. congesta crebrifolia.

10. Gilia aggregata (Pursh) Spreng. Syst. 1: 626, 1825.

Cantua aggregata Pursh, Fl. 1: 147, 1814.

Gilia pulchella Dougl.; Hook. Fl. Bor. Am. 2: 74, 1838.

Type locality: "On the banks of the Mississippi, M. Lewis;" but the specimens were really collected on "Hungry Creck" [Lolo Creek], in Western Idaho.

Range: Washington to California, Texas, and Nebraska.

Specimens examined: Wenache, Whited 151; North Yakima, Henderson, May 29, 1892; Leckenby, May, 1898; Watt, August, 1895; Tieton River, Cotton 441; Fish Lake, Dunn, August, 1900; Klickitat River, Flett 1221; Peshastin, Sandberg & Leiberg 474; eastern Washington, Wilcox in 1883; locality unknown, Vasey 408; Pullman, Piper 1519; Blue Mountains, Piper, August 2, 1896; Clarks Springs, Kreager 91; Conconully, Griffiths & Cotton 313.

ZONAL DISTRIBUTION: Arid Transition and Canadian.

11. Gilia filifolia Nutt. Journ. Acad. Phila. n. ser. 1: 156, 1847.

Type locality: "Near Santa Barbara, Upper California."

Range: Eastern Washington to Southern California.

Specimens examined: Pasco, Piper, May 26, 1899; Elmer 1059; Moses Coulee, Lake & Hull 590; Crab and Wilson Creek, Sandberg & Leiberg 246; north of Bickleton, Suksdorf 393; Yakima Region, Brandegee 966; Moses Lake, Cotton 614.

Zonal distribution: Upper Sonoran.

This species has frequently been mistaken for the closely allied G. floccosa.

12. Gilia capitata Hook. Bot. Mag. 53: pl. 2698, 1826.

Type locality: "From the northwest coast of America," specifically "in the vicinity of Fort Vancouver," Washington. Collected by Douglas.

Range: Washington to California.

Specimens examined: Port Townsend, Edwards 20; Whidby Island, Gardner 205; Tacoma, Flett 79; Olympia, Heller 4040; Skamania County, Flett 1224; White Salmon, Suksdorf 451; Wawawai, Piper 3530; Scattle, Piper in 1888; Cape Horn, Piper 4908.

ZONAL DISTRIBUTION: Transition.

13. Gilia achilleaefolia Benth. Bot. Reg. 19: under pl. 1622, 1833.

Type locality: "California." Collected by Douglas.

Range: Washington to California.

Specimens examined: Whatcom County, Suksdorf 1998; Port Ludlow, Binns, June 30, 1890; Olympia, Henderson 2401.

Zonal distribution: Humid Transition.

14. Gilia minutiflora Benth. in DC. Prod. 9: 315. 1845.

Type locality: "In America boreali occidentali." Collected by Douglas.

Range: Eastern Washington to Oregon and Wyoming.

Specimens examined: Wenache, Elmer 481; Whited in 1895; Wenache Flat, Whited 1158, 1289; North Yakima, Watt, August, 1895; Piper 1818; Henderson in 1892; Kiona, Piper 2755; Pasco, Piper, July 11, 1897; Wilson Creek, Lake & Hull 670; Crab and Wilson

ereeks, Sandberg & Leiberg 270; locality unknown, Vascy 400; north of Bickleton, Suksdorf 396; Walla Walla region, Brandegee 967; Prosser, Cotton 813.

Zonal distribution: Upper Sonoran.

15. Gilia capillaris Kellogg, Proc. Cal. Acad. 5: 46, 1873.

Type locality: "Cisco, Sierra Nevada Mountains," California.

Range: Washington, Idaho, Oregon, and California.

Specimens examined: Mount Stuart, Elmer 1226; Simcoe Mountains, Suksdorf 395, 1515.

This species was mistaken by Suksdorf for G. filiformis Parry and under that name included in his list.

Gilia leptomeria A. Gray, Proc. Am. Acad. 8: 278, 1870.

Type locality: "Mountain valleys of Nevada and Utah." Collected by Watson.

Range: Eastern Washington to Nevada.

Specimens examined: Morgan's Ferry, Suksdorf 394; Pasco, Piper 2984, 2751; Hindshaw 27; mouth of Alder Creek, Howell 909; junction Crab and Wilson creeks, Sandberg & Leiberg 301; Sunnyside, Colton 315.

Zonal distribution: Upper Sonoran.

17. Gilia inconspicua (Smith) Dougl.; Hook. Bot. Mag. pl. 2883. 1829.

Ipomopsis inconspicua Smith, Exot. Fl. 1: pl. 14. 1804.

Cantua parviflora Pursh, Fl. 2: 730. 1814.

Gilia parviflora Spreng, Syst. Veg. 1: 626, 1825.

Type locality: Supposed by Smith to be from North America.

Range: British Columbia to Texas and California.

Specimens examined: North Yakima, Watt, August, 1895; Henderson, May 25, 1892; Pasco, Piper 2978; Hindshaw 22; junction Crab and Wilson creeks, Sandberg & Leiberg 261; Walla Walla, Lyall in 1860; Prosser, Cotton 591.

Zonal distribution: Upper Sonoran.

NAVARRETIA.

Leaves simply pinnatifid. 1. N. divaricata.

Leaves bipinnatifid. 1. N. divaricata.

Herbage not glandular nor malodorous.

Stems glabrate; calyx tube nearly glabrous; ovules 1 to 3 in

each cell. 5. N. minima.

Stems not glabrate.

Ovules 3 or 4 in each cell; stems pubescent; calyx tube

Ovules solitary in each cell; stems puberulent; calyx

tube and bracts sparsely villous....... 4. N. klickitatensis.

1. Navarretia divaricata (Torr.) Greene, Pittonia 1: 136. 1887.

Gilia divaricata Torr.; A. Gray, Proc. Am. Acad. 8: 270, 1870.

Type locality: "Along the foothills of the Sierra Nevada," California.

Range: Washington to California.

Specimens examined: Falcon Valley, Suksdorf, July, 1881.

2. Navarretia squarrosa (Esch.) Hook. & Arn. Bot. Beech. 368. 1840. Skunk-weed. Gilia squarrosa Hook. & Arn. Bot. Beech. 151. 1833.

Hoitzia squarrosa Esch. Mem. Acad. St. Petersb. 10: 283, 1826.

Gdia pungens Dougl.; Hook. Bot. Mag. 57: pl. 2977. 1830.

Type locality: "In Novae Californiae arenosis."

Range: Washington to California.

Specimens examined: Whidby Island, Gardner 204; Lake Washington, Suksdorf 992; Fairhaven, Suksdorf 993; Tacoma, Flett 909, 199; Touchet River, Horner 582; Clallam County, Elmer 2818.

Zonal distribution: Humid Transition.

Navarretia intertexta (Benth.) Hook. Fl. Bor. Am. 2: 75. 1838.

Aegochloa intertexta Benth. Bot. Reg. 19: under pl. 1622. 1833.

Gilia intertexta Steud. Nom. ed. 2. 1: 683. 1840.

Type locality: "California and North West America."

Range: British Columbia to California, eastward to the Rocky Mountains.

Specimens examined: Manor, Piper, July 14, 1899; Ellensburg, Whited 535; Klickitat County, Suksdarf 44; Klickitat River, Flett 1222; Spokane, Henderson, July 9, 1892; Sandberg, Heller, & McDougal 904; Dewart; Tukanon River, Lake & Hull 591; Pullman, Piper 1520; Davis Ranch, Kreager 178; Washtucna, Cotton 617; Rattlesnake Mountains, Cotton 663.

Zonal distribution: Transition.

4. Navarretia klickitatensis Suksdorf, Deutsch. Bot. Monatss. 18: 133, 1900.

Gilia klickitatensis Piper, Bull. Torr. Club 28: 43. 1901.

Type locality: Klickitat County, near the mouth of Klickitat River, Washington. Collected by Suksdorf.

Range: Washington and Oregon.

Specimens examined: Klickitat River, Suksdorf 991.

5. Navarretia minima (Nutt.) A. Gray, Proc. Am. Acad. 8: 269, 1870.

Gilia minima Nutt. Journ. Acad. Phila. n. ser. 1: 160, 1847.

Navarretia suksdorfiii Howell, Fl. N. W. Am. 457, 1901.

Type locality: "Plains of the Oregon, near Walla Walla." Collected by Nuttall.

Range: Washington to Dakota, Colorado, and Nevada.

Specimens examined: Falcon Valley, Suksdorf, July, 1881.

COLLOMIA.

•		
1	PATES	entire

Flowers solitary-axillary 4. C. tenella.

Flowers in clusters.

Corolla salmon-color, 2 to 3 cm. long........................ 1. C. grandiflora.

Corolla pink, 1 cm. long.

Calyx lobes acute; clusters many-flowered........ 2. C. linearis.

Calyx lobes aristate; clusters few-flowered........... 3. C. aristella.

Leaves more or less dissected.

1. Collomia grandiflora Dougl.; Lindl. Bot. Reg. 14: pl. 1174, 1828.

Gilia grandiflora A. Gray, Proc. Am. Acad. 17: 223, 1882.

Type locality: "In the northwest of North America in all the country bordering on the Columbia, as far eastward as the valleys of the Rocky Mts., but not beyond that great dividing ridge." Collected by Douglas.

Range: British Columbia to Idaho, Nevada, and California.

Specimens examined: Seattle, Piper, July, 1891; Tieton River, Cotton 447; Falcon Valley, Suksdorf 162; Sprague, Sandberg & Leiberg 157; Blue Mountains, Lake & Hull 592; Wawawai, Elmer 780; Clarks Springs, Kreager 112.

Cotton 702 from the Rattlesnake Mountains and a specimen collected by Vasey in 1889 represent a low spreading plant with broader leaves and bracts, probably a new subspecies.

ZONAL DISTRIBUTION: Upper Sonoran and Transition.

1a. Collomia grandiflora diffusa (Mulford).

Gilia grandiflora diffusa Mulford, Bot. Gaz. 19:120, 1894.

Type locality: "Foothills about Boise City, Idaho." Collected by Miss Mulford.

Range: Eastern Washington, Eastern Oregon, and Idaho.

Specimens examined: Wenache, Whited 1124; Leavenworth, Whited 240; North Yakima, Watt in 1895; Mrs. Steinweg in 1894; Rock Island, Sandberg & Leiberg 451; west Klickitat County, Suksdorf 161; Loon Lake, Winston, July 20, 1897; Colfax, Hardwick; Pullman, Piper 1514.

Zonal distribution: Upper Sonoran and Arid Transition.

2. Collomia linearis Nutt. Gen. 1: 126, 1818.

Gilia linearis A. Gray, Proc. Am. Acad. 17: 223, 1882.

Type locality: "Near the banks of the Missouri about the confluence of Shian River, and in the vicinity of the Arikaree village."

RANGE: Manitoba to British Columbia, south to Colorado and California.

Specimens examined: Wenache, Whited 82, 1015; Toppenish, Henderson, May 28, 1892; Klickitat River, Flett 1227; White Salmon, Suksdorf 446; Tampico, Flett 1220; Almota Canyon, Hull 671; Wawawai, Lake 587; Snake River, Hunter 26; Pullman, Piper 1515 and July 21, 1893; Clarks Springs, Spokane County, Kreager 19; Clallam County, Elmer 2822; Conconully, Griffiths & Cotton 308; Coulee City, Piper 3849.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

3. Collomia aristella (A. Gray) Rydberg, Mem. N. Y. Bot. Gard. 1: 318, 1900.

Gilia aristella Λ. Gray, Syn. Fl. ed. 2. 21: 408, 1886.

Type locality: "Northern part of California." Collected by Greene.

Range: Washington to California.

Specimens examined: Mount Stuart, Elmer 1238; Klickitat River, near Mount Adams, Suksdorf 590; Flett 1228.

Collomia tenella A. Gray, Proc. Am. Acad. 8: 259, 1870.

Gilia leptotes A. Gray, Proc. Am. Acad. 17: 223, 1882.

Type locality: "Parley's Peak, Utah." Collected by Watson.

Range: Washington to Nevada and Idaho.

Specimens examined: Egbert Springs, Sandberg & Leiberg 350; Wenache, Whited 2625.

5. Collomia heterophylla Hook. Bot. Mag. 56: pl. 2895, 1829.

Gilia heterophylla Dougl. Bot. Mag. 56; under pl. 2895, 1829, as synonym.

Type locality: "About Fort Vancouver," Washington. Collected by Douglas.

Range: Vancouver Island to California.

Specimens examined: Silverton, Bouck 151; Seattle, Piper, July 14, 1895; Tacoma, Flett 10; Nisqually Valley, Allen 65; Montesano, Heller 4057; Port Ludlow, Binns; Fidalgo Island, Lyall: Fort Vancouver, Scouler; Mount Rainier, Flett 2120; Charleston, Piper, July 21, 1895; without locality, Cooper; Challam County, Elmer 2821.

ZONAL DISTRIBUTION: Humid Transition.

6. Collomia debilis (S. Wats.) Greene, Pittonia 1: 127, 1887.

Gilia debilis S. Wats. Am. Nat. 7: 302, 1873.

Gilia larseni A. Gray, Syn. Fl. 21: 146, 1878.

Type locality: "Utah." Collected by Wheeler.

RANGE: Washington to Montana, California, and Utah.

Specimens examined: Mount Rainier, Piper 456; Flett 30; Mount Stuart, Brandegee 968; Mount Adams, Suksdorf 450; Flett 1223; Henderson, August 9, 1892.

Zonal distribution: Aretic.

29418--06 м----30

POLEMONIUM.

Annual; corolla white, nearly rotate	1. P . $micranthum$.
Perennials; corolla blue, campanulate.	
Stems erect, 60 to 90 cm. tall.	
Leaflets oblong-ovate.	2. P. coeruleum.
Leaflets linear	3. P. pectinatum.
Stems low, 5 to 30 cm. high.	
Densely cespitose, 5 to 10 cm. high.	
Viscid-glandular throughout; flowers violet with	
yellow eye	4. P. elegans.
Less viscid, sparsely pilose throughout; flowers	
white or pale blue	5. P. viscosum pilosum
Loosely cespitose, 15 to 30 cm. high, scarcely glandular.	•
Leaflets oval or oblong, less than 1 cm. long	6. P. humile.
Leaflets banceolate, 1 to 1.5 cm. long	7. <i>P. amoenum.</i>
	~

Polemonium micranthum Benth. in DC. Prod. 9: 318, 1845.

Type locality: "Ad flum. Columbia." Collected by Douglas.

RANGE: British Columbia to California and Nevada.

Specimens examined: Wenache, Whited 1025, 20; North Yakima, Henderson, May 25, 1892; Sunnyside, Cotton 322; Coupeville, Gardner 209; Fort Colville, Lyall in 1861; Spokane, Piper, May 16, 1896; Hangman Creek, Sandberg & Leiberg 13; Pullman, Piper; Hull 589; Wawawai, Piper 1521; Walla Walla, Bramlegee 972.

Zonal distribution: Arid Transition and Upper Sonoran.

2. Polemonium coeruleum L. Sp. Pl. 1: 162, 1753.

Polemonium occidentale Greene, Pittonia 2: 75, 1890.

Type locality: "Habitat in Europae, Asiae, Americae septentrionalibus.

Range: Alaska to California and Colorado. Europe. Asia.

Specimens examined: Mount Adams, Henderson, August 4, 1892; Marshall Junction, Piper 2251.

The P. foliosissimum t of Suksdorf's list is based on a specimen similar to Piper 2251 and from the same region. The specimens from Mount Adams are not quite identical with those from Marshall Junction, and further material may show them to be distinct.

Professor Greene maintains that the so-called P. coeruleum of the Pacific coast differs from the European plant in having horizontal rootstocks. Unfortunately too few of the specimens have the underground parts preserved to judge this character fairly.

3. Polemonium pectinatum Greene, Bull. Cal. Acad. 1: 10, 1884.

Type locality: "In the eastern part of Washington Territory." Collected by Hilgard. Range: Eastern Washington.

Specimens examined: Rock Lake, Sandberg & Leiberg 105; Spokane County, Mrs. Susan Tucker in 1892; eastern Washington, Hilgard in 1882; without locality, Wilkes Expedition.

4. Polemonium elegans Greene, Pittonia 3: 305, 1898 (April 8).

Polemonium bicolor Greenman, Bot. Gaz. 25: 262, 1898 (April 15).

Type locality: "In volcanic sand at 9000 feet altitude on Mt. Rainier, Washington." Collected by Piper.

Range: Cascade Mountains, Washington.

Specimens examined: Mount Rainier, Piper 2129; Smith 780; Allen 62, 294; Mount Adams, Suksdorf 79; Howell in 1882; Henderson 2411; Flett 1243.

ZONAL DISTRIBUTION: Arctic.

5. Polemonium viscosum pilosum Greenman, Bot. Gaz. 25; 263, 1898

Type Locality: "In clefts of rock on Goat Mountain, Washington, altitude 1540 m." Collected by Allen.

Range: Known only from the type locality.

Specimens examined: Goat Mountain near Mount Rainier, Allen 261.

6. Polemonium humile Roem. & Schult. Syst. 4: 792, 1819.

Polemonium pulchellum Bunge; Ledeb. Fl. Alt. 1: 233, 1829.

Polemonium humile pulchellum A. Gray, Syn. Fl. 12: 150. 4884.

Type locality: "In Siberiae orientalis maritimis arcnosis."

Range: Alaska to California and Colorado. Siberia.

Specimens examined: Nason Creek, Sandberg & Leiberg 680; Wenache Mountains, Whited, August 43, 1896; Elmer 456; Wenache Region, Brandegee 970; Mount Rainier, Piper 2107; Allen 262; Smith 779; Klickitat River, Flett 1241; Cascade Mountains to Colville, latitude 49°, Lyall in 1860; Blue Mountains, Piper 2326; locality unknown, Vascy 410; Clallam County, Elmer 2819.

Zonal distribution: Hudsonian.

Polemonium amoenum Piper, Erythea 7: 174, 1899.

Type locality: "Humptulips, Chehalis County, Wash." Collected by F. H. Lamb.

Range: Known only from the type locality.

Specimens examined: Humptulips, Lamb 1178; Humptulips Prairie, Conard 98.

HYDROPHYLLACEAE. WATERLEAF FAMILY.

Leaves not all basal.	
Styles entire	Romanzoffia (p. 468).
Styles 2-eleft.	
Corolla convolute in bud; placentae broad.	
Perennials; stamens exserted	Нургориуцим (р. 468).
Annuals; stamens included	Nемориња (р. 469).
Corolla imbricated in bud; placentae narrow.	

Flowers solitary in the leafy forks of the stem.... Conantius (p. 472).

CAPNOREA.

Corolla campanulate	1. C. lasiantha.
Corolla saucer-shape.	

Leaves glabrous, except on the margins.

Calyx lobes very unequal.2. C. fulcrata.Calyx lobes subequal.3. C. pamila.

Leaves pubescent beneath.

Pubescence appressed. 4. C. rillosula, Pubescence not appressed. 5. C. hortalla.

Capnorea Iasiantha Greene, Pitronia 5: 47, 1902.

Capnorea macilenta Greene, op. cit. 48.

Type locality: Eastern Washington, without station. Collected by G. R. Vasey.

RANGE: Washington, Oregon, and Idaho.

Specimens examined: Effensioner, Whited 66; Sprague, Henderson, May 30, 1892; Spokane, Piper, May, 1898; Medical Lake, Sandburg & Leiberg 52; Rock Creek, Piper 2793; Pasco, Hindshaw 23; Coulee City, Piper 3864, without locality, 4 asey in 1889; Wenas River, Cotton 916.

ZONAL DISTRIBUTION: Arid Transition.

2. Capnorea fulcrata Greene, Pittonia 5: 51, 1902.

Type locality: "From somewhere in the State of Washington." Collected by G. R. Vasey.

Specimens examined: Without locality, Vascy in 1889; without locality, Brandegee 979 in part; Wenache Mountains, Cotton 1234.

Zonal distribution: Arid Transition.

3. Capnorea pumila (Dougl.) Greene, Erythea 2: 193. 1894.

Villarsia pumila Dougl.; Griseb. in Hook. Fl. Bor. Am. 2: 70, 1838.

Hesperochirou pumilus Porter; Hayden, Geol. Rep. 768, 1872.

Capnorca mercosa Greene, Pittonia 5: 51, 1902.

Type locality: "Amer. boreali occ." Collected by Douglas in 1829.

Range: Washington, Oregon, and Idaho.

Specimens examined: Blue Mountains, Horner R105; B354; without locality, Suksdorf in 1878.

An authentic Douglasian specimen of Villarsia pumila in the Gray Herbarium is the same as Capnorea nervosa Greene.

Zonal distribution: Arid Transition.

4. Capnorea villosula Greene, Pittonia 5: 52, 1902.

Type locality: Pullman, Washington.

Range: Known only from the type locality.

Specimens examined: Pullman, Elmer 1001; Piper 1698.

Zonal distribution: Arid Transition.

5. Capnorea hirtella Greene, Pittonia 5: 51, 1902.

Type locality: "Wet prairies of Eastern Washington." Collected by Howell.

Specimens examined: Eastern Washington, Howell April, 1890.

ROMANZOFFIA.

1. Romanzoffia sitchensis Bong, Mem. Acad. St. Petersb. VI. 2: 158, 1832.

Type locality: Sitka.

Range: Alaska to Washington.

Specimens examined: Olympic Mountains, Piper 2233; Silverton, Bouck 149 (pedicels glandular!); Bridge Creek, Elmer 690; Mount Baker, Flett 863; Green River Hot Springs, Piper in 1887; Mount Rainier, Flett 229; Goat Mountains, Allen 236.

Zonal distribution: Hudsonian and Canadian.

HYDROPHYLLUM. WATERLEAF.

Calvx lobes pubescent on the back and citate with long, soft hairs;

Calvx lobes glabrous on the back, hirsute-ciliate, basal leaves with

1. Hydrophyllum capitatum Dougl., Benth. Linn. Trans. 17: 273, 1837.

Type locality: "In the interior of the Columbia in Northwest America." Collected by Douglas.

Range: Washington and Idaho to California and Utah.

Specimens examined: Klickitat River, Flett 1249; Suncoe Hills, Howell, June, 1879; without locality, Vascy in 1889; Wenache, Whited 23, Clealum, Henderson, June 11, 1892; Hangman Creek, Sandberg & Leiberg 45, Pullman, Elmer 1002; Moore, May, 1893; Piper 1893, 1696.

ZONAL DISTRIBUTION: Arid Transition.

2. Hydrophyllu n albifrons Heller, Bull. Torr. Club 25: 267, 1898.

Hydrophyllum congestum Wiegand, Bull. Torr. Club 26: 136, 1899.

Type locality: Lake Waha, Nez Perces County, Idaho.

Range: Washington and Idaho.

Specimens examined: Nason Creek, Sandburg & Leiberg 658; Okanogan County, Whited 222; Silverton, Bouck 159; Mount Rainier, Piper 2124; Mount Adams, Suksdorf 453, 591; Henders m 685; Goat Mountains, Allen 232; Klickitat River, Flett 1250; without locality, Vasey in 1889; Pullman, Piper 1697; Hull 773; Blue Mountains, Horner 3351; Wenache Mountains, Cotton 1183).

ZONAL DISTRIBUTION: Arid Transition and Canadian.

This species is very close to *H. feudleri* (A. Gray) Heller, to which it has been referred. The plant called *H. macrophyllum* Nutt, in Cooper's Report is probably *H. albifrons*, which has also been confused with *H. occidentale* (S. Wats.) A. Gray, a species of more southern range.

The type specimen of *H. congestum* Wiegand really came from Mount Rainier (Mount Tacoma) and not from Tacoma as published.

3. Hydrophyllum tenuipes Heller, Bull. Torr. Club 25: 582, 1898.

Type locality: Montesano, Washington.

Range: British Columbia to Oregon, west of the Cascade Mountains.

Specimens examined: Montesano, Heller 3853; Hoquiam, Lamb 1140; Clallam County, Elmer 2831; Hwaco, Piper 5000; Seattle, Piper 260, 3020; Skokomish River, Kincaid, May 16, 1902; Tacoma, Flett 1768; Quinault, Conard 134; without locality, Wilkes Expedition.

ZONAL DISTRIBUTION: Humid Transition.

Two quite distinct forms of this species occur, but satisfactory characters to separate them are not evident. The coast form like Piper's 5000 has dark blue flowers on long peduncles, and thick leaves coarsely and doubly crenate-dentate, while the form away from the immediate coast has thinner leaves, simply dentate, and pale flowers on shorter peduncles.

Hydrophyllum tennipes has heretofore been referred to H. virginicum L.

NEMOPHILA.

Leaves mostly alternate; corolla shorter than calyx.......... 2. N. breviglora.

Leaves mostly opposite; corolla equaling the calvx or longer.

 Seeds mostly 6 to 8 per capsule; leaves oblong.
 3. N. pedanentata.

 Seeds mostly 4 per capsule; leaves ovate.
 1. N. parciflora.

1. Nemophila sepulta Parish, Erythea 7: 93, 1899.

Nemophila densa Howell, Fl. N. W. Am. 466, 1901.

Nemophila minutiflora Suksdorf, West Am. Sci. 14: 22, 1903.

Nemophila menziesii minutiflora Suksdorf, Deutsch. Bot. Monatss. 18: 133, 1900.

Nemophila reticulata Suksdorf, West Am. Sci. 14: 22, 1903.

Nemophila crosa Suksdorf, op. cit. 23.

Type locality: Bear Valley, San Bernardino Mountains, California.

Range: Washington to California.

Specimens examined: West Klickitat County, Suksdorf 684, 397; Bingen, Suksdorf 2198; Clarke County, Suksdorf 2315.

2. Nemophila breviflora A. Gray, Proc. Am. Acad. 10: 315, 1875.

Type locality: "Mountains of Utah." Collected by Watson.

RANGE: Washington to Montana, Wyoming, and Utah.

Specimens examined: Cleman Mountain, Henderson, June 14, 1892; Klickitat County, Suksdorf in 1881; Klickitat River, Flett 1013; Blue Mountains, Piper, July, 1896.

ZONAL DISTRIBUTION: Canadian.

3. Nemophila pedunculata Dougl.; Benth. Linn. Trans. 17: 275, 1837.

Type locality: "On the Columbia." Collected by Douglas.

Range: Washington to California.

Specimens examined: Klickitat County, Suksdorf 2637, 2638.

4. Nemophila parviflora Dougl.; Benth. Linn. Trans. 17: 275, 1837.

Type locality: "From the Columbia." Collected by Douglas and by Scouler.

Range: British Columbia to California in the coast region.

Specimens examined: Clallam County, Elmer 2830; Whidby Island, Gardner 395; Seattle, Piper in 1885; upper Nisqually Valley, Allen 61; without locality, Vasey in 1889; Vancouver, Piper 4940.

ZONAL DISTRIBUTION: Humid Transition.

PHACELIA.

Leaves entire or with a few much smaller lateral lobes.	
Flowers bright blue, rather large.	
Low, branched from the base; ovules only 4.	. 1. P. humilis.
Taller, erect; ovules 10 or more	
Flowers white or bluish, small.	
Herbage canescent	3. P. heterophylla.
Herbage green, hirsute	4. P. nemoralis.
Leaves pinnately cleft into narrow subequal lobes.	
Annual: stems erect	9. P. glandulifera.
Perennials.	
Stems erect.	
Stems weak, reclining	. 8. P. ramosissima.
Leaves silky; inflorescence not glandular	5. P. sericea.

Leaves silky; inflorescence not glandular. 5. P. scricca.

Leaves green; inflorescence glandular. 6. P. peocera.

Calyx not ciliate; leaves not glandular. 6. P. peocera.

Phacelia humilis Torr. & Gr. Pac. R. Rep. 2: 122, 1855-57.

Type locality: "Near the summit of the Sierra Nevada, California."

RANGE: Washington to Nevada and California.

Specimens examined: Cleman Mountain, Henderson 2541; Egbert Springs, Sandberg & Leiberg 352; Yakima region, Brandegee 974; Wenache, Whited 1103, 35; Douglas County, Spillman, May, 1896.

Zonal distribution: Upper Sonoran.

2. Phacelia linearis (Pursh) Holzinger, Contr. Nat. Herb. 3: 242, 1895.

Phacelia menziesii Torr.; S. Wats. Bot. King. Explor. 252, 1871.

Hydrophyllum lineare Pursh, Fl. 1: 134, 1814.

Entoca menziesii R. Br. in Richards, Bot. App. Frankl. Journ. 764, 1823.

Entoca multiflora Dough.; Lindl. Bot. Reg. 14: pl. 1180, 1828.

Type locality: "On the banks of the Missouri. April." Collected by Lewis. The specimen in the Philadelphia Academy bears the label "Rocky Camp, April 17, 1806." This spot is on the Dalles of the Columbia, and it is probable that Pursh has made an error.

RANGE: British Columbia and Alberta to California and Utah.

Specimens examined: Whidby Island, Gardner 210; Mount Adams, Flett 1247; Rattle-snake Mountains, Cotton 330; Yakima, Henderson, May 25, 1892; North Yakima, Mrs. Steinweg in 1894; Pasco, Piper 2958; Hindshaw 24; Rock Lake, Sandberg & Leiberg 116; Pend Oreille River, Lyall in 1861; without locality, Vascy in 1889; along Tukanon River, Lake & Hull, July 2, 1892; Spokane, Piper, July 18, 1894; Almota, Piper 1695; Wawawai, Lake & Hull 566; Elmer 782.

Zonal distribution: Upper Sonoran and Arid Transition.

3. Phacelia heterophylla Pursh, Fl. 1: 140, 1814.

Phacelia hastata Dougl.; Lehm. Pug. 2: 20, 1830.

Type locality: "On dry hills on the banks of the Kooskooskee," Idaho. Collected by Lewis."

Range: British Columbia to Dakota, Arizona, and California.

Specimens examined: Peshastin, Sandberg & Leiberg, August, 1893; Wenache, Whited 23, 1129; Ellensburg, Elmer 388; Wilson Creek, Lake & Hull 567; Pasco, Hindshaw 24; Spokane, Henderson 2564; Wawawai, Lake & Hull 567; without locality, Vascy in 1889; Rattlesnake Mountains, Cotton 475; Clarks Springs, Kreager 116; Kalispel Lake, Kreager 445; Clallam County, Elmer 2829t; "North Branch of the Columbia," Wilkes Expedition. Zonal distribution: Arid Transition and Upper Sonoran.

4. Phacelia nemoralis Greene, Pittonia, 1: 141, 1887.

Type locality: "Common in the hills behind Oakland and Berkeley, California."

Range: Washington to California, in the coast region.

Specimens examined: Chehalis County, Lamb 1161; Shoalwater Bay, Cooper in 1854; Montesano, Heller 3923; Silverton, Bouck 148; Mount Rainier, Piper, August, 1895; Horseshoe Basin, Lake & Hull, August 24, 1892; Skokomish River, Kinevid, June 25, 1892; Caseade Mountains, latitude 49°, Lyull in 1859; Columbia River, Scouler; Puget Sound, Wilkes Expedition.

ZONAL DISTRIBUTION: Humid Transition.

5. Phacelia sericea (Graham) A. Gray, Proc. Am. Acad. 10: 323, 1875.

Eutoca sericea Graham; Hook, Bot, Mag. 57: pl. 3003, 1830.

Type locality: "Rocky Mountains, North America." Collected by Drummond.

RANGE: British Columbia to Saskatchewan, southward to Colorado and Nevada.

Specimens examined: Clallam County, Elmer 2827; Mount Steele, Piper 2229; Mount Adams, Henderson, August 10, 1892; Puyallup Glacier, Flett 265; Klickitat River, Flett 1248; Mount Rainier, Smith in 1889; Flett 2174.

Zonal distribution: Arctic.

6. Phacelia procera A. Gray, Proc. Am. Acad. 10: 323, 1875.

Type locality: "Mountain meadows of the Sierra Nevada in Sierra and Nevada Counties," California.

Range: Washington to California.

Specimens examined: Trout Lake, Suksdorf 412: Simcoe Mountains, Howell 334: Cleman Mountain, Henderson: near Wenache, Whited 146, 1160: Peshastin, Sandberg & Leiberg 500: Leavenworth, Surage 30.

ZONAL DISTRIBUTION: Canadian.

7. Phacelia lenta Piper, Bull. Torr. Club 28: 44, 1901.

Type locality: "Bare hills of the Columbia River," Washington. Collected by Brandegee.

Range: Eastern Washington. Known only by the type specimen.

Specimens examined: Columbia River, Brandeger 976.

8. Phacelia ramosissima Dougl.; Lehm. Pug. 2; 21, 1830.

Type locality: None given. According to Hooker: "Dry rocky plains of the Columbia near Priests Rapid and at the Stony Island." Collected by Douglas.

RANGE: Washington to California and Arizona.

Specimens examined: Near Orondo, Whited 196; near Priest Rapids, Brandeger 975; Wenache, Whited 1304, 1375; Crab and Wilson creeks, Sandberg & Leiberg 288; Soap Lake, McKay 1.

Zonal distribution: Upper Sonoran.

9. Phacelia glandulifera, sp. nov.

Annual, branched from the base, 5 to 30 cm, high, hispid, and glandular throughout; leaves oblong, pinnately parted into 11 to 15 narrow divisions, these acutish and mostly 2 to 6-lobed; calyx lobes spatulate-oblanceolate, obtuse, entire or rarely bearing a single lobe, hispid and glandular, about 6 mm, long in flower, becoming twice as long and remaining erect in fruit; corolla pale violet, campanulate-funnelform, 6 mm, long, barely exceeding the calyx, 15-nerved, its rounded lobes 1.5 mm, long, the crests very obscure or wanting; stamens included, the slender filaments subulate, unequally inserted toward the base, the white anthers cordate-reniform; style 2-cleft at apex; stigmas capitate; capsule oblong, 5 to 6 mm, long, obtuse, sparsely hispidulous; seeds about 12, angular, lanceolate-oblong, beautifully tuberculate in transverse rows, 1.7 mm, long.

This plant has long been confused with *P. iresiana* Torr, of the Great Basin region southward, though attention was called to its distinctness long since *a. P. iresiana* differs in having its herbage more hispid and nearly glandless, and in having broader, obtuse, mostly entire leaf lobes, glandless calvx, and more deeply corrugated seeds.

Specimens examined: Washington—Junction Crab and Wilson creeks, Douglas County, Sandberg & Leiberg 306, June, 1893; Pasco, Piper 2954, May 25, 1899 (type); same locality, Henderson 2540; Morgan's Ferry, Yakima County, Suksdorf 398. Oregon—Sage Plains, Howell, June 16, 1885; Ontario, Leiberg 2015; Guano Ranch, Coville & Leiberg 5, July 24, 1896; eastern Oregon, Cusick 1670. Idaho—without locality, Hayden in 1872; Big Butte Station, Palmer 590; Blue Lakes, Palmer 65.

Zonal distribution: Upper Sonoran.

CONANTHUS.

1. Conanthus parviflorus Greenman, Erythea 7: 117, 1899.

Gilia hispida Piper, Erythea 6; 30, 1898, not Conanthus hispidas Heller nor Nama hispida A. Gray, 1862.

Type locality: "Oregon in sandy soil of the Malheur." Collected by Cusick.

Range: Eastern Washington and eastern Oregon.

Specimens examined: Near Morgan's Ferry, Suksdorf 390; Wallula, Brandegee 978; Pasco, Piper 2968; Hindshaw, May 25, 1896; Henderson 2402; Piper, July 10, 1897.

Zonal distribution: Upper Sonoran.

0

O

Washington specimens referred to Nama demissum A. Gray and Conauthus arctioides Wats, belong to this species.

BORAGINACEAE. BORAGE FAX	MILY.
vary undivided, sometimes 2 to 4-grooved; style terminal. Style entire; stigma peltate Style 2-eleft; stigmas capitate vary 4-parted; the style arising from between the parts.	
Nutlets armed with barbed prickles. Nutlets erect, prickly on the margins and sometimes on the back. Nutlets spreading, prickly all over. Nutlets not armed with barbed prickles,	1.1
Calyx much enlarged and membranous in fruit Calyx not much enlarged nor membranous in fruit.	Аѕрепидо (р. 476).
Corolla tubular or tubular-funnelform, blue Corolla funnelform or rotate. Nutlets erect attached by the very base. Racemes bractless; corolla rotate; roots	Mertensia (p. 476).

.. Myosotis (p. 486).

```
Racemes bracteate; corolla funnelform;
     roots thick...... Lithospermum (p. 486).
Nutlets erect or oblique, attached above the
 base, a more or less prominent fruiting
 receptacle (gynobase).
   Corolla yellow or orange, with naked
     Corolla white or blue with throat more
     or less fornicate—that is, bearing
     prominent swellings.
       Nutlets very flat and thin, attached
         above the middle, the margins
         Nutlets thick, attached at or below
         the middle.
           Perennials.
               Corolla bluez nutlets ob-
                 lique, the dorsal surface
                 with an acute, entire or
                 spiny margin..... Entriculum (p. 480).
               Corolla white or whitish;
                 nutlets ovate-trigonous. Oreocarya (p. 481).
           Annuals.
               Calvx circumscissile..... Piptocalyx (p. 481).
                Calvx not circumscissile.
                   Gynobase clongate,
                     the nutlets attached
                     by one-third their
                     length or more.... Cryptanthe (p. 483).
                   Gynobase low.
                        Nutlets oblique
                         or incurved, at-
                         tached a bout
                         the middle by
                         a caruncle-like
                         process; leaves
                         all alternate... Plagiobothrys (p. 482).
                        Nutlets attached
                         just inside the
                         base: lower
                         leaves opposite Allocarya (p. 485).

HELIOTROPIUM.

1. Heliotropium curassavicum L. Sp. Pl. 1: 130, 1753.

! Heliotropium chenopodioides Willd. Enum. Hort. Berol. 175, 1809.

Type locality: "In Americae calidioris maritimis."

Range: Washington to Virginia and southward.

Specimens examined: Junction Crab and Wilson creeks, Sandberg & Leiberg 339; Walla Walla, Lyall, June, 1860; Waitsburg, Horner 379; without locality, Vasey in 1889; Wallula, Cotton 1074a.

Zonal distribution: Upper Sonoran.

COLDENIA.

1. Coldenia nuttallii Hook. Journ. Bot. & Kew Misc. 3: 296, 1851.

Tiquilia parvifolia Nutt.; Hook. loc. cit. as synonym.

Type locality: "Rocky Mountains." Collected by Nuttall.

Range: Washington to Wyoming, Arizona, and California.

Specimens examined: Egbert Springs, Sandberg & Leiberg 343; Kennewick, Piper, July 10, 1897; Pasco, Elmer 1061; Henderson, June, 1892; without locality, Brandegee 982.

Zonal distribution: Upper Sonoran.

LAPPULA.

Annuals: scar of the nutlets linear.

Perennials; scar of nutlets triangular or ovate.

Lateral prickles united for about half their length.

Corolla greenish, the lobes broadest at base................. 6. L. hispida.

Lateral prickles of the fruit free to the base or nearly so.

Swellings in throat of corolla pubescent.

Flowers white; pubescence, harsh, appressed.................. 1. L. arida.

Flowers blue; pubescence soft, not appressed................. 2. L. saxatilis.

Swellings in throat of corolla not pubescent.

Flowers white; swellings as long as broad.................... 5. L. hendersoni.

Flowers blue; swellings broader than long.

Corolla 4 to 6 mm, broad. 3. L. floribunda. Corolla 8 to 10 mm, broad. 4. L. diffusa.

1. Lappula arida Piper, Bull. Torr, Club 28: 44, 1901.

Lappula cottoni Piper, Bull. Torr. Club 29: 549. 1902.

Type locality: Ellensburg, Washington.

Range: Washington and Oregon.

Specimens examined: Wenache, Whited, June, 1896 and 1047; Ellensburg, Elmer 385; Whited 324; Piper 2676; Peshastin, Sandberg & Leiberg 595; Douglas County, Spillman, May 27, 1896; junction Crab and Wilson creeks, Sandberg & Leiberg 277; Coulee City, Piper 3840; without locality, Vascy in 1889; Chelan Butte, Griffiths & Cotton 173; Wenache Mountains, Griffiths & Cotton 126; Rattlesnake Mountains, Cotton 360, 579, 650.

Zonal distribution: Upper Sonoran.

2. Lappula saxatilis Piper, Bull. Torr. Club 29: 541, 1902.

Type locality: "Rocky sides of canons, Klickitat River, Wash." Collected by Suksdorf. Not otherwise known.

3. Lappula floribunda (Lehm.) Greene, Pittonia 2:182.1891.

Echinospermum floribundum Lehm. Pug. 2: 24. 1830.

Type locality: "Lake Pentanguishene to the Rocky Mountains," collected by *Drummond*, according to Hooker.

RANGE: Washington to Saskatchewan, Colorado, and California.

Specimens examined: Yakima Region, Brandegea 986.

4. Lappula diffusa (Lehm.) Greene, Pittonia 2: 182. 1891.

Echinospermum diffusum Lehm. Pug. 2:23. 1830.

Type locality: "N. W. America," collected by Douglas, according to Hooker.

RANGE: British Columbia to California, Montana, and Utah.

Specimens examined: Wenache Mountains, Whited 1258; mountains near Ellensburg, Piper 2669; upper Yakima River, Lyall in 1860; Klickitat River, Suksdorf 592; Fleit 1011; Blue Mountains, Horner 121, 341; without locality, Vascy in 1889.

Zonal distribution: Canadian.

5. Lappula hendersoni Piper, Bull. Torr. Club 29: 539, 1902.

Type locality: "Clemens Mountains, Yakima County, Washington." Collected by Henderson.

RANGE: Eastern slope of the Cascade Mountains in Washington and Oregon.

Specimens examined: Klickitat County, Suksdorf, June, 1881; Upper Yakima, Lyull in 1860; Cleman Mountain, Henderson, June 14, 1892.

6. Lappula hispida (A. Gray) Greene, Pittonia 2: 182, 1891.

Echinospermum diffusum hispidum A. Gray, Proc. Am. Acad. 17: 225, 1882.

Echinospermum hispidum A. Gray, Syn. Fl. ed. 2, 21: 422, 1886.

Type locality: Rocky hillsides of Pine Creek near the mouth, Union County, Oregon. Collected by Cusick.

Range: Northeastern Oregon and adjacent Washington.

Specimens examined: Asotin County, Sheldon in 1897.

7. Lappula ciliata (Dougl.) Greene, Pittonia 2: 182, 1891.

Cynoglossum ciliatum Dougl.; Lehm. Pug. 2: 24, 1830.

Echinospermum ciliatum A. Gray, Proc. Am. Acad. 17: 225, 1882.

Type locality: "Kettle Falls and Spokane River, Washington." Collected by Douglas. Range: Spokane and Stevens counties, Washington.

Specimens examined: Chewelah, John K. Ely 55; Spokane, Dewart, May 6, 1901; Piper 2292; Henderson, June, 1892; Spokane and Kettle Falls, Douglas in 1826; Clarks Springs, Kreager 95.

ZONAL DISTRIBUTION: Arid Transition.

8. Lappula occidentalis (S. Wats.) Rydberg, Mem. N. Y. Bot, Gard. 1: 329, 1900.

Echinospermum redowskii occidentale S. Wats. Bot. King Explor. 246, 1871.

Lappula fremontii Howell, Fl. N. W. Am. 480, 1901.

Type locality: "In the valleys and on the mountains from the Sierras to the Wahsatch."

Range: Alaska to Minnesota and Arizona.

Specimens examined: Berne, Piper, July 7, 1895; Wenache, Whited 32, 1048, 1226; Ellensburg, Elmer 430; Whited 342, 389; Douglas County, Spillman, May 27, 1896; North Yakima, Mrs. Steinweg in 1894; Flett 1034; Pasco, Hindshaw 17; Piper 2952; Spokane, Piper 2691; Sprague, Sandberg & Leiberg 174; Rattlesnake Mountains, Cotton 407; Kalispel Lake, Kreager 441; Meyers Falls, Kreager 502; North Yakima, Henderson, May 25, 1892; Moxee to North Yakima, Griffiths & Cotton 35; Davis Lake, Kreager 441; Meyers Falls, Kreager 502; Wenache, Whited, April 15, 1902; Rattlesnake Mountains, Cotton 407.

Zonal distribution: Upper Sonoran and Arid Transition.

A specimen collected at Spokane (Nandberg, Heller, & MacDongal 928) was erroneously determined and listed as Lappula lappula (L.) Karst. a

9. Lappula cupulata (A. Gray) Rydberg, Bull. Torr. Club 28: 31, 1901.

Echinospermum redowskii cupulatum A. Gray, Bot. Cal. 1: 530, 1876.

Lappula columbiana A. Nelson, Bot. Gaz. 34: 28, 1902.

Type locality: Trinity Mountains, Nevada. Collected by Watson.

Range: Washington and Idaho to Nevada and Colorado.

Specimens examined: Almota, Piper 1703.

Zonal distribution: Upper Sonoran.

Our plant is identical with the type of L. cupulata.

CYNOGLOSSUM.

1. Cynoglossum grande Dougl.; Lehm. Pug. 2: 25, 1830.

Type locality: "Shady Woods, N. W. Coast." Collected by Douglas.

Range: Washington to California in the coast region.

Specimens examined: West Klickitat County, Suksdorf 92; Fort Vancouver, Tolmie.

ASPERUGO.

1. Asperugo procumbens L. Sp. Pl. 1: 138, 1753.

Type locality: European.

Specimens examined: Spokane, Piper 2721.

MERTENSIA

MERTENSIA.	
Plants tall and leafy, 50 to 100 cm, high, the leaves thin and broad.	
Leaves glabrous on both sides or merely papillose above:	
calyx smooth on the back.	
Calyx lobes elongate, acute, much longer than the fruit.	
Leaves few, green, oblong-lanceolate, obtuse or	
acutish	1. M. infirma.
Leaves many, pallid, ovate, acuminate	2. M. lacrigata.
Calyx lobes short and obtuse, or triangular and acute,	
not longer than the fruit.	2. 16
Leaves acute, mostly sessile: calyx lobes obtuse	
Leaves acuminate, short-petioled; calyx lobes acute,	4. M. brachycalyx.
Leaves pilose beneath. Upper leaf surface strigose.	
Calvx lobes canescent	5 W manhanaga
Calvx lobes ranescent.	o. M. memoranacea.
Dorsal surface of callyx lobes glabrous	6 M. vaniculata
Dorsal surface of ealyx lobes pubescent	
Upper leaf surface smooth or merely papillose.	i. m. pargpagaa.
Calvx lobes pubescent on back	8. M. subcordata.
Calyx lobes glabrous on back	
Plants low, 15 to 40 cm. high, the leaves narrow or thickish.	er six repropregues.
Roots tuberous or fasciculate-tuberous, shallow-seated;	
basal leaves, none.	
Leaves glabrous or merely papillose above.	
Herbage not glaucous	10. M. pulchella.
Herbage glaucous.	
Leaves strigose above.	
Corolla tube 3 or 4 times as long as the limb	11. M. oblongifolia.
Corolla tube once or twice as long as the limb	12. M. horneri.
Roots not tuberous, vertical; basal leaves numerous, their	
dry bases persistent on the crown.	
Leaves pubescent on both sides.	M. pubescens.
Leaves not pubescent on both sides.	
Leaves glabrous on both sides	
Leaves strigillose above	14a. M. nutans subcalva.

1. Mertensia infirma sp. nov.

Glabrous throughout except the ciliate margins of the leaves and calyx lobes; stems weak, erect or nearly so, 50 to 60 cm. high; basal and lower cauline leaves oblanceolate,

obtuse, the blades 5 to 7 cm. long, shorter than the margined petioles; middle and upper cauline leaves lanceolate, acute or acutish, 5 to 10 cm. long, narrowed toward the base, sessile or short-petioled; inflorescence rather open, the bracts foliaceous; petioles slender, papillate near the calyx; calyx divided nearly to the base, the lance-oblong lobes smooth excepting the appressed-ciliate margin, about one-third as long as the corolla-tube; corolla bright blue, about 18 mm. long, the ampliate limb distinctly shorter than the tube; filaments dilated, longer than the anthers; fruit not seen.

In damp thickets, Ellensburg, April 25, 1897, Kirk Whited 307.

This species is allied to *M. intermedia* Rydberg, but is at once distinguished by the larger corolla with relatively longer tube. The type is in the U.S. National Herbarium (sheet no. 366088).

2. Mertensia laevigata sp. nov.

Stems stout, erect, more or less glaucous, 40 to 90 cm, high; leaves pale or glaucescent, numerous, the cauline ovate, acuminate, glabrous or somewhat papillate above, glabrous beneath, ciliate on the margin, 5 to 7 cm, long, short-petioled; inflorescence loose, the pedicels appressed-pubescent or muriculate; calyx divided nearly to the base, its lobes lance-oblong, acute, ciliate, smooth on the back, over half as long as the corolla tube; corolla blue, 14 mm, long, the somewhat ampliate limb as long as the tube; filaments dilated, shorter than the anthers; nutlets finely muriculate, pale, the scar of attachment central.

The following specimens are referred here: Goat Mountains, O. D. Allen, no. 231, July 22, 1896; Mount Rainier, Piper 2116, altitude 2,000 m., August 15, 1895; type sheet no. 3369⁴/₂ in U. S. National Herbarium; Klickitat River, Flett 1199, June 27, 1899; Mount Stuart, Elmer 1195, August, 1898; "California Bob" Peak, Olympic Mountains, Lamb 1383, August 4, 1897; Simcoe Mountains, Howell, June 6, 1899; Mount Rainier, Piper 2116.

3. Mertensia ambigua sp. nov.

Stems glabrous and leafy, about 60 cm. high; leaves thin, acute, more or less papillose above, sparsely scabrous-ciliate on the margins, the lower cauline lanceolate or lance-ovate, 8 or 10 cm. long, on petioles of nearly equal length, the middle and upper cauline oblong or oblong-ovate, or the uppermost ovate and sessile; inflorescence loose and open; pedicels muriculate; calyx short, its lobes oblong, scarcely broader at base, mostly obtuse, smooth on the back, ciliate, only one-fifth as long as the corolla tube, and in fruit exceeded by the nutlets; corolla blue, 12 mm. long, the tube about twice as long as the slightly enlarged throat; filaments dilated, shorter than the anthers; nutlets pale, distinctly keeled on the back, slightly tuberculate, the triangular scar central.

Collected by G. R. Vasey in the Cascade Mountains of central Washington in 1889. The type sheet is in the U. S. National Herbarium, no. 296759.

4. Mertensia brachycalyx sp. nov.

Whole plant glabrous except the ciliate margins of the leaves and calyx lobes; stems stout, erect, leafy, a meter or more high; leaves bright green, lance-ovate, or the lower cauline lanceolate, smooth beneath, usually papillose above, 5 to 10 cm, long, the lower ones petioled; inflorescence leafy and open, the flowers in small clusters subtended by a pair of leafy bracts on slender branches; calyx small, glabrous, the short triangular acute lobes often unequal; corolla blue, about 12 mm, long, the tube as long as the strongly ampliate throat; filaments dilated, much shorter than the anthers; fruit whitish, nearly smooth, convex on back.

Collected near Nason Creek, Chelan County, at an altitude of 1,400 meters by Sandberg & Leiberg, no. 678, August 14, 1893, the type in the U. S. National Herbarium.

5. Mertensia membranacea Rydberg, Bull. Torr. Club 28: 33, 1901.

Type locality: Priest River, Idaho.

Range: Idaho and adjacent Washington and Oregon.

Specimens examined: Davis Ranch near Mount Carlton, Kreager 202, 216.

6. Mertensia paniculata (Ait.) G. Don, Hist. Dichl. Pl. 4: 318, 1838.

Palmonaria paniculata Ait. Hort. Kew. 1: 181, 1789.

Type locality: Hudson Bay.

Range: Alaska to Hudson Bay, Minnesota and Washington.

Specimens examined: Mount Carlton, Kreager 190.

Mertensia platyphylla Heller, Bull. Torr. Club 26: 548, 1899.

! Lithospermum denticulatum Lehm. Asper. 2: 294, 1818.

Type locality: Montesano, Washington. Collected by Heller.

Range: Western Washington.

Specimens examined: Montesano, *Heller* 3872; New London, *Lamb* 1168; Skokomish River, *Kincaid*, May 16, 1892.

Zonal distribution: Humid Transition.

According to Hooker the type of *Lithospermum denticulatum* Lehm, was collected in "Shady woods near the confluence of the Columbia with the sea. Douglas. Mr. Tolmie," It has usually been considered a synonym of *Mertensia sibirica* L., but it probably will prove it to be *M. platyphylla* Heller.

8. Mertensia subcordata Greene, Pittonia 4: 89, 1899.

Type locality: Roseburg, Oregon.

Range: Washington and Oregon.

Specimens examined: Cascade Mountains, Henderson 2259; Mount Stuart, Whited 796; Blue Mountains, Horner 367; Lake & Holl 639; Piper, July 17, 1896.

Zonal distribution: Canadian.

9. Mertensia leptophylla sp. nov.

Stems glabrous, stout, erect, a meter or more high; leaves ovate, acute, pilose beneath, glabrous above, ciliate, very thin, the blades 6 to 10 cm, long, all on margined petioles 1 to 3 cm, long; inflorescence loose; pedicels with spreading pubescence; calyx parted nearly to base, the lobes narrowly triangular-lanceolate, acute, ciliate, smooth on the back; corolla blue, about 12 mm, long, the slightly enlarged throat as long as the tube; filaments dilated, shorter than the anthers.

Known only from the Olympic Mountains of Clallam County, the type collected by Elmer, no. 2826, July 1900, sheet no. 402139 in the U. S. National Herbarium. The plant was also collected on Mount Storm King by Lawrence, no. 359, July 23, 1904.

10. Mertensia pulchella sp. nov.

Stems erect, solitary or rarely two, glabrous, 15 to 20 cm, high; tubers shallow-seated, simple or fasciculate-branched, black; leaves green, elliptic or ovate, mostly obtuse, thickish, glabrous beneath, more or less papillose above, scabrous-ciliate, the lower narrowed at base and short-petioled, the middle and upper ones ovate, sessile, often half-clasping, 2 to 10 cm, long; lowest leaves much reduced, scarious; flowers in a close cluster, usually 10 to 15; calyx parted nearly to the base, the lobes oblong-lanceolate very acute, denticulate; corolla blue, its tube three to four times as long as the calyx and nearly as broad as the ampliate limb; filaments dilated, as long as the anthers; nutlets small, dark gray, linely muriculate, attached by a pale and prominent scar, inclosed in the tube of the much enlarged fruiting calyx.

The following collections have been examined:

Idaho: On the lower Clearwater River, Sandberg, Heller, & MacDongal, 75 and 75a, April 30, 1892 (type sheet in U. S. National Herbarium, no. 213037); without locality, $Re \circ G$, Ainslee in 1874; Henderson, April 21, 1894; Lake Waha, Nez Perces County, Heller, June 2, 1896; Lewiston, Byron Hunter, 11, March 31, 1900.

All the above specimens are from Idaho, close to the Washington line, so that the species doubtless occurs within our limits.

10a. Mertensia pulchella glauca subsp. nov.

Herbage slightly glaucous throughout; leaves narrower, usually elliptic, mostly narrowed at base; stems often 2 to 4 from the same tuber; corolla tube more slender.

Specimens examined: Hills west of Wenache, Whited 1010, March 31, 1899; type sheet no. 366511 in the U. S. National Herbarium; Badger Mountain, Whited, May 24, 1900.

This may well prove a distinct species, but in the light of rather scanty material is considered too close to M, pulchella.

11. Mertensia oblongifolia (Nutt.) G. Don, Hist. Dichl. Pl. 4: 372, 1838.

Pulmonaria oblongifolia Nutt. Journ. Acad. Phila. 7: 43, 1834.

Mertensia longiflora Greene, Pittonia 3: 261, 1898.

Type locality: "Towards the sources of the Columbia River." Collected by Wyeth, Range: Washington, Idaho, Montana.

Specimens examined: Fort Colville, Lyall in 1861; Upper Columbia, Geyer 316; Cheney, Mrs. Susan Tucker in 1890; Hangman Creek, Sandberg & Leiberg 48; Spokane, Lyall in 1861; Henderson in 1892; Wenache, Whited 1010; Pullman, Piper 1875; Almota, Piper, April 7, 1894; without locality, Vasey in 1883.

12. Mertensia horneri sp. nov.

Stems 8 to 15 cm, high, glabrous, solitary or rarely 2 or 3, erect from a shallow-scated oblong, black tuber; basal leaves none; cauline 2 to 5, oblong, obtuse, pale and somewhat glaucous, appressed puberulent above, glabrous beneath, sessile, or the lower ones short-petioled, 2 to 3 cm, long; lowest leaves reduced and scarious; inflorescence close; calyx glaucous, parted nearly to the base, its lobes oblong-lanceolate, very acute, denticulate-ciliate on the margin; corolla blue, 10 to 12 mm, long, its tube about twice as long as the calvx; filaments dilated, as long as the anthers.

Specimens examined: Waitsburg, Washington, Prof. R. M. Horner 366, April 3, 1897, the type in the U. S. National Herbarium, sheet no. 318875; Union County, Oregon, Cusick, 1830, April 13, 1898.

13. Mertensia pubescens sp. nov.

Tufted from a stout vertical caudex covered with the dead bases of old leaves; stems 10 to 15 cm, high, leafy to the top; leaves numerous, the cauline inclined to be secund, linear or linear-lanceolate, obtuse or acutish, only the midrib evident, 3 to 6 cm, long, mostly about 5 mm, wide, pubescent on both surfaces, the basal ones attenuate into margined petioles about as long as the blades, the cauline sessile and but little reduced upwards; panicle short, dense, nodding; calyx lobes lanceolate, acute, coarsely ciliate, glabrous on the back, a third to a fourth as long as the corolla tube; corolla blue, the narrow tube 6 to 8 mm, long, one-half longer than the campanulate limb; filaments dilated, as long as the anthers.

Collected near Waterville, Douglas County, by Kirk Whited, 1214, April 23, 1900, the type sheet in the U. S. National Herbarium no. 370326.

Closely allied to *M. amoena* A. Nelson and *M. bakeri* Greene, but distinguished by its narrow more pubescent leaves and longer corollas.

14. Mertensia nutans Howell, Fl. N. W. Am. 491, 1901.

Type locality: "On the north side of high ridges, eastern Oregon and Washington." The type specimen is from Klickitat County, Washington.

Range: Washington and Oregon to Idaho and ? Colorado.

Specimens examined: Near Granddalles, Gorman, April 20, 1892; Klickitat County, Howell, May, 1880; Wenache, Whited 1034; Ellensburg, Whited, April 18, 1897.

ZONAL DISTRIBUTION: Arid Transition.

14a. Mertensia nutans subcalva subsp. nov.

Leaves minutely strigose above; otherwise as in M, nutans.

Specimens examined: Rattlesnake Mountains, J. S. Cotton, 328, April 29, 1901.

Mertensia Maritima (L.) S. F. Gray, Nat. Arr. Br. Pl. 2: 354, 1821. (Pulmonaria maritima L. Sp. Pl. 1: 136, 1753.)

This species is said by Λ . Gray a to occur on the coast of Washington, and it is included in Suksdorf's list. There are, however, no specimens in any of the American herbaria to substantiate the statement.

ERITRICHIUM.

Eritrichium howardi (A. Gray) Rydberg, Mem. N. Y. Bot. Gard. 1: 327, 1900.

Omphalodes howardi A. Gray, Proc. Am. Acad. 20: 263, 1885.

Cynoglossum howardi A. Gray, Syn. Fl. 21: 188, 1878.

Type locality: Rocky Mountains in Montana.

Raxge: Washington to Montana and Wyoming.

Specimens examined: Cascade Mountains, Tweedy 130.

AMSINCKIA.

Nutlets not muriculate, the projections smooth and pavement-like; calyx lobes oblong, obtuse. 1. A. tessellata.

Nutlets muriculate-scabrous. 2. A. intermedia.

Spreading; calyx lobes lanceolate or ovate, two or three of them often united. 3. A. lycopsoides.

1. Amsinckia tessellata A. Gray, Proc. Am. Acad. 10: 54, 1874.

Type locality: "Contra Costa mountains near Monte Diablo," California.

Range: Washington to Utah and California.

Specimens examined: Wenache, Whitel, June, 1896 and 44; Ellensburg, Piper, May 20, 1897; North Yakima, Piper 2785; Henderson 2558; Pasco, Piper 2971, 2977; Hindshaw 20; Snipes Mountain, Cotton 312; Coulee City, Piper 3847; Ephrata to Ritzville, Griffiths & Cotton 489.

Zonal distribution: Upper Sonoran.

2. Amsinckia intermedia Fisch. & Mey. Ind. Sem. Hort. Petrop. 2: 26, 1835.

Entoca menziesii Lehm. Pug. 2: 29, 1830, not R. Br. 1823.

Type locality: "Hab, cum sequente specie circa coloniam ruthenorum Ross in portu Bodega Novae Californiae."

Range: Washington and Idaho to California and Nevada.

Specimens examined: San Juan Island, Lyall, May 10, 1858; Fairhaven, Piper, July 2, 1897; Port Ludlow, Binns; Ellensburg, Piper 2699; west Klickitat County, Suksdorf 994, 2007, 390, 995; Rock Lake, Sandberg & Leiberg 120; Douglas County, Spillman; Waitsburg, Horner 146, 147; Blue Mountains, Piper; Pullman, Hull 638; Elmer: Almota Piper 2786; Wawawai, Piper 1838; Colfax, Piper; without locality, Vasey in 1889; Meyers Falls, Kreager 479.

Zonal distribution: Upper Sonoran and Arid Transition.

An exceedingly troublesome weed in grain fields of southeastern Washington, locally known as "tarweed." The species is extremely variable and Suksdorf segregates from it three proposed new species, A. arcnaria, b. A. retrorsa, c and A. micrantha.c The characters relied upon seem very slight and we question their value.

3. Amsinckia lycopsoides Lehm.; DC. Prod. 10: 117, 1846.

Lithospermum lycopsoides Lehm. Pug. 2: 28, 1830.

Amsinekia lycopsoides bracteosa A. Gray, Syn. Fl. 21: 198, 1878.

Type locality: "Straits of De Fuca, Scouler" according to Hooker.

a Syn. Fl. 2: 200, 1878. b Deutsch. Bot. Monatss. 18: 133, 1900. c Op. cit. 134.

RANGE: Vancouver Island to California.

Specimers examined: Fairhaven, Suksdorf 996; Puget Sound, Suckley; Port Ludlow, Binns, September 25, 1890; Clallam County, Elmer 2754; Fairhaven, Piper, July 3, 1897, Spokane, Piper 2275; without locality, Cooper in 1854.

ZONAL DISTRIBUTION: Humid Transition.

The two forms distinguished by Doctor Gray are probably worthy of recognition, but unfortunately his subspecies bracteosa is clearly based on the original Lithospermum lycopsoides.

PIPTOCALYX.

Piptocalyx circumscissus (Hook, & Arn.) Torr, Bot, Wilkes Exped. 17: 411, 4874.
 Lithospermum t circumscissum Hook, & Arn. Bot, Beech, Voy. 370, 4840.

Echinospermum circumscissum A. Gray, Proc. Am. Acad. 10: 58, 1875.

Type locality: "Snake Fort, Snake Country," Idaho. Collected by Tohnie.

RANGE: Washington to Wyoming, Utah, and California.

Specimens examined: Morgans Ferry, Suksdorf 401; Sunnyside, Cotton 351; North Yakima, Henderson, May 26, 1892; Pasco, Piper 2966; Hindshaw 30; Ainsworth, Brandegee 991; Wilson Creek, Sandberg & Leiberg 228.

ZONAL DISTRIBUTION: Upper Sonoran.

OREOCARYA.

Corolla tube exceeding the calyx. 1. O. lencophaca.

Corolla tube not exceeding the calyx.

Herbage not very hispid, but decidedly canescent and the inflores-

Herbage very hispid; inflorescence not fulvescent.

 Inflorescence very dense; leaves obtuse.
 2. O. colosioides.

 Inflorescence not very dense; leaves acute.
 3. O. spiculifera.

1. Oreocarya leucophaea (Dougl.) Greene, Pittonia 1: 58, 1887.

Myosotis leucophaea Dougl.; Lehm. Pug. 2: 22, 1830.

Eritrichium leucophacum A. DC. Prod. 10: 129, 1846.

Krynitskia leucophaca A. Gray, Syn. Fl. ed. 2, 21: 430, 1886.

Type locality: "Arid barrens of the Columbia, and of its northern and southern tributaries." Collected by Douglas.

Range: British Columbia to California and Utah.

Specimens examined: Columbia River, latitude 46° to 49°. Lyall in 1860; Morgans Ferry, Suksdorf 407; arid barrens of the Columbia, Donglas: Egbert Springs, Sandburg & Leiberg 93, 373; Scott, Leckenby, May 16, 1898; Pasco, Piper, July 11, 1897; Hindshaw 2; Elmer 1056; Piper 2987; Walla Walla region, Brandeger 997; Wallula, Cotton 1027.

Zonal distribution: Upper Sonoran.

2. Oreocarya celosioides Eastwood, Bull. Torr. Club 30: 240, 1903.

Type locality: "from the banks of the Columbia, eastern Washington." Collected by Howell.

Range: Eastern Washington.

Specimens examined: Rock Island, Sandberg & Leiberg 440; Rattlesnake Mountains, Cotton 359; near Columbus, Suksdorf, June 10, 1886; Klickitat, Howell, June, 1879; without locality, Brandegee 996.

ZONAL DISTRIBUTION: Arid Transition.

This species has been confused with O, glomerata (Pursh) Greene.

3. Oreocarya spiculifera sp. nov.

Tufted from a stout woody candex, the whole plant pallid; basal leaves numerous, crowded, spatulate-oblanceolate, acute, only the midnerve evident, densely pubescent and

29418--06 м----31

both sides with fine appressed hairs, scattered among these and on the margins tout hyaline bristles; blades 1.5 to 2 cm. long, exceeding the margined petioles; cauline leaves few, similar to the basal ones, but with shorter petioles; flowering stems erect, simple, 20 to 30 cm. high, angled, pubescent like the leaves; inflorescence of 8 to 12 alternate, subequal, false racenes, floriferous to their bases, the bracts and calyx pubescent like the leaves, but the bristles more abundant; bracts linear-lanceolate, obtuse, shorter than the calyx; pedicels short, soft-hairy; calyx lobes lanceolate, in flower 5 to 6 mm., in fruit 8 mm. long; corolla white, salver-form, its tube 5 mm. long, its limb 8 mm. broad; appendages triangular-ovate, obtuse, short; nutlets pale brown, dull, ovate, obtuse, 3 mm. long, each with a smooth, narrow margin, the back bluntly tuberculate, the ventral side rugose, the groove reaching nearly to the apex; gynobase longer than the nutlets.

Type in the National Herbarium, collected at Ritzville, Adams County, by Sandberg & Leiberg (no. 164), June 6, 1893.

4. Oreocarya sericea (A. Gray) Greene, Pittonia 1: 58, 1887.

Krynitskia sericea A. Gray, Proc. Am. Acad. 20: 279, 1885.

Type locality: "Alpine and subalpine on the mountains from Colorado and Utah to Oregon and Montana and probably in the British Possessions."

Range: Washington to Montana, Colorado, and California.

Specimens examined: Wenache, Whited 1099; Spokane, Piper 2294; Henderson 2563.

Zonal distribution: Arid Transition.

PECTOCARYA.

Nutlets oblong, the wings undulate	1. P. penicillata
Xutlets obovate, the wings entire or wanting.	
Nutlets with a thin scarious wing.	$2.\ P.\ setosa.$
Nutlets wingless	3. P. pusilla.

1. Pectocarya penicillata (Hook, & Arn.) A. DC. Prod. 10: 120, 1846.

Cynoglossum penicillatum Hook, & Arn. Bot. Beech, Voy. 371, 1840.

Type locality: California.

RANGE: British Columbia to California and Nevada.

Specimens examined: Wenache, Whited 86; North Yakima, Henderson, May 27, 1892; Pasco, Piper 2967; Douglas County, Spillman, May 27, 1896; Harrington, Sandberg & Leiberg 223; Coulce City, Piper 3869; Walla Walla region, Brandegee 984; Rattlesnake Mountains, Griffiths & Cotton 22.

Zonal distribution: Upper Sonoran and Arid Transition.

2. Pectocarya setosa A. Gray, Proc. Am. Acad. 12: 81, 1877.

Type locality: "On the desert plains of the upper Mohave River," California.

Range: Washington to California.

Specimens examined: Yakima County, Brandegee 985; North Yakima, Henderson 2560. Zonal distribution: Upper Sonoran.

3. Pectocarya pusilla (A. DC.) A. Gray, Proc. Am. Acad. 12: 81, 1877.

Gravelia pusilla A. DC. Prod. 10: 119, 1846.

Type locality: "In Chili prope Valparaiso et montem la Leona."

RANGE: Washington to California. Chile.

Specimens examined: West Klickitat County, Suksdorf 410.

PLAGIOBOTHRYS.

 Xutlets somewhat cruciform, muriculate.
 1. P. tenellus.

 Nutlets ovate, carinate, dull, roughened.
 2. P. nothofulvus.

 Plagiobothrys tenellus (Nutt.) A. Gray, Proc. Am. Acad. 20: 283, 1885, Al yosotis tenellu Nutt.; Plook, Kew. Journ. Bot. 3: 295, 1851. Plagiobothrys asper Greene, Pittonia 3: 262, 1898.

Type Locality: "Sunny rocky glopes of the mountains along the Coeur d'Alene River," Idaho. Collected by Gever.

RANGE: British Columbia to Idaho and California.

Specimens examined: San Juan Island, Lyall in 1858; Orcas Island, Lyall in 1858; Fort Vancouver, Tolmie; Wenache, Whitel 1046; Spokane Valley, Lyall in 1861; Spokane, Piper; Henderson: Sandberg & Leiberg 10; Walla Walla region, Bran legee 990; near Waitsburg, Horner 160; Wawawai, Piper; Elmer 767; without locality, Vasey in 4889.

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

2. Plagiobothrys nothofulvus A. Gray, Proc. Am. Acad. 20: 285, 1885.

Eritrichium nothofulvum A. Gray, Proc. Am. Acad. 17: 227, 1882.

TYPE LOCALITY: California.

Range: Washington to California.

Specimens examined: West Klickitat County, School 37.

CRYPTANTHE.

Autlets with scarious crenate wings	1. C. plerocarya.
Nutlets not winged.	
Surface of nutlets smooth and shining.	•
Nutlets solitary or rarely two, narrow, attenuate-acuminate.	
Vent: al groove simple, clongated at base	2. C. flaccida.
Ventral groove bifurcate at base	3. C. suksdorfii.
Nutlets four, ovate, acute or short-acuminate.	
Ventral groove simple to the base	4. C. affinis.
Ventral groove forked at base.	
Pubscence setose, spreading	5. C. ramulosissima.
Pubescence somewhat appressed	6. C. torreyana.
Surface of nutlet rough.	
Calyx twice as long as the acuminate nutlets	7. C. ambigua.
Calvx little longer than the acute nutlets.	S. C. muriculata.

1. Cryptanthe pterocarya (Torr.) Greene, Pittonia 1: 120, 1887.

Eritrichium p'erocaryum Torr. Bet. Nex. Bound, 142, 1859.

Krynitskia pterocarya A. Gray, Proc. Am. Acad. 20: 276, 1885.

Type locality: "Near El Paso," Texas.

Range: Washington to C. lifornia and Texas.

Specimens examined: Elleusburg, Hindshaw, May, 1896; Yakima, Henderson in 1892; Pasco, Hindshaw, May 25, 1806 and no. 41; Piper 2961; Couké City, Piper 3881; Wilson Creek, Sandberg & Leiberg 260; Walla Walla region, Brandegee 995; without locality, Vascy in 1889.

ZONAL DISTRIBUTION: Upper Sonoran.

2. Cryptanthe flaccida (Lehm.) Greene, Pittonia 1: 115, 1887.

Mysotis flaccida Lehm. Pug. 2: 22, 1830.

Eritrichium oxycaryum A. Gray, Proc. Am. Acad. 10: 58, 1874.

Krynitskia oxycarya A. Gray, Syn. Fl. 21: 425, 1878.

Type locality: "X. W. Coast in dry plains." Collected by Douglas.

RANGE: Washington and Idaho to California.

Specimens examined: Yakima, Henderson in 1892; Coulce City, Piper 3887; Crab and Wilson creeks, Sandberg & Leiberg 304; Sprague, Sandberg & Leiberg 173; without locality, Brandegee 992; Almota, Piper 1702; Waitsburg, Horner 602, 141; Wawawai, Lake & Hull 820; Elmer 766.

Zonal distribution: Upper Sonoran.

3. Cryptanthe suksdorfii (Greenman).

Krynitskia sukskorfii Greenman, Bot. Gaz. 40: 146, 1905.

Type locality: "On dry hillsides near Rockland, Klichitat County," Washington. Collected by Suksdorf.

Range: Washington and Oregon.

Specimens examined: Rockland, Suksdorf, June 8, 1904.

4. Cryptanthe affinis (A. Gray) Greene, Pittonia 1: 119, 1887.

Krynitskia affinis A. Gray, Proc. Am. Acad. 20: 270, 1885.

Type locality: "E. side of the Cascades near Lat, 49°," Collected by Lyall in 1860. RANGE: Washington and Idaho to California.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1860; Falcon Valley, Suksdorf 455; Klickitat River, Flett 1197; Cascade Mountains, Yakima County, Henderson; Kamiak Butte, Piper 3092; Blue Mountains, Piper, July 15, 1896; Waitsburg, Horner 603; along Touchet River, Horner 381.

Zonal distribution: Arid Transition.

5. Cryptanthe ramulosissima A. Nelson, Erythea 7: 68, 1899.

Type locality: Laramie, Wyoming.

Range: Washington and Wyoming.

Specimens Examined: Pasco, Elmer 1054; Piper 2750 and 2951; Henderson 2562; Rattlesnake Mountains, Griffills & Cotton 24.

Zonal distribution: Upper Sonoran.

6. Cryptanthe torreyana Greene, Pittonia 1:118. 1887.

Krynitzkia torreyana A. Gray, Proc. Am. Acad. 20: 271, 1885.

Krynitzkia leiocarpa Fisch, & Mey, err. det. Torr. Bot. Mex. Bound, 142, 1859.

Type locality: Grassy hills near San Luis Rey, California, according to label on type specimen.

Range: Washington to Nevada and California.

Specimens examined: Coulee City, Piper 3882.

6a. Cryptanthe torreyana calycosa Greene, Pittonia 1: 119. 1887.

Krynitskia torregana calycosa A. Gray, Proc. Am. Acad. 20: 271, 1885.

Type locality: "E. Humboldt Mountains, Nevada." Collected by Watson.

RANGE: Washington and Montana to California and Nevada.

Specimens examined: Ellensburg, Whited 506; Piper, July 9, 1897; North Yakima, Henderson, May 29, 1892; Falcon Valley, Suksdorf 593; Crab and Wilson creeks, Sandberg & Leiberg 249; Spangle, Piper, June 24, 1899; Spokane, Piper, July 6, 1895, 1943; Henderson, June 4, 1892; Pullman, Piper 1942, 1945; Wawawai, Lake, June 4, 1892; Piper, 1944, 3813, 1941; along Tukanon River, Lake & Hull 821; Kamiak Butte, Piper 3091.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

There are two forms of this subspecies, one with small corollas and one with large. No other character seems to be associated with this difference, however.

7. Cryptanthe ambigua (A. Gray) Greene, Pittonia 1: 113, 1887.

Krynitskin ambigua A. Gray, Proc. Am. Acad. 20: 273, 1885.

Exitrichium muriculatum Torr. Bot. Wilkes. Exped. 17: 416. pl. 13. 1874.

Cryptanthe monosperma Greene, Pittonia 5: 53, 1902.

Type locality: Nisqually, Washington.

Range: Washington to Montana and California.

Specimens examined: Klickitat Howell 337; north of Bickleton, Suksdorf 406; without locality, Brandegre 994; Falcon Valley, Suksdorf 46, 595.

8. Cryptanthe muriculata (A. DC.) Greene, Pittonia 1: 113, 1887.

Exitrichium muriculatum A. DC. Prod. 10: 132, 1846.

Krynitskia muriculata A. Gray, Proc. Am. Acad. 20: 273, 1885.

Myosotis muricata Hook, & Arn. Bot. Beech. Voy. 369, 1840, not Lithospermum muricatum Ruiz & Payon, 1799.

Allocarya hendersoni A. Nelson, Erythea 7: 69, 1899.

Type locality: California.

Range: Washington and Idaho to California.

Specimens examined: Mason County, Kineaid, May 16, 1892; Tacoma, Flett 896; Olympia, — July 4, 1896; Steilacoom, Piper, May 27, 1888; Fourth Plain, Piper 3083; Vancouver, Tolmie: Falcon Valley, Suksdorf 456; Clealum, Henderson, June 44, 1892; Palouse, Cloud, June, 1895; Goat Mountains, Flett 2156; Cape Horn, Piper 5018; Pullman, Elmer 155.

Suksdorf lists under Krynitskia two additional species, Cryptanthe leiocarpa (Fisch, & Mey.) Greene and C. findleri (A. Gray) Greene. There is no evidence in the Gray Herbarium that the former occurs in Washington, though Doctor Gray included this State in its range, nor have we seen specimens elsewhere. The Wilkes Expedition plant referred to C. leiocarpa by Torrey is C. torreyana calycosa, collected near Spokane. Suksdorf's specimen on the basis of which C. findleri is included in his list seems to be C. ambigna.

ALLOCARYA.

Corolla small, 1 to 2 lines broad; branches prostrate.

Nutlets transversely rugose, not bristly..................... 1. A. hispidula,

Nutlets transversely rugose and bristly. 2. A subglochidiata. Corolla large, 3 to 5 lines broad; stems erect or ascending.

1. Allocarya hispidula Greene, Pittonia 1: 17, 1887.

Type locality: San Bernardino Mountains, California.

RANGE: Washington and Idaho to California.

Specimens examined: Klickitat County, Howell 295; near Mount Adams, Henderson: Falcon Valley, Suksdorf 2113; Ellensburg, Whited 863; Bingen, Suksdorf 2207; Kettle Falls, Walson 284; Crab Creek, Suksdorf 403; Harrington, Sandberg & Leiberg 217; Spokane, Sarage 20; Waitsburg, Horner 138; without locality, Vascy in 1889; Pullman, Piper, July 20, 1894, 1701, 3022.

Zonal distribution: Arid Transition.

A close ally of A. californica, with which it has often been included.

2. Allocarya subglochidiata (A. Gray).

"Ullocarya humistrata Greene, Pittonia 1: 46, 1887.

Exitrichium californicum subglochidiatum A. Gray, Bot. Cal. 1: 526, 1876.

Type locality: "Placer to Sierra Co.," California.

Range: Washington to California.

Specimens examined: North Yakima, Henderson, June 13, 1892; Wilson Creek, Lake & Hull, August 6, 1892.

ZONAL DISTRIBUTION: Upper Sonoran.

3. Allocarya scouleri (Hock. & Arn.) Greene, Pittonia 1: 18, 1887.

Myosotis sconleri Hook, & Arn. Bot. Beech. Voy. 370, 1840.

Entrichium ! scouteri A. DC. in DC. Prod. 10: 130, 1846.

Krynitskia scouleri A. Gray, Proc. Am. Acad. 20: 267, 1885.

Type locality: "Columbia River."

Range: Washington to California in the coast region.

Specimens examined: Succotash Valley, Prper in 1895; Klickitat County, Suksdorf 45; Howell 336; Seattle, E. S. Meuny 531, Claffam County, Elmer 2753, 2756.

ZONAL DISTRIBUTION: Humid Transition.

A specimen collected by Suksdorf May 26, 1881, in Western Klickitat County I would refer to A. scouleri, but Professor Greene regards it as belonging to his Allocarya hirta.a

4. Allocarya stipitata Greene, Pittonia 1: 19. 1887.

Type locality: "In the central part of California."

Range: Washington to California in the coast region.

Specimens examined: Challam County, Elmer 2755; Tacoma, Flett 2, 879; Mason County, Piper 1053.

Zonal distribution: Humid Transition.

MYOSOTIS. FORGET-ME-NOT.

Perennial; calyx hairs straight; corolla blue. 1. M. laxa.

Annual; calyx hairs hooked; corolla white. 2. M. macrosperma.

1. Myosotis laxa Lehm. Asper. 83, 1818.

Type locality: "Habitat in America septentrionale."

Range; Canada to Virginia and Tennessee; Washington and Oregon.

Specimens examined: Whatcom, Gardner 415, Walla Walla, Sarage 3; Wenache, Whitel 1362.

ZONAL DISTRIBUTION: Transition.

2. Myosotis macrosperma Engelm. Am. Journ. Sci. I. 46: 98, 1844.

Type locality: Texas.

RANGE: Washington to New England, southward to California, Texas, and Florida. Specimens examined: Whidby Island, Gardner 215; Seattle, Poper 618; White Salmon, Suksdorf 295; Spokane, Henderson, May 31, 1892; Walla Walla Region, Brandegie 1000; Copper River, Horner 119; Waitsburg, Horner 600; Mount Carlton, Kreager 158.

ZONAL DISTRIBUTION, Transition,

This species seems amply distinct from M. verna Nutt., to which it is commonly referred.

LITHOSPERMUM.

Lithospermum ruderale Dougl., Lehm. Pug. 2; 28, 1830.

t Lithospermura priosum Nutt. Journ. Acad. Phil. 7: 43, 1834.

Lithospermum binecolatum Rydberg, Mem. N. Y. Bot. Gard. 1: 333, 1900.

Type Locality; "Gravelty banks of the Columbia and Multnomali Rivers." Collected by Douglas.

RANGE: British Columbia to Montana, Utah, and California.

Specimens examined. Wenache, Whited 1060, Rattlesnake Mountains, Cotton 358; North Yakima, Leckenby, May. 1898, Flett 1035, Whidby Island, Gardner 213, west Klickitat County, Suksdorf 166, Ritzville, Sandberg & Leiberg, June, 1893, Rock Creek, Sandberg & Leiberg 128, Colville, Lyall in 1861, Walla Walla Lyall in 1860, without locality, Vascy in 1889, Pullman, Elmer 212; Hull 640, Priper 1700, 1699, Wawawai, Lake & Hull 640, Clarks Springs, Kreager 69; Ione, Kreager 402, Colville Reservation, Griffiths & Cotton 406.

Zonal distribution: And Transition.

MENTHACEAE. MINT FAMILY.

Ovary 1-lobed.

Corolla nearly regular, 5-eleft Tricuostema (p. 487).

Corolla very irregular, apparently 1-hpped Teucrium (p. 487).

Ovary 1-parted.

Corolla distinctly bilabiate, the upper lip concave.

Antheriferous stamens 4

Calyx with a protuberance on the upper side.... Scutellaria (p. 488).

Calyx without protuberance.

Upper pair of stamens longer than the lower. Anther cells parallel	Абактасие (р. 489)
Calyx teeth subequal	Херета (р. 489).
Calyx teeth unequal, the upper very	
large	Draeocephalum (р. 489).
Upper pair of stamens shorter than the lower.	
Calyx bilabiate	Prunella (p. 489).
Calyx not bilabiate.	
Teeth of the calyx 10, spiny	Marrubium (p. 489).
Teeth of the cally 5, not spiny.	
Flowers opposite; calyx becom-	
ing inflated	Ритѕоѕтебіл (р. 490).
Flowers whorled; calyx not be-	
coming inflated.	
Throat of corolla dilated.	Lамитм (р. 490),
Throat of corolla not dil-	
ated	Stachys (p. 490).
Corolla nearly regular, or when bilabiate, the upper lip plane.	
Corolla regular or nearly so.	
Autheriferous stamens 2	Lycopus (p. 491).
Antheriferous stamens 4	МЕХТИА (р. 492).
Corolla bilabiate.	
Plant creeping; flowers axillary	Micromeria (p. 493).
Plant erect; flowers capitate-verticillate	Madronella (p. 493.)

TRICHOSTEMA.

Corolla tube not exceeding the calyx; leaves membranaceous, costate-		
veined	1.	$T.\ oblongum.$
Corolla tube slender, exserted: leaves crowded, strongly 3 to 5-her vose.	.2-	$T.\ lance olatum.$

1. Trichostema oblongum Benth, Lab. 659, 1832-35.

Type locality: "In herbidis prope areem Vancouver." Collected by Douglas.

Range: Washington and Idaho to California.

Specimens examined: Falcon Valley, Suksdorf 34; without locality, Douglas; Pullman Piper 1874; Hull, July 16, 1892.

Zonal distribution; Arid Transition.

2. Trichostema lanceolatum Benth, Lab. 659, 1835-36.

Type Locality: "Prope areem Vancouver in siecis ad flumen Multnomah et in Nova California." Collected by Douglas.

Range: California, Oregon, Washington!

It is very doubtful if this plant occurs north of the Columbia River. The above statement of Douglas in Hooker's Flora is the only direct evidence.

TEUCRIUM.

1. Teucrium occidentale A. Gray, Syn. Fl. 21: 349, 1878.

Type locality: Nebraska. Collected by Hayden.

RANGE: Washington to California, New Mexico, and Nebraska.

Specimens examined: Coulee City, Henderson 2533; Toppenish, Griffiths & Cotton 769.

1a. Teucrium occidentale viscidum subsp. nov.

Differs from T, occidentale in being viscid-pubescent throughout.

Collected at Mission, Stevens County, in muck land, August 22, 1902, by Frank O. Krenger (no. 482). The type is the sheet in the U. S. National Herburium no. 141297.

RAMONA.

1. Ramona incana (Beuth.) Dougl.; Briquet, Bull. Herb. Boiss. 2: 440, 1894.

Audibertia incana Benth. Bot. Reg. 17: pl. 1469, 1831.

Salvia carnosa Dougl. loc. cit. as synonym.

Type locality: "On the plains of the Columbia, near the Priest's Rapid, and on the clayey hills near the Big Birch, in 1826." Collected by Douglas.

RANGE: Washington and Idaho to Arizona.

Specimens examined: Wenache, Whited 1066; Ellensburg, Elmer 110; North Yakima, Mrs. Steinweg in 1891; Flett 1029; Henderson, May 21, 1892; Piper, July 10, 1897; Watt August, 1895; Yakima River, Suksdorf 428; Egbert Springs, Sandberg & Leiberg 362; Rattlesnake Mountains, Cotton 467; Snipes Mountain, Cotton 388; Columbia Valley, Lyall in 1860; Crab Creek, Sandberg & Leiberg 244; Douglas County, Spillman, May 27, 1890; Coulee City, Lake & Hull, August 8, 1892; Loon Lake, Winston, July 20, 1897; Soap Lake, McKay 9; Spokane, Henderson, July 9, 1892; Leiberg 60.

Zonal distribution: Upper Sonoran.

SCUTELLARIA. SKULLGAP.

Lower lip of corolla not villous. 2. S. galericulata.

Lower lip of corolla villous within.

Corolla 14 to 20 mm. long; leaves oblong, obtuse at each end. 3. 8. antirrhinoides.

Scutellaria lateriflora L. Sp. Pl. 2: 598, 1753.

Type locality: "Habitat in Canada, Virginia."

Range: Temperate North America.

Specimens examined: Cascade Mountains, latitude 49°, Lyall: Whatcom County, Suksdorf 1001; Loomis, Elmer 612; Seattle, Piper in 1885.

Zonal distribution: Humid Transition.

2. Scutellaria galericulata L. Sp. Pl. 2: 599, 1753.

Type locality: European.

RANGE: Alaska to Labrador, southward to Arizona, Nebraska, and North Carolina.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Mount Constitution, Henderson, July 4, 1892; Falcon Valley, Suksdorf 473; Nason Creek, Sandberg & Leiberg 619; Mission, Kreager, August 21, 1902; Wilbur, Henderson, July 12, 1892; Rock Lake, Lake & Hull, August, 1892; Marshall Junction, Piper, July 2, 1896; Mission, Kreager 492.

Zonal distribution: Transition.

3. Scutellaria antirrhinoides Benth. Lab. 440, 1834.

Type locality: "Prope areem Vancouver ad ripas Columbiae." Collected by Scouler. Range: Oregon, California Nevada, and ! Washington.

We have seen no Washington specimens of this species, though Fort Vancouver is given as the type locality. All recent Washington specimens referred to S. antirrhinoides are S. angustifolia.

4. Scutellaria angustifolia Pursh, Fl. 2: 412, 1811.

Type locality: "On the river Kooskoosky." Collected by Lewis, the exact spot opposite Kamiah, Idaho.

Range: British Columbia to Montana and California.

Specimens examined: West Klickitat County, Suksdorf 54; Naches, Lyall in 1860; Douglas County, Spillman, May 27, 1896; Spokane, Henderson, May, 1892; Pullman, Lake & Hull 598; Piper 1570; Wawawai, Lake 598; Spokane, Kreager 10.

Zonal distribution: Arid Transition.

AGASTACHE.

 Leaves green on both sides.
 1. A. urticifolia.

 Leaves white beneath.
 2. A. occidentalis.

1. Agastache urticifolia (Benth.) Rydberg, Mem. N. Y. Bot. Gard. 1: 339, 1900.

Lophantus urticifolius Benth. Bot. Reg. 15: under pl. 1282, 1829.

Type locality: "From the north-west coast of America." Collected by Douglas.

RANGE: Washington and Idaho to Nevada and California.

Specimens examined: Rattlesnake Mountains, Suksdorf 426; Crab Creek, Suksdorf 427; Walla Walla, Lyall in 1860; Tukanon River, Lake & Hull 597; Pullman, Piper 1569; Clarks Springs, Kreager 142.

ZONAL DISTRIBUTION: Arid Transition.

2. Agastache occidentalis (Piper) Heller, Muhlenbergia 1: 4. 1900.

Vleckia occidentalis Piper, Erythrea 6:31, 1898.

Type locality: "Six miles southwest of Ellensburg," Washington. Collected by Elmer. Range: Eastern Washington.

Specimens examined: Near Wenache, Whited 143½, 1296; Ellensburg, Elmer 396; Tampico, Flett 1040; Egbert Springs, Sandberg & Leiberg 353; lower Naches River, Henderson, June 13, 1892; Douglas County, Spillman, May 27, 1896; Toppenish, Griffiths & Cotton 673, Zonal distribution: Upper Sonoran.

NEPETA.

1. Nepeta cataria L. Sp. Pl. 2: 570, 1753.

Catnip.

Type locality: European.

Specimens examined: Pullman, Hardwick, July 30, 1895.

DRACOCEPHALUM.

1. Dracocephalum parviflorum Nutt. Gen. 2: 35, 1818.

Type locality: "Around Fort Mandan, on the Missouri." Collected by Nuttall.

RANGE: British Columbia, eastward to Lake Outario, and in the Rocky Mountains to New Mexico.

Specimens examined: Stevens Pass, Sandberg & Leiberg 800; Pend Oreille, Lyall in 1861; Medical Lake, Henderson.

Zonal distribution: Arid Transition.

PRUNELLA.

1. Prunella vulgaris L. Sp. Pl. 2: 600, 1753.

HEALALL.

Prunella vulgaris major Hook, Fl. Bor, Am. 2: 114, 4838.

Type locality: European.

Range: Temperate North America. Europe. Asia.

Specimens examined: Clallam County, Elmer 2544; Humptulips, Lamb 1205; Muckleshoot, Dr. Ruhn: Seattle, Piper, July 10, 1895; Silverton, Bonck 145; Cascade Mountains, latitude 49°, Lyall in 1859; Peshastin, Sandberg & Lieberg 541; west Klickitat County, Suksdorf 1445; Skamania County, Suksdorf 2244; North Yakima, Watt, August, 1895; Kettle Falls, Watson 332; Tukanon River, Lake & Hull, July 1, 1892; Pullman, Hull 601; Clarks Springs, Kreager 128; Mabton, Griffiths & Cotton 570.

Zonal distribution: Transition and Canadian.

MARRUBIUM.

1. Marrubium vulgare L. Sp. Pl. 2: 583, 1753.

Horehound.

Type locality: European.

Specimens examined: Almota, Lake & Hull 596. A common weed in most parts of the State.

PHYSOSTEGIA.

1. Physostegia parviflora Nutt; A. Gray, Syn. Fl. 21: 383, 1878.

Type locality: "Oregon." Collected by Nuttall.

Range: British Columbia and Saskatchewan to Oregon and Wyoming.

Specimens examined: Cascade Mauntains, latitude 49°, Lyall in 1858; Lindsleys, Henderson, September 9, 1892; Kettle Falls, Watson 333; Chelan, Elmer 486; Lake Chelan, Lake & Hull 688; Lake Kalispel, Kreager 320; Mission, Kreager 483.

ZONAL DISTRIBUTION: Transition.

LAMIUM.

1. Lamium amplexicaule L. Sp. Pl. 2: 579, 1753.

Type locality: European.

Specimens examined: Wawawai, Piper 3007.

STACHYS.

Upper leaves sessile, the lower short-petioled.	1. S.	palustris.
Upper leaves not sessile, the lower long-petioled.		
Corolla tube little longer than the calyx, calyx lobes subulate-		
aristulate	2. S.	bullata.
Corolla tube twice as long as the calyx.		
Leaves thick, tomentose and reticulate beneath	3. S.	chamissonis.
Leaves thin, not tomentose.		
Corolla 20 mm, long; calyx glabrous or sparsely hirsute;		
leaves subcordate	4. S.	ciliata.
Corolla 12 mm. long; calyx soft-villous; leaves mostly		
cordate	5. Š.	pubens.

1. Stachys palustris L. Sp. Pl. 2: 580, 1753.

*Type locality: European.

Range: Temperate North America. Europe. Asia.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; west Klickitat County, Suksdorf 55; Vancouver, Suksdorf 2226; Alma, Elmer 541; Parker, Dunn, August 8, 1901; Coulee City, Henderson 2533; Rock Lake, Lake & Hull 599; Medical Lake, Henderson 2532; Spokane, Piper: Union Flat, Lake & Hull; Kalispel Lake, Kreager 449; Spokane, Kreager 541; Mission, Kreager 487; Meyers Falls, Kreager 471.

Zonal distribution: Arid Transition.

2. Stachys bullata Benth, Lab. 547, 1834.

Type locality: "Hab. in California."

Range: Washington to California.

Specimens examined: Lindsleys, Clarke County, Henderson in 1892; Vancouver, Suksdorf 2226; Cape Horn, Suksdorf, August 19, 1894.

ZONAL DISTRIBUTION: Hamid Transition.

3. Stachys chamissonis Benth. Linnaca 6: 80, 1831.

Type locality: California.

Range: California to Washington.

Specimens examined: West Klickitat County, Suksdorf, 665, 666, 84.

These specimens are rather intermediate between *ciliata* and *chamissonis*. They are possibly referable to *S. flaccida* Eastwood, *a* but that species is known as yet only from the type specimen.

4. Stachys ciliata Dougl.; Benth. Lab. 539, 1832-36.

Stachys cooleyac Heller, Bull. Torr. Club 26: 590, 1899.

Type locality; "Hab. in America boreali-occidentali; ad ripas fluminis Columbiae; Douglas; Scouler."

Range: British Columbia to Oregon.

Specimens examined: Montesano, Heller 3960; Chehalis County, Henderson 2531; Clallam County, Elmer 2543; Olympic Mountains, J. M. Grant in 1889; Cascade Mountains, latitude 49°, Lyall; Scattle, Piper 178; Mount Adams, Suksdorf 667; Tacoma, Flett 121; Lake Quinault, Lamb 1285; Skokomish River, Kincaid; Nisqually Valley, Allen 131; Skamania County, Suksdorf, August 40, 1886; Goose Lake, Flett 1204; Peshastin, Sandberg & Leiberg 503; Fort Vancouver, Tolmie; Manor, Piper, July 14, 1899; Ellensburg, Elmer 498; Whited 399; Atanum Soda Springs, Watt; Union Gap, Cotton 490; Nason City, Sandberg & Leiberg; without locality, Vascy in 1889.

The leaves vary from nearly glabrous (typical) to soft-pilose but scarcely tomentose.

ZONAL DISTRIBUTION: Transition.

5. Stachys pubens (A. Gray) Heller, Bull. Torr. Club 25: 581, 1898.

Stachys ciliata pubens A. Gray, Syn. Fl. 21: 388, 1878.

Stachus emersoni Piper, Erythea 6: 31, 1898.

Type locality: "Washington Terr. to Fraser River."

Range: Washington and British Columbia near the coast."

Specimens examined: Montesano, Heller 3902; Hoquiam, Lamb 1138; Ilwaco, Sarage 9; Ocean Beach, Henderson in 1886; without locality, Cooper in 1854; Ilwaco, Piper 1990, 4919; Port Crescent, Lawrence 281a.

ZONAL DISTRIBUTION: Humid Transition.

LYCOPUS.

Plants not stoloniferous; calyx teeth triangular-cuspidate longer than

Plants stoloniferous at base.

Calyx teeth subulate longer than the nutlet: leaves sharply serrate. 1. L. Incidus.
Calyx teeth obtuse, shorter than the nutlet. 2. L. unitherus.

Lycopus lucidus Turez.; DC. Prod. 12: 178, 1848.

Lycopus lucidus americanus A. Gray, Proc. Am. Acad. 8: 286, 1870.

Type locality: "In montibus Ircutiae."

Range: Washington to California, Kansas, and Saskatchewan.

Specimens examined; Coulee City, Lake & Hull 600; Rock Lake, Lake & Hull 600; Spokane County, Suksdorf 601; Mabton, Cotton 749.

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

2. Lycopus uniflorus Michx. Fl. 1: 14, 1818.

Lycopus macrophyllus Benth. Lab. 185, 1833.

Lycopus communis Bicknell in Britton, Man. 803, 1901.

Type locality: "Hab. ad Lacus S- Joannis et Mistassins."

Range: British Columbia and Oregon to Labrador and Florida.

Specimens examined: Tacoma, Flett 15; Puyallup, Piper, September 2, 1899; Falcon Valley, Suksdorf 1439; Cascade Mountains, latitude 49°, Lyall in 1858–59; Copalis, Conard 405.

This species has heretofore been referred to L. virginicus L. and thus appears in Suksdorf's list.

Zonal distribution: Humid Transition.

3. Lycopus americanus Muhl.; Bart. Fl. Phila. Prod. 12, 1815.

Lycopus sinuatus Ell. Bot. S. C. & Ga. 1; 26, 1816.

Type locality: Philadelphia, Pennsylvania.

Range: Temperate North America.

Specimens examined: Lakeview, Henderson, July 25, 1892; Ellensburg, Whited 566, 1450; North Yakima, Watt August, 1895; Henderson, June 18, 1892; Alma, Elmer 543; Rock Lake, Lake & Hull 602; Spokane, Piper, October 1, 1900; Usk, Kreager 354; Seattle, Piper.

ZONAL DISTRIBUTION: Transition.

MENTHA. MINT.

Mentha spicata L. Sp. Pl. 2: 576, 1753.

Spearmint.

Type locality: "Habitat in Dania, Germania, Anglia, Gallia."

Specimens examined: North Yakima, Watt August, 1895; White Salmon, Suksdorf.

Mentha spicata viridis L. Sp. Pl. 2: 576, 1753.

Type locality: European.

Specimens examined: Seattle, Piper; Vancouver, Piper; White Salmon, Suksdorf.

2. Mentha citrata Ehrh. Beitr. 7: 150, 1792.

Type locality: "Europa."

Specimens examined: Tacoma, Flett 155.

3. Mentha canadensis L. Sp. Pl. 2: 577, 1753.

Type locality: "Habitat in Canada."

RANGE: British Columbia to New Brunswick, south to California and Virginia.

Specimens examined: Clallam County, Elmer 2545; Seattle, Piper in 1885; Tacoma, Flett 874; Coulee City, Lake & Hull, August 6, 1892; McKay 16; North Yakima, Watt August, 1895; without locality, Vascy in 1889; Meyers Falls, Kreager 506; Spokane, Dewart, July 45, 1901; Piper, September 1, 1900; Prosser, Cotton 654; Clealum Lake, Cotton 842; Mabton, Cotton 748.

Zonal distribution: Transition.

3a. Mentha canadensis borealis (Michx.).

Mentha borealis Michx, Fl. 2: 2, 1803.

Mentha canadensis glabrata Benth. Lab. 181, 1833.

Mentha arrensis perardi Briq. Bull. Herb. Boiss 3: 215, 1895.

Type locality: "Hab. juxta amnes ad sinum Hudsonis defluentes."

Range: British Columbia to Saskatchewan, south to Colorado and California.

Specimens examined: Chehalis River, Lamb 1235; Silverton, Bouck 146a; Skamania County, Suksdorf 1000; Falcon Valley, Suksdorf 663, 664; Colville, Lyall in 1860; Lake Chelan, Lake & Hull 601; Pullman, Lake & Hull 601; without locality, Vasey in 1889; Kreager 481; 557, 146; Seattle, Piper, August, 1892.

Zonal distribution: Transition.

3b. Mentha canadensis lanata (Piper).

Mentha arrensis lanata Piper, Bull. Torr. Club 29: 223, 1902.

Type locality: Parrott, Lincoln County, Washington. Collected by Lake & Hull.

Range: Washington and Idaho to California.

Specimens examined: Wilson Creek, Lake & Hull, August 5, 1892; Parrott, Lake & Hull 603; Rock Lake, Lake & Hull 601; Newport, Kreager, August 11, 1902; Mount Carlton, Kreager 295.

MICROMERIA.

Micromeria chamissonis (Benth.) Greene, Man. Bay Reg. 289, 4894.

YERBA BUENA.

Micromeria douglasii Benth, Lab. 372, 1834.

Thymus? douglasii Benth, Linnaea 6: 80, 1831.

Thymus? chamissonis Benth. Linnaea 6: 80, 1831.

Type locality: California.

RANGE: British Columbia and Idaho to California.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 4859; upper Nisqually Valley, Allen 23; Orchard Point, Piper, July, 1895; Scattle, Piper; Woodlawn, Henderson, June 22, 1892; Fort Vancouver, Tolmie: Lake Kalispel, Kreager 349.

Zonal distribution: Transition.

MADRONELLA.

Leaves narrowly oblong, green on both sides. 3. M. odoratissima Leaves ovate-lanceolate.

Paler beneath; nerves not prominent. 1. M. discolor. Not paler beneath; nerves prominent. 2. M. nervosq.

1. Madronella discolor Greene, Leaflets 1: 169, 4906.

Monardella discolor Greene, Pittonia 2: 24, 4889.

Type locality: "Near Clealum, Washington." Collected by Greene.

Range: Eastern Washington.

Specimens examined: Clealum, Greene, August 14, 1889; Ellensburg, Elmer 373; Whited 547; without locality, Vascy, in 4889; Yakima, Brandegee; "coast prairies," Cooper; Mount Rainier, Piper 2078(4).

ZONAL DISTRIBUTION: Upper Sonoran.

2. Madronella nervosa Greene, Leaflets 1: 169, 4906.

Monardella nervosa Greene, Pittonia 4: 322, 4901.

Type locality: "The arid region of Eastern Washington." Collected by Sandberg & Leiberg.

Range: Eastern Washington.

Specimens examined: Rock Island, Sandberg & Leiberg, in 1893; Okanogan County, Whitel 195; White Bluff Ferry, Lake & Hull 705; Tampico, Henderson 2527; Cowiche Creek, Cotton 464; Alkali Lake, Sandberg & Leiberg 413; Yakima, Howell; Rattlesnake Mountains, Cotton 760.

ZONAL DISTRIBUTION: Upper Sonoran.

3. Madronella odoratissima Greene, Leaflets 1: 168, 1906.

Monardella odoratissima Benth, Lab. 332, 4832-36.

Type locality: "In petrosis ad flumen Columbia et in rupibus alpestribus in montibus White Mountains," Collected by Douglas.

Range: Washington and Oregon.

Specimens examined: Blue Mountains, Piper 2078; Meyers Falls, Kreager 499.

ZONAL DISTRIBUTION: Transition.

MELISSA.

1. Melissa officinalis L. Sp. Pl. 2: 592, 1753.

Валм.

Type locality: "Habitat in montibus Genevensibus, Allobrogicis, Italicis."

This plant is reported as escaped from gardens in Klickitat County, Suksdorf.

SCROPHULARIACEAE. FIGWORT FAMILY.

SOLOTHODARIAGDAE. PROMORT 1.	CMILI.
Antheriferous stamens 5; leaves alternate. Antheriferous stamens 2 or 4; leaves opposite or alternate.	Verbascum (р. 494.)
Fifth sterile stamen present.	
Corolla spurred at base	Linaria (p. 495).
Corolla not spurred.	•
Sterile stamens represented by a gland or scale on	
the upper side of the corolla tube	
Peduncles several-flowered	Scrophularia (d. 495).
Peduncles 1-flowered.	'1 /
Corolla conspicuously bilabiate	Collinsia (d. 495).
Corolla nearly rotate	Toxella (p. 496)
Sterile stamen clongated.	(p. 1),
Seeds wingless; anthers woolly or glabrous	PENTSTEMON (p. 497)
Seeds winged; anthers woolly	
Fifth sterile stamen wanting.	СПЕДОЛЕ (р. 505).
Stamens 4, 2 antheriferous, 2 sterile.	
Sterile filaments 2-forked, exserted	Liverythee (n. 502)
Sterile filaments simple, included	•
•	ОКАПОБА (р. 505).
Stamens all antheriferous.	
Stamens 2.	C (
Calyx 5-parted	GRATIOLA (p. 503).
Culyx 4-parted.	(704)
Leaves alternate, mostly basal	
Leaves opposite, at least the lower	VERONICA (p. 505).
Stamens 4.	
Corolla nearly regular: leaves entire Corolla 2-lipped.	Limosella (p. 507).
Stamens not inclosed in the upper lip.	
Leaves opposite; calyx prismatic	Мімиция (р. 507).
Leaves alternate; calyx campanulate.	Digitalis (p. 519).
Stamens included in the upper lip.	
Anther cells equal, parallel.	
Ovules 2 in each cell	Месамруким (р. 511).
Ovules many.	•
Calyx inflated in fruit ; leaves	
opposite	
Calyx not inflated; leaves	•
alternate or verticillate	
Anther cells unequal.	4
Lips of corolla unequal, the upper	
larger	
Lips of corolla subequal.	(P. 313).
Calyx lips cleft	Orthogyppus (p. 516)
Calyx lips entire	
VERBASCUM.	(p. 020)
	1 17 47
Leaves large, densely woolly; flowers spicate	
Leaves glabrous, or nearly so: flowers racemose	2.) . otawaria.
1. Verbascum thapsus L. Sp. Pl. 1: 177, 1753.	Mullein.

Type locality; European.

Specimens examined: Whatcom County, Gardner 409; North Yakima, Piper: Puyallup. Piper: Pullman, Piper.

2. Verbascum blattaria L. So. Pl. 1: 178, 1753.

MOTH MULLERS.

Type locality: European.

Specimens examined: Manor, Piper, July 14, 1899; Concomilly, Whited 1311; Waitsburg, Horner, July 25, 1896; Meye's Falls, Kreager 470.

LINARIA.

1. Linaria linaria (L.) Karst. Deutsch. Fl. 917, 1880-83.

Butter-and-eggs.

Antirrhinum linaria L. Sp. Pl. 2: 616, 1753.

Linaria vulgaris Mill. Gard. Dict. ed. S. 1768.

Type locality: "Habitat in Europae ruderatis."

Specimens examined: Woodlawn, Henderson, June 22, 1892; Waitsburg, Horner 383; Pullman, Piper; Meyers Falls, Beattie & Chapman 2235.

2. Linaria canadensis (L.) Dumort. Bot. Cult. 2: 96, 1802.

Antirchinum canadense L. Sp. Pt. 2: 618, 1753.

Type locality: "Habitat in Virginia, Canada."

RANGE: British Columbia to California, east to Nova Scotia and Florida.

Specimens examined: Alki Point, Piper in 1889; Smith in 1889; Woodlawn, Henderson; without locality, Cooper; La Camas, Henderson.

An infrequent plant in Washington, but according to Douglas "plentiful between Fort Vancouver and the Grand Rapids."

Zonal distribution: Humid Transition.

SCROPHULARIA.

1. Scrophularia californica Cham. Linnaca 2: 585, 1827.

Figwort.

Type locality: San Francisco, California.

RANGE: British Columbia to Montana and California.

Specimens examined: Montesano, Heller 4003; Hoquiam, Lamb 1224; Olympia, Kinctid: Goose Lake, Flett 1155; west Klickitat County, Suksdorf, June 1, 1886; Skamania County, Suksdorf 997; Ellensburg, Whited 688; Pullman, Elner 879; Piper, July 21, 1894; Granville, Conard 339; Ilwaco Piper.

Zonal distribution: Transition.

A variable species as here understood and possibly consisting of several. The specimens from near the seacoast are quite fleshy.

COLLINSIA.

Calvx lobes acute; inflorescence not glandular. Filaments hairy at base; callyx lobes much longer than the

tube and much exceeding the capsule; pedicels mostly

Filaments glabrous; calyx lobes scarcely longer than the tube and little exceeding the capsule; pedicels mostly in whorls.

Tube of corolla longer than the limb; corolla 5 to 7

Tube of corolla shorter than the limb; corolla 8 to 16 mm. long.

Corolla 12 to 16 mm, long; pedicels deflexed in

Corolla 8 to 10 mm. long; pedicels erect in fruit. 3a. C. grandiflora pasilla

1. Collinsia sparsiflora Fisch, & Mey, Ind. Sem. Hort. Petrop. 2: 33, 1835.

Type locality: "Hab. circa coloniam ruthenorum Ross in Nova California."

RANGE: California to Klickitat County, Washington.

Specimens examined: White Salmon, Suksdorf 298.

2. Collinsonia tenella (Pursh).

Antirrhinum tenellum Pursh, Fl. 1: 421, 1814.

Collinsia parviflora Dougl.; Lindl. Bot. Reg. 13: pl. 1082, 1827.

Collinsia panciflora Lindl.; Hook, Fl. Bor, Am. 2: 94, 1838.

Type locality: "On the banks of the Missouri", according to Pursh, but really from "Rockford Camp" [The Dalles of the Columbia]. Collected by Lewis.

Range: British Columbia to Lake Superior, Colorado, and California.

Specimens examined: Admiralty Head, Piper, May, 1898; Puget Sound, Cooper; Olympia, Henderson, May 24, 1892; South Prairie, Lizzie Hardy, May 23, 1890; Falcon Valley, Suksdorf: Tampico, Flett 1183; Pasco, Hindshaw 28; Spokane Valley, Lyall; Nason Creek, Sandberg & Lieberg 621; Hangman Creek, Sandberg & Lieberg 31; Pullman, Hull 574; Piper 1656 and June 14, 1893; Rattlesnake Mountains, Cotton 327; Clallam County, Elmer 2586; Clarks Springs, Kreager 75.

Zonal distribution: Transition and Upper Sonoran.

Collinsia grandiflora Dougl.; Lindl. Bot. Reg. 14: pl. 1107, 1827.

Type locality: "Banks of the Columbia River at a distance of one hundred miles or more from the ocean." Collected by Douglas.

Range: British Columbia to California, and in north Idaho.

Specimens examined: Oreas Island, Lyall in 1858; San Juan Island, Lyall in 1858; Steilacoom, Cooper; Piper in 1888; Olympia, Henderson, May 24, 1892; Falcon Valley, Suksdorf; mountains near Lower Cascades, Suksdorf, May 30, 1886; Fort Vancouver, Garry, April, 1826; Cape Horn, Piper 5004.

Zonal distribution: Humid Transition.

3a. Collinsia grandiflora pusilla A. Gray, Syn. Fl. 21: 256, 1878.

Collinsia pusilla Howell, Fl. N. W. Am. 506, 1901.

Type locality: Plumas County, California.

Range: British Columbia to California.

Specimens examined: Whidby Island, Gardner 227; Tacoma, Flett 44; Olympia, Kincaid, July 4, 1896; Goat Mountains, Illen 240; Skokomish Valley, Kincaid, May 6, 1892.

Zonal distribution: Humid Transition.

4. Collinsia rattani Λ. Gray, Syn. Fl. ed. 2, 2¹; 139, 1886.

Type locality: Mendocino County, California.

RANGE: North California to Washington.

Specimens examined: West Klickitat County, Suksdorf, April 24, 1886; White Salmon, Suksdorf 301; Sincoe Mountains, Howell, June, 1879.

Collinsia Minima Nutt. Journ. Acad. Phila. 7: 17, 1831. Type locality, "Flat Head River." Collected by Wyeth. Range, Washington and Idaho. Specimens examined, Fort Colville, Lyall, March 30, 1861. This is perhaps not distinct from C. tenella, but the flowers are decidedly larger. More material is needed.

TONELLA.

 1. Tonella floribunda A. Gray, Proc. Am. Acad. 11: 92, 1876.

Type locality: "Willow thickets of the valley of the Kooskooskee, in the western part of Idaho." Collected by Spalding and by Geyer.

Range: Western Idaho and adjacent Oregon and Washington.

Specimens examined: Without locality, Brandegee 1003; Almota, Piper 1655; Wawawai, Lake 575; Elmer 103; Asotin Creek, Hunter 92.

ZONAL DISTRIBUTION: Upper Sonoran.

Tonella collinsioides Nutt.; A. Gray, Proc. Am. Acad. 7: 378, 1868.

Collinsia tenella Benth.; DC. Prod. 10: 593. 1846, not C. tenella (Pursh) Piper.

Tonella tenella Heller, Muhlenbergia 1: 5. 1900.

Type locality: "In sylvis juxta flum. Oregon." Collected by Nuttall.

Range: California to Washington, in the coast region.

Specimens examined: West Klickitat County, Suksdorf, April 27, 1881, May 12, 1895; Lyle, Suksdorf, April 14, 1890.

Zonal distribution: Humid Transition.

Corolla red, 20 to 25 mm. long; leaves coarsely dentate or lobed	

Pentstemon barrettae A. Grav, Syn. Fl. ed. 2, 21: 440, 1886.

Type locality: "Mountains of Hood River, Oregon, near its confluence with the Columbia." Collected by Mrs. Barrett.

Range: Cascade Mountains of Washington and Oregon near the Columbia River.

Specimens examined: Klickitat County, Suksdorf 395.

2. Pentstemon rupicola Howell, Fl. N. W. Am. 510, 1901.

Pentstemon newberryi rapicola Piper, Bull. Torr. Club 27: 397, 1900,

Type locality: "Dry rocky cliffs, Mt. Rainier," Washington.

Range: Cascade Mountains of Washington.

Specimens examined: Mount Rainier, Piper 2086; Allen 130; without locality, Vasey; Mount Adams, Henderson, August 9, 1892; Suksdorf 458; Klickitat River, Flett 1164; Nason Creek, Sandberg & Leiberg 667; Lake Chelan, Gorman 587; Cape Horn, Piper 4986, Zonal distribution: Hudsonian.

3. Pentstemon menziesii Hook. Fl. Bor. Am. 2: 98, 1838.

Type locality: "Nutka." Collected by Menzies.

RANGE: British Columbia and Washington.

Specimens examined: Olympic Mountains, Piper 2176; Henderson; Mount Rainier, Piper in 1888; Cascade Mountains, latitude 49°, Lyall in 1859; Mount Benson, Macoun

736; Baldy Peak, Lamb 1320; Silverton, Bouck, July, 1895 and 126; Yakima Pass, Watson, November 20, 1880; Clallam County, Elmer 2578.

Zonal distribution: Arctic.

3a. Pentstemon menziesii davidsonii (Greene).

Pentstemon davidsonii Greene, Pittonia 2: 241, 1892.

Type locality: "On Mt. Conness [California], at an altitude of 12,300 feet."

RANGE: Washington to California.

Specimens examined: Olympic Mountains, J. M. Grant: Mount Rainier, Allen 279, 2087; Mount Adams, Suksdorf: Henderson: Flett 1166; Loomis, Elmer 581.

ZONAL DISTRIBUTION: Arctic.

Pentstemon lyallii Λ. Gray, Syn. Fl. 2¹: 440, 1878.

Pentstemon menziesii lyallii, A. Gray, Proc. Am. Acad. 6: 76, 1865.

Type locality: "Between Fort Colville and the Rocky Mountains." Collected by Lyall. Range: Washington, Idaho, and British Columbia.

Specimens examined: Stevens Pass, Sandberg & Leiberg 759, according to the label, but the specimen is almost certainly from Pend Oreille Lake, Idaho. The species will probably be found in Stevens county.

5. Pentstemon fruticosus (Pursh) Greene, Pittonia 2: 239, 1892.

Gerardia fruticosa Pursh, Fl. 2: 423. pl. 18, 1814.

Pentstemon crassifolius Lindl. Bot. Reg. 24: pl. 16, 1838.

Pentstemon douglasii Hook, Fl. Bor, Am. 2: 98, 1838.

Pentstemon lewisii Benth.; DC. Prod. 10: 321, 1846.

Pentstemon adamsianus Howell, Fl. N. W. Am. 511, 1901.

Type locality: "In great abundance in the pine forests of the Rocky Mountains." Collected by Lewis, probably in Idaho.

Range: Cascade Mountains of British Columbia to Oregon, and eastward to west Montana.

Specimens examined: Mountains north of Ellensburg, Whited 715, 1161; Mount Stuart, Elmer 1204; Sandberg & Leiberg 550; Whited 795; Mount Adams, Suksdorf 459 and July 12, 1886; Klickitat River, Flett 1152; Rock Island, Sandberg & Leiberg 459, Twisp River, Whited, Peshastin, Sandberg & Leiberg, July, 1893; Kittitas, Lyall in 1860; Naches Pass, Watson, November 25, 1880; Cascade Mountains to Fort Colville, Lyall in 1860. Clealum, Henderson in 1892; Nason City, Sandberg & Leiberg: Blue Mountains, Lake & Hull 686, Piper 2422, 2327.

ZONAL DISTRIBUTION: Canadian and Hudsonian.

Pentstemon crassifolius Lindl, is founded on a specimen with entire leaves, a valueless character, as both entire and serrate leaves may be found on the same plant and intergrades are very numerous; P. donglasic Hook, is a high altitude form with shorter and broader toothed leaves; P adamsanus Howell from Mount Adams and Mount St. Helens is a form with rather large, thinner leaves.

5a. Pentstemon fruticosus cardwellii (Howell).

Pentstemon cardwelln Howell, Fl. N. W. Am. 510, 1901.

Type locality: Base of Mount Hood, Oregon.

RANGE. Cascade mountains of Washington and Oregon.

Specimens examined: Mount St. Helens, Goodwin, July 13, 1903.

This subspecies may be distinguished by its thickish serrulate mostly obtuse leaves,

6. Pentstemon scouleri Lindl. Bot Reg. 15: pt. 1277, 1829

Type locality "Kettle Falls of the Columbia" Collected by Douglas.

Range: Apparently local in northeastern Washington

Specimens examined. Near Spokane, Miss Kate B. Reed. Mount Carlton, Kreager 274.

7. Pentstemon acuminatus Dougl.; Lindl. Bot. Reg. 15: pl. 1285. 1829.

Type locality: "Sandy plains of the Columbia." Collected by Douglas.

Range: Washington to Saskatchewan and Texas.

Specimens examined: Sunnyside, Cotton 381; Egbert Springs, Sandberg & Leiberg, July, 1893; Pasco, Piper 2985; Hindshaw 25; Henderson in 1892; Columbus, Suksdorf, June 10, 1886; Moses Lake, Sandberg & Leiberg 376; Horse Heaven, Leckenby, May, 1898; Eltopia, Cotton 1023; Wallula, Cotton 1039.

Zonal distribution: Upper Sonoran.

8. Pentstemon glaber Pursh, Fl. 738, 1814.

Pentstemon speciosus Dougl.; Lindl. Bot. Reg. 15: pl. 1270, 1829.

Type locality: "Upper Louisiana." Collected by Bradbury.

RANGE: Washington to California, Arizona, and the Dakotas.

Specimens examined: Wenache, Whited 29, 1111; North Yakima, Leckenby, May, 1898; Steinweg in 1894; Ellensburg, Piper 2672; Whited 429; Simcoe Valley, Lyall in 1860; Naches Valley, Lyall in 1860: near Bickleton, Suksdorf 414; Wilson Creek, Sandberg & Leiberg, June, 1893; Ritzville, Sandberg & Leiberg 185; Fresh Lake, McKay 27; Blue Mountains, Piper, July 15, 1896; Horner 385.

Zonal distribution: Upper Sonoran.

9. Pentstemon erianthera Pursh, Fl. 737, 1814.

Pentstemon eristatus Nutt. Gen. 2: 52, 1818.

Pentstemon whitedii Piper, Bot. Gaz. 22: 490, 1901.

Type locality: "Upper Louisiana." Collected by Bradbury.

Range: Washington to Nevada and the Dakotas.

Specimens examined: Wenache, Whited 131, 1112, 1068, 1257, 1166; Spokane, Leiberg 28; Dewart, May 20, 1901.

Zonal distribution: Arid Transition.

10. Pentstemon deustus Dougl.; Lindl. Bot. Reg. 16: pl. 1318, 1830.

Type locality: "Northwest America on scorched rocky plains in the interior." Collected by Douglas.

Range: British Columbia and Montana to eastern California.

Specimens examined: Wenache, Whited 95, 1083; Douglas County, Spillman, May 27, 1896; Sprague, Sandberg & Leiberg 170; Blue Mountains, Piper in 1896; along Tukanon River, Lake & Hull, July 1, 1892; Wawawai, Lake & Hull 711; Piper 1891; Elmer 751. ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

Pentstemon variabilis Suksdorf, Deutsch. Bot. Monatss. 18: 153, 1900.

Pentstemon paniculatus Howell, Fl. N. W. Am. 513, 1901.

Type locality: "In Schluchten ostlich vom Klickitat-flusse," Klickitat County, Washington.

Range: Klickitat County, Washington.

Specimens examined: Klickitat County, Suksdorf 417, 999; Howell in 1879; opposite The Dalles, Howell 162.

12. Pentstemon pruinosus Dougl.; Lindl. Bot. Reg. 15: pl. 1280, 1829.

Type locality: "Near Priests Rapids of the Columbia," Collected by Douglas. Range: Central Washington.

Specimens examined: Near Wenache, Whited 1; Wenache region, Brandegee 1005; Wenache Mountains, Whited 1256, 1255; Ellensburg, Piper 2670; Douglas County, Spillman, May 27, 1896; Coulee City, Piper 3859; Lakeside, Griffiths & Cotton, June 17, 1902. Zonal distribution: Arid Transition.

Pentstemon pinetorum Piper.

Pentstemon ovatus pinctorum Piper, Fl. Palouse Reg. 158, 1901.

Pentstemon veronicaefolius Greene, Leaflets 1: 167, 1906.

Type locality: Cedar Mountains, Latah County, Idaho.

Range: Washington and Idaho.

Specimens examined: Simcoe Hills, Howell 345; west Klickitat County, Suksdorf 32; Atanum River, Lyall in 1860; Falcon Valley, Suksdorf 460; Cascade Mountains, latitude 49°, Lyall in 1860; Kellogy & Harford 669; Leavenworth, Sarage 48; mountains near Yakima, Henderson; mountains near Lower Cascades, Suksdorf, May 30, 1886; Kamiak Butte, Elmer in 1897; Goose Lake, Flett 1457; without locality, Vascy in 1889; Chelan Butte, Griffiths & Cotton 166.

ZONAL DISTRIBUTION: Arid Transition.

14. Pentstemon ovatus Dougl.; Hook. Bot. Mag. 56: pl. 2903, 1829.

Type locality: "High mountains about the Grand Rapids of the Columbia." Collected by Douglas.

Range: Cascade Mountains of Washington and Oregon, and westward.

Specimens examined: Upper Nisqually Valley, Allen 16; Mount Rainier, Piper 2068; Clallam County, Elmer 2576; Cape Horn, Piper 5033.

ZONAL DISTRIBUTION: Canadian.

15, Pentstemon collinus A. Nelson, Bull. Torr. Club 25: 279, 1898.

Type locality: Evanston, Wyoming.

Range: Washington, Oregon, and Wyoming.

Specimens examined: Ellensburg, Whited 430; Piper, May 20, 1897; Tampico, Flett 1181; Falcon Valley, Suksdorf, June 26, 1886; Ritzville, Sandberg & Leiberg 187.

ZONAL DISTRIBUTION: Upper Sonoran.

 Pentstemon procerus Dougl.; Graham, Edinb. New Phil. Journ. 348, 1829, also Hook. Bot. Mag. pl. 2954, 1829.

Pentstemon confertus coeruleo-purpureus A. Gray, Proc. Am. Acad. 6: 72, 1866.

Pentstemon tolmiei Hook, Fl. Bor, Am. 2; 98, 1838.

Pentstemon pulchellus Greene, Pittonia 3; 310, 1898.

Type locality: "In swampy and overflowed lands between Fort Vancouver and the Grand Rapids of the Columbia on the north side."

RANGE: Alaska to California and Colorado.

Specimens examined: Olympic Mountains, J. M. Grant; Mount Rainier, Piper 2088; Smith 751; Allen 298; Mount Adams, Henderson in 1892; Suksdorf in 1886; Flett 1165; Mount Stuart, Elmer 1170; Sandberg & Leiberg 549; Cascade Mountains, latitude 49°, Lyull; Ellensburg, Whited 436; Yakima, Leckenby, May 10, 1898; Thorp, Whited 401; Klickitat River, Flett 1178; Falcon Valley, Suksdorf, July 17, 1886; Spokane, Piper 2636; Palouse, Cloud in 1894; without locality, Tolmic.

Zonal distribution. Transition to Arctic.

17. Pentstemon confertus Dougl.; Lindl. Bot. Reg. 15: pl. 1260, 1829.

Type locality: "In mountainous pine woods in dry sandy soils between Salmon River and the Kettle Falls of the Columbia, in 48° N. latitude." Collected by Douglas.

Range: British Columbia to Oregon and Idaho.

Sprimens examined: Mount Rainier, Allen 39; Piper 2079; Goat Mountains, Allen 244; Wenache Mountains, Whited 716; Peshastin, Sandberg & Leiberg, July, 1893; Ritzville, Sandberg & Leiberg 189; Leavenworth, Whited 249; Spokane, C. A. Ramm; Pullman, Piper; Hull; Elmer; Mount Carlton, Kreager 234; Clarks Springs, Kreager 67, 29.

Zonal distribution: Transition to Arctic.

18. Pentstemon attenuatus Dougl.; Lindl. Bot. Reg. 15: pl. 1295, 1829.

Pentstemon ellipticus Greene, Leaflets 1: 167, 1906, not Coult. & Fisher, 1893.

Pentstemon confertus globosus Piper, Bull. Torr. Club 27: 397, 1900.

Type locality: "Mountains of Lewis and Clark's River," that is, Craig Mountains, Idaho. Collected by Douglas.

Range: Blue Mountains of Washington and Oregon, and adjacent Idaho.

Specimens examined: Wenache Mountains, Whitel 1162, 1254; Mount Stuart, Sandberg & Leiberg 549; Kamiak Butte, Piper 3093; Elmer 807; Blue Mountains, Horner 384; Piper in 1896; Douglas; Yakima County, Henderson, May 29, 1892; Mount Adams, Henderson August 9, 1892; Wenache Mountains, Cotton 1295.

Zonal distribution: Arid Transition.

This species is exceedingly variable as to color of the flower. While pale yellow is perhaps the commonest tint, it varies from pink to dull red, lavender to violet, pale blue to dark blue and to white. Occasionally all these color forms occur in close proximity.

19. Pentstemon gairdneri Hook. Fl. Bor. Am. 2: 99. 1838.

Type locality: "Blue Mountains of N. W. America." Collected by Douglas.

Range: Eastern Washington and eastern Oregon and Nevada.

Specimens examined: Wenache Region, Brandegee 1007; Wenache, Whited 1084; Egbert Springs, Sandberg & Leiberg 355; Columbia River, latitude 46° to 49°, Lyall; Sincoe Mountains, Howell 344 and July, 1880; Cleveland, Suksdorf 413; upper Naches River, Henderson, June 15, 1892; Cascade Mountains, Mrs. Steinweg in 1894; without locality, Howell May, 1891.

Zonal distribution: Upper Sonoran.

19a. Pentstemon gairdneri hians Piper, Bull. Torr. Club 27: 396, 1900.

Type locality: Eastern Washington. Collected by G. R. Vasey.

Range: Eastern Washington and eastern Oregon.

Specimens examined: Wenache, Whited 36: Ellensburg, Piper 2702; without locality, Vascy in 1889; Wenache Mountains, Cotton 1294.

Zonal distribution: Upper Sonoran.

20. Pentstemon glandulosus Dougl.; Lindl. Bot. Reg. 15: pl. 1262, 1829.

Type locality: "In the Rocky Mts., Lat. 47° N, and at the base of the Blue Mts., on the banks of the Kooskooskee River." Collected by Douglas.

Range: Interior of Washington and Oregon and adjacent Idaho.

Specimens examined: Near Wenache, Whited 30, 1082; Klickitat County, Howell, June, 1879; Yakima Valley, Brandegee 1008; Whitman County opposite Clarkston, Hunter; without locality, Vascy in 1889; Simcoe Mountains, Howell, July, 1881.

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

21. Pentstemon venustus Dougl.; Lindl. Bot. Reg. 16: pl. 1309, 1830.

Type locality: "Gravelly channels of rivulets of the Blue Mountains and near the source of the Walla Walla River." Collected by Douglas.

RANGE: Blue Mountains and adjacent Idaho.

Specimens examined: Blue Mountains, Lake & Hull 712; Piper, July, 1896; Asotin Creek, Hunter 97; Waitsburg, Horner.

ZONAL DISTRIBUTION: Arid Transition.

22. Pentstemon richardsonii Dougl.; Lindl. Bot. Reg. 13: pl. 1121. 1827.

Type locality: "On bare dry rocks in the vicinity of the Columbia and its branches." Collected by Lewis.

Range: Oregon and Washington.

Specimens examined: Ellensburg, Elmer 405; Whited 572; Wenache, Whited in 1896, 1306; North Yakima, Piper, July 9, 1897; Egbert Springs, Sandberg & Leiberg 345; Atanum Springs, Watt, August, 1895; Rock Island, Sandberg & Leiberg, July, 1893; Cape Horn, Suksdorf 2319; Parker, Dunn, August 10, 1901; Kettle Falls, Watson 300; Columbia River above the Chelan River, Watson: Fresh Lake, McKay 12; Spokane County, Mrs. Tucker; Spokane, Piper, July 26, 1896; Cascade Mountains, Mrs. Steinweg in 1894; withwithout locality, Cooper; Marcus, Kreager 464.

Zonal distribution: Arid Transition and Upper Sonoran.

23. Pentstemon diffusus Dougl.; Lindl. Bot. Reg. 14: pl. 1132, 1828.

Type locality: "In the districts around the mouth of the Columbia River," Collected by Douglas.

Range: British Columbia to Oregon in the coast region.

Specimens examined: Olympic Mountains, Piper 2178; Mount Elinor, Jennic V. Getty, August, 1902; Mount Rainier, Piper 2068; Goat Mountains, Allen 129; Mount Adams, Suksdorf 48; Cascade Mountains, latitude 19°, Lyall; Goose Lake, Flett 1157; Baldy Peak, Lamb 1369; Silverton, Bonck 143; Skokomish River, Kincaid, June 17, 1892; Skagit Pass, Lake & Hull, August, 1892; Stevens Pass, Sandberg & Leiberg 787; Stehekin, Whited 1386; Stampede Pass, Henderson, July 12, 1892; along Twisp River, Whited 218; Bridge Creek, Elmer 638; Clallam County, Elmer 2585; Stehekin, Griffiths & Cotton 609, 610; Cape Horn, Piper 5032.

Zonal distribution: Canadian.

24. Pentstemon triphyllus Dougl.; Lindl. Bot. Reg. 15: pl 1245, 1829.

Type locality: "On decomposed dry granite, or schist rocks, on the Blue Mountains of North-west America."

RANGE: British Columbia to Oregon and Idaho.

Specimens examined: "Boundary N. W. Coast," Cooper; Columbia Valley, Lyall in 1860; Rockland, Suksdorf 998; Palouse River, Lyall, July, 1860; Snake River, Brandegee 1010; Almota, Piper 1865; Wawawai, Lake & Hull 710.

Zonal distribution: Upper Sonoran and Arid Transition.

CHELONE.

 Chelone nemorosa Dougl.; Lindl. Bot. Reg. 14; pl. 1311, 1829. TURTLEHEAD. Chelone ramosa Dougl.; Hook. Fl. Bor. Am. 2: 95, 1838.

Pentstemon nemorosus Trauty, Bull. Acad. St. Petersb. 5: 345, 1839,

Type locality: "A native of mountain woods, near springs and rivulets, in the northwest of North America." Collected by Douglas.

RANGE: British Columbia to north California.

Specimens examined: Olympic Mountains, Piper in 1890; Snoqualinie, Parker; Mount Rainier, Piper 2080; Allen 275; Mount Adams, Suksdorf; Klickitat River, Flett 1153; Green River Hot Springs, Piper in 1887; without locality, Vascy in 1889; Challam County, Elmer 2575; Skokomish River, Kincaid, June, 1892; Stampede Tunnel, Henderson, July, 1892.

ZONAL DISTRIBUTION: Canadian and Hudsonian.

ILYSANTHES.

Ilysanthes dubia (L.) Barnhart, Bull. Torr. Club. 26: 376, 1899.

Gratiola dubia L. Sp. Pl. 17, 1753.

Hysanthes gratioloides Benth, in DC, Prod. 10: 419, 1846.

Capraria gratioloides L. Sp. Pl. ed. 2, 2: 876, 1763.

Type locality: Virginia.

RANGE: Washington to California and Canada to Texas and Florida.

Specimens examined: Green Lake, Piper 2864; west Klickitat County, Suksdorf 2192, 1473; Parker, Dunn, August 8, 1901 - Lake Chelan, Lake & Hull, August 12, 1892. Waitsburg, Horner 593; Almota, Piper 2658; Toppenish, Griffiths & Cotton 797.

Zonal distribution: Upper Sonoran and Transition.

GRATIOLA.

1. Gratiola virginiana L. Sp. Pl. 1: 17. 1753.

Type locality: "Habitat in Virginia."

Range: British Columbia to Canada, south to California, Texas, and Florida.

Specimens examined: Ellensburg, Whited 691; Toppenish, Henderson, May 28, 1892; Lindleys, Henderson, June 9, 1892; Kalama, Piper, October 31, 1901; Sumas, Lyall in 1858-59; Colville, Lyall in 1860; Lake Chelan, Lake & Hull, August 12, 1892; Manor, Piper, July 14, 1899; Spokane, Piper 2641; Pullman, Piper 1664; Hull 708; without locality, Vascy in 1889; Lake Kalispel, Kreager 318; Vancouver, Piper 5025.

Zonal distribution: Transition.

2. Gratiola ebracteata Benth.; A. DC. Prod. 10: 595, 1846.

Type locality: "In planitiebus terrae Oregon." Collected by Nuttall.

Range: Washington to California in the coast region.

Specimens examined: Tacoma, Flett 472; Roslyn, Whited 472.

Zonal distribution: Transition.

SYNTHYRIS.

Flowers in spikes; leaves not reniform-orbicular.

Petals entire.

1. Synthyris rubra (Dougl.) Benth. in DC. Prod. 10: 454, 1846.

Gymnaudra rubra Dougl; Hook. Fl. Bor. Am. 2: 103, 1838.

Besseya rubra Rydberg, Bull. Torr. Club 30: 280, 1903.

Type locality: "Banks of M'Gillivray's and Flathead Rivers, near the Kettle Falls of the Columbia, and in the valleys of the Rocky Mountains." Collected by Douglas.

Range: British Columbia to Oregon and Idaho.

Specimens examined: Fort Colville, Lyall in 1861; near Rockford, Watson: Rock Lake, Saudberg & Leiberg, May, 1893; Waterville, Whited 1221; Spokane County, Suksdorf 422; Hangman Creek, Saudberg & Leiberg 58; Pullman, Piper 1658; Elmer 166; Clarks Springs, Kreager 24.

ZONAL DISTRIBUTION: Arid Transition.

2. Synthyris pinnatifida lanuginosa subsp. nov.

Densely appressed white-woolly. Otherwise as in the species.

Collected in gravelly soil in the Olympic Mountains at 1,650 meters altitude, August 30, 1898, by J. B. Flett (no. 815). The occurence of the subspecies so far detached from its related species of the Rocky Mountains seems remarkable. It may be expected to turn up in the Cascade Mountains, possibly with intermediate character of pubescence. The type is deposited in the National Herbarium.

3. Synthyris schizantha Piper, Bull. Torr. Club 29: 223, 1902.

Type locality: Baldy Peak, Olympic Mountains, Washington.

Range. Washington.

Specimens examined: Baldy Peak, Lamb 1343, Conard 301, mountains of Lewis County near Elbe, Flett 2744.

4. Synthyris rotundifolia A. Gray, Syn. Ft. 21: 285, 1878.

Type locality. "Oregon, in shady woods of the Columbia and Willamette."

Range. Washington and Oregon in the coast region.

Specimens examined Chehalis, Garduer 240, Skamania County, Suksdorf 1474; west Klickitat County, Suksdorf, Fort Vancouver, Wideox; Piper 4922.

ZONAL DISTRIBUTION. Humid Transition.

5. Synthyris reniformis (Dougl.) Benth. in DC. Prod. 10: 454, 1846.

Wulfenia reniformis Dougl.; Hook. Fl. Bor. Am. 2: 102. pl. 71. 1838.

Type locality: "Common about the Grand Rapids of the Columbia and in the vallies of the Blue Mountains."

Range: Washington, Oregon, and Idaho.

Specimens examined: Kamiak Butte, Elmer 320. Zonal distribution: Canadian and Hudsonian.

VERONICA. SPEEDWELL.

Annuals; flowers solitary in the axils.

Pubescent; petals blue; leaves crenate.

Pedicels short; upper leaves reduced......................... 1. V. arvensis.

Perennials: flowers in racemes.

Peduncles terminal.

Capsules elliptic, emarginate; leaves all sessile.

Leaves shorter than the internodes; corolla 5 to 6 mm.

Leaves longer than the internodes; corolla 6 to 10 mm.

broad.

Corolla 6 to 7 mm. broad, white.............................. 5. V. allenii.

Capsules orbicular, obcordate; lower leaves petioled......... 6. V. serpyllifolia. Peduncles axillary.

Leaves linear or linear-lanceolate; capsule deeply notched... 9. V. scutellata.

Leaves oblong-lanceolate to ovate; capsule with a shallow

notch.

Cauline leaves short-petioled S. U. americana,

1. Veronica arvensis L. Sp. Pl. 1: 13, 4753.

Type locality: European.

Specimens examined: Seattle, Piper, July 10, 1895; Lower Cascades, Suksdorf; Waitsburg, Horner 601; Wawawai, Piper 3825.

2. Veronica peregrina L. Sp. Pl. 1; 14, 1753.

Type locality: European.

RANGE: British Columbia to Nova Scotia, south to California and Florida.

Specimens examined: Challam County, Elmer 2591; west Klickitat County, Suksdorf 1478; Ellensburg, Whited 653; Tampico, Flett 1185; Columbia River, Lyall; Hangman Creek, Sandberg & Leiberg 67; Pullman, Piper, July, 1893; Hull 578; without locality Vasey in 1889; Mount Carlton, Kreager 154; Lake Kalispel, Kreager 334.

Zonal distribution: Upper Sonoran and Transition.

Veronica alpina L. Sp. Pl. 1: 11, 1753.

Veronica wormskioldii Roem. & Schult. Syst. 1: 101, 1817.

Type locality: "Habitat in Alpibus Europae."

Range: Alaska to Labrador, south to California and New England.

Specimens examined: Olympic Mountains, Piper, August, 1895; Cascade Mountains, latitude 49°, Lyall in 1859; Silverton, Bouck 143a; Mount Rainier, Flett 243; Piper 2083; Allen 277; Mount Stuart, Elmer 1121; Little Klickitat River, Henderson, August 4, 1892; Klickitat River, Flett 1154; Stevens Pass, Sandberg & Leiberg 710.

ZONAL DISTRIBUTION: Arctic.

4. Veronica cusickii A. Gray, Syn. Fl. 21: 288, 1878.

Type locality: "Alpine region of the Blue Mountains," Oregon. Collected by Cusick. Range: Washington to California.

Specimens examined: Clallam County, Elmer 2587; Mount Rainier, Allen 95; Piper 2084; Paradise Valley, Flett 269; Mount Adams, Henderson, August 3, 1892; Mount Stuart, Brandegee 1019; Horseshoe Basin, Lake & Hull 580; Bridge Creek, Elmer 661.

Zonal distribution: Arctic.

5. Veronica allenii Greenman, Bot. Gaz. 25: 263, 1898.

Type locality: "Along Paradise River on Mt. Rainier, altitude 1,700 m." Collected by O. D. Allen.

Range: Known only from the type locality.

Specimens examined: Mount Rainier, Allen 95a.

6. Veronica serpyllifolia humifusa (Dickson) Hook. Fl. Bor. Am. 2: 101, 1838.

Veronica humifusa Dickson, Trans. Linn. Soc. 2: 288, 1794.

Type locality: Scotland.

Range: Alaska to California, Colorado, and New England.

Specimens examined: San Juan Island, Lyall 1858; Admiralty Head, Piper, May, 1898; Silverton, Bouck 138; Mount Adams, Suksdorf 598; Skamania County, Suksdorf 1477; mountains south of Ellensburg, Whited 729; without locality, Henderson, May 24, 1892; Spokane Valley, Lyall; without locality, Vascy in 1889; Mount Carlton, Kreager 249.

Zonal distribution: Transition.

7. Veronica anagallis-aquatica L. Sp. Pl. 1: 12, 1753.

Type locality: European.

Range: British Columbia to Nova Scotia and New Mexico.

Specimens examined: Fort Colville, Lyall in 1860.

8. Veronica americana Schwein.; DC. Prod. 10: 468, 1846.

Type locality: "In America boreali a Canada et Carolina usque ad flum. Oregon et in ins. Sitcha."

Range: Alaska to California and the Atlantic States.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Silverton, Bonck 138a, 138b; Tacoma, Flett 163; Skamania County, Suksdorf 1460; Columbus, Suksdorf; Klickitat River, Flett 1160; Egbert Springs, Sandberg & Leiberg 368; Wenache, Whited; Ellensburg, Whited 492; Toppenish, Henderson, May, 1892; Cold Creek, Cotton 3:6; Tieton River, Cotton 446; Grand Coulee, McKay 15; Coulee City, Lake & Hull 581; Tukanon River, Lake & Hull, July 1, 1892; Wawawai, Lake & Hull, June 4, 1892; Pullman, Piper, July, 1901; without locality, Vasey in 1889; Clarks Springs, Kreager 53.

Zonal distribution: Upper Sonoran and Transition.

9. Veronica scutellata L. Sp. Pl. 1: 12, 1753.

Type locality: European.

RANGE: British Columbia to Quebec, south to California, Minnesota, and New York, Europe. Asia.

Specimens examined: Muckleshoot Prairie, Dr. Ruhn; Nisqually Valley, Allen 228; west Klickitat County, Suksdorf 1476; Ellensburg, Whited 562, 849; Toppenish, Henderson, May 28, 1892; Pullman, Piper, July 3, 1894; without locality, Vascy in 1889; Usk, Kreager 357; Satus, Cotton 1135.

ZONAL DISTRIBUTION: Upper Sonoran and Transition.

10. Veronica tournefortii Gmel. Fl. Bad. 1: 39, 1805.

Veronica buxbaumii Tenore, Fl. Nap. 1: 7. pl. 1. 1811.

Type locality: "Prope Carlsruhe," Germany.

Specimens examined: Pullman, Piper, July, 1894.

LIMOSELLA. 1. Limosella tenuifolia Hoffm, Deutsch, Fl. 12: 29, 1804. Type locality: Germany. Range: Washington; Labrador to New Jersey. Europe. Specimens examined: Kalama, Piper, October 31, 1901; Lake Chelan, Elmer 491. Perhaps only a subspecies of L, aquatica, 2. Limosella aquatica L. Sp. Pl. 2: 631, 1753. Type locality: "Habitat in Europae septentrionalis inundatis" Range: Alaska to Labrador, south to California and Colorado. Europe. Asia. South America. Specimens examined: White Salmon, Suksdorf: Ritzville, Sandberg & Leiberg 193. MIMULUS. Flowers reddish or purple. Corolla with a moderate tube. Stigmas funnelform. Leaves elliptic, acute; corolla 1.5 to 2 cm. long 2. M. nanus. Leaves ovate, acuminate: corolla 2 to 2.5 cm. long.... 3. M. cusickii. Stigmas 2-lipped. Flowers very small, about 5 mm. long, pale purple. . . 4. M. breweri. Flowers large, over 2 cm, long. Corolla rose-purple; stamens included...... 6. M. lewisii. Flowers yellow; stigmas 2-lipped. Calyx 5-angled, 5 toothed. Perennials. Flowering stems leafy. Leaves pinnately veined. Herbage slimy-viscid, musk-scented. 10. M. moschatus. Leaves palmately veined. Rootstocks wanting. Stems stout or stoutish, 10 to 60 cm, high; leaves not viscid; corolla 2 to 5 cm. long...... 11. M. langsdorfti. Stems very slender 5 to 20 cm, high, fewflowered; corolla 12 to 15 mm. long; Rootstocks present. Stems 2 to 4 cm. high, mostly 1-llowered: plants stoloniferous, densely matted,

Annuals. Corolla rather large; leaves palmately vemed....... 15. M. nasutus.

alpine. 12. M. alpinus.

rootstocks; herbage slimy-viscid...... 14. M. implexus.

Stems 10 to 20 cm, high, mostly severalflowered, arising from slender matted Corolla small; leaves pinnately veined.

Calyx teeth unequal, the lower two larger...... 16. M. alsinoides. Calyx teeth subequal.

Fruiting calyx distended.

Fruiting calyx cylindrical.

Leaves sessile; corolla scarcely exceed-

ing calyx. 19. M. suksdorfti.

Leaves petioled; corolla larger.

Plant erect, not villous........... 20. M. peduncularis.

Plant spreading or prostrate, villous

1. Mimulus subuniflorus (Hook. & Arn.)

Mimulus douglasii A. Gray, Bot. Cal. 1: 563, 1876.

Mimulus nanus subuniflorus Hook. & Arn. Bot. Beech. Voy. 378, 1840

Eunanus douglasii Benth, in DC. Prodr. 10: 374, 1846.

Type locality: California.

Range: Klickitat County, Washington, to California.

Specimens examined: Klickitat Hills, Gorman, May 16, 1901.

2. Mimulus nanus Hook. & Arn. Bot. Beech. Voy. 378, 1840.

Eunanus tolmici Benth. in DC. Prod. 10: 374, 1846.

Type locality: California.

Range: Washington to Wyoming and California.

Specimens examined: Klickitat County, Howell, June, 1879; Klickitat Hills, Gorman, May 16, 1901.

3. Mimulus cusickii (Greene).

Eunanus cusickii Greene, Pittonia 1: 36, 1887.

Type locality: Malheur River, Oregon. Collected by Cusick.

Range: Washington and Oregon.

Specimens examined: Alkaline soil near Columbia River, Brandegee 1011.

This species was included by Dr. Gray in M. bigelovii $\Lambda.$ Gray, but it seems sufficiently distinct.

4. Mimulus breweri (Greene) Rydberg, Mem. N. Y. Bot. Gard. 1: 351, 1901.

Eunanus breweri Greene, Bull. Cal. Acad. Sci. 1: 101, 1885.

Type locality: "About Donner Lake," California.

Range: Washington to California and Montana.

Specimens examined: Mount Rainier, Piper 2071; Simcoe Hills, Howell 297; Klickitat Meadows, Flett 1355; Mount Adams, Suksdorf 50, 488; upper Atanum, Henderson, August 3, 1892, Cascade Mountains, Lyall in 1860; North Yakima, Henderson 2264, Blue Mountains, Piper 2441.

5. Mimulus cardinalis Dougl.; Benth. Scroph. Ind. 28, 1835.

Type locality: California. Collected by Douglas.

RANGE: California, Oregon, and ! Washington.

Specimens examined: Yakima County, Watt, August, 1895.

It is possible that there has been some confusion of labels with respect to the above specimen, as we have no further evidence of its occurrence in Washington.

6. Mimulus lewisii Pursh, Fl. 2: 427. pl. 20. 1814.

Mimulus roscus Dougl. Bot. Reg. pt. 1591, 1833.

Type locality: "On the head springs of the Missouri, at the foot of Portage Hill." Collected by Lewis.

RANGE: British Columbia to California, Utah, and Montana.

Specimens examined: North Yakima, Watt, August, 1895; Mount Stuart, Sandberg & Leiberg 557; Tieton River, Cotton 436; Mount Rainier, Piper 2076; Allen 276; Skokomish River, Kincaid, June 17, 1892; Cascade Mountains, latitude 49°, Lyall in 1859; Stevens Pass, Whited 1432; near Skagit Pass, Lake & Hull 571; Bridge Creek, Elmer 646; along Salmon River, Horner 386; near Berne, Piper, July 7, 1895; without locality, Vascy in 1889; Entiat Creek; Mrs. Howe.

7. Mimulus pilosus (Benth.) S. Wats. Bot. King Explor, 225, 1871.

Herpestis pilosa Benth.; Hook. Comp. Bot. Mag. 2: 57, 1836.

Mimulus exilis Dur. & Hilg. Pac. R. Rep. 5: 12, 1855.

Type locality: "North California." Collected by Douglas.

Range: Washington to California and Arizona.

Specimens examined: North Yakima, Piper 1800; Watt, August, 1895; Henderson, October 5, 1892; Walla Walla, Savage 24; Waitsburg, Horner 591; Almota, Piper, July 30, 1897; near Bingen, Suksdorf 2322; Rattlesnake Mountains, Suksdorf 421; Egbert Springs, Sandberg & Leiberg 357; without locality, Branchegee 1018.

8. Mimulus primuloides Benth. Scroph. Ind. 29, 1835.

Mimulus pilosellus Greene, Erythea 4: 22, 1896.

Type locality: "Amer. boreali-occid." Collected by Douglas.

Range: Washington to California.

Specimens examined: Wenache Region, Brandeger 1017; Simcoe Mountains, Howell 298; mountains between Ellensburg and Wenache, Whited 717; Cascade Mountains, Henderson, August 4, 1892; east side Cascade Mountains, Cooper in 1853; without locality, Suksdorf 489; near Mount Adams, Cotton 1474, 1498.

9. Mimulus dentatus Nutt.; Benth. in DC. Prod. 10: 372, 1846.

Type locality: "Ad Oregon Ilum." Collected by Nuttall.

Range: Washington to California in the coast region.

Specimens examined: Hwaco, Piper 4917.

10. Mimulus moschatus Dougl.; Lindl. Bot. Reg. 13: pl. 1118, 1827.

Minulus moschatus longiflorus A. Grav, Syn. Fl. ed. 2, 2 1: 447-1886.

Mimulus moschatus pallidiflorus Suksdorf, Deutsch. Bot. Monatss. 18: 154, 1900.

Type locality: "Margins of springs in the country about the river Columbia." Collected by Douglas.

Range: British Columbia to California and Utah.

Specimens examined: Seattle, Piper, July 10, 1895; Tacoma, Flett 160; Skokomish River, Henderson, June 17, 1892; west Klickitat County, Suksdorf 490; Klickitat River, Flett 1159, 1179; Fort Vancouver, Donglas in 1825; Cascade Mountains, latitude 49°, Lyall in 1859; Chenowith, Suksdorf 2320; without locality, Cooper: Tieton River Cotton 483; Stevens Pass, Whited 1431; Sandberg & Leiberg 762; Skagit Pass, Lake & Hull, August 24, 1892; Bridge Creek, Elmer, September, 1897; Horseshoe Basin, Elmer 745; Blue Mountains, Piper 2411; Lake & Hull 689; without locality, Brandegee 1016.

11. Mimulus langsdorfii Donn; Sims, Bot. Mag. pl. 1501, 1812.

Mimulus guttatus DC. Cat. Monsp. 127, 1813.

Type locality: Unalaska.

RANGE: Alaska to California and New Mexico.

Specimens examined: Montesano, Heller 3986, 4006; Grays Harbor, Lamb 1065; Oreas Island, Lyall in 1858; Coupeville, Gardner 221; Cascade Mountains, latitude 49°, Lyall in 1859; Skokomish Valley, Kincaid; Tacoma, Flett; Silverton, Bonck 140; Klickitat River, Flett 1145, 1149; Tieton River, Cotton 459; Rattlesnake Mountains, Cotton 417; Cold Creek, Cotton 394; Ellensburg, Whited 476; Wenache, Whited; west Klickitat County Suksdorf 2136, 202, 475, 473; Muckleshoot, Dr. Rulen: Spanaway Lake, Piper 2085;

Manor, Piper; Wilson Creek, Lake & Hull; Nason City, Sandberg & Leiberg 618; Coulee City, Lake & Hull 570; Fresh Lake, McKay 11; Union Flat, Piper, July 9, 1901; Wawawai, Hull; Elmer 777.

12. Mimulus alpinus (A. Gray).

Mimulus lu'eus alpinus A. Gray, Proc. Acad. Phila. 1863: 71, 1863.

Mimulus scouleri caespitosus Greene, Pittonia 2: 22, 1889.

Mimulus caespitosus Greene, Journ. Bot. 24: 8, 1895.

TYPE LOCALITY: "Alpine region of the Rocky Mts." Collected by Parry.

RANGE: British Columbia to Colorado and California.

Specimens examined: Mount Rainier, Flett 288; Piper 2070; Allen: Greene in 1889; Mount Adams, Suksdorf 479, 418; Bridge Creek, Elmer 642; Horseshoe Basin, Lake & Hull in 1892.

13. Mimulus microphyllus Benth. in DC. Prod. 10: 371, 1846.

Minulus luteus depauperatus A. Gray, Bot. Cal. 1: 567, 1880.

Type locality: "In rupibus ad flumen Oregon." Collected by Douglas.

Range: Washington to California.

Specimens examined: Klickitat River, Suksdorf 478; Flett 1146; west Klickitat County, Suksdorf 477, 2321.

14. Mimulus implexus Greene, Journ. Bot. 33: 8, 1895.

Mimulus tilingii Regel, err. det. Greene, Bull. Cal. Acad. 1: 110. 1885.

Type locality: "Higher Sierra Nevada of California."

Range: Washington to California.

Specimens examined: Olympic Mountains, Piper 2177; Elmer 2583; Mount Adams, Suksdorf 471, 472.

15. Mimulus nasutus Greene, Bull. Cal. Acad. 1: 112, 1885.

Type locality: "In Sonoma County, Cal. at Knight's Valley and Skagg's Springs," Range: Washington and Idaho to California.

Specimens examined: Oreas Island, Lyall in 1858; upper Naches River, Henderson in 1892; west Klickitat County, Suksdorf 202, 419, 480, 476, 481; Rock Lake, Sandberg & Leiberg 110a; Almota, Piper 2783; Wenache Mountains, Whited 1363.

16. Mimulus alsinoides Dougl.; Benth. Scroph. Ind. 29, 1835.

Mimulus alsinoides minimus Benth. loc. cit.

Type locality: "America boreali-occid." Collected by Douglas.

Range: British Columbia to California.

Specimens examined: Whidby Island, Gardner 223; Oreas Island, Lyall in 1858; Mount Adams, Suksdorf 483; west Klickitat County, Suksdorf 420, 484; Cascade Mountains to Fort Colville, Lyall in 1860; mouth of the Columbia, Scouler.

17. Mimulus pulsiferae A. Gray, Proc. Am. Acad. 11: 98, 1876.

Type locality: "California in the Sierra and Indian Valleys of the Sierra Nevada." Range: Middle California to Klickitat County, Washington.

Specimens examined: Glenwood, Flett 1163; Klickitat River, Flett 1148; Falcon Valley, Suksdorf, 486 and June 10, July 30, 1885.

18. Mimulus breviflorus Piper, Bull. Torr. Club 28: 45. 1901.

Type locality: Pullman, Washington.

Range: Washington, Oregon, and Idaho.

Specimens examined: Falcon Valley, Suksdorf 793, 485; west Klickitat County, Suksdorf 203; Ellensburg, Whited 652; Spokane, Piper 2764, 2640; Waitsburg, Horner 592; Blue Mountains, Piper 2440; Pullman, Piper 1858; Wawawai, Elmer 774.

19. Mimulus suksdorfii A. Gray, Syn. Fl. ed 2, 21: 450, 1886.

Type locality: Mt. Paddo (Adams). Collected by Suksdorf.

Range: Washington to Utah and California.

Specimens examined: Mount Adams, Suksdorf 487.

Mimulus peduncularis Dougl.; Benth. Scroph. Ind. 29, 1835.

Type locality: "America boreali-occidentalis." Collected by Douglas.

Range: Eastern Washington, Eastern Oregon, and Idaho.

Specimens examined: West Klickitat County, Suksdorf: Trout Lake, Suksdorf: Falcon Valley, Suksdorf: Wenache, Whited: Rock Lake, Sandberg & Leiberg 114: Wawawai, Elmer 752: Almota, Piper: Toppenish, Griffiths & Cotton 796: Prosser, Griffiths & Cotton 651.

21. Mimulus floribundus Dougl.; Lindl. Bot. Reg. 13; pl. 1125, 1827.

Minulus scrotinus Suksdorf, Deutsch. Bot. Monatss. 18: 154, 1900.

Type locality: "On moist rocks in the interior of the districts of the Columbia River." Collected by Douglas.

RANGE: British Columbia to California and Colorado."

Specimens examined: Ellensburg, Whited 847; North Yakima, Henderson in 1892; west Klickitat County, Suksdorf 205, 2185; Wilson Creek, Lake & Hull 709; Sprague, Henderson, May 30, 1892; bars Touchet River, Horner 266; Spokane, Watson 309; Piper; Sandberg, Heller, & MacDongal 926; without locality, Dr. Cooper; Wawawai, Elmer 754; Almota, Piper, June 28, 1894.

Mimulus jungermanniones Suksdorf, Deutsch. Bot. Monatss 18: 154, 1900. Type locality, near Bingen, Klickitat County, Washington. Specimens examined, near Bingen, Suksdorf 1470. This species is very close to the preceding, but it is perhaps distinguishable by its broader and shorter, more deeply cordate leaves. According to Suksdorf it perennates by means of bud-like tubers formed on the tips of stolon-like branches.

MELAMPYRUM.

1. Melampyrum lineare Lam. Encyc. 4: 22, 1797.

Melampyrum americanum Michx. Fl. 2: 16, 1803.

Type locality: "Amerique septentrionale."

RANGE: Washington to Hudson Bay, southward to North Carolina.

Specimens examined: Box Canyon, Kreager 409.

RHINANTHUS.

1. Rhinanthus crista-galli L. Sp. Pl. 2: 603, 1753.

Type locality: European.

RANGE: Washington to New England, north to Alaska and Labrador. Europe. Asia. Specimens examined: Whidby Island, Gardner 224; Admiralty Head, Piper in 1898; Cascade Mountains, latitude 49°, Lyall; Loomis, Elmer 596; Spokane County, Suksdorf; Palouse City, Henderson; Fort Vancouver, Scouler, according to Hooker.

Zonal distribution. Transition.

PEDICULARIS.

Leaves lanceolate, doubly-crenulate. 6. P. racemosa. Leaves pinnately parted.

Flowers purple.

Corolla beaked; alpine plants.

Beak long and filiform, curved. 1. P. groenlandica
Beak short and conical. 2. P. ormthorhyncha.

Flowers yellowish or whitish.

Corolla yellow, with a slender inrolled beak...... 4. P. contorta.

Corolla whitish, with a broad food-like beak................. 5. P. bractcosa.

1. Pedicularis groenlandica surrecta (Benth.) Piper, Mazama 2: 100. 1901.

Pedicularis surrecta Benth.; Hook. Fl. Bor. Am. 2; 107, 1858.

Type locality: "N. West Interior." Collected by Douglas.

Range: British Columbia and Saskatchewan to California and New Mexico.

Specimens examined: Big Creek Prairie, Lamb 1398; Mount Rainier, Piper 2072; upper Nisqually Valley, Allen 89; Challam County, Elmer 2580; Cascade Mountains latitude 49°, Lyall in 1859; Stampede Pass, Henderson, July 26, 1892; Stevens Pass, Sandberg & Leiberg August, 1893, 709; Bridge Creek, Elmer 668.

Zonal distribution: Hudsonian.

2. Pedicularis ornithorhyncha Benth: Hook. Fl. Bor. Am. 2: 108, 1838.

Type locality: "Mt. Rainier." Collected by Tolmie.

Range: Cascade Mountains of Washington.

Specimens examined: Mount Rainier, Allen 92; Piper 2009, 397; Smith in 1889; Mount Stuart, Brandegee 1027; Bridge Creek, Elmer, September, 1897; Horseshoe Basin, Lake & Hull 577; Entiat Creek, Mrs. Howe; Monte Cristo, Misses Coffin & Goodspeed.

ZONAL DISTRIBUTION: Arctic.

3. Pedicularis parviflora Smith, Rees' Cycl. 26: no. 4, 1813.

Pedicularis palustris vlassoriana Bunge; Ledeb. Fl. Ross. 3: 283, 1849.

Pedicularis vlassoviana Stev. Monogr. 27. pl. 9. fig. 1. 1823.

Type locality: "On the west coast of North America." Collected by Menzies.

Range: Alaska to Labrador and Oregon. Siberia.

Specimens examined: Point Orchard, Parker in 1888.

4. Pedicularis contorta Benth; Hook, Fl. Bor, Am. 2: 108, 1838.

Type locality: "Mt. Rainier." Collected by Tolmie.

Range: Washington, Oregon, and Idaho.

Specimens examined: Mount Rainier, Prper 2071; Allen 91; Smith in 1889; Mount Stuart, Elmér 1173; Stevens Pass, Sandberg & Leiberg 738; Blue Mountains, Horner 387; Wenache Mountains, Cotton 1704.

Zonal distribution: Arctic.

5. Pedicularis bracteosa Benth.; Hook. Fl. Bor. Am. 2: 110, 1838.

Type locality: "Shady alpine woods of the Rocky Mountains." Collected by Drummond. "N.W. Am." Collected by Douglas.

Range: British Columbia and Saskatchewan to Colorado.

Specimens examined: Olympic Mountains, Elmer 2577; Mount Rainier, Piper 2077; Allen 90; Mount Stuart, Sandberg & Leiberg 556; Simcoe Mountains, Howell; Skagit Pass, Lake & Hull 576; Wenache Mountains, Elmer 443; along Twisp River, Whited 194; Nason City, Sandberg & Leiberg, July, 1893; Blue Mountains, Piper, July, 1896; Horner 134; without locality, Brandegee; Mount Carlton, Kreager 270.

ZONAL DISTRIBUTION: Canadian and Hudsonian.

6. Pedicularis racemosa Dougl.; Hook. Fl. Bor. Am. 2: 108, 1838.

Type locality. "Abundant on the summit of the high mountains of the Grand Rapids of the Columbia." Collected by Douglas. "Mt. Raimer." Collected by Tolmic.

Range. British Columbia to Cafifornia and Colorado

Specimens examined: Silverton, Bouck 14; Clallam County, Elmer 2579; Goat Mountains, Allen 88. Mount Rainier, Peper 2073, along Twisp River, Whited 193; Stevens Pass, Sandberg & Leiberg 743; Martin, Henderson, July 20, 1892; Fish Lake, Dunn, August 8, 1900, east side Cascades, Lyall, without locality, Vasey in 1889, Lake Katispel, Kreager 350.

ZONAL DISTRIBUTION, Canadian and Hudsonian,

CASTILLEJA.

Annual; stems slender, erect; leaves entire, narrow.	. 1. C. exilis.
Perennials.	
Bracts whitish or yellowish; galea shorter than the tube of the corolla.	
Galea short and broad	2. C. pallescens.
Galea şlender.	
Pubescence harsh	3, C. Intescens.
Pubescence soft, pilose.	
Lip one-third as long as the galea	1. C. camporum.
Lip over one-half as long as the galca	
Bracts searlet or crimson (occasionally yellow); galea as long or	
longer than the corolla tube.	
Leaves and bracts cleft into linear lobes.	
Stems glabrous below; bracts crimson or white	6. C. orcopola.
Stems pilose to the base; bracts scarlet.	•
Galea much longer than the corolla tube	7. C. rapicola.
Galea about equaling the corolla tube	
Leaves and bracts entire, very rarely cleft.	
Stems from slender rootstocks; bracts green, with scarlet	
tips	12. C. suksdorfiii.
Stems from a stout caudex.	·
Bracts rose-purple; leaves viscid-puberulent	9, C, elmeri.
Bracts scarlet; spikes very dense.	
Leaves glabrous: bracts entire.	
Plants erect; leaves rather thin	10. C. miniata.
Plant decumbent; lcaves thick	
Leaves puberulent, not viscid; bracts, or some	
of them, lobed or toothed	13. C. crispula.

1. Castilleja exilis A. Nelson, Proc. Biol. Soc. Wash. 17: 100, 1904.

Castilleja stricta Rydberg, Mem. N. Y. Bot. Gard. 1: 354, 1900, not DC, 1846.

Type locality: Ruby Valley, Nevada.

RANGE: Washington to Montana, Nevada, and Utah.

Specimens examined: Yakima City, Piper 2845; Satus, Elmer 1066; Toppenish, Griffiths & Cotton 772; Priest Rapids, Cotton 1395.

Zonal distribution: Upper Sonoran.

2. Castilleja pallescens (A. Gray) Greenman, Bot. Gaz. 25; 266, 1898.

Orthocarpus pallescens A. Gray, Proc. Am. Acad. 7: 384, 1868.

Euchroma pallescens Nutt.; A. Gray, loc. cit. as synonym.

Orthocarpus parryi A. Gray, Am. Nat. 8: 214, 1874.

Type locality: None given.

Range: Washington and Oregon to Montana and Wyoming.

Specimens examined: Columbia River, latitude 46° to 49°, Lyall in 1860; Wenache, Whited 1079; Ellensburg, Piper 2703; Klickitat River, Flett 1144; Mount Adams, Flett 1177; Henderson, 2269, August 9, 1892; Pasco, Hindshaw 29; Piper, May 26, 1899; Kittitas Mountains, Whited, May 27, 1896; Loomis, Elmer 569, 593; Sprague, Sandberg & Leiberg, June, 1893; Coulee City, Henderson, July 11, 4892; Spangle, Piper, June 24, 1899; Douglas County, Henderson 2267; Spokane County, Henderson 2268; without locality, Vascy in 1889; Coulee City, Piper 3852.

Zonal distribution: Upper Sonoran and Arid Transition.

Geyer's 291 referred by Hooker to C. septentrionalis Lindl. is C. pallescens. The "C. pallida Kunth" of Cooper's Report, page 67, is probably this species.

29418--06 м----33

3. Castilleja lutescens (Greenman) Rydberg, Mem. N. Y. Bot. Gard. 1: 359, 1900.

Castilleja pallida lutescens Greenman, Bot. Gaz. 25: 265. 1898.

Type locality: "Prairies, Spokane Co., Washington." Collected by Suksdorf. The above is the first cited specimen.

Range: Idaho. British Columbia.

Specimens examined: Sprague, Saudberg & Leiberg 141: Kamiak Butte, Piper 3086; Pullman, Elmer 816: Lake, June, 1892; Mount Carlton, Kreager 149.

Zonal distribution: Arid Transition.

4. Castilleja camporum (Greenman) Howell, Fl. N. W. Am. 532, 1901.

Castilleja pallida camporum Greenman, Bot. Gaz. 25: 266. 1898.

Castilleja lutea Heller, Bull. Torr. Club 25: 268, 1898.

Type locality: "Low prairies, Spokane Co., Washington." Collected by Suksdorf. (The first cited specimen.)

Range: Washington, Oregon, and Idaho.

Specimens examined: Rock Creek, Sandberg & Leiberg 80; Silver Lake, Henderson; Spokane, Henderson 2266; Spangle, Piper 2833, 3540; Pullman, Piper 2826; Lake & Hull. Zonal distribution: Arid Transition.

5. Castilleja levisecta Greenman, Bot. Gaz. 25: 268, 1898.

Type locality: "Mill plain, Washington," in Clarke County. Collected by Howell; the first specimen cited.

Range: Western Washington and Vancouver Island.

Specimens examined: Whidby Island, Gardner 236; Port Ludlow, Binns, June 15, 1890; Roy, Allen 83; Mill Plain, Howell 279; Admiralty Head, Piper, April, May, 1898; Seattle, Hindshaw, July, 1897.

Zonal distribution: Humid Transition.

6. Castilleja oreopola Greenman, Bot. Gaz. 25: 264. 1898.

Castilleja miniata alpina Suksdorf, Deutsch. Bot. Monatss. 18: 155, 1900.

Type locality: "In damp ground, on Mt. Adams (Mt. Paddo), Washington, altitude 1840 to 2150 m." Collected by Suksdorf.

Range: Mountains of western Washington.

Specimens examined: Olympic Mountains, *Piper*, September, 1895; Mount Rainier, *Flett* 2197, 294; *Piper* 2081; *Allen* 95a; Goat Mountains, *Allen* 134; Mount Adams, *Suksdorf* 2046; near Skagit Pass, *Leke* & Hull, August 24, 1892; Horseshoe Basin, *Elmer* 696; Bridge Creek, *Elmer* 696; Callam County, *Elmer* 2590.

ZONAL DISTRIBUTION: Arctic.

7. Castilleja rupicola Piper, Erythea 6: 45. 1898.

Type locality: "On perpendicular cliffs, Paradise Valley, Mount Rainier, Washington." Range: Known only from Mount Rainier.

Specimens examined: Mount Rainier, Piper 2075; Allen; Flett 2128.

ZONAL DISTRIBUTION: Hudsonian.

8. Castilleja angustifolia (Nutt.) G. Don, Hist. Diehl. Pl. 4:616. 1837.

Castilleja douglasii Benth. in DC. Prod. 10: 530. 1846.

Castilleja desertorum Geyer; Hook. Journ. Bot. and Kew. Misc. 5: 258, 1853.

Euchroma angustifolia Nutt. Journ. Acad. Phila. 7: 46, 1834.

Type locality: "Native in dry prairies on the borders of the Little Goddin River, near the source of the Columbia."

Range: British Columbia to California and Colorado.

Specimens examined: Kamiak Butte, Moore 2324.

This species and its subspecies have very generally been confused with the very distinct Alaskan C. parciflora Bong.

SUBSPECIES OF CASTILLEJA ANGUSTIFOLIA.

Leaves entire Sa. C. angustifolia whitedii. Leaves cleft.

Stems sparingly pilose.

Leaves lanceolate to oblong-lanceolate, 2 to 5 cm.

Leaves ovate-oblong to obovate, 1 to $2.5\,\mathrm{cm}$, long , . 8c, C, angustifolia abbreviata. Stems densely pilose.

Leaves harshly pubescent; stems 40 to 50 cm, high;

leaves short, not spreading.................................. 8d. C. angustifolia hispida.

Leaves less harsh; stems 10 to 30 cm, high; leaves

8a. Castilleja angustifolia whitedii Piper, Bull. Torr. Club 27: 399, 1900.

Type locality: Wenache, Washington.

Specimens examined: Wenache, Whited 1141.

8b. Castilleja angustifolia bradburii (Nutt.) Fernald, Erythea 6: 48. 1898.

Euchroma bradburii Nutt. Journ. Acad. Phila. 7: 47, 1834.

Castilleja bradburii G. Don, Hist. Dichl. Pl. 4: 616, 1837.

Type locality: "Little Goddin River, sources of the Columbia."

RANGE: British Columbia, Washington, and Idaho.

Specimens examined: Olympic Mountains, Piper, August, 1895; Oreas Island, Lyall; Tacoma, Flett 104; Easton, Henderson, June 11, 1892; Bear Prairie, near Mount Rainier, Allen 133; Klickitat River, Flett 1151; Clealum, Whited 362; Mount Adams, Flett 1162; Roy, Allen 84; Wenache, Whited 5; Spokane Valley, Lyall; without locality, Vasey 451.

Zonal distribution: Arid Transition.

8c. Castilleja angustifolia abbreviata Fernald, Erythea 6: 49. 1898.

Type locality: Olympic Mountains, Washington.

Range: Olympic Mountains.

Specimens examined: Olympic Mountains, Piper 2175; Clallam County, Elmer 2582.

8d. Castilleja angustifolia hispida (Benth.) Fernald, Erythea 6: 48, 1898.

Castilleja hispida Benth.; Hook. Fl. Bor. Am. 2: 105, 1838.

Type locality: "Common on dry soils of the NW, coast, especially about Fort Vancouver," Collected by Douglas, by Scouler, by Tolmie, and by Gairdner.

Range: Washington to California and Colorado.

Specimens examined: Kamiak Butte, Piper 3096, 3095, 3097; Blue Mountains, Piper 2435; Almota, Piper 2323, 2798.

9. Castilleja elmeri Fernald, Erythea 6: 51, 1898.

Type locality: "On Wenatchee Mts., 19.3 km, north of Ellensburg, Washington."

Range: Mount Stuart and Wenache Mountains.

Specimens examined: Mount Stuart, Elmer 1179, 1180; Wenache Mountains, Elmer 457.

10. Castilleja miniata Dougl.; Hook. Fl. Bor. Am. 2: 106, 1838.

Type locality: "Blue Mountains, N. W. America." Collected by Douglas and by Tolmic.

RANGE: Alaska to California and Colorado.

Specimens examined: Olympic Mountains, Lamb 1160; Fairhaven, Piper, September, 1892, 2807; Silverton, Bouck 144; Mount Rainier, Piper 2082; Mount Adams, Flett 1143; Klickitat River, Flett 1150; Tacoma, Flett 46; Peshastin, Sandberg & Leiberg 616; Wenache, Whited 157; Atanum Springs, Watt, August, 1895; Horseshoe Pasin, Lake & Hull 573; Nason Creek, Sandberg & Leiberg 616; Wilbur, Henderson, July 12, 1892; Pullman, Piper

1668; Mount Adams, Suksdorf: Skamania County, Suksdorf: Cascade Mountains, latitude 49°, Lyall: Falcon Valley, Suksdorf 599; Seattle, Dixon in 1898; Quinault, Dixon in 1898; Kettle Falls, Watson in 1880; Puget Sound, Cooper; Ellensburg, Whited 700.

ZONAL DISTRIBUTION: Upper Sonoran to Hudsonian.

Narrow-leaved forms of this species have erroneously been referred to C. linariaefolia Benth.

11. Castilleja dixonii Fernald, Erythea 7: 122, 1899.

Type locality: "Abundant on the seashore, in gravelly or sandy soil, usually just above high-water mark, Quinault Indian Agency, Washington."

Range: Ocean coast of Washington.

Specimens examined: Quinault, Dixon, July 17, 1898; Grays Harbor, Wilkes Expedition; Ilwaco, Piper 4957.

ZONAL DISTRIBUTION: Humid Transition.

This is very closely related to C. miniata Douglas, and is perhaps merely a seashore form of it.

12. Castilleja suksdorfii A. Gray, Proc. Am. Acad. 22: 311. 1887.

Type locality: "Alpine meadows and springs of Mount Adams, Washington, at 6,000 to 7,000 feet of elevation." Collected by Suksdorf.

RANGE: Mount Adams and vicinity.

Specimens examined: Mount Adams, Suksdorf 198, 600; mountains of Skamania County, Suksdorf: Hell Roaring River, Cotton 1506.

13. Castilleja crispula sp. nov.

Perennial from a stout woody crown; stems erect or nearly so, 20 to 30 cm, high; whole herbage sparsely crisp-puberulent; leaves lanceolate, acute, broadest near the sessile base, 3-nerved, 2 to 4 cm, long, all entire or the uppermost with a few teeth; spike short and dense; bracts broader than the leaves, scarlet-tipped, all or at least the upper ones few-toothed near the apex; calyx villous, about equally cleft before and behind, each lateral segment cleft about midway into two attenuate-lanceolate, acute, lobes; corolla about 3 cm, long, the glandular, puberulent galea green except a thin scarlet margin, nearly straight, as long as the sparsely pilose tube; lip small, the three teeth saccate-involute, acute; ovary elliptic-acuminate; stigma 2-lobed.

 Λ species very close to C, miniata Dougl, differing in its puberulent herbage and the dentate bracts.

Specimens have been examined as follows, all from Washington: Mount St. Helens, Coville, 768, July 48, 1898, sheet 380051 in the National Herbarium (type); same locality, L. L. Goodwin, 26, July 43, 4903.

ORTHOCARPUS.

Lobes of lower lip of corolla well developed.

Galea bearded on the back; filaments pubescent............... 2. 0. purpurascens.

Galea naked; filaments smooth.

Spike short and dense; bracts with broad obtuse white

Lobes of lower lip of corolla very small.

Lip simply saccate, scarcely larger than the galea.

Bracts very different from the leaves, the upper ones entire.

Galea hooked at the tip; bracts obtuse.

Corolla minutely pubescent; herbage scabrous	
and sparsely hirsute-ciliate	5. O. tenuifolius
Corolla glabrous or minutely granular-puberu-	
lent; herbage puberulent, not at all hirsute-	
ciliate	6. O'. imbricatus.
Galea straight not hooked, its tip glandular pubes-	
cent; bracts all acute	7. O. barbatus.
Bracts less different from the leaves, all 3 to 5-lobed.	
Flowers purple; leaves all 3-cleft	8. O. bracteosus.
Flowers yellow; leaves mostly entire	9. O. luteus.
Lip with 3 conspicuous swellings, much larger than the galea.	
Flowers very small 4 to 6 mm. long, dull purple; leaves	
pinnatifid or bipinnatifid into filiform segments	10. O. pusillus.
Flowers larger 12 to 20 mm, long; leaves simply pinnate	•
with slender lobes or entire.	
Corolla sulphur-yellow, 2 to 2.5 cm, long; anthers	
1-celled	11. O. erianthus.
Corolla white, about 1 cm. long; anthers 2-celled.	12. O. hispidus.

1. Orthocarpus pilosus S. Wats. Bot. King Explor. 231, 1871.

Type locality: "In Washoe Valley, Nevada."

Range: Washington to California and Nevada.

Specimens examined: Mount Adams, Suksdorf, September 2, 1904 (an unusually glandular form).

2. Orthocarpus purpurascens Benth. Scroph. Ind. 13, 1835.

Type locality: California. Collected by Douglas.

Range: Oregon and California.

Specimens examined: Seattle (introduced), Piper, June 4, 1891.

3. Orthocarpus castilleoides Benth. Scroph. Ind. 13. 1835.

Type locality: California. Collected by Douglas.

Range: On the seacoast, Puget Sound to Monterey.

Specimens examined: Grays Harbor, Wilkes Expedition: Oyhut, Lamb 1269: Whidby Island, Gardner 239: Lillewaup, Piper in 1890: Astoria, Cooper: Everett, Piper 4987: Copalis, Conard 385.

Zonal distribution: Humid Transition.

4. Orthocarpus attenuatus A. Gray, Pac. R. Rep. 4: 121, 1857.

Type LOCALITY: Corte Madera, California.

RANGE: British Columbia to Middle California.

Specimens examined: Whidby Island, Gardner, 225; Lopez Island, Lyall in 1858; near Tacoma, Flett 191, 2123, May 5, 1895; Nisqually, Wilkes Expedition.

ZONAL DISTRIBUTION: Humid Transition.

5. Orthocarpus tenuifolius (Pursh) Benth. in DC. Prod. 10: 536, 1846.

Bartsia tenuifolia Pursh, Fl. 2: 429, 1814.

Type locality: "On the banks of Clark's River." Collected by Lewis. The exact locality is near the mouth of the Lolo fork of the Bitterroot River, Montana.

RANGE: British Columbia to Oregon and west Montana.

Specimens examined: Wilson Creek, Sandberg & Leiberg, June, 1893; Wilbur, Henderson, July 12, 1892; Douglas County, Spillman, May, 1896; Cow Creek, Lyall; Spokane County, Suksdorf 425; Spokane, Dewart; Pullman, Piper 1666; Clarks Springs Kreager 18; Okanogan to Grand Coulce, Wilkes Expedition.

ZONAL DISTRIBUTION: Arid Transition.

6. Orthocarpus imbricatus Torr.; S. Wats. Bot. King Explor. 458, 1871.

Orthocarpus olympicus Elmer, Bot. Gaz. 36: 60. 1903.

Type locality: "In the Cascade Mts., Oregon." Collected by Newberry.

Range: Washington to California.

Specimens examined: Olympic Mountains, Elmér 2574; Flett 85.

7. Orthocarpus barbatus Cotton, Bull. Torr. Club 29: 574. 1902.

Type Locality: "At the junction of Crab and Wilson creeks, Douglas County," Washington. Collected by Sandberg and Leiberg.

Range: Central Washington.

Specimens examined: Wilson Creek, Sandberg & Leiberg 234; Moses Lake, Griffiths & Cotton 613; Fort Okanogan, Wilkes Expedition.

Zonal distribution: Upper Sonoran.

8. Orthocarpus bracteosus Benth. Scroph. Ind. 13. 1835.

Type locality: "Ad flum, Columbia." Collected by Douglas.

Range: British Columbia to northern California.

Specimens examined: Falcon Valley, Suksdorf 167; without locality, Cooper; Seattle, Piper; east of the Cascades, Wilkes Expedition.

9. Orthocarpus luteus Nutt. Gen. 2: 57, 1818.

Orthocarpus strictus Benth, Scroph. Ind. 12, 1835.

Type locality: Near Fort Mandan, North Dakota.

RANGE: British Columbia to Saskatchewan and California.

Specimens examined: Parrott, Lake & Hull 701; "high timbered regions of Spokane," Spalding: Colville, Lyall: Usk, Kreager 359.

Zonal distribution: Arid Transition.

10. Orthocarpus pusillus Benth. Scroph. Ind. 12. 1835.

Type locality: California. Collected by Douglas.

RANGE: British Columbia to California west of the Cascades and Sierras.

Specimens examined: Montesano, Heller 3877; Clallam County, Elmer 2592; Seattle, Piper, May, 1892; Tacoma, Flett 8.

Zonal distribution: Humid Transition.

11. Orthocarpus erianthus Benth. Scroph. Ind. 12. 1835.

Type locality; California. Collected by Douglas.

Range: California.

Specimens examined: West Scattle, Piper 552, introduced from California.

12. Orthocarpus hispidus Benth.; DC. Prod. 10: 535, 1846.

Type locality: "Ad flumen Oregon." Collected by Douglas.

RANGE: British Columbia to Idaho and northern California.

Specimens examined: Silver Luke, Henderson 2265; Falcon Valley, Suksdorf 465, 466; Wenache Region, Brandegee 1023; Ellensburg, Whited 497; Sprague, Sandberg & Leiberg 153; Spokane, Piper, July 2, 1896; Henderson 2265; Pullman, Piper, 1665, July 28, 1894; Elmer 832; without locality, Vascy 450; Colville to Spokane, Wilkes Expedition.

Zonal distribution: Arid Transition.

ADENOSTEGIA.

1. Adenostegia capitata (Nu(t.) Greene, Pittonia 2: 180. 1891.

Cordylanthus capitatus Nutt.; DC. Prod. 10: 597, 1846.

Type locality: "In Nova California." Collected by Nuttall.

Range: Washington to Idaho and Nevada.

Specimens examined: Mount Adams, Flett 1161; Falcon Valley, Suksdorf, August, 1880; Simcoe Mountains, Howell, July, 1880; Tampico, Henderson, July 31, 1892; without locality, Brandegee 1024; without locality, Vasey in 1889.

Zonal distribution: Arid Transition.

The Brandegee specimen was referred by Gray erroneously to A. ramosa (Nutt.), a species not known from Washington.

DIGITALIS.

1. Digitalis purpurea L. Sp. Pl. 2: 621, 1753.

Foxglove.

Type locality: "In Europae australiore."

Specimens examined: Union City, Piper. Abundantly introduced along the lower Columbia River.

VERBENACEAE. VERBENA FAMILY.

VERBENA.

Stems prostrate or decumbent; bracts exceeding the flowers. 1.1'. bracteosa.

Stems erect; bracts shorter than the flowers. 2. V. strictu.

Herbage densely soft-pubescent 2. V. structu. Herbage glabrous or nearly so. 3. 1'. hastata.

1. Verbena bracteosa Michx. Fl. 2: 13, 1803.

Type locality: "In regione Illinoiensi et in urbe Nashville."

RANGE: Washington to California, Wisconsin and Florida.

Specimens examined: Cascade Mountains to Colville, Lyall in 1860; Egbert Springs, Sandberg & Leiberg 340; North Yakima, Watt, August, 1895; Prosser, Henderson, May 26, 1892; Wenache, Whited 1373; Almota, Lake & Hull 606; Wawawai, Piper 1542; Mission, Kreager, August 22, 1902; Meyers Falls, Kreager 474; without locality, Vasey in 1889; Prosser, Cotton 621.

Zonal distribution: Upper Sonoran and Arid Transition.

2. Verbena stricta Vent. Descr. Pl. Jard. Cels. pl. 53, 1800.

Type locality: Illinois.

Range: Washington to Ohio and Texas.

Specimens examined: Meyers Falls Kreager 475.

3. Verbena hastata L. Sp. Pl. 1: 20. 1753.

Verbena paniculata Lam. Encyc. 8: 548, 1808.

Type locality: "Habitat in Canadae humidis."

RANGE: Washington to Canada, New Mexico, and Florida.

Specimens examined: Ellensburg, Piper, July 9, 1897; North Yakima, Watt, August, 1895; Piper, August 6, 1894; Alma, Elmer 537; Rock Lake, Lake & Hull 605; Almota, Piper, August 26, 1894, Meyers Falls, Kreager 469; Toppenish, Cotton 787.

Zonal distribution: Upper Sonoran.

SOLANACEAE. NIGHTSHADE FAMILY.

Fruit a berry; corolla campanulate or rotate.

Fruit a capsule, corolla tunnelform.

Capsule prickly, leaves dentate in ours. Datura.

Capsule not prickly; leaves entire. Nicotiana.

PHYSALIS.

Herbage pubescent; fruiting calyx sharply 5-angled. 1. P. pubescens. Herbage glabrous, fruiting calyx obscurely 5 to 10-angled. 2. P. wocarpa.

1. Physalis pubescens L. Sp. Pl. 1, 183, 1753.

Type locality. Habitat in India utraque.

RANGE: California to Iowa, New York, and Florida. Specimens examined: North Yakima, *Henderson* 2496.

2. Physalis ixocarpa Brot.; Hornem. Hort. Hafn. Suppl. 26, 1819.

Type locality: "Habitat unknown." Probably originally from Mexico.

Specimens examined: Near Bingen, Suksdorf 2284.

SOLANUM.

Plant armed with prickles; flowers yellow; leaves pinnatifid...... 1. S. rostratum. Plant not prickly.

1. Solanum rostratum Dunal, Sol. 231, 1813.

Type locality: "In horto Monspeliensi cultum."

Range: Colorado and Nebraska to Texas.

Specimens examined: Walla Walla, Piper, August 13, 1897 (introduced).

2. Solanum dulcamara L. Sp. Pl. 1: 185, 1753.

BITTERSWEET.

Type locality: European.

Specimens examined: Parker, Dunn, August 8, 1901; North Yakima, Watt, August, 1895; Piper 1889; Rock Lake, Lake & Hull 583; Spokane, Kreager 545, Selah Valley, Cotton 882.

3. Solanum triflorum Nutt. Gen. 1: 128, 1818.

Type locality: "Near Fort Mandan." Collected by Nuttall.

Range: Washington to Saskatchewan and New Mexico.

Specimens examined: Columbia River, Henderson 2495; Ellensburg, Whited, July, 1897; North Yakima, Piper 1806.

Zonal distribution: Upper Sonoran.

4. Solanum nigrum L. Sp. Pl. 1: 186, 1753.

Type locality: "Habitat in Orbis totius cultis."

Range: Temperate North America.

Specimens examined: Cascade Mountains latitude 49°, Lyall in 1859; Tacoma, Flett 67; west Klickitat County, Suksdorf 1480, 2317, 2318; North Yakima, Piper 1787, Ophir, Elmer 525; Wawawai, Elmer, June, 1897; Squaw Creek, Cotton 871.

ZONAL DISTRIBUTION: Upper Sonoran and Transition.

DATURA.

Datura stramonium L Sp. Pt 1: 179-1753
 Type locality: "Habitat in America, nunc vulgaris per Europem"

Jimson weed.

Reported in Suksdorf's list, but we have seen no Washington specimens

2. Datura tatula L Sp Pl. ed 2, 1:256-1762

Type locality Unknown

Specimens examined. Pullman. Piper, September 8, 1894; near Wawawai, Piper in 1902.

NICOTIANA.

1. Nicotiana attenuata Torr.; S. Wats. Bot. King. Explor. 276, pl. 27, 1871.

Type locality; "Rather common in the valleys and dry lower canyons of Nevada." Range: Washington to California and Colorado.

Specimens examined: Wenache, Elmer 478; Whited 1329; North Yakima, Mrs. Steinweg in 1894; Watt, August, 1895; west Klickitat County, Suksdorf 201; Bingen, Suksdorf 1482; Rattlesnake Mountains, Cotton 477; Pasco, Henderson, June, 1892; Crab and Wilson creeks, Sandberg & Leiberg 317; near Moses Coulee, Lake & Hull 584; Almota, Piper, September 9, 1896, August 26, 1894; without locality, Vasey in 1889; Moxee to North Yakima, Griffitles & Cotton 49.

Zonal distribution: Upper Sonoran.

OROBANCHACEAE. Broomrape Family.

Anther cells not separated, their bases rounded.

Anther cells separated below, the bases mucronate.

No bracts on the callyx or the elongated peduncles.

Thalesia.

One or two bracts on the callyx or the short pedicel.

Orobanche.

THALESIA.

 Calyx lobes subulate, longer than the tube.
 1. F. uniflora.

 Calyx lobes triangular, shorter than the tube.
 2. F. fasciculata.

1. Thalesia uniflora (L.) Britton, Mem. Torr. Club 5: 298, 1894.

Orobanche uniflora L. Sp. Pl. 2: 633, 1753.

Aphyllon uniflorum Torr. & Gray in Gray, Man. ed. 1, 290, 1848.

Thalesia purpurea Heller, Bull. Torr. Club 24: 313, 1897.

Aphyllon minutum Suksdorf, Deutsch. Bot. Monatss. 18: 155, 1900.

Aphyllon sedi Suksdorf, loc. cit.

Type locality: "Habitat in Virginia."

Range: British Columbia to Newfoundland, Virginia, Texas, and California.

Specimens examined: Clallam County, Elmer 2555; Whidby Island, Gardner 242; Baldy Creek, Lamb 1331; Tacoma, Flett 198; Wenache Mountains, Elmer 463; Yakima, Henderson, May 25, 1892; Ellensburg, Whited 327; Semiamoo Bay, Lyall in 1858; Kittitas, Lyall in 1860; Bingen, Suksdorf 2323; Skamania County, Suksdorf 2130; upper Naches River, Henderson, June 15, 1892; west Klickitat County, Suksdorf 2089; Blue Mountains, Horner 396, 397; Pullman, Piper, May, 1894; Almota, Piper 1809; Horseshoe Basin, Lake & Hull 780; Clarkston, Hunter 41; Wawawai, Elmer 776; without locality, Cooper; Stuart Island, Lawrence 101.

ZONAL DISTRIBUTION: Transition.

2. Thalesia fasiculata (Nutt.) Britton, Mem. Torr. Club 5: 298, 1894.

Orobanche fasciculata Nutt. Gen. 2: 59, 1818.

Aphyllon fasciculata Torr. & Gr. in Gray, Man. ed. 2, 281, 1856.

Type locality: "In sandy alluvial soil about Fort Mandan," North Dakota.

Range: British Columbia to California, Nebraska, Indiana, and Saskatchewan.

Specimens examined: Olympic Mountains, Flett 101; Elmer 2556; J. M. Grant in 1889; Whidby Island, Gardner 241; near Clealum, Henderson, June, 1892; west Klickitat County, Suksdorf 2098, 2102; Wenache, Whited, May 25, 1895; Wenache Mountains, Whited 1238; Pasco, Hindshaw 37; junction Crab and Wilson creeks, Sandberg & Leiberg 298; Coulee City, Piper 3873; Blue Mountains, Horner 399, 398; Wawawai, Piper, May 26, 1894; Illia, Lake & Hull 779; Big Meadow, Kreager 415; Spokane, Dewart in 1901; Rattlesnake Mountains, Cotton 679.

ZONAL DISTRIBUTION: Transition.

OROBANCHE.

Flowers pedicellate.

Flowers subsessile; anthers glabrous or nearly so.

Stems tuber-like at base, branched above. 3. 0. pinorum.

Stems not tuber-like at base, usually simple. 4. 0. huloviciana.

1. Orobanche comosa Hook. Fl. Bor. Am. 2: 92, 1838.

Aphyllon comosum A. Gray, Bot. Cal. 1: 584, 1876.

Phelipoet comosa A. Gray, Pac. R. Rep. 12: 54, 1860.

Type locality: "Banks of the Columbia." Collected by Douglas, by Scouler, and by Gairdner.

Range: Washington to California.

Specimens examined: Whidby Island, Gardner 358; Falcon Valley, Suksdorf 82; without locality, Brandegee 1029; Rock Island, Sandberg & Leiberg 456; Chelan, Elmer 506; Grand Coulee, Lake & Hull 778; Soap Lake, McKay 3; Squaw Creek, Cotton 876; Rattlesnake Mountains, Cotton 764; Flat Top Island, Lawrence 103; Sucia Island, Flatt 2755.

Zonal distribution: Upper Sonoran and Transition.

2. Orobanche californica Cham. & Schlecht. Linnaea 3: 134, 1828.

Aphyllon californica A. Gray, Bot. Cal. 1: 584, 1876.

Type locality: "E vicinia portus St. Francisco," California.

Range: Washington to California and Nevada.

Specimens examined: Walla Walla region, Brandegee 1030.

3. Orobanche pinorum Geyer; Hook. Kew. Journ. Bot. 3: 297. 1851.

Aphyllon pinetorum A. Gray, Bot. Cal. 1: 585, 1876.

Type locality: "Top of high mountains near St. Joseph, Coeur d'Aleine country. Growing on the roots of Abies balsamea," Idaho. Collected by Geyer.

Range: Eastern Washington and Idaho.

Specimens examined: Columbia Valley, latitude 46° to 49°, Lyall, June, 1860; Ione, Kreager 403.

ZONAL DISTRIBUTION: Arid Transition.

4. Orobanche ludoviciana Nutt. Gen. 2: 58. 1818.

Aphyllon ludovicianum A. Grav, Bot. Cal. 1: 585, 1876.

Type Locality: "In sandy alluvial soils around Fort Mandan," North Dakota.

Range: Washington to Saskatchewan, Texas, and California.

Specimens examined: Rock Island, Sandberg & Leiberg 436; west Klickitat County, Suksdorf 2248; Wawawai, Piper 2842; Lake Chelan, Gorman 720; Craigs Ferry, Cotion 1343; Granddalles, Westgate in 1905; "on roots of Psorchea verrucosa in the light drift sand desert at the mouth of Lewis and Walla Walla rivers," Geyer.

Zonal distribution: Upper Sonoran.

BOSCHNIAKIA.

1. Boschniakia strobilacea A. Gray, Pac. R. Rep. 4: 118, 1856.

Type locality: "Dry and rocky hills South Yuba," California.

Range: Washington to California in the coast region.

Specimens examined: Cape Foulweather, Howell; near Union City, Piper in 1890; Bitter Lake, near Seattle, Piper 1127; Springfield, Robbins, May 10, 1897.

The common host plants are Gaultheria shallon and Arctostaphylos tomentosa.

ZONAL DISTRIBUTION: Humid Transition.

PINGUICULACEAE.

Aquatic plants; leaves dissected. Utricularia.

Terrestrial plants; leaves entire. Pinguicula.

UTRICULARIA. BLADDERWORT.

Leaves 2 to 3-pinnately divided, very bladdery; flowers large. $1.\ U.\ rulgaris$. Leaves repeatedly dichotomous; flowers small.

Bladders mostly on leafless branches 2. U. intermedia.

Bladders among the leaves.

Spur of corolla short and obtuse. 3. U. minor.
Spur of corolla conical, acute. 4. U. occidentalis,

1. Utricularia vulgaris L. Sp. Pl. 1: 18, 1753.

Type locality: European.

Range: British Columbia to California, Texas, and Newfoundland.

Specimens examined: Mud Lake, near Seattle, Piper 1103; Whidby Island, Gardner 368; Olympia, Kineaid, June, 1896; Falcon Valley, Suksdorf 468.

Zonal distribution: Humid Transition.

2. Utricularia intermedia Hayne, Schrad, Journ. Bot. 1: 18, 1800.

Type locality: "Habitat in inundatis prope Berolinum et Upsaliam."

Range: Subarctic regions, southward to California, Ohio, and New Jersey. Europe. Asia.

Specimens examined: Falcon Valley, Suksdorf 168.

3. Utricularia minor L. Sp. Pl. 1: 18, 1753.

Type locality: European.

RANGE: British Columbia to Canada, southward to California, Utah, and New Jersey. Europe. Asia.

Specimens examined: Mud Lake, near Scattle, Piper in 1891; Olympia, Kincaid in 1896; Skamania County, Suksdorf 2239.

ZONAL DISTRIBUTION: Humid Transition.

4. Utricularia occidentalis A. Gray, Proc. Am. Acad. 19: 95. 1884.

Type locality: "Washington Territory in Falcon Valley." Collected by Suksdorf.

Range: Known only from the type locality.

Specimens examined: Falcon Valley, Suksdorf 169 (type), 469; Henderson.

2. PINGUICULA.

Pinguicula vulgaris L. Sp. Pl. 1: 17, 1753.

Type locality: European.

Range: Oregon to the Adirondacks and northward.

Specimens examined: Olympic Mountains, Piper, August, 1895; Elmer 2526; Mount Rainier, Piper 2067; Flett 237; Silverton, Bouck 177a; Mount Stuart, Limer 1212; Brandegee 1031; Skagit Pass, Lake & Hull 582; Stevens Pass, Sandberg & Leiberg 793; Loomis, Elmer, September, 1897.

ZONAL DISTRIBUTION: Hudsonian and Arctic.

PLANTAGINACEAE. PLANTAIN FAMILY.

PLANTAGO. PLANTAIN.

Leaves ovate or lanceolate.

 Leaves linear.

Corolla lobes spreading in fruit.

Leaves fleshy; seaside plant................................. 3. P. maritima.

Leaves not fleshy.

Spikes woolly; bracts short 4. P. purshii.
Spikes not woolly; bracts long 5. P. aristata.

Corolla lobes closed over the fruit.

Spikes short, dense; capsules 3 to 4 mm. long 6. P. bigelovii.
Spikes slender; capsules 2 mm. long 7. P. elongata.

1. Plantago major L. Sp. Pl. 1: 113, 1753.

Type locality: European.

Range: Nearly cosmopolitan.

Specimens examined: Silverton, Bouck in 1899; Seattle, Piper, July 1, 1895; Tacoma, Flett 223; Ellensburg, Whited 548; North Yakima, Watt, August, 1895.

One form of this plant found on gravelly lake shores and in salt marshes seems to be native.

2. Plantago lanceolata L. Sp. Pl. 1: 113, 1753.

Type locality: European.

Specimens examined: Silverton, Bouck; Pullman, Piper, July 20, 1894.

A common weed in lawns and pastures.

3. Plantago maritima L. Sp. Pl. 1: 114, 1753.

Type locality: "Habitat in littoribus marimis Europae borealis."

Range: Seacoasts, Labrador to New Jersey and Alaska to California. Europe. Asia. Specimens examined: Whidby Island, Gardner 252; Orchard Point, Piper, July, 1895; Tacoma, Flett 118; Clallam County, Elmer 2817.

Zonal distribution: Humid Transition.

4. Plantago purshii Roem. & Schult. Syst. 3: 120, 1818.

Plantago lagopus L. err. det. Pursh, Fl. 1:99. 1814.

Plantago gnaphalioides Nutt. Gen. 1: 100. 1818.

Plantago patagonica gnaphalioides A. Gray, Syn. Fl. 2: 391. 1878.

Type locality: "In dry situations on the banks of the Missouri."

Range: British Columbia to Ontario and Mexico.

Specimens examined: Olympia, Kincaid, July 4, 1896; Wenache, Whited 169, 1097; Rattlesnake Mountains, Cotton 392; Cascade Mountains to Colville, Lyall in 1860; Pasco, Hindshaw 1; Henderson, June 12, 1892; Crab and Wilson creeks, Sandberg & Leiberg 278; without locality, Vascy in 1889; Clarks Springs, Kreager 141, 16; Chelan, Elmer 505; Lake Chelan, Lake & Hull, August 13, 1892; Spokane, Piper, July, 1896; Wawawai, Lake & Hull 655; Piper, June 9, 1894; Okanogan, Griffiths & Cotton 285; Cow Creek, Griffiths & Cotton 546; Brewster, Griffiths & Cotton 256; Wenache, Griffiths & Cotton 145.

Zonal distribution: Arid Transition and Upper Sonoran.

5. Plantago aristata Michx. Fl. 1: 95. ISO3.

Plantago patagonica aristata A. Gray, Man. ed. 2, 269, 1856.

Type locality: "In pratensibus Illinoensium."

RANGE: British Columbia to Dakota, New Mexico, and Texas. Spreading as a weed eastward.

Specimens examined: Scattle, Gardner 376.

6. Plantago bigelovii A. Gray, Pac. R. Rep. 4: 117, 1856.

Type locality: Benicia, California.

RANGE: British Columbia to California along the coast.

Specimens examined: Whidby Island, Gardner 424; Scattle, Piper & Smith 1088.

Zonal distribution: Humid Transition.

7. Plantago elongata Pursh, Fl. 2: 729, 1814.

Plantago pusilla Nutt. Gen. 1: 100, 1818.

Type locality: "In Upper Louisiana."

Range: Washington to New England and Texas.

Specimens examined: White Salmon, Suksdorf 306; Major Creek, Suksdorf, May 4, 1886.

RUBIACEAE. MADDER FAMILY.

GALIUM.

Annuals; fruit hispid or hirsute.

Leaves mostly in 4's; stems erect, smooth.................... 3. G. bitolium.

Leaves 6 to 8 in each whorl; stems rough on the angles.

Stems erect or ascending; fruit 2 to 3 mm.

1. G. vaillantii. broad _____ 2. G. aparine.

Stems reclining; fruit 4 to 6 mm. broad......

Stems wholly herbaceous.

Perennials.

Leaves 3-nerved in whorls of four.

Fruit hispid.

4a. G. kamtschatieum oreganum.

Leaves oboyate or orbicular, obtuse... 4. G. kamtschaticum.

Fruit canescent, becoming smooth; leaves

linear 5, G, borcale.

Leaves 1-nerved.

Whorls containing four, five, or six leaves;

fruit smooth.

Flowers in clusters of three, or solitary-

axillary 6. G. trifidum. 7. G. cymosum.

Whorls containing six leaves; fruit not

smooth.

Fruit granulate-scabrous..... 8. G. asperrimum.

9, G. triflorum. Fruit hispid with hooked hairs.....

Stems suffrutescent.

Herbage glabrous.

Leaves ovate, thick..... 10. G. multiflorum.

Herbage puberulent; leaves ovate 10b. G. multiflorum puberulum.

Galium vaillantii DC, Fl. Fr. 4: 263, 1805.

Galium aparine minor [us] Hook, Fl. Bor, Am. 1: 290, 1833.

Galium aparine vaillantii Koch, Fl. Germ. 330, 1837.

Type locality: Near Paris, France.

Range: British Columbia to California and Texas.

Specimens examined: West Klickitat County, Suksdorf 1659 (!); between Coulee City and Waterville, Spillman, May, 1896; Coulee City, Piper 3858, Kamiak Butte, Piper 3858.

2. Galium aparine L. Sp. Pl. 1: 108, 1753.

Type locality: European.

Range: Alaska to Canada, southward to California and Texas. Europe. Asia.

Specimens examined: Montesano, Heller 4007; Lopez Island, Lyall in 1858; Peshastin,

Sandberg & Leiberg 505; west Klickitat County, Suksdorf 1659; Skokomish River, Henderson, May 12, 1892; Pullman, Piper.

Zonal distribution: Transition.

3. Galium bifolium S. Wats. Bot. King Explor. 134.-1871.

Type locality: "In the Trinity, Battle, and East Humboldt Mountains, Nevada, and in the Wahsatch."

RANGE: Washington to California, Colorado, and Montana.

Specimens examined: Mount Adams, Suksdorf 328; Mount Stuart, Elmer 1101; Klickitat River, Flett 1194; Blue Mountains, Piper 2406.

ZONAL DISTRIBUTION: Canadian?

4. Galium kamtschaticum Steller; Roem. & Schult. Mant. 3: 186, 1827.

Type locality: Kamtschatka.

RANGE: Alaska to New England and Washington. Siberia.

Specimens examined: Stevens Pass, Sandberg & Leiberg 754.

4a. Galium kamtschaticum oreganum (Britton).

Galium oreganum Britton, Bull. Torr. Club 21: 31. 1894.

Type locality: Oregon. Collected by Howell.

Range: Washington and Oregon in the coast region.

Specimens examined: Clallam County, Elmer 2547; Lake Cushman, Piper 921; Mount Adams, Flett 1192; Goat Mountains, Allen 296; Cascade Mountains, Suksdorf 22; Skamania County, Suksdorf 864; Skokomish Valley, Kineaid, May, 1892; Stampede Pass, Henderson, July 26, 1892.

ZONAL DISTRIBUTION: Canadian.

5. Galium boreale L. Sp. Pl. 1: 108, 1753.

Galium boreale linearifolium Rydberg, Mem. N. Y. Bot. Gard. 1: 375, 1900.

Type locality: "Habitat in Europae borealis pratis."

Range: Alaska to Canada, southward to California, Texas, and Pennsylvania. Europe. Asia.

Specimens examined: Montesano, Heller 4020; San Juan Island, Lyall in 1858; Cascade Mountains, latitude 49°, Lyall in 1859; Muckleshoot Prairie, Dr. Ruln; Snoqualmi Smith 605; Beaver Creek, Whited 18, 228; Ellensburg, Whited 437; North Yakima and Spokane, Henderson, May 27, July 9, 1892; Pullman, Hull 556; Piper 1504; without locality Vasey in 1899.

In some of the older botanical works our plant is erroneously referred to the European G, rubioides L.

Zonal distribution: Transition and Upper Sonoran.

Galium trifidum subbiflorum Wiegand, Bull. Torr. Club 24: 399. 1897.

Type locality: Colorado.

RANGE: Washington to Alberta, south to Arizona and California.

Specimens examined: Westport, Lamb 1107; Cascade Mountains, latitude 49°, Lyall in 1858; Ellensburg, Whited 480; Nason Creek, Sandberg & Leiberg 606; Pullman, Piper, July 25, 1895; Lake Kalispel, Kreager 444.

ZONAL DISTRIBUTION: Transition and Canadian.

This subspecies has the flowers often 2 to each pedicel, and leaves 8 to 10 mm. long.

The northwestern plants referred by Hooker a to G, elaytoni Michx, and G, tinetorium L, undoubtedly belong to G, trifidum.

6a. Galium trifidum pacificum Wiegand, Bull. Torr. Club 24: 400. 1897.

Type locality: Placer County, California.

RANGE: Washington to California.

Specimens examined: Hoquiam, Lamb 1220; Clallam County, Elmer 2547; Scattle, Piper; west Klickitat County, Suksdorf 1661.

This subspecies has solitary flowers and leaves 15 to 25 mm. long.

7. Galium cymosum Wiegand, Bull. Torr. Club 24: 401, 1897.

Type locality: Tacoma, Washington. Collected by Flett.

Range: British Columbia to Oregon near the coast.

Specimens examined: Montesano, Heller 4009; Tacoma, Flett 165, 37; Stuart Island, Lawrence 87; Port Crescent, Lawrence 290.

ZONAL DISTRIBUTION: Humid Transition.

8. Galium asperrimum A. Gray, Mem. Am. Acad. 4: 60, 1849.

Type locality: "Wet places, near irrigating ditches, Sante Fe," New Mexico.

Range: Washington to California and New Mexico.

Specimens examined: Ellensburg, Whited 584; Spangle, Nuksdorf 923; along Tukanon River, Lake & Hull, July 2, 1892; Blue Mountains, Piper, July, 1896; Meyers Falls, Kreager, August 20, 1902, and 508; Pullman, Piper 1804, 1717; Henderson 2487; Elmer, Zonal distribution: Arid Transition.

9. Galium triflorum Michx. Fl. 1: 80, 1803.

Type LOCALITY: Canada.

RANGE: Alaska to Canada, southward to California, Colorado, and Alabama.

Specimens examined: Clallam County, Elmer 2458; Cascade Mountains, latitude 49°, Lyall, in 1859; Silverton, Bouck 98; Skokomish Valley, Kincaid, June 7, 1892; Skagit Pass, Lake & Hull 791; Ellensburg, Whited, June 22, 1897; Nason Creek, Sandberg & Leiberg 651; Blue Mountains, Horner 368; without locality, Vasey in 1889; Clarks Springs, Kreager 34; Mount Rainier, Flett 2150.

ZONAL DISTRIBUTION: Transition.

10. Galium multiflorum Kellogg, Proc. Cal. Acad. 2: 97, 1863.

Type LOCALITY: Washoe, Nevada.

RANGE: Washington to California and Utah.

Specimens examined: Blue Mountains, *Horner*, August 1, 1896; without locality, *Brandegee* 814.

10a. Galium multiflorum watsoni A. Gray, Syn. Fl. 12: 40. 1884.

Type locality: "Cañons and gulches, N. Arizona to E. Oregon and adjacent Idaho."

Range: Washington and Idaho to Arizona.

Specimens examined: Blue Mountains, Horner 372, 373.

10b. Galium multiflorum puberulum subsp. nov.

Whole herbage densely and finely hirtellous; leaves oblong to elliptical or the upper ones ovate.

Specimens examined: Cleman Mountain, Henderson, June 14, 1892; Wenache Whited 88, 1108; Ellensburg, Elmer 414 (type); without locality, Brandegie 813; without locality, Vasey in 1889; junction Cool and Crab creeks, Sandberg & Leiberg 224; Rattlesnake Mountains, Cotton 696.

KELLOGGIA.

1. Kelloggia galioides Torr. Bot. Wilkes. Exped. 332, 1874.

Type locality: Walla Walla River, Washington.

Range: Washington to Wyoming, Arizona, and California.

Specimens examined: Mount Adams, Gorman, August 7, 1897; west Klickitat County, Suksdorf; Klickitat River, Flett 1021; Peshastin, Sandberg & Leiberg 479; Wenache region, Brandegee 816; Roslyn, Whited 473; Clealum, Henderson in 1892.

ZONAL DISTRIBUTION: Canadian,

CAPRIFOLIACEAE. Honeysuckle Family.

Corolla tubular or campanulate; styles elongate.

Creeping vine; flowers in pairs; fruit dry...... Linnaea (p. 528).

Shrubs, erect or climbing; fruit a berry.

Corolla tubular, irregular Lonicera (p. 529).

Corolla rotate or open campanulate, in compound cymes.

Leaves simple Viburnum (p. 531).

LINNAEA.

1. Linnaea americana Forbes, Hort. Woburn. 135, 1833.

Linnaca borealis longiflora Torr. Bot. Wilkes Exped. 327, 1874.

Linnaea longiflora Howell, Fl. N. W. Am. 280, 1900.

Type locality: "America."

RANGE: Alaska to Newfoundland, south to Oregon, Colorado, and Maryland.

Specimens examined: Challam County, Elmer 2739; Cascade Mountains, latitude 49°, Lyall in 1859; Fidalgo Island, Lyall in 1858; Silverton, Bouck 93; upper Nisqually Valley, Allen 19; Blue Mountains, Lake & Hull 547; without locality, Vasey in 1889; Mount Carlton, Kreager 181.

ZONAL DISTRIBUTION: Humid Transition and Canadian.

SYMPHORICARPOS. WAXBERRY.

Corolla campanulate, 2 to 4 mm. long.

Erect shrub; leaves glabrous. 1. S. racemosus.

Trailing shrub; leaves pubescent. 2. S. mollis.

Corolla cylindric-campanulate, 6 to 7 mm. long. 3 S. acutus.

1. Symphoricarpos racemosus Michx. Fl. 1: 107, 180

Type Locality: "Ad lacus Mistassins," Canada.

RANGE: British Columbia to Canada, southward to California and Pennsylvania.

Specimens examined: Montesano, Heller 3948; Clallam County, Elmer 2738; Cascade Mountains, latitude 49°, Lyall; Silverton, Bouck 121a; Orchard Point, Piper, July 15, 1895; Tacoma, Flett 152; Woodlawn, Henderson, June 6, 1892; Falcon Valley, Suksdorf; Lower Cascades, Suksdorf; Peshastin, Sandberg & Leiberg 804; Ellensburg, Whited 456; Sprague, Henderson, May 30, 1892; Pullman, Hull 512; Piper 1892, 1690; Elmer 836; Tukanon River, Lake & Hull, July 2, 1892; Blue Mountains, Piper 2418; without locality, Vasey in 1889; Clarks Springs, Krager 563, 36; Rattlesnake Mountains, Cotton 694.

ZONAL DISTRIBUTION: Transition.

This species varies considerably, especially in the pubescence and the thickness of the leaves. Woodland forms tend to be thinner-leaved than the prairie form, and are usually more pubescent beneath. All gradations seem to occur between plants with leaves perfectly glabrous beneath and those which are quite pubescent. According to Fernald, a the latter is the typical S. racemosa Michx., while the perfectly smooth form he considers a subspecies, S. racemosa laevigata Fernald.

2. Symphoricarpos mollis Nutt.; Torr. & Gr. Fl. 2: 4, 1841.

Type locality, "St. Barbara, California."

RANGE: Washington to California.

Specimens examined: Upper Nisqually Valley, Allen 105; Olympia, Kincaid, July 4, 1896; Mount Adams, Henderson, August 12, 1892; McAllisters, Henderson, June 22, 1892; Blue Mountains, Piper 2412; without locality, Cooper; without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Transition.

The northwestern specimens that have been referred to S. pauciylorus (Robbins) Howell belong apparently to S. mollis.

3. Symphoricarpos acutus (A. Gray) Howell, Fl. N. W. Am. 281, 1900.

Symphoricarpos mollis acutus A. Gray, Syn. Fl. 12: 14, 1878.

Symphoricar pos vaccinoides Rydberg, Mem. N. Y. Bot, Gard. 1: 371, 1900.

Type locality: "Washington Terr., east of the Cascade Mountains." Collected by Pickering and Breckenridge.

RANGE: Washington and Oregon to Montana.

Specimens examined: Without locality, Pickering & Breekenridge: Mount Adams, Suksdorf 188; Egbert Springs, Sandberg & Leiberg 367; Simcoe Mountains, Horell 328; Wenache Mountains, Whited 1282; Nile River, Henderson 2565; Blue Mountains, Piper 2394; without locality, Vascy in 1889.

ZONAL DISTRIBUTION: Arid Transition and Canadian!

The type of S, acutus has unusually narrow leaves, but it seems not distinguishable from S, raccinoides. This species is near S, rotundifolius Λ . Gray, to which specimens have commonly been referred.

Symphoricarpos occidentalis a is said in the original description to have been collected at "Fort Vancouver" by Douglas; Cooper also lists this species as "common."

With little doubt these references belong to *S. racemosus*, as no trace of *S. occidentalis* has been found by recent collectors in Washington.

LONICERA. Honeysuckle.

Climbing shrubs; flowers in terminal clusters; upper leaves connateperfoliate.

Flowers orange; stamens and style little exserted............ 1. L. ciliosa.

Flowers pink; stamens and style long-exserted. 2. L. hispidula.

Erect shrubs; flowers on axillary peduncles in pairs; upper leaves not connate.

Bracts small and narrow.

Leaves somewhat pale beneath; berries blue-black.......... 6. L. cocrulea.

Leaves green on both sides; berries red.

Corolla dark-purple, 2-lipped. 4. L. conjugialis.
Corolla whitish, its lobes subequal. 5. L. utahensis.

1. Lonicera ciliosa (Pursh) Poir, Encyc. Suppl. 5: 612, 1817.

Caprifolium ciliosum Pursh, Fl. 1: 160, 1814.

Lonicera occidentalis Lindl. Bot. Reg. 17: pl. 1457, 1831.

Type locality: "On the banks of the Kooskoosky," Idaho. Collected by Lewis, near the present town of Kamiah.

RANGE: British Columbia to Montana, southward to California and Arizona.

Specimens examined: Montesano, Heller 3938; upper Valley Nisqually, Allen 113; Seattle, Piper, June, 1892; Klickitat County, Suksdorf; Klickitat River, Flett 1264; Peshastin, Sandberg & Leiberg 554; Cascade Mountains, Lyall in 1859; lower Cascades, Suksdorf; Skokomish Valley, Kincaid, June 15, 1892; Clealum, Henderson, June 11, 1892; without locality, Vascy in 1889; Mount Carlton, Kreager 200; Stehekin, Griffiths & Cotton 217.

Zonal distribution: Transition.

The color of the flowers of this species varies from pale orange to nearly scarlet.

2. Lonicera hispidula Dougl.; Lindl. Bot. Reg. 21: pl. 1761. 1836.

Caprifolium hispidulum Lindl. l. c.

Louicera! microphylla Hook. Fl. Bor. Am. 1: 283, 1833, not Willd. 1819.

Type locality: "In the woods of North West America." Collected by Douglas.

Range: British Columbia to Oregon in the coast region.

Specimens examined: Puget Sound, Henderson in 1892; Seattle, Piper in 1885; Orchard Point, Piper, July, 1895; Tacoma, Flett 128.

ZONAL DISTRIBUTION: Humid Transition.

3. Lonicera involucrata Banks; Richards, Bot. App. Frankl. Journ. 733, 1823.

Lonicera ledebouri Esch. Mem. Acad. Petersb. 10: 284, 1826.

Xylosteum involucratum Richards, Bot. App. Frankl. Journ. 733, 1823.

Type locality: "Wooded country from 54° to 64° north," British America.

RANGE: Alaska to Canada southward to California, Colorado, and Lake Superior.

Specimens examined: Cascade Mountains, Mrs. Steinweg in 1894; mountains north of Ellensburg, Whited, August 28, 1898; Piper, May 20, 1897; near Skagit Pass, Lake & Hull 543; Wenache Mountains, Elmer 436; upper Nisqually Valley, Allen 215; Entiat Creek, Mrs. Howe; Nason Creek, Sandberg & Leiberg 610; Blue Mountains, Piper, July, 1896; without locality, Vasey in 1889; Mount Carlton, Kreager 256; Hoquiam, Lamb 1014; Admiralty Head, Piper, May, 1898; Tacoma, Flett 60; McAllisters Lake, Henderson, June 22, 1892; Ilwaco, Piper 4956; Stehekin, Griffiths & Cotton 197; Clealum Creek, Cotton 829.

ZONAL DISTRIBUTION: Transition.

4. Lonicera conjugialis Kellogg, Proc. Cal. Acad. 2: 67, 1863.

Xylosteum conjugialis Howell, Fl. N. W. Am. 282, 1902.

Type locality: "Washoe," Nevada. Collected by Dr. J. A. Veatch.

RANGE: Washington and Idaho to Nevada and California.

Specimens examined: Mount Adams, Suksdorf 389; Simcoe Mountains, Howell 296; Big Klickitat River, Henderson August 4, 1892.

Zonal distribution: Canadian.

5. Lonicera utahensis S. Wats. Bot. King Explor. 133, 1871.

Lonicera chractulata Rydberg, Mem. N. Y. Bot. Gard. 1: 372, 1900.

Xylosteum utaliense Howell, Fl. N. W. Am. 282, 1900.

Type locality: "Wasatch Mountains, Utah, in Cottonwood Canon; 9,000 feet altitude."

RANGE: British Columbia to Montana and Utah.

Specimens examined: Olympic Mountains, Flett 99; Elmer 2736; Blue Mountains, Horner 319, Piper, July, 1896; Mount Carlton, Kreager 283.

Zonal distribution: Canadian and Hudsonian.

6. Lonicera coerulea L. Sp. Pl. 1: 174, 1753.

Xylosteum villosum Michx. Fl. 1: 106, 1803.

Type locality: "In Helvetia."

Range: Alaska to Labrador, south to California, Wisconsin, and New England.

Specimens examined: Mount Adams, Suksdorf 559.

SAMBUCUS. ELDER.

Inflorescence flat-topped; berries black with a bloom. 1. S. glauca. Inflorescence pyramidal.

Berries red, rarely yellow or chestnut 2. S. callicarpa.
Berries black 3. S. melanocarpa.

1. Sambueus glauca Nutt.; Torr. & Gr. Fl. 2: 13, 1841.

Type locality: "Plains of the Oregon, near the Blue Mountains." Collected by Nuttall.

Range: Washington and Idaho to California and Nevada.

Specimens examined: Challam County, Elmer 2740; Scaftle, Piper; Nisqually Valley, Allen 302; Wenache, Whited 1248; Ellensburg, Whited, June 6, 1897; Olympia, Heller 4050; Egbert Springs, Sandberg & Leiberg 363; Lake Chelan, Lake & Hull 546; Blue Mountains, Piper, August 2, 1896; Pullman, Piper 1726; without locality, Brandegee 809; without locality, Vascy 289; Clarks Springs, Kreager 73, 560; Rattlesnake Mountains, Cotton 757; Stehekin, Griffiths & Cotton 224.

Zonal distribution: Transition, especially Arid.

The name Sambucus cocrulea Raf. Alsographia Am. 48, 1838, undoubtedly pertains to our plant, but it may be questioned if it is really published. Rafinesque bases the name wholly upon a brief mention in the journals of Lewis and Clark of an elder with blue berries.

2. Sambucus callicarpa Greene, Fl. Fran. 342, 1892.

Sambucus racemosa arborescens (Nu(t.) Torr. & Gr. Fl. N. Am. 2: 13, 1811, not 8, arborescens Gilib. 1: 5, 1792.

Sambucus leiosperma Leiberg, Proc. Biol. Soc. Wash. 11: 40, 1897.

Sambucus pubens Michx, var. Cooper Pac. R. Rep. 122: 64, 1860.

Sambueus arboreseeus Howell, Fl. N. W. Am. 279, 1900.

Type locality: "By streams * * * along the Coast Range," California.

Range: British Columbia to California in the coast region.

Specimens examined: Clallam County, Elmer 2737; Skokomish River, Kincaid in 1890; Seattle, Piper in 1887; Montesano, Heller 3922; Cape Disappointment, Engelmann & Sargent, July 13, 1880; Silverton, Bonck 95; Bridge Creek, Elmer 662; Cascade Mountains to Fort Colville, latitude 49°, Lyall in 1860; Stevens Pass, Whited 1435; without locality Vascy in 1889; Nason Creek, Sandberg & Leiberg 670; Skagit Pass, Lake & Hull 545; Wenache region, Brandegee 808 (the last two specimens have the nutlets somewhat rugose).

Zonal distribution: Humid Transition.

The fruit is usually brilliant scarlet, but occasionally yellow. Along the bluff between Seattle and Everett the great majority of the plants have the fruit chestnut-colored, but the plants are otherwise identical with the ordinary scarlet-fruited form.

3. Sambucus melanocarpa A. Gray, Proc. Am. Acad. 19:76, 1883.

Type locality: "First collected in New Mexico by Fendler."

RANGE: Washington and Montana to California and New Mexico.

Specimens examined: Mount Adams, Suksdorf 1664, 327; Blue Mountains, Piper 2452, Mount Carlton, Kreager 246.

Zonal distribution: Canadian.

5. VIBURNUM.

Cyme radiant, that is the outer flowers neutral and enlarged....... 1. V. apulns. Cyme not radiant.

Leaves roundish, mostly 3-lobed. 2. V. pauciflorum.

Leaves oval to elliptic, dentate. 3. V. ellipticum.

1. Viburnum opulus L. Sp. Pl. 1: 268, 1753.

Viburnum opulus americanum Ait. Hort. Kew. 1: 373, 1789.

Type locality: European.

RANGE: British Columbia to New Brunswick, south to Oregon and Pennsylvania.

Specimens examined: Cape Horn, Piper 4976. Reported by Lyafla as occurring on Sumas River, latitude 49°.

Zonal distribution: Humid Transition.

Viburnum pauciflorum Pylaie; Torr. & Gr. Fl. 2; 17, 1841. High bush cranberry. Viburnum accrifolium L. err. det. Bong. Mem. Acad. St. Peterb. VI. 2; 144, 1832.

Type locality: Newfoundland.

Range: Alaska to Labrador, southward to Washington, Colorado, Saskatchewan, and New England.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Silverton, Bouck 94; Mount Adams, Suksdorf 388; Goose Lake, Flett 1345; Stevens Pass, Sandberg & Leiberg 722; Simcoe Mountains, Howell: Lake Chelan, Lake & Hull 548; without locality, Vascy in 1889.

ZONAL DISTRIBUTION: Canadian and Hudsonian.

3. Viburnum ellipticum Hook. Fl. Bor. Am. 1: 280, 1833.

Viburnum ellipticum macrocarpum Suksdorf, Deutsch. Bot. Monatss. 18: 97, 1900.

Type locality: "Common on the branches of the Columbia near its confluence with the Pacific." Collected by Douglas.

RANGE: Washington to north California.

Specimens examined: Lower Cascades, Suksdorf in 1886; west Klickitat County, Suksdorf 1213; Cape Horn, Piper 5019.

According to Suksdorf there are two distinct subspecies, one distinguished by having much larger fruit than the other.

VALERIANACEAE. VALERIAN FAMILY.

Perennials; calyx limb of 5 to 15 plumose slender lobes, inrolled	
until fruiting	Valeriana.
Annuals; calyx limb obsolete or nearly so	Valerianella,

VALERIANA.

Tube of corolla slender, twice as long as the limb; stamens

Tube of corolla short, less than twice the limb.

1. Valeriana ceratophylla (Hook).

A

Товассо гоот.

Valeriana edulis Nutt.; Torr. & Gr. Fl. 2: 48, 1841.

Patrinia ceratophylla Hook, Fl. Bor, Am. 1: 290, 1833.

Ediver.

Type locality: "Common in low, wet soils between the Kettle Falls and Spokan." Collected by Douglas.

RANGE: British Columbia to Arizona and New Mexico and eastward to Ohio.

Specimens examined: Klickitat County, Howell; Ellensburg, Whited 6; Sprague, Henderson, May 30, 1892; Spokane County, Suksdorf 329; Medical Lake, Sandburg & Leiberg 53; "Kettle Falls to Spokane, plentiful," Douglas, Pullman. Piper 1506; Hull 541; Elmer 822.

ZONAL DISTRIBUTION: Arid Transition.

2. Valeriana sitchensis Bong, Mem. Acad, St. Petersb. VI. 2: 145, 1832.

Type locality: Sitka.

RANGE: Alaska to Oregon and Idaho.

Specimens examined: Olympic Mountains, J. M. Grant in 1890; Baldy Peak, Lamb 1339a; Mount Adams, Henderson, August 8, 1892; Suksdorf 467; Mashel River, Piper 2629; Silverton, Bouck 99; Goose Lake, Flett 1203; Nason Creek, Sandberg & Leiberg 691; Mount Rainier, Piper, August, 1895; Wenache Mountains, Elmer 440; Okanogan County, Whited 47, 182; Cascade Mountains, Steinweg in 1894; Horseshoe Basin, Lake & Hull 540; Blue Mountains, Piper, July 15, 1896; without locality, Vascy in 1889; Clallam County, Elmer 2792.

Zonal distribution: Hudsonian.

In Cooper's Report, p. 64, this plant was erroneously referred to V. capitata Willd.

2a. Valeriana sitchensis scouleri (Rydberg).

Valeriana scouleri Rydberg, Mem. N. Y. Bot. Gard. 1: 377, 1900.

Valeriana capitata hookeri Torr. & Gr. Fl. 2: 48, 1844, not V. hookeriana Wight & Arn. 834.

Type locality: "Moist rocks and islands of the Columbia River." Collected by Douglas and by Scouler.

Range: Washington and Oregon to Montana.

Specimens examined: Mount Baldy, Olympic Mountains, Conard 296; Lake Crescent, Lawrence 256; Eatonville, Flett 2204; Mashel River, Piper in 1889; Mount Rainier, Allen 243; Montesano, Heller 3937.

Zonal distribution: Canadian.

3. Valeriana columbiana Piper, Bot. Gaz. 22: 489, 1896.

Type locality: Mountains near Wenache. Collected by Whited.

Range: Wenache Mountains.

Specimens examined: Mount Stuart, Sandberg & Leiberg 551; ridge west of Wenache, Whited 140.

Zonal distribution: Arid Transition.

Valeriana sylvatica Banks appears in Suksdorf's list, but we have been unable to find any good evidence that this species occurs within our limits.

VALERIANELLA.

Fruit obscurely keeled on the back; cotyledons incumbent.

Wings broad, as long as the body of the fruit................ 1. 1. 1. Macrocera.

Wings narrow, shorter than the body of the fruit. 2. 1. mamillata.

Fruit strongly keeled on the back: cotyledons accumbent.

Flowers rose-color; fruit broadly winged..................... 3. V. congesta.

Flowers pale or white.

Corolla spurless; fruit winged 4. V. anomala.

Corolla spurred.

Fruit wingless 6. V. samolifolia.

Mr. Suksdorf erects the latter group of species into a genus, Aligera, and the former group he retains in Plectritis, considering both distinct from Valerianella.

1. Valerianella macrocera (Torr. & Gr.) A. Gray, Proc. Am. Acad. 19: 83, 1883.

Plectritis macrocera Torr. & Gr. Fl. 2: 50, 1841.

Aligera grayi Suksdorf, Dentsch. Bot. Monatss. 4: 147, 1897.

Type locality: California. Collected by Douglas.

RANGE: Washington and Idaho to California and Arizona.

Specimens examined: Klickitat County, Suksdorf 23, 25, 218, 24, 5, 330; Ellensburg, Piper, May 20, 1897; Whited 311; North Yakima, Mrs. Steinweg: Leckenby: Henderson: Flett 1038; Tampico, Flett 1219; Wenache, Whited 1030; Pasco, Piper 2957; Douglas County, Spillman: Sprague, Sandberg & Leiberg 206; Henderson, May 20, 1892; Spokane, Piper 2945; Hangman Creek, Sandberg & Leiberg 60; Waitsburg, Horner: Pullman, Piper 1789; Hull: Elmer 179; Wawawai, Piper 1505; opposite Clarkston, Horner 32; without locality, Vascy in 1889; Snipes Mountain, Cotton 314; Rattlesnake Mountains, Cotton 335.

Zonal distribution: Arid Transition and Upper Sonoran.

Mr. Suksdorf considers that this species is really an aggregate of several, which he distinguishes as follows, so far as the Washington species are concerned:

Corolla pale, the limb equally 5-lobed.

Corolla 2-lipped, rose-colored.

Corolla 2 to 3 mm, long; spur 2 to 3 mm, long.

True macrocera on this basis is confined to California. The remaining segregates occur in Washington.

2. Valerianella mamillata (Suksdorf).

Aligera mamillata Suksd.; Deutsch. Bot. Monatss. 4: 147, 1897.

Type locality: Sinicoe Mountains, Washington.

Range: Known only from the type locality.

Specimens examined: Simcoe Mountains, Suksdorf.

This species seems to us perfectly valid, the fruit appearing long-beaked partly owing to the short wings.

3. Valerianella congesta Lindl. Bot. Reg. 13: pl. 1094, 1827.

Pleetritis congesta DC. Prod. 4: 631, 1830.

Pleetritis microptera Suksdorf, Deutsch. Bot. Monatss. 4: 119, 1897.

Betekea major Fisch. & Mey. Ind. Sem. Hort. Petrop. H. 5: 30, 1837.

Plectritis major Hoeck; Engl. Bot. Jahrb. 3: 37, 1882.

Type locality: "Native of the north-west coast of North America." Collected by Douglas in 1826.

RANGE: British Columbia to California in the coast region.

Specimens examined: Compeville, Gardner 147; Admiralty Head, Piper, May, 1898; Tacoma, Flett 55, 55; west Klickitat County, Suksdorf, May, 1881; Bingen, Sheldon 10220; Cape Horn, Piper 4984.

Zonal distribution: Humid Transition.

Three forms of this plant occur as to fruit, one wingless (major), the second narrowly winged (microptera), the third broadly winged (congesta). They are considered distinct species by Suksdorf, but they do not differ in any character but the fruit. All three forms occur in Washington.

Plectritis conquesta minor Hook, a has usually been considered a synonym of V, macrocera, but its type locality "near the mouth of the Columbia" is a region where macrocera is not known to occur.

4. Valerianella anomala A. Gray, Proc. Am. Acad. 19: 83, 1883.

Plectritis anomala Suksdorf, Deutsch. Bot. Monatss. 4: 144, 1897.

Type locality: "Wet grounds on the Columbia River and near it." Collected by Howell and by Suksdorf.

Range: Washington and Oregon.

Specimens examined: Hoquiam, Lamb 1021; Klickitat County, Suksdorf 26; Bingen, Sheldon 10221.

ZONAL DISTRIBUTION: Humid Transition.

5. Valerianella aphanoptera A. Gray, Proc. Am. Acad. 19: 83, 1883.

Plectritis aphanoptera Suksdorf, Deutsch. Bot. Monatss. 4: 144, 1897.

Type locality: Klickitat County, Washington. Collected by Suksdorf.

Range: Washington and Oregon.

Specimens examined: West Klickitat County, Suksdorf, June 9, 1882.

6. Valerianella samolifolia (DC.) A. Gray, Proc. Am. Acad. 19: 83, 1883.

Betekea samolifolia DC. Prod. 4, 642, 1830.

Type locality: "In pascuis montanis prope la Punta de Cortes Chilensium."

RANGE: Washington to California. Chile.

Specimens examined: Admiralty Head, Piper in 1898; west Klickitat County, Suksdorf 111, 332; Port Crescent, Lawrence 263.

Zonal distribution: Humid Transition.

Valerianella olitoria (L.) Poll., the cultivated "corn salad," is an occasional garden escape.

DIPSACEAE.

1. DIPSACUS.

1. Dipsacus sylvestris Mill. Gard. Dict. ed. 8. no. 1, 1768.

Teasel.

Type locality: European.

Specimens examined: Port Townsend, Edwards, July, 1896; Spokane Dewart, August 20, 1902; Waitsburg, Piper, July 19, 1896.

CUCURBITACEAE. GOURD FAMILY.

1. MICRAMPELIS.

1. Micrampelis oregana (Torr. & Gr.) Greene, Pittonia 2: 129, 1890.

Megarrhiza oregana Torr. Pac. R. Rep. 6: 74, 1855.

Siegos oreganus Torr. & Gr. Fl. 1: 542, 1840.

Echinocystis oregana Cogn, Mem. Cour. Ac. Belg. 28: 87, 1878.

Siegos angulatus L. err. det. Hook. Fl. Bor. Am. 1: 220, 1834.

Type locality: "On the Oregon from near its month to Kettle Falls." Collected by Scouler, Douglas, and Tolmic.

RANGE: British Columbia to California in the coast region. Umatilla County, Oregon.

Specimens examined: Montesano, Heller 3873; Orcas Island, Lyall in 1858; Tacoma, Flett 184; East Sound, Henderson, July, 1892; Fort Vancouver, Tolmic; west Klickitat County, Suksdorf 127.

Zonal distribution: Humid Transition.

CAMPANULACEAE. BLUEBELL FAMILY.

Corolla regular; anthers separate.

Calyx lobes narrow; capsules opening by small valve-like lat-

eral openings.

Corolla rotate; earlier flowers cleistogamous................ Specularia (p. 536).

Corolla campanulate; no cleistogamous flowers......... Campanulat (p. 536).

Calyx lobes large, foliaceous.

Corolla tubular-campanulate; capsule opening by a hole

Corolla open-campanulate; capsules bursting irregularly;

Corolla irregular; anthers united.

Tube of the corolla very long, not cleft..................... Bolelia (p. 537).

GITHOPSIS.

1. Githopsis specularioides Nutt. Trans. Am. Phil. Soc. 8: 258, 1843.

Type Locality: "Plains near the outlet of the Wahlamet," Oregon. Collected by Nuttall.

Range: Washington to California.

Specimens examined: American Lake, Flett, June 10, 1895; foothills, Blue Mountains, Horner 158; Waitsburg, Horner 402; without locality, Cooper; Almota, Sheldon in 1898.

ZONAL DISTRIBUTION: Transition.

SPECULARIA.

1. Specularia perfoliata (L.) A. DC. Monogr. Camp. 351, 1830.

Venus's looking-glass.

Campanula perfoliata L. Sp. Pl. 1: 169, 1753.

Legouzia perfoliata Britton, Mem. Torr. Club 5: 309, 1894.

Type locality: "Habitat in Virginia."

RANGE: Washington to Canada, southward to Utah and Texas. Mexico.

Specimens examined: Whidby Island, Gardner 186; Charleston, Piper, July 21, 1895; Bingen, Suksdorf 1548; Columbia Valley, Lyall in 1860; Fort Vancouver, G. H. Hicks, June 24, 1890; Spokane, Henderson, July 10, 1892; Almota, Lake & Hull 558; Wawawai, Elmer 756; Piper 1888; Clarks Springs, Spokane County, Kreager 901.

ZONAL DISTRIBUTION: Upper Sonoran and Transition.

CAMPANULA.

Herbage glabrous; at least the basal leaves not entire.

Cauline leaves linear, entire; basal orbicular or cordate...... 2. C. rotundifolia. Cauline leaves spatulate-lanceolate, dentate; basal similar.... 3. C. piperi.

1. Campanula scouleri Hook.; A. DC. Monog. Camp. 312. 1830.

Type locality: "Fort Vancouver on the Columbia," Washington. Collected by Scouler.

Range: Alaska to California west of the Cascade Mountains.

Specimens examined: Montesano, Heller 3956; Orchard Point, Piper, July, 1895; Seattle, Piper 127; upper Nisqually Valley, Allen 21; Falcon Valley, Suksdorf 76; McAllisters Lake, Henderson, June 22, 1892; Fort Vancouver, Tolmie: Tumwater Canyon, Wenache River, Whited 1454; without locality, Vasey 389, 387; Clallam County, Elmer 2741.

Zonal distribution: Humid Transition.

Hooker a distinguishes two subspecies as follows: C. scouleri hirsutula, with the calyx lobes erect, and C. scouleri glabra, with the calyx lobes open-spreading.

2. Campanula rotundifolia L. Sp. Pl. 1: 163, 1753.

Campanula linifolia DC, err. det. Hook. Fl. Bor. Am. 2: 27, 1834.

Type locality: European.

Range: Alaska to Labrador, south to Mexico, Nebraska, and Pennsylvania. Europe. Asia.

Specimens examined: Mount Rainier, Flett 257; Piper, August 1895, 467; Cascade Mountains, latitude 49°, Lyall; Woodlawn, Henderson, June 22, 1892; Falcon Valley, Suksdorf 1549; Fish Lake, Dunn, August 8, 1900; Horseshoe Basin, Lake & Hull 557; Spokane, Piper, July 18, 1894; Spokane Region, Spalding; Silverton, Bouck 118; Loon Lake, Winston, July 20, 1897; without locality, Vasey in 1889; Clallam County, Elmer 2742; Tumwater Canyon, Whitel 1454.

Zonal distribution: Transition to Hudsonian.

This species is very variable and has been considered an aggregate of several species. Our ordinary form with erect sepals and thickish leaves accords with C, $petiolata\ DC.b$

3. Campanula piperi llowell, Fl. N. W. Am. 1: 409, 1901.

Type locality: Mount Steele, Olympic Mountains, Washington.

Range: Olympic Mountains, Washington.

Specimens examined: Olympic Mountains, Flett 125, 814; Elmer 2743; Mount Steele, Piper 2217; Mount Storm King, Lawrence 342.

ZONAL DISTRIBUTION: Arctic.

This species is allied to C. aurita Greene of Alaska, to which it has been referred.

4, Campanula scabrella Engelm. Bot. Gaz. 6: 237, 1881.

Type locality: "On bleak rocky ridge of Scott Mountain, west of Mt. Shasta," California.

Range: Washington to California.

Specimens examined: Wenache Mountains, Brandegee 937; Mount Stuart, Brandegee 938; Mount Adams, Henderson, August 10, 1892; Suksdorf 38; Howell 448.

ZONAL DISTRIBUTION: Arctic.

HETEROCODON.

1. Heterocodon rariflorum Nutt. Trans. Am. Phil. Soc. 8; 255, 1843.

Type locality: "Grassy plains of the Wahlamet and Oregon," Oregon. Collected by Nuttall.

Range: British Columbia to Idaho and California.

Specimens examined: Naches River, Henderson, June 13, 1892; Peshastin, Sundberg & Leiberg 584; Glenwood, Flett 1209; Klickitat River, Flett 1147; Pullman, Piper 1855, 1748; without locality, Cooper; Clarks Springs, Kreager 14.

ZONAL DISTRIBUTION: Transition.

RAPUNTIUM. LOBELIA.

 Aquatic; leaves all basal, terete, hollow.
 1. R. dortmanna.

 Terrestrial; stems leafy.
 2. R. kalmii.

1. Rapuntium dortmanna (L.) Presl, Prod. Mon. Lobel. 18, 1836.

Lobelia dortmanna L. Sp. Pl. 2: 929, 1753.

Type locality: "Habitat in Europae frigidissimae lacubus & ripis."

Range: Subarctic regions, southward to Washington and Pennsylvania. Europe.

Specimens examined: Whatcom County, Suksdorf 983; Gardner 412; Lake Crescent, Laurence 312.

2. Rapuntium kalmii (L.) Presl, Prod. Monogr. Lobel. 23, 1836.

Lobelia kalmii L. Sp. Pl. 2: 930.

Type locality: "Habitat in Canada."

Range: Washington to Nova Scotia, south to Ohio and New Jersey.

Specimens examined: Priest Rapids, Cotton 1382.

BOLELIA.

1. Bolelia elegans (Dougl.) Greene, Pittonia 2: 126, 1890.

Clintonia elegans Dougl. Bot. Reg. 15: pl. 1241, 1829.

Downingia elegans Torr. Bot. Wilkes Exped. 2: 375, 1874.

Type locality: "On the plains of the Columbia near Walla Walla River and near the head springs of the Multnomah." Collected by Douglas.

RANGE: Washington and Idaho to California.

Specimens examined: Harrison, H. H. Garretson in 1895; Manor, Clarke County, Piper, July 14, 1897; Centralia, Lamb 1129; Colville, Watson in 1880; Lake Kalispel, Kreager, August 9, 1902 and 316; Spokane, Henderson, July 9, 1892; Crab and Wilson creeks, Sandberg & Leiberg 287; Pullman, Hull 451; Piper 1728; without locality, Vasey in 1889.

ZONAL DISTRIBUTION: Transition.

CICHORIACEAE. CHICORY FAMILY.

Pappus none; akenes 20 to 30-nerved; flowers yellow, Lapsana (p. 538). Pappus present.

Bristles of pappus scale-like or plumose.

Flowers not yellow.	
Akenes beaked : pappus brown, plumose ; flowers violet .	Tragopogon (p. 539).
Akenes beakless.	
Pappus a crown of short scales; flowers blue	
Pappus plumose; flowers pink or white	Ртіговіл (р. 539).
Flowers yellow.	
Receptacle chaffy: pappus bristles plumose, not broad-	
ened at base	Hypochaeris(p.541).
Receptacle naked; pappus scale-like, or the bristles	
broadened at base.	
Heads nodding when young; scales 15 to 20, each	
bearing a very plumose awn.	Ptilocalais (p. 541).
Heads erect even when young.	
Pappus of plumose or subplumose bristles	
slightly enlarged at base.	
Heads solitary on bractless scapes or	
peduncles	Scorzonella (p. 540).
Heads usually several on branching	
bracteolate scapes	Leontodon (p. 541),
Pappus of chaff-like scales.	
Scales 20 to 24, linear-lanceolate, not	
awned	Хотносадаіs (р. 540).
Scales 5 to 10, awned, the awn rising	
from the notclied apex	Uropappus (p. 539).
Bristles of pappus capillary, never plumose.	
Heads solitary; leaves all basal.	
Akenes smooth at apex, beakless or long-beaked	Agoser's (p. 541).
Akenes spinulose at apex, long-beaked	Taraxacum (p. 545).
Heads several; leaves not all basal.	
Akenes flattened.	
Flowers yellow; akenes truncate, not beaked	Sonchus (p. 549).
Flowers blue, pink, or yellow; akenes narrow at	
summit or beaked	Lactuca (p. 548).
Akenes terete, cylindric or prismatic.	
Pappus white, persistent	Crepis (p. 545).
Pappus tawny.	
Flowers yellow (or in one species white)	
Flowers pinkish	Nabalus (p. 548.)
LAPSANA.	

LAPSANA.

1. Lapsana communis L. Sp. Pl. 2: 811, 1753.

Type locality: European.

Specimens examined: Seattle, Piper in 1888; west Klickitat County, Suksdorf 146; Vancouver, Piper, July 10, 1899.

CICHORIUM.

1. Cichorium intybus L. Sp. Pl. 2: 813, 1753.

CHICORY.

Type locality: "Hab, in Europa ad margines agrorum viarumque." Specimens examined: Seattle, Piper in 1892.

PTILORIA.

Plumose to the very base 2. P. tenuifolia.
Plumose only above the middle 3. P. exigua.

1. Ptiloria paniculata (Nutt.) Greene, Pittonia 2: 132, 1890.

Stephanomeria paniculata Nutt. Trans. Am. Phil. Soc. 7; 428, 1841.

Type locality: "On the Rocky Mountain plains towards the Colorado."

Range: Washington and Idaho to Nevada.

Specimens examined: North Yakima, Piper 2757; Pasco, Henderson, June 12, 1892; west Klickitat County, Suksdorf 982; Major Creek, Suksdorf in 1882; Rock Island, Sandberg & Leiberg 433; White Bluff Ferry, Lake & Hull 690; Wawawai, Piper, July 31, 1893.

Zonal distribution: Upper Sonoran.

2. Ptiloria tenuifolia (Torr.) Raf. Atl. Journ. 145, 1832.

Prenanthes? tennifolia Torr. Ann. Lyc. N. Y. 2; 210, 1828.

Lygodesmia minor Hook, Fl. Bor, Am. 1: 205, 1833.

Stephanomeria minor Nutt, Trans. Am. Phil. Soc. 7: 427, 1841.

Ptiloria filifolia Greene, Pittonia 3; 311, 1898.

Type locality: "Rocky Mountains," Collected by James.

Range: British Columbia to California and Texas.

Specimens examined: Twisp River, Whited, July 20, 1896; Wenache, Whited 8, 2582, 1311; Elmer 479; White Bluff Ferry, Lake & Hull 812; North Yakima, Watt, August, 1895; Ellensburg, Piper 2747; Whited 561; without locality, Vascy 555; without locality, Brandegee 934, 935; Fort Walla Walla, Lyall in 1860; Spokane, Kreager 530; Kittitas Valley, J. Howell in 1877.

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

3. Ptiloria exigua (Nutt.) Greene, Pittonia 2: 132, 1890.

Stephanomeria exigua Nutt. Trans. Am. Phil. Soc. 7; 428, 1841.

Type locality: "On the Rocky Mountain plains toward the Colorado."

Range: Washington and Wyoming to California and Texas.

Specimens examined: North of Morgans Ferry, Suksdorf 377; North Yakima, Watt, August, 1895.

ZONAL DISTRIBUTION: Upper Sonoran.

TRAGOPOGON.

1. Tragopogon porrifolius L. Sp. Pl. 2: 789, 1753.

Salsify. Oyster plant.

Type locality: Not given.

Specimens examined: Ellensburg, Elmer, July, 1897.

UROPAPPUS.

1. Uropappus linearifolia (DC.) Nutt. Trans. Am. Phil. Soc. 7: 425, 1841.

Microseris linearifolia Schultz Bip. Pollichia 22-24: 308, 1866.

Calais linearifolia DC. Prod. 7: 85, 1838.

Calais macrochaeta A. Gray, Pl. Fendl. 112, 1849.

Microseris macrochaeta Schultz Bip. Pollichia 22-24: 309, 1866.

Type locality: "In California legit cl. Douglas et circa Fort Vancouver cl. Garry."

Range: Washington and Idaho to California and New Mexico.

Specimens examined: West Klickitat County, Suksdorf, April, May, 1886; Rockland, Suksdorf, April 10, 1886; Almota, Piper, June 3, 1893.

ZONAL DISTRIBUTION: Upper Sonoran.

Calais macrochaeta Gray is founded upon immature specimens collected by Spalding on the Clearwater, Idaho. They are undoubtedly young plants of C. linearifolia, as the pappus of that species shows just the transitions from young flowers to adult akenes needed to connect the differences supposed to be specific.

NOTHOCALAIS.

1. Nothocalais troximoides (A. Gray) Greene, Bull. Cal. Acad. 2: 55, 1886.

Microseris troximoides A. Gray, Proc. Am. Acad. 9: 211, 1874.

Nothocalais suksdorfii Greene, Bull. Cal. Acad. 2: 54, 1886.

Type locality: "From the hills on the Clearwater River," Idaho. Collected by Spalding.

RANGE: Idaho and Washington to California.

Specimens examined: Ellensburg, Piper 2678; Kincaid 344; North Yakima, Mrs. Steinweg in 1894; Leckenby, April 22, 1898; west Klickitat County, Suksdorf, April, May, 1886; Klickitat County, Howell, June, 1879; Wenache, Whited 78, 1038; Rattlesnake Mountains, Cotton 323; Sprague, Sandberg & Leiberg 147; Spangle, Piper 2438; Spokane, Henderson, May 31, 1892; Hangman Creek, Sandberg & Leiberg 38; Blue Mountains, Piper 2439; Walla Walla region, Brandegee 929; Waitsburg, Horner 325; Mabton, Cotton 747; Prosser, Cotton 585.

ZONAL DISTRIBUTION: Arid Transition.

The distinctions relied upon by Professor Greene to separate two supposed species seem too unstable. In the type specimen of transmides the paleae are not "very unequal."

SCORZONELLA.

1. Scorzonella borealis Greene, Pittonia 2: 19, 1889.

Apargia boreale Bong, Mem. Acad. St. Petersb. V1. 2: 146, 1832.

Leontodon boreale DC. Prod. 7: 102, 1838.

Apargidium boreale Torr. & Gr. Fl. 2: 474, 1843.

Microseris borealis Schultz Bip. Pollichia 22-24: 310, 1866.

Type locality: Sitka.

Range: Alaska to California.

Specimens examined: Mount Rainier, Flett 281; Greene in 1889; without locality, Tolmie

ZONAL DISTRIBUTION: Hudsonian.

2. Scorzonella leptosepala Nutt. Trans. Am. Phil. Soc. 7: 426, 1841.

Microseris leptosepala (Nutt.) A. Gray, Proc. Am. Acad. 9: 209, 1874.

Type locality: "Near the outlet of the Wahlamet." Collected by Nuttall.

Range: Washington to California in the coast region.

Specimens examined: Falcon Valley, Suksdorf 147, 148, 149, June 26, 1886.

3. Scorzonella bolanderi (A. Gray) Greene, Bull. Cal. Acad. 2: 54, 1886.

Microseris bolanderi A. Gray, Proc. Am. Acad. 19: 61, 1883.

Calais bolanderi A. Gray, Proc. Am. Acad. 7: 365, 1867.

Type locality: Fort Bragg, Mendocino County, Cal.

RANGE: Washington to California, near the coast.

Specimens examined: Seattle, Mrs. Summers, a doubtful, immature specimen.

Wild Chienry Edin by hick

4. Scorzonella laciniata (Hook.) Nutt. Trans. Am. Phil. Soc. 7: 426. 1841.

Hymenonema? laciniatum Hook, Fl. Bor, Am. 1: 301, 1833.

Microseris laciniata Schultz Bip. Pollichia 22-24: 309, 1866.

Type locality: "Dry plains of the Columbia from the Rocky Mountains to the ocean." Collected by Douglas.

Range: Washington to California.

Specimens examined: Montesano, Henderson: Humptulips, Lamb 1181; Tacoma, Flett 174; Muckleshoot Prairie, Dr. Ruhn: Falcon Valley, Suksdorf, July 17, 1886; Steilacoom Prairie, Piper 376.

Zonal distribution: Humid Transition.

PTILOCALAIS.

Ptilocalais nutans (Geyer) Greene, Bull. Cal. Acad. 2: 54, 1886.
 Scorzonella nutans Geyer; Hook, Lond. Journ. Bot. 6: 253, 1847.

Microseris nutans Schultz Bip. Pollichia 22-24: 308, 1866.

Type locality: "Declivities of Spokan and Coeur d'Aleine Mountains." Collected by Geyer.

Range: British Columbia and Montana to Colorado and California.

Specimens examined: Klickitat River, Flett 1101; Falcon Valley, Suksdorf 420; Simcoe Mountains, Howell, July, 1879; Cascade Mountains to Colville, latitude 49°, Lyall in 1860; North Fork Columbia, Wilkes Expedition: Wenache Mountains, Elmer 450; Roslyn, Whited 413; Easton, Henderson, June 11, 1892; Sprague, Henderson, May 3, 1892; Sandberg & Leiberg, June, 1893; Spokane, Henderson, May 30, 1892; Piper 2266; Blue Mountains, Piper, July 15, 1896; Pullman, Piper 1612; Hull 716; without locality, Vasey 552; west Klickitat County, Suksdorf 981, 285.

Zonal distribution: Arid Transition and Canadian.

HYPOCHAERIS.

Hypochaeris radicata L. Sp. Pl. 2: 811, 1753.

Gosmore.

Type locality: European.

Specimens examined: Whidby Island, Gardner 378; Seattle, Piper, July 17, 1897; Chehalis County, Lamb 1404; Tacoma, Flett 20.

An exceedingly troublesome weed in lawns, now spread over most of Western Washington. One of Flett's specimens was erroneously referred by Wiegand a to H. glabra L., a species not known to occur in Washington.

LEONTODON.

Leontodon autumnale L. Sp. Pl. 2: 798, 1753.

FALL DANDLLION.

Type locality: European.

Specimens examined: Seattle, Piper 750.

AGOSERIS.

· Akenes beakless; leaves glabrous; alpine plant............. 1. A. al pestris. Akenes beaked.

Leaves glaucous; beak of akene short, stout, nerved.......... 2. .1. glauca.

Leaves not glaucous; beak of akene slender, nerveless.

Beak about as long as the body of the akene.

Flowers orange; leaves mostly entire.

Leaves lanceolate-spatulate; beak shorter than the

akene...... 3. .1. aurantiaca.

Leaves narrowly linear; beak longer than the akene. 4. A. gracilenta.

Flowers yellow: leaves mostly lobed. Akenes with beak 12 to 15 mm, long; leaves mostly entire.... 5. A. elata. Akenes with beak 8 to 10 mm, long; leaves mostly Beak much longer than the body of the akene. Perennials: heads large. Apex of akene truncate; herbage tomentose....... 7. A. retrorsa.

Apex of akene attenuate.

1. Agoseris alpestris (A. Gray) Greene, Pittonia 2: 177, 1891.

Troximon alpestre A. Gray, Proc. Am. Acad. 19: 70, 1883.

Type locality: Mount Adams, Washington. Collected by Suksdorf.

Range: Cascade Mountains of Washington and Oregon.

Specimens examined: Mount Rainier, Flett 248, 273, 272; Piper 2140, 493; Allen 288; Mount Adams, Suksdorf 422; near Mount Adams, Henderson, August 5, 1892.

Zonal distribution: Arctic.

2. Agoseris glauca (Nutt.) Greene, Pittonia 2: 177, 1891.

Troximon glaucum Nutt. Gen. 2: 128, 1818.

Type locality: "On the banks of the Missouri."

RANGE: British Columbia and Alberta to Oregon, Colorado, and Dakota.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1860; Ellensburg, Whited 507; Toppenish, Henderson, May 28, 1892; Peshastin, Sandberg & Leiberg 490; Spangle, Piper 2873; Spokane, C. A. Ramm in 1883; Spokane County, Suksdorf 383; Beaver Creek, Whited 233; Loomis, Elmer 552; Pullman, Piper 3, 1769, 1862; Union Flat, Hull, July 18, 1892; Waitsburg, Horner 345; Walla Walla Region, Brandegee 936; without locality, Vascy 557; Clarks Springs, Kreager 104.

Zonal distribution: Arid Transition.

2a. Agoseris glauca scorzoneraefolia (Schrad.).

Ammogeton scorzoneracjolium Schrad, Cat. Sem. Goett. 7, 1833.

Troximon glaveum dasycephalum Torr. &. Gr. Fl. 2: 490, 1843.

Agoseris scorzoneraciolia Greene, Pittonia 2: 177, 1891.

Type locality: "America borealis arctica."

Range: Nearly identical with that of A. glauca.

Specimens examined: Spokane County, Geyer 666; Fort Simcoe, Lyall in 1860; Pullman, Piper 3027, 3029, 3536.

This plant differs from A. glanca only in having a pubescent involucre. It is scarcely worth nomenclatorial recognition.

2b. Agoseris glauca aspera (Rydberg).

Agoseris leontodon asperum Rydberg, Mem. N. Y. Bot. Gard. 1: 457, 1900.

Troximon glaucum asperum Piper, Mazama 2: 96, 1901.

Type locality: Mount Chauvet, Idaho.

Range: Washington to Montana.

Specimens examined: Mount Rainier, Piper 2149; Allen 226; Wenache Mountains, Elmer 455; North Fork Bridge Creek, Elmer September, 1897.

Zonal distribution: Arctic.

3. Agoseris aurantiaca (Hook.) Greene, Pittonia 2: 177. 1891.

Troximon aurantiacum Hook, Fl. Bor, Am. 1: 300, pl. 104, 1833.

Type locality: "Alpine prairies of the Rocky Mountains."

RANGE: British Columbia and Saskatchewan to California and Colorado.

Specimens Examined: Mount Rainier, Tolmie: Allen 37, 287; Piper 2145, 2157; Mount Adams, Suksdorf 196, 575; Skamania County, Suksdorf: Klickitat River, Henderson, August 3, 1892; Atanum River, Henderson, August 3, 1892; east side Cascade Mountains, Lyall in 1860; Wenache Mountains, Elmir 445, 451; between Wenache and Ellensburg, Whited, August 13, 1896; Horseshoe Basin, Lake & Hull, August 24, 1892.

ZONAL DISTRIBUTION: Hudsonian and Arctic.

4. Agoseris gracilenta (A. Gray) Greene, Pittonia 2: 177, 1891.

Troximon gracilens A. Gray, Proc. Am. Acad. 19: 71, 1883.

Type Locality: "Cascade Mountains of Oregon and Washington Terr." Collected by Lyall, by Nevius, and by Suksdorf.

Range: Washington and Oregon to Wyoming.

Specimens examined: Olympic Mountains, Piper 2198; Cascade Mountains, latitude 49°, Lyall in 1860; Mount Adams, Suksdorf 425, 576; Skamania County, Suksdorf, August 10, 1886; Leavenworth, Sarage 29; Nason Creek, Sandberg & Leiberg 835; along Salmon River, Horner 346; without locality, Brandeger 931.

Zonal distribution: Hudsonian.

5. Agoseris elata (Nutt.) Greene, Pittonia 2: 177, 1891.

Stylopappus elatus Nutt. Trans. Am. Phil. Soc. 7: 433, 4841.

Macrorhynchus elatus Torr. & Gr. Fl. 2: 492, 1843.

Troximon nuttallii A. Gray, Proc. Am. Acad. 9: 216, 1874.

Type locality: "Plains of the Wahlamet near its estuary," Oregon. Collected by Nuttall.

Range: Washington to California in the coast region.

Specimens examined: Coupeville, Gardner: Olympia, Henderson 1683; Klickitat River, Suksdorf 577; Falcon Valley, Suksdorf 578.

Zonal distribution: Humid Transition.

6. Agoseris apargioides (Less.) Greene, Pittonia 2: 177, 1891.

Troximon apargioides Less. Linnaea 6: 501, 1831.

Agoscris maritima Sheldon, Buil. Torr. Club 30: 310, 1903.

Type locality: California.

Range: Washington to California.

Specimens examined: Westport, Henderson in 1892; Ilwaco, Piper 4960.

Mr. Sheldon regards the northern plant as distinct from the Californian, which may prove to be the case. It is possible, also, that this is *Leontodon hirsutum* Hook, a (Agoseris hirsuta Greeneb), the type of which is said to have been collected by Douglas and by Scouler on "Menzies Island and sandy banks of the Columbia," and which is referred by A. Gray c to *Troximon humile*.

We have seen no specimens of $Troximon\ humile\ \Lambda$. Gray ($Macrorhynchus\ humilis\ Benth.$) from Washington, and doubt its occurrence.

7. Agoseris retrorsa (Benth.) Greene, Pittonia 2: 178, 1891.

Macrorhynchus retrorsus Benth, Pl. Hartw. 320, 1849.

Troximon retrorsum A. Grav, Proc. Am. Acad. 9: 216, 1874.

Macrorhynchus angustitolius Kellogg, Proc. Cal. Acad. 5: 17, 1873.

Type locality. "In montibus Sacramento," California.

Range: Washington to California.

Specimens examined: West Klickitat County, Suksdorf 579; Cleahum, Henderson in 1892; Wenache, Whited 1232.

ZONAL DISTRIBUTION: Arid Transition.

8. Agoseris laciniata (Nutt.) Greene, Pittonia 2: 178. 1891.

Stylopa ppus laciniatus Nutt. Trans. Am. Phil. Soc. 7: 432, 1841.

Macrorhynchus laciniatus Torr. & Gr. Fl. 2: 492. 1843.

Type locality: "Plains of the Wahlamet, near its estuary," Oregon. Collected by Nuttall.

RANGE: British Columbia to California west of the Cascade Mountains.

Specimens examined: Scattle, Piper, July, 1891; Nisqually Valley, Atlen 225; Wilkes Expedition: Puget Sound, Cooper: Nason Creek, Sandberg & Leiberg 612.

Zonal distribution: Humid Transition.

9. Agoseris grandiflora (Nutt.) Greene, Pittonia 2: 178, 1891.

Stylopappus grandiflorus Nutt. Trans. Am. Phil. Soc. 7: 432, 1841.

Macrorhyneus grandiflorus Torr. & Gr. Fl. 2: 492, 1843.

Troximon grandiflorum A. Gray, Proc. Am. Acad. 9: 216, 1874.

Troximon grandiflorum obtusifolium Suksdorf, Deutsch. Bot. Monatss. 18: 98, 1900.

Type locality: "High plains of the Wahlamet," Oregon. Collected by Nuttall.

Range: Washington and Idaho to California.

Specimens examined: West Klickitat County, Suksdorf 37, 2025; Pullman, Piper 1616; Tukanon River, Lake & Hall, July 1, 1892.

Exceedingly variable as to foliage, but as all forms occur together the variations do not seem worthy of naming.

Zonal distribution: Humid Transition.

10. Agoseris heterophylla (Nutt.) Greene, Pittonia 2: 178, 1891.

Macrorhynchus heterophyllus Nutt. Trans. Am. Phil. Soc. 7: 430, 1841.

Troximon heterophyllum Greene, Bull. Torr. Club 10: 88, 1883.

Troximon heterophyllus kymapleura Greene, Bull. Torr. Club 10: 88, 1883.

Agoseris heterophylla kymaplenra Greene, Pittonia 2: 179, 1891.

Type locality: "Plains of Oregon."

Range: Washington to California.

*Specimens examined: Spokane, Suksdorf 581; Pullman, Piper 1617, 1859, 3098.

ZONAL DISTRIBUTION: Arid Transition.

10a. Agoseris heterophylla normalis subsp. nov.

Herbage hirsute or villous; akenes 10-striate or 10-costate.

The fact seems to have been overlooked that the name A. heterophylla belongs to the plant commonly called A. heterophylla kymaphenra and that the commonest form of this remarkably variable species has never been christened.

Specimens examined: West Klickitat County, Suksdorf 1648, 2312; Ellensburg, Piper 2688; Falcon Valley, Suksdorf 580; Wennehe, Whited 1094, in 1895; Spokane, Kreager 165; Hangman Creek, Sandberg & Leiberg 59; without locality, Vascy 559, 560; without locality, Brandegee 928; along Tukanon River, Lake & Hull, July 5, 1892.

Zonal distribution: Arid Transition.

10b. Agoseris heterophylla californica (Nutt.)

Cryptopleura californica Nutt. Trans. Am. Phil. Soc. 7: 430, 1841.

Troximon heterophyllum cryptopleura Greene, Bull. Torr. Club 10: 88. 1883.

Agoseris heterophylla cryptopheura Greene, Pittonia 2: 179, 1891.

Troximon heterophyllum cryptopleuroides Suksdorf, Deutsch. Bot. Monatss. 18: 98, 1900.

Type Locality: "Near Santa Barbara," California.

Range: Washington to California.

Specimens examined: West Klickitat County, Suksdorf 1648, 2313, 583, 582.

10c. Agoseris heterophylla glabrata (Suksdorf).

Troximon heterophyllum glabratum Suksdorf, Deutsch. Bot. Monatss. 18: 98, 1900.

Agoseris heterophylla glabra Howell, Fl. N. W. Am. 402, 1901.

Type locality: Klickitat County, Washington.

Range: Washington and Oregon.

Specimens examined: West Klickitat County, Suksdorf 2312.

TARAXACUM.

1. Taraxacum taraxacum (L.) Karst. Deutsch. Fl. 1138, 1880-83. Dandelion.

Leontodon taraxacum L. Sp. Pl. 2: 798, 1753.

Taraxacum officinale Weber, Prim. Fl. 11ols. 56, 1780.

Type locality: "Hab, in Europae pascuis,"

The common dandelion is established as a weed in nearly all parts of the State.

CREPIS.

stocks. . . Foliage green, not canescent nor scurfy.

Stems leafy; cauline leaves clasping. 3. C. virens.

Foliage mostly white-pubescent, scurfy.

Plants 10 to 30 cm, high; involuere with 9 to 24 principal bracts.

Involuere glandular-hirsute 4 °C. occidentalis.

Involucre hirsute, not glandular.

Akenes beaked: pubescence hirsute...... 5. C. rostrata.

Akenes not beaked; pubescence tomentose....... 6. ℓ' . glarcosa.

Plants 40 to 60 cm, high; involuere with 5 to 10 principal bracts.

Involucre bearing bristle-like appendages on the back 9. C. barbigera.

Involuere without bristle-like appendages.

1. Crepis nana Richards, Bot. App. Frankl, Journ. ed. 2, 757, 1823.

Type locality: "On the Copper Mine River."

RANGE: Arctic regions, south to California and Colorado.

Specimens examined: Olympic Mountains, Flett 810; Mount Adams, Suksdorf in 1904.

Zonal distribution: Arctic.

2. Crepis runcinata (James) Torr. & Gr. Fl. 2: 487, 1843.

Hieracium runcinatum James, Long Exped. 1: 453, 1823.

Crepidium runcinatum Nutt. Trans. Am. Phil. Soc. 7: 436, 1841.

Type locality: "In depressed grassy situations along the Platte."

RANGE: Washington to Saskatchewan, south to Utah and Colorado.

Specimens examined: Ellensberg, Piper 2665; Whited 695; Toppenish, Henderson, May 28, 1892; Wilbur, Henderson, in 1889, July 12, 1892; without locality, Vasey: Sprague, Sandberg & Leiberg 208; Kittitas Valley, Cotton 1217.

ZONAL DISTRIBUTION: Arid Transition.

3. Crepis virens L. Sp. Pl. ed. 2, 2: 1131, 1763.

Malacothrix crepoides A. Grav, Pac. R. Rep. 12: 49, 1860.

Crepis cooperi A. Gray, Proc. Am. Acad. 9: 214, 1874.

Type locality: "Habitat in Helvetiae, Italiae agris."

Specimens examined: Olympia, Kincaid, July 4, 1896; Scattle, Piper, July 10, 1895; Suksdorf 1640; Clarke County, Suksdorf 29; Tacoma, Piper.

 $29418{-06}\;{\rm M}{---35}$

4. Crepis occidentalis Nutt. Journ. Acad. Phila. 7: 29, 1834.

Psilachenia occidentalis Nutt. Trans. Am. Phil. Soc. 7: 437, 1841.

Type locality: "Columbia River." Collected by Wyeth.

RANGE: British Columbia and Montana to California and Arizona.

Specimens examined: Olympic Mountains, Flett, August, 1888; near Lyle, Suksdorf 875; near Cleveland, Suksdorf 381; Wenache, Whited 1087, 1350; "on the borders and in in the vicinity of the river Columbia," Wyeth: Wawawai, Piper 1784; Elmer 747; Blue Mountains, Piper 2438; Wenas, Griffiths & Cotton 72.

Zonal distribution: Upper Sonoran and Arid Transition.

5. Crepis rostrata Coville, Contr. Nat. Herb. 3: 564, 1896.

Type locality: "Near Crab Creek, Douglas County, Washington." Collected by Sandberg & Leiberg.

Range: British Columbia and eastern Washington.

Specimens examined: North Yakima, Mrs. Steinweg in 1894; Cleman Mountain, Henderson, June 11, 1892; Klickitat County, Howell 1879; between Naches and Wenache rivers, Pickering & Brackenridge in 1841; Coulee City, Piper 3866; near Crab Creek, Sandberg & Leiberg 225.

ZONAL DISTRIBUTION: Upper Sonoran.

6. Crepis glareosa Piper, Bull. Torr. Club 28: 42, 1901.

Type locality: Ellensburg, Washington.

Specimens examined: Ellensburg, Piper 2704 (type).

7. Crepis acuminata Nutt. Trans. Am. Phil. Soc. 7: 437, 1841.

Type locality: "Plains of the Platte." Collected by Nuttall. Range: Washington and Montana to California and Utah.

Specimens examined: Ellensburg, Elmer 383; Crab and Wilson creeks, Sandberg & Leiberg 232.

8. Crepis gracilis (D. C. Eaton) Rydberg, Mem. N. Y. Bot. Gard. 1: 461, 1900.

Crepis occidentalis gracilis D. C. Eaton; S. Wats. Bot. King Explor. 203. 1871.

Crepis intermedia A. Gray, Syn. Fl. 12: 432, 1884.

Type locality: Middle Park, Colorado.

Range: British Columbia to California and Colorado.

Specimens examined: Wenache, Whited 1112; Ellensburg, Whited 455; Toppenish, Henderson in 1892; Wenas, Lyall in 1860; Naches Valley, Piper 2737; without locality, Vasey 571, 572, 573; Spokane County, Suksdorf 379; Douglas County, Spillman; Colton, Piper 2883; Wawawai, Elmer 1401, 761; Almota, Piper; without locality, Wilkes Expedition; Waitsburg, Horner 167; Conconully, Griffiths & Cotton 269.

Zonal distribution: Arid Transition and Upper Sonoran.

9. Crepis barbigera Leiberg, Contr. Nat. Herb. 3: 565, 1896.

Type locality: "Near Alkali Lake, Douglas County, Washington." Collected by Sandberg & Leiberg.

Range: Eastern Washington and eastern Oregon.

Specimens examined: Mountains north Ellensburg, Whited 659; Ellensburg, Elmer 392; Piper; Wenache, Whited 455, 1183; Wenache Mountains, Whited 1183; Klickitat County, Suksdorf 777 in part; near Alkali Lake, Sandberg & Leiberg 313; Spokane Prairie, Suksdorf 378; Piper 2264, 2637; Spangle, Piper 2874.

ZONAL DISTRIBUTION: Arid Transition.

HIERACIUM. HAWKWEED.

Stems few-leaved; involucre a series of equal bracts and a few short calveulate ones.

Flowers yellow.

Heads larger; not black-hairy.

Involuce densely long-hairy.

Cauline leaves ample, half-clasping at the broad

bases...... 5. II. longiberbe.

Involucre with few or no long hairs.

1. Hieracium columbianum Rydberg, Bull. Torr. Club 28:513, 1901.

Type locality: "Priest River Valley," Idaho.

Range: North Idaho and adjacent Washington.

Specimens examined: Dartford, Kreager, September 12, 1903; Loon Lake, Winston, July 20, 1897; Spokane County, Suksdorf 935; Peshastin, Sandberg & Leiberg 510.

ZONAL DISTRIBUTION: Arid Transition.

2. Hieracium canadense Michx. Fl. 2: 86, 1803.

Type locality: "Hab, in Canada."

RANGE: British Columbia to Nova Scotia, south to Oregon and New Jersey.

Specimens examined: Loomis Elmer 570; Pullman Piper, August 5, 4893; Elmer 307; Spokane Piper, July 26, 1896; Coupeville Gardner 422.

Zonal distribution: Arid Transition.

3. Hieracium albiflorum Hook, Fl. Bor, Am. 1: 298, 1833.

! Hieracium vancouverianum Arvet-Touv. Spicil. Hier. 10, 1874.

Type locality: "Rocky Mountains north of Smoking River, Lat. 56°." Collected by Drummond.

RANGE: British Columbia and Alberta to California and Colorado.

Specimens examined: Montesano, Heller 3918; Grays Harbor, Wilkes Expedition; Cascade Mountains, latitude 49°, Lyall in 1859; Silverton, Bouck 113; Seattle, Piper 502; Mount Rainier, Piper, August, 1895; upper Nisqually Valley, Allen 11; Skagit Pass, Lake & Hull, August 24, 1892; Colville, Lyall in 1860; Falcon Valley, Suksdorf 427; Nason Creek, Sandberg & Leiberg 611; Conconully, Whitel 1323; Bridge Creek, Elmer 688, in 1897; Tukanon River, Lake 742; Mount Carlton, Kreager 303; Lake Kalispel, Kreager 347.

Zonal distribution: Transition and Canadian.

4. Hieracium gracile Hook. Fl. Bor. Am. 1: 298, 1833.

Hieracium triste gracile A. Gray, Bot. Cal. 1: 441, 1876.

Hieracium hookeri Steud. Nom. ed. 2, 1:763, 1840.

Hieracium arcticum Froel.; DC. Prod. 7: 209, 1838.

Type locality: Rocky Mountains. Collected by Drummond.

Range: Alaska to Oregon and Colorado.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Silverton, Bouck 116; Mount Rainier, Piper 2155; Allen 286; Mount Adams, Suksdorf 128; Flett 1082, 1398; Stevens Pass, Sandberg & Leiberg 716; Skagit Pass, Lake & Hull, August 24, 1892; Yakima County, Henderson, August 5, 1892; Wenache Mountains, Elmer 449; Horseshoe Basin, Elmer 726; Blue Mountains, Piper, July, 1896.

Zonal distribution: Arctic.

5. Hieracium longiberbe Howell, Fl. N. W. Am. 395, 1901.

Type locality: "On cliffs along the Columbia river near the Cascades."

RANGE: Oregon and Washington on cliffs in the Columbia Gap.

Specimens examined: Cape Horn, Piper 5011; Chenowith, Suksdorf 2133.

Zonal distribution: Ilumid Transition.

6. Hieracium scouleri Hook. Fl. Bor. Am. 1: 298. 1834.

Type locality: "Mouth of the Columbia." Collected by Scouler.

Range: British Columbia to Montana and Utah.

Specimens examined: Nason Creek, Sandberg & Leiberg 671; Colville, Lyall in 1860; Spokane County, C. A. Raum, July, 1883; Suksdorf 385; Mount Carlton, Kreager 244; along the Tukanon River, Lake & Hull, July 4, 1892; Pullman, Piper 1614; Bishop's Bar, Snake River, Piper 2885.

Zonal distribution: Transition.

The relations of this and the two following need careful field study. The differences are wholly of pubescence, and inasmuch as the different types frequently occur growing together, the character may be only of formal value.

7. Hieracium griseum Rydberg, Mem. N. Y. Bot. Gard. 1: 465, 1900.

Type locality: Jack Creek, Montana.

Range: Washington to Montana.

Specimens examined: Mount Adams, Suksdorf; Lake Park, Piper 2160 in part; between Olympia and Gate City, Heller 4053; mouth of Columbia, Scouler: Wenache Mountains, Whited 1187 in part; Cotton 1744; Chelan, Whited 214; Lake Chelan, Lake & Hull 741; Chelan, Elmer 496.

Zonal distribution: Transition.

8. Hieracium cynoglossoides Arvet-Touv. Spieil. Hier. 20, 1881.

Hieracium amplum Greene, Erythea 3: 101. 1895.

Type locality: "North Western Wyoming."

Range: British Columbia to Wyoming and Oregon.

Specimens examined: Whidby Island, Gardner 117; Mount Adams, Suksdorf 2255; Lake Park, Piper 2160 in part: Falcon Valley, Suksdorf 426; Klickitat River, Flett 1085, 1077; Peshastin, Sandberg & Leiberg 526; Fish Lake, Dunn, August 8, 1902; Wenache Mountains, Whited 1187 in part: Tieton River, Cotton 440; Loon Lake, Winston, July 20, 1897; without locality, Vascy 561, 562; Elma, Heller 4063; Loomis, Elmer 550.

Zonal distribution: Transition.

NABALUS.

1. Nabalus hastata (Less.) Heller, Muhlenbergia 1: 8, 1900.

Souchus hastatus Less. Linnaea 6: 99, 1831.

Nabalus alatus Hook, Fl. Bor, Am. 1: 294, 1833.

Prenanthes alata A. Gray, Syn. Fl. 12: 435, 1884.

Type locality: "In Unalaschka."

Raxge: Alaska to Cregon and Idaho.

Specimens examined: Cascades, latitude 49°, Lyall in 1859; Olympic Mountains, Piper in 1890; Snoqualmic Falls, Piper, September, 1902; Monte Cristo, Misses Coffin & Goodspeed; Wind River, Flett 1084; Stevens Pass, Whited 1461; Snoqualmic Pass, Piper; without locality, Vascy 558; mouth of Queets River, Conard 325.

Zonal distribution: Canadian and Hudsonian.

LACTUCA.

Pappus brown; flowers whitish. 1. L. spicata.
Pappus white.

Flowers yellow; leaves spiny. 2. L. scariola. Flowers blue; leaves not spiny 3. L. pulchella.

1. Lactuca spicata (Lam.) A. S. Hitchcock, Trans. Acad. St. Louis 5: 506, 1891.

Sonchus spicatus Lam. Encyc. 3: 401, 1789.

Sonchus leucophaeus Willd, Sp. Pl. 3:1520, 1803.

Mulgedium leucophaeum DC. Prod. 7: 250, 1838.

Lactuca leucophaea A. Gray, Proc. Am. Acad. 19: 73, 1883.

Type locality: "Carolina."

Range: British Columbia to Newfoundland, south to Oregon and Carolina.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Seattle, Piper; Nisqually Valley, Allen 126a; Falcon Valley, Suksdorf 429; Nason Creek, Sandberg & Leiberg 615; Waitsburg, Horner 11.

Zonal distribution: Transition.

2. Lactuca scariola integrata Gren. & Godr. Fl. Fr. 2: 320, 1850.

Prickly lettuce.

Type locality: France.

Specimens examined: Rock Island, Sandberg & Leiberg 467; North Yakima, Watt, August, 1895; Pullman, Piper, August 15, 1894; Wawawai, Piper, 1615; Spokane, Kreager 580.

3. Lactuca pulchella (Pursh) DC. Prod. 7: 134, 1838.

Blue lettuce,

Sonchus pulchellus Pursh, Fl. 2: 502, 1814.

Type locality: "On the banks of the Missouri."

Range: British Columbia to Saskatchewan, south to California and New Mexico.

Specimens examined: Ellensburg, Whited 567; North Yakima, Watt, August, 1895; Beaver Creek, Whited 30; Fort Vancouver, Tolmie: Cascade Mountains to Colville, Lyall in 1860; Cow Creek, Lyall in 1860; Lake Chelan, Lake & Hull, August 4, 1892; Egbert Springs, Sandberg & Leiberg 422; Coulee City, Lake & Hull, August 7, 1892; Wilson Creek, Lake & Hull 808; Wawawai, Elmer 895; Box Canyon, Kreager 390; without locality, Vascy 570.

ZONAL DISTRIBUTION: Arid Transition.

SONCHUS. SOW THISTLE.

Leaves prickly-toothed; auricles rounded. 2. 8. asper.

Leaves with soft teeth; auricles acute. 3. 8. oleraceus,

1. Sonchus arvensis L. Sp. Pl. 2: 793, 1753.

Type locality: European.

Specimens examined: Whidby Island, Gardner 150; mouth of Naches River, Piper 2666.

2. Sonchus asper (L.) Hill, Herb. Brit. 1: 47, 1769.

Sonchus oleraceus asper L. Sp. Pl. 2: 794, 1753.

Type locality: European.

Specimens examined: North Yakima, Watt, August, 1895; Tukanou River, Lake, July 2, 1892; Pullman, Hull 807.

3. Sonchus oleraceus L. Sp. Pl. 2: 794, 1753.

Type locality: European.

Specimens examined: Seattle, Piper, July 10, 1895.

AMBROSIACEAE. RAGWEED FAMILY.

Heads with both staminate and pistillate flowers; involucre open Iva. Heads unisexual; pistillate heads usually spiny.

Bracts of staminate heads separate; pistillate heads forming an oblong

bur.....Xanthum.

Bracts of staminate heads united.

Pistillate flowers solitary in each head; spines in a single series . . . Ambrosia.

Pistillate flowers 1 to 4 in each head; spines in several series Gaertneria.

IVA.

Heads in dense panicles; leaves ovate or orbicular, coarsely serrate...... 1. I. xanthiifolia. Heads in axillary racemes; leaves oblong or obovate, mostly entire..... 2. I. axillaris.

1. Iva xanthiifolia Nutt. Gen. 2: 185, 1814.

Iva paniculata Nutt. Trans. Am. Phil. Soc. 7: 347, 1840.

Type locality: "Near Fort Mandan," North Dakota.

RANGE: Washington to Saskatchewan, south to Utah and New Mexico.

Specimens examined: West Klickitat County, Suksdorf 355; Leavenworth, Whited 1447; Pullman, Piper 1381; Spokane, Kreager 532.

Zonal distribution: Arid Transition.

2. Iva axillaris Pursh, Fl. 2: 743, 1814.

Type locality: "In upper Louisiana." Collected by Bradbury.

RANGE: British Columbia to Saskatchewan, south to California and New Mexico.

Specimens examined: Wenache, Whited 1133; Morgans Ferry, Suksdorf 450; Washtuena, Elmer 1038; Coulee City, Henderson, July 11, 1892; Lake & Hull, August 7, 1897; Wilson Creek, Lake & Hull 739; Junction, Crab, and Wilson creeks, Sandberg & Leiberg 318.

Zonal distribution: Upper Sonoran.

XANTHIUM. COCKLEBUR.

Leaves lanceolate, not cordate, bright green above, white-tomentose

Leaves ovate to orbicular, cordate; axils without spines.

Body of the burs 2.5 to 3 cm. long; spines about 100, hispid,

Body of the burs 1.5 to 2 cm. long.

Spines about 20, approximately as long as the body of the

Spines 50 to 70.

Burs oblong or slightly ovate; spines about 50, each two-

thirds as long as the diameter...... 4. X. affine.

Burs ovate; spines about 70, each one-half as long as

1. Xanthium spinosum L. Sp. Pl. 2: 987, 1753.

Type locality: "Habitat in Lusitania."

Specimens examined: Columbia River, Brandegee 889, Colfax, Piper 1591.

Becoming common as a weed in various parts of eastern Washington; locally known as "Chinese Thistle,"

2. Xanthium speciosum Kearney, Bull. Torr. Club 24: 574, 1897.

Nanthium silphufolium Greene, Pittonia 4: 60, 1899.

Type locality: "Near Wolf Creek Station," Tennessee.

Range: Washington, Oregon, Missouri, Tennessee.

Specimens examined: White Salmon, Suksdorf 189; Wawawai, Piper 1593.

ZONAL DISTRIBUTION: Humid Transition.

3. Xanthium oligaeanthum sp. nov.

Stem erect or spreading, 30 to 60 cm. high, sparsely hispid; leaves reniform-orbicular, obscurely lobed and crenate, harshly scabrous, hispid on both faces, the petioles as long or longer than the blades; fruiting involucres oblong, the body 1.5 cm. long, 5 to 7 mm, thick, the stout beaks somewhat incurved; prickles 15 to 25, uncinate-tipped, about as long as the diameter of the fruit; surface of the fruit and base of prickles pubescent.

Bolles, Walla Walla County, *Piper*, September 18, 1893; also found at Waitsburg by *Horner* (no. B 272). The type is in the National Herbarium. This differs from any other American species in the small size of the fruit and the relatively few prickles.

4. Xanthium affine Greene, Pittonia 4: 60, 1899.

Type locality: "Sandy banks of the Columbia River, Klickitat County, Washington." Collected by Suksdorf.

Range: Washington.

Specimens examined: West Klickitat County, Suksdorf 1583; Spokane, Kreager 537; Piper September 1, 1899.

5. Xanthium varians Greene, Pittonia 4: 59, 1899.

Type locality: "Sandy banks of the Columbia River, Klickitat County, Washington." Collected by Suksdorf.

Range: Washington.

Specimens examined: West Klickitat County, Suksdorf 1583; Waitsburg, Horner 273 B.

Xanthium echinatum Murr, and Xanthium strumarium L, are names which appear in Suksdorf's list, but they are erroneous determinations of some of the above species.

AMBROSIA. RAGWEED.

Fruiting involuere spiny; leaves thin 2. 1. artemistacjoti Fruiting involuere tubercled; leaves thick 3. 4. psilostachya.

1. Ambrosia trifida L. Sp. Pl. 2: 987, 1753.

Type locality: "In Virginia, Canada."

Range: Saskatchewan and Canada to Texas and Florida.

Specimens examined: Walla Walla, Piper, August 13, 1897 (introduced).

2. Ambrosia artemisiaefolia L. Sp. Pl. 2: 988, 1753.

Type locality: "Habitat in Virginia; Pennsylvania."

RANGE: British Columbia to Nova Scotia, south to Texas.

Specimens examined; Mission, Kreager 495.

2a. Ambrosia artemisiaefolia diversifolia subsp. nov.

Leaves becoming progressively less deeply lobed upward, those of the upper third of the plant mostly entire, these ovate-lanceolate or lanceolate, acute, narrowed abruptly to a subsessile base, 3-nerved.

On the gravelly banks of Almota Creek at Almota, Piper, August 26, 1894 (no. 1837). At this place it seems unquestionably to be native. The entire or subentire upper leaves present a peculiar characteristic which does not seem to be approached in any eastern specimens. The plant may represent a distinct species, but in the absence of more abundant material it seems best to treat it as above.

The type is in the National Herbarium.

3. Ambrosia psilostachya DC. Prod. 5: 526, 1836.

Type locality: "In Mexico, inter San Fernando et Matamoras."

Range: Washington to Saskatchewan, south to California and Texas.

Specimens examined: Walla Walla, Piper, August 13, 1897; Pullman, Piper, October 10, 1897.

Apparently an introduced plant in Washington.

GAERTNERIA.

Not maritime; annual, erect or spreading.

Maritime species; prostrate perennials.

Leaves 2 to 3 pinnately parted.

Leaves cuneate-obovate, serrate or laciniate.

2. G. chamissonis.

1. Gaertneria bipinnatifida (Nutt.) Kuntze, Rev. Gen. 1: 339. 1891.

Franseria bipinnatifida Nutt. Trans. Am. Phil. Soc. 7: 344, 1840.

Type locality: "Sea coast of Upper California, (St. Barbara, St. Diego, &c.)"

Range: Seacoast, Washington to California.

Specimens examined: Hwaco, Henderson, September 7, 1892; Shoalwater Bay, Cooper; Puget Sound, Henderson 21; Port Angeles, Piper 2307; Fairhaven, Piper, July 2, 1897; Whatcom County, Suksdorf 976; Seattle, Piper, September, 1898; Tacoma, Flett 101.

Zonal distribution: Humid Transition.

2. Gaertneria chamissonis (Less.) Kuntze, Rev. Gen. 1: 339, 1891.

Franseria chamissonis Less.; DC. Prod. 5: 524, 1836.

Franseria cuncifolia Nutt. Trans. Am. Phil. Soc. 7: 507, 1840.

Type locality: California.

Range: Seacoasts, Washington to California.

Specimens examined: Shoalwater Bay, Cooper in 1854.

Zonal distribution: Ilumid Transition.

3. Gaertneria acanthicarpa (Hook.) Britton, Mem. Torr. Club 5: 382, 1894.

Ambrosia acanthicarpa Hook, Fl. Bor, Am. 1: 309, 1833.

Franscria hookeriana Nutt. Trans. Am. Phil. Soc. 7: 345, 1840.

Franscria acanthicarpa Coville, Contr. Nat. Herb. 4: 129, 1893.

Type locality: "Banks of the Saskatchewan and Red Rivers."

Range: Washington to Saskatchewan, south to Arizona and Texas.

Specimens examined: West Klickitat County, Suksdorf, September, 1883; Fishhook Ferry, Leiberg 922; banks of Columbia River, Wenache, Whited 28; North Yakima, Watt, August, 1895; bluffs of the Columbia above Chelan River, Watson 211; Almota, Piper 1839, 1837; Prosser, Cotton 630; Sunnyside, Cotton 755; Priest Rapids, Cotton 1390.

Zonal distribution: Upper Sonoran.

ASTERACEAE. ASTER FAMILY.

SYNOPSIS OF THE TRIBES.

Anthers not caudate at base; style branches either truncate or tipped with an appendage.

Heads radiate (rarely rayless).

Style branches of perfect flowers truncate or appendaged, not flattened; leaves often opposite.

Involucre not scarious.

Pappus never capillary.	
Receptacle chaffy	Helantheae.
Receptacle not chaffy	Helenieae.
Pappus capillary	
Involucre scarious, pappus not capillary	
Anthers caudate at base; style-branches neither truncate nor	appendaged;
heads not radiate.	
Receptacle not bristly; corollas not deeply cleft	
Receptacle long bristly; corollas deeply cleft	CYNAREAE.
EUPATORIEAE.	
Akenes 5-angled	Eupatorium (p. 555).
Akenes 10-ribbed	
ASTEREAE.	
	C
Pappus of 2 to 8 rigid awns; heads large, gummy	GRINDELIA (p. 556).
Pappus of numerous capillary bristles. Rays yellow (sometimes wanting).	
Pappus double, the outer very short	Cupysopsis (n. 557)
Pappus simple.	Спитаната (р. жи).
Heads rayless, small, clustered	Chrysothamnus (d. 558).
Heads radiate or if rayless, large.	
Pappus bristles unequal; heads mostly few	
and large.	
Style branches setaceous-tipped	Ericameria (p. 559).
Style branches not setaceous-tipped	
Pappus bristles equal; heads small, clus-	
tered.	
Panicle thyrsoid; receptacle alveolate	•
Panicle flat-topped; receptacle fimbril-	
late	•
Rays white, purple, or blue (yellow in a few Erigerons),	
rarely wanting.	70
Pappus a single series of coarse, rigid bristles	TOWNSENDIA (p. 505).
Pappus of numerous soft bristles. Bracts of the involuere in many series, their	
tips spreading	
Bracts of the involucre in few (1 to 5) series,	
their tips mostly erect.	
Involucial bracts in one or two series, nar-	
row; rays usually narrow and numerous.	
Involueral bracts in two to five series,	
rays broader, less numerous.	
Involuere narrow, with rigid bracts:	
rays white, few	Sericocarpus (p. 569).
Involuere turbinate or hemispheric.	
Stems scape-like	Oreastrum (p. 569).
Stems leafy.	
Scales of the involucre dry	
and chartaceous, closely	
appressed	
Scales of the involucre more or less herbaceous and	
spreading	
Spreading	The state of the s

HELIANTHEAE.

Involucial scales boat-shaped, each more or less inclosing a	
ray akene.	
Akenes all laterally compressed.	Madia (p. 575).
Akenes not laterally compressed.	
Ray akenes turgid, or somewhat obcompressed.	
Involucre 4 or 5-sulcate; disk flower solitary	
Involucre not sulcate; disk flowers several	Немігомы (р. 577).
Ray akenes obcompressed.	
Rays about 5; pappus none	1
Rays 8 to 13; pappus capillary	BLEPHARIPAPPUS (p. 578).
Involucial scales not inclosing the outer akenes.	
Pappus present, of well-developed scales or awns. Scales of the pappus 12 to 20, thin, fringed	Periovers (p. 578)
Scales of the pappus awn-like.	1 THOSELLA (p. 573).
Awn-like scales 2 or 4, retrorsely barbed	Bidens (n. 578)
Awn-like scales 2, subulate.	•
Pappus wanting, or crown-like, or of short teeth.	· · · · · · · · · · · · · · · · · · ·
Receptacle elongate-cylindric	Rudbeckia (р. 579).
Receptacle flat or convex.	•
Rays pistillate and fertile.	
Pappus none	
Pappus a toothed crown	Wyethia (р. 581).
Rays neutral.	
Akenes flat and thin	
Akenes prismatic	Helianthus (p. 582).
HELENIEAE.	
Bracts of the involucre in two series; receptacle naked; pap-	
pus none	Jaumea (р. 582).
Bracts of the involucre in one series.	·
Akenes linear, 4-angled.	
Bracts of the involucre united	Евіоричьким (р. 583).
Bracts of the involucre separate, linear.	
Heads radiate.	VT (7:10)
Pappus scales thin, blunt; viscid perennial.	-
Pappus scales awn-like; annual	Kigiopappus (p. 583).
Heads rayless, but marginal flowers enlarged; pappus scales blunt, hyaline	CHARMACTIC (p. 582)
Akenes obpyramidal.	Сплемлеттв (р. 500).
Receptacle bristly	GAILLARDIA (D. 584).
Receptacle naked.	(1,1,2,2,7,
Akenes 4–5 angled: pappus scales 10 to 20	Hymenopappus (p. 584).
Akenes 8-10 ribbed; pappus scales 5 or 6	
ANTHEMIDEAE.	
Ray flowers present. Receptacle chaffy.	
Involucre narrow; rays short	Achillea (d. 584).
Involucre broad: rays conspicuous	\r ,
. 1	Ахтнемія (р. 585).
Receptacle naked	Anthemis (p. 585). Chrysanthemum (p. 585).
Receptacle naked	Сикувантиемим (р. 585).
	Сикувантиемим (р. 585).

Receptacle not conical.	
Heads slender-peduncled; pistillate flowers apetalous Cottla (p. 586).	
Heads sledder-peddirled, pistmate nowers apetalous Cort Ly (p. 586). Heads clustered; corollas present.	
Pappus a short crown; heads corymbed	
Pappus none; heads received panieled Artemsia (p. 586).	
rappus none, neads ratemose of paincied	
SENECIONEAE.	
Shrub; involuere of 4 to 6 concave bracts	
Herbs.	
Leaves all or mostly opposite	
Leaves alternate.	
Flowers whitish or pinkish; heads rayless.	
Leaves large, palmately lobed, mostly basal.	
Styles united nearly to the apex	
Styles united about half way	
Leaves entire; stems leafy.	
Heads about 40-flowered, corymbed LUXA (p. 594).	
Heads 4 to 6-flowered, paniculate	
Flowers yellow; rays present (except in a few species of	
Senecjo).	
Involucre hemispheric; heads solitary Crocnown (p. 594).	
Involucre campanulate; heads usually corymbose Sevecto (p. 595).	
INULEAE.	
Pappus capillary, at least in pistillate flowers.	
Plants dioccious or polygamo-dioccious.	
Pappus of staminate flowers clavate	
Pappus of staminate flowers clavate	
Pappus of staminate flowers clavate	
Pappus of staminate flowers clavate. Antennaria (p. 601). Pappus of all the flowers similar. Anaphalis (p. 606). Plants not dioecious; flowers all fertile. Gnaphalum (p. 606). Pappus none.	
Pappus of staminate flowers clavate. Antennaria (p. 601). Pappus of all the flowers similar. Anaphalis (p. 606). Plants not dioecious; flowers all fertile. Gnaphalium (p. 606).	
Pappus of staminate flowers clavate. Antennaria (p. 601). Pappus of all the flowers similar. Anaphalis (p. 606). Plants not dioecious; flowers all fertile. Gnaphalum (p. 606). Pappus none.	
Pappus of staminate flowers clavate. Antennaria (p. 601). Pappus of all the flowers similar. Anaphalis (p. 606). Plants not dioecious; flowers all fertile. Gnaphalum (p. 606). Pappus none. Receptacle naked: leaves large, green above Adenocation (p. 607). Receptacle chaffy: leaves small, woolly Psilocarphus (p. 607).	
Pappus of staminate flowers clavate. Antennaria (p. 601). Pappus of all the flowers similar. Anaphalis (p. 606). Plants not dioecious; flowers all fertile. Gnaphalium (p. 606). Pappus none. Receptacle naked: leaves large, green above. Adenocation (p. 607). Receptacle chaffy: leaves small, woolly. Psilocarphus (p. 607). Cynareae.	
Pappus of staminate flowers clavate. Antennaria (p. 601). Pappus of all the flowers similar. Anaphalis (p. 606). Plants not dioecious; flowers all fertile. Gnaphalium (p. 606). Pappus none. Receptacle naked: leaves large, green above. Adenocation (p. 607). Receptacle chaffy; leaves small, woolly. Psilocarphus (p. 607). Cynareae. Akenes obliquely attached by one side at base.	
Pappus of staminate flowers clavate. Antennaria (p. 601). Pappus of all the flowers similar. Anaphalis (p. 606). Plants not dioecious; flowers all fertile. Gnaphalium (p. 606). Pappus none. Receptacle naked; leaves large, green above. Adenocation (p. 607). Receptacle chaffy; leaves small, woolly. Psilocarphus (p. 607). CYNAREAE. Akenes obliquely attached by one side at base. Heads not subtended by bristly leaves

EUPATORIUM.

1. Eupatorium occidentale Hook. Fl. Bor. Am. 1: 305, 1833.

Krystenia occidentalis Greene, Leaflets 1: 9, 1903.

Type locality: "On the low hills between the north and south branch of Lewis and Clarks River in stony places." Collected by Douglas.

RANGE: Washington and Idaho to California.

Specimens examined: West Klickitat County, Suksdorf 865; Ellensburg, Elmer 423 1084; Klickitat River, Suksdorf, July 16, 1886.

COLEOSANTHUS.

Leaves cordate-triangular, coarsely toothed. 1. C. grandiflorus.

Leaves oblong or lanceolate, entire.

Akenes glandular. 2. C. oblongifolius.

Akenes hispid, not glandular. 3. C. linifolius.

1. Coleosanthus grandiflorus (Nutt.) Kuntze, Rev. Gen. Pl. 1: 328, 1891.

Brickellia grandiflora Nutt. Trans. Am. Phil. Soc. 7: 287, 1840.

Type locality: "In the Rocky Mountain range by streams in gravelly places, and west to the lower falls of the Columbia." Collected by Nuttall.

Range: Washington and Montana to New Mexico and Arizona.

Specimens examined: Spokane, Piper 2381; Kreager 542, 547; Spokane Falls, Geyer 452; Blue Mountains, Salmon River, Horner 351.

ZONAL DISTRIBUTION: Arid Transition.

2. Coleosanthus oblongifolius (Nutt.) Kuntze, Rev. Gen. Pl. 1: 328, 1891.

Brickellia oblongifolia Nutt. Trans. Am. Phil. Soc. 7: 288, 1840.

Type locality: "Gravel bars of the Columbia and tributary streams, and along the Wahlamet, common." Collected by Nuttall.

Range: British Columbia to Oregon.

Specimens examined: Peshastin, Sandberg & Leiberg 491: Klickitat Prairie, Howell; without locality, Vasey in 1889; Rattlesnake Mountains, Cotton 710: Umtanum Creek, Cotton 819.

Zonal distribution: Arid Transition.

3. Coleosanthus linifolius (Eaton) Kuntze, Rev. Gen. Pl. 1: 328, 1891.

Brickellia linifolia Eaton in S. Wats. Bot. King. Explor. 137, pl. 15, 1871.

Type locality: "Sandy bottoms of American Fork, Jordan Valley, Utah."

Range: Washington to Utah and Arizona.

Specimens examined: Ellensburg, Elmer 369; Piper 2745; Whitel 690, 574; Egbert Springs, Sandberg & Leiberg 408; Yakima region, Brandegee 836; Spokane, Henderson 2277; Piper; bars of Touchet River, Horner 354; Spokane Bridge, Sandberg, McDongal, & Heller 911.

Zonal distribution: Arid Transition and Upper Sonoran.

GRINDELIA.

Heads small, 6 to 8 mm. high; bracts squarrose.

Rays wanting...... 1a. G. nana columbiana.

Heads larger; bracts not squarrose.

Cauline leaves broadest at base. 2. G. integrifolia.

Cauline leaves narrowest at base.

Stems herbaceous. 4. G. oregana.

1. Grindelia nana Nutt. Trans. Am. Phil. Soc. 7: 314, 1840.

Type locality: "Forests of Oregon, near Fort Vancouver, etc." Collected by Nuttall. Range: Washington to Wyoming and California.

Specimens examined: Fort Vancouver, Nuttall: Chelan, Elmer 498; Spangle, Suksdorf 333; Spokane, Henderson, July 9, 1892; Belmont, Piper 1833; St. Johns, Lake & Hull 754; Pullman, Hardwick, August 18, 1895; Waitsburg, Horner 566

ZONAL DISTRIBUTION: Arid Transition.

1a. Grindelia nana columbiana nom. nov.

Grindelia discoidea Nutt. Trans. Am. Phil. Soc. 7: 315, 1840, not Hook. & Arn. 1836.
Grindelia nana discoidea A. Gray, Syn. Fl. ed. 2, 12: 119, 1884.

1 (1

Type locality: "On the banks of the Oregon." Collected by Nuttall.

Range: Oregon and Washington.

Specimens examined: West Klickitat County, Suksdorf 189; White Bluff Ferry, Lake & Hull 753 and August 41, 1892; without locality, Cooper; Wenache, Whited 4151; Wilson Creek, Lake & Hull 753; Toppenish, Cotton 780.

Zonal distribution: Arid Transition.

2. Grindelia integrifolia DC. Prod. 7: 315, 1836.

Grindelia virgata Nutt. Trans. Am. Phil. Soc. 7: 314, 1840.

Type locality: "N. W. America." Range: Oregon and Washington.

Specimens examined: Fort Vancouver, Piper 3805; Tolmie.

ZONAL DISTRIBUTION: Humid Transition.

3. Grindelia hendersoni Greene, Pittonia 2: 18, 1889.

Type locality: "Lummi Island," Washington. Collected by Henderson

Range: Known only from the type locality.

Specimens examined: Lummi Island, Henderson 1676.

ZONAL DISTRIBUTION: Humid Transition.

This is perhaps only a perennating form of the following.

Grindelia oregana A. Gray, Syn. Fl. 12: 118, 1884.

Type locality: Oregon.

Pare none

RANGE: British Columbia to Oregon along the coast.

Specimens examined: Steilacoom, Suckley: Port Ludlow, Binns, September 15, 1890; 1890; Oreas Island, Henderson 2300; Fidalgo Island, Lyall in 1858; Oyhut, Lamb 1270; Rock Island, San Juan County, Henderson 2300; Tacoma, Flett 119; Seattle, Piper 2865; Union City, Piper in 1890; Stuart Island, Lawrence 38; Copalis Conard 387.

Zonal distribution: Humid Transition.

Grindella hirsutula Hook, & Arn, is listed by Suksdorf, but we find no evidence of its belonging to our flora.

CHRYSOPSIS.

Navs none	1. C. oregana.
Rays present.	
Leaves canescent, strigose, or hirsute	2. C. villosa.

Leaves green, hirsute and hispid. 2. C. hispida. 3. C. hispida.

1. Chrysopsis oregana (Nutt.) A. Gray, Proc. Am. Acad. 6: 543, 1865.

Ammodia oregana Nutt. Trans. Am. Phil. Soc. 7: 32, 1840.

Type locality: "On the sand and gravel banks of the Oregon and its tributary streams." Collected by Nuttall.

Range: Washington to California.

Specimens examined: Olympic Mountains, Piper 2194, 1063; Ellensburg, Whited 576, 689.

ZONAL DISTRIBUTION: Transition.

2. Chrysopsis villosa (Pursh) Nutt.; Hook. Fl. Bor. Am. 2: 22, 1834.

Amellus villosus Pursh, Fl. 2: 564, 1814.

Diplopappus villosus Hook. Fl. Bor. Am. 2: 22, 1834.

Type locality: "On the Missouri."

Range: British Columbia to Saskatchewan, south to California and Alabama.

Specimens examined: Whidby Island, Gardner 153; Rock Island, Sandberg & Leiberg 454; North Yakima, Watt, August, 1895; Wenache, Whited 7; Ellensburg, Whited 575; near Colville, Lyall in 1860; Similkameen, Lyall in 1860; Wawawai, Piper, July 8, 1898; Elmer 1017; Illia, Lake & Hull 752; Box Canyon, Kreager 397; Meyers Falls, Kreager 546.

Zonal distribution: Upper Sonoran, mainly.

3. Chrysopsis hispida (Hook.) Nutt.; DC. Prod. 7: 279, 1839.

Diplopappus hispidus Hook. Fl. Bor. Am. 2: 22, 1834.

Chrysopsis hirsuta Greene, Pittonia 3: 296, 1898.

Type locality: "Carlton-House Fort."

RANGE: Washington to Saskatchewan, south to Texas and Arizona.

Specimens examined: Loon Lake, Winston, July 20, 1897; Spokane, Piper 2385; Granddalles, Cotton 1550.

Zonal distribution: Arid Transition and Upper Sonoran.

CHRYSOTHAMNUS. RABBIT BRUSH.

Bracts of the involucre attenuate, acute. 4. C. bloomeri. Bracts of the involucre obtuse or obtusish.

Stems glabrous.

1. Chrysothamnus pumilus Nutt. Trans. Am. Phil. Soc. 7: 323, 1840.

Bigelovia douglasii pumila Λ. Gray, Syn. Fl. 1²: 140, 1884.

Type locality: "On the border of Lewis River and the Rocky Mountain plains." Collected by Nuttall.

Range: Washington and Montana to Utah.

Specimens examined: Yakima region, Brandeger in 1882.

2. Chrysothamnus viscidiflorus (Ilook.) Nutt. Trans. Am. Phil. Soc. 7: 324. 1840.

Crinitaria viscidiflora Hook, Fl. Bor, Am. 2: 24, 1834.

Bigelovia viscidiflora DC. Prod. 7: 279, 1838.

Bigelovia douglasii A. Gray, Proc. Am. Acad. 8: 645, 1873.

Type locality: "On the barren plains of the Columbia from the Great Falls to the mountains, and along Salmon River." Collected by Douglas.

Range: British Columbia to Dakota, south to California and New Mexico.

Specimens examined: Tampico, Henderson, July 31, 1892; Ellensburg, Whited 855; North Yakima, Henderson, October 5, 1892; Wenache, Whited 1328; Rattlesnake Mountains, Cotton 481; Egbert Springs, Sandberg & Leiberg 382; Chelan, Elmer 852; Coulee City, Lake & Hull 732; without locality Vasey 509; mouth of Snake River, Cooper.

Zonal distribution: Upper Sonoran.

Chrysothamnus viscidiflorus lanceolatus (Nutt.) Greene, Erythea 3: 95, 1895.
 Chrysothamnus lanceolatus Nutt. Trans. Am. Phil. Soc. 7: 324, 1840.

Bigelovia douglasii lanceolata Λ. Gray, Syn. Fl. 1²: 140, 1884.

Type locality: "Toward the source of the Platte and on the banks of Lewis River." Collected by Nuttall.

Range: Washington to Montana and Wyoming.

Specimens examined: Tampico, Flett 1026.

ZONAL DISTRIBUTION: Upper Sonoran.

3. Chrysothamnus nauseosus (Pall.) Britton in Britt. & Br. Ill. Fl. 3: 326, 1898.

Chrysocoma nauscosa Pall.; Pursh, Fl. 2: 517, 1814.

Chrysothamnus speciosus albicaulis Nutt. Trans. Am. Phil. Soc. 7: 324, 1840.

Bigelovia graveolens albicaulis A. Gray, Proc. Am. Acad. 8: 645, 1873.

Type locality: "On the banks of the Missouri."

Range: Washington to Alberta, south to California and Wyoming.

Specimens examined: Yakima Region, Cooper; Ellensburg, Whited 856; Umtanum Creek, Cotton 895; Prosser, Cotton 897; Blue Mountains, Horner 327; Wawawai, Piper 1571; Quillamene Creek, Cotton 1790.

Zonal distribution: Upper Sonoran.

3a. Chrysothamnus nauseosus graveolens (Nutt.).

Chrysocoma graveolens Nutt. Gen. 2: 136, 1818.

Bigelovia gravolens A. Gray, Proc. Am. Acad. 8: 645, 1873.

Chrysothamnus speciosus Nutt. Trans. Am. Phil. Soc. 7: 323, 1840.

Type locality: "On the banks of the Missouri in denudated soils."

KANGE: British Columbia to Dakota, south to California and New Mexico.

Specimens examined: North Yakima, Henderson, October 5, 1892; Watt, August, 1895; Wenache, Whited 1327: Rattlesnake Mountains, Cotton 481; White Bluffs, Dunn, September 13, 1902; Egbert Springs, Sandberg & Leiberg 344; Chelan, Elmer 854; Coulee City, Lake & Hull 733; Spokane, Sandberg, McDougal, & Heller 913.

Zonal distribution: Upper Sonoran.

4. Chrysothamnus bloomeri Greene, Erythea 3: 115, 1895.

Aplopappus bloomeri A. Gray, Proc. Am. Acad. 6: 541, 1865.

Type locality: "Mount Davidson, Nevada."

Range: Washington to California and Nevada.

Specimens examined: Mount Adams, Suksdorf 190; Yakima Region, Brandegee 843; Simcoe Mountains, Howell in 1880; Big Klickitat River Cotton 1490; without locality, Vascy in 1889; Mitchell Creek, Okanogan County, Gorman 835 (erroneously referred to Aplopappus watsoni); Mount Adams, Henderson & Flet 1068; Falcon Valley, Suksdorf, October 3, 1881.

Zonal distribution: Arid Transition.

ERICAMERIA.

1. Ericameria nana Nutt. Trans. Am. Phil. Soc. 7: 319, 1840.

Ericameria resinosa Nutt. loc. cit.

Aplopappus nanus D. C. Eaton in Wats. Bot. King Explor. 159, 1874.

Type Locality: "On shelving rocks on the Blue Mountains of Oregon." Collected by Nuttall.

Range: Washington to Idaho and Nevada.

Specimens examined: West Klickitat County, Suksdorf 338; mountains north of Ellensburg, Whited 862; North Yakima, Mrs. Steinweg in 1891; Yakima Region, Brandegre 845; Chelan, Elmer 855; Alkali Lake, Sandberg & Leiberg 418; cliffs at the mouth of the Tukanon, Piper.

Zonal Distribution: Arid Transition and Upper Sonoran.

Leaves lanceolate or oblong-spatulate, puberulent.......... 8. II. greenei.

1. Hoorebekia carthamoides (Hook.)

Pyrrocoma carthamoides Hook, Fl. Bor, Am. 1: 307, pl. 107, 1833. Aplopappus earthamoides A. Gray, Proc. Acad. Phila. 1863: 65, 1863. Type locality: "Northwest coast of America." Collected by Douglas.

Range: Washington, Oregon, and Idaho.

Specimens examined: Yakima region, Brandegee 841; Klickitat Prairie, Howell in 1880; White Salmon, Suksdorf 391; Tshimikaine [Chamokane], Geyer 588; Spokane County, Suksdorf 336.

Zonal distribution: Arid Transition.

Hoorebekia carthamoides cusickii (A. Gray).

Aplopappus carthamoides cusickii A. Gray, Syn. Fl. 12: 126, 1884.

Pyrrocoma cusickii Greene, Erythea 2: 59, 1894.

Type locality: "Union Co., Oregon." Collected by Cusick.

Range: Washington and Oregon.

Specimens examined: Falcon Valley, Suksdorf, July 17, 1886; Kamiak Butte, Piper, July 20, 1899.

Zonal distribution: Arid Transition.

2. Hoorebekia racemosa (Nutt.).

Homopappus racemosus Nutt. Trans. Am. Phil. Soc. 7: 332. 1840.

Purrocoma racemosa Tort. & Gr. Fl. 2: 244, 1842.

Aplopappus racemosus Torr. in Sitgreaves Rep. 162, 1853.

Type locality: "Plains of the Waldamet," Oregon. Collected by Nuttall.

RANGE: British Columbia to Saskatchewan, south to Nevada.

Specimens examined: Spokane County, Suksdorf 337; Pullman, Piper 1572.

Zonal distribution: Arid Transition.

3. Hoorebekia hirta (A. Gray).

Aplopappus hirtus A. Gray, Syn. Fl. 12: 127, 1884.

Pyrrocoma hirta Greene, Erythea 2: 69, 1894.

Type locality: Baker Co., Oregon. Collected by Cusick.

Range: Washington, Oregon, and Idaho.

Specimens examined: Yakima Region, Brandegee.

4. Hoorebekia hallii (Λ. Gray).

Aplopappus hallii A. Gray, Proc. Am. Acad. 8: 389, 1872.

Type locality: "Bluffs of the Columbia River at the Dalles." Collected by Hall.

Range: Washington and Oregon.

Specimens examined: White Salmon, Suksdorf 389.

5. Hoorebekia lyallii (A. Gray).

Aplopappus lyallii A. Gray, Proc. Acad. Phila. 1863: 64, 1863.

Type locality: Cascade Mountains, latitude 49°, at 2,270 m. altitude. Collected by

Range: British Columbia to Montana and Oregon.

Specimens examined: Olympic Mountains, Flett 802; Cascade Mountains, east side at 2,270 meters, Lyall in 1860; Mount Adams, Henderson, August 10, 1892; Howell; Suksdorf.

Zonal distribution: Arctic.

Hoorebekia lanuginosa (Λ. Gray).

Aplopappus lanuginosus A. Gray in Torr, Bot, Wilkes Exped. 347, 1874.

Stenotus lanuginosus Greene, Erythea 2: 72. 1894.

Type locality: "Upper part of the north fork of the Columbia River," Washington. Collected by the Wilkes Expedition.

Range: Washington and Oregon.

Specimens examined: Ellensburg, Piper 2701; upper Wenas River, Henderson 2291; Wenache, Whited 6, 1104, 1259; Yakima, Brandegee 844; Simcoe Mountains, Howell 285; Blue Mountains, Piper 2430.

Zonal distribution: Arid Transition.

7. Hoorebekia stenophylla (A. Gray).

Aplopappus stenophyllus A. Gray in Torr. Bot. Wilkes Exped. 347, 4874.

Stenotus stenophyllus Greene, Erythea 2: 72, 1894.

Type locality: Spipen [Naches] River and north fork of the Columbia River. Collected by Pickering and Brackenridge.

RANGE: Washington and Idaho to California.

Specimens examined: Mountains between Ellensburg and Wenache, Whited 28, Ellensburg, Piper 2685; North Yakima, Mrs. Steinweg in 1894; near Cleveland, Suksdorf 335; Klickitat County, Howell in 1882; Rattlesnake Mountains, Cotton 346.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

8. Hoorebekia greenei mollis (A. Gray).

Aplopappus greener mollis A. Gray, Syn. Fl. 12: 135, 1884.

Aplopappus mollis A. Gray, Proc. Am. Acad. 16: 80, 1880.

Macronema molle Greene, Erythea 2: 73, 1894.

Type locality: "High mountains of Union Co., Oregon." Collected by Suksdorf.

RANGE: Washington and Oregon

Specimens examined: Yakima region, Brandegie 839, 842; Lake Chelan, Gorman 845. Gorman's plant was mentioned in his paper on the Washington Forest Reserve as Macronema suffraticosum Nutt.

SOLIDAGO. GOLDENROD.

Branches of the panicle racemiform

Leaves thin; stems erect and tall.

Heads small, 1 to 5 mm long, in very dense panieles.

Leaves thick and firm.

Branches of the panicle not racenuform

Involucial bracts obtuse

1. Solidago caurina Piper, Bull. Torr. Club 28: 40-1901.

Type locality Cascade Mts., Wash., above Lake Chelan."

Range. Cascade Mountains of Washington

Specimens examined. Klickitat County, Suksdorf 30; Horseshoe Basin, Lake and Hull 818.

2. Solidago elongata Nutt Trans Am. Phil Soc. 7: 327-1810

Type locality, "Wappatoo Island and the plans of the Oregon," Coffected by Nuttalf.

RANGE: British Columbia to Montana and California

Specimens examined. Seattle, Prper 1136. Whatcom County, Suksdorf 974; Tacoma, Flett 67; upper Nisqually Vafley, Allen 13. Puyallup, Flett 66, Leavenworth, Savage 4, Yakima County, Henderson 2318. Khekitat County, Suksdorf 30. McCloud Lake, Suksdorf 974, Fort Vancouver, Donglas; Trout Lake, Flett 1071, Fish Lake, Dann, July 31, 1900; Stevens Pass, Whited 1443; Spokane County, Henderson 2317.

ZONAL DISTRIBUTION: Transition.

29418--06 м----36

3. Solidago serotina Ait. Hort. Kew. 3: 211, 1789.

Type locality: "North America."

RANGE: Washington to Newfoundland, south to Nevada, Texas, and Georgia.

Specimens examined: West Klickitat County, Suksdorf 29, Rock Island, Sandberg & Leiberg 449; Beaver Creek, Whited 17; Similkameen, Lyall in 1860; Pullman, Piper 3102; Wawawai, Piper, August 23, 1895, August 24, 1894; Newport, Kreager 451; Prosser, Cotton 811; Mabton, Cotton 756.

Solidago serotina salebrosa Piper, Fl. Palouse Reg. 185, 1901.

Type locality: Pullman, Washington.

Range: Washington and Oregon castward across the continent.

Specimens examined: Seattle, Piper, August, 1892; Silver Lake, Henderson 2317; Peshastin, Sandberg & Leiberg 806; Klickitat County, Suksdorf 28; without locality, Brandegee; North Yakima, Piper 1785; Watt, August, 1895; Coulee City, Lake & Hull 797; Alma, Elmer 524; Lake Chelan, Lake & Hull 796; Union Flat, Lake & Hull, July 18, 1892; Pullman, Piper 1580; Henderson 2313.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

This plant has frequently been considered a form of S. canadensis L., a species not known in our limits.

4. Solidago tolmieana A. Grav, Syn. Fl. 14: 151, 1884.

Type locality: Fort Vancouver, Wash, collected by Tolmie.

RANGE: Washington and Oregon in the coast region.

Specimens examined: Olympia, Henderson 1708, 2316, 1709; Kincaid; Fort Vancouver, Tolmie.

ZONAL DISTRIBUTION: Humid Transition.

5. Solidago missouriensis Nutt. Journ. Acad. Phil. 7: 32, 1834

Type locality: "On the upper branches of the Missouri and Arkansas."

Range: Washington to Manitoba, south to Texas.

Specimens examined: Rattlesnake Mountains, Cotton 480; Peshastin, Sandberg & Leiberg 539; Coulee City, Lake & Hull 794, Rock Lake, Lake & Hull 795; Spokane, Henderson 2315; Spokane County, Suksdorf 926; Pullman, Piper; Henderson 2314; Hull, July 16, 1892; Waitsburg, Horner 573; Rattlesnake Mountains, Cotton 480.

ZONAL DISTRIBUTION: Arid Transition.

6. Solidago corymbosa Nutt. Trans. Am. Phil. Soc. 7: 328-1840.

Solidago multiradiata scopulorum A Gray, Proc. Am. Acad. 17: 191, 1882.

Solidago ciliosa Greene, Pittonia 3: 22, 1896.

Solidago hesperia Howell, Fl. N. W. Am. 303, 1900.

Type locality: "Central chain of the Rocky Mountains." Collected by Nuttall.

Range: British Columbia to California and New Mexico.

Specimens examined: Olympic Mountains, Piper 2200, 2199; Mount Stuart, Elmer 1196; Mount Rainier, Piper 2158; Smith 1064, Baldy Peak, Lamb 1313, Silverton, Bouck 105, without locality, Brandegee 14; Loomis, Elmer 562

ZONAL DISTRIBUTION: Hudsonian and Arctic.

7. Solidago purshii Porter, Bull. Torr. Club 21: 311. 1894.

Solidago humilis Pursh, Fl 2: 543. 1814.

Type locality. "In North America"

Range: Newfoundland to Virginia. Washington.

Specimens examined: Mason County, Peper 886; Kincaid, June 15, 1892; Tacoma, Flett 878; without locality, Henderson 2319.

Zonal distribution: Humid Transition.

These western specimens are so similar to the Atlantic coast plant that I am compelled so to refer them, notwithstanding the fact that the species is unknown in intermediate regions.

8. Solidago glutinosa Nutt. Trans. Am. Phil. Soc. 7: 328, 1840.

Solidago confertiflora DC. Prod. 5: 339 1836, not Nutt. 1834.

Type locality: "Plains of the Oregon and Wahlamet." Collected by Nuttall.

Range: Washington and Oregon in the coast region.

Specimens examined: Shoalwater Bay, Cooper; Fort Nisqually, Wilkes Expedition, Coupeville, Gardner 423.

Zonal distribution: Humid Transition.

EUTHAMIA.

1. Euthamia occidentalis Nutt. Trans. Am. Phil. Soc. 7: 326, 1840.

Solidago occidentalis Torr. & Gr. Fl. N. Am. 2; 226, 1841.

Type locality: "Banks of the Oregon and Wahlamet, and Lewis River." Collected by Nuttall.

RANGE: British Columbia to California and New Mexico.

Specimens examined: Scattle, Piper, August 1892; North Yakima, Wall, August, 1895; Ellensburg, Whited 589; banks of Columbia, Brandegee 868; Okanogan River, Walson 190; Coulee City, Lake & Hull 793; Spokane, Elmer 869; Piper, October 1, 1900; Pullman, Piper 4114; Spokane, Kreager 550; Prosser, Cotton 887; Vancouver, Sheldon 11290.

Zonal distribution: Upper Sonoran and Transition.

TOWNSENDIA.

Townsendia florifer (Hook.) A. Gray, Proc. Am. Acad. 16: 81, 1880.

Townsendia strigosa Nutt. err. det. Gray in Torr. Bot. Wilkes Exped. 17: 344, 1874.

Erigeron florifer Hook, Fl. Bor, Am. 2: 20, 1834.

Type locality: "Near Priests Rapids of the Columbia." Collected by Douglas.

Range: Washington and Oregon east of the Cascade Mountains.

Specimens examined: Tampico, Flett 1107; Morgans Ferry, Suksdorf 347; opposite Willows, Howell; Wenas Valley, Lyall in 1860; Yakima Reservation, Miss Cooley, July, 1891; North Yakima, Watt, August, 1895; Steinweg in 1894; Ellensburg, Piper 2687; Pasco, Piper 2988; Elmer 1058; Hindshaw 9; without locality, Henderson in 1892; Coulee City, Piper 3862; Ritzville, Sandberg & Leiberg 169.

Zonal distribution: Upper Sonoran.

ERIGERON.

Rays conspicuous, much surpassing the disk.

Root stout, perennial or perennating by offsets.

Tall species with flat, rather broad and large leaves.

Rays narrow, 100 to 150; involuere smooth or hirsute, not viscid.

Leaves entire; involucre usually hirsute;

not stoloniferous

Rays broader, 30 to 50; involucre viscid.

Leaves thick; rays pink 2. E. salsaginosus. Leaves thin; rays violet 3. E. membranaceus.

1. E. speciosus.

Low species; leaves either narrow or mostly basal. Rays yellow.

Heads solitary: leaves obovate or spatu-

Heads several: leaves linear.

Leaves hispidulous, curved; rays	
pale yellow	5. E. curvifolius.
Leaves canescent-puberulent,	10 1 257 5
straight; rays bright yellow	10. E. filifolius.
Rays not yellow.	
Leaves cleft or parted. Leaves parted into narrow lobes	9. E. compositus.
Leaves merely 3 to 5-cleft	9a. E. compositus trifidus
Leaves entire or merely toothed.	, J
Stems branched, leafy, usually bear-	
ing several heads.	
Pubescence long and dense;	
rays blue, pink or white	4. E. hispidissimus.
Pubescence very short.	
Leaves linear-lanceolate, 3-	
nerved	6. E. corymbosus.
Leaves filiform or linear, 1-	the E. E
nerved	11. E linearis
Stems simple, scapiform; head al- ways solitary.	
Leaves dentate, broadly spatu-	
late.	
Involucre glandular; stems	
not producing offsets	13. E. leibergii.
Involucre glabrate; stems	
producing resulate offsets.	15. E. oreganus.
Leaves entire; involuere not	
glandular.	
Rays white, leaves linear-lanceolate,	8 E. nevadensis,
Rays violet.	5 E. neranensis,
Involuere very woolly.	14. E. uniflorus.
Involucre hispidulous.	7. E. poliospermus.
Roots annual, fibrous: leaves toothed or lobed.	
Stems diffusely branched; rays pink 100 to 120	17. E. divergens.
Stems erect, branched above; rays white 40 to 60.	18. E. ramosus.
Rays very short or wanting.	
Plants low, root stout, perennial; heads solitary to	
numerous.	01 6
Leaves ternately cleft or parted; involucre hirsute. Leaves linear or linear-spatulate, narrow; invo-	9b. E. compositus discoideus.
lucre villous	20. E. bloomeri.
Plants tall: heads several to numerous.	zo. E. moonere.
Rays wanting: heads cymose; leaves firm; root pe-	
rennial	19. E. eradiatus.
Tory's present, short.	
Heads paniculate; involuere glabrous; root an-	
nual	21. E. canadensis.
Heads corymbose; involucre hirsute at least	
at base; roots biennial.	99 K
Tall, 30 to 60 cm.; heads many Low 10 to 20 cm.; heads few	
LOW TO CO TO CILL, IN COST ON	www. 191 mer so recording

1. Erigeron speciosus DC. Prod. 5: 284, 1833.

Stenactis speciosa Lindl. Bot. Reg. t. 1577, 1833.

Type locality: "California." Collected by Douglas.

RANGE: British Columbia to southern Oregon, Idaho, and Colorado.

Specimens examined: Olympic Mountains, Flett. 812; Whidby Island on the 175; Lake Park, Piper, July 27, 1895; Lopez Island, Lyall in 1858; Olympia, House 1941; Fort Vancouver, Tolmie; Mount Stuart, Elmer 1110; Peshastin, Sandbarg & Leiberg 176; Upper Naches River, Henderson, June 15, 1892; along Twisp River, Vis. of 41; Leavenworth, Whited, August 6, 1896; Tieton River, Cotton 439; upper Nisqually Veney, Alben 222; west Klickitat County, Suksdorf 561; Falcon Valley, Suksdorf 401; Yek're, region, Brandegce 880, Conconully, Whited 1317; Wenache foothills, Whited 1295, 1182; Trout Lake, Flett 1090; Loomis, Elmer 578; Fort Colville to Cascades, Lyall in 1860; without locality, Vascy 513.

ZONAL DISTRIBUTION: Transition.

2. Erigeron saluginosus (Richards.) A. Gray, Proc. Am. Acad. 16; 93, 1881.

Aster sulsuginosus Richards, Bot. App. Frankl. Journ. 2: 748, 1823.

Type locality: "On the Salt Plains in the Athabasca."

RANGE: Alaska to California and New Mexico.

Specimens examined: Mount Rainier, Allen 50; Smith, August, 1890; Piper 2148; Cascade Mountains, latitude 49°, Lyall in 4859; Mount Adams, Suksdort 560; Flett 1092; upper Atanum River, Henderson, August, 1892; Nason Creek, Sandberg & Leiberg 353; Cascade Mountains, Yakima County, Henderson, August, 1892; ucat Skagit 1538, Lake & Hull, August 27, 1892; between Wenache and Ellensburg, Whited, August, 1893; Yakima region, Brandegee 876; without locality, Vascy 510.

Zonal distribution: Hudsonian and Arctic.

2a. Erigeron salsuginosus angustifolius A. Gray, Proc. Am. Acad. 16: 93-1880.

Type locality: "California."

Range: Washington to California.

Specimens examined: Mount Rainier, Allen 142; Silverton, Bouck 410; Yakima region, Brandegee 877.

3. Erigeron membranaceus Greene, Pittonia 3: 294, 1898.

Type locality: "Eastern Oregon" in the Blue Mountains. Collected by Cusick.

RANGE: Blue Mountains of Washington and Oregon.

Specimens examined: Blue Mountains, Piper 2401.

ZONAL DISTRIBUTION: Hudsonian.

4. Erigeron hispidissimus (Hook.)

Erigeron strigosus hispidissimus Hook, Fl. Bor, Am. 2: 18, 1831.

Erigeron concinnus Torr. & Gr. Fl. 2: 174, 1841

Distasis concinna Hook, & Am. Bot. Beech, Vov. 350, 1840.

Type LOCALITY: "Plentiful in the vallies of the Blue Mountains and of the Spokane River." Collected by Douglas.

RANGE. British Columbia to New Mexico and Arizona.

Specimens examined: Ellensburg, Whited 447; North Yakima, Mis. 86 in a call 1891; Watt in 1895; Yakima, Henderson, May 25, 1892, Wenache, Whited, Judy, 1895, and 1098. Bickleton, Suksdorf 352. Naches, Lyall in 1860. Rattlesnake Mountains, Carla 103. Pasco, Hindshaw 51; Crab and Wilson creeks, Sandberg & Leiberg 236; Ritzville, Sandberg & Leiberg 195; Colville, Lyall in 1860; Medical Lake, Henderson 2302, 2301; Moses Coulee, Lake & Hull 696; Spokane, Piper 2275, 1831; Sarage 14; Elmer 375; between Coulee City and Waterville, Spillman, May, 1896; Waitsburg, Horner 170; Brewster, Gryfidle & Collor 348.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

5. Erigeron curvifolius Piper, Bull. Torr. Club 27: 396, 1900.

(Chrysopsis hirtella DC, Prod. 5: 327, 1836, not Erigeron hirtellus DC, Prod. 5: 290, 1836.

Type locality: Morgan's Ferry, Yakima County, Washington. Collected by Suksdorf. Range: Eastern Washington.

Specimens examined: Snipes Mountain, Cotton 384; Soap Lake, McKay 5; Morgans Ferry, Yakima County, Suksdorf, June 7, 1884; Washtuena, Elmer 1036; Pasco, Hindshaw, May 25, 1896; Piper 2993; Connell, Leekenby, June 18, 1897; near Ephrata, Griffiths & Cotton 491; Kahlotus, Cotton 1000; Prosser, Cotton 1100, 1075.

Zonal distribution: Upper Sonoran.

This species was included by Doctor Gray in *E. cho ysopsidis* Gray. The type locality of that is given as "E. Oregon and adjacent Washington Terr., *Douglas, Cusick, Nevius, Howell.*"

6. Erigeron corymbosus Nutt. Trans. Am. Phil. Soc. 7: 308, 1840.

Type locality: "Rocky Mountains towards the Oregon." Collected by Nuttall.

RANGE: Washington to Montana and California.

Specimens examined: Elliensburg, Elmer 374; Whited 515, 678 and June 27, 1897; Wenache, Whited 1144; Rock Island, Sandberg & Leiberg 458; Chelan, Whited 138, 7; Crab and Wilson creeks, Sandberg & Leiberg 254; Coulee City, Lake 719; Medical Lake, Henderson 2303, July, 1892; Spangle, Suksdorf 351; without locality, Vasey 520, 125; Pullman, Piper 1601; Walla Walla region, Brandegee 872; Illia, Lake & Hull 695; Spokane, Piper, June 25, 1897; without locality, Wilkes Expedition; Rattlesnake Mountains, Cotton 689.

Zonal distribution: Arid Transition.

7. Erigeron poliospermus A. Grav, Syn. Fl. 12: 210, 1884.

Type locality: "Umatilla, Oregon." Collected by Howell.

Range: Eastern Washington and eastern Oregon.

Specimens examined: Ellensburg, Piper, May 21, 1897; Whitel 720; North Yakima, Leckenby, April 22, 1898; Steinweg: Henderson, May 25, 1892; Wennehe, Whitel, May 27, 1896, 1085; Tampico, Flett 1034; Columbus, Suksdorf, April 13, 1886; Bickleton, Suksdorf 348; Rattlesnake Mountains, Cotton 331; Klickita) River, Flett 1106 in part: Coulee City, Piper 3888; Wilson Creek, Lake & Hull, August 6, 1892; Spokane, Leiberg 39; Walla Walla, Brandegee 869; Tw. edg 922; Pro ser, Cotton 586.

Zonal distribution: Upper Sonoran.

8. E.igeron nevadensis A. Gray, Proc. Am. Acad. 8: 649, 1873.

Type locality: Near Virginia City, Nevada. Collected by Bloomer.

RANGE: Washington to California and Nevada.

Specimens examined: Without locality, Brandeger 875.

9. Erigeron compositus Pursh, Fl. 2: 535, 1814.

Type locality: "On the banks of the Kooskoosky," Idaho. Collected by Lewis.

RANGE: Washington to California and Colorado.

Specimens examined. Spokane, Prper 2289; Spokane Hills, Lyall in 1861; Spokane, Henderson 2306; Sandberg & Leiberg 1.

Zonal distribution: Upper Sonoran and Arid Transition.

Erigeron compositus trifidus (Hook.) A. Gray, Proc. Am. Acad. 16: 90. ISSI. Erigeron trifidus Hook. Fl. Bor. Am. 2: 17, 1834.

Type locality: "Barren places among the Rocky Mountains."

RANGE. British Columbia to Colorado and California.

Specimens examined: Mount Rainier, Smith 496; Peper 2144; Mount Adams, Flett 1079; Suksdorf; Henderson, August 10, 1892; Olympic Mountains, Piper, August, 1895; Flett 120; J. M. Grant 30; Mount Stuart, Elmer 1211; Klickitat River, Flett 1106.

Zonal distribution: Arctic.

9b. Erigeron compositus discoideus A. Gray, Am. Journ. Sci. 11, 33: 237, 1862.

Type locality: Rocky Mountains, Colorado. Collected by Parry.

Range: Washington to Colorado.

Specimens examined: Cascade Mountains, latitude 49° at 2,100 meters, Lyall in 1860.

10. Erigeron filifolius (Hook.) Nutt. Trans. Am. Phil. Soc. 7: 308, 1840.

Diplopappus filifolius Hook, Fl. Bor, Am. 2: 21, 1834.

Chrysopsis canescens DC. Prod. 5: 328, 1836.

Erigeron peucephyllus A. Gray, Proc. Am. Acad. 16: 89, 1880.

Type locality: "Common on the Great Falls of the Columbia, and barren grounds of the interior." Collected by Douglas.

RANGE: British Columbia to California and Nevada.

Specimens examined: Wenache, Whited 83, 27, 1074; Ellensburg, Piper 2684; Whited 352, 641; Elmer 368; Yakima, Leckenby, May 11, 1898; North Yakima, Mrs. Steinweg in 1894; Watt, June, 1892; Sunnyside, Cotton 355; Rattlesnake Mountains, Cotton 363; Toppenish, Henderson, May 28, 1892; Bickelton, Suksdorf 334; Wenas Valley, Lyall in 1860; Tampico, Flett 1065; Crab and Wilson creeks, Sandberg & Leiberg 233; Cheney, Mrs. Susan Tucker in 1890 and 1892; Sprague, Sandberg & Leiberg 142; Coulee City, Piper 3860; Spangle, Piper, June 24, 1899; without locality, Vasey 503; Walla Walla region, Brandegee 873, 874.

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

11. Erigeron linearis (Hook.)

Diplopappus linearis Hook. Fl. Bor. Am. 2: 21, 1834.

Type locality: "Common on dry rocks and sandy grounds near the "Priests Rapids" of the Columbia, and also on Lewis and Clarkes River." Collected by Douglas.

Range: British Columbia to California and Nevada.

Specimens examined: Wenache, Whited 72, 1116, Elmer 477; Wenache Mountains, Whited, June 23, 1901; Ellensburg, Piper 2741; Whited 655, 514; Elmer 372; North Yakima, Brandegee; Watt; Yakima County, Suksdorf 350; Cleman Mountain, Henderson in 1892; Wenas River, Henderson in 1892; Pasco, Henderson in 1892, White Bluff Ferry, Lake & Hull; Connell, Leckenby; Washtucna, Elmer 1039; Coulee City, Lake & Hull 817, Piper 3844; Crab and Wilson creeks, Sandberg & Leiberg 255; Mount Stuart, Elmer 1111; Colville, Watson 207; Columbus, Suksdorf; Lake Chelan, Loke & Hull 817; Spokane, Sandberg, Heller, & McDongal 915; without locality, Vasey 541; Rocky Mountains and Walla Walla, Nuttall; Spokane, Piper 2274; Snipes Mountain, Cotton 387; Soap Lake, McKay 6, Stehekin, Whited 1389.

Zonal distribution: Upper Sonoran.

12. Erigeron aureus Greene, Pittonia 2: 169, 1891.

Aplopappus brandegei Λ. Gray, Syn. Fl. ed. 2, 1²: 132, 1886, not Erigeron brandegei Λ. Gray, 1884.

Type locality: "Mountains of Washington in the Yakima district." Collected by Brandegee.

Range. Cascade Mountains, Washington.

Specimens examined. Mount Stuart, Elmer 1105, Brandegee 85, Mount Ramier, Peper 2150, 523, Allen 94, Stevens Pass, Sandberg & Leiberg 782; above Lake Chelan, T. E. Wilcox in 1883, North Fork of Bridge Creek, Elmer 698.

Zonal distribution: Aretic.

13. Erigeron leibergii Piper, Bull. Torr Club 28: 41. 1901

Type locality Mount Stuart, Washington, at 2,460 meters altitude.

Range. Known only from the type locality

Specimens examined: Mount Stuart Sandberg & Leiberg 810

14. Erigeron uniflorus L Sp. Pl. 2: 864-1753

Type locality. 'Habitat in Applus Lapponiae, Helvetiae''

RANGE: Alaska to Labrador south to California and Colorado.

Specimens examined: Cascade Mountains, Dr. Cooper.

15. Erigeron oreganus A. Gray, Proc. Am. Acad. 19: 2, 1883.

Type locality: "Oregon, along the Columbia River, under overhanging cliffs, in Multnomah Co.," Howell.

Range: Bluffs of the Columbia River below the Cascades on both sides of the river.

Specimens examined: Cape Horn, Peper 4983, 5010.

16. Erigeron philadelphicus L. Sp. Pl. 2: 863, 1753.

Erigeron occidentale Nutt. Trans. Am. Phil. Soc. 7: 311–1840.

Type locality: Canada

Range: Throughout most of Temperate North America.

Specimens examined: Whidby Island, Gardner 179; Snohomish Kincaid June 3, 1892; Silverton, Bonek 109; Peshastin, Sandberg & Leiberg 169; Deming, Flett 870; Lake Concountly, Whited 1318; Cascade Mountains to Colville, Lyall in 1860, Loomis, Elmer, August, 1897. Waitsburg, Horner 175.

ZONAL DISTRIBUTION: Transition.

17. Erigeron divergens Torr. & Gr. Fl. N. Am. 2: 175-1841

Leigeron divarientus Nutt. Trans. Am. Phil. Soc. 7; 311–1840, not Michx. 1803.

Type locality: "In the Rocky Mountains and the plains of Oregon". Collected by Nuttall

RANGE: Washington to California, Nebraska, and Texas

Specimens examined: Wenache, Whited 72, 73, 74. Elmer 480; west Klickitat County, Suksdorf 563; Rock Island, Sandberg & Leiberg 155. between Coulee City and Waterville, Spittman, May, 1896; Maishall Junction, Piper 2257. Wawawai, Elmer, June, 1897; Piper, July 8, 1898; Almota, Piper 1832.

ZONAL DISTRIBUTION: Upper Sonoran

18. Erigeron ramosus (Walt.) B. S. P. Piel, Cat. N. Y. 27, 1888.

Doronicum ramosum Walt., Fl. Car. 205, 1788.

Erigeron strigosus Muhl., Willd. Sp. Pl. 3: 1956, 1803.

Type locality: Pennsylvania.

RANGE: British Columbia to Nova Scotia south to California, Texas, and Florida.

Specimens examined: C. scade Mountains to Fort Colville, Lyall in 1860; Steilacoom, Piper: Fort Vancouver, Piper 3077; Wenache, Elmer 182; Waitsburg, Horner 353 and July 27, 1896; Spokane, Piper, June 25, 1897; Union Flat, Lake & Hull 697; Pullman, Piper 1821.

Zonal distribution; Transition.

19. Erigeron eradiatus (A. Gray).

Erigeron douglasii eradiatum A. Gray, Pac. R. Rep. 124; 5, 1860

Erigeron inormatus A. Gray, Proc. Am. Acad. 16:88, 1880

Erigeron foliosus inornatus A. Gray, Bet. Cal. 1:320, 4876.

Type Locality: "Sandy pine forest on the table-land east of Mount Adams," Washington. Collected by Cooper.

Range: Washington to California.

Specimens examined: Cascade Mountains, Cooper; Falcon Valley, Suksdorf 400, Big Klickitat River, Henderson, August 21, 1892; Blue Mountains, Horner 349

ZONAL DISTRIBUTION: Arid Transition.

20. Erigeron bloomeri A. Gray, Proc. Am. Acad. 6: 40, 1865.

Type locality: "Near Virginia City, Nevada."

RANGE: Washington to Nevada and California.

Specimens examined: Yakima County, Henderson 2305; Blue Mountains, Piper 2392.

Zonal distribution: Hudsonian.

21. Erigeron canadensis L. Sp. Pl. 2: 863, 1753.

Type locality: "Canada, Virginia."

Range: Temperate North America.

Specimens examined: Mason County, Kineaid in 1892; North Yakima, Watt, August, 1895; Leavenworth, Whited, August 6, 1896; Lake Chelan, Lake & Hull, August 14, 1892; Loomis, Elmer 567; Prosser, Cotton 886.

ZONAL DISTRIBUTION: Transition and Upper Sonoran.

22. Erigeron acris L. Sp. Pl. 2: 863, 1753.

Type locality: European.

RANGE: British Columbia to Labrador south to Oregon and Colorado. Europe. Asia. Specimens examined: Goose Lake, Flett 1156: Falcon Valley, Subsdorf 353: Yakima Region, Brandegee 878: Cascade Mountains, 19°, Lyall in 1860; Stevens Pass, Sandberg & Leiberg 765; Stampede Tunnel, Henderson, July 26, 1892.

Zonal distribution: Arid Transition and Canadian.

22a. Erigeron acris debilis A. Grav, Syn. Fl. 12: 220, 1884.

Type locality: "Northern Rocky and Cascade Mountains, Montains, Canby, Surgent, at Woodruffs Falls, * * *; Mount Paddo, Suksdorf, Howell."

RANGE: Alaska to Labrador south to Washington and Montana.

Specimens examined: Olympic Mountains, Flett 820; Mount Adams, Suksdorf 70, 402, 2170; Howell in 1882; Flett 4156; Henderson, August 9, 1892; Skamania County, Suksdorf 2170; Loomis, Elmer 591.

Zonal distribution: Arctic.

ERIGERON GLABELLUS MUCRONATUS Hook, Fl. Bor. Am. 2: 19, 1834. Type locality, "Plentiful on low plains of the Columbia, near the coast." We have been unable to determine what this plant is from the brief description.

SERICOCARPUS.

1. Sericocarpus rigidus Lindl. in Hook. Fl. Bor. Am. 2:14, 1831.

Scricocarpus oregonensis Nutt. Trans. Am. Phil. Soc. 7: 302, 4840.

Type locality: "Columbia River." Collected by Scouler.

Range: Washington to California in the coast region.

Specimens examined: Whidby Island, Gardner 154; Tacoma, Flett 164, 876, Olympia, Henderson 1706; McAllisters Lake, Henderson, July 22, 1888; Fort Vancouver, Tolmic

ZONAL DISTRIBUTION: Humid Transition.

OREASTRUM.

1. Oreastrum alpigenum (Torr. & Gr.) Greene, Pittonia 3: 447, 1896

Aster alpigenus A. Gray, Proc. Am. Acad. 8: 389, 4872.

Aplopappus alpigenus Torr. & Gr. Fl. N. Am. 2: 241, 1842.

Aster pulchellus D. C. Eaton in S. Wats. Bot. King Explor, 143, t. 16, 1871

Type Locality, Mount Ramier, Washington Collected by Tolmie.

Range: Cascade Mountains, Washington and Oregon.

Specimens examined: Mount Rainier, Allen 143, Piper 498, 2456; Tolmie; Mount Stuart, Elmer 1094, without locality, Brandegee 18, 20, 32; Mount Adams, Subsdorf in 1878 and 522; Flett 1091.

ZONAL DISTRIBUTION: Aretic.

EUCEPHALUS.

Rays purple or violet.		
Rays white, becoming pink-tinged	1.	E. paneicapitatus.
Leaves tomentose beneath	<u>·</u>).	$E.\ ledophyllus.$
Leaves glabrous		
T I I II I I	.)	L1

Leaves glancous, broadly fanceolate 3. E. glancophyllus. Leaves green.

Leaves broadly lanceolate 4. E. engelmanni. Leaves narrowly lanceolate 5. E. serrulatus.

1. Eucephalus paucicapitatus (Robinson) Greene, Pittonia 3: 56. 1896.

Aster paucicapitatus Robinson, Proc. Am. Acad. 29: 329, 1894.

Aster engelmanni pancicapitatus Robinson, Proc. Am. Acad. 26: 176, 1891.

Type locality: Olympic Mountains, Washington.

Range: Olympic Mountains.

Specimens examined: Olympic Mountains, Piper 2195; Flett 819.

Zonal distribution: Hudsonian.

2. Eucephalus ledophyllus (A. Gray) Greene, Pittonia 3: 55. 1896.

Aster ledophyllus A. Gray, Proc. Am. Acad. 16: 98, 1880.

Aster engelmanni ledophyllus A. Gray, Proc. Am. Acad. 8: 388, 1872.

Type locality: "In the Cascade Mountains." Collected by Lyall.

Range: British Columbia to Oregon in the Cascade Mountains.

Specimens examined: Mount Rainier, Piper 2147; Allen 284; Mount Adams, Henderson, August 5, 1892; Suksdorf 61.

Zonal distribution: Hudsonian.

3. Eucephalus glaucophyllus nom. nov.

Aster engelmanni glaucesceus A. Gray, Syn. Fl. ed. 2, 1²; 200, 1886, not Aster glaucescens Wender, 4832.

Eucephalus glaucescens Greene, Pittonia 3: 56, 1896.

Type locality: "On Mount Paddo" [Adams], Washington. Collected by Suksdorf.

Range: Washington to California.

Specimens examined: Mount Adams, Henderson, August 12, 1892; Suksdorf 651; Howell 401; Flett 1089; Simcoe Mountains, Howell, September 1880; Falcon Valley, Suksdorf 398; Skamania County, Suksdorf, August 10, 1886.

Zonal distribution: Hudsonian.

4. Eucephalus engelmanni (A. Gray) Greene, Pittonia 3: 54, 1896.

Aster engelmanni A. Gray, Syn. Fl. 12; 199, 1884.

Aster elegans engelmanni D. C. Eaton in S. Wats. Bot. King Explor. 144, 1871.

Type locality: "Cascade Mountains, latitude 49"." Collected by Lyall.

Range: British Columbia to Utah and Wyoming.

Specimens examined: Cascade Mountains, latitude 49°, Lyall; Colville to Cascade Mountains, latitude 49°, Lyall in 1860; head of Twisp River, Whited 39; Atanum River, Henderson, August 2, 1892; Stehekin, Whited 1401; near Skagit Pass, Lake & Hull 693; North Fork Bridge Creek, Elmar 649; without locality, Vasey 526; Mount Stuart, Sandberg & Leiberg 559; Clealum Lake, Cotton 869, Fort Sinicoe, Cotton 1562.

ZONAL DISTRIBUTION: Canadian and Hudsonian.

5. Eucephalus serrulatus Greene, Pittonia 3: 55, 1896.

Type locality: Mount Adams. Collected by Suksdorf (no. 1563).

Known only from the type collection. The plant is exceedingly close to E. engelmanni.

ASTER.

Leaves coriaceous, serrate, involucre well imbricated.

 Involucre campanulate, glaudular
 1. A. conspicuus.

 Involucre broadly turbinate, not glandular
 2. A radulinus.

Leaves membranaceous.

Involucre viscid or pruinose-glandular.

Heads over 1 cm, broad,

Leaves entire, firm; bracts rather rigid, well imbricated. 4. A. integrifolius.

Leaves serrate, not firm; bracts not rigid, loose 5. A. major.

Leaves serrate, not firm; bracts not rigid, loose 5. A. major.
Involuere not viscid or glan lular.
Heads less than 1 cm. broad.
Rays purple; involuere turbinate 6. A. amethystinus.
Rays usually white; involucre campanulate.
Herbage harshly puberulent
Herbage not harshly puberulent.
Involucial bracts acute
Involucial bracts obtuse 9. A. hallii.
Heads more than 1 cm, broad.
Involucial bracts closely appressed, mainly corraccous.
Akenes glabrous.
Leaves glaucous, entire
Leaves green, serrate, glabrous
Akenes pubescent; leaves puberulent, entire 12. A. jessicae.
Involueral bracts looser, largely herbaceous.
Leaves few, large, scarcely reduced upward, the
cauline with auriculate or clasping bases.
Heads solitary or few, long-peduncled leaves
dark green, usually glabrous
Heads several; stems leafy to the top; leaves
thin, pale, usually pubescent
Leaves numerous, either small, or much reduced
upward; cauline sessile, not at all auriculate.
Pubescent throughout; involucial bracts
herbaceous, lanceolate, flat
Glabrous or nearly so; involuctal bracts nar-
row, acute.
Involucial bracts, at least the outer ones,
foliaceous and passing into the leaves.
Leaves firm, entire, numerous 16. A. catoni.
Leaves thinner, less numerous, usually
serrate near the middle 17 1. douglasii.
Involueral bracts not at all foliaceous
Heads corymbose.
Leaves serrulate, those of the
inflorescence much reduced. 18. 4. occidentalis.
Leaves entire, those of the inflo-
rescence not much reduced 19. A. fremontii.
Heads solitary, naked-pedunculate 20. A. stenomeres.
1. Aster conspicuus Lindl. Hook. Fl. Bor. Am. 2: 7, 1834. Aster macdongalii Coult. & Fisher, Bot. Gaz. 18: 301, 1893. Type locality: "Carlton House." Collected by Drummond.
Range: British Columbia to Saskatchewan south to Oregon and Montana.
Specimens examined. Peshastin, Sandberg & Leiberg 494; footbills near Wenache, Whited
6, 1290, 1294; Ophir, Elmer 529; Lake Chelan, Lake & Hull 692, Alma, Elmer 538; Fort
Colville, Lyall in 1860; Geyer; Spokane County, Suksdorf 927; Kamiak Butte, Piper; near
Colton, Piper, July, 1898; Blue Mountains, Piper, July and August, 1896.
The state of the s

2. Aster radulinus A. Gray, Proc. Am. Acad. 8: 388, 1872.

Aster radula Less. Linnaea 6, 125-1831, not Ait, 1789.

Type locality: "In California." Collected by Chamisso.

RANGE: Washington to California.

ZONAL DISTRIBUTION: Arid Transition.

Specimens examined: North Yakima, Mrs. Steinwey, August, 1894; Watt, August, 1895; Falcon Valley, Suksdorf 395; White Salmon, Suksdorf 394; Howell; without locality, Vasey 512; Trout Lake, Flett 1074; Klickitat River, Cotton 1440.

Zonal distribution. Transition.

3. Aster campestris Nutt. Trans. Am. Phil. Soc. 7: 293, 1840.

Type locality: "Along the plains of Lewis River," probably in southern Idaho. Collected by Nuttall.

RANGE: Washington to Montana and northern California.

Specimens examined: Falcon Valley, Suksdorf 68; Howell in 1882; Wilson Creek, Lake & Hull 815, 816; Sprague, Lake & Hull, August, 1895, July 9, 1892; Lake Chelan, Lake & Hull 720; Spokane Falls, Walson 195; Spokane County, Suksdorf 928; Spalding; without locality, Brandegee; Walla Walla, Mrs. Anderson; Waitsburg, Horner 550, 553.

Zonal distribution: Upper Sonoran and Arid Transition.

3a. Aster campestris suksdorfii subsp. nov.

Differs from true A, campestris in being canescent all over with short hairs that are not at all appressed.

Type specimen in the Gray Herbarium. Collected on Little Klickitat River, October 5, 1882, by Suksdorf.

4. Aster integrifolius Nutt. Trans. Am. Phil. Soc. 7: 291, 1810.

Type locality: "Near the summit of Thornberg's Pass." Collected by Nuttall.

RANGE: Washington to California, Colorado and Montana.

Specimens examined: Blue Mountains, Horner 364

5. Aster major (Hook.) Porter, Mem. Torr. Club 5: 325, 1894.

Aster unaluschensis major Hook, Fl. Bor, Am. 2: 7, 1834.

Aster modestus Lindl.; Hook. Fl. Bor. Am. 2; S. 1834.

Aster sayianus Nutt. Trans. Am. Phil. Soc. 7: 294, 1840.

Type locality. "Saskatchewan to the Rocky Mountains," or as given by Lindley, "Mountain woods at the mouth of Smoking River, Lat. 56° N." Collected by Drummond. Range. British Columbia and Oregon eastward to Ontario.

Specimens examined. Cascade Mountains, latitude 49°, Lyall in 1859; Nisqually Valley, Allen 125a; Falcon Valley, Suksdorf 64; Skokomish River, Piper 2189; plains of Columbia, Nuttall: Beaver Creek, Whited 29; Minastash Canyon, Whited, August 29, 1897; Yakima region, Brandegee 858; Stevens Pass, Whited 1466, Loomis, Elmer 568; Railroad Creek, Elmer 700, Kittitas County, Sandberg & Leiberg 703; Wind River, Flett 1088; Cleahum Creek, Cotton 840.

ZONAL DISTRIBUTION: Canadian.

6. Aster amethystinus Nutt. Trans. Am. Phil. Soc. 7: 291, 1840.

Type locality, Salem and Cambridge, Massachusetts.

Range: Massachusetts to Iowa; eastern Oregon and eastern Washington.

Specimens examined: Okanogan River, Watson 191; Waitsburg, Horner 559; Wawawai, Poper 1602

Zonal distribution. Arid Transition and Upper Sonoran.

7. Aster multiflorus Ait. Hort. Kew. 3: 203. 1779.

Type locality: "North America"

RANGE. British Columbia to Canada, south to Arizona and Georgia

Specimens examined North Yakima, Henderson, October 5, 1892; Ellensburg, Whited 853, 591, Colville, Lyall in 1860; Loomis, Elmer 615, Lake Chelan, Lake & Hull 799; Spokane County, Suksdorf 930, Spokane, Sandberg, Hetler & McDougal 917, Sprague, Lake & Hull August 4, 1892, without locality, Lake & Hull 798, without locality, Vascy; without locality, Brandegee 34, without locality, Cooper in 1853, Waitsburg, Horner 23, Toppenish, Cotton 774.

ZONAL DISTRIBUTION. Upper Sonoran and Arid Transition.

8. Aster oreganus Nutt.; Torr. & Gr. Fl. 2: 163, 1841.

Tripolium oreganum Nutt. Trans. Am. Phil. Soc. 7: 296, 1840.

Type locality: "On the inundated banks of the Wahlamet," Oregon. Collected by Nuttall.

Range: Washington and Oregon.

Specimens examined: Falcon Valley, Substort 63, 647, 396; Loomis, Elmer 611; Spokane, Piper 2377; without locality, Vascy 521; Kittitas County, Colton in 1904.

ZONAL DISTRIBUTION: Arid Transition.

9. Aster hallii A. Gray, Syn. Fl. 12: 191, 1884.

Type locality: Oregon. Collected by Hall.

Range: Washington and Oregon.

Specimens examined: Yakima region, Brandegee 860.

Aster laevis geyeri A. Gray, Syn. Fl. 12: 183, 1884.

Aster brevibracteatus Rydberg, Mem. N. Y. Bot. Gard. 1: 393, 1900.

Type locality: "Meadows, Spokane and Columbia River valleys." Collected by Gever, no. 638.

RANGE: Washington to Montana and Wyoming.

Specimens examined: Fort Colville, Lyall in 1860; Spokane County, Suksdorf 929; Spokane, Piper 2380, Elmer 868; Palouse, Piper 1783; Waitsburg, Horner 548; without locality, Vasey.

11. Aster elmeri Piper, Bull. Torr. Club 29: 615, 1902.

Type locality: "Sinlahekin Basin near Loomis, Okanogan County, Wash." Pollected by Elmer. Not otherwise known

12. Aster jessicae Piper, Erythea 6: 30-1898

Aster latahensis Henderson, Contr. Nat. Herb. 5: 201, 1899.

Aster mollis Rydberg, Bull. Torr. Club 28: 22, 1901.

Type locality: Pullman, Washington.

Range: Washington, Idaho, Wyoming.

Specimens examined: Pullman, Piper, August, 1898, 1604, 2663, May, 1898; Union Flat, Piper in 1900

ZONAL DISTRIBUTION: Arid Transition

13. Aster foliaceus Lindl.: DC Prod. 5: 228, 1836.

Type locality: "In Unalaschka"

RANGE: Alaska to California and Nevada

Specimens examined: North Yakima, Watt; Klickitat River, Henderson, August 13, 1892; Mount Adams, Suksdorf 67; without locality, Vascy 523.

ZONAL DISTRIBUTION: Hudsonian

13a. Aster foliaceus frondeus A. Gray, Syn. Fl. 12: 193-1884

Aster foliaceus burkei Λ Gray, loc cit.

Aster amplissimus Greene, Proc. Acad. Phila. 1895; 550–1895

Type locality: Cascade Mountains, latitude 49°. Collected by Lyall.

Range: British Columbia to Oregon, Utah and Colorado

Specimens examined Olympia, Piper 2197; Flett 811, Lake Cushman, Henderson 2041; Mount Stuart, Elmer 1201 Mount Adams Henderson in 1882; Suksdorf 66, 642, August 42, 1885; Cascade Mountains, latitude 49° Lyall in 1859, upper Nisqually Valley, Allen 283, Skagit Pass, Lake & Hull 694 Blue Mountains, Piper in 1896; Loomis, Elmer 581; without locality, Brandegee 856; Parson Creek, Gorman 828 Klickitat River, Cotton 1430.

Zonal distribution, Hudsonian.

13b. Aster foliaceus apricus A. Gray, Syn. Fl. 12: 193, 1884.

Type locality "High mountains of Colorado at Union Pass."

Range. Washington to Colorado.

Specimens examined: Mount Rainier, Smith, August 11, 1889; Piper 1071; Mount Adams, Henderson, August 3, 1892; Suksdorf 65; Yakima region, Brandegee 115, 852.

Zonal distribution: Hudsonian.

14. Aster cusickii A. Gray, Proc. Am. Acad. 16: 99, 1881.

Type locality: "In the mountains of Union Co." Oregon. Collected by Cusick.

Range: Oregon and Washington in the Blue Mountains.

Specimens examined: Blue Mountains, *Horner* 363; Klickitat River, *Cotton* 1425, 1483. Zonal distribution; Hudsonian,

The Cotton specimens are quite glabrous and perhaps a distinct species.

15. Aster wattii Piper, Bull. Torr. Club 29: 645, 1902.

Type locality: "Near North Yakima, Wash." Collected by Prof. G. H. Watt; not otherwise known.

16. Aster eatoni (A. Gray) Howell, Fl. N. W. Am. 310, 1900.

Aster foliaceus catoni A. Gray, Syn. Fl. 12: 194, 1884.

Type locality: "West Humboldt Mountains to the Walsatch; 6-8000 feet elevation," Nevada.

Range: Washington to Utah and Nevada.

Specimens examined. Wenache, Whited 21, 199; Salmon River, Horner 361; Peshastin, Sandberg & Leiberg, August, 1893; Silver Lake, Henderson, July 3, 1892; Walla Walla, Piper, August 13, 1897; Waitsburg, Horner 547, 359; Toppenish, Cotton 776; Squaw Creek, Cotton 873.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

17. Aster douglasii Lindl; Hook. Fl. Bor. Am. 2: 11. 1834.

Type locality: "Common on the N W coast, near the confluence of the Columbia, in open undulating grounds." Collected by Douglas.

RANGE: British Columbia to Idaho and California.

Specimens examined: Toppenish, Henderson, May 28, 1892; Fort Canby, Sarage 27; Chelan, Elmer 849; Spokane, Elmer 866, 864; Piper 3801, 3802; Kreager 628; west Klickitat County, Suksdorf 191, 341, 342, 343, 344, 346; Peshastin, Brandegee 863.

Zonal distribution: Transition.

18. Aster occidentalis Nutt.; Torr. & Gr. Fl. 2: 164, 1841.

Tripolium occidentale Nutt. Trans. Am. Phil. Soc. 7:296, 1840.

Type locality: "By the margins of muddy ponds in the Rocky Mountains, 7,000 feet above the level of the sea." Collected by Nuttall.

Range: Washington, Oregon, and Idaho.

Specimens examined: Wenache, Whited.

18a. Aster occidentalis intermedius Λ. Gray, Syn. Fl 1²: 192, 1884

Type locality: Falcon Valley, Washington. Collected by Suksdorf.

Range: Washington to California.

Specimens examined: Peshastin, Sandberg & Leiberg 803, 807; Wind River, Flett 1070; Tampico, Henderson, July 31, 1892; Falcon Valley, Suksdorf 62; Klickitat, Howell 329, 557, west Klickitat County, Suksdorf 345; Yakima region, Brandegee 861; North Yakima, Piper 1782; Ellensburg, Whited 580, 529; Conconully, Whited 1319; Waitsburg, Horner 560, 551, 556; Almota, Piper 2731, 2373; without locality, Vascy 527; Clealum Lake, Cotton 864. Zonal distribution: Upper Sonoran and Arid Transition

19. Aster fremonti (Torr. & Gr.) A. Gray, Syn. Fl 1²: 191–1884.

Aster adscendens fremonti Torr. & Gr. Fl. 2: 503, 1843

Type locality. None given.

RANGE: British Columbia and Montana to California and Colorado.

Specimens examined: Cascade Mountains, Lyall in 1860; Peshastin, Sandberg & Leiberg, July, 1893; west Klickitat County, Suksdorf 640, 648, 649; Skamania County, Suksdorf 2169; Mount Adams, Suksdorf 339, 643; Falcon Valley, Suksdorf 340, 397; Yakima region, Brandegee 857; without locality, Cusick 1821; without locality, Brandegee 854, 855, 859. Spokane County, Ramm, July, 1893; Bingen, Suksdorf 2247; Spokane, Piper 2379; Pullman, Piper 1605; Waitsburg, Horner, August, 1896.

ZONAL DISTRIBUTION: Arid Transition.

20. Aster stenomeres A. Grav, Proc. Am. Acad. 17: 209, 1882.

Ionactis stenomeres Greene, Pittonia 3: 246, 1897.

Type locality: "Rocky Mountains of Montana and Idaho, Burke, Watson."

Range: Washington to Montana.

Specimens examined: Mount Carlton, Kreager 280.

ASTER PEREGRINUS Pursh. This is included in Gorman's list of the plants of the Washington Forest Reserve. An examination of the specimen in the National Herbarium shows the collection to be a mixture of Erigeron subsupinosus and Aster foliaceus.

ASTER ADSCENDENS Lindl, is included in Suksdorf's list, but we question the identity of the specimens.

MACHAERANTHERA.

1. Machaeranthera canescens (Pursh) Greene, Pittonia 3: 59, 1896.

Aster canescens Pursh, Fl. 2: 547, 1811.

Type locality: "On the banks of the Missouri."

Range: Washington to Saskatchewan and Texas.

Specimens examined: Loomis, Elmer 608; Spokane, Piper, September, 1896.

Zonal distribution: Arid Transition.

1a. Machaeranthera canescens viscosa (Nutt.).

Dieteria viscosa Nutt. Trans. Am. Phil. Soc. 7: 301, 1840.

Aster eanescens viscosus A. Gray, Syn. Fl. 11: 206, 1884.

Type locality: "Near Scott's Bluff, on the Platte." Collected by Nuttall.

Range: Washington to Wyoming and California.

Specimens examined: North Yakima, Wall, August, 1895; Henderson, October 5, 1892; Wenache, Whited 1331; Ellensburg, Whited 854; Rattlesnake Mountain, Cotton 478; Columbus, Suksdorf, June 10, 1886; Lake Chelan, Lake & Hull, August 16, 1892; near mouth of Okanogan, Walson 197; Coulee City, Lake & Hull 691; Colville, Lyall in 1860; Spokane, Sandberg, Heller, & MeDongal 912; Waitsburg, Horner 555; Wawawai, Piper 1606; Almota, Piper, September, 1896.

Zonal distribution: Upper Sonoran.

MADIA. TARWEED.

Heads small, long-peduncled; disk-flower one 1. M. exagua. Heads larger, sessile or short-peduncled; disk-flowers several.

Leaves all or mostly alternate; ligules small.

Rays 5 to 12; involucres campanulate.

Akenes of the rays broad; herbage lemon-scented 2. M. citriodora.

Akenes of the rays compressed; herbage heavy-scented.

Rays 1 to 5, sometimes none; involuere laterally compressed;

heads densely glomerate.

Stems glandular to the base; glomerules loosely cymose . . . 5. M. ramosa.

Stems glandular above, glomerules racemose 6. M. glomerata.

1. Madia exigua (Smith) Greene, Erythea 1: 90, 1893.

Sclerocarpus exiguus Smith, Rees' Cycl. 31: n. 3, 1816.

Harpaccarpus exignus A. Gray, Bot. Mex. Bound. 401, 1859.

Madia filiges A. Gray, Proc. Am. Acad. 9: 1874.

Harpacearpus madarioides Nutt. Trans. Am. Phil. Soc. 7: 389, 1840.

Type locality: "On the west coast of North America." Collected by Menzies.

Range: British Columbia to California and Idaho.

Specimens examined: San Juan Island, Lyall in 1858; Scattle, Piper 735; Smith 1069; Tacoma, Flett 140; Olympia, Heller 4045; west. Klickitat County, Suksdorf 2139; Clealum, Henderson, June 41, 1892; Wenache, Whited, June, 1895 and 1132; junction Crab and Wilson creeks, Sandberg & Leiberg 272; Spokane, Piper, June 25, 1897; Pullman, Piper 1573; Lake & Hull, June 23, 1894; Waitsburg, Horner 172.

Zonal distribution. Transition.

1a. Madia exigua macrocephala (Suksdorf).

Madia filipes macrocephala Suksdorf, Deutsch. Bot. Monatss. 18: 97, 1900.

Harpaccarpus exignus macrocephalus Suksdorf, loc. cit.

Type locality: Bingen, Klickitat County, Wash.

Range: Washington.

Specimens examined. West Klickitat County, Suksdorf, June 18, 1892.

2. Madia citriodora Greene, Bull. Torr. Club 9: 63, 1882.

Hemizonia vitriodora A. Gray, Syn. Fl. 12: 307, 1884.

Type locality: Yreka, California.

Range: Washington to California.

Specimens examined: West Klickitat County, Suksdorf 370; Waitsburg, Horner 152, Bingen, Sheldon 10255; Wallula, Cotton 1071.

Zonal distribution: Arid Transition.

3. Madia racemosa (Nutt.) Torr. & Gr. Fl. 2: 405, 1843.

Madorella racemosa Nutt. Trans. Am. Phil. Soc. 7: 387, 1841.

Madia sativa racemosa A. Gray, Proc. Am. Acad. 9: 189, 1874.

Madorella dissitiflera Nutt. loc. cit.

Madia dissitiflora Torr. & Gr. loc. cit.

Madia sativa dissitiflora A. Gray, loc. cit.

Type locality: "On the banks of the Oregon, near the estuary of the Wahlamet." Collected by Nuttall.

Range: British Columbia and Idaho to California.

Specimens examined: Fairhaven, Piper; Roslyn, Whited 470; Yakima region, Brandegee 897; Seattle, Piper 513; west Klickitat County, Suksdorf 2137, 2142; Vancouver, Donglas; Satsop, Heller 4029; Eghert Springs, Sandberg & Leiberg; Wenache, Whited 53; Ellensburg, Whited 684; Elmer 367; Clealum, Henderson; McAlisters Lake, Henderson; North Yakima, Henderson; Leavenworth, Whited 238; Peshastin, Sandberg & Leiberg 537; Alkali Lake, Sandberg & Leiberg 415; Pullman, Piper 1575, 3103, Elmer 902. Blue Mountains, Piper 2450; Wawawai, Piper 3061; Clarks Springs, Kreager 102; Tieton, Cotton 489; without locality, Vasey 545; Tukanon River, Lake & Hull 721.

Zonal distribution: Transition and Upper Sonoran.

4. Madia sativa capitata (Nutt.).

Madia capitata Nutt Trans. Am. Phil. Soc. 7: 386, 1841.

Madia sativa congesta Torr & Gr. Fl. 2: 401-1843.

Type locality: 'In the plains of the Oregon towards the sea, particularly on Wappatoo Island.' Collected by Nuttall.

Range. Washington to California in the coast region.

Specimens examined. Coupeville, Gardner 169. Seattle, Suksdorf 978.

Zonal distribution. Humid Transition.

5. Madia ramosa Piper, Bull Torr. Club 29: 222, 1902.

Type locality: "Blue Mts., Walla Walla County, Wash."

RANGE: Blue Mountains of Oregon and Washington.

Specimens examined: Blue Mountains, Columbia County, Piper 2451.

Madia glomerata Hook, Fl. Bor, Am. 2: 21, 1834.

Amida gracilis Nutt. Trans. Am. Phil. Soc. 7: 390, 1841.

Amida hirsuta Nutt. loc cit.

Type locality: "Plains of the Saskatchewan." Collected by Drummond.

RANGE: British Columbia to Saskatchewan south to California and Colorado.

Specimens examined: Puyallup, Peper, September 2, 1899, Mount Stuart, Elmer 1098; Peshastin, Sandberg & Leiberg 895, 587, Yakima region, Brandegee 896, Falcon Valley, Suksdorf 414; Ellensburg, Whited 701; Pullman, Piper 1574; Waitsburg, Horner 172.

ZONAL DISTRIBUTION: Arid Transition.

7. Madia madioides (Nutt.).

Anisocarpus madioides Nutt Trans. Am. Phil. Soc. 7: 388, 1841.

Madia nuttallii A. Gray, Proc. Am Acad 8: 391, 1872.

Type locality, "Among rocks, in shady forests, at the mouth of the Wahlamet," Oregon—Collected by Nuttall

RANGE: British Columbia to middle California in the coast region.

Specimens examined: Port Ludlow, Binns; Bellingham Bay, 8nksdorf 977; Seattle, Piper 734, Tacoma, Flett 145 McAllisters Lake, Henderson, June 22, 1892.

ZONAL DISTRIBUTION. Humid Transition.

HEMIZONELLA.

1. Hemizonella durandi A. Gray, Proc. Am. Acad. 9: 189-1874.

Hemizoma dinandi A. Gray, Proc. Am. Acad. 6: 549-1865.

Type Locality Nevada County California.

RANGE. Washington to California in the coast region.

Specimens examined. Tacoma Flett 186; Steilacoom, Piper 373; Falcon Valley, Suksdorf 415, Mount Constitution, Henderson 2296; Easton, Henderson 2297.

ZONAL DISTRIBUTION. Humid Transition.

HEMIZONIA.

1. Hemizonia pungens (Hook & Arn.) Torr. & Gr. Fl 2: 399-1813.

Hartmannia pangens Hook & Arn Bot Beech, Voy. 357-1840

TYPE LOCALITY California

Range: California - Introduced in Washington

Specimens examined. Tacoma, *Flett* 158, Frenchtown, *Nather*, August 22, 1898; Walla Walla, *Blandford*, November 9, 1901. The species is doubtless introduced from California.

LAGOPHYLLA

1 Lagophylla ramosissima Nutt Trans Am Phil Soc 7: 390-4841.

Type locality. "In the prairies near Walla Walla." Collected by Nuttall.

RANGE. Washington and Idaho to California

Specimens examined. North Yakima Henderson, May 25, 1892. White Salmon, Suksdorf 416. Crab and Wilson creeks Sandberg & Leiberg 253. Pullman Prper 1576. Lake & Hull 746. Almota, Lake & Hull 746

ZONAL DISTRIBUTION And Transition and Upper Sonoran.

29418--06 м----37

BLEPHARIPAPPUS.

1. Blepharipappus glandulosus Hook, Fl. Bor, Am. 1: 316, 1833.

Layia glandulosa Hook, & Arn. Bot. Beech, Voy. 358, 1840.

Type Locality: "On the plains of the Columbia in sandy soils." Collected by Douglas. Range: British Columbia to California and New Mexico.

Specimens examined: Yakima Mountains, Mrs. Steinweg: Henderson in 1891; Rockland, Suksdorf 284; Pasco, Piper 2955; Hindshaw 21; Sunnyside, Cotton 350; junction Crab and Wilson creeks, Sandberg & Leiberg 299; Wallula, Cotton 1038.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

BLEPHARIPAPPUS OREGANUS Greene, Pitttonia 2: 247, 1892. Layia douglasii Hook. & Arn. Bot. Beech. Voy. 358, 1841, not Calliglossa douglassi Hook. & Arn. op. cit. 356. Type locality: "On the gravelly islands of the Columbia between the Narrows and the Great Fails." Collected by Douglas. Not since feund. We incline to the view of Dr. Gray, that this is merely an aberrant form of B. glandulosus Hook, with stouter and nearly maked pappus bristles. In other characters it can not be distinguished.

PTILONELLA.

1. Ptilonella scabra (Hook.) Nutt. Trans. Am. Phil. Soc. 7: 386, 1841.

Blepharipappus scaber Hook. Fl. Bor. Am. 1: 316. 1833.

Type locality: "Sandy plains of the Columbia." Collected by Douglas.

Range: Washington and Idaho to California and Nevada.

Specimens examined: Rock Lake, Sandberg & Leiberg 119, Spokane, Wilkes Expedition; Spangle, Piper 2876; Tukanon River, Blue Mountains, Lake & Hull 723.

Zonal distribution: Arid Transition.

BIDENS. Beggar ticks.

Plant aquatic; submerged leaves capillary	3.	$B.\ beekii.$
Plants terrestrial.		
Rays none, leaves pinnately 3 to 5-divided		
Rays conspicuous; leaves lanceolate, serrate	2.	B. cernua.

1. Bidens vulgata Greene, Pittonia 4: 72. 1899

Type locality. None given.

Range: Washington to New York south to California and Virginia.

Specimens examined: West Klickitat County, Suksdorf 1591, 412; North Yakima, Watt, August, 1895; Loomiston, Elmer 611; Rock Lake, Lake & Hull, August 3, 1892; Spokane, Henderson, July 10, 1892; Wawawai, Piper 1863, Chewelah, Kreager 527; without locality, Brandegee 895

ZONAL DISTRIBUTION: Upper Sonoran and Arid Transition.

2. Biden3 cernua L. Sp. Pl. 2: 832, 1753.

Bidens cernua elliptica Wiegand, Bull Torr, Club 26: 417, 1890.

Bulens lonchophylla Greene, Pittonia 4: 258. 1901.

Bidens macounii Greene, loc. cit.

Type locality: "Habitat in Europa ad fontes & fossas."

RANGE: British Columbia to Labrador south to California and North Carolina. Europe. Asia

Specimens examined: Coupeville, Gardner 148; Ilwaco, Henderson, September 7, 1892; Tacoma, Flett 157. Ellensburg, Whited 592, Puyallup, Piper, September 2, 1899; Spokane, Piper; Falcon Valley, Suksdorf 1592. Sumas, Lyall; Spangle, Suksdorf 932; Waitsburg, Horner 22, 333; Newport, Piper 4210; Kittitas County, Cotton 1763.

Prof. E. L. Greene considers that the American plants generally referred to *Bidens* cernua represent not less than 13 species. The distinctions relied upon seem very slight. The western Washington specimens apparently are all referable to *B. macounii*, while most of the eastern Washington plants belong to *B. lonchophylla*.

One of these Washington forms was mistaken for *Bidens chrysanthemoides* by Hooker, Fl. Bor. Am. 1: 314, 1834.

3. Bidens beckii Torr.; Spreng. Neu. Entd. 2: 135. 1821.

Megalodonta remota Greene, Pittonia 4: 272. 1901.

Type locality: Near Schenectady, New York.

RANGE: Washington, Manitoba, and Quebec to Missouri and New Jersey.

Specimens examined: Seattle, Piper in 1890; Davis Lake, Kreager 442.

BIDENS DENTATA (Nutt.) Wiegand, Bull. Torr. Club 26: 412. 1899. Bidens quadriaristata dentata Nutt. Trans. Am. Phil. Soc. 7: 368. 1841. Bidens cernua cluta Torr. & Gr. Fl. 2: 352. 1842. Type locality: "Wappatoo Island, at the outlet of the Wahlamet, Oregon." There is much doubt about the identity of this plant, which may perhaps be cleared up by collecting new material at the type locality.

COREOPSIS.

1. Coreopsis atkinsoniana Dougl.; Lindl. Bot. Reg. 16: pl. 1376, 1830.

Calliopsis atkinsoniana Hook. Fl. Bor. Am. 1: 311. 1833.

Type locality: "Mewries [Menzies!] Island, in the river Celumbia." Collected by Douglas.

Range: British Columbia to Oregon and Idaho.

Specimens examined: Fort Vancouver, Tolmie; Douglas; Wenache, Whited 1150; Cascades to Colville, Lyall in 1860; mouth of Chelan River, Watson 217; Old Fort Colville, Watson; Chelan Falls, Lake & Hull 748; Loomis, Elmer 601; head of Grand Coulee, McKay, 25; Spokane, Henderson, July 9, 1892; without locality, Vascy 551; Lake Kalispel, Kreager 315.

ZONAL DISTRIBUTION: Arid Transition.

RUDBECKIA. CONE FLOWER.

Leaves oblong-lanceolate, hispid or hirsute. 1. R. kirta.

Leaves ovate or ovate-lanceolate.

Glabrous or nearly so, somewhat glaucous; leaves entire or dentate. 2. R. occidentalis. Pubescent; leaves mostly 3 to 5-parted toward the base 3. R. alpicola.

1. Rudbeckia hirta L. Sp. Pl. 2: 907, 1753.

Type locality: "In Virginia, Canada."

RANGE: Saskatchewan and Canada to Colorado, Texas, and Florida. Introduced in Washington.

Specimens examined: Whidby Island, Gardner 151; Tacoma, Flett 122; Snoqualmic, Miss Parker, July, 1892.

Introduced from the eastern States.

2. Rudbeckia occidentalis Nutt. Trans. Am. Phil. Soc. 7: 355, 1840.

Type locality: "Rocky Mountains and woods of the Oregon, particularly in the Blue Mountain range." Collected by Nuttall.

RANGE: Washington to Montana and California.

Specimens examined: Marshall Junction, Piper, July 2, 1896; Spokane County, Suksdorf 356, Blue Mountains, Columbia County, Piper, July 20, 1896.

ZONAL DISTRIBUTION: Arid Transition and Canadian.

Ŕ

3. Rudbeckia alpicola Piper, Erythea 7: 173, 1899.

Type locality: Mount Stuart, Washington. Collected by Elmer.

Range: Cascade Mountains, Washington.

Specimens examined: Mount Stuart, Elmer 1171; Sandberg & Leiberg 578; Wenache Mountains, Whited 1417.

BALSAMORHIZA.

Herbage green.

Leaves deltoid, usually laciniate, but varying to coarsely

dentate or rarely entire; involucre more or less woolly. 5. B. terebintbacca.

Balsamorhiza careyana A. Gray, Pl. Fendl. 81, 1849.

Type locality, Idaho. "Sandy plains, Clear Water, on the Kooskooskie." Collected by Spalding.

RANGE: Eastern Washington, Eastern Oregon, and perhaps adjacent Idaho.

Specimens examined. Ritzville, Sandberg & Leiberg 166; Sprague, Sandberg & Leiberg, June, 1893; Ephrata to Ritzville, Griffiths & Cotton 483; Prosser to Rattlesnake Mountains. Griffiths & Cotton 10. Wallula, Cotton 1052; Delight, Cotton 1004, Washtuena, Cotton 976; Prosser, Cotton 1084, 1105; Walla Walla region, Brandegee 891.

ZONAL DISTRIBUTION: Upper Sonoran.

This species has not since been found near Lapwai, Spalding's "Clearwater" locality. It is, however, abundant on the lower parts of Snake River and the type may have there been gathered, as some of Spalding's specimens were collected "60 miles west of Clearwater."

2. Balsamorhiza sagittata (Pursh) Nutt. Trans. Am. Phil. Soc. 7: 350, 1840.

Buphthalmum sagittatum Pursh, Fl. 2: 564, 1814.

Espeletia sagittata Nutt. Journ. Acad. Phila. 7: 38, 1834.

Espeletia belianthoides Nutt. Journ. Acad. Phila 7: 39, 1834.

Balsamorhiza helianthoides Nutt. Trans. Am. Phil. Soc. 7: 351, 1840.

Type locality: "On dry barren hills in the Rocky Mountains." Collected by Lewis. The exact place is Lewis and Clark Pass, Mentana.

Range: British Columbia and Montana to California and Colorado.

Specimens examined. Colville, Lyall in 1861; Spokane County, Suksdorf 366; Sandberg & Leiberg 23; Spokane, Henderson, May 3, 4892, Flathead River, Wyeth; Pullman, Elmer 828, Piper 1594; without locality, Vasey 496, Rock Creek, Cotton 961; Wenache Mountains, Piper 2668, apparently a hybrid between deltoidea and sagittata, with which it occurred

ZONAL DISTRIBUTION: Arid Transition

Balsamorhiza deltoidea Nutt Trans. Am. Phil Soc. 7: 351–1840.

Type Locality, "Outlet of the Wahlamet, in wet open places," Oregon. Collected by Nuttall.

RANGE: British Columbia to Idaho and California

Specimens examined: Whidby Island near Coupeville, Gardner 180; Lake Park, Piper, July 27, 1895, Tacoma, Flett 43; Vancouver, Piper 1915; Nisqually, Walkes Expedition;

Yakima, Mrs. Steinweg, Leckenby, April 22, 1896; Mount Stuart, Sandberg & Leiberg 573; without locality, Vascy in 4889; Umtanum Creek, Cotton 1140.

The typical plant occurs only west of the Cascade Mountains, and has broad, deeply cordate, usually crenate-dentate leaves, while in the Eastern–Washington plant the leaves are longer and narrow, entire or nearly so, and but little cordate. Perhaps two species may be involved.

ZONAL DISTRIBUTION: Transition.

allives

4. Balsamorhiza balsomorhiza (Hook.) Heller, Cat. N. A. Pl. 7, 1898.

Heliopsis? balsamorhiza Hook Fl. Bor. Am. 1: 310, 4833.

, 1 5 - - - - - -

Balsamorhiza hookeri Nutt. Trans. Am. Phil. Soc. 7: 349, 1840.

Type locality. "Common on the gravelly banks of the Columbia near Fort Vancouver." Collected by Douglas.

Range: Washington to Utah and California.

Specimens examined: Falcon Valley, Suksdorf 357, 358; Klickitat River, Suksdorf 359; Simcoe Mountains, Howell; Rattlesnake Mountains, Cotton 568, Mill Plain near Vancouver, Howell, June 4, 1880

Zonal distribution: Transition.

Balsamorhiza terebinthacea (Hook.) Nutt. Trans. Am. Phil. Soc. 7:349, 1840.
 Heliopsis terebinthacea Hook. Fl. Bor. Am. 1: 310, 1833.

Type LOCALIFY: "Common at Fort Vancouver on the Columbia and in the grounds of the interior." Collected by Douglas.

Range. Washington, Idaho, and Oregon.

Specimens examined Falcon Valley, Subsdorf 869, 363, 135; Rock Island, Sandberg & Leiberg 460; Klickitat River, Subsdorf 360, 362, 361; Ellensburg, Piper, May 20, 1897; 60 miles west of Clearwater Spalding.

ZONAL DISTRIBUTION: Transition.

6. Balsamorhiza hirsuta Nutt Trans Am. Phil Soc 7: 349, 1840.

Type locality: "Dry plains east of Walla Walla, near the Blue Mountains, and in the Grande Ronde prairie" Collected by Nuttall.

RANGE: British Columbia to Utah and California.

Specimens examined Wenache Mountains, Elmer 476; Whited 1354½; Wenache, Whited 6, 1354, Ellensburg, Piper 2718 May 20, 1897. Cleman Mountain, Henderson, June 14, 1892; Coulee City Piper 3853; Waterville Whited 1219, "Wallah Wallah," Nuttall t, without locality Vasey in 1889, Wenache Mountains, Cotton 1493; Spipen [Naches] River, Wilkes Expedition.

ZONAL DISTRIBUTION: Transition.

1. Wyethia amplexicaulis Nutt Trans Am. Phil Soc. 7: 352, 1840.

Espeletia amplexicaulis Nutt Journ. Acad Phila 7:38-1834.

Type locality. "About Flat-head River" Collected by Wyeth.

RANGE: British Columbia and Montana to Nevada and California.

Specimens examined. Columbia River latitude 46° to 49°, Lyall; White Salmon, Suksdorf; Peshastin Sandberg & Leiberg 532; Pullman, Lake & Hull 750; Piper 1595; without locality, Vascy 497. Wenache Mountains, Griffiths & Cotton 113.

ZONAL DISTRIBUTION. Arid Transition

2. Wyethia angustifolia (DC.) Nutt. Trans. Am. Phil. Soc. 7: 352, 4840.

Helianthus longitolius Hook Fl. Bor. Am. 1: 312, 1834, not Pursh, 1814.

Alarconia augustifolia DC Prod. 5: 537, 1836

Helianthus hookerianus DC. Prod. 5: 590, 1836.

Wyethia robusta Nutt. Trans. Am. Phil. Soc. 7: 352, 1840.

Type locality: "In California." Collected by Douglas.

Range: Washington to California.

Specimens examined: West Klickitat County, Suksdorf 129.

Zonal distribution: Humid Transition.

HELIANTHELLA.

1. Helianthella douglasii Torr. & Gr. Fl. N. Am. 2: 334, 1842.

Type locality: "Common on the subalpine ranges of the Blue Mountains." Collected by Douglas.

Range: British Columbia to Idaho and Oregon.

Specimens examined: Ellensburg, Whited 663; Wenache, Whited 154, 1138; Yakima Region, Brandegee 891; Peshastin, Sandberg & Leiberg 486; without locality, Vascy 502; Spokane County, Suksdorf 367; Pullman, Piper 1598; Lake & Hull 751; Moxee, Griffiths & Cotton 30.

Zonal distribution: Arid Transition.

Helianthella uniflora Torr. & Gr. is not known definitely from Washington, but specimens of *H. douglasii* have sometimes been mistaken for it.

HELIANTHUS. SUNFLOWER.

Annual; disk flowers dark. 1. \$\overline{H}\$. annuus.

Perennial; disk flowers yellow; involucial bracts ciliate. 2. \$H\$. cusickii.

1. Helianthus annuus L. Sp. Pl. 2: 904, 1753.

Helianthus lenticularis Dougl.; Lindl. Bot. Reg. 15: t. 1265, 1829.

Type locality: "In Peru, Mexico."

Range: Washington to Saskatchewan south to Texas and California. Mexico.

Specimens examined: Wenache, Whited 1088; Rock Island, Sandberg & Leiberg 462; Coulee City, Henderson, July 11, 1892; without locality, Vasey 499; Fresh Lake, McKay 14; Wawawai, Piper 1597; Almota, Piper, August 26, 1894; Marcus, Kreager 462.

Zonal distribution: Upper Sonoran.

2. Helianthus cusickii A. Gray, Proc. Am. Acad. 21: 413, 1886

Type locality: Malheur River, Oregon. Collected by Cusick.

Range: Eastern Washington and Eastern Oregon.

Specimens examined: Morgans Ferry, Suksdorf 368. Columbia River, Howell: Tampico, Flett 1182; Snipes Mountain, Cotton 378; North Yakima, Brandegee; Henderson in 1892; Steinweg; Watt in 1895; Yakima, Piper 1825; Leckenby.

Zonal distribution: Upper Sonoran.

Helianthus nuttallii Torr. & Gr. in Suksdorf's list is based on specimens that are really II. eusickii.

JAUMEA.

1. Jaumea carnosa (Less.) A. Gray in Torr. Bot. Wilkes Exped 360-1874.

Coinogyne carnosa Less. Linnaca 6: 521-1831.

Type locality: California.

Range: Seacoas.s, Washington to California.

Specimens examined: Shoalwater Bay, Cooper; Henderson, Whidby Island, Gardner 425, 152; Port Townsend, Edwards in 1896; Tacoma, Flett 102, Union City, Peper in 1890, Zonal distribution: Humid Transition.

ERIOPHYLLUM.

Akenes glandular 1. E. multi florum. Akenes not glandular 2. E. landum.

1. Eriophyllum multiflorum (Nutt.) Rydberg, Mem. N. Y. Bot. Gard. 1: 422, 1900.

Trichophyllum multiflorum Nutt. Journ. Acad. Phila. 7: 35, 1834.

Bahia gracillis Hook. & Arn. Bot. Beech. Voy. 353, 1840.

 $Eriophyllum\ gracile\ \Lambda.$ Gray, Proc. Am. Acad. 19: 26, 1883.

Type locality: "In the valleys of the Rocky Mountains towards the sources of the Missouri." Collected by Wyeth.

RANGE: Washington, Oregon, and Idaho.

Specimens examined: Mount Stuart, Brandegee 905; North Yakima, Watt in 1895; Mrs. Steinweg; Henderson 2292; Yakima Region, Brandegee 904; Ellensburg, Piper; Whited 493; Thorp, Whited 633; Rattlesnake Mountains, Cotton 405; White Bluffs, Suksdorf 372; Coulee City, Piper 3857; Ritzville, Sandberg & Leiberg 183; Lake Chelan, Lake & Hull 802; Moses Coulee, Lake & Hull; without locality, Vasey 492, 493; Spokane, Piper; Snake country, Tolmie.

Zonal distribution: Upper Sonoran.

2. Eriophyllum lanatum (Pursh) Forbes, Hort. Woburn. 183, 1838.

Actinella lanata Pursh, Fl. 2:560. 1814.

Eriophyllum eaespitosum Dougl.; Lindl. Bot. Reg. 14: t. 1167, 1828.

Type locality: "On the highlands of the Kooskoosky." Collected by Lewis, the exact spot opposite Kamiah, Idaho.

RANGE: British Columbia and Montana to California.

Specimens examined: Mason County, Piper 515; Olympic Mountains, Piper 2193; Lake Park, Piper, July 27, 1895; Skokomish River, Kineaid, June 15, 1892; Bellingham Bay, Henderson, July 2, 1892; Fairhaven, Piper 2802; Salmon River, Horner 340; Roslyn, Whited 410; Fourth Plain, Piper, July 10, 1897; Wawawai, Piper, June 9, 1894; Lake & Hull 801; Vancouver, Piper 4932.

Zonal distribution: Transition.

HULSEA.

1. Hulsea nana A. Gray, Pac. R. Rep. 6: 76, 1855.

Type locality: "Crater Pass, Cascade Mountains, 44° 10'," Oregon. Collected by Newberry.

Range: Washington and Idaho to California.

Specimens examined: Mount Rainier, Piper 2153; Allen 227; Mount Adams, Henderson, August 10, 1892; Flett 1075; Suksdorf in 1878.

Zonal distribution: Aretic.

RIGIOPAPPUS.

Rigiopappus leptocladus A. Gray, Proc. Am. Acad. 6: 548, 1865.

Type locality: "Dalles of the Columbia River." Collected by Lyall.

Range: Washington to California.

Specimens examined: Klickitat County, Suksdorf: Wenache, Whited 1128; foothills Blue Mountains, Horner 142; Wawawai, Elmer 768; Piper 1780.

Zonal distribution: Upper Sonoran and Arid Transition.

CHAENACTIS.

Heads corymbose. 1. C. douglasii.
Heads solitary; alpine dwarf 2. C. nevadensis.

Chaenactis douglasii (Hook.) Hook & Arn. Bot. Beech. Voy. 354, 1840.

Hymenopappus douglasii Hook Ft Bor. Am. 1:316, 1833.

Type locality: "In the barren grounds of the Columbia from the Great Falls to the Rocky Mountains." Collected by Douglas.

RANGE: Washington and Montana to California and New Mexico.

Specimens examined: North Yakima, Watt, August, 1895; Leckenby, May 10, 1898; Yakima, Henderson, May 25, 1892; Wenache, Whited 167, 1126; Snipes Mountain, Cotton 497; Crab and Wilson creeks, Sandberg & Leiberg 295; Soap Lake, MeKay 10; Spokane, Piper, July 2, 1896; Geyer 142; Henderson, July 9, 1892; Wawawai, Elmer 897; Lake & Hull 800; Blue Mountains, Horner 347; Clarks Springs, Kreager 92; Marcus, Kreager 457, Zonal distribution: Upper Sonoran.

2. Chaenactis nevadensis (Kellogg) A. Gray, Bot. Cal. 1: 391. 1876.

Hymenopappus nevadensis Kellogg, Proc. Cal. Acad. 5: 46, 1873.

Type Locality: None given, but presumably the Sierra Nevada Mountains, California, Range: Washington to Nevada.

Specimens examined: Near Mount Stuart, Brandegee 906.

GAILLARDIA.

Gaillardia aristata Pursh, Fl. 2: 573, 1814.

Type locality: "Rocky Mountains." Collected by Lewis in Lewis and Clark Pass, Montana.

Range: British Columbia to Saskatchewan south to California and New Mexico.

Specimens examined: Fort Vancouver, Tolonie: Rock Island, Sandberg & Leiberg 438; Parker, Cotton 434; west Klickitat County, Suksdorf 979, 191; North Yakima, Watt, August, 1895; Henderson, May 29, 1892; Wenache, Whited 1117, June and July, 1896; Pasco, Hindshaw 12, between Coulee City and Waterville, Spillman, May, 1896; Loon Lake, Winston, July 20, 1897; Old Fort Colville, Watson 221; Spokane, Watson 223; Pullman, Piper 1599; Illia, Lake & Hull 729; without locality, Vascy 501; Clarks Springs, Kreager 26; Lake Kalispel, Kreager 326.

Zonal distribution: Arid Transition and Upper Sonoran.

HYMENOPAPPUS.

1. Hymenopappus filifolius Hook, Fl. Bor. Am. 1:317, 1833.

Type locality: "On the undulating arid grounds of the Columbia, near the Wallawallah and on the banks of the Spokan and Flathead rivers." Collected by Douglas.

Range: Eastern Washington, Eastern Oregon, and Idaho.

Specimens examined: Morgans Ferry, Suksdorf 373; Moses Lake, Sandberg & Leiberg 375; Walla Walla region, Bråndegee 903; Sentinel Bluffs, Cotton 1366.

Zonal distribution: Upper Sonoran.

HELENIUM.

Helenium autumnale grandiflorum (Nutt.) A. Gray, Syn. Fl. 12: 349, 1884.
 Helenium grandiflorum Nutt. Trans. Am. Phil. Soc. 7: 384, 1840.

Type locality: "Banks of the Oregon and Wahlamet." Collected by Nuttall.

RANGE: British Columbia to Idaho and Oregon.

Specimens examined: West Klickitat County, Suksdorf 194, Centralia, Piper, September, 1895; Sumas Prairie, Lyall in 1858-9; Cascades to Colville, Lyall in 1860; Wawawai, Piper, October, 1895; Almota, Piper, August 26, 1894.

ZONAL DISTRIBUTION: Transition.

ACHILLEA.

 Achillea millefolium lanulosa (Nutt.) Piper, Fl. Palouse Reg. 196, 1901. Yarrow, Achillea lanulosa Nutt. Journ. Acad. Phila, 7, 36, 1834.

? Achillea millefolium occidentale DC. Prod. 6:24, 1837.

Type locality: Rocky Mountains. Collected by Wyeth.

RANGE: British Columbia to Manitoba south to Mexico.

Specimens examined: Port Crescent, Lawrence 266; Everett, Piper 1986; Mount Adams, Suksdorf 1606; Mount Rainier, Piper, August, 1895; Smith; Alben; Tolmie; Crab and Wilson creeks, Sandberg & Leiberg 286; Loon Lake, Winston, July 20, 1897; Kamiak Butte, Piper, July 20, 1899; Wawawai, Lake & Hull 804; Spokane, Kreager 7.

Zonal distribution: Transition to Hudsonian.

The form of this species which grows near the seacoast is much greener and may perhaps better be referred to typical A, millefolium L.—Alpine forms are much reduced in stature, but we believe that none of the Washington specimens can properly be referred to A borealis Bong.

ANTHEMIS.

 Leaves glabrous, ill-scented; rays neutral
 2. A. cotula,

 Leaves pubescent, not ill-scented; rays fertile
 3. A. arransis.

1. Anthemis tinctoria L. Sp. Pl. 2: 896, 1773.

Type locality: "Habitat in Succiae, Germaniae apricis pratis siccis."

Specimens examined: Lake Park, Pierce County, Piper.

2. Anthemis cotula L. Sp. Pl. 2: 894, 1753.

Maruta cotula DC, Prod. 6: 13, 1837.

Mayweed.

Type locality: "Habitat in Europae ruderatis praecipue in Ucrania."

Specimens examined: Pullman, Piper, July 29, 1899.

3. Anthemis arvensis L. Sp. Pl. 2: 891, 1753.

Type locality: "Habitat in Europae praesertim Surerae agris."

Specimens examined: Olympia, Henderson 2293; West Klickitat County, Suksdorf 139; Fort Canby, Sarage August 13, 1898

CHRYSANTHEMUM.

1. Chrysanthemum leucanthemum subpinnatifidum Fernald, Rhodora 5: 181, 1903, Oxere dass.

The oxeye daisy is a common weed in a few localities in western Washington. According to Hooker it was collected by Douglas at Fort Vancouver as early as 1825.

2. Chrysanthemum parthenium (L.) Pers. Syn. 2: 462, 1807 Feb.

Feverfew.

Matricaria parthenium L. Sp. Pl. 2: 890, 1753.

Type locality: European.

This has been collected as a garden escape at Waitsburg by *Horner*, and it is reported from west Klickitat County by *Suksdorf*.

MATRICARIA.

1. Matricaria matricarioides (Less.) Porter, Mem. Torr. Club 5:311, 189

Artemisia matricarioides Less, Linnaea 6: 210, 1831.

Matricaria discoidea DC, Prod. 6: 50, 1837.

Type locality: Unalaschka.

Range: Alaska to California and Montana.

Specimens examined: Seattle, Piper in 1892; Silverton, Bonck 442a; Pullman, Piper 1588; Big Meadows, Kreager 432.

ZONAL DISTRIBUTION: Transition.

Matricaria Chamomilla L., the garden chamomile, is reported from Klickitat County as an escape by Suksdorf.

COTULA.

1. Cotula coronopifolia L. Sp. Pl. 2: 892, 1753.

Type locality: "In Aethiopia."

RANGE: Washington to California, introduced from South Africa.

Specimens examined: Hoquiam, Linb 1223; Pore Angeles, Pince, September 1, 1895; Grant in 1880; Tacoma, Flett 127; Candeston, Piper, July 21, 1805; Southbend, Spillman.

This plant has been abundan in brackish marshes along the seacoast of Washington for twenty years or more, and gives one the impression of being native.

TANACETUM.

1. Tanacetum huronense Nutt. Gen. 2: 141. 1818.

Tanacetum dərəfləsii DC. Prod. 6: 128, 1837.

Type locality: "Lake Huron near Michilimackinack."

RANGE: Washington and Oregon on the seacoast, the Great Lakes, Maine and New Brunswick.

Specimens examined Grays Harbor, Lamb 4247; without locality, Cooper; Hwaco, Piper.

Zonal distribution: Humid Transition.

Tanacetum vulgare L., the garden tansy, is found occasionally as an escape from gardens.

Artemisia dracunculoide: Pursh, Fl. 2: 521, 1814.

Artemisia cernua Nutt. Gen. 2: 143, 1818.

Artemisia inodora Hook, & Arn. Bot. Beech. Voy. 150, 1833.

Type locality: "On the Missouri." Collected by Lewis; the exact place near the mouth of White River, Lyman Co., S. Dak.

Range: British Columbia to Sashatchewan, south to California and Texas.

Specimens examined: West Klickitat County, Suksdorf 1609; Wenache, Whited 1337; North Yakima, Henderson, October 5, 1892; Peshastin, Sandberg & Leiberg 829; Loomis, Elmer 598; Spokane, Piper, August, 1893; Sandberg, Heller, & McDongal 908; Wawawai, Piper 1587.

Zonal distribution: Upper Sonoran.

2. Artemicia canadensis Michx. Fl. 2: 128, 1804.

? Artenisia pacifica Nutt. Trans. Am. Phil. Soc. 7: 401, 1841.

Type locality: Hudson Bay.

RANGE: Washington to Hudson Bay, south to New England and in the Rocky Mountains to Arizona.

Specimens examined: Whidby Island, Gardner 164; Skamania County, Suksdorf 659; Wenatchee, Whited 29.

Zonal distribution: Transition.

3. Artemisia borealis wormskioldii Besser, Dracunc. 83, 1832.

Type locality: "In rupibus simus Kabssund Groenlandine."

RANGE: Alaska to Greenland, south to Washington.

Specimens examined: Olympic Mountains, Flett, July 20, 1897; Mount Rainier, Flett, August 27, 1896.

4. Artemisia frigida Willd. Sp. Pl. 3: 1838, 1803.

Type locality: "Daŭŭriae."

Range: Washington to Saskatchewan, south to New Mexico and Texas.

Specimens examined: "Interior Oregon," i. e. Washington, Cooper in 1853; Colville Reservation, Griffiths & Cotton 362.

Artemisia biennis Willd. Sp. Pl. 3 3: 1842, 1803.

Type locality: "Nova Zelandia!"

RANGE: Washington to Hudson Bay, south to California and Colorado.

Specimens examined: Waitsburg, Horner 545; Colton, Piper 2660.

Artemisia longepedunculata Rudolphi, Nov. Mem. Soc. Imp. Nat. Mosc. 3: 77, 1834. Artemisia norvegica pacifica A. Gray, Syn. Fl. 12: 371, 1884.

Type locality: "In Siberia ulteriori."

Range: Alaska to Washington. Siberia.

Specimens examined: Horseshoe Basin, Elmer 705.

7. Artemisia ludoviciana Nutt. Gen. 2: 143, 1818.

Artemisia gnaphalodes Nutt. loc. cit.

Artemisia diversifolia Rydberg, Bull. Torr. Club 28: 21, 1901.

Type locality: "On the banks of the Mississippi, near St. Louis; also on the alluvial plains of the Missouri."

RANCE: British Columbia to Michigan, south to California and Texas.

Specimens examined: Lake Chelan, Lake & Hull, August 12, 1892; Wenache, Whited 1338, 11; Yakima, Watt, August, 1895; junction Crab and Wilson creeks, Sandberg & Leiberg 337; Sprague, Lake & Hull 725; Spokane, Piper 3519; Elmer 867; Pullman, Piper 1586; Salmon River, Horner 342; Rock Lake, Lake & Hull 721; Coulee City, Lake & Hull, August, 1892; west Klickitat County, Suksdorf 1610; Toppenish, Cotton 778; Ellensburg, Elmer 378; Lake Chelan, Gorman 679; Sheep Springs, Leiberg 944; Walla Walla, Wilkes Expedition 944; Fort Colville, Watson 227; Blue Mountains, Horner 296; without locality, Vascy 479, 182; Squaw Creek, Cotton 867.

ZONAL DISTRIBUTION: Arid Transition and Upper Sonoran.

An exceedingly common species presenting great variability as to leaf contour and pubescence. Several such forms have been considered species or subspecies, a disposition which seems to us entirely artificial. The plant is often called "white sage."

8. Artemisia atomifera sp. nov.

Cespitose, often in large clumps; stems sulfrutescent, mostly simple up to the inflorescence, 60 to 120 cm, high, coarsely striate, canescent or glabrate; leaves numerous, subsessile, firm, and rather rigid, green and nearly glabrous above, speckled with numerous white resinous atoms, closely white-tomentose beneath, excessively variable as to form, either all lanceolate and entire or all dentate or laciniate, or the larger ones 5 to 7-pinnately divided with narrow lobes, usually the upper ones entire, the lower variously dentate or lobed, commonly 2 to 6 cm, long; panicle oblong or somewhat pyramidal, 10 to 20 cm, long, more or less leafy-bracted, the heads glomerate or spicate on the ascending branches; involucre campanulate, canescently tomentose, more or less atomiferous like the leaves, 2 to 4 cm, high; bracts about 10, ovate, obtuse; flowers 10 to 25 in each head; mature akenes linear-oblong, glabrous, destitute of pappus.

A species with the habit and appearance of A. hadoriciana Nutt., to which it is cl sely allied, but apparently well marked by the peculiar atomiferous character of the upper leaf surface. The odor is decidedly more pungent than that of A. hadoriciana.—I have never met the species except in Snake River canyon at Wawawai and Almota.

The type, in the U. S. National Herbarium, is my no. 6466 from Wawawai, a good series of which shows the variability of the foliage. Other specimens were collected at Wawawai July 19, 1892, and at Almota under no. 2321.

9. Artemisia tilesii Ledeb. Mem. Acad. St. Petersb. 5: 568, 1815.

Artemisia tilesii elatior Torr. & Gr. Fl. 2: 422, 1843.

Artemisia arachaoidea Sheldon, Bull. Torr. Club 30: 310, 1903.

Type locality: "Hab. in Kamtschatka."

Range: Alaska to Oregon.

Specimens examined: Mount Stuart, Elmer 1199; Cascade Mountains, Tweedy & Brandegee 115, 469; west Klickitat County, Suksdorf 871; Lake Chelan, Lake & Hull, August 24, 1892; Olympic Mountains, Piper, August, 1895; Lake Cushman, Piper, August, 1895; Peshastin, Sandberg & Leiberg 492; Twisp River, Whited, July 20, 1896; near Vancouver, Sheldon 11284.

Zonal distribution: Hudsonian and Canadian.

The type of A. arachnoidea Sheldon seems to me only a form of this variable species.

Artemisia discolor Dougl.; DC. Prod. 6: 109, 1837.

2. Artemisia michanxiana Besser, Abrot. 71, 1834. "Ad fluy. Columbiam. Douglas."
Artemisia stenoloba Rydberg, Mem. N. Y. Bot. Gard. 1: 432, 1900.

Type locality: "In America bor, ad Rocky Mountains, prope Spokan et Kettle Falls." Collected by Douglas.

RANGE: British Columbia and Montana to California and Utah.

Specimens examined: Cascade Mountains, 19°, Lyall in 1859; Cascade Mountains to Colville, Lyall in 1860; Mount Adams, Henderson, August 10, 1892; Suksdorf 35; Yakima County, Brandegee; Loomis, Elmer 589; Box Canyon, Kreager 388.

Zonal distribution: Arid Transition.

11. Artemisia lindleyana Besser; Hook. Fl. 1: 322, 1831, and Abrot. 35, 1831.

Type locality: "Northwest coast of America." Collected by Douglas.

Range: Washington and Oregon.

Specimens examined: West Klickitat County, Suksdorf 193, 1611; banks of Columbia at Alder Creek, Brandegee 908; Pasco, Henderson; Bingen, Piper 6450.

Along with the original description of the species, Besser describes four subspecies based wholly on leaf contour, which character in this group we consider worthless. Besser's subspecies are named *legitima*, brerifolia, subdentata, and coronopus.

12. Artemisia suksdorfii Piper, Bull. Torr. Club 28: 42, 1901.

Artemisia vulgaris littoralis Suksdorf, Deutsch. Bot. Monatss. 18: 98, 1900, not. A. littoralis Retz.

Type locality: Fairhaven, Washington.

RANGE: Seacoast, British Columbia to California.

Specimens examined: Montesano, Heller 3976; Fairhaven, Piper 2808; Henderson in 1892; Seattle, Piper; Chuckanut Bay, Suksdorf 980.

ZONAL DISTRIBUTION: Humid Transition.

13. Artemisia tridentata Nutt. Trans. Am. Phil. Soc. 7: 398, 1811.

Common Sagebrush.

Type locality: "Plains of the Oregon and Lewis River." Collected by Nuttall.

Range: Washington to Montana, Colorado, and eastern California.

Specimens examined: North Yakima, Watt, August, 1895; Leckenby: Mount Adams, Suksdorf 72; plains of the Columbia and Lewis rivers, Nuttall; Okanogan, Cooper in 1853; Wenache, Whited 1332; Peshastin, Sandberg & Leiberg 470; Rattlesnake Mountains, Dunn, September 10, 1902; Moses Coulee, Lake & Hull 717; Chelan, Elmer 850; without locality, Vascy 480.

ZONAL DISTRIBUTION: Upper Sonoran.

For illustrations of Artemisia tridentata see Plates IV and VI, facing pages 25 and 36.

14. Artemisia arbuscula Nutt. Trans. Am. Phil. Soc. 7: 398, 1841.

Type locality: "On the arid plains of upper California, on Lewis River."

Range: Washington to Wyoming and California.

Specimens examined: Wenache Mountains, Whited 861, Cotton 1795, 1796.

Two specimens collected by Cotton in the Wenache Mountains, nos. 1565 and 1798, represent a plant intermediate in characters between A. arbuscula and A. tridentata, and this is said to occupy a belt above the latter and below the former. It is probably an undescribed species, but better material is needed.

15. Artemisia rigida A. Gray (Nutt.) Proc. Am. Acad. 19: 49, 1884.

Scabland sagebrush.

Artemisia trefida rigida Nutt. Trans. Am. Phil. Soc. 7: 398, 1841.

Type locality: "The plains of Lewis River." Collected by Nuttall.

Range: Idaho, castern Washington, and castern Oregon.

SPECIMENS EXAMINED: Mount Adams, Suksdorf 72; North Yakima, Watt, August, 1895; Leckenby; Wenache, Whited 1332, Chelan, Elmer 850; Moses Coulee, Lake & Hull 717; Okanogan County, Cooper in 1853; Peshastin, Sandberg & Leiberg 470; plains of Columbia and Lewis rivers, Nuttall; without locality, Vascy 480; Rock Creek, Cotton 966; Wawawai, Piper 3814, 3815; Fort Sincoe, Cotton 1564.

ZONAL DISTRIBUTION: Arid Transition.

16. Artemisia tripartita Rydberg, Mem. N. Y. Bot. Gard. 1: 432, 1900.

Artemisia trifida Nutt. Trans. Am. Phil. Soc. 7: 398, 1841, not Turez, 1832.

Type locality: "Plains of the Rocky Mountains and Oregon." Collected by Nuttall, Range: Washington to Wyoming and California.

Specimens examined: Wenache, Whited 1339; Rattlesnake Mountains, Cotton 482; Okanogan River, Cooper; near Deep Creek Falls, Watson 229; Columbia and Lewis River Plains, Nuttall; Wenache Mountains, Cotton 1793.

ZONAL DISTRIBUTION: Arid Transition.

17. Artemisia absinthium L. Sp. Pl. 2: 848, 1753.

WORMWOOD,

Type locality: European.

Specimens examined: Pullman, Burnham, August 6, 1901; Piper, August, 1903. This species seems to be spreading rapidly.

ARTEMISIA RICHARDSONIANA Besser does not occur in Washington, the "Mt. Rainier Tolmie" specimen of the Synoptical Flora having really been collected on the "E. side Rky. Mts., Burke," as noted by Dr. Gray on the sheet in the Gray Herbarium.

TETRADYMIA.

1. Tetradymia canescens DC. Prod. 6: 440, 1837.

Type locality: "Ad Columbia River." Collected by Douglas.

RANGE: British Columbia to Wyoming, Arizona, and California.

Specimens examined: Ellensburg, Elmer 400; Wenache, Whited 166; upper Naches River, Henderson, June 3, 1892; Klickitat County, Howell; Wilbur, Henderson, July 17, 1892; Wilson Creek, Sandberg & Leiberg, June, 1893; Coulee City, Lake & Hull 731; Crab and Wilson creeks, Sandberg & Leiberg 247; Spokane, Sandberg, Heller, & MacDougal 930; Palouse River, Lyall; without locality, Vasey 543; Rattlesnake Mountains, Cotton 695.

Zonal distribution: Upper Sonoran.

ARNICA.	
Basal leaves cordate, long-petioled.	
Heads rayless; herbage villous and viscid.	1. A. discoidea.
Heads radiate.	
Herbage pubescent, the stems hirsute or villous	2. A. cordifolia.
Herbage glabrous,	
Akenes atomiferous-glandular; leaves often similarly	
glandular on both sides	3. A. gracilis.
Akenes glabrous or nearly so,	
Leaves large, usually dentate, thin	4. A. latifolia,
Leaves small, crenate-dentate, firm	5. A. betonicaefolia,
Basal leaves not cordate, short-petioled.	
Heads rayless	6. A. parryi,
Heads radiate.	
Leaves dentate or denticulate, mostly rather broad.	
Pappus whitish, barbellate.	
Herbage viscid-glandular, upper leaves much re-	
duced.	
Stems with corm-like base, this covered with	
a reddish tomentum	7. A. pedunculata.
Stems from horizontal rootstocks	8. A. fulgens.
Herbage atomiferous-glandular or glundless; up-	
per leaves but little reduced	9. A. aurantiaca.
Pappus fuscous, subplumose.	
Upper surface of leaves glabrous, sticky.	
Stem leaves ovate or ovate-oblong	10. A. amplexicaulis.

Stem leaves lanceolate or lance-oblong, 11. .1. macoumi. Upper surface of leaves pubescent.

 Pubescence sparse, pilose
 12. A. aspira.

 Pubescence dense, short
 13. A. mollis.

Leaves subentire, rarely lanceolate.

Herbage white-tomentose. 11. 1. cana. Herbage glabrous or nearly so. 15. 1. longifolia.

1. Arnica discoidea Benth. Pl. Hartw. 319, 1819.

Arnica cordifolia cradiata Gray, Syn. Fl. 12: 381, 1881.

Type Locality: Monterey, California. Range: British Columbia to California.

Specimens examined: Falcon Valley, Suksdorf 1617, 565.

2. Arnica cordifolia Hook, Fl. Bor, Am. 1: 331, 1833.

Arnica macrophylla Nutt. Trans. Am. Phil. Soc. 7: 407, 1841.

Type locality: "Alpine woods of the Rocky Mountains on the east side." Collected by Drummond.

RANGE: British Columbia to California and Colorado.

Specimens examined: Upper Nisqually Valley, Allen 139; Mount Adams, Flett 1103; Clealum, Whited 621; near Wenache, Whited 91, 1101; Eaton, Henderson, June 11, 1892; Spokane, Piper, May 16, 1896; Hangman Creek, Sandberg & Leiberg 42; Kamiak Butte, Moore, June 4, 1893; Piper, July 20, 1859; without locality, Vasey 535, Lake Kalispel, Kreager 351.

Zonal distribution: Arid Transition and Canadian.

3. Arnica gracilis Rydberg, Bull. Torr. Club 24: 297, 1897.

Arnica multiflora Greene, Pittonia 4: 162, 1900.

Type locality: Spanish Peaks, Montana.

Range: Washington to Montana.

Specimens examined: Baldy Peak, Lamb 1306; Mount Steele, Piper 2203; Loomis, Elmer, August, 1879. Nason Creek, Sandberg & Leiberg 6°2. Mount Adams, Suksdorf, September 17, 1883.

4. Arnica latifolia Bong, Mem. Acad. St. Petersb. VI 2: 147, 1832.

Arnica menziesii Hook, Fl. Bor, Am. 1: 331, 1833.

Type locality: Sitka.

RANGE: Alaska to Oregon and Colorado.

Specimens examined: Olympic Mountains, Piper 2205, 1072 Cascade Mountains, 19°, Lyall; Mount Rainier, Piper 2143 and August, 1895, Flett 247; Mount Stuart, Elmer 1165; Mount Adams, Henderson, August 10, 1892; Suksdorf 195, Flett 1080, upper Nisqually Valley, Allen 138, Silverton, Bouck 106; Yakıma Region, Brandeger 913, Skagit Pass, Lake & Hull 737; Stevens Pass, Whited 1462.

ZONAL DISTRIBUTION: Hudsonian.

5. Arnica betonicaefolia Greene, Pittonia 4: 163-1900.

Type locality, "At 6000 to 7000 feet on slopes of Mount Steele of the Olympic Mountains,"

Range. Olympic Mountains, Washington.

Specimens examined: Baldy Peak, Lande 1306, Mount Steele, Peper 2202, Mount Storm King, Lawrence 349.

ZONAL DISTRIBUTION. Arctic.

This species is closely allied to A. latifolm Bong, and may prove to be nothing but a reduced alpine form of it

6 Arnica parryi A. Gray, Am. Nat. 8, 213, 1871

Type Locality Coforado. Collected by Parry.

Range: Washington and Oregon to Colorado.

Specimens examined: Olympic Mountains, Flett 130; Mount Rainier, Piper 2159; Goat Mountain, Allen 137; Mount Adams, Suksdorf 566; Howell; Loomis, Elmer 582; without locality, Vascy 536; Wenache Mountains, Cotton 1653.

Zonal distribution: Hudsonian.

7. Arnica pedunculata Rydberg, Bull. Torr. Club 24: 297, 1897.

Arnica monocephala Rydberg, Mem. N. Y. Bot. Gard. 1: 435, 1900.

Type Locality: Spanish Basin, Montana.

Range: Washington to Montana.

Specimens examined: Mountains north of Ellensburg, Whited 719, Wenache Mountains, Whited 1137; Spangle, Piper, May 24, 1901; Rock Lake, Sandberg & Leiberg 103; Pullman, Piper 1578; Elmer 875; Spokane, Dewart

This species is in liabit just like the plant referred to A. fulgens Pursh, but that has horizontal rootstocks, while this has a cormose base covered with pale reddish tomentum. This difference may not prove constant, and needs further examination in the field. Both the species here mentioned have been referred to A. alpina Olin, which, in its typical form at least, does not occur in Washington.

8. Arnica fulgens Pursh, Fl. 2: 527, 1814.

Type locality: "On the banks of the Missouri."

RANGE: British Columbia to Montana and Oregon.

Specimens examined: Republic, Beattie & Chapman 264; Goat Mountains, Allen 229; Cascade Mountains to Colviffe, Lyall in 1860, Wenas and Umtanum creeks, Cotton 1148; Ellensburg, Piper 2677; Whited 542, 649. Spokane, Piper, July 2, 1896; Sprague, Henderson 2279; Waitsburg, Horner 598; Pullman, Peper, June 13, 1894.

Zonal distribution. Arid Transition.

9. Arnica aurantiaca Greene, Torreya 1: 42, 1901.

Type locality. "At the head of Keystone Creek, Wallowa Mountains, Oregon, at about 7,000 feet." Collected by Cusick, August 1900

Specimens examined: Goat Mountains, Allen 229

10. Arnica amplexicaulis Nutt. Trans. Am. Phil. Soc. 7: 408, 1841.

Arnica amplexifotius Rydberg, Mem. N. Y. Bot Gard. 1: 134, 1900 (February 15).

Type locality. "On the rocks of the Wahlamet at the Falls," Oregon.

Range: Washington and Oregon.

Specimens examined: Cape Horn, Peper 4962, 5009; Olympic Mountains, Piper 2204; Flett 818; Mount Rainier, Allen 285a; Skagit Pass, Lake & Hull 738

11. Arnica macounii Greene, Pittonia 4:160, 1900 (December 8).

Type locality: "Near Comox, Vancouver Island."

Specimens examined: Skokomish River, Piper 1074; Coast Mountains, Cooper; Cascade Mountains, 49°, Lyall in 1859; White Salmon, Suksdorf 28; Lake Cushman, Kincaid, June 15, 1892; Olympic Mountains, Piper, August, 1895; Mount Stuart, Elmer 1194; Bridge Creek, Elmer 672; Lake Wenache, Sandberg & Leiberg 633.

This species differs from A. amplexicaulis only in its narrow leaves, a character far from constant.

12. Arnica aspera Greene, Ottawa Nat. 15: 281, 1902.

Type locality: Mount Rainier. Collected by Greene.

Specimens examined: Mount Rainier, Greene, August 20, 1889.

This species is closely allied to the Alaskan A. chamissonis Less., but the pubescence is much harsher.

13. Arnica mollis Ho.k, Fl. Bor, Am. 1: 231, 1839.

Type locality: "Alpine rivulets of the Rocky Mountains."

RANGE: British Columbia to Quebec, south California, and Colorado.

Specimens examined: Mount Rainier, Allen 285; Piper 2139; Mount Adams, Suksdorf 567; Henderson, August 10, 1892; Howell in 1882; Suksdorf 567; Yakima County, Henderson 2298; Yakima Region, Brandegee 912; Mount Stuart, Elmer 1164, 1163; Cascade Mountains, 49°, Lyall in 1860; Skagit Pass, Lake & Hull 736; Stevens Pass, Sandberg & Leiberg 725; Bridge Creek, Elmer.

Most of the above specimens were distributed as A. chamissonis Less., a species which apparently does not reach our limits.

14. Arnica cana Greene, Ottawa Nat. 15: 282, 1902.

Arniea foliosa incana Gray, Bot. Cal. 1: 416, 1876.

Arnica incana Greene, Pittonia 4: 169, 1900, not A. incana Pers. 1807.

Type locality: Lake Tahoe, California.

Range: Washington to California.

Specimens examined: Cascade Mountains, Brandegee 139; White Salmon, Suksdorf in 1878; Big Klickitat River, Henderson in 1892.

15. Arnica longifolia D. C. Eaton in Wats. Bot. King. Explor. 186, 1871.

Type eocality: "Clover Mts." Nevada.

RANGE: Washington? and Idaho to California and Utah.

Specimens examined: Klickitat County, Suksdorf 568, a somewhat doubtful specimen, the akenes hairy as well as glandular.

The above treatment of the Washington species of Arnica is far from satisfactory. It is probable that further study in the field will compel the recognition of a larger number of species. Collectors should secure large series of specimens and note carefully which characters are constant and which are due to differences in environment.

PETASITES.

Alpine plant; leaves ovate or oblong, 5 to 7-lobed, 5 to 10 cm. long 3. P. frigida. Lowland plants.

Leaves reniform-orbicular, 7 to 11-cleft, very large, often 30 cm. or more

broad ... 2. P. speciosa.

1. Petasites dentata Blankinship, Mont. Agr. Coll. Sci. Stud. 1: 64, 1905.

Type Locality: "The common Rocky Mountain species."

Range: British Columbia to Hudson Bay south to Colorado.

Specimens examined: Marshall Junction, Piper, July 2, 1896; Pend Oreille River, Lyall in 1861.

Zonal distribution. Canadian.

This species has been generally confused with the entire leaved P, sogittata Pursh of the Hudson Bay region.

2. Petasites speciosa (Nutt.) Piper, Mazama 2: 97, 1901.

Nardosmia speciosa Nutt. Trans. Am. Phil. Soc. 7: 288, 1840.

Type locality: "Shady forests of the Oregon and Wahlamet by streams." Collected by Nuttall.

RANGE: British Columbia to California.

Specimens examined: Port Ludlow, Binus; Seattle, Piper 123; Silverton, Bouck 104; Tacoma, Flett 201; upper Nisqually Vafley, Allen 54; Larm River, Suksdorf 140; Wenache Mountains, Whited 1341.

Zonal distribution: Humid Transition.

This species is entirely different from the eastern P, palmata (Ait.) Gray, with which authors have confused it.

29418-06 M-38

3. Petasites frigida (L.) Fries, Sum. Veg. Scand. 182. 1846.

Tussilago frigida L. Sp. Pl. 2: 865, 1753.

Petasites nivalis Greene, Pittonia 2: 18, 1889.

Type locality: "Habitat in Alpium Lapponiae, Helvetiae, Siberiae convallibus."

Range: Alaska to Washington and Lake Superior. Europe. Asia.

Specimens examined: Baldy Peak, Lamb 1356; Olympic Mountains, Piper 2190; Mount Rainier, Smith in 1889; Piper in 1890; Skagit Pass, Lake & Hull 803; Stevens Pass, Saudberg & Leiberg 783.

Zonal distribution: Hudsonian.

CACALIOPSIS.

1. Cacaliopsis nardosmia glabrata Piper, Bull. Torr. Club 29: 222, 1902.

Type locality: Klickitat County, Washington. Collected by Suksdorf.

Range: Washington in the Cascade Mountains.

Specimens examined: Klickitat County, Suksdorf in 1883; Klickitat River, Flett 1104; Simcoe Mountains, Howell: near Wenache, Whited 1136; Stevens Pass, Sandberg & Leiberg 564; Roslyn, Whited 425; Wenache Mountains, Cotton 1271.

Zonal distribution: Arid Transition.

LUINA.

1. Luina hypoleuca Benth.; Hook. Ic. Pl. 12: 36. t. 1139, 1873.

Type locality: "Amongst rocks, Cascade Mountains, Lake Chilukweyuk," Washington Collected by Lyall.

Range: British Columbia to California.

Specimens examined: Olympic Mountains, Piper, August, 1895; Cascade Mountains, latitude 49°, Lyall; Mount Rainier, Piper 2151, 352; Flett 246; Goat Mountain, Allen 31; Skokomish River, Kincaid, June 14, 1892; Silverton, Bonck; Yakima County, Brandegee; Stevens Pass, Sandberg & Leiberg 784; Skagit Pass, Lake & Hull 805; Stampede Pass, Henderson, June 26, 1892; Bridge Creek, Elmer 687; without locality, Vasey 540; Mount Storm King, Lawrence 325.

Zonal distribution: Hudsonian.

RAINIERA.

1. Rainiera stricta Greene, Pittonia 3: 291, 1898.

Prenanthes stricta Greene, Pittonia 2: 21, 1889.

Luina piperi Robinson, Bot. Gaz. 16: 43. t 6. 1891.

Psacalium strictum Greene, Pittonia 2: 228, 1892.

Type locality: Mount Rainier, Washington.

Range: Cascade Mountains of Washington.

Specimens examined: Mount Rainier, Piper, August, 1895; Goat Mountains, Allen, 140; Flett 2140; near Mount Adams, Henderson 2320; Mount Rainier, Greene in 1889.

ZONAL DISTRIBUTION: Hudsonian.

CROCIDIUM.

1. Crocidium multicaule Hook. Fl. Bor. Am 1; 335, 1833.

Type locality: "About Fort Vancouver," Washington.

Range: Washington and Idaho to California.

Specimens examined. Whidby Island, Gardner 183; Orcas Island, Lyall in 1858; Tacoma, Flett 79; Ellensburg, Whited 262; near Ellensburg, Whited 64; foothills Blue Mountains, Horner 165; without locality, Cooper.

ZONAL DISTRIBUTION: Transition.

SENECIO.

Annual; calyculate bracts of the involucre several, short, closely appressed, distinctly black-tipped.	1. S. vulgaris.
Biennials or perennials; calyculate bracts of the involucre few, not closely appressed, slightly or not at all black-tipped	
(except in S. lugens).	
Leaves, or some of them, pinnate or pinnatifid. Stems mostly leafy; leaves all pinnatifid or the lower-	
most undivided and orbicular; pubescence if any	
erisp-hairy, not woolly.	
Leafy to the inflorescence; leaves thin	2. S. harfordii.
Leafy at the base, naked above; leaves thick	3. S. flettii.
Stems leafy below, the upper leaves much reduced,	5. 5. jieuu.
mostly pinnatified or pinnatisect; pubescence if any	
white woolly.	
Herbage densely white woolly or floccose; pubes-	
cence usually persistent.	
Pubescence persistent except in S. fastigi-	
atus; leaves 1 to 2 cm. broad.	
Petioles of the basal leaves usually	
shorter than the blades	19 S canus
Petioles of the basal leaves usually ex-	12. 17. (1777)
ceeding the blades.	
Leaves entire to pinnate-lobed; up-	
per leaf surface usually perma-	
nently woolly	13. S. howellii.
Leaves entire or dentate; upper	1317 1 103611000
leaf-surface often glabrate	14. S. tastigiatus.
Pubescence floccose, more or less evanescent;	· · · · · · · · · · · · · · · · · · ·
leaves 1 to 5 cm. broad.	
Involucial bracts and bractlets not	
conspicuously black-tipped	15. S. elmeri.
Involucral bracts and bractlets conspic-	
uously black tipped	16. S. lugens.
Herbage not densely lanate nor floccose; pubes-	
cence confined chiefly to the base of the stems	
and the leaf-axils.	
Heads discoid (except in subspecies fallax).	4. S. pauci florus.
Heads radiate.	
Stems 10 to 30 cm. high; heads usually	
solitary.	
Cauline leaves much reduced,	
bract-like	5. S. subnudus.
Cauline leaves when present broad	
and subamplexicaul, closely pec-	
tinate	6 S. orinus.
Stems 30 to 70 cm. high; heads several	
to many.	
Leaves thin in texture, the lower	
distinctly ovate	7 S. pseudaureus.
Leaves thick in texture the lower	
not ovate.	
Akenes hispidulous on the	
angles	11. S. balsamīta c. .

Akenes glabrous.		
Basal leaves obovate or		
oblanceolate, dentate		
	O. S balanisidas	
only toward the apex	9. S. cymbalarioides.	
Basal leaves crenate-		
dentate from the base		
to apex or subentire.		
Glabrous; basal		
leaves nearly quad-		
rangular, sinuate,		
dentate or entire.	10. S. fraternus.	
More or less pubes-		
cent, especially in		
the leaf axils;		
leaves often cune-		
ata at base	8 S. adamsi.	
Leaves not at all pinnate nor pinnatifid.		
Rootstock woody; stems low; leaves smali, thick	26. S. ductoris.	
Rootstock none or not woody; stems tall, leaves, at		
least the basal ones, large.		
Stems tall, clustered, leafy to the inflorescence.		
Leaves triangular-lanceolate, petiolate,	04 6 40	
coarsely dentate	24. 8. triangutaris.	
Leaves lanceolate, sessile	27 11	
Margin of leaves evenly serrate		
Margin of leaves entire	25a. S. serra lanccolatus.	
Stems usually solitary; leaves mostly basal,		
the cauline much reduced.		
Herbage wholly glabrous		
Leaves glaucous, quite fleshy, mostly		
entire	17. S. hydrophilus.	
Leaves not glaucous, mostly dentate.		
Bracts of the involucre 6 to 7 mm.		
long, stramineous	18. S. hydrophiloides.	
Bracts of the involucre 7 to 8 mm.		
long, brownish	19. S. foctidus.	
Herbage more or less pubescent with long		
jointed somewhat intermixed hairs.		
Heads discoid	20. S. vaseyi.	
Heads tadiate.	J	
Heads 8 to 10 mm high in an-		
thesis; bracts of the involucre		
usually 13, from 5 to 7 num.		
long	21 S. craftatus	
Heads 10 to 12 mm. high in an-	21. In Catalana	
thesis; bracts of the involucie		
about 21, from 6.5 to 8.5 mm.		
,		
long.	99 & aprianizulatus	
Inflorescence open	•	
Senecio vulgaris L. Sp. Pl. 2, 867, 1753.	Groundsel	

Type locality: European.

Specimens examined: Pullman, Piper, June 2, 1894; Seattle, Piper in 1885; Lower Cascades, Suksdorf, May 29, 1886.

2. Senecio harfordii Greenman, sp. nov.

Glabrous or essentially so throughout; stem erect or ascending from a slender rootstock, 2 to 5 dm. high, somewhat glaucous, usually leafy; leaves mostly pinnately divided, with irregularly lobed divisions, and these in turn dentate, including the petiole 4 to 14 cm. long, 1 to 5 cm. broad, thin in texture, and drying pale green; the lowermost leaves often undivided, rotund and crenately lobed; uppermost leaves epetiolate; inflorescence a terminal corymbose cyme, few to many- (2 to 30-) headed; heads mostly less than 1 cm. high, including the rays 1.5 to 2 cm. in diameter; involuce shorter than the flowers of the disk; bracts of the involuce about 13, narrowly lanceolate, 5 to 5.5 mm. long, acuminate, acute, glabrose; ray-flowers commonly 5; rays bright yellow; disk flowers 18 to 25; achenes 2.5 to 3.5 mm. long, glabrous.

Oregon: Rocky high lands, Cascade Mountains, May 31, 1869, W. G. W. Harford & Geo. W. Dunn 540 (hb. Gray), type; Rooster Rock, June, 1877, J. Howell (hb. Gray, and hb. Field Mus.); rocky banks of Columbia River, western Oregon, June, 1880, Thomas J. Howell (hb. Field Mus.); Bouneville, Multnomah County, July 17, 1885, W. V. Suksdorf 572 (hb. Gray); Multnomah Falls, July 27, 1902, E. P. Sheldon 11004 (hb. Gray), and at the same locality, June 25, 1904, C. V. Piper 6212 (hb. Gray).

Washington: On mountains near the Lower Cascades, May 29, 1886, W. N. Suksdorf (hb. Gray); in woods, Lower Cascades, May 29, 1887, W. N. Suksdorf 872 (hb. Gray), south of Mount Adams, August 4, 1887, J. B. Flett 1087 (hb. Piper). Differs from S. bolanderi A. Gray in being essentially glabrous throughout, in having somewhat thunner leaf texture, a shorter involucre with fewer involucral bracts and fewer flowers.

3. Senecio flettii Wiegand, Bull. Torr. Club 26: 137, 1899.

Type locality: "Near the headwaters of the Quilcene River, Olympic Mountains." Collected by Flett.

RANGE: Olympic Mountains, Washington.

Specimens examined: Olympic Mountains, Flett 801; Elmer 2620, Mount Steele, Piper 2196, 929.

ZONAL DISTRIBUTION: Arctic.

4. Senecio pauciflorus Pursh, Fl. 2: 529, 1814.

Type locality: "In Labrador."

Range: British Columbia and Washington to Labrador.

Specimens examined; Mount Constitution, Henderson 2312; Big Meadows, Kreager 428: Deming, Flett 852 in part.

ZONAL DISTRIBUTION: Transition and Canadian.

4a. Senecio pauciflorus fallax Greenman, subsp. nov.

Stem erect, about 5 dm. high; lower stem-leaves 3 to 8 cm. long, 1 to 2.5 cm broad, pinnately parted with deep broad sinuses between the lateral divisions, blackish or dark green in the dried state; segments narrowly oblong to subovate, obtusely toothed; upper leaves reduced to mere bracts; inflorescence cymose, few-headed; heads 8 to 10 mm. high, radiate, involucre campanulate; bracts of the involucre 18 to 21, linear acute, 6 to 8 mm. long, slightly purplish-tipped, glabrous, ray-flowers 10 to 12; rays yellow; disk-flowers 50 to 60, achenes glabrous.

Washington: Roadside in partial shade, Deming, Whatcom County, June 30, 1898, $J.\,B.\,$ Flett, no. 852 in part (type in hb. Piper, fragment and tracing in hb. Gray).

The subspecies fallax is readily separated from D, pseudamens on the characters of the foliage

Senecio subnudus DC. Prod. 6: 428, 1837.

Senecio aureus submudus A. Gray, Syn. Fl. 12: 391, 1884.

Type locality, "Ad Columbia River," Collected by Douglas.

RANGE. Washington and Montana to California.

Specimens examined: Near Mount Adams, Henderson 2308, Yakima region, Brandegee 915; Chiquash Mountains, Suksdorf 2467.

Zonal distribution: Hudsonian.

6. Senecio ovinus Greene, Pittonia 4: 110. 1900.

Type locality: "On Sheep Mountain, Alberta."

RANGE: Washington, Montana, and Alberta.

Specimens examined: North Fork of Bridge Creek, Elmer, August, 1897; Horseshoe Basin, Lake & Hull, August 24, 1892.

ZONAL DISTRIBUTION: Arctic.

7. Senecio pseudaureus Rydberg, Bull. Torr. Club 24: 298. 1897.

Type locality: Little Belt Mountains, Montana

Range: Washington to Nevada and Colorado

Specimens examined. Cascade Mountains, 49°, Lyall in 1860, Mount Adams, Suksdorf 570, Falcon Valley, Suksdorf 571, without locality, Brandegee 917, Ellensburg, Elmer 431; Whited 442; Lake Keechelus, Tenderson in 1892; without locality, l'asey in 1889; Fort Okanogan, Wilkes Expedition 971

ZONAL DISTRIBUTION Canadian

8. Senecio adamsi Howell, Fl. N. W. Am. 379, 1900.

Type locality Mount Adams, Washington

RANGE. Known only from Mount Adams

Specimens examined Mount Adams, Suksdorf 73, Henderson 2309; Flett 1093.

Zonal distribution Arctic

9. Senecio cymbalarioides Nutt Trans Am. Phil. Soc. 7: 412, 1841.

Type locality, "In Oregon"

RANGE, Washington to Athabasea and Utah

Specimens examined Cascade Mountains, 49°, Lyall in 1860, Mount Chapaca, Elmer 592; Pinyon Creek Gorman 809. Twenty-live Mile Creek, Gorman 810.

10. Senecio fraternus sp. nov

Perennial, glabrous throughout, the several more or less flexuous stems erect or nearly so, arising from a stout caudex, stems about 30 cm high, somewhat coarsely striate, basal leaves thickish, somewhat quadrangular, subentire or with 7 to 11 coarse sinuations, 2 to 3 cm, long, the blade abruptly contracted to a narrowly-margined petrole about twice as long; cauline leaves about 6 spatulate-oblanceolate to oblong, becoming smaller and lobed upward, sessile or nearly so, the lateral lobes 4 to 8, oblong-linear, obtuse, heads 8 to 12 in a rather close or convex cymose cluster, only the lower elongated rays branched, involucte somewhat turbinate, of from 11 to 13 linear-lanceolate acutish bracts 6 to 7 mm, long, with a few callyculate ones at base, rays few, bright yellow, oblong, 7 mm, long, florets 15 to 20, akenes glabrous

Collected on Mount Stuart, Kittitas County Washington, by Sandberg & Leiberg, no. 553, July 24, 1893, at an altitude of 1,060 meters. The type specimen is in the United States National Herbarium, numbered 285758

The species is somewhat intermediate between S cymbalarioides Nutt and S, adams: Howell.

11. Senecio balsamitae Muht, Willd. Sp. Pt 3: 1998-1803.

Type locality: "In America boreah"

RANGE: British Columbia and Washington to Quebec and Pennsylvania.

Specimens examined Colville Reservation Griffiths & Cotton 366, Republic, Beattie & Chapman 2256, Wenache, Whited 1096, Pasco, Hindshaw 8.

ZONAL DISTRIBUTION Transition

12. Senecio canus Hook. Fl. Bor. Am. 1: 333, 1833.

Type locality: "Banks of the Saskatchewan, rare." Collected by Drummond.

RANGE: British Columbia to Saskatchewan, Dakota, and Colorado.

Specimens examined: Cascade Mountains, 49°, Lyall in 1860.

13. Senecio howellii Greene, Bull. Torr. Club 8: 98, 1881.

Type locality: "On the upper Columbia River in Oregon." Collected by Howell. The label of the type collection reads "Columbia River opposite the mouth of the Des Chutes."

Range: Washington and Idaho to California.

Specimens examined: Wenache, Whited 1142; Rock Island, Sandberg & Leiberg 457; Pasco, Hindshaw, May 25, 1896; Loon Lake, Winston, July 20, 1897; Spokane County, Suksdorf 275; Spokane, Henderson, May 31, 1892; Piper 2267; Hangman Creek, Syksdorf 934; Clarks Springs, Kreager 98; Wenache Mountains, Cotton 1249; Whited 1361; eastern Washington, Wilkes Expedition.

ZONAL DISTRIBUTION: Arid Transition.

This was listed by Torrey in the Botany of the Wilkes Expedition as S. aureus borealis.

14. Senecio fastigiatus Nutt. Trans. Am. Phil. Soc. 7: 410. 1841.

Senecio spatuliformis Heller, Bull. Torr. Club 26: 552, 1899.

Type locality: "The plains of Oregon, near the Wahlamet." Collected by Nuttall.

Range: Washington and Oregon in the coast region.

Specimens examined: Mason County, Piper, July 20, 1890; Yelm, Smith 538; Clarke County, Henderson; Elma, Heller 4061; Mill Plain, J. Howell, June, 1877; Mount Constitution, Flett 2734.

Zonal distribution: Humid Transition.

14a. Senecio fastigiatus macounii (Greene) Greenman.

Senecio macounii Greene, Pittonia 3: 169, 1897.

Type locality: Mount Benson, Vancouver Island.

Range: Vancouver Island and Washington.

Specimens examined: Mount Constitution, Flott 2730, 2743; Valley of the Columbia River, Lyall in 1860.

15. Senecio elmeri Piper, Erythea 7: 173, 1899.

Senecio crepidineus Greene, Ottawa Nat. 15: 250, 1902.

Type locality: "On gravelly moraines at the head of North Fork of Bridge Creek, Okanogan County," Washington. Collected by Elmer.

Range: British Columbia to Oregon.

Specimens examined: Without locality, Brandegee 920, 985; Bridge Creek, Elmer 715; Mount Stewart, Elmer 1200.

16. Senecio Iugens Richards, Bot. App. Frankl. Journ. 748, 1823.

Type locality: "At Bloody Fall, where the Esquimaux were destroyed by the Northern Indians that accompanied Hearne, whence the specific name." This place is on the Coppermine River in Yukon.

Range: Yukon to Washington and Montana.

Specimens examined: Olympic Mountains, Flett 95, 800.

ZONAL DISTRIBUTION: Arctic.

17. Senecio hydrophilus Nutt. Trans. Am. Phil. Soc. 7: 411, 1841.

Type locality: "In the Rocky Mountains by Ham's Fork of the Colorado of the West." Collected by Nuttall.

RANGE: British Columbia to California and Colorado.

Specimens examined: Spokane, Kreager 556; Elner 863; Piper 2382; Falcon Valley, Suksdorf 419; Pend Oreille River, Lyall in 1861.

Zonal distribution: Arid Transition and Canadian.

18. Senecio hydrophiloides Rydberg, Mem. N. Y. Bot. Gard. 1: 441. 1900.)

Type Locality: Idaho.

Range: Washington to Montana.

Specimens examined: Spokane, Piper, July 2, 1896; Spokane County, Suksdorf 376; Ramm, July, 1883; Clarks Springs, Kreager 55; Falcon Valley, Suksdorf, July 5, 1881.

ZONAL DISTRIBUTION: Arid Transition.

19. Senecio foetidus Howell, Fl. N. W. Am. 1: 377, 1900.

Type locality: Klickitat Valley, Washington.

Range: Known only from the type locality.

Specimens examined: Klickitat Valley, Howell 224.

20. Senecio vaseyi Greenman, sp. nov.

An herbaceous perennial, more or less pubescent throughout with jointed crisp hirsutish hairs, later glabrate; stem erect, 4 to 7 cm, high, simple; leaves elliptic-ovate to lanceolate, 5 to 10 cm, long, 1 to 4 cm, broad, acute or obtuse, entire or inconspicuously denticulate, narrowed at the base into a winged petiole; the upper leaves remote, lanceolate from a sessile subclasping base; inflorescence a simple or compound corymbose cyme; heads medium-sized, 10 to 12 mm, high, discoid; involucre campanulate, sparingly bracteolate; bracts of the involucre 12 to 18, linear-lanceolate, acute, black-tipped; achenes glabrous. Washington; without definite locality, coll. of 1889, G. R. Vasey, no. 568 (hb, Gray); in and near the Cascade Mountains of Kittitas, Chelan, and King counties, coll. of 1889, G. R. Vasey, without number (hb, Piper); Klickitat River, Cascade Mountains, August 3, 1892, L. F. Henderson (hb, Piper); Chewaukum, Whited 2532; Spipen [Naches] River to Columbia River, Wilkes Expedition. California: Mount Shasta, altitude 7,500 feet, August 23, 1881, C. G. Pringle, no. 6 (hb, Gray and hb, Field Mus.); Lassens Peak, coll. of 1875, J. G. Lemmon (hb, Gray).

21. Senecio exaltatus Nutt. Trans. Am. Phil. Soc. 7: 410, 1841.

Type locality: "The plains of the Oregon, near the mouth of the Wahlamet."

Range: Washington and Idaho to California.

Specimens examined: Pullman, Piper 1608: upper Atanum River, Henderson 2311.

Zonal distribution: Transition.

21a. Senecio exaltatus ochraceus nom. nov.

Senecio cordatus Nutt. Trans. Am. Phil. Soc. 7: 411, 1841, not Koch, 1834.

Senecio lugens ochrolencus A. Gray, Syn. Fl. 1²: 388, 1884, not S. ochrolencus Hook, & Arn. 4841.

. Type locality: "Near the outlet of the Wahlamet."

RANGE: British Columbia to California.

Specimens examined: Mount Rainier, Flett 2167; Klickitat County, Suksdorf 23; Howell in 1879; Goat Mountain, Allen 230; High Prairie, Klickitat County, Suksdorf 1620; Simcoe Mountains, Howell, June, 1881; Wenache Mountains, Cotton 1196; Ellensburg, Piper, May 20, 1897; without locality, Vascy in 1889.

Zonal distribution: Transition.

22. Senecio atriapiculatus Rydberg, Mem. N. Y. Bot. Gard. 1: 442, 1900.

Senecio columbianus Greene, Pittonia 3: 170, 1900, not S. renifolius columbiansis A. Gray. 1884.

Type locality: None definitely given.

RANGE: British Columbia to Washington and Montana.

Specimens examined: Mount Carlton, Kreager 242; Wenache, Whited 88.

Zonal distribution: Arid Transition.

23. Senecio condensatus Greene, Pittonia 3: 298, 1898.

Type locality: "High ridges of the Blue Mountains, Walla Walla Co., Washington." Collected by Piper.

Specimens examined: Blue Mountains, Piper 2434; Waitsburg, Horner, April 17, 1897.

24. Senecio triangularis Hook. Fl. Bor. Am. 1: 332, 1833.

Senecio longidentatus DC, Prod. 6: 428, 1837.

Senecio gibbonsii Greene, Pittonia 2: 20, 1889.

Type locality: Rocky Mountains. Collected by Drummond.

Range: British Columbia to Saskatchewan, south to California and Colorado.

Specimens examined: Mount Rainier, Piper 2154; Mount Adams, Flett 1083; Stevens Pass, Sandberg & Leiberg 732; Stampede Tunnel, Henderson, July 26, 1892; Bridge Creek, Elmer 647; Blue Mountains, Horner 344.

Zonal distribution: Canadian and Hudsonian, occasionally Transtion.

The type of *S. gibbonsii* Greene was collected in salt marshes at the mouth of the Columbia River. The original specimen has the leaves only few-toothed, but abundant material collected by the writer just above Astoria in salt marshes seems in every way typical *S. tri-angularis*. This is a remarkable station for the species, which is usually subalpine in its habitat.

24a. Senecio triangularis subvestitus (Howell) Greenman.

Senecio subvestitus Howell, Erythea 3: 35, 1895.

Type locality: "In wet meadows, top of Siskiyou Mountains near Waldo, Oregon."

Range: British Columbia to California.

Specimens examined: East of Mount Adams, Henderson 2310.

25. Senecio serra Hook, Fl. Bor, Am. 1: 333, 1833.

Type locality: "Common on the banks of the Wallawallah, Spokan, and Flathead rivers." Collected by Douglas.

Range: Washington to Wyoming and Colorado.

Specimens examined: Ellensburg, Whited 702, 495; North Yakima, Steinweg 894; Egbert Springs, Sandberg & Leiberg 392; Kooskooskie to Walla Walla, Wilkes Expedition 521; along Coppei River, Horner 356; Pullman, Piper 4609; Cow Creek, Griffiths & Cotton 527; Rattlesnake Mountains, Cotton 675.

ZONAL DISTRIBUTION: Arid Transition.

25a. Senecio serra lanceolatus (Torr. & Gr.).

Senecio lanccolatus Torr. & Gr. Fl. 2: 440, 1843.

Senecio andinus Nutt. Trans. Am. Phil. Soc. 7: 409, 1841, not Buck. 1840.

Senecio serra integrinsculus A. Gray, Syn. Fl. 12: 387, 1884.

Type locality: "Rocky Mountains." Collected by Nuttall, probably in Wyoming.

Range: Washington to Wyoming and California.

Specimens examined: Atanum Soda Springs, Watt, August, 1895; Cascade Mountains, Tweedy, August, 1882; Falcon Valley, Suksdorf, July 28, 1882; Waitsburg, Horner 572.

ZONAL DISTRIBUTION: Arid Transition.

26. Senecio ductoris nom. nov.

Senecio fremonti Torr. & Gr. Fl. 2: 445, 1843, not S. filifolius fremontii Torr. & Gr. Fl. 2: 444.

Type locality: "Wind River Chain, Rocky Mountains."

RANGE: British Columbia to California and Colorado.

Specimens examined: Mount Rainier, Allen 144; Piper 2146; Bridge Creek, Elmer 695; Olympic Mountains, Piper 2201.

Zonal distribution: Aretic.

ANTENNARIA.

Pappus bristles of the staminate flowers not dilated at tip.

Heads several, brown.

Heads solitary.	
Plants with slender naked stolons	3. A. flagellaris.
Plants without slender stolons.	
Pistillate stems 6 to 10 cm. tall.	4. A. latisquama.
Pistillate stems 2 to 3 cm. tall.	5. A. dimorpha.
Pappus bristles of staminate flowers dilated at tip.	
Plants not stoloniferous.	
Pistillate heads oblong, the bracts pinkish	 4. geyeri.
Pistillate heads not oblong, the bracts white or brownish.	
Pubescence close, silky-woolly	7. A. Inzuloides.
Pubescence floccose-woolly.	
Stems 5 to 10 cm. high; alpine plant	S. A. lanata.
Stems 25 to 60 cm, high; not alpine.	
Tips of the bracts not conspicuously papery	9. A. pulcherrima.
Tips of the bracts conspicuously white-papery.	10. A. anapholoides.
Plants stoloniferous, growing in patches.	
Heads loosely racemose; inflorescence glandular	11. A. racemosa.
Heads corymbose; inflorescence not glandular.	
Leaves 3 to 5 cm. long, oblanceolate or narrowly obovate.	
Green and glabrate above	12. A. howellii.
Tomentose on both surfaces	13. A. concolor.
Leaves much smaller and narrower.	
Heads 6 to 8 mm. high; bracts white or pink	A. parvifolia.
Heads 4 to 7 mm, high.	
Involucial bracts tinged with green or brown.	
Suffrutescent at base; bracts yellowish	14. A. confinis.
Not suffrutescent; bracts greenish brown.	
Leaves densely white-tomentose on	
both sides	15. A. media.
Leaves glabrate above, loosely to-	
mentose beneath	16. A. tomentella.
Involueral bracts white or pink.	
Leaves obtuse, white-tomentose; bracts	
pink	17. A. concinna.
Leaves acute, grayish tomentose.	
Heads in a dense cluster; bracts	
pink	18. A. rosca.
Heads in a loose corymb; bracts	
white	19. A. hendersoni.
1 Antonomic stanonhalls A Comp. Don. Am. 4 1 17: 019 1	UUG
1. Antennaria stenophylla A. Gray, Proc. Am. Acad. 17: 213. 1	

Antennaria alpina stenophylla A. Gray in Torr. Bot. Wilkes Exped. 366, 1874.

Type locality: "Spipen [Naches] River." Collected by Pickering & Brackenridge. Range: Washington and Oregon.

Specimens examined: Wenache Mountains, Whited 1345; Ellensburg, Piper 2708; Whited, April 18, 1898; Pasco, Hindshaw 4, May 25, 1896; Kittitas Mountain, Whited, May 27, 1896; Spipen River, Wilkes Expedition: Hangman Creek, Sandberg & Leiberg 51; Medical Lake, Sandberg & Leiberg, May, 1893, Spangle, Piper 3541; Spokane River,

Wilkes Expedition.

ZONAL DISTRIBUTION. Arid Transition.

2. Antennaria leucophaea Piper, Bull. Torr. Club 29: 221, 1902.

Type locality Khekitat, Washington. Collected by Howell.

Range: Klickitat County, Washington

Specimens examined Klickitat County, Howell; near Columbus, Suksdorf.

3. Antennaria flagellaris (Torr.) A. Gray, Proc. Am. Acad. 17: 212, 1882.

Antennaria dimorpho flagellaris Torr. Bot. Wilkes Exped. 17: 366, 1874.

Type locality: "Between Spipen [Naches] River and the north fork of the Columbia, Washington Territory."

Range: Washington and Oregon to Montana.

Specimens examined: Ellensburg, Piper 2709; Simcoe Mountains, Howell 286; Cleveland, Suksdorf 451; Spipen River, Wilkes Expedition; Yakima region, Brandegee 92, 887; Wenache Mountains, Cotton 1396.

ZONAL DISTRIBUTION: Upper Sonoran.

4. Antennaria latisquama Piper, Bull. Torr. Club 28: 41, 1901.

Type locality: Klickitat County, Washington. Collected by Howell.

Range: Washington.

Specimens examined: Klickitat County, Howell 417; mountains near Columbus, Suksdorf, April 13, 1886; near Fort Colville, Lyall in 4861.

5. Antennaria dimorpha (Nutt.) Torr. & Gr. Fl. **2**: 431, 1843.

Gnaphalium dimorphum Nutt. Trans. Am. Phil. Soc. 7: 405, 1841.

Type locality: "On the Black Hills of the Platte."

RANGE: British Columbia to California and Colorado.

Specimens examined: Wenache, Whited 11; Roslyn, Whited 419; Rattlesnake Mountains, Cotton 309; Pasco, Piper 2979; Hindshaw 45; Colville, Lyall in 1860; Spokane River, Geyer 479; Spipen [Naches] River, Wilkes Expedition: Pine City, Piper, May 6, 1898; Spokane, Piper 2296; Lyall in 1861; above Wawawai, Elmer 401; Piper, May 6, 1900; Waitsburg, Horner 162.

ZONAL DISTRIBUTION: Arid Transition.

6. Antennaria geyeri A. Gray, Pl. Fendl. 107, 1849.

Type locality: "Arid sandy woods near Tshimakaine, Spokan Country," Washington, Collected by Gever.

Range: Washington and Idaho to California and Nevada.

Specimens examined: Naches River, Henderson, August 11, 1892; Falcon Valley, Suksdorf 407; Howell, August 18, 1882; Mount Adams, Henderson, August 14, 1882; Spokane, Kreager 173; near Tshimakaine, Geyer 542.

ZONAL DISTRIBUTION: Arid Transition.

7. Antennaria luzuloides Torr. & Gr. Fl. 2: 430, 1843.

TYPE LOCALITY: "Oregon or Rocky Mountains." Collected by Douglas or by Drummond.

Range: British Columbia to Wyoming and Oregon.

Specimens examined: Ellensburg, Whited 399; Falcon Valley, Suksdorf 406; between Thorp and Clealum, Whited 399; Pend Oreille River, Lyall in 1861; without locality, Vascy in 1889; Sprague, Sandberg & Leiberg 177; without locality, Wilkes Expedition: Pullman, Piper 1512. Blue Mountains, Horner 610.

ZONAL DISTRIBUTION. Arid Transition.

8. Antennaria lanata (Hook) Greene, Pittonia 3: 288, 1898.

Antennaria carpathica lanata Hook, Fl. Bor, Am. 1: 329, 1833.

Type locality, "Swamps of the plains among the Rocky Mountains," Collected by Drummond.

RANGE: British Columbia to California and Colorado.

Specimens examined. Olympic Mountains, Elmer 2422; Mount Rainier, Allen 289; Peper 527, 2462; Tolmie; Cascade Mountains, latitude 49°, Lyall in 4859; Mount Adams, Henderson, August 40, 4892; Flett 4094; Skagit Pass, Lake & Hull, August 24, 4892; Nason Creek, Sandberg & Leiberg 833.

Zonal distribution. Arctic.

9. Antennaria pulcherrima Greene, Pittonia 3: 176, 1897.

Antennaria carpathica pulcherrima Hook. Fl. Bor. Am. 1: 329, 1833.

Type locality: "Swamps of the plains among the Rocky Mountains."

RANGE: British Columbia and Alberta to Oregon and New Mexico.

Specimens examined: Wenache Mountains, Elmer, 452; Pullman, Elmer, June, 1897.

ZONAL DISTRIBUTION: Arid Transition.

10. Antennaria anaphaloides Rydberg, Mem. N. Y. Bot, Gard. 1: 409, 1900.

Type Locality: Spanish Basin, Montana.

Range: Washington to Montana.

Specimens examined: Upper Naches, Henderson, June 15, 1892; Cleman Mountain, Henderson 2284; Similkameen, Lyall in 1860; Yakima County, Henderson 2284; Wenache Mountains, Cotton 1307.

ZONAL DISTRIBUTION: Arid Transition.

11. Antennaria racemosa Hook. Fl. Bor. Am. 1: 330, 1833.

Antennaria piperi Rydberg, Bull. Torr. Club 28: 21, 1901.

Type locality: "Alpine woods of the Rocky Mountains."

Range: British Columbia and Alberta to Oregon and Wyoming.

Specimens examined: Clallam County, Elmer 2420; Nisqually sources, Allen 224; Cascade Mountains, latitude 49°, Lyall in 1859; Pend Oreille River, Lyall in 1861; Peshastin, Sandberg & Leiberg 484; Klickitat River, Flett 1105; Wenache Mountains, Whited 1261; Roslyn, Whited 419; Clealum, Henderson, June 11, 1892; Kamiak Butte, Elmer in 1897; Piper, July 20, 1899; Mount Carlton, Kreager 227; without locality, Vasey in 1889; Mount Storm King, Lawrence 329, 330; Olympic Mountains, Piper in 1895.

Zonal distribution: Canadian.

12. Antennaria howellii Greene, Pittonia 3: 276, 1898.

Type locality: St. Helens, Oregon (not "Mt. St. Helen"). Collected by Howell.

Range: British Columbia to Montana and Oregon.

Specimens examined: Olympic Mountains, Elmer 2423; Mason County, Kincaid, June 15, 1892; upper Nisqually Valley, Allen; Tacoma, Flett 103; near Mount Adams, Henderson 2289; west Klickitat County, Suksdorf 2109; Falcon Valley, Suksdorf 404, Pend Oreille River, Lyall in June, 1861; Spokane, Piper 2942; Spangle, Piper 3539, Blue Mountains, Horner 171.

ZONAL DISTRIBUTION: Transition.

This species was formerly referred to A. plantaginifolia (L.) Hook, of the Eastern States,

13. Antennaria concolor sp. nov.

Cespitose, the ligneous rootstocks and stolons slender; stems slender, erect, 20 to 30 cm. high, sparsely tomentose; basal leaves thin, spatulate, 2.5 to 3.5 cm. long, whitish, abruptly acuminate, concave on the lateral margins, the greener upper side becoming nearly glabrous the second season; cauline 7 to 9, linear or linear-lanceolate; inflorescence of 4 to 7 short-peduncled heads in a corymb; involucre 8 to 9 mm. high; bracts in about 3 ranks, mostly acute, greenish below, fuscous in the middle, the tips paler or white.

Type specimens collected by the writer in open places in fir woods near the suburb of Portland, Oreg., known as Mount Scott, June 6, 1904, no. 6189. A few colonies only were found, all pistillate.

The species is perhaps nearest to A. howellii Greene, which was abundant in the same locality, but that has larger and thicker leaves, nearly always smooth and green above with the lateral margins nearly straight and with the heads usually sessile.

I would also refer to this species no. 485, G. R. Vasey, collected in the Cascade Mountains, probably near Ellensburg, Wash., in 1889. This was referred doubtfully by Nelson (Proceedings U. S. National Museum 33.713) to A. pedicelluta Greene, but that has a glandular inflorescence. The Vasey specimen differs from the type of A. concolor only in that the stems are somewhat stouter, the leaves thicker and less suddenly narrowed into the petiole and the heads shorter-pedicelled.

14. Antennaria confinis Greene, Pittonia 4: 40, 1899.

Type locality: Santa Catalina Mountains, Arizona.

Range: Washington to Arizona.

Specimens examined: Wenache Mountains, Whited 1262; Cotton 1280; Rattlesnake Mountains, Cotton 1280.

ZONAL DISTRIBUTION: Arid Transition.

15. Antennaria media Greene, Pittonia 3: 286, 1898.

Type locality: "Mountains above Coldstream, Placer Co., California."

RANGE: British Columbia and Alberta to California and Colorado.

Specimens examined: Olympic Mountains, Piper, August, 1895; Elmer 2421; Mount Rainier, Allen 141; Mount Adams, Henderson, August, 1892; Flett 1180; Yakima region, Brandegee 886.

ZONAL DISTRIBUTION: Arctic.

This species was formerly confused with the European A. alpina (L.) Gaertn.

16. Antennaria tomentella E. Nelson, Proc. U. S. Nat. Mus. 23: 701, 1901.

Type locality: "Near Stevens Pass, Cascade Mountains, Washington." Collected by Sandberg & Leiberg.

RANGE: Cascade Mountains, Washington.

Specimens examined: Stevens Pass, Sandberg & Leiberg 751; Mount Adams, Cotton 1517.

17. Antennaria concinna E. Nelson, Proc. U. S. Nat. Mus. 23: 705, 1901.

Type locality: "Olympic Mountains, Clallam County, Washington."

RANGE: Washington, Oregon, Utah.

Specimens examined: Clallam County, Elmer 2417; Mount Storm King, Lawrence 350; Olympic Mountains, Piper 2491.

Zonal distribution: Hudsonian.

18. Antennaria rosea Greene, Pittonia 3: 281, 1898.

Antennaria divica rosca D. C. Eaton; S. Wats, Bot. King, 186, 1871, nom. nud.

Type locality: North Park, Colorado, collected by C. S. Sheldon.

RANGE: British Columbia to Alberta, Colorado, and California.

Specimens examined: Mount Rainier, Piper 2161; Mount Adams, Henderson 2288; Goose Lake, Flett 1095; west Klickitat County, Suksdorf 2190; Ellensburg, Elmer 398; Mountains north of Ellensburg, Whited 661; Sprague, Sandberg & Leiberg 213; Loomis, Elmer 372; Spangle, Piper, June 24, 1899; Spokane, Henderson 2286; Piper 2273; Cheney, Tucker, in 1890; without locality, Vasiy 484, 487.

Zonal distribution: Arid Transition.

18a. Antennaria rosea angustifolia (Rydberg) E. Nelson, Proc. U. S. Nat. Mus. 23: 706, 1901.

Antennaria angustifolia Rydberg, Bull. Torr. Club 26: 546, 1899.

Type locality: Yosemite Valley, California.

Range: Washington to California.

Specimens examined: Olympic Mountains, Piner 2192; Mount Baldy, Conard 394.

19. Antennaria hendersoni Piper, Bull. Torr. Club 29: 221, 1902.

Type locality: Mount Adams, Washington, collected by Henderson.

Range: Washington.

Specimens examined: Mount Adams, Henderson 2290 July 3, 1892; Flett 1078.

20. Antennaria parvifolia Nutt. Trans. Am. Phil. Soc. 7: 406, 1841.

Antennaria aprica Greene, Pittonia 3: 282, 1898.

Type locality: "On the Black Hills and plains of the upper part of the Platte." Collected by Nuttall.

Range: Washington to Manitoba, south to New Mexico and Nebraska.

Specimens examined: Yakima Region, Brandegee 883 in part; Spokane, Piper 2297, 2298; Spokane, Kreager 174.

Zonal distribution: Arid Transition

ANAPHALIS.

Anaphalis margaritacea occidentalis Greene, Fl. Fran. 399, 4897.

Type locality: Sand bills of the seaboard at least from Middle California to Alaska, Range: Alaska to California.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Seattle, Piper; Silverton, Bouck 103; Goose Lake, Flett 1096; Tacoma, Flett 129; Tieton River, Cotton 445; North Yakima, Watt, August, 4895; Roslyn, Whited 467; along Twisp River, Whited 201; Lake Chelan, Lake & Hull 744; Bridge Creek, Elmer 631; without locality, Vasey 488; Mount Carlton, Kreager 223; Fish Lake, Dunn, August, 1900; Atanum Soda Springs, Watt, August, 1895.

ZONAL DISTRIBUTION: Transition.

1b. Anaphalis margaritacea subalpina A. Gray, Syn. Fl. 12: 233, 1884.

Type locality: "Mountains of Colorado."

RANGE: Washington to Colorado.

Specimens examined: Snoqualmic Falls, Piper 676; Peshastin, Sandberg & Leiberg 511; Mount Stuart, Elmer 1177; Stuart Island, Laurence 155.

GNAPHALIUM.

Plants low; flowers in dense leafy clusters; involucres very woolly.

Bracts white; plants loosely-woolly.......................... 2. G. palustre.

Bracts brownish; plants appressed-woolly..................... 3. G. uliginosum

Plants tall; flowers in looser, leafless clusters; involucres woolly only at base.

Not glandular; leaves white-woolly.

Involucre white; cymes loose................................. 5. G. microcephalum.

Gnaphalium purpureum L. Sp. Pl. 2: 854, 1753.

Type locality: "In Carolina, Virginia, Pennsylvania."

Range: Throughout the most of the United States, Mexico, South America.

Specimens examined: Montesano, Heller 3919; Seattle, Piper, July, 1895; Tacoma, Flett 72; west Klickitat County, Suksdorf 1580.

ZONAL DISTRIBUTION: Humid Transition.

2. Gnaphalium palustre Nutt. Trans. Am. Phil. Soc. 7: 404, 1840.

Gnaphalium gossypinum Nutt. Trans. Am. Phil. Soc. 7: 404, 1840.

Type locality: "Rocky Mountains, Oregon, California, and Chile."

RANGE: Washington to Wyoming, south to California and Arizona.

Specimens examined: Montesano, Heller 4014; west Klickitat County, Suksdorf 2070, 655, 653, 654, 2080; mouth of Columbia, Nuttall; Wenache, Whited 242; Ellensburg, Whited 696, 496; North Yakima, Watt, August, 1895; Crab and Wilson creeks, Sandberg & Leiberg 284; Rock Lake, Lake & Hull, August 3, 1892; Spokane, Henderson, July 9, 1892; Pullman, Piper 1583; Almota, Piper 2735; Mount Carlton, Kreager 177.

Zonal distribution: Transition and Upper Sonoran.

3. Gnaphalium uliginosum L. Sp. Pl. 2: 856, 1753.

Type locality: European.

Range: British Columbia to Oregon. Asia. Europe.

Specimens examined: Whatcom County, Suksdorf 975; Fairhaven, Piper; west Klickitat County, Suksdorf 127, 656; Manor, Piper, July 10, 1899; Kalama, Piper, October 30, 1901.

Zonal distribution: Humid Transition.

4. Gnaphalium decurrens californicum (DC.) A. Gray, Bot. Cal. 1: 341, 1876.

Gnaphalium californicum DC, Prod. 7: 224, 1865-8.

Type locality: California.

RANGE: Washington and Idaho to California.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Falcon Valley, Suksdorf 33; Mount Adams, Flett 1067; Kittitas County, Sandberg & Leiberg 700; Pend Oreille River, Lyall in 1861.

ZONAL DISTRIBUTION: Arid Transition and Canadian.

5. Gnaphalium microcephalum Nutt. Trans. Am. Phil. Soc. 7: 404, 4840.

Type locality: "St. Diego, Upper California."

RANGE: British Columbia to Idaho and California.

Specimens examined: Port Ludlow, Binus, August 15, 1890; Port Townsend, Edwards 33; Anacortes, Henderson, July 5, 1892; Tacoma, Flett 138; upper Nisqually Valley, Allen 223; Peshastin, Sandberg & Leiberg 830; Leavenworth, Sarage 25; Whited 245; Tumwater Canyon, Whited 1458; Spokane, Piper, August 28, 1898; Newport, Kreager 454.

ZONAL DISTRIBUTION: Transition.

6. Gnaphalium chilense Spreng, Syst. 3: 480, 1826.

Gnaphalium sprenglii Hook, & Arn. Bot. Beech, Voy. 150, 1838.

Gnaphalium luteo-album occidentale Nutt. Trans. Am. Phil. Soc. 7: 403, 4841.

Type locality: California. There collected by Chamisso, but the specimens erroneously attributed to Chile.

Range: Washington to California and Texas.

Specimens examined: Seattle, Piper 1076; North Yakima, Watt, August, 1895; Piper 1786; Lake Chelan, Lake & Hull 745; Pullman, Piper, October 5, 1897; Waitsburg, Horner 412; Alma, Elmer 544; Toppenish, Cotton 777, Prosser, Cotton 896.

Zonal distribution: Transition.

ADENOCAULON.

Adenocaulon bicolor Hook, Bot. Misc. 1: 19, t. 15, 1830.

Type locality: "In sylvis densis apud Fretum de Fuca, atque prope Fort Vancouver ad flumen Columbiae, in ora occidentali Americae Septentrionalis" Collected by Scouler.

RANGE: British Columbia to California and east to Lake Superior.

Specimens examined: Cascade Mountains, latitude 49°, Lyall in 1859; Olympic Mountains, Edwards in 1889, Silverton, Bouck 87; Seattle, Piper, July, 1891; upper Nisqually Valley, Allen 12; Peshastin, Sandberg & Leiberg 598; Stehekin, Whited 4400; Maxfield, Henderson, June 22, 1892, Skagit Pass, Lake & Hull 806; Railroad Creek, Elmer 859; without locality, Vasey 490; without locality, Geyer 523; Mount Carlton, Kreager 214.

Zonal distribution: Humid Transition.

PSILOCARPHUS.

Heads covered with long loose woodly hairs.

Erect, 6 to 15 cm. high; heads sparsely woolly 1. P. datior.

Heads covered with short close wool.

Ascending; leaves narrowly oblanceolate...................... 4. P. oreganus.

1. Psilocarphus elatior Λ. Gray, Syn. Fl. ed. 2. 12: 448, 1886.

Psilocarplus oreganus elatior A. Gray, Bot. Cal. 1: 336, 1876.

Type locality: Portland, Oregon.

Range: Washington, Oregon, and Idaho.

Specimens examined: Seattle, Piper 1125; west Klickitat County, Suksdorf 1573; Manor, Piper 3079; Pullman, Piper, September 30, 1897; Blue Mountains, Horner 336; Coulee City, Piper 3904; Vancouver, Piper 5024.

Zonal distribution: Transition.

2. Psilocarphus brevissimus Nutt. Trans. Am. Phil. Soc. 7: 340, 1840.

Type locality: "Plains of the Oregon River, in inundated tracts." Collected by Nuttall.

Range: Washington to California.

Specimens examined: Coulee City, Piper 3904½.

ZONAL DISTRIBUTION: Arid Transition.

3. Psilocarphus tenellus Nutt. Trans. Am. Phil. Soc. 7: 341, 1840.

Type locality: Santa Barbara, California.

Range: British Columbia to California.

Specimens examined: Fairbaven, Suksdorf, July 15, 1890.

4. Psilocarphus oreganus Nutt. Trans. Am. Phil. Soc. 7: 341, 1840.

Type locality: "Near the Oregon and outlet of the Wahlamet" Collected by Nuttall. Range: Oregon, Washington, and Idaho.

Specimens examined: Klickitat County, Suksdorf 32; Howell 284; Spokane County, Suksdorf 932, 931; Coulee City, Piper.

Nuttall's type in the Gray Herbarium agrees with his description and is the plant understood by Dr. Gray. There is evidently some error in regard to the type locality, as the only species found in recent years near the mouth of the Willamette is *P. clatior* Gray.

CENTAUREA.

Perennial; rays red; pappus none. 3. C. consimilis.

1. Centaurea melitensis L. Sp. Pl. 2: 917, 1753.

Type locality: "In Melita."

Specimens examined: Whidby Island, Gardner 161; Port Townsend, Edwards in 1896; Scattle, Piper, September, 1898.

2. Centaurea cyanus L. Sp. Pl. 2: 911, 1753.

CORN FLOWER.

Type locality: Europe.

Specimens examined: Wenache, Whited 1270.

3. Centaurea consimilis Boreau, Fl. Centr. Fr. ed. 3. 2: 351, 1857.

Type locality: Angers, France.

Specimens examined: Pullman, Hardwick 2390.

CNICUS.

Cnicus benedictus L. Sp. Pl. 2: 826, 1753.

Blessed thistle.

Centaurea benedicta L. Sp. Pl. ed. 2, 2: 1296 1763.

Type locality: "In Chio, Lemus, Hispania."

Specimens examined: Waitsburg, Horner 166; Colfax, Piper, June 28, 1901.

SILYBUM.

1. Silybum marianum (L.) Gaertn. Fruct. & Sem. 2: 378, 1802. MILK THISTLE. Carduus mariana L. Sp. Pl. 2: 823, 1753.

Type locality: "In Angliae, Galliae, Italiae aggeribus ruderatis."

Specimens examined: Pullman, Piper in 1902; Vancouver, Piper in 1904.

CARDUUS. THISTLE.

Hermaphrodite; heads larger; biennials.

Bracts of the involuere all with dilated fringed tips............. 2. C. americanus.

Bracts of the involucre or some of them with spiny tips.

Outer and inner bracts all with spiny tips 3. C. lanceolatus.

Outer bracts spine-tipped; inner ones unarmed.

Involucre loose, the outer bracts nearly or quite as long as the inner.

Heads clustered, short-peduncled; flowers pink..... 4. C. edulis.

Heads few, long-peduncled; flowers cream-color.... 5. C. remotifolius. Involucre close, the outer bracts much shorter than the

inner.

Heads clustered, subsessile, leafy; bracts herbaceous,

not glandular on the back 6. C. foliosus.

Heads not clustered, peduncled; bracts coriaccous, glandular on the back.

Outer bracts with spines nearly as long....... 7. C. ochrocentrus. Outer bracts with much shorter spines.

Leaves canescent on both sides; flowers

usually pink 8. C. undulatus.

Leaves green above; flowers whitish..... 9. C. palousensis.

1. Carduus arvensis (L.) Robs. Brit. Fl. 163, 1777.

Canada Thistle.

Serratula arvensis L. Sp. Pl. 2; 820, 1753,

Unicus arrensis Hoffm. Deutschl. Fl. ed. 2, 12; 130, 1804.

Uirsium arvense Scop. Fl. Carn. ed. 2, 2: 126, 1772.

Type locality: European.

Specimens examined: Pullman, Piper, July 1, 1895; Tacoma, Piper.

The Canada thistle is now well established in various places in Washington, but it produces good seed only exceptionally, and therefore its spread is slow.

2. Carduus americanus (A. Gray) Rydberg, Bull. Torr. Club 28: 508, 1901.

Chicus carlinoides americanus A. Gray, Proc. Am. Acad. 10: 48, 1871.

Unicus americanus A. Gray, Proc. Am. Acad. 19: 56, 1883.

Type locality: "Rocky Mountains of Colorado."

Range: Washington to California and New Mexico.

Specimens examined: Seattle, Piper in 1888; Goose Lake, Flett 1097.

Carduus lanceolatus L. Sp. Pl. 2: 821, 1753.

Bull thistle.

Cuicus lanceolatus Willd. Prod. Fl. Berol. 259, 1787.

Cirsium lanccolatum Scop. Fl. Carn. ed. 2, 2: 130, 1772.

Type locality: European.

Specimens examined: Pullman, Piper, August, 1897; abundant in western Washington.

Carduus edulis (Nutt.) Greene, Proc. Acad. Phila. 1892; 362, 1893.

Cursium edule Nutt. Trans. Am. Phil. Soc. 7: 420, 1841.

Cnicus edulis A. Gray Proc. Am. Acad. 10: 47, 1874.

Type locality: "The plains of Oregon and the Blue Mountains" Collected by Nuttall. 29418-06 м---39

RANGE: British Columbia to Idaho and California.

Specimens examined: Montesano, Heller 4000, 3963; Cascade Mountains, latitude 79°, Lyall in 1859; Sumas Prairie, latitude 49°, Lyall in 1858; Scattle, Piper, August, 1892; Mount Rainier, Piper 2152; Beaver Creek, Whited 24; Nason Creek, Sandberg & Leiberg 695; Conconnully, Whited 1315; west Klickitat County, Suksdorf 143, 144; Ellensburg, Whited 660; Blue Mountains, Horner 330.

Zonal distribution: Transition.

The roots of this species were formerly used by the natives as food.

5. Carduus remotifolius Hook, Fl. Bor. Am. 1: 302, 1833.

Unicus remotifolius A. Gray, Proc. Am. Acad. 10: 47, 1875.

Cirsium remotifolium DC. Prod. 6: 655, 1837.

Type locality: "In the valley of the Columbia." Collected by Douglas.

Range: Washington to California.

Specimens examined: West Klickitat County, Suksdorf 145; Mount Adams, Suksdorf 574; Yakima region, Brandegee 922; Nason Creek, Sandberg & Leiberg 626; Fourth Plain, Piper, July 10, 1899; Cape Horn, Piper 4963.

Zonal distribution: Humid Transition.

6. Carduus foliosus Hook, Fl. Bor, Am. 1: 303, 1833.

Cnicus foliosus Gray, Proc. Am. Acad. 10: 40, 1874.

Cirsium foliosum DC. Prod. 6: 654, 1837.

Type locality: "Prairies of the Rocky Mountains." Collected by Drummond.

Range: Washington and Oregon to Alberta.

Specimens examined: Pullman, Piper 1822 and June, 1893; Henderson 4275; without locality, Vascy 475.

Zonal distribution: Arid Transition.

7. Carduus ochrocentrus (A. Gray) Greene, Proc. Acad. Phila. 1892; 336, 1893.

Cirsium ochrocentrum A. Gray, Pl. Fendl. 110, 1849.

Type locality: "Mountain sides around Santa Fe," New Mexico.

Range: Washington to California and Texas.

Specimens examined: Blue Mountains, Piper in 1896.

8. Carduus undulatus Nutt. Gen. 2: 130, 1818.

Unicus undulatus A. Gray, Proc. Am. Acad. 10: 42, 1875.

Unsium douglassii DC, Prod. 6: 643, 1837.

Cirsium undulatum Spreng, Syst. 3: 374, 1826.

Type locality: "On the calcareous islands of Lake Iluron and on the plains of upper Louisiana."

RANGE: Washington to Canada, south to New Mexico.

Specimens examined: Klickitat River, Suksdorf 142; Columbia Valley, Lyall in 1860; Yakima County, Henderson 2274. Wenache, Whited 91, 1173–1274, Spokane, Piper, July, 1896. Almota, Piper 1823, Wawawai, Hull, June, 1892; Rattlesnake Mountains, Cotton 742

Zonal distribution Upper Sonoran.

9. Carduus palousensis sp. nov.

Perennial, stems erect, usually loosely branched above, 30 to 90 cm. high, tomentose when young, becoming glabrous; leaves lanceolate in outline, pinnatifid into 3 to 7 pairs of entire or toothed lobes, early becoming green and glabrous above, persistently white-woodly beneath, 5 to 15 cm. long, bearing but few prickles, the uppermost commonly simple, head 3 to 4 cm. high, often on long nearly naked peduncles, involuce hemispheric, its bracts firm, closely imbricated in several successively shorter ranks, not cholate, all but the innermost prickly-pointed, each bearing an oblong or linear glandular spot near the tip, uniermost attenuate-acuminate and feebly armed or muticous, flowers yellowish

white; corolla lobes shorter than the throat; pappus bristles somewhat clavellate at tip; anther tips acute.

This species was erroneously referred to C, breveri (Gray) Greene in the Flora of the Palouse region.

Specimens have been examined as follows: Silver Lake, *Henderson* 2277; Ellensburg, *Whited* 558, 857; Pullman, *Elmer* 99; *Piper* 1589 (type); without locality, *Vascy* 477, 478, Waitsburg, *Horner* 303.

ARCTIUM.

1. Arctium minus Schk. Bot. Handb. 3: 49, 1803.

Burdock.

Type locality: Germany.

Specimens examined: Seattle, Piper.

SAUSSUREA

1. Saussurea americana D. C. Eaton, Bot. Gaz. 6: 283, 1881.

Type locality: "Mountains of Union Co., Oregon." Collected by Cusick.

Range: Washington, Oregon, and Idaho.

Specimens examined: Olympic Mountains, Piper 2188, 930; Mount Rainier, Piper 2141; Mount Adams, Suksdorf 573; Simcoe Mountains, Howell; Monte Cristo, Misses Coffin & Goodspeed; without locality, Vasey 550.

ZONAL DISTRIBUTION: Canadian and Hudsonian

ADDENDA.

While the preceding pages have been in press several papers by Mr. W. N. Suksdorf dealing with Washington plants have been issued, as follows: Washingtonische Pflanzen H. Allgemeine Botanische Zeitschrift, vol. 12, pages 5 to 7, 26 to 27, and 42 to 43, 1906; Neue Pflanzen aus Washington I, West American Scientist, vol. 15, pages 58 to 61, 1906. Material for only a few of many new species and subspecies proposed has been available for examination.

Cadamagrostis anomala Suksdorf, Allg. Bot. Zeitsen. 12: 43, 1906. Mount Adams, Related to C. scribucri Beal, but believed to be distinct.

Festuca Reflexa Buckl. Proc. Acad. Phila. 1862: 98, 1863.

This has recently been collected by Mr. Suksdorf near Bingen. It may be distinguished from C. pacifica Piper by the 1 to 3-flowered spikelets which are all divaricate.

Festuca Myuros L. Sp. Pl. 1:74, 1753.

Łake Washington, Suksdorf, July 3, 1890. Easily distinguishable from F. megahara Nutt. by the absence of the cilia from the lemma.

Quamasia azurea Heller, Bull. Torr. Club 26:547, 1899.

The only character adduced to distinguish this from Q, quamash is the blue color of the flowers, an insufficient distinction in our opinion.

Corallorniza multiflora sulphurea Suksdorf, Allg. Bot. Zeitsch. 12: 42, 1906. Bingen.

Corallorhiza leimbachiana Suksdorf, op. cit. 42. Bingen.

Both of these are close allies of C. multiflora.

Piperia transversa Suksdorf, od. cit. 43. Bingen.

Ranunculus occidentalis laevicaulis Suksdorf, West Am. Sci. 15:58, 1906.

Characterized by having the stems glabrous instead of pilose, as in R. occidentalis Nutt.

Physaria alpestris Suksdorf, op. cit. 58.

A new species from Mount Adams.

Saxifraga paddoensis Suksdorf, op. cit. 59.

From Mount Adams, said to be related to S. punctata L.

Saxifraga fragosa leucandra Suksdorf, op. cit. 60. Bingen.

Saxifraga bracteosa leptopetala Suksdorf, op. cit. 60. Bingen.

Saxifraga bracteosa micropetala Suksdorf, op. cit. 60. Bingen.

Lithophragma tenella ramulosa Suksdorf, op. eit. 61. Bingen.

LITHOPHRAGMA TENELLA FLORIDA, Suksdorf, op. eit. 61. Bingen.

Vicia washingtonensis Suksdorf, op. cit. 59.

Based on specimens collected on cliffs near Bingen.

Sanicula Tripartita Suksdorf, Allg. Bot. Zeitschr. 12:5, 1906.

A new species closely related to *S. menzicsii*, but distinguished by the larger fruit, which has only a very short stipe. The type is from Bingen, Klickitat County. Seattle specimens, *Piper* 643, seem also to be referable to this species.

Steironema ciliatum occidentale Suksdorf, op. cit. 26. Bingen.

Said to be distinguishable from S. ciliatum Raf. by having shorter-petioled, less acute leaves.

NAVARRETIA PROPINQUA Suksdorf, op. cit. 26. Spokane County and Falcon Valley. A new species very close to N. intertexta, but with more dissected leaves, corolla shorter than calyx, and the style only half as long as the stamens.

ILYSANTHES GRATIOLOIDES DEPRESSA Suksdorf, op. cit. 61. Bingen.

Orthocarpus rarior Suksdorf, op. cit. 27. Falcon Valley and Spokane County. A close ally of O. hispidus, from which it is said to differ by having a bright yellow corolla and obtuse capsules, besides being less pubescent.

Aphyllon inundatum Suksdorf, op. cit. 27. Bingen.

Allied to A. uniflorum. Its host plant is Corcopsis atkinsoniana Dougl.

Aphyllon arenosum Suksdorf, op. cit. 27. Type from Bingen.

The western plants referred to A, ludoricianum are considered to represent a distinct species.

Plectritis congesta alba Suksdorf, op. cit. 6. Bingen.

A white-flowered subspecies or form of Valerianella congesta.

Aligera macroptera obtusa Suksdorf, op. cit. 6. Bingen.

Antennaria rhodantha Suksdorf, op. cit. 6. Skamania County.

A new species unknown to us, apparently allied to A. rosea.

Anaphalis margaritacea revoluta Suksdorf, op. cit. 7. Skamania County. Said to be distinguishable by having small linear revolute leaves.

BIBLIOGRAPHY.

The following is a list of publications relating wholly or largely to the flora of Washington:

- Allen, Edward F. The Western hemlock. Bulletin 33, Bureau of Forestry, U. S. Department of Agriculture, 1902.
 - Contains also a 1 st of the trees of Washington and Oregon.
- Ayers, H. B. Washington Forest Reserve. Nineteenth Annual Report, U. S. Geological Survey, pt. 5, 283-313, 1898.
 - Contains notes on the forest trees of the region.
- Cooper, J. G. Report on the medical flora of Washington Territory. Transactions American Medical Association 10: 221-237, 1857.
- —— Catalogue of plants collected in Washington Territory. Pacific Railroad Reports 12²: 50-71, 1860.
- Contains list of plants collected by Cooper, Gibbs, and Suckley, mostly identified by Gray or by Torrey.
- ——— The sylva of Montana. American Naturalist 3: 405–422, 1870, Includes notes on Washington trees.
- Cotton, John S. Three new plants from Washington. Bulletin Torrey Botanical Club 29: 573, 1902.
 - Describes Glyceria latifolia, Astragalus olympicus, and Orthocarpus barbatus.
- A report on the range conditions of central Washington. Bulletin 60, Washington Agricultural Experiment Station. 1904.
 - Contains economic references to many plants.
- Cones, Elliott. Notes on Mr Thomas Mechan's paper on the Plants of Lewis and Clark's Expedition across the continent, 1804–1806. Proceedings Academy Natural Sciences, Philadelphia 1898:291–315, 1898.
- ——— History of the expedition under the command of Lewis and Clark.
- Contains references to many Washington plants, with detailed notes on the more important economic ones. These notes are all by Lewis.
- Dodwell, Arthur, and Rixon, Theodore Olympic Forest Reserve. Twenty-first Annual Report, U. S. Geological Survey, pt. 5, 145-209, 1900.
 - Contains notes on forest trees
- Elmer, A. D. E. New Western plants. Botanical Gazette 36: 52-61-1903.
- Includes eleven proposed new species from Washington.
- ——— An extension of range for Woodwardia radicans. Fern Bulletin 7: 9-10. 1899.
- Flett, J. B. Some Washington ferns. Fern Bulletin 8: 40-41, 1900.
- Notes on some rare Washington ferns Fern Bulletin 10 24-25, 1902.
- ---- The fern flora of Washington Fern Bulletin 11: 79-85 1903.
- Gannett, Henry Forest conditions and standing timber in Washington. Nineteenth Annual Report, U.S. Geological Survey pt. 5, 26-42, 1898.
- Has plates showing percentage empositions of torests in western Washington as regards red fir, western hemiock, cedar and spruce.

Gannett, Henry. The forests of Washington. Professional Paper no. 5, series II. Forestry 2. U. S. Geological Survey, 1902.

A detailed account of the merchantable timber in each county of the State and a map showing relative density of stand.

- Geyer, Charles H. Notes on the vegetation and general character of the Missouri and Oregon Territories, made during botanical journey from the State of Missouri across the south pass of the Rocky Mountains to the Pacific, during the years 1843 and 1844. London Journal of Botany 4: 479-492, 653-662, 1845; 5: 22-44, 198-208, 285-310, 509-524, 1846.
- Gorman, Martin W. Eastern part of Washington Forest Reserve. Nineteenth Annual Report, U. S. Geological Survey, pt. 5, 315-350, 1890.

Refers to many plants, especially trees and shrubs.

Griffiths, David. Forage conditions and problems in castern Washington, eastern Oregon, northeastern California, and northwestern Nevada. Bulletin 38, Bureau of Plant Industry, U. S. Department of Agriculture, 1903.

Incidentally mentions a considerable number of Washington plants.

Henderson, L. F. The Flora of the Olympics. Zoe 2: 253-295, 1891.

Gives list of species observed or collected in these mountains.

Holzinger, John M. Report on a collection of plants made by J. H. Sandberg and assistants in northern Idaho in the year 1892. Contributions from U. S. National Herbarium 3: 205-287, 1895.

Mentions several Washington plants, mainly from Spokane and Kamiak Butte.

- Hooker, J. D. Account of the botanical collections made by David Lyall, R. N., F. L. S., surgeon and naturalist to the North American Boundary. Journal of the Linnau Society 7:124-144, 1864.
- Hooker, W. J. A brief memoir of the life of Mr. David Douglas with extracts from his letters. Companion to the Botanical Magazine 2:79-182, 1836.

Contains many notes and references to northwestern plants by Douglas. This paper is reprinted in volume 5 of the Quarterly of the Oregon Historical Society.

- —— Catalogue of Mr. Geyer's collection of plants gathered in the upper Missouri, the Oregon Territory, and the intervening portion of the Rocky Mountains. London Journal of Botany 6: 65–79, 206–256, 1847. Hooker's Journal of Botany and Kew Garden Miscellany 3: 287–300, 1851, 5: 257–265, 1853; 7: 371–378, 1855, 8: 16–19, 1856.
- —— and Arnott, G. A. Walker. The botany of Captain Beechey's voyage to the Pacific and Bering Strait in the years 1825–1828. London, 1830–41.

In the supplement are described numerous plants collected by Douglas and by Tolmie—The "Snake Country" specimens were gathered in the summer of 1837 by a friend of Mr Tolmie, who conducted a party from Fort Vancouver on the Columbia to the rendezvous of the American trappers in the interior of California, i. e., southern Idaho

Howelt, Thomas—Catalogue of the flora of Washington, Oregon, and Idaho. 1884.—Contains a fist of spermatophytes, pteridophytes, and mosses.—A supplementary list from Klickitat County, Wash., by W. N. Suksdorf, is added.

—— Catalogue of the known plants (Phaenogamia and Pteridophyta) of Oregon, Washington and Idaho. 1887.

——— Flora of Northwestern America. 1903.

Contains descriptions of all the plants reported from Oregon, Washington, and Idaho. Incidentally many plants are stated to range into Washington, in case of which there is no definite knowledge of such occurrence.

Leiberg, John B.—Two new plants from the northwest coast.—Proceedings Biological Society of Washington 11.39-41_1897.

Describes Sambucus teiosperma and Delphinium viridescens.

- Meehan, Thomas. The plants of Lewis and Clark's expedition across the Continent, 1804–1806. Proceedings Academy Natural Sciences, Philadelphia 1898; 12–49, 1898.
- A list of the Lewis and Clark plants in the Philadelphia Academy of Sciences, mostly identified by Robinson and Greenman.
- Nuttall, Thomas. A catalogue of a collection of plants made chiefly in the valleys of the Rocky Mountains or Northern Andes, toward the sources of the Columbia River, by Mr. Nathaniel B. Wyeth, and described by T. Nuttall. Read February 18, 1834. Journal of the Academy of Natural Sciences, Philadelphia, 7:1-60, 1834.
- "This collection was made wholly on the returning route of Mr. Wyeth from the Falls of the Columbia to the first navigable waters of the Missouri."
- Piper, C. V. New and noteworthy Washington plants. Botanical Gazette 22:488–491, 1896.
- ——— An undescribed black-cap raspberry. Erythea 5:103, 1897, Describes *Rubus hesperius*.
- ——— New species of Washington plants. Erythea 6:29-32, 1898,
- ——— A new violet from Washington. Erythea **6**:69, 1898, Describes Viola flettii.
- —— New and noteworthy Northwestern plants. Erythea 7:99-104, 159-163, 171-174, 1899.
- —— New and noteworthy Northwestern plants. Bulletin Torrey Botanical Club 27:392-401, 1900; 28:39-45, 1901; 29:221-226, 642-646, 1902.
- ——— The flora of Mount Rainier. Mazama 2:93-117, 1901.
 - A list of all the flowering plants known to occur on Mount Rainier.
- —— and Beattie, R. K. The flora of the Palouse region. 1901.
- Contains descriptions of all the flowering plants known to grow wild within 20 miles of Pullman, Wash.
- Plummer, Fred G. Mount Rainier Forest Reserve. Twenty-first Annual Report, U. S. Geological Survey, pt. 5, 81-144, 1990.
 - Contains notes on the distribution of the native trees; also a list of shrubs.
- Robinson, B. L. Two new plants from the Cascade Mountains. Botanical Gazette 16:43-44. 1891.
 - Describes and figures Luina piperi and Silene suksdorfii.
- Seribner, F. L. A list of grasses from Washington Territory. Bulletin Torrey Botanical Club 10:63-66, 77-78, 1879.
- Suksdorf, Wilhelm N.—Flora Washingtonensis. A catalogue of the Phaenogamia and Pteridophyta of the State of Washington, 1892—Published by the author.
- —— and Howell, Thomas. The flora of Mount Adams. Mazama 1:68-97, 4896.

 A list of all the flowering plants known from this peak.
- Die Plectrideen. Deutsche Botanische Monatsschrift **15**: 116-118, 144-148, 1897.
- Washingtonische Pflanzen. Deutsche Botanische Monatsschrift **16**·209–212, 220–222, 1898, **18**:26–27, 86–88, 97–99, 132–134, 153–156, 1900; **19**:91–93, 1901.
- Washingtonische Ptlanzen II. Allgemeine Botanische Zeitschrift **12**:5-7, 26-27, 42, 43, 1906.
 - Two series of papers describing many new Washington plants
- Zwei neue einjahrige Epilobium-Arten. West American Scientist 11:77-78, 1901.
 - Describes Epilobium apricum and E. jasciculatum.

- Suksdorf, Wilhelm N. Eine neue Brodiaea-Art. West American Scientist 14:1, 1902. Describes Brodiaea bicolor.
- Ueber einige Nemophila-Arten. West American Scientist 14: 22-23, 1903.

 Describes Nemophila minutiffora, M. reticulata, and M. erosa.
- —— Neue Pflanzen aus Washington. West American Scientist **15**:58-61, 1906. Proposes new species and subspecies.
- Torrey, John. Phanerogamia of Pacific North America. U. S. Exploring Expedition under the command of Chas. Wilkes, vol. 17, 1874.
- One of the most important contributions to the knowledge of the Washington flora. It is usually referred to as the Botany of the Wilkes Expedition.
- Tweedy, Frank. Notes on the Coniferae of Washington Territory. Bulletin Torrey Botanical Club 14: 47-48. 1883.
- Wiegand, Karl M. Some rare Washington plants. Bulletin Torrey Botanical Club 24: 343-344, 1897; 25: 208-209, 1898.
